- it seems impossible to assume an honorific arch, dedicated to Hadrian, or a statue of the emperor, standing right in front of the Temple of *Divus Vespasianus*, as suggested by Eck (2003), and followed by Barron (2018). For the following reason: we know that there was not even space enough to accommodate an *altar* in front of this temple, which was, therefore, incorporated into the steps that led up to the temple.

Besides, the `area immediately in front of the Temple of *Divus Vespasianus*', the road *Clivus Capitolinus*, and the adjacent piazza of the *Forum Romanum*, was on a daily basis used for a great variety of different purposes. The most prominent events being triumphal processions, and the *Saturnalia*, which were celebrated in front of the Temple of Saturn in the Roman Forum, from December 17th through the 23rd or 25th (depending, which calendar one uses). *The Saturnalia* comprised the *Opalia*, celebrated on 19th December at the *sacellum Ops ad Forum*, also called *sacellum* of Ops and Saturnus, *sacellum* of Dis Pater and Proserpina, as well as *Mundus*.

For discussions of all that; cf. *infra*, in volume 3-2, at *Appendix I.e*) It is conceivable that Vitellius (cf. *Suet.*, Vit. 15,3), on December 19th AD 69, could actually have watched the fighting on the Capitolium, while staying at the `Domus Tiberiana' on the Palatine; and at *Appendix I.f*) The procession, which Domitian joined, the festival of the *Opalia* on 19th December, the *Saturnalia*, the festival of Fors Fortuna on 24th June, and the `Isis ship', shown in the processions of the *Saturnalia* at Cologne; and for our above-mentioned, now updated maps; cf. below, at Chapter *The visualization of the results of this book on Domitian on our maps*.

**Caroline Barron's (2018) above-quoted findings concerning the inscription CIL VI 974 = 40524 (here Fig. 29.1), followed by the *verbatim* quotations from Werner Eck's article (2003), lead us to Werner Eck's most recent published opinions concerning the inscription (CIL VI 974 = 40524; here Fig. 29.1).**

Contrary to his earlier opinions, summarized by Barron (2018), who quotes for this Werner Eck (1999; W. ECK and G. FOERSTER 1999; and W. ECK 2003), Eck has more recently expressed a very different opinion concerning the inscription (CIL VI. 974 = 40524 [here **Fig. 29.1**]). But Eck (2019b, 203-204) himself does not address in this article his relevant earlier opinions (of 2003, likewise quoted *verbatim* above).

Eck (2019b, 203-204) dedicates this article to his new reading of the inscription CIL VI 40518 (here **Fig. 91.1**), which, in his opinion, Michaela Fuchs (2014) has incorrectly interpreted. Eck comments for example on Fuchs's (2014) conclusions concerning the results of Hadrian's suppression of the Bar Kokhba Revolt and rejects her hypothesis that the Arch of Hadrian alongside the *Via Flaminia* (cf. here **Figs. 66; 91-94**) was erected in order to commemorate Hadrian's victory in this war: "Der Sieg über die rebellierende Provinz [*i.e.*, Judaea] wurde in Rom, nach allem, was wir verbürgt wissen, nicht besonders gefeiert. Ein gewaltiger Bogen [*i.e.*, this Arch of Hadrian; here **Fig. 66**], der diese Kämpfe und ihr Ende zum Thema gemacht und damit den für Rom [page 204] teuer erkauften Krieg nochmals deutlich ins Licht der Öffentlichkeit gerückt hätte [with n. 40 - as suggested by M. FUCHS 2014], wäre, wie man mit Sicherheit annehmen darf, nicht im Sinne Hadrians gewesen. Auch die Reichsmünzen nehmen keinen Bezug auf den Abschluss des Krieges, trotz der gegenteiligen Ausführungen von Fuchs [with n. 41]".

Werner Eck (2019b, 204, n. 40) refers also to the inscription **Fig. 29.1**, discussed here. In his **note 40**, Eck writes: "**Von CIL VI 974 = 40524 [= here Fig. 29.1] ist zu wenig erhalten, als dass man die Inschrift mit Sicherheit auf das Ende des Krieges im Osten [*i.e.*, Hadrian's suppression of the Bar Kokhba Revolt] beziehen könnte. In jedem Fall handelte es sich nicht um ein gewaltiges Monument [*contra*: M. FUCHS**

2014, 130, who suggests that the inscription belonged to a colossal statue of Hadrian]; **die Inschrift war maximal 2,2 m breit** [my emphasis]".

In his **note 41**, Eck writes: "Fuchs a. O. (Anm. 29) [an angegebenen Ort; *i.e.*, here M. FUCHS 2014] 130".

For a detailed discussion of this subject; cf. *infra*, in volume 3-2, at *A Study on the consequences of Domitian's assassination ... Or: The wider topographical context of the Arch of Hadrian alongside the Via Flaminia which led to the (later) Hadrianeum and to Hadrian's Temples of Diva Matidia (and of Diva Sabina?)*; at Chapter II. W. Eck's (2019b) critique of the hypotheses published by M. Fuchs (2014) concerning the inscription CIL VI 40518 (cf. here **Fig. 91.1**) and the Arch of Hadrian discussed here.

**To conclude this summary of the observations concerning the inscription CIL VI 974 = 40524 (here Fig. 29.1), made by Caroline Barron (2018), Werner Eck (2003), and Eck (2019b), which have been quoted verbatim above.**

Eck (2019b, 204, n. 40) writes: "**Von CIL VI 974 = 40524 [= here Fig. 29.1] ist zu wenig erhalten, als dass man die Inschrift mit Sicherheit auf das Ende des Krieges im Osten [*i.e.*, Hadrian's suppression of the Bar Kokhba Revolt] beziehen könnte** [my emphasis].

Nevertheless the following fact remains.

As Eck (2003, 163, with n. 40) observes, from the same findspot (*i.e.*, 'beneath the Temple of *Divus Vespasianus*') as the inscription CIL VI 974= 40524 (here **Fig. 29.1**) comes the likewise fragmentary inscription (CIL VI 1565 = 37054 = VI, VIII 3, p. 4713), which, in Eck's opinion (of 2003), also refers to the suppression of the Bar Kokhba Revolt. **In the case of the latter inscription, Eck argues that this war against the Jews is defined in this inscription as a *bellum*, a fact, which he regards as a secure indication that this *elogium* referred to the suppression of the Bar Kokhba Revolt.**

Since Eck in his article of 2019b does not withdraw his statement concerning the second inscription (CIL VI 1565 = 37054 = VI, VIII 3, p. 4713), I regard Eck's (2003) judgement concerning this inscription, which comes from the same findspot as CIL VI 974= 40524, as an additional support of Géza Alföldy's (1996 = here **Fig. 29.1**) judgement that the inscription CIL VI 974 = 40524 = here **Fig. 29.1**) refers likewise to Hadrian's suppression of the Bar Kokhba revolt.

Fortunately some important parts of this honorary inscription (CIL VI 974 = 40524 = here **Fig. 29.1**) are preserved: The Senate and the Roman People dedicated the statue (possibly erected on an arch), to which this inscription belonged, to the Emperor Hadrian. The inscription is datable: according to Caroline Barron: to "135 CE Sep 15th to 135 CE Dec 9th". As we have seen above, Géza Alföldy (CIL VI 974 = 40524 = here **Fig. 29.1**) dated it to AD 134/5, and Werner Eck (2003, 162, n. 35) to AD 135/6.

In addition to this, we learn that Hadrian's achievement, which this structure was supposed to commemorate, consisted in a military victory, as is stated at the end of the inscription: "AB HO]STE LIBERAVIT"; in addition to this, the inscription states that this victory was based on: "A]RDORE MISSO". This victory of Hadrian is compared with the (military achievements of) "IMPERAT]ORIBVS MAX[IMIS". Given the findspot of this inscription, 'within?', 'beneath', or 'in front of?' the temple of *Divus Vespasianus*, 'imperatores maximi', also in my opinion, can only refer to the *imperatores* Vespasian and Titus, as suggested by Géza Alföldy (at CIL VI 974 = 40524 = here **Fig. 29.1**).

Of course *both men* had acted as 'imperatores' only in the Great Jewish War. Which means that in this inscription (here **Fig. 29.1**), they are not referred to as 'Emperor Vespasian' and as 'Emperor Titus', but as

*imperatores* in the sense of 'magistrates, endowed with *imperium*', in this specific case as the *imperatores*/victorious generals Vespasian and Titus in the Great Jewish War.

For this meaning of the term *imperator*; cf. *supra*, n. 457, in Chapter III.

In AD 67, Vespasian had been sent to Judaea by the Emperor Nero to suppress the Great Jewish Revolt (or War), he was *legatus Augusti pro praetore exercitus in Judaea* (AD 67-69); cf. Dietmar Kienast, Werner Eck and Matthäus Heil (2017, 101). And Titus had won his victories in Judaea under the Emperor Vespasian; at the end of AD 69, the Emperor Vespasian had endowed his elder son Titus with the command in the Great Jewish War; cf. Dietmar Kienast, Werner Eck and Matthäus Heil (2017, 105): "Übertragung des Oberbefehls im Jüdischen Krieg (Ende 69)"; Werner Eck (2022, Sp. 495); and Rose Mary Sheldon (2007, 141).

**Besides, I see no other military victory, achieved by the Emperor Hadrian, to which the inscription here Fig. 29.1 could *alternatively* refer. - Exactly as Lorenzo Cigaina (2020, 222) writes: "L'unica guerra impegnativa durante il suo [*i.e.*, Hadrian's] regno è rappresentata dalla repressione della rivolta di Bar Kochba".**

*Consequently, I maintain my hypotheses, presented in this Chapter*

I follow 1.) those scholars (G. ALFÖLDY 1996 = here Fig. 29.1; W. ECK 2003; M. FUCHS 2014; C. BARRON 2018), who have argued that the inscription CIL VI 974 = 40524 (here Fig. 29.1) belonged to an honorary statue (possibly standing on top of an arch), which was dedicated by the Senate and the Roman People to Hadrian in order to commemorate his suppression of the Bar Kokhba Revolt. As an important part of this hypothesis has been argued by those scholars that this "victory monument" (so W. ECK 2003, 163) of Hadrian had on purpose been erected 'within', 'beneath', or 'in front of' the Temple of *Divus Vespasianus*. To this scenario, I have myself added -

2.) my own suggestion, according to which this inscription (here Fig. 29.1) belonged to the (lost) prototype of the portrait-statue of Hadrian, of which almost 30 copies survive, the most famous one being the statue from Hierapydna at Istanbul (cf. here Fig. 29). This hypothesis is based on the following observations by other scholars and by myself:

Paul Leberecht Strack (1933 II, 138, no. 291, Pl. IV) wrote that Hadrian's coins (here Fig. 129) were 'not issued before AD 134'. He was also first to identify on those coins the crocodile as such, and suggested that this crocodile could a) 'mean the enemy in general', and could b) 'just as well refer to (a victory in) Palestine';

Annalina Caló Levi (1948, 30-33-35, 37-38), who followed Strack (1933), was first to consider that Hadrian's coins (here Fig. 129) commemorated Hadrian's suppression of the Bar Kokhba Revolt, but then abandoned this idea; she was also first to suggest that these coins represent an existing portrait. She identified this statue with the prototype of Hadrian's portrait from Hierapydna (here Fig. 29), which, in her opinion, was erected at the cenotaph of Antinous in Rome. Caló Levi illustrated a relief of a Pharaoh from the Temple of Horus at Dendera in Egypt (here Fig. 129.1), who is shown in the act of killing a crocodile. The meaning of this Egyptian iconography is well known. Like other scholars, I follow Caló Levi's suggestion that, because of the striking iconographic similarities with this Egyptian relief (here Fig. 129.1), Hadrian, on his coins (here Fig. 129), is portrayed 'as King of Egypt'. This implies that Hadrian, by definition, like an Egyptian Pharaoh, had the obligation to fight the 'evil' (*i.e.*, the Pharaoh the enemies of the Egyptian state/ and Hadrian the enemies of the Imperium Romanum), which is symbolized by the crocodile. Or, in other words, that Hadrian had the obligation of 'fighting the enemy in general', to borrow Strack's (1933) above-quoted phrasing.

Cornelius Vermeule (1981, 24-25), who followed Annalina Caló Levi (1948), was first to suggest that Hadrian's portrait-type (here fig. 29) "from Hierapydna on Crete (a legionary port of embarkation to the East)", was created to commemorate the emperor's suppression of the Bar Kokhba Revolt. Vermeule (1981, 25) was also first to observe that the pose (interpreted by him as "'Virtus-pose'") and the iconography of this statue-type intentionally copied the representation of Vespasian: "... the famous JVDAEA CAPTA *sestertii* of

Vespasian [here **Fig. 130**], where the latter [*i.e.*, Vespasian] had assumed armor and an identical pose [as Hadrian on his coins and in his statue from Hierapydna; here **Figs. 129; 29**] to celebrate the capture of Jerusalem and the destruction of the holiest Temple ... it may signify the seriousness of the Jewish uprisings in 116 to 117 or 132 to 134 ... The latter date would accord better with the mature portrait of Hadrian [here **Fig. 29**]. But Vermeule did not mention that Hadrian's endowment with a *parazonium* on these coins (here **Fig. 129**) was likewise copied after the IVDAEA CAPTA coins of Vespasian (here **Fig. 130**);

**Birgit Bergmann (2010b) has suggested that Hadrian's portrait-type (here Fig. 29) was created after Hadrian's foundation of the Panhellenion 131/132, and was especially frequently copied after Hadrian's suppression of the Bar-Kokhba Revolt. Personally, I have a problem with the first part of this hypothesis though, because the prototype, after which Hadrian's portrait from Hierapydna (here Fig. 29) was copied, shows the cuirassed Hadrian in the same 'victor pose' as Vespasian and Titus in their IVDAEA CAPTA coins (cf. here Figs. 130; 131);**

Michaela Fuchs (2014, 127-131) has followed Birgit Bergmann's (2010b) suggestions, and, therefore, refers to Hadrian's portrait (here **Fig. 29**) as belonging to his 'Piräus-Hierapydna' statue-type. Fuchs (2014, 129-130 with ns. 40-44, Fig. 7 [cf. here **Fig. 129**]) suggests that the coins, issued by the emperor, show Hadrian in the pose of Mars Ultor, and that this pose is exactly the same as that of his portrait-statue (here **Fig. 29**). These cuirassed portrait-statues of Hadrian were, in her opinion, dedicated to the emperor after his suppression of the Bar Kokhba Revolt, and showed him in an "Angleichung" (assimilation) to the god Mars. In addition to this, Fuchs (2014, 130) observes that Hadrian is holding on his coins (here **Fig. 129**) a *parazonium* in his left hand, which, according to her, 'indicates that the victories, celebrated with these coin, were won by the Roman legions'. But because Fuchs has overlooked Vermeule (1981), she ignores the fact that this iconographic detail is likewise copied from Vespasian's IVDAEA CAPTA coins (here **Fig. 130**);

Sam Heijnen (2020, 200-204) refers to those portraits of Hadrian (cf. here **Fig. 29**), as to Hadrian's "Eastern breastplate type", the relief decorations of the cuirasses of those portraits of Hadrian follow Heijnen's "trophy type". Heijnen (2020, 203) mentions that "**during the Flavian period, trophies were used in statuary representations of the emperors to refer to their conquests of Judaea and Germania [my emphasis]**". At the end of his discussion of his "Eastern breastplate type" (cf. here **Fig. 29**), Heijnen (2020, 204) comes to the following conclusion: "**The choice to use the 'trophy-type' [on the cuirass of Hadrian's portrait-statue, here Fig. 29, and on the replicas of this statue] as an anchor might have been influenced by the fact that this type has been used before to commemorate the conquest of Judaea under the Flavians. However, even regions that did not suffer from rebellions directly employed the military cuirass with the eastern breastplate type [of Hadrian] (albeit without the barbarian motif) to express that their age of prosperity was thanks to the eternity of Rome and the emperor's efforts to ensure peace [my emphasis]**" (!);

To Lorenzo Cigaina (2020) findings I will come back below.

My only own additional observations are: I have realized that not only Hadrian's pose and the fact that he is wearing a cuirass on his coins (here **Fig. 129**) had intentionally been copied after the representation of the Emperor Vespasian on his IVDAEA CAPTA coins (here **Figs. 130**), as observed by Cornelius Vermeule (1981, 24-25). Exactly the same iconography appears *a*) also on the IVDAEA CAPTA coins of the Emperor Titus; and *b*) on these coins the Emperor Hadrian (here **Fig. 129**), in addition to this, is holding a *parazonium* in his left hand, exactly as Vespasian and Titus on their IVDAEA CAPTA coins (here **Figs. 130; 131**).

The reasons for my hypothesis are, therefore:

**Hadrian issued his coins (here Fig. 129) at Rome, 'not earlier than AD 134' (so P.L. STRACK 1933); A. Caló Levi (1948) realized that Hadrian's portrait from Hierapydna (here Fig. 29) appears on Hadrian's coins (here Fig. 129). This portrait of Hadrian is, therefore, in my opinion, likewise datable 'not earlier than AD 134'; C. Vermeule (1981) was first to suggest that Hadrian's portrait-statue from Hierapydna commemorated Hadrian's suppression of the Bar Kokhba Revolt; he added to this the observation that**

the represented age of Hadrian further supports this hypothesis; the pose, the cuirass, and the *parazonium* of the representation of Hadrian on his coins (here Fig. 129) are intentional copies of the representations of Vespasian and Titus on their IVDAEA CAPTA coins (so C. VERMEULE 1981 and myself; cf. here Figs. 130; 131); Hadrian's cuirass of the statue-type (here Fig. 29) is decorated with S. Heijnen's "trophy type", that had been used by the Flavian emperors "to commemorate the conquest of Judaea under the Flavians"; cf. Heijnen (2020, 204); L. Cigaina (2020, 219) adds to this new data from Crete: there, in AD 133-136, Hadrian improved a major, pre-existing road. Cigaina convincingly suggests that the emperor did this in order to guarantee the transportation and supply of the army that was involved in his suppression of the Bar Kokhba Revolt in *Judaea*. In Crete five (or six?) replicas of Hadrian's portrait-statue from Hierapydna were found. According to Cigaina (2020, 222), all the copies of this portrait-type of Hadrian are datable between AD 132-138. And because Hadrian built this major road in Crete in AD 133-136, Cigaina (2020, 222) convincingly suggests that those five (or six?) honorary portrait-statues of Hadrian in Crete were dedicated to commemorate Hadrian's suppression of the Bar Kokhba Revolt.

Taking all those facts together, I maintain my hypothesis that the iconography of Hadrian's statue-type, to which his portrait from Hierapydna (here Fig. 29) belongs, may, in my opinion, be regarded as an 'illustration, or else a duplication of', the content of the inscription *CIL VI 974 = 40524 = here Fig. 29.1*.

Or, in other words: I suggest, that the prototype of the statue from Hierapydna (here Fig. 29) may be regarded as the honorary statue, dedicated (according to G. ALFÖLDY 1996 = here Fig. 29.1, C. BARRON 2018, and W. FUCHS 2003) to Hadrian in AD 134/5, 135 or 135/6 (according to W. ECK 2003, 162, n. 35) by the Senate and the Roman People to commemorate the emperor's suppression of the Bar Kokhba Revolt, to which the fragmentary inscription (*CIL VI 974 = 40524*; here Fig. 29.1) had once belonged. This inscription, in its turn, was found in the *Forum Romanum*, or very close to the Temple of *Divus Vespasianus*.

Provided all that were true, the facts that :

1.) the pose, the cuirass, and the *parazonium* of the representation of Hadrian on the reverses of his coins (here Fig. 129) are intentional copies of the portraits of Vespasian and Titus on their IVDAEA CAPTA coins (here Figs. 130; 131) (C. VERMEULE 1981; and myself);

2.) the decoration of Hadrian's cuirass (here Fig. 29) copies intentionally the "trophy type" iconography, used by the Flavian emperors "to commemorate the conquest of Judaea under the Flavians" (S. HEIJNEN 2020);

3.) according to Lorenzo Cigaina (2020) the five (or six?) replicas of Hadrian's portrait-statue from Hierapydna (cf. here Fig. 29) in Crete were dedicated in connection with Hadrian's improvement in AD 133-136 of a major road in Crete to guarantee the transportation and the supply of his army that suppressed the Bar Kokhba Revolt in *Judaea*;

- may be regarded as supports of Géza Alföldy's reconstruction of the missing parts of the inscription *CIL VI 974 = 40524 = here Fig. 29.1*), because in this reconstruction Alföldy had expressed exactly the same thoughts.

I, therefore, repeat here again, what Eck (2003, 163) has written concerning this point: "If Hadrian allowed the senate to regard his achievement in Judaea as continuing Vespasian's victory, or even exceeding it, [with n. 38] what would be a more fitting place for the victory monument than the temple of *divus Vespasianus*? [with n. 39, quoting for the latter, very brilliant, idea, Anthony R. Birley 1997, 287; my emphasis].

In his n. 38, Eck writes: "*CIL VI 40524* is reconstructed by Géza Alföldy in this spirit. Cf. no. [corr.: n.] 35 above [= here Fig. 29.1]".

In the following are quoted *verbatim* those passages from Annalina Caló Levi (1948), Pavlina Karanastasi (2012/2013) and Michaela Fuchs (2014) that I have referred to above.

Analina Caló Levi (1948, 30-31) wrote about Hadrian's coin-type (cf. here Fig. 129) :

"Among the coin-types of Hadrian there is one which never has been satisfactorily explained. On this type Hadrian appears in military dress. He is standing right, holding a spear and a parazonium, with his left foot on a crocodile [with n. 1] (Fig. 1). These coins (bronze and silver) [page 31] can certainly be dated in the last years of Hadrian's reign. Laffranchi [with n. 2] dates them to the time of Hadrian's journey to Egypt (A. D. 130-131). However, the later date of *c.[irca]* A. D. 134-136 given by Mattingly [with n. 3] seems more acceptable, Strack [with n. 4] also believes the type to be not earlier than A. D. 134.

As far as the meaning of the scene is concerned, the remarks of both Mattingly and Strack have to be examined [with n. 5]. Strack's explanation excludes a reference to Hadrian's journey to Egypt. The motive, in his opinion, is a victory motive; but he queries whether the crocodile might not be a symbol of Palestine or of the enemy in general [my emphasis] ...

Mattingly also believes the motive to be a victory motive since he says "type ... unexplained. The crocodile is the symbol of Egypt, and we know of no revolt in Egypt under Hadrian's rule" [my emphasis].

In her note 1, Caló Levi wrote: "Sestertii: Mattingly, *British Museum Catalogue of Coins of the Roman Empire*, vol. iii [1936], p. 475, nos. 1552, 1553, Pl. 89,2 (cf. Cohen, *Descriptions historique des monnaies frappées sous l'empire romain*, vol. ii [1862]. Hadrien nos. 1380-2, 1384); dupondius: Mattingly, *op.cit.*, 1383, 1385). The accessory under the foot of Hadrian is not described as a crocodile by Mattingly for the denarius (*op. cit.*, p. 338\*), nor by Cohen (*op.cit.*, no. 1503). However Strack identifies it as a crocodile (Strack, *Untersuchungen zur römischen Reichsprägung des II. Jahrhunderts*, vol. ii [1933], no. 291, Pl. IV). Our Fig. 1 [= here Fig. 129] is from a cast of a sestertius of the Museo Nazionale of Naples: I owe the photograph to the courtesy of Dr. C. Pietrangeli of Rome [my emphasis]."

In her note 2, she wrote: "Laffranchi, in *Numismatische Zeitschrift* N. F., 19 (1926), p. 117".

In her note 3, she wrote: "Mattingly, *op.cit.*, p. clxxxii".

In her note 4, she wrote: Strack, *op.cit.*, p. 138".

In her note 5, she wrote: "Cf. nn. [notes] 3 and 4".

Caló Levi (1948, 33-34) observed that because of the presence of the crocodile on Hadrian's coins (cf. here Fig. 129) the represented iconography must somehow refer to Egypt. In her opinion, only the victory over the Jews in AD 134 could have been celebrated with these coins, but because, in her opinion, to commemorate this victory an iconography with such an Egyptian "accent" could not possibly have been used, she suggested that those coins rather celebrate "the victorious power of the emperor in general [my emphasis]":

"Taking thus the connection with Egypt for granted, the nature of this connection is to be considered. The motive cannot signify anything but victory. However, while a motive of this kind may refer to a specific victory over a military enemy, it may also refer to the victorious power of the emperor in general. This aspect of the emperor's personality, emphasized over and over again on coins, very often without signifying any actual or specific victory, found expression in statuary also. The famous statue found at Hierapytna [with n. 13], for instance, shows Hadrian in an attitude very similar to the one on the coin-type in consideration. The barbarian enemy he is trampling upon is not the personification of a people recently vanquished by the emperor, but a symbol of his vanquished enemies in general. The victory motive of the coin-type under consideration is to be explained under these more general terms. The scholars already mentioned [with n. 14] have pointed out that there was no victory in Egypt under Hadrian's rule [with n. 15]. The only military victory which could have been celebrated on our coins is the one over the Jews in A. D. 134. A reference to this victory cannot be seriously considered: [page 34] there

would be no reason why, on a Roman coin - and the coins of Hadrian in general celebrate the peaceful rather than the warlike events of his rule - a victory over an enemy should be celebrated with such an Egyptian accent [my emphasis]".

In her **note 13**, Caló Levi wrote: "Mendel ... [*i.e.*, here C. MENDEL 1914], ii, pp. 316 ff.; On the general meaning of the barbarians as attribute of the emperor see Levi, in *American Journal of Archaeology* 1 [*i.e.*, the 1. fascicle], 1946, p. 287".

In her **note 14**, she wrote: "See above, p. 1 f. [cf. A.C. LEVI 1948, 30-31, quoted *verbatim supra*]".

In her **note 15**, she wrote: "**The Jewish insurrection which took place in Judaea and in Egypt during the last years of Trajan's reign was already completely put down by 117 P.-W.-K. (See *Real-Encyclopädie*, vol. i, col. 500 [my emphasis])**".

Caló Levi (1948, 35) discussed the meaning of the relief from the Temple of Horus at Dendera in Egypt, illustrated on her Fig. 5 (cf. here **Fig. 129.1**) which represents an Egyptian Pharaoh who is killing a crocodile:

**The [Egyptian] kings were considered incarnations of Horus and they were called "Horus", the oldest name among the traditional titles of the king. The king, like Horus, was considered the vanquisher of evil and the purveyor of good. On the reliefs of the temples of Horus at Edfu and Dendera both Horus and the king are represented as vanquisher of evil animals, among them the crocodile [with n. 22] (Fig. 5 [= here Fig. 129.1]; my emphasis)**".

In her **note 22**, Caló Levi wrote: "Roeder, *op.cit.*, col. 1115; Chassinat, *Le Temple d'Edfu (Mémoires de l'institut français d'archéologie orientale de Caire, vol. XX)*, vol. iii, Pl. LXXVII. **Our Fig. 5 [= here Fig. 129.1] is from Mariette, Dendérah, vol. ii [1870-1874], Pl. 75a [my emphasis]**". Cf. her note 17: "On the crocodile god see Roeder, in Roscher, *Ausführliches Lexikon der griech.[ischen] und röm.[ischen] Mythologie*, vol. iv, cols. 1093 ff."

Caló Levi (1948, 36-37) suggested that Hadrian's coins (here **Fig. 129**), because of their similarity with the Egyptian iconography of 'the king kills a crocodile' (here **Fig. 129.1**), represent 'Hadrian as King of Egypt':

"It seems logical to reach the conclusion, therefore, that Hadrian appears in the coin-type discussed here as the ruler of Egypt the [page 37] incarnation of Horus, and as the vanquisher of the evil and hostile forces symbolized by the crocodile".

*As the next Section on the tomb of Antinous and the Antinous Obelisk will show, Annalina Calò Levi (1948) turns out to have been one of the first scholars to suggest that the Antinous Obelisk (here Fig. 101.1) stood on a cenotaph of Antinous*

In Annalina Caló Levi's (1948, 37-38) opinion the representation of Hadrian on the reverses of his coins (cf. here **Fig. 129**) was based on a portrait-statue of Hadrian that had been created not much earlier than those coins, thus referring to the (lost) prototype of the statue of Hadrian from Hierapydna (cf. here **Fig. 29**).

**As for the function of this original portrait-statue of Hadrian, Caló Levi was of the opinion that it was on display at Antinous's cenotaph at Rome, next to which the Antinous Obelisk was erected :**

**"The fact that the image of an emperor treading down a crocodile never appeared before on a Roman coin leads to the assumption that a statue erected not much earlier than the time at which [page 38] the coins were issued provided the model for the die-engraver [with n. 34]. This statue [thus referring to the prototype of Hadrian's portrait-statue from Hierapydna; cf. here Fig. 29] was executed in artistic Graeco - Roman forms but according to Egyptian ideas, a composite frequently found on monuments in Egypt. It is**

also found in Italy in connexion with Isiac sanctuaries. This composite style is clearly apparent on many of the Alexandrian coin types.

**It is rather tempting now to advance an hypothesis regarding the occasion for the erection of the statue [i.e., the prototype of Hadrian's portrait from Hierapydna; cf. here Fig. 29]. It has been pointed out above that Hadrian's coin-type cannot be dated earlier than A. D. 134.** Although Antinous died in A.D. 130, he does not appear on Alexandrian coins before A. D. 134-135, and Greek coins of the East point to a memorial festival held for him in A. D. 134 [with n. 35]. No festival for Antinous is recorded for Rome.

**But a monument found there shows, in its hieroglyphic inscriptions, that a cenotaph was erected in Rome for Antinous. This monument is an obelisk, now on the Pincio in Rome [with n. 36] which most probably decorated the cenotaph. A likely date for the erection of both cenotaph and obelisk is after A. D. 134. It seems possible that Hadrian's statue [i.e., the prototype of here Fig. 29] was part of the decoration of Antinous' cenotaph. The hieroglyphic inscription of the obelisk mentions the fact that the temple of Antinous at Antinoe [i.e, Antinoopolis in Egypt], too, was decorated with statues in Egyptian, and also in Greek, style. [with n. 37; my emphasis]"**

In her **note 34**, Caló Levi wrote: "Lehmann-Hartleben, *Die Trajanssäule*, p. 17".

In her **note 35**, she wrote: "Blum, in *Journal Intern. d'arch. numismatique*, xvi, 1914, pp. 33 ff.; Vogt, *Die alexandrinischen Münzen*, p. 106; Bosch, *Die kleinasiatischen Münzen der römischen Kaiserzeit*, ii, p. 35; also Baldwin, *Numismatic Notes and Monographs*, 17 (1923), pp. 1 ff.; Toynbee, in *Journal of Roman Studies*, xxxiv, 1944, pp. 65ff."

In her **note 36**, she wrote: "Erman, in *Römische Mitteilungen*, xi, 1896, pp. 113ff. ...; Hülsen, in *Röm. Mitt.*, xi 1896, pp. 122ff.; Marucchi, *Gli obelischi egiziani di Roma*, pp. 132ff.; Erman, in *Abhandlungen der preuss. Akademie der Wissensch.*, 1917, p. 10ff.; Hülsen, in *Berliner philol. Wochensch.*, 1919, cols. 259ff.; Platner-Ashby, *A Topographical Dictionary of Ancient Rome*, p. 366; Lugli, *I monumenti antichi di Roma e suburbio*, vol. iii, pp. 485ff.; Scharff, in: Otto, *op.cit.*, p. 639, n. 5". Cf. her note 21: "Scharff, in Otto, *Handbuch der Archäologie*, vol. i ...".

In her **note 37**, she wrote: "This is, incidentally, an interesting piece of information for the knowledge of the art of Egypt during the Roman period, a field which is still to be thoroughly investigated ...".

**Analina Caló Levi's (1948, 38 with n. 36) just-quoted hypothesis that the original statue of Hadrian, of which the statue from Hierapydna (cf. here Fig. 29) may be regarded as a copy, could have decorated Antinous's cenotaph at Rome, has not found any followers. But because Caló Levi (1948) has suggested 'that the original statue of Hadrian, of which the statue from Hierapydna (cf. here Fig. 29) may be regarded as a copy, could have decorated Antinous's cenotaph at Rome', I allow myself in the following a digression on the recent research on the tomb of Antinous.**

*The research published in my earlier Study (2017): on the tomb of Antinous at Antinoopolis, on his (alleged) tomb at Hadrian's Villa near Tivoli, on his cenotaph at Rome, and on the two pertaining Antinous Obelisks*

**Fig. 101.a. Cf. G.B. Cipriani (1823, with Tav. 1; 2), his discussion and etchings of the 12 (Egyptian) obelisks in Rome. The caption of his Tav. 1 reads: "Dodici Obelischi Egizj, che si osservano rialzati ad ornamento della Città di Roma, posti secondo ordine della loro rievazione". The caption of his Tav. 2 reads: "Fusti dei dodici Obelischi dei Egizj, che si osservano rialzati ad ornamento della Città di Roma, posti secondo il grado della loro altezza". Cipriani's etchings of those 12 obelisks are measured: the tallest one is the Lateran Obelisk. Cipriani has also discussed and drawn Domitian's obelisk, which he refers to in his text and on his plates as: "Agonale di Piazza Navona", see his Tav. 1; Tav. 2 (in both Domitian's obelisk is the fifth from left); as well as the Antinous Obelisk, called by him "Aureliano della Passeggiata [on the Pincio]", see his Tav. 1 (the Antinous Obelisk is the second from right); Tav. 2 (the Antinous Obelisk is the fourth from right).**

For a discussion of the documentation of the twelve (Egyptian) obelisks in Rome by Giovanni Battista Cipriani (1823); cf. below, at *The second Contribution by Franz Xaver Schütz Wie schwer war der ägyptische Obelisk, der heute auf der Piazza di S. Giovanni di Laterano in Rom steht?*

For definitions of the *status quaestionis* concerning almost all the subjects revolving around the Antinous Obelisk, that will be mentioned in the following; cf. now the article by the Egyptologist Richard Bruce Parkinson ("Imaginary Histories: Ancient Egypt in the writings of Marguerite Yourcenar and Philippe Derchain", 2019), who also discusses in great detail my relevant hypotheses, published in 2017.

See also Paolo Liverani ("Antinoo a Roma: l'obelisco e la tomba", 2022), with whom I could discuss my relevant ideas, when I was writing my *Study* of 2017. He had been kind enough to provide me with the manuscript of this article, allowing me also generously to quote from it. - To this I will come back below.

Liverani (2022) follows most of Grenier's (2008) translations and interpretation of the hieroglyphic inscriptions of the Antinous Obelisk, whereas I myself follow those scholars, who have rejected most of Grenier's relevant hypotheses.

For Antinous, his myth, and the controversy concerning the original locations of both his tomb and his cenotaph, and his two pertaining obelisks. Cf. Häuber (2017, 341-345 with ns. 93-114, especially ns. 111, 112; cf. pp. 442-452: "**Appendix 8. The controversy concerning the original location of the Antinous Obelisk (Fig. 9 [= here Fig. 101.1])**").

In this *Chapter* are discussed the locations, suggested for the tomb of Antinous: the real tomb at Antinoopolis (but which has also been located in the *Diaeta Adonaea* on the Palatine in Rome, in the *Horti Domitiae*, near Hadrian's Mausoleum at Rome, and in the Villa Hadriana near Tivoli !), and his cenotaph, which has been assumed in the *Horti Domitiae*, next to Hadrian's Mausoleum at Rome - and their pertaining obelisks.

**Fig. 101.1. The Antinous Obelisk on the Pincio in Rome, also known as the 'Barberini Obelisk' and as 'Monte Pincio Obelisk'. Originally commissioned by Hadrian for the tomb of Antinous at Antinoopolis, or for a cenotaph of Antinous at Rome, the location of which is controversial. 'Elagabalus' copied Augustus' concept of placing an obelisk on the *spina* in the *Circus Maximus*, when he erected this obelisk on the *spina* of the *Circus Varianus* in the *horti Spei Veteris*; Cf. ns. 113, 114, and chapters Domitian's Obelisk, Obeliscus Pamphilius, Appendix 8, Chapter VIII. EPILOGUE (photo: F.X. Schütz 20-IX-2015). Cf. Häuber (2017, 346, caption of Fig. 9, which has been slightly changed).**

See Häuber (2014a, 157, n. 75), for the reason, why I write the name of this emperor with inverted commas: 'Elagabalus': "Since this emperor was only called 'Elagabalus/Heliogabalus' after his lifetime, I write his cognomen with inverted commas, following Bruun 1997a, [*i.e.*, here, C. BRUUN 1997] p. 4; cf. pp. 1-2".

**Cf. Häuber (2017, 442): concerning Grenier's and Coarelli's (1986) original location of the real tomb of Antinous and of the Antinous Obelisk at the *Diaeta Adonaea* on the Palatine, in the (later) Vigna Barberini, I write :**

"In an earlier study, Filippo Coarelli and Jean-Claude Grenier [1986] had located the tomb of Antinous on the Palatine, a suggestion which has been refuted in the meantime. For a discussion, cf. J.-C. Grenier (2008, 43, with n. 22)". - There I have also referred to the *Contribution* by Coarelli (2017, 667 ff.) in the same volume.

For the fact that the hypothesis by Grenier and Coarelli (1986) to locate the tomb of Antinous and the Antinous Obelisk at the *Adonaea* on the Palatine has in the meantime been refuted; cf. also Paolo Liverani (2022, 10 with ns. 9, 10, providing ample bibliography). - Coarelli's text (2017, 669) will be discussed below; cf. Häuber (2017, 452-455): "**Antinous, his myth and his portraits**"; cf. p. 598f., Chapter: "VIII. EPILOGUE");

cf. pp. 659-662: **Frederick E. Brenk**, "**Antinoos Obelisk - My Comments**", who wrote me this text as an E-mail on 28th August 2016. He came on p. 661 to the following conclusions:

**"In any case, the weight of evidence does seem to be on the side of Antinoopolis as the original site of the obelisk and the reference on the obelisk being not to ``in Rome,`` but to Egypt. Renberg [2010] also pretty well demolishes the case for the obelisk being at the ``Antinoeion`` at the Villa Hadriana. Archaeologist[s] would have to pronounce on his objection that there is no footing for the slab upon which an obelisk supposedly was erected (190-191) ...**

P.S. (Addition from 31.08.2016): **Another thought occurred to me. All Egyptian obelisks came from quarries near the Nile and most of them came from Aswan. It should be, or have been possible, to tell whether the granite is from Italy or Egypt. If from Italy, this would rule out its having been manufactured for Antinoopolis [my emphasis]";**

cf. pp. 667-671: **Filippo Coarelli**: "**A proposito di Chr. Häuber, Augustus and the *Campus Martius* in Rome**". On p. 669, Coarelli writes:

**"5) L'obelisco pinciano (p. 346, 442-452) [cf. here Fig. 101.1] non apparteneva a un cenotafio, ma alla reale tomba di Antinoo, come ha dimostrato Grenier, in base alla sua lettura del testo geroglifico. Su questo mi sono già espresso altrove, e mi sembra inutile riprendere qui le mie argomentazioni e quelle di Grenier [with n. 4]. Da respingere è anche la recente proposta di collocare la tomba a Villa Adriana [with n. 5], che richiede lo spostamento dell'obelisco, la cui posizione nel Circo Variano è attestata da documenti rinascimentali [my emphasis]".**

In his **note 4**, Coarelli writes: "Grenier, Coarelli, 1986".

In his **note 5**, he writes: "Mari, Sgalambro 2007";

cf. Häuber (2017, 731): "**Comments by Miguel John Versluys**" (a discussion of his assertion that Antinous is *not* necessarily a historical person);

cf. p. 734: "**Comments by Rafed El-Sayed**" (see below for the *verbatim* quote. El-Sayed observes that so far the *lacuna* in the hieroglyphic inscription on the fourth side of the Antinous Obelisk has not been precisely measured and documented and explains the consequences which this fact has for any attempt to restore this text. The text in this *lacuna* contained part of the description of the location of this obelisk).

But note that in my *Study* of 2017, I had overlooked that also Coarelli (2012, 497- 512, Chapter: "La Formazione dei Palazzi Imperiali; Section: "10. Il complesso di Vigna Barberini"; esp. pp. 530-532; at point 6.) has addressed the just-discussed subjects.

**To Coarelli's (2017, 669) above-quoted statements on the Antinous Obelisk and on the tomb of Antinous, and to Coarelli (2012, 530-532), I should like to add some comments. Let's turn first to his text of 2017 :**

Coarelli (2017, 669) does not quote, and consequently not consider all relevant contributions in my *Study* of 2017: not all of my own texts, nor the texts by Brenk, Versluys and by El-Sayed (*op.cit.*). In my opinion, Coarelli (2017, 669) arrives at the erroneous conclusions that will be discussed below. I myself maintain the hypotheses, at which I myself and my co-authors had arrived in 2017, whom I have followed then and still follow now.

The following points *I-VII*. are interrelated:

**I.) Contrary to Coarelli's (2017, 669) opinion, Grenier's reading (1986; repeated 2008) of the relevant passage of the hieroglyphic text of the Antinous Obelisk is wrong, as Alfred Grimm (1994) and Gil H.**

**Renberg (2010) were able to demonstrate. Besides, contrary to Grenier's and Coarelli's (1986) assertion, the real tomb of Antinous stood at Antinoopolis in Egypt (see below, at point VI.).**

Exactly like Coarelli (2012, 530) states about himself, I myself have not studied the ancient Egyptian language, nor am I able to read hieroglyphs. I have, therefore (2017, 442-452), first of all collected the different readings and interpretations of the hieroglyphic texts of the Antinous Obelisk at the time available to me. Almost all of them were published by Egyptologists, but with for me surprisingly different results.

In his second reading of the hieroglyphic text of the Antinous Obelisk, Grenier (2008, 37) has repeated unchanged that part of his first reading (1986) of the passage comprising the *lacuna* on the 4th side of the obelisk, in which the location of this obelisk was described; cf. Häuber (2017, 443, 445).

For an illustration of Grenier's reconstruction (2008); cf. Liverani (2022, 14, Fig. 2: in the middle).

I have then sent my text comprising all those readings and interpretations of the relevant hieroglyphic text to my good late friend Frederick E. Brenk, who was a noted authority of those subjects, and to the Egyptologist Rafed El-Sayed, and have asked them for advice; cf. Häuber (2017, 447).

Both were kind enough to answer me by E-mail and with their kind consent, I have published their E-mails as the above-mentioned contributions to my *Study*; cf. Brenk (2017), and El-Sayed (2017).

The observations I made in context of my publication of 2017 concerned all the hieroglyphic texts of the Antinous Obelisk, but especially the passage with the *lacuna* on its 4th side, where the original location of this obelisk had been mentioned.

**I have thus arrived at the conclusion that Grenier's (1986, 217-229, esp. p. 223, Figs. 1-4) reading of this text passage, which Coarelli (1986; 2012: see below; and 2017, 669) has followed, is wrong.**

**This fact has been observed by the Egyptologist Alfred Grimm (1994, 82, n. 176), quoted *verbatim* in Häuber (2017, 444; cf. pp. 443, 447); it has also been discussed in great detail by Gil H. Renberg (2010, 181-191, esp. pp. 186-188), quoted in part *verbatim* in Häuber (2017, 450-451). - To this I will come back below.**

See also the comment by Frederick E. Brenk (2017, 659) on *all* those reconstructions of the *lacuna* in the hieroglyphic inscription on the fourth side of the Antinous Obelisk, that I have collected in Häuber (2017, 442-452):

**"I finally got to your materials. I would be very skeptical about the reconstructions [my emphasis]"**.

For the comments by Rafed El-Sayed (2017, 734) on those reconstructions, see below at point II.

See also Pierluigi Romeo's (2007) critique of Grenier's reading of the relevant hieroglyphic text passage; cf. Frischer (*et al.* 2016, 60 with n. 42); quoted *verbatim* in Häuber (2017, 449). Romeo's critique has been rejected by Liverani (2022, 13 with n. 27), who, contrary to myself and Renberg (2010) believes that Grenier's (2008) reading and interpretation of the hieroglyphic texts of the Antinous Obelisk (2008) is in most parts correct.

Grenier and Coarelli (1986); Grenier (2008) and Coarelli (2012; and 2017) took and take for granted that, by reconstructing the hieroglyphic text of this *lacuna*, the original location at Rome of the tomb of Antinous and of the Antinous Obelisk could with certainty be established. But it is not as easy as that. I'm not joking.

The reason being that the real tomb of Antinoos stood at Antinoopolis in Egypt. Consequently, some scholars believe that the Antinous Obelisk stood on a cenotaph of Antinous. So for example already

Annalina Calò Levi (1948, 38 with n. 36, quoted *verbatim supra*), who wrote about the Antinous Obelisk: "which most probably decorated a cenotaph", quoting for this opinion much earlier scholars; myself (2017, 346, 443, 446, 450-452), and also Liverani (2022, 16, quoted *verbatim infra*). In Häuber (2017, 446 with n. 241), I have quoted Liverani's relevant opinion after the manuscript of his article.

Gil H. Renberg (2010, 176, 185-186) believes that the Antinous Obelisk was made in Egypt (or rather its lost original, as he himself suggests); cf. Häuber (2017, 451). Renberg has, in my opinion, demonstrated that the content of the hieroglyphic inscriptions on the Antinous Obelisk made only sense, provided this monument was erected in Antinoopolis; cf. Häuber (2017, 450-452). Frederick E. Brenk (2017, 661, quoted *verbatim supra*) has followed Renberg in both respects (but he has added the reserve that we cannot be sure, where the Antinous Obelisk was manufactured, unless its granite has been tested). - My thanks are due to Rafed El-Sayed, who was kind enough to read this Section, for alerting me to another problem: in theory granite from Aswan could, of course, just as well have been shipped to Rome.

**If true, we must ask ourselves, whether the Antinous Obelisk that we have is the original obelisk, made for the tomb of Antinous at Antinoopolis, or a copy of the original, on which all the hieroglyphic texts of the original obelisk have been repeated without any alterations; cf. Häuber (2017, 450).**

**Cf. Häuber (2017, 446) for the fact that, *inter alia* because of its shape, some scholars have, in my opinion convincingly, suggested that the Antinous Obelisk was created in Rome; cf. p. 451 for the fact that so far the granite of the Antinous Obelisk seems not to have been tested, as Paolo Liverani was kind enough to tell me in a telephone-conversation on 13th September 2016. As quoted above, Frederick E. Brenk (2017, 661) had asked the relevant question.**

Also before it has been suggested that the Antinous Obelisk is the copy of the original obelisk, which stood on the real tomb of Antinous at Antinoopolis in Egypt; so Serena Ensoli Vittozzi (1990, 49-50, with ns. 97-104); quoted after Bernard Frischer (in: Frischer *et al.* 2016, 61). And it has also earlier been suggested that the Antinous Obelisk is the original obelisk, which stood on the tomb of Antinous at Antinoopolis in Egypt, from where it had been brought to Rome in the Severan period; so Hugo Meyer (1994b, 16-20); cf. Häuber (2017, 446).

**If one of the two last-mentioned alternatives should be true, all the efforts to reconstruct the hieroglyphic text in this *lacuna* on the 4th side of the obelisk were, of course, in a certain sense in vain. - At least, provided the aim of the relevant scholar had been to add with his or her publication a contribution to the topography of Rome. Because, as observed by Bernard Frischer (in: Frischer *et al.* 2016, 61), in that case this (lost) text in the *lacuna* of the hieroglyphic text on the 4th side of the Antinous Obelisk had referred to a location at Antinoopolis (!) :**

**"Of course, if one reckons with the possibility of a replicated obelisk [*i.e.*, the Antinous Obelisk here Fig. 101.1] preserving its original inscription even when the inscription's topographical reference to the place of erection is no longer relevant, then the question of whether we can use topographical references on an inscribed obelisk to recover its original context in central Italy becomes moot [my emphasis]".**

Coarelli (2017, 669), apart from rejecting my own hypothesis (cf. C. HÄUBER 2017, 346; cf. the caption of here Fig. 101.1, cf. pp. 443, 446, 450-452), according to which the Antinous Obelisk on the Pincio (here Fig. 101.1) can only have belonged to a cenotaph of Antinous - does not explicitly address any of the new relevant research results, obtained by Brenk, El-Sayed and myself, published in 2017.

**II.) Grenier (1986; 2008) - like all other scholars, who have so far tried to reconstruct the hieroglyphic text in the *lacuna* on the 4th side of the Antinous Obelisk - has not documented the precise size of this *lacuna*, before he has reconstructed the text in this *lacuna*.**

The Egyptologist Rafed El-Sayed (2017, 734) mentions an observation by Erhart Graefe (2012, 223-227), which he develops further: the size of the *lacuna* in the hieroglyphic text on the 4th side of the Antinous Obelisk has so far not been correctly defined, measured and documented by any of the scholars, who were involved in this discussion. El-Sayed explains the consequences of this fact and adds further considerations, why the reconstruction of this text passage is so difficult. El-Sayed also suggests, how this complex problem could be solved:

**"Was die problematische Textpassage der Seite IV des Obeliskens anbelangt, über die ja schon so viel gesagt worden ist, läßt sich m.[eines] E.[rachtens] zunächst feststellen, daß sämtliche Ergänzungen in Unkenntnis der exakten Abmessungen der Lacuna formuliert wurden. Die Kenntnis der Größe der Fehlstelle ist aber eine grundlegende Voraussetzung für Überlegungen die Rekonstruktion des verlorenen Text- bzw. Zeichenbestandes betreffend. Die hierfür nötigen dokumentarischen Bemühungen - eine epigraphische Aufnahme am Objekt und eine photogrammetrische Dokumentation - haben m.[eines] W.[issens] bisher nicht stattgefunden. Allein E. Graefe 2012: (223-227; bes.[onders] 224) ist ausführlich auf die Problematik des wohl bereits postantiken ungenau zusammengesetzten Obeliskens und die Konsequenzen für die Rekonstruktion des zerstörten Textabschnittes eingegangen. Ganz gleich, wie groß die Lacuna auch immer ist, alle Gedanken zur Grammatik bleiben Spekulation bestenfalls Optionen. Auch die Wortsemantik und Phraseologie von *š.t tš* (Hortus der Domäne?) und *nb.t w3s* (Princeps und in der Form *nb.t w3s* auch als eine Bezeichnung für die Stadt Rom?) bleiben wohl vor allem deshalb problematisch, da es sich bei dem Text des Obeliskens um Übersetzungsliteratur handelt. Dies bedeutet m.[eines] E.[rachtens] nach, daß hier Überlegungen die Sprache des Ausgangstextes betreffend weiterhelfen könnten. Was die ägyptische Grammatik angeht, so ließe sich - für den Fall, daß die Rekonstruktion von Graefe, die ohne Partikel (*m/n*) auskommt, zuträfe - auch an eine Genitivkette *š.t tš n nb w3s Hrm* ' `Domäne des Princeps von Rom' oder einen absolut adverbialen Gebrauch von *Hrm* ' in der Bedeutung von `in Rom/Roma' denken. Sollte die Lacuna allerdings größer sein als Graefe angenommen hat, ließe sich an eine völlig andere Restituierung der Textpassage denken [my emphasis]".**

See further on the Antinous Obelisk: El-Sayed (2021, 60, quoted *verbatim infra*).

But note that Coarelli (2012, 531) contradicts my above-made assertion that Grenier has not correctly reconstructed the size of this *lacuna* in the hieroglyphic text on the 4th side of the Antinous Obelisk:

**"... al momento della collocazione sulla base attuale, i due tronconi dell'obelisco vennero ritagliati per farli combaciare, e ciò provocò la scomparsa di una piccola parte del testo. Attraverso le riproduzioni di Zoega, anteriori a tale intervento, Grenier ha potuto stabilire le dimensioni della lacuna, in particolare per quanto riguarda il lato IV, e integrare la presenza probabile di un solo segno. la preposizione *m*, che significa `in'".**

**Di conseguenza, il testo va letto nel modo seguente: `L'Osiris Antinoo giustificato, che riposa in questa tomba (situata) nei giardini dell'imperatore a Roma' [my emphasis]".**

Coarelli himself does not provide a reference for 'Zoega'. But he obviously refers to: Jørgen (translated as 'Georgio' in the title of his publication) Zoega's (1755-1809) book: *De origine et usu Obeliscorum* (Romae 1797). Zoega (1797, 77-79: "§ VIII.") describes the Obeliscus Barberinus [*i.e.*, the Antinous Obelisk] and illustrates on the second-last (unnumbered) foldout plate in this volume drawings of its 4 sides with the hieroglyphic inscriptions, indicating all the *lacunae* in these texts.

**Coarelli (2012, 531), like Grenier (1986; 2008) before him, tacitly assumes that the drawings, published by Zoega (1797), still showed the complete Antinous Obelisk, only broken into three (not two) large parts.**

Before trying myself such a reconstruction of the hieroglyphic text in the *lacuna* on the 4th side of the Antinous Obelisk, I would, therefore, first of all try to establish, whether or not that assumption is true. As

we have seen above, El-Sayed (2017, 734) mentions instead the possibility that this *lacuna* in the hieroglyphic text may be much larger than assumed by Graefe (2012).

In order to clarify also that question, I would personally prefer the method, suggested by El-Sayed (2017, 734) to create a: "photogrammetrische Dokumentation" of (all four sides) of the Antinous Obelisk, in order to document the *lacuna* in the hieroglyphic text on its 4th side *precisely*. A scholar, who chooses this method will certainly base himself or herself also on the complete documentation that is available for the Antinous Obelisk, for example the just-mentioned drawings, published by Zoega (1797), but especially the measured drawing of the Antinous Obelisk by Giovanni Battista Cipriani (1823, Tav. 1 [= here **Fig. 101.a**]).

**To Coarelli's text (2012), I should like to add the following comments :**

**III.) Already Coarelli (2012, 531) has confirmed his opinion that Grenier's (1986) reconstruction of the hieroglyphic text is correct that once stood in part in the *lacuna* on the 4th side of the Antinous Obelisk, in which the location of this obelisk was described**

As stated above, in my points *I.*) and *II.*), I hope to have demonstrated in 2017, based *inter alia* on the relevant observations of my co-authors Brenk (2017) and El-Sayed (2017), that Grenier's and Coarelli's (1986) relevant assumptions are wrong.

**IV.) Coarelli (2012, 530 with n. 619, pp. 531-532 with n. 624) mentions Grenier's (2008, 37-43) later suggestion, according to which the tomb of Antinous could alternatively have been erected in the *Horti Domitiae*, close to the Mausoleum of Hadrian/ Castel Sant'Angelo. Coarelli (2012, 531-532) agrees with Grenier concerning this point. I myself (2017, 444, 448) have likewise discussed Grenier's (2008) relevant hypothesis and have accepted it as a possibility. - But again: if so, this was not Antinous's real tomb, but a cenotaph of Antinous (see below, at point VI.)).**

Contrary to what was previously believed, the *Horti Domitiae* were the property of Hadrian's natural mother, Domitia Paulina Lucilla *maior*; cf. Häuber (2017, 444 with n. 238), where I quote for this important information Paolo Liverani (2007a, 89); cf. now Liverani (2022, 18-19 with ns. 60-64, with ample bibliography).

Cf. Dietmar Kienast, Werner Eck and Matthäus Heil (2017, 122 [Hadrian]: "Domitia Paulina (*PIR*<sup>2</sup> D 185. FOS 330) [*i.e.*, the mother of the Emperor Hadrian]).

Cf. here **Fig. 58**, labels: Tomb of the Emperor Hadrian/ SEPULCRUM : P. AELIUS HADRIANUS / Castel S. Angelo; HORTI DOMITIAE.

**V.) Coarelli (2012, 531, with n. 623) believes that the (alleged) tomb of Antinous at Rome, which according to his current hypothesis may have stood in the *Horti Domitiae*, close to the Mausoleum of Hadrian, was destroyed by the Emperor Antoninus Pius immediately after his predecessor Hadrian had died. This happened, in Coarelli's opinion, in the course of the abolishment of the cult of Antinous, (allegedly) ordered by Antoninus Pius for the western half of the Roman Empire.**

**Based on the first assumption, Coarelli (*op.cit.*) suggests that the existence of the tomb of Antinous at Antinoopolis, which has been recorded by the late antique author Epiphanius, can be explained with this (alleged) destruction of the (alleged) tomb of Antinous at Rome.**

Cf. Coarelli (2012, 531): "**La notizia tarda che colloca ad Antinoe [*i.e.*, Antinoopolis] i resti del favorito di Adriano [*i.e.*, of Antinous; with n. 623] si spiega a mio avviso con l'eliminazione della tomba romana, certamente ad opera di Antonino Pio, subito dopo la morte del suo predecessore [*i.e.*, Hadrian], nel quadro dell'eliminazione del culto di Antinoo dalla parte occidentale dell'impero. L'obelisco non venne distrutto, ovviamente perché i testi che vi erano iscritti risultavano a tutti incomprensibili [my emphasis]**".

In his **note 623**, Coarell writes: "Epiphanius, *de constantia. Ancoratus* (ed. Hall. [corr.: Karl Holl]) I, 130b. GRENIER-COARELLI 1986, p. 246".

Personally, I do not believe that Coarelli's (2021, 531) just-quoted assumptions are true; cf. below, at points VI.); and VII.).

**VI.) Contrary to the hypothesis, formulated by Grenier and Coarelli (1986), Grenier (2008), and Coarelli (2012; 2017), the real tomb of Antinous stood from the beginning at Antinoopolis in Egypt**

In my opinion, the first part of Coarelli's (2012, 531) above-quoted statement is not true, because I follow those scholars, who have discussed those ancient authors, who have stated that the tomb of Antinous stood - from the very beginning ! - at Antinoopolis. For detailed discussions, not only of Epiphanius, whom also Grenier and Coarelli (1986) and Coarelli (2012) quote, but also of Clement of Alexandria, neglected by Grenier and Coarelli (1986); cf. Gil H. Renberg (2010, 174, 176, 185, and *passim*), Frederick E. Brenk (2017, 659-661), and myself (2017, 449-452).

Clement of Alexandria's (AD 150-circa 215) relevant statement is especially important in this context, because he lived much earlier than Epiphanius (AD 315-403).

Frederick E. Brenk (2017, 660) mentions Renberg's judgement about Clement of Alexandria:

"Renberg also cites Clement of Alexandria (150 - c.[irca] 215), (*Protr.* 49.1-3) [185 and note 103, Renberg]). As he says, Clement lived in Egypt, and not too long after Hadrian, and thus is a more reliable witness than Epiphanius".

**For Epiphanius**; cf. also Henry Chadwick and Mark Julian Edwards ("**Epiphanius**, c.[irca] AD 315-403, born in Eleutheropolis, Palestine. He became a monk, and in 367 bishop of Salamis (2) (Constantia) in Cyprus ...", in *OCD*<sup>3</sup> [1996] 546 [the emphasis is by the authors themselves]).

**For Clement of Alexandria**; cf. also Mark Julian Edwards ("**Clement of Alexandria (Titus Flavius Clemens)**, was born c.[irca] 150, probably at Athens and of pagan parents ... Clement died between 211 and 216 ... in: *OCD*<sup>3</sup> [1996] 345 [the emphasis is by the author himself]).

**Richard Bruce Parkinson (2019, 220) follows the hypothesis, suggested here, and supports it with a further argument :**

**"In any case, the mention of `this mound` could well refer to a cenotaph as opposed to an actual burial place, [with n. 98] meaning that it is possible that Antinous was buried in Antinoopolis, but that the obelisk [*i.e.*, the Antinous Obelisk; here Fig. 101.1] was carved and erected at a cenotaph in Italy. [with n. 99]"**.

In his **note 98**, Parkinson writes: "As suggested early by Hülsen, in: *MDAIR* [*i.e.*, *RM*] 11.2, 1896, 129".

In his **note 99**, he writes: "See Liverani, forthcoming [*i.e.*, 2022]; Häuber, Augustus and the Campus Martius [*i.e.*, 2017], 451-452".

For the fact that Epiphanius and Clement of Alexandria document the tomb of Antinous at Antinoopolis; cf. now also Paolo Liverani (2022, 12-13, with ns. 19, 21).

As already mentioned by Parkinson (2019, 220, n. 99, quoted *verbatim supra*), also Liverani (2022, 16) has now come to the conclusion that the tomb of Antinous stood at Antinoopolis, and that the Antinous Obelisk belonged to a cenotaph of Antinous, which Liverani, following Grenier (2008), assumes in the *Horti Domitiae*, adding on pp. 18-19 further arguments in support of this hypothesis: "Si deve trovare un denominatore che accomuni da un lato **Antinoopoli (dove era un tempio e - secondo le fonti greche [*i.e.*, Epiphanius and**

**Clement of Alexandria] - la tomba di Antinoo), dall'altro la tenuta (romana) dell'imperatore "in cui riposa" Antinoo [with n. 45]. L'elemento comune non può che essere quello funerario, ma non si può avere una vera tomba in due luoghi, come stabilisce chiaramente il diritto romano [with n. 46]. Dobbiamo ritenere che si stia parlando della vera tomba (ad Antinoopoli) e del cenotafio (a Roma) [my emphasis]"**.

In his **notes 45 und 46**, Liverani provides references and further discussion.

Liverani had earlier followed Grenier's (2008) suggestion that the Antinous Obelisk stood on the real tomb of Antinous in the *Horti Domitiae* (cf. *id.* 2010, 16-18); quoted in Häuber (2017, 444, with n. 236). With Liverani's above-quoted statement (2022, 16) that the monument, erected in the *Horti Domitiae*, should instead be identified as the *cenotaph* of Antinous, he follows now Renberg (2010), according to whom Antinous' real tomb stood at Antinoopolis. Liverani's relevant decision has had a very peculiar effect. To demonstrate this point, I quote in the following a passage from Häuber (2017, 451-452), where I had based these observations on the manuscript of Liverani's article (2022), to which I refer in this text as to 'Liverani forthcoming':

"Whereas Liverani (forthcoming [*i.e.*, 2022]) follows Renberg (2010) in so far as he accepts that the real tomb of Antinous stood at Antinoopolis in Egypt, Liverani maintains his earlier view that the Antinous Obelisk was erected in the *horti Domitiae* at Rome (on, or at Antinous' cenotaph). Whereas previous scholars, concerning the question, whether the hieroglyphic inscription on the Antinous Obelisk refers to Antinous' tomb in Egypt or in Italy, opted for only one of these alternatives [cf. *supra*, at point I.], Liverani (forthcoming [*i.e.*, 2022]) thus suggests the apparent paradox [page 452] that both hypotheses are true. Liverani (forthcoming [*i.e.*, 2022]) ... also accepts the idea of Renberg (2010) concerning the passage of the hieroglyphic inscription discussed above ('He [*i.e.*, Antinous] goes out from his tomb (lit. "holy place") to the numerous temples of the entire land, and he heals the sick among the needy poor by sending a dream' [translation: G.H. RENBERG 2010, 176 with n. 66; quoted in more detail in C. HÄUBER 2017, 450]). **Liverani (forthcoming [*i.e.*, 2022]) agrees that this passage must refer to the real tomb of Antinous at Antinoopolis. On the other hand, he claims that the passage, discussed in the previous section of this Appendix [*i.e.*, the text in part in the *lacuna* of the hieroglyphic text on the 4th side of the Antinous Obelisk], refers to Antinous' cenotaph in Italy (assuming that this stood at Rome). Liverani (forthcoming [*i.e.*, 2022]) is thus the first modern commentator who suggests that the Antinous Obelisk is covered with an hieroglyphic inscription that refers to *both* monuments: Antinous tomb at Antinoopolis, and his cenotaph at Rome. If true, this hypothesis implies that the Antinous Obelisk was made for his cenotaph at Rome (or elsewhere in Italy?), and that it is, therefore, *the* original [my emphasis]"**.

**VII.) Antoninus Pius has not abolished the cult of Antinous in the western half of the Roman Empire, as asserted by Coarelli (2012, 531)**

According to Paolo Liverani (2022, 19) the cult of Antinous was still alive in Rome until the Severan period: "In conclusione, se la ricostruzione sopra avanzata è corretta, dobbiamo aggiungere il testo geroglifico dell'obelisco di Antinoo ai *Fontes ad topographiam veteris Urbis Romae pertinentes*, **in quanto ci permette di collocare con discreta precisione l'obelisco stesso e il cenotafio di Antinoo in prossimità del Sepolcro di Adriano (Castel Sant'Angelo) almeno fino all'età severiana, quando il venir meno dell'interesse per il culto del giovane bitino [*i.e.*, Antinous] permise il riuso dell'obelisco, che venne spostato nell'area degli *horti della Spes Vetus*, forse a decorare il Circo Variano [my emphasis]"**.

For the hieroglyphic inscriptions on the Antinous Obelisk; cf. also Emanuele M. Ciampini (2004, 168-187: "N. 9 - Obelisco di Antinoo (o del Pincio o Barberini) (I)", Fig. 19). This publication has likewise not been considered by Coarelli (2012; 2017).

For a discussion of his new reconstruction of the Mausoleum of Hadrian; cf. Paolo Vitti ("Le mausolée, la ville et l'empereur : une nouvelle interprétation architecturale de la tombe d'Hadrien", 2022). Vitti (2022) does not mention the fact that some of the above-mentioned scholars have either located the cenotaph of Antinous in the vicinity of the Mausoleum of Hadrian, or even the tomb of Antinous.

*Positive responses to my earlier Study on Antinous (2017)*

See the article by the Egyptologist Richard Bruce Parkinson ("Imaginary Histories: Ancient Egypt in the writings of Marguerite Yourcenar and Philippe Derchain", 2019, *passim*). As mentioned above, Parkinson (2019) discusses all my relevant hypotheses, suggested in 2017, in great detail, and follows the hypothesis, suggested *inter alia* by myself, that the Antinous Obelisk (here **Fig. 101.1**) stood on a cenotaph of Antinous.

See also the article by the Egyptologist Rafed El-Sayed (pp. 58-60: Section "3.3 Panopolis - Alexandria - Rom"; p. 60, at: "Panopolis and Rome", in: Rafed El-Sayed, Konstantin C. Lakomy, Elisabeth Ehler, Cäcilia Fluck, Anne Herzberg-Beiersdorf and Olivia Zorn (*Akhmîm Ägyptens vergessene Stadt*, 2021); English edition: *Akhmîm Egypt's forgotten city*:

**"In Ptolemaic times, Panopolitans were already active as priests at sanctuaries dedicated to Egyptian deities in Italy. This is evidenced by two statue fragments found during excavations in Isis sanctuaries near the city of Rome (Antiquarium Comunale del Celio, 2411) and Campania (Museo Archeologico Nazionale di Napoli, 241834). [with n. 10; my emphasis]**

Egyptian monuments and papyrus-finds relating to Panopolis, now in Rome, Berlin and Dublin, supplement the reports of Roman historians on the visits to Egypt by the Roman emperors Hadrian (r.[eigned] 117-138) and Diocletian (r.[eigned] 284-305).

**Two of these monuments - the so-called Antinous Obelisk now erected on Monte Pincio in Rome and a stela in the Egyptian Museum Berlin (ÄM 22489) (Figs. 1-3) - are directly related to the visit of emperor Hadrian, who reached Egypt in the summer of the year 130, on his second journey of several years duration. After founding the Middle Egyptian city of Antinoopolis a year later, Hadrian reached Panopolis, some 200 km to the south, where he had the temple of Min shown to him. The priest of Min Pa-di-Hor-neb-khem ('the one given by Horus-of-Letopolis'), who guided the emperor through the temple, is also considered the original author of the text written for the Antinous obelisks, one of which is still in Rome today. [with n. 11].**

**The stela of this priest from Akhmim is perhaps the last evidence of a skill that fell into disuse almost everywhere in Egypt from Roman times onwards, namely the command of the ancient Egyptian language and hieroglyphic writing, as well as the quality of relief. It is all the more [page 61] regrettable that this stela, which came to Berlin at the beginning of the 20<sup>th</sup> century, was destroyed during the Second World War (Figs. 1-2) [my emphasis]"**.

In his **note 10**, El-Sayed writes: "Cozzolino 1999, 22; Lollio Barberi et al. 1995, 175-176.

In his **note 11**, he writes: "Derchain 1987. For the hypothesis of two obelisks of Antinous, see Häuber 2017, 442-452".

The caption of El-Sayed's **Fig. 1** reads: "Stela ÄM 22489, © Staatliche Museen zu Berlin, Ägyptisches Museum und Papyrussammlung / Archiv".

The caption of El-Sayed's **Fig. 2a-b** reads: "Preserved fragments of stela ÄM 22489, © Staatliche Museen zu Berlin, Ägyptisches Museum und Papyrussammlung / Sandra Steiß".

The caption of El-Sayed's **Fig. 3** reads: Representation of the Antinous (Pinciano) Obelisk in Athanasius Kircher's *Oedipus Aegyptiacus*, after Graefe 2012, fig. 33".

Because I had not understood El-Sayed's (2021, 60) above quoted passage: "After founding the Middle Egyptian city of Antinoopolis a year later, Hadrian reached Panopolis, some 200 km to the south, where he had the temple of Min shown to him. The priest of Min Pa-di-Hor-neb-khem ('the one given by Horus-of-

Letopolis'), who guided the emperor through the temple ..." - I asked him in a telephone-conversation on 9th December 2021 for advice.

**Contrary to what I had expected, Hadrian actually *could* enter the Temple of Min at Panopolis, as El-Sayed was kind enough to explain to me - because as the Roman emperor he was the Pharaoh of Egypt (!). The precedent for this exemption of the normal rule being Alexander in the Temple of Amon at the oasis of Siwa, as El-Sayed further added. - Rafed El-Sayed has kindly allowed me to mention our conversation here.**

For the above-mentioned stela formerly in Berlin; cf. also El-Sayed ("Zur historischen Stadttopographie von Achmîm", 2023, 115 [there this illustration is erroneously referred to as "Abb. 21"], with n. 225, p. 118, Fig. 22. The caption reads: "Stele ÄM 22489 (Kriegsverlust) aus der Zeit Kaiser Hadrians. Der Steleninhaber vor den Göttern von Panopolis : Min, Osiris, Horus-Senedjemib, Harendotes, Kolanthes, Repit, Isis ...").

Because I had also discussed in great detail my ideas concerning Antinous's Obelisk (here **Fig. 101.1**) with Paolo Liverani, when writing my earlier *Study* (2017), he had been so kind as to provide me with his at the time forthcoming article on the subject, from which he had also very generously allowed me to quote passages *verbatim* ("La diffusione e la localizzazione del culto di Antinoo a Roma e in Italia", in: F. Chausson (ed.), *Proceedings of Antinoos: la fabrication d'un dieu (Égypte, Asie mineure, Grèce, Rome, Latium)*).

Assuming that this essay had been published in the meantime, I asked Liverani on 6th December 2021 to write me the relevant reference. Because of the considerable delay of this publication, Liverani had withdrawn it from those Proceedings, had updated this manuscript and divided it into two essays.

Cf. now Paolo Liverani ("*Leo in fabula: l'apoteosi di Antinoo*", 2020a; and "*Antinoo a Roma: l'obelisco e la tomba*", 2022), both of which Paolo was kind enough to send me.

See also *supra*, in Chapter *V.1.i.3.b*); at Section *II.*, which is dedicated *inter alia* to the *Diaeta Adonaea* at the (later) Vigna Barberini on the Palatine. There I have mentioned the discussions of Grenier and Coarelli (1986), Grenier (2008), and Coarelli (2012; 2017) of the tomb of Antinous and his Obelisk, summarized above.

**In the following are quoted *verbatim* those passages from Pavlina Karanastasi (2012/2013) and Michaela Fuchs (2014) that I have referred to above.**

**Pavlina Karanastasi (2012/2013, 352-353, Section: "DIE ÄGYPTISCHE PERSPEKTIVE", after discussing some relevant sculptures) writes concerning the portrait-statues of Hadrian (cf. here Fig. 29) and concerning his coins (here Fig. 129):**

"Diese Denkmäler stellen eine interessante Mischung des altbekannten ägyptischen Schemas des Erschlagens bzw. [beziehungsweise] Niedertretens der Feinde durch den Pharao [with n. 176] mit Elementen der römischen, möglicherweise auch schon der ptolemäischen Bildsymbolik dar, wie das Diadem, die Panzerung, das Schwert und die Lanze des Kaisers.

**Sucht man nun nach einem konkreten freiplastischen Vorbild bzw. [beziehungsweise] nach einem Vermittler für diese Werke, bieten sich als beste [page 353] Kandidaten die Hadriansstatuen aus Kreta im 'östlichen Typus', zuvorderst die Statue aus Hierapytna [cf. here Fig. 29], die nach orientalischem Habitus den Fuß auf den geschlagenen Feind setzt [with n. 177]. Die enge Verbindung des statuarischen Schemas der zuletzt genannten Figur mit Ägypten wird durch eine in die Spätzeit Hadrians datierte stadtrömische Prägung noch deutlicher (Abb. 7 [cf. here Fig. 129]). Der Kaiser, der in einer zum Verwechseln ähnlichen Pose und mit den gleichen Attributen wie die Statue aus Hierapytna dargestellt ist, setzt den Fuß auf das Zeichen von Ägypten, das Krokodil [with n. 178; my emphasis]".**

In her **note 176**, Karanastasi writes: "Schoske 1994; La Rocca 1994; La Rocca 1995 [*i.e.*, here E. LA ROCCA 1995a]; Laubscher 1996. s.[siehe] auch o.[ben] Anm. 169".

In her **note 177**, she provides references and further discussion.

In her **note 178**, she writes: "Zum Münzbild und zu dessen Deutung s.u. [siehe unten] Anm. 191".

The caption of Karanastasi's Fig. 7 (cf. Hadrian's coin here **Fig. 129**) reads: "London, Brit. Mus. [British Museum] Inv. 1972.0711.4 Silbersesterz Hadrians".

Cf. Karanastasi (2012/2013, 356):

**"In der Folge dieser imperialen Münzrepräsentation ist schließlich das bereits erwähnte stadtrömische Münzbild zu sehen (Abb. 7 [cf. Hadrian's coin here Fig. 129]), auf dem Hadrian ganz im Schema der 'Variante Hierapytna' ([cat. no.] 12 Taf. 6,1 [cf. here Fig. 29]) und ihrer Pendants ([cat. no.] 4 Taf. 2,4; [cat. no.] 23 Taf. 6,1) erscheint, den Fuß allerdings nicht auf einen personifizierten Feind, sondern auf ein Krokodil gesetzt, das wohl in eine ähnliche Richtung gedeutet werden kann [with n. 191]. Über den Anlass und Sinn dieser hadrianischen Prägung sind wir nicht genauer informiert; wie die Statuen [which she has discussed before] verbildlichte sie jedoch eine anschauliche Kombination von griechischem, römischem und ägyptischem bzw. [beziehungsweise] orientalischem Kulturgut [my emphasis]"**.

In her **note 191**, Karanastasi writes: "Sesterz (AR) London, Brit. Mus. [British Museum] Inv. 1972, 0711.4; Strack 1933, 138 Nr. 291 Taf. IV; BMCRE III (1936) 8, clxxxii; 475 Nr. 1552.1553 Taf. 89,2; 485 Nr. 167 Taf. 91,3; Levi 1948. Aufgrund der Legende PP (*pater patriae*) ist die Prägung zwischen 128 und 138 zu datieren. Dass hier Hadrian als König von Ägypten, Inkarnation des Horus und Überwinder feindlicher Kräfte, die das Krokodil verkörpert, dargestellt ist, wurde treffend durch Levi (1948, 36 f.) dargelegt. Vgl. [Vergleiche] La Rocca 1995 [*i.e.*, here E. LA ROCCA 1995a], 231 mit N. 191; Laubscher 1996, 236 mit Anm. 54, der zu Recht hervorhebt, dass römische Betrachter das Bild auch ohne Kenntnis des ägyptischen Hintergrunds verstehen konnten [my emphasis]"

Let's now turn to Michaela Fuchs's (2014, 129-130) observations concerning the portraits of Hadrian of her 'Piräus-Hierapytna' statue-type [the context is Fuchs's discussion of a statue-type representing Mars Ultor, its copies, and its distribution] :

**"Die wohl auf dieselbe Vorlage zurückgehenden, handwerklich z. T. [zum Teil] sehr bescheidenen Werke aus Ägypten [with n. 37] spiegeln, ebenso wie die Gruppe 'Piräus-Hierapytna', die Reaktion der östlichen Provinzen auf den jüdischen Aufstand [*i.e.*, the Bar Kokhba Revolt] ...**

**Auf [page 130] einem Münztypus, der 134 n. Chr. oder etwas später von Hadrian und Senat mit übereinstimmendem Rückseitenbild herausgegeben wurde, erscheint in eben dieser Pose des Mars Ultor der Kaiser [with n. 41] (Abb. 7 [cf. here Fig. 129]), wobei er durch die von Legionsoffizieren verwendete Waffe in seiner Linken [cf. p. 129: *i.e.*, the "Parazonium"] zusätzlich als siegreicher Imperator gekennzeichnet ist. Darüber hinaus setzt er seinen linken Fuß auf ein Wesen, das auf besser erhaltenen Exemplaren als ein Krokodil erkannt werden kann. In der Forschung hat sich die Interpretation durchgesetzt, Hadrian sei auf diesen Münzen durch das Motiv des niedergetretenen Tieres als König Ägyptens, als Inkarnation des Horus und Überwinder böser Kräfte dargestellt [with n. 42]. Das Parazonium in der Linken des Kaisers scheint jedoch auf von Legionen errungene Siege hinzuweisen, ein Aspekt, der sich nur schlecht mit der ägyptischen Perspektive vereinbaren lässt. Ein konkreter Bezug zu Ägypten kann wohl kaum hergestellt werden, ob das Tier "das Gefährliche und Feindliche schlechthin" versinnbildlicht oder auch als Symbol für Palästina verstanden werden kann [with n. 43], muss offen bleiben ... In der senatorischen Münzprägung fand die erfolgreiche Beendigung der jüdischen Revolte [*i.e.*, the Bar Kokhba Revolt] kaum einen nennenswerten Widerhall [with n. 48]; darauf nimmt am deutlichsten der erwähnte Münztypus mit Hadrian in der Pose des Mars Ultor [with n. 49] (Abb. 7 [cf. here Fig. 129]) Bezug [my emphasis]"**.

In her note 37, Fuchs writes: "Hofmann 1984, 585-591, Taf. 31; Karanastasi 2012-2013, 351-354 mit Anm. 173, 181 und Abb. 6. **Das freiplastische Vorbild für diese Werke konkret in der Statue von Hierapytna zu vermuten (so Karanastasi 2012-2013, 352-353), erscheint fragwürdig** [my emphasis]".

In her note 41, she writes: "Strack 1933, 138, Nr. 291, Taf. 4 (Denar), Nr. 701, Taf. 11 (Dp-As); vgl. [vergleiche] *BMCRE*, III, 1936, 475, Nr. 1552-1553, Taf. 89, 2 (As); 485, Nr. 1617, Taf. 91, 3 (As); Robertson 1971, 156, Nr. 567-570, Taf. 40; Gorny & Mosch, Auktion 186 a, 8.-9. März 2010, Nr. 2046". - But note that, as already mentioned above, the coins here **Fig. 129** were exclusively issued by the Emperor Hadrian himself.

In her note 42, she writes: "Levi 1948, 30-38; Laubscher 1996, 236 mit Anm. 54; Karanastasi 2012-2013, 356 mit Anm. 191; vgl. [vergleiche] Birley 2001, 287".

In her note 43, she writes: "Strack 1933, 138; vgl. *BMCRE*, III, 1936, CLXXXII".

In her note 48, she writes: "48 Vgl. [Vergleiche] Strack 1933, 126-127, 134-137; vgl. [vergleiche] Birley 2001, 280 (mit weiteren Angaben in Anm. 5)".

In her note 49, she writes: "s. o. [siehe oben] mit Anm. 41".

**To conclude this Study. Since we have started this book about Domitian with Arminius (cf. *supra*, in Chapter *What this Study is all about*), we might just as well end it with him.**

I was born in an area, which, for a long time, I mistakenly believed to have been called *Germania libera* in antiquity. I was, therefore, always interested in Arminius' successful revolt against the Romans, and have asked myself, why his insurrection was successful, and that of the Jews not, believing that the Germanic tribes involved in this uprising simply had a 'geographic' advantage because the areas, where they lived, were by chance located on the border of the *Imperium Romanum*.

See Helmut Neumaier ("Freies Germanien' / 'Germania libera' - Zur Genese eines historischen Begriffs"), from whom I have now fortunately learned that the term 'Germania libera' was only invented in 1926 (!).

**But there were many more factors to the disadvantage of the Jews than the mere geographic position of Judaea, as I have learned from Rose Mary Sheldon (2007, 199, quoted *verbatim infra*).**

To Arminius I will come back below.

Cf. in Chapter *The major results of this book on Domitian*; and *infra*, in volume 3-2, at *Appendix IV.d.2.d* (*The meaning of the representation of the Piroustaie within Augustus's Porticus ad Nationes at Rome*). With Hans Wiegartz's (1996) observations concerning the Piroustaie and their representations; and a summary of the revolt of Arminius in Germany, which he planned because he had fought under Tiberius to suppress the revolt of the Pannonian-Dalmatian tribes, inter alia of the Piroustaie.

**Rose Mary Sheldon (2007, 199: "Chapter 8 Israel's Last Stand - The Bar Kokhba Revolt") concludes this chapter as follows:**

"... but the Romans were not invincible. The Battle of the Teutoburg Forest stopped Roman expansion in Germany in 9 CE and altered Roman foreign policy across the Rhine forever. Unlike the Germans, however, the Jews did not have endless numbers of warriors who could withdraw into the vast forests of the north when the Romans approached. Judaea was a small place with its back to the sea, and the Jews had nowhere to retreat ...

The Jews chose to attack the Roman Empire when it was at the zenith of its power and organisation. They were located in a strategically important province that the Romans had no intention of giving away. There was no time when a negotiated solution might have been slipped in; that is, there was no interregnum such as that between the death of Nero and the accession of Vespasian in 69 CE.

The Romans never let a challenge to their authority go unanswered; for example, in 70 CE they spent considerable time reducing Masada, a fortress that had no strategic importance whatsoever except that its destruction was an object lesson to people who might consider revolting.

**The Jews simply did not have sufficient time, space or manpower to resist the Roman occupation. They waged three of the most impressive anti-colonial wars in antiquity, and their use of intelligence was brilliant. The last two wars took a heavy toll on the Romans, but such wars are valuable only as a symbol of defiance, not as a model of success [my emphasis].**

**Those "three of the most impressive anti-colonial wars in antiquity [my emphasis]", fought by the Jews, to which Rose Mary Sheldon (2007, 199) in the above-quoted passage refers, are:**

the Maccabean Revolt (167-163 BC) against the occupation by the Seleucid Empire, which the Jews won, and the two wars against the Roman occupation: the Great Jewish Revolt or War (AD 66-73) and the Bar Kokhba Revolt (AD 132-135, or according to D. KIENAST, W. ECK and M. HEIL 2017, 123; W. ECK 2019b, 201 n. 34; and W. ECK 2022, Sp. 486: until AD 136) - both of which the Romans won.

For further discussions of all those three wars; cf. *infra*, in volume 3-2, at *A Study on the consequences of Domitian's assassination ...*; and at *Appendix IV.c.2.*

### *The major results of this book on Domitian*

The first part of this summary is dedicated to the Cancellaria Reliefs, which were commissioned by Domitian. Concerning their interpretation, I follow Filippo Magi (1939; 1945) and hope to be able to disprove the arguments of those recent scholars, who have rejected his hypotheses. I hope to further support Magi's ideas with some new evidence that has led me to suggest that these panels had originally decorated the passageway of one of Domitian's arches on the Palatine. Likewise new is the idea, pursued in this *Study*, to compare the contents, visualized on the Cancellaria Reliefs with those, represented on the *pyramidion* of the Pamphili Obelisk/ Domitian's obelisk on display on top of Gianlorenzo Bernini's 'Fountain of the Four Rivers' in the Piazza Navona at Rome, and with the contents, formulated *expressis verbis* in the hieroglyphic texts of his obelisk. We have seen that in both monuments stress is laid 'on the legitimization of Domitian's reign as emperor'. Then follows a short summary of the results obtained in this *Study*, which concern Domitian's building projects at Rome. From this emerges that Domitian (or rather: all three Flavian emperors together) have caused the effect, 'that Rome is still nowadays basically a Flavian city'. A third, much larger part of this summary is dedicated to Domitian's Palace on the Palatine, his *Domus Augustana*, concentrating on some of the finds, which Francesco Bianchini had excavated in the 'Aula Regia', published posthumously in 1738. The chosen artworks demonstrate 'Domitian's claim to possess the *virtus* 'invincibility'', that 'was on principle expected from all Roman emperors' and which, in its turn, 'guaranteed Rome's wealth'.

The just-mentioned statements in inverted commas are quotes from scholars, whose work will be discussed in the following text. On 25th January 2023, Franz Xaver Schütz and I have published an earlier version of this Chapter on our Webserver as a Preview for this *Study* on Domitian:  
Online at: <<https://FORTVNA-research.org/FORTVNA/FP3.html>>.

**Figs. 1 and 2 drawing. F. Magis drawing of Frieze A and B of the Cancellaria Reliefs. From: F. Magi (1945, Tav. Agg. D 1 and 2). The slabs of both panels (A1-A4 and B1-B4) and the figures of both Friezes (1-17) are numbered, as in S. Langer and M. Pfanner (2018, 19, Abb. 2).**

Magi's two drawings show his reconstruction of the Cancellaria Reliefs; cf. F. Magi (1945, Tav. I), the display of the reliefs at the Musei Vaticani, Museo Gregoriano Profano, follows Magi's reconstruction. This display has been documented by the photographs here **Figs. 1 and 2**.

**I follow here Magi's reconstruction (1945) of the Cancellaria Reliefs, which is the most important prerequisite for our visualization of Figs. 1 and 2 of the Cancellaria Reliefs, drawing, 'in situ' (cf. *infra*).**

My thanks are due to Giandomenico Spinola and Claudia Valeri of the Vatican Museums, together with whom I could study the Cancellaria Reliefs in front of those panels on 24th September 2018, and on 8th March, 9th May and 19th September 2019. We found out that S. Langer's and M. Pfanner's (2018, 29-31, Taf. 10,1, Abb. 7a; 7b, pp. 50, 52-53, 68, 70) assumption of an additional slab between B1 and B2 on Frieze B is based on a number of errors: these errors concern some technical properties of the slabs B1 and B2, as well as misunderstandings of Magi's (1945) description of the Vestal Virgins on slabs B1 and B2. Langer and Pfanner (2018, 29, 73, 76) themselves regard their assumption that all six Vestal Virgins should be represented on frieze B as a support of their hypothesis.

Ranuccio Bianchi Bandinelli (1946-48, 259) remarked on Frieze B that usually only five Vestal Virgins (as represented on Frieze B) could participate in public ceremonies, because the sixth Vestal Virgin had always to stay behind to keep the fire of Vesta going. I have, therefore, asked the religious historian Jörg Rüpke, whether this is reported by ancient literary sources, and how many Vestal Virgins we might expect to have usually appeared in public ceremonies. Jörg Rüpke was kind enough to answer my questions, and comes to the following conclusion: "Kurzum, denkbar ist die Pflicht, dass eine stets Feuerwache hatte" ('In short, it is conceivable that one [of the six Vestal Virgins] had always to watch the fire'). In addition to this, Rüpke has kindly allowed me to publish his E-mail as his first *Contribution* to his volume. Cf. *The first Contribution by Jörg Rüpke in this volume on the question, how many Vestal Virgins we might expect to appear at public ceremonies, such as the one shown on Frieze B of the Cancellaria Reliefs (cf. here Fig. 2).*

**Giandomenico Spinola, Claudia Valeri and Jörg Rüpke have thus greatly supported my efforts to verify Magi's reconstruction of the length of Frieze B of the Cancellaria Reliefs.**

Cf. *supra*, at *Introductory remarks and acknowledgements*; and at Chapter V.1.d. *The reconstruction, in my opinion erroneous, of the length of Frieze B by S. Langer and M. Pfanner (2018) and the correct reconstruction of the length of Frieze B by F. Magi (1945), whom I am following here (here Figs. 1; 2; Figs. 1 and 2 drawing; and Figs. 1 and 2 of the Cancellaria Reliefs, drawing, 'in situ')*. With a discussion of how many Vestal Virgins we might expect to appear at public ceremonies, such as the one shown on this panel, and with The first Contribution by Jörg Rüpke.

Claudia Valeri and Giandomenico helped me also in solving the vexed problem, whether or not the head of Vespasian on Frieze B (cf. here **Figs. 1 and 2 drawing; figure 14**) is the result of a reworking process. This had first been suggested by Marguerite McCann (1972, 251 with n. 8; cf. *supra*, at n. 111, in Chapter I.1.), and later by Marianne Bergmann (1981, 24, *supra*, at ns. 111, 115, 190, in Chapter I.1.), whose hypothesis has been followed by many scholars (cf. *supra*, at Chapter I.1.1.). Stephanie Langer and Michael Pfanner (2018, 60 with ns. 49-52; cf. *supra*, at Chapter V.1.h.1.) state that both McCann's (1972) and Bergmann's (1981) hypotheses have been rejected. According to Bergmann's hypothesis (1981, 23-24, Taf. 11; 12; 9, p. 25), the emperor on Frieze B had originally been Domitian, whose head was allegedly reworked into the extant portrait of Vespasian.

**Langer and Pfanner have contributed new observations to this discussion which, in their opinion, prove that originally the emperor on Frieze B had been Domitian (cf. *id.* 2018, 57-58, 72-74, Abb. 22-24; Abb. 23: they demonstrate their observations by illustrating a photo of Vespasian's neck after a plaster cast, but note that all the details indicated by them look different on the original relief; cf. their Kapitel 2.9.4). Cf. *supra*, at Chapter V.1.h.2.**

To show the results obtained by Giandomenico Spinola, Claudia Valeri and myself, when studying together Vespasian's neck in front of Frieze B of the Cancellaria Reliefs, I repeat in the following a text passage that was written for the Chapter *Introductory remarks and acknowledgements*:

'The other detail I wanted to study again on 9th May 2019 in front of the original was the neck of the emperor on Frieze B. Langer and Pfanner (2018; cf. *supra*, at Chapter V.1.h.2.)) assert that Vespasian's larynx cuts through a wrinkle at the represented man's neck, an alleged fact, which in their opinion proves that this wrinkle belongs to a presumed earlier portrait, and that Vespasian's larynx was only carved at a second moment. Langer and Pfanner, therefore, conclude that Vespasian's entire head has been recut from this alleged earlier portrait. Their conclusion is based on a wrong observation though: in front of the original is clearly visible - with and without the aid of a lamp - that the wrinkle in question was instead cut *after* the larynx was sculpted. What we see is, therefore, the first and only larynx ever carved on this figure's neck - a fact, which proves beyond any doubt that the extant portrait of Vespasian is the original head of the emperor on Frieze B (cf. *supra*, at Chapter V.1.h.2.)).

Consequently, also Magi's assumptions concerning the head of Vespasian prove to be correct, which he took for the original head of the represented emperor on Frieze B (cf. *id.* 1939, quoted *verbatim supra*, in n. 112, at Chapter I.1.; and *id.* 1945) [my emphasis]'.

**Fig. 1. Musei Vaticani, Museo Gregoriano Profano ex Lateranense (inv. nos. 13389-13391). Frieze A of the Cancellaria Reliefs. *Profectio* of Domitian in AD 83, 89 or 92. After the emperor's assassination and *damnatio memoriae*, Domitian's face on Frieze A (figure 6) has been reworked into a portrait of the Emperor Nerva. Therefore, the panel now probably represents Nerva's (alleged) *profectio* to his *bellum Suebicum* in AD 97. Cf. *supra*, at Chapters I.-VI.; especially n. 232, in Chapter I.2.), and Chapters II.3.1.a); II.3.3.a), and *infra*, in volume 3-2, at Appendix IV.d.2.e); and Appendix IV.d.2.f): in my opinion, this relief represents Domitian's *profectio* to his Second Dacian War in the spring of AD 89 that ended with his victory, celebrated with his (last) triumph in Rome in November/ December 89. Cf. *supra*, in Chapters II.3.1.a); II.3.2.; V.1.b); V.1.c): for Nerva's motivation to usurp this *profectio* relief of Domitian.**

Fig. 2. Musei Vaticani, Museo Gregoriano Profano ex Lateranense (inv. nos. 13392-13395). Frieze B of the Cancelleria Reliefs. *Adventus* of Vespasian at Rome in the first half of October of AD 70, his coronation by *Victoria* with the *corona civica* for having ended the civil war AD 68-69, and his *investiture* as the new Roman emperor. The fact that Vespasian lays his lifted right hand on the left shoulder of Caesar Domitian, who is standing right in front of him, means the legitimization of Domitian's future reign (in reality, Vespasian's hand does not touch Domitian's shoulder, but from a distance it looks like this).

Figs. 1 and 2 of the Cancelleria Reliefs, drawing, 'in situ'. Visualization created on the basis of F. Magis drawings (1945), here 'Figs. 1 and 2 drawing'.

Based on hypotheses, first suggested by F. Magi (1939, 205, *quoted verbatim* in n. 112, in Chapter I.1.), and reported by B. Nogara (1939, 8, 106, 115-116, 227), and by A.M. Colini (1938 [1939], 270); cf. H. Kähler (1950, 30-41), J.M.C. Toynbee (1957, 19), J. Henderson (2003, 249), and especially M. Pentiricci (2009, 61-62; cf. *supra*, ns. 262, 263, 264, in Chapter I.3.2.), this visualization intends to show the Cancelleria Reliefs, as if attached to the opposite, parallel walls in the bay of an arch, built by Domitian.

It made only sense to try this reconstruction, because both panels certainly belonged together, a fact, which is *inter alia* proven by their equal heights. Since it is debated over which kind of building those panels may have belonged, we wanted to know, whether or not the compositions of both friezes were designed in order to stress relationships among the figures appearing on both panels, once mounted on opposite walls and viewed together. The prerequisite for this kind of inquiry was the correct positioning of both friezes, when both were attached to opposite walls in the bay of an arch. We knew that this could, in theory, be done for two reasons: *a)* both friezes were originally framed on all sides by identical projecting ledges; *b)* these projecting ledges are partly preserved on the right hand small side of Frieze A and partly on the left hand small side of Frieze B. We could, therefore, mount (first, in 2020, the photographs, here Figs. 1; 2), now the drawings of both panels, used for this operation by basing our reconstruction on this common axis of those two small sides of the panels which, in our reconstruction, now stand opposite each other. (In this illustration of our reconstruction those two small sides of both panels appear at the bottom of the page). For our reconstruction we used (first the photographs of Frieze A and B of the Vatican Museum, here Figs. 1 and 2, both of which follow Magi's reconstruction of 1945), now Magi's own drawings (1945) of both Friezes. In our visualization, these (first the photos), now the drawings are 'lying on their backs' in order to show, how an ancient beholder, passing through the bay of this arch, would have seen both panels.

Both visualizations demonstrate *a)* that the beholder who passed through this bay must have had the impression of 'moving together' with the processions that are depicted on both friezes; and *b)* that there is indeed one such relationship amongst those two panels that we were looking for. The figures in question are the Emperor Domitian (now Nerva) on Frieze A (figure 6) and the togate youth on frieze B (figure 12) - when both panels are *in situ*, these two figures stand almost opposite each other. Prior to our reconstruction, this fact had not been observed. And because both figures are heading the two processions 'that are moving on these panels together with the beholder in the same direction' these two figures turn out to be the most important persons on both panels. Both facts support the assumption that the Cancelleria Reliefs had been the horizontal panels in the bay of one of Domitian's arches. Considering also that Domitian commissioned the structure in question, both facts support at the same time the hypothesis suggested here that the togate youth on Frieze B may be identified as the young Caesar Domitian, who is represented on Frieze B in his capacity as *praetor urbanus*.

I tentatively suggest, in addition to this, that the Cancelleria Reliefs may have decorated the bay of the 'Arcus Domitiani', which stood on the Palatine, in front of Domitian's Palace 'Domus Flavia' / *Domus Augustana* and which, according to F. Coarelli (2009b, 88; *id.* 2012, 283, 286-291, 481-483, 486-491), Domitian may have dedicated to his father, *Divus Vespasianus*; or rather one of the three bays of the Arch of Domitian, which Coarelli assumes at the "Porta principale" of Domitian's *Domus Augustana*. Coarelli identifies this arch with the *Pentapylon*, believing that this was a triumphal arch (for the location of both arches; cf. here Fig. 58). F.X. Schütz and C. Häuber 2022, reconstruction (cf. *supra*, at Chapters I.3.2.; V.1.d); V.1.h.1.); V.1.i.3.); VI.3.; *Addition*; see also *infra*, in volume 3-2, at Appendix IV.d.2.f); Appendix IV.d.4.b); and Appendix VI.; at Section VII.).

**Fig. 28. Obeliscus Pamphilius / Domitian's obelisk. From the Iseum Campense. On display on top of Gianlorenzo Bernini's 'Fountain of the Four Rivers' in the Piazza Navona at Rome. From: C. Häuber (2017, 156, Fig. 5.5.2). Photos: F.X. Schütz (5-IX-2019). Courtesy F.X. Schütz. Photo: Cesare D'Onofrio (1921-2003). From: G. Simonetta, L. Gigli and G. Marchetti [2004] 122, Fig. 8. The caption reads: "La fontana dei Quattro fiumi, ripresa zenitale dall'alto della chiesa di Sant'Agnese". Courtesy: L. Gigli. Photo: L. Gigli (December 2003). Courtesy: L. Gigli.**

**Fig. 101.a. Cf. G.B. Cipriani (1823, with Tav. 1; 2), his discussion and etchings of the 12 (Egyptian) obelisks in Rome. The caption of his Tav. 1 reads: "Dodici Obelischii Egizj, che si osservano rialzati ad ornamento della Città di Roma, posti secondo ordine della loro rievazione". The caption of his Tav. 2 reads: "Fusti dei dodici Obelischii dei Egizj, che si osservano rialzati ad ornamento della Città di Roma, posti secondo il grado della loro altezza". Cipriani's etchings of those 12 obelisks are measured: the tallest one is the Lateran Obelisk. Cipriani has also discussed and drawn Domitian's obelisk, which he refers to in his text and on his plates as: "Agonale di Piazza Navona", see his Tav. 1 and 2 (on both the fifth obelisk from left).**

For a discussion of the book by Giovanni Battista Cipriani (1823); cf. below, at *The second Contribution by Franz Xaver Schütz : Wie schwer war der ägyptische Obelisk, der heute auf der Piazza di S. Giovanni in Laterano in Rom steht?*

In my earlier study on Domitian's obelisk (2017), I had come to the following conclusion:

"In the course of studying the *Iseum Campense*, some new arguments have been found, which, in my opinion, support the old assumption that Domitian had actually commissioned his Obelisk for this sanctuary, that is now on display on top of Gianlorenzo Bernini's famous Fountain of the Four Rivers in Piazza Navona [cf. here **Fig. 28**] ... In one of the inscriptions on his Obelisk, [the text is Egyptian,] written in hieroglyphs, Domitian formulates his hope that his contemporaries as well as posterity will always remember the achievements of his family, the Flavian dynasty, especially their benefactions for the Roman People. Domitian stresses that his family managed to consolidate the state, which had severely suffered from those 'who reigned before' (*i.e.*, the emperors of the Julio-Claudian dynasty)"; cf. Häuber (2017, 21; cf. pp. 158-168 for Domitian's obelisk and its inscriptions, my quote on p. 21 is *inter alia* based on K. LEMBKE 1994 and J.-C. GRENIER 2009). Cf. *supra*, n. 466, in Chapter IV.1., for those references in detail.

For the *pyramidion* and the texts of Domitian's obelisk see also E.M. Ciampini (2004, 156-167; *id.* 2005, published again, *supra*, in Chapter IV.1.1.d); see also *supra*, the complete Chapter IV. *Frieze B of the Cancelleria Reliefs* (cf. here **Fig. 2**) and the *Obeliscus Pamphilius/ Domitian's obelisk* (cf. here **Fig. 28**), especially at Chapter IV.1.1.a) - IV.1.1.h); see also *infra*, in volume 3-2, at Appendix II.a-e). Again on the Egyptianizing marble relief allegedly from Ariccia at the Museo Nazionale Romano, Palazzo Altemps (**Fig. 111**) - a representation of the Egyptian festival of New Year?

As mentioned above, in this new *Study*, the contents of Domitian's obelisk (of the reliefs represented on its *pyramidion* and of its hieroglyphic inscriptions) are compared with the contents of Frieze B of the Cancelleria Reliefs, which were likewise commissioned by Domitian. In my opinion, both monuments express very clearly the same political message, and in addition to this, how Domitian saw himself.

Concentrating predominantly on Domitian, this *Study* tries to answer the question, why Domitian felt the desperate need to build 'in such a pharaonic manner', as has (similarly) first been suggested by Mario Torelli (1987, 575, quoted *verbatim* in this *Study*, *supra*, in n. 228, at Chapter I.2.). This notorious characteristic of Domitian has aptly been called "Bauwut" ('building rage') by Stephanie Langer and Michael Pfanner (2018, 41 with n. 23); cf. *supra*, in n. 480, at Chapter VI.3.; and discussed *infra*, in volume 3-2, at Appendix IV.d.4.b) *Domitian's building project comprising the Campus Martius, the Capitoline Hill and the sella between Arx and Quirinal. With detailed discussion of the Templum Pacis and some remarks on Domitian's Villa, called Albanum.*

Of course, Domitian's building policy has already been studied by many previous scholars. Personally I favour the following observations: Eric M. Moormann (2018, 162) mentions "three fields of interest in Domitian's building policy", as defined by Jens Gering (2012, 210-211): "personal grandeur, family memory and legitimization".

This is exactly how, in my opinion, also the contents of Frieze B of the Cancellaria Reliefs can be defined. And when we study the contents of Domitian's obelisk, we arrive, in my opinion, at exactly the same result.

To illustrate this last assertion, I will give you an example from one of the hieroglyphic inscriptions of Domitian's obelisk, and will compare that with the content of Frieze B of the Cancellaria Reliefs. In my opinion, the subject of both is Domitian's legitimization as emperor, which he has received from his father Vespasian (and from his brother Titus). But there are two important differences: whereas on Frieze B of the Cancellaria Reliefs Vespasian is represented as still being alive, in the hieroglyphic text on Domitian's obelisk he is called *Divus Vespasianus*; and, contrary to Frieze B, on which Titus does not appear (being at Jerusalem at that stage), this hieroglyphic inscription declares that Domitian has received his reign of the Empire also from his elder brother *Divus Titus*.

It goes without saying that in the case of Frieze B of the Cancellaria Reliefs any interpretation of the represented scene depends on the identification of its two protagonists. I myself follow Filippo Magi (1939; 1945) in identifying those figures with the Emperor Vespasian and his younger son Domitian (cf. here **Fig. 2; Figs. 1 and 2 drawing: figures: 14; 12**).

I regard the hypothesis, according to which not only this hieroglyphic inscription on Domitian's obelisk, but also the iconography of Frieze B of the Cancellaria Reliefs prove that Domitian ordered the relevant people involved in creating *both* artworks to address his legitimization as emperor, as the most interesting result of my book on Domitian. I have, therefore, chosen the following title for this *Study*:

*The Cancellaria Reliefs and Domitian's Obelisk in Rome in context of the legitimization of Domitian's reign. With studies on Domitian's building projects in Rome, his statue of Iuppiter Optimus Maximus Capitolinus, the colossal portrait of Hadrian (now Constantine the Great), and Hadrian's portrait from Hierapydna in Honour of Rose Mary Sheldon.*

For those, who wonder, why the Emperor Hadrian appears likewise in the title of this *Study* on Domitian: you will see that only by studying those subjects related to the Emperor Hadrian, have I managed to find important facts concerning *Domitian*. The *Study* of the colossal portrait of Hadrian (now Constantine the Great in the Palazzo dei Conservatori; here **Fig. 11**) led to the identification of the statue-type of Domitian's (fourth) statue of Iuppiter Optimus Maximus Capitolinus (cf. here **Fig. 10**), and the *Study* of Hadrian's portrait-statue from Hierapydna (here **Fig. 29**), *via* Hadrian's military campaigns, to Domitian's Dacian Wars and, finally, to my dating of the Cancellaria Reliefs. The latest additional *Study* I have conducted, 'A Study on the consequences of Domitian's assassination' (comprising research on Hadrian's Temple complex in the *Campus Martius*), resulted in the (for me) surprising finding that Domitian's prevailing bad image has been 'commissioned' by Trajan. I repeat, therefore, in the following a relevant passage from above, the Chapter *Introductory remarks and acknowledgements*:

'Studying Hadrian's military campaigns ... has also provided new insights concerning Domitian's Dacian Wars, and has procured the answer to the question for which of his military campaigns Domitian (now Nerva) is actually leaving for on Frieze A of the Cancellaria Reliefs (cf. here **Fig. 1; Figs. 1 and 2 drawing: figure 6**). Another result consists in the identification of the colossal statue of Jupiter in the Hermitage at St. Petersburg (cf. here **Fig. 10**) as a copy of the colossal (chryselephantine?) cult-statue of Jupiter in Domitian's (fourth) Temple of Iuppiter Optimus Maximus Capitolinus. This statue-type of Jupiter (here **Fig. 10**) (and its variants) was extremely successful in antiquity and has also been copied in statuette format as Capitoline Triad, together with Juno and Minerva (cf. here **Fig. 13**). Most famous among these

copies in statuette format is certainly the statuette of 'Euripides' in the Louvre at Paris (cf. here **Fig. 12**). As Hans Rupprecht Goette (forthcoming) has demonstrated, this was created at the order of Francesco Ficoroni by turning such a headless copy of Jupiter of a Capitoline Triad into the tragic poet.

I am not saying that it would have been impossible to find out those new data about Domitian's military campaigns or concerning his cult-statue of Iuppiter Optimus Maximus Capitolinus otherwise, but, as a matter of fact, I found them *this way*'.

See also the title of the above-mentioned latest *Study* added to this book; cf. *infra*, in volume 3-2:

*A Study on the consequences of Domitian's assassination:*

*Nerva is forced to adopt Trajan and Trajan creates Domitian's negative image to consolidate his own reign. With Hadrian's adoption manquée in late October or at the beginning of November of AD 97, his 20-year long road to his accession and his thanksgivings for it, his Temple complex in the Campus Martius.*

*Or: The wider topographical context of the Arch of Hadrian alongside the Via Flaminia which led to the (later) Hadrianeum and to Hadrian's Temples of Diva Matidia (and of Diva Sabina?). With discussions of Hadrian's journey from Moesia Inferior to Mogontiacum (Mayence) in order to congratulate Trajan on his adoption by Nerva, and of Hadrian's portrait-type Delta Omikron ( $\Delta o$ ) (cf. here **Fig. 3**). With The fourth and the fifth Contribution by Peter Herz, with The first Contribution by Franz Xaver Schütz (cf. here **Fig. 77**), with The Contribution by John Bodel, and with The second Contribution by Angelo Geißen.*

**Let's now begin with the hieroglyphic text on Domitian's obelisk that I have mentioned above.**

Cf. Emanuele M. Ciampini (2004, 163-164). In the following quotation, I have left out Ciampini's drawing of the relevant hieroglyphic inscription and his transliteration of this Egyptian text, but quote only his Italian translation of it:

"Lato verso Corso Rinascimento (est)

Pyramidion - Domiziano di fronte [*corr.*: fronte] a Mut, seguito da un'altra figura

H. 22 Horo [*i.e.*, Domitian]: Quello per il quale dei e uomini fanno lode;

H. 23 quando riceve la regalità da suo padre **Vespasiano il dio**, [page 164]

H. 24 dal fratello maggiore **Tito il dio**, mentre il suo ba si muove verso la volta celeste [the emphasis is by the author]".

**Let's now turn to Frieze B of the Cancelleria Reliefs.**

In the following, I anticipate a text, written for *infra*, volume 3.2: *A Study of the consequences of Domitian's assassination ...; Introduction; Section I. The motivation to write this Study: ... and the subjects discussed here, as told by the accompanying figures and their pertaining captions.*

The following text refers to our Rome map here **Fig. 58**.

**'3.) Vespasian's 500 kilometre walk (?) on the Via Appia from Brindisi to Rome, where he arrived in the 1. half of October AD 70 at the Porta Capena in the Servian city Wall (cf. here **Fig. 2; Figs. 1 and 2 drawing; and Fig. 58**).**

Vespasian's itinerary is likewise discussed in this *Study* on Domitian, because I suggest that Frieze B of the Cancelleria Reliefs (here **Fig. 2; Figs. 1 and 2 drawing; figure 14**) shows Vespasian who, coming back from Alexandria, and especially after this 500 kilometre journey on the *Via Appia*, all the way from Brindisi, has just arrived at his destination, the City of Rome.

There he is solemnly received by the representatives of the City (from left to right): the city goddess *Dea Roma*, five Vestal Virgins, the *Genius Senatus*, the acting *praetor urbanus* (*i.e.*, his son, Caesar Domitian)

and the *Genius Populi Romani*. This panel shows at the same time how Vespasian arrived for the first time as emperor at Rome or, in other words, his *adventus* into Rome, which, as we now know, had occurred in the 1. half of October in AD 70'. - For this date; cf. *supra*, at n. 195, in Chapter I.1.1. In the following, I will explain my just-quoted interpretation of this scene in detail.

*In my opinion, the emperor on Frieze B (Fig. 2; Figs. 1 and 2 drawing: figures 14; 12), and the togate youth standing in front of him, were from the very beginning the Emperor Vespasian and his son Domitian*

I thus follow Filippo Magi's (1939; *id.* 1945) interpretations of the two major figures on Frieze B (cf. here **Fig. 2; Figs. 1 and 2 drawing: figures 12; 14**), and hope to be able to support in my book Magi's hypotheses with further facts. Apart from Diana E.E. Kleiner (1992, 191, Fig. 158, quoted *verbatim supra*, at n. 394, in Chapter III.), Stefan Pfeiffer (2009, 62, quoted *verbatim supra*, as epigraph of Chapter V.1.i.3.), John Pollini (2017b, 115-118, cf. *supra*, n. 72, in Chapter I.1.), Barbora Chabrečková (2017, 65-67, Figs. XXIX-XXXII; cf. *supra*, n. 73, in Chapter I.1.), Rose Mary Sheldon (2023, in press; Chapter 7; Section: "The Cancellaria Reliefs", with ns. 61-69; cf. *supra*, n. 74, in Chapter I.1.), as well as Giandomenico Spinola and Claudia Valeri (both Musei Vaticani); cf. *supra*, at *Introductory remarks and acknowledgements*; and *infra*, at *The Contribution by Giandomenico Spinola on the Cancellaria Reliefs* (quoted below), who likewise follow Magi, most other scholars have rejected Magi's relevant hypotheses and we have seen in this *Study* that it has taken some time to prove all the arguments of those scholars wrong.

Two of the arguments against Magi's interpretation that Frieze B shows Vespasian's *adventus* in AD 70, has always been that those scholars could only imagine Vespasian in military garb, and accompanied by members of his victorious army, since he was at that stage coming back from his victories in the Great Jewish War. But precisely that was not true. I repeat, therefore, in the following a passage written for *supra*, Chapter V.1.i.3.):

'... according to Dio Cassius 65,10, Vespasian, as soon as he had landed in Italy at Brundisium (Brindisi) in AD 70, had changed from military into civilian garb - this is at least how Jocelyn M.C. Toynbee (1957, 4-5 with n. 1 on p. 5; cf. *supra*, at n. 201, in Chapter I.1.1.) and Elisabeth Keller (1967, 211; cf. *supra*, at n. 415, in Chapter III.), in my opinion convincingly, have interpreted this passage; Dio Cassius tells us also that Vespasian went from Brindisi to Rome. This means, by the way, that Vespasian has come down the *Via Appia*, and that, therefore, Frieze B is set at the *Porta Capena* in the Servian city Wall [cf. here **Fig. 58**] - without picturing this gate.

That Vespasian is shown on Frieze B as wearing a *tunica* and a *toga* at the represented moment, is therefore historical, as well as the fact that he came to Rome in October of AD 70; even the most bewildering feature of Frieze B is true: we also know that Vespasian came back to Rome without his army (but see now *supra*, at Chapter V.1.i.3.a)').

To the just-quoted facts we may add an observation, made by Rita Paris (1994b, 81-83), that she herself has also applied to the emperor, who is represented on Frieze B of the Cancellaria Reliefs (cf. **Fig. 2; Figs. 1 and 2, drawing: figures 14; 16**). This emperor (**figure 14**) is crowned by *Victoria* (**figure 16**) with the *corona civica* : an honour only bestowed upon Augustus and Vespasian, because both had been able to put an end to a civil war. The emperor on Frieze B was certainly not Augustus (this has, of course, so far no scholar suggested), because the kind of *toga* he is wearing became only fashionable under Domitian; cf. Hans Rupprecht Goette (1990, 40, 41, Taf. 12, 5), and because Vespasian is also represented as wearing the *corona civica* on one of the reliefs from the *Templum Gentis Flaviae* (cf. here **Fig. 33**), also this emperor on Frieze B must have been from the very beginning a portrait of Vespasian, as rightly stated by Rita Paris (1994b, 82). I repeat in the following the relevant passage concerning Rita Paris's observation from *supra*, *Introductory remarks and acknowledgement*:

'Besides, Rita Paris (1994b) had already found long ago an argument that proves beyond any doubt that the emperor on frieze B was from the very beginning Vespasian. In her discussion of one of the marble reliefs of

the *Templum Gentis Flaviae*, which shows, in my opinion, Vespasian's *adventus* into Rome in October of AD 70, Paris mentions the *corona civica* Vespasian is wearing on this panel (cf. *supra*, in Chapter V.1.i.3.a) and here **Fig. 33**). Paris (1994b, 81-83), in her description of this relief, stresses that the decoration with this specific wreath was *a*) regarded by Pliny (*HN* 16,3) as "l'emblema più fulgido del valore militare" ('the most splendid symbol of military prowess'), highly superior to the decorations with all other known crowns granted for military victories, and *b*) that Vespasian had been honoured this way because, by conducting his victorious campaigns, he had put an end to the civil war of AD 68-69. - Exactly as Augustus before him, who had received the *corona civica* for likewise having ended a civil war (cf. *supra*, at Chapter V.1.i.3.a) and here **Fig. 35**)'.

Some scholars have, in addition to this, asserted that Filippo Magi was by no means first to realize that the emperor on Frieze B of the Cancelleria Reliefs represents Vespasian, (erroneously) asserting that this had been first published by 'S. Fuchs 1938', but without providing a reference. Those scholars ignored the fact that, already in his article of 1939, Magi had identified the emperor on Frieze B with Vespasian (cf. *supra*, n. 112, in Chapter I.1., where the relevant passage of F. MAGI 1939, 205, is quoted *verbatim*).

My thanks are due to Michaela Fuchs, who found this publication for me: it is Siegfried Fuchs 1937: but the author did not mention the Cancelleria Reliefs at all. Not surprisingly, because the slabs B3 and B4 of Frieze B with the portrait of Vespasian (cf. here **Figs. 1 and 2 drawing: figure 14**) should only be found in 1938 (!) (cf. *supra*, n. 113, in Chapter I.1.).

For a detailed discussion; cf. *supra*, ns. 5; 113; 191, in Chapter I.1., especially at: *The Siegfried-Fuchs-Saga*. The entire story reminds me of a famous book by Carl Robert, to which my late supervisor Andreas Linfert (15th May 1942 -21st May 1996) had alerted me many years ago - the title of which has become proverbial:

*Archaeologische Maerchen aus alter und neuer Zeit (1886)*  
(*Archaeological fairy tales from old and new times*)

Already Magi (1945; like all later scholars) knew that the matter is further complicated by some decisions, obviously made by Domitian, who commissioned the Cancelleria Reliefs.

Our extant literary sources describe, for example, in great detail Vespasian's arrival at Rome on that occasion; cf. Dio Cassius (65,9-10) and Flavius Josephus (BJ 7,2; 7,4,1). But these authors *a*) do not mention such a formal *adventus* ceremony at Rome, nor do they *b*) mention Domitian in this context at all (!). On the contrary, we know from those sources that the first encounter of father and son (which seems to be depicted on Frieze B), after four years of separation, had instead already occurred a couple of days (?) before, at Beneventum. In reality, Domitian must, therefore, have been among those people, *together with whom* his father Vespasian had arrived on that occasion at Rome; for all that; cf. *supra*, at Chapter V.1.i.3.).

Contrary to myself, most other scholars follow those, who have (in my opinion erroneously) asserted that the head of this emperor (or even the heads of both figures) on Frieze B have been reworked. I have discussed these scholarly opinions in great detail (cf. *supra*, in Chapters I.1.; I.1.1.; V.1.i.3.); VI.3.), in my opinion, these assertions have caused a great deal of confusion. To the effect that currently most scholars believe that Frieze B showed originally another emperor (most scholars believe: Domitian), in addition, many scholars believe that the togate youth in front of this emperor cannot possibly be a portrait at all.

Against Magi's identification of the togate youth in front of the emperor of Frieze B with Domitian (here **Fig. 2; Figs. 1 and 2 drawing: figure 12**), scholars have mentioned three arguments; *a*) being a Senator (for that see below), Domitian should have been represented with the *calcei patricii*, the togate youth is only shod with the simple *calcei* that were appropriate for an *eques*; *b*) the facial traits of the togate youth are not those of a portrait; *c*) if the togate youth were a portrait of Domitian, it should have been destroyed after Domitian's assassination and *damnatio memoriae*.

To illustrate point *a*), the 'wrong' shoes, Domitian is wearing on Frieze B, I anticipate here a text passage, written for a *infra*, volume 3-2, at *A Study of the consequences of Domitian's assassination ...; Introduction*; at Section XI.

Elsewhere in this volume have been discussed the problems, caused by the fact that some of the 34 figures, that appear on the Cancellaria Reliefs (cf. here **Figs. 1; 2; Figs. 1 and 2 drawing**), are represented as wearing the 'wrong' shoes.

**Cf. *supra*, at Chapter I.1. The discussion of the Cancellaria Reliefs, or the story of a dilemma: wrong shoes or wrong interpretations?**

In that case, it took me a full year to analyse the discussion concerning those 'wrong' shoes. Only to find out (cf. *supra*, in Chapter I.1., at n. 144), as also suggested by Stephanie Langer and Michael Pfanner (2018, 76-77 with n. 123, quoted *verbatim supra*, in Chapter I.1., at n. 193), that all the resulting problems can be explained by assuming the simple facts that the artists had made mistakes. Langer and Pfanner (*op.cit.*) discuss the representation of the *Genius Senatus* on Frieze B of the Cancellaria Reliefs (cf. here **Fig. 2; and Figs. 1 and 2 drawing: figure 11**), who is clad in the simple *calcei* (as appropriate for *equites*), instead of wearing the *calcei patricii* (as appropriate for Senators. For *calcei patricii*; cf. *supra*, in Chapter I.1., at n. 145).

Langer and Pfanner (2018, 66, Kapitel 2.9.3) write: "**Fehler finden sich oft bei den Schuhen** (A: Figuren 2, 3, 7, 8, 12, 15, 16, 17; B: Figuren 8?, 12, 14, 15, 17; s. dazu jeweils im Kapitel 2.8 unter "Technisches"): **Sei es, dass sie vergessen und nachträglich eingeritzt wurden, oder dass es Verwechslungen mit der anschließenden Figur gab ...** [my emphasis]" ('errors are often to be found concerning the shoes', mentioning the figures on Frieze A and B of the Cancellaria Relief which, in their opinion, are wearing wrong shoes, inter *alia* **figure 12** on Frieze B; 'see for those figures Chapter 2.8, under: 'technical observations'. These shoes 'have either been forgotten or have only been carved at a second moment, or they have been mixed up with the shoes of the next figure'. For a discussion; cf. *supra*, at Chapter V.1.d).

**Figure 12** on Frieze B, mentioned by Langer and Pfanner (2018, 66) in this context, is the togate youth, whom I myself identify with Domitian (cf. here **Figs. 1 and 2 drawing**). In their discussion of this figure; cf. Langer und Pfanner (2018, 55-56, Kapitel 2.8: "Figur 12 Junger Mann in Toga"), where they observe that this youth is shod with the "einfachen *calcei*" ('simple *calcei*'), the authors unfortunately do not address the fact (as we might expect after their statement on p. 66, quoted above) in how far, in their opinion, **figure 12** is wearing the 'wrong' shoes.

*Ad point a). Why the togate youth on frieze B is wearing the simple calcei, and why he is the acting praetor urbanus and, therefore, Domitian*

Personally I follow in this respect Erika Simon and Jocelyn M.C. Toynbee, who have observed that the togate youth, whom they themselves identify with Domitian, does *not* wear the 'wrong' shoes.

Cf. Simon (1960, 134-135; *ead.* 1963, 10; quoted *verbatim supra*, ns. 175, 181, in Chapter I.1.). Acknowledging that the head of this youth is his portrait (and explaining, why he is wearing this kind of shoes), Simon identified this figure as Domitian, shown in his capacity as *praetor urbanus* (cf. *infra*), arguing that he could, therefore, receive *Vespasian* in this *adventus* ceremony because was the highest ranking magistrate currently present at Rome.

And I follow Jocelyn M.C. Toynbee (1957, 7-8, quoted *verbatim supra*, n. 176, in Chapter I.1.) in assuming that this togate youth, whom she likewise identified with Domitian, is shod with the simple *calcei*, because he was also *Princeps Iuventutis*. To illustrate this point, I repeat in the following a passage from *supra*, Chapter I.1.1.:

‘If at all the current magistrate *praetor urbanus* is portrayed in the togate youth on Frieze B, as suggested by Erika Simon (1963, 10; cf. *supra*, at n. 181 and n. 175, and *supra*, at n. 456, in Chapter III.), this is only possible, as suggested by Jocelyn M.C. Toynbee (1957, 7-8), provided this *praetor urbanus* was Domitian in the year 70 AD. Only in his case, this magistrate, who belonged to the senatorial order, could nevertheless have been shown as wearing the ‘simple *calcei*’, which were typical of members of the equestrian order, because those shoes were appropriate for the *Princeps Iuventutis*, a title, which Domitian likewise held at that time [with note 186: ‘as suggested by J.M.C. TOYNBEE 1957, 7-8 (quoted *verbatim supra*, n. 176)’].

Domitian held the office *praetor urbanus consulari potestate* since the 1st of January AD 70. We know also that already on 21st December AD 69, Domitian had received the title *Princeps iuventutis* (for both; cf. *supra*, at n. 189, in Chapter I.1.). Cf. **Jocelyn M.C. Toynbee (1957, 8 with n. 11, quoted *verbatim supra*, at n. 205, in Chapter I.1.1.), who suggested that the togate youth on Frieze B of the Cancelleria Reliefs represents the young Domitian in his capacity as *Princeps iuventutis*, "a title that marked him out from other senators as heir presumptive to the Empire [my emphasis]"**.

To Simon's (1960, 134-135; *ead.* 1963, 10) observation we may add that only few Roman magistrates were allowed to welcome a newly elected emperor in an *adventus* ceremony, among them the *praetor urbanus*, which means that *the represented age* of the togate youth on Frieze B is decisive for the identification of this man. The other magistrates, who could receive an emperor in an *adventus* ceremony, were the *praefectus urbi* and the *consules*. The man, who held the office *praefectus urbi*, "was always a senator ... usually a senior ex-consul", as stated by Theodore John Cadoux and R.S.O. Tomlin (1996, 1239; cf. *supra*, at n. 183, in Chapter I.1.), who was, therefore, definitely much older than the togate youth. In the Republic the same had been true for the *consules*, but not for Domitian ! For a detailed discussion of this subject; cf. *supra*, in Chapter V.1.h.1.). I, therefore, repeat here a text passage from this *Chapter*:

‘The just mentioned Republican "age limits" for all offices, *inter alia* that of the *consules*, "were often disregarded as imperial relatives and protégés were signalled by the bestowal upon them of the consulship"; cf. Peter Sidney Derow (1996, 384) ... With his above-quoted remark that the traditional age limit for the consulship was disregarded in the Imperial period, Derow was certainly right, as also the age shows, at which Titus (at 30?) and Domitian (at 19) first became consul ... his [*i.e.*, Vespasian's] son Domitian (born 24th October 51 AD) became "cos. suff." for the first time in March-June AD 71 (at the age of 19); cf. Kienast, Eck and Heil (2017, 109, 110)’.

***Ad points b) and c). The controversy whether the togate youth on Frieze B is a portrait or not, the proof that he is Domitian, and the reason, why this portrait has not been destroyed***

I myself follow in this *Study* those scholars, who identify the togate youth on Frieze B as Domitian, but I have also in great detail discussed the arguments of those scholars, who deny this fact; cf. *supra*, in Chapters I.1.; I.1.1; V.1.i.3.; VI.3.). I see no chance to convince those scholars ‘of the other Camp’ of my own opinion by using the usual methods of scholars of ‘both Camps’: by describing the facial traits of the togate youth. I have, therefore, pursued a different avenue of research, namely by concentrating on *contexts*; there are two such contexts, which are of importance here. One context is the topography of the location at Rome, where the scene, represented on Frieze B, is set. We know that Vespasian, coming from Brindisi, at the moment, represented on Frieze B, has arrived at Rome on the *Via Appia*. The meeting place of Vespasian and Domitian, for a variety of legal reasons, must, therefore, be the *Porta Capena* in the Servian city Wall. The inherent problems for both, father and son, will be explained below.

**That at this time the *pomerium* in the area of the *Porta Capena* still ran parallel with the Servian city Wall, is unmistakably clear because of the locations of two buildings just outside the *Porta Capena*.**

I am referring to the *Mutatorium Caesaris* on the *Via Appia* in the Augustan *Regio I*, and to the *Senaculum*, both of which, because of their functions, had to be located outside the *pomerium*. The *Mutatorium Caesaris* was the building, "where emperors changed from military garb to civilian garb on returning from campaign [in the

East]"; cf. Häuber (2014a, 274). The reason being that they were only allowed to enter the City of Rome wearing civilian garb. In the building called *Senaculum*, on the other hand (of which there were altogether three in Rome), representatives of the Roman Senate met with people, who (for very different reasons) were not allowed to transgress the *pomerium*, the sacred boundary of the City of Rome, or in other words, who were not allowed to enter the city. Laura Asor Rosa (2001) was able to locate the *Mutatorium Caesaris* outside the *Porta Capena* precisely, which is why we could mark it in our maps.

Cf. Filippo Coarelli ("Murus Servii Tullii"; Mura Repubblicane: Porta Capena", in *LTUR* III [1996] 325); Giuseppina Pisani Sartorio ("Mutatorium Caesaris", in: *LTUR* III [1995] 335); Coarelli ("Senaculum", in: *LTUR* IV [1999] 264-265; Laura Asor Rosa (2001), summarized in Häuber (2014a, 274-275).

For Vespasian's return to Rome, as well as for the *pomerium* and its functions, which Vespasian, in the situation discussed here, had to consider; cf. *supra*, in Chapter *Preamble*; Section *III.*, at point 2.); and at n. 199, in Chapter *I.1.1.* Compare our maps here **Figs. 58; 71**, labels: Servian city Wall; PORTA CAPENA; VIA APPIA; REGIO I; site of MUTATORIUM CAESARIS.

The other context is the togate youth, seen in relation to the figures, represented on Frieze A. Franz Xaver Schütz and I have, therefore produced:

**Figs. 1 and 2 of the Cancelleria Reliefs, drawing, 'in situ'. Visualization created on the basis of F. Magis drawings (1945), here 'Figs. 1 and 2 drawing'. See above, at the captions of these illustrations.**

We created this visualization, because we asked ourselves, whether the assumption (suggested by several scholars) that the Cancelleria Reliefs had decorated the opposite walls in the bay of an arch, could help us to learn more about those reliefs.

Only after having created in 2020 our own first visualization of the Cancelleria Relief 'in situ', based on the photos here **Figs. 1; 2**, did I have a chance to study the similar visualization by John Henderson (2003, 249, Figs. 48; 49), which has been mentioned by Massimo Pentiricci (2009, 61 with n. 427). For a discussion; cf. *supra*, Chapter *I.3.2.*, with n. 263. Henderson (2003, 249, Figs. 48; 49) based his visualization on Filippo Magi's drawings (1945 = here **Figs. 1 und 2 drawing**), but he confronted Frieze A with Frieze B "reversed right/left", that is to say: with a representation of Frieze B 'back to front'. Henderson has thus likewise found relationships of the figures on the Friezes A and B. But because an ancient beholder could not possibly ever have seen Frieze B "reversed right/left", we maintain our own method to create this visualization. Now, in 2022, likewise on the basis of Magi's drawings.

Quite unexpectedly we thus found (first in 2020, by basing our visualization on the photographs here **Figs. 1; 2**) the context of the togate youth within this pair of panels. When these panels were *in situ* (cf. here **Figs. 1 and 2 of the Cancelleria Reliefs, drawing, 'in situ'**) the togate youth on Frieze B (**figure 12**) stood almost opposite the figure of Domitian/ Nerva in Frieze A (**figure 6**). Both men lead the processions, which are represented on those friezes, and are, therefore, the main figures. Considering at the same time that it was Domitian, who commissioned the Cancelleria Reliefs, it is consequent to assume that the togate youth, leading the procession of the representatives of Rome to the meeting with the homecoming new Emperor Vespasian in an *adventus* ceremony, must, therefore, be the acting *praetor urbanus*, Caesar Domitian; also because the togate youth has the right age: in the first half of October AD 70 Domitian was 18 years old. To illustrate this point further, I repeat here a passage from *supra*, Chapter *V.1.i.3.*):

'If so, Domitian [*i.e.*, the togate youth] is thus only recognizable on Frieze B because of his age, and a combination of his action - he heads the receiving party in an *adventus* ceremony - with the specific topographical context, where this action is staged, the meaning of which has just been analysed above [*i.e.*, in Chapter *V.1.i.3.*; see here below].

Although the fact remains that the head of the togate youth, **figure 12** on Frieze B (cf. here **Figs. 1 and 2 drawing**), has not been destroyed, which is why some scholars have suggested that, therefore, it cannot possibly be identified as a portrait of Domitian, which should have been destroyed after the emperor's *damnatio memoriae*, of course.

Whereas I myself have developed a scenario to explain this fact (cf. *supra*, in Chapter II.3.1.a) [see below], with reference to Chapter II.3.2.), John Henderson (2003) offers a different solution to this problem, which does not contradict my suggestion, since both hypotheses could be regarded as complementing each other.

Henderson (2003, 246) writes:

"On Relief 'B', we recognise the features of dear old Vespasian in the front-rank figure to right who is being crowned by a Victory launch. And we wonder if (we can ever decide if) the young man he is paired with has an individualised, or blankly idealising, visage [with n. 54]: a youthful Domitian, or some worthy public servant? A Domitian, some agree (never, in any event, a square-jaw Titus) - a princeling Domitian re-imag(in)ed in a two decades retrospect from the meat of his reign, and hence a Domitian unlike his former self? So Magi reckoned, and 'A' is thus pinpointed as the start or finale of some (major? enough to call for massive sculpture ...) campaign under Domitian's auspices, while 'B' must B [*corr.*: be] a contemporaneous resuscitation of an occasion way back in Vespasian's era - bringing together father and (second) son. **If Nerva displaced the head on Domitian's neck in 'A', perhaps the dead and damned Domitian escaped defacement in 'B' precisely because he looks (so) little like Domitian?** [my emphasis].

In his **note 54**, Henderson writes: "His [*i.e.*, of **figure 12**, the togate youth's] eyes bigger and deeper than the lictors' [*i.e.*, of **figures 1 and 10** on Frieze B], his face more individualised than theirs, at least (Simon [1960] 134; Bonanno [1976] 56)". - Note that Anthony Bonanno (1976, 56-57) mentions more arguments than the one, quoted by Henderson, which have led him to identify this head of the togate youth as a portrait of Domitian'.

**To conclude this point: I myself ask in this *Study*, whether Frieze B, when still *in situ* at the Domitianic building, to which it belonged, was accessible at all to people, who could have damaged it (cf. *supra*, in Chapter II.3.2.); whereas John Henderson (2003, 246), who takes for granted that Frieze B *was accessible*, asks, whether the togate youth was *possibly not recognizable* as Domitian, and therefore not damaged.**

#### *Why the head of the togate youth/ Domitian on Frieze B was not damaged*

Most scholars, who discussed the Cancellaria Reliefs so far, ignored the fact that Nerva actually had (in theory) a reason to usurp Domitian's arch (provided, that assumption is true), for which the Cancellaria Reliefs were created: his victory in the *bellum Suebicum*. For the whole, very complex procedure; cf. *supra*, at Chapters II.3.1.a; II.3.2; II.3.3.a); V.1.c; V.1.i.3.).

The governor of Pannonia, not Nerva had conducted this victorious military campaign, but because Nerva was the reigning emperor, this victory was attributed to him. The governor of Pannonia, therefore, sent Nerva in Rome a laurel wreath, as a sign of his victory, which Nerva dedicated in late October or at the beginning of November AD 97, in a solemn ceremony, to Iuppiter Optimus Maximus Capitolinus; in the same solemn ceremony on the Capitoline Hill, Nerva then adopted Trajan, "whom he had previously appointed governor of Upper Germany, as his son, co-emperor, and successor" (cf. J.B. CAMPBELL 1996, 1038-1039; cf. *supra*, **n. 322**, in Chapter II.1.e)). Trajan was at Mogontiacum/ Mayence/ Mainz at that stage.

Cf. *supra*, at Chapters II.3.2.); and II.3.3.a), and *infra*, at *The fourth Contribution by Peter Herz* in this volume ("Wann wurde Trajan von Nerva adoptiert?"). See also *infra*, in volume 3-2, at *A Study on the consequences of Domitian's assassination: Nerva is forced to adopt Trajan and Trajan creates Domitian's negative image to consolidate his own reign ...*

**As a consequence of both facts (Nerva's victory in the *bellum Suebicum* and his adoption of Trajan), the Senate granted in November of AD 97 both Nerva and Trajan for their victory in the *bellum Suebicum* the title *Germanicus*, which Nerva added to his official title, and which also Trajan accepted.**

In my opinion, this sequence of events allows the assumption that Nerva, when learning the news of his victory in the *bellum Suebicum*, gave the order to rework the portrait of Domitian on Frieze A into a portrait of himself. As is plain to see (cf. here **Fig. 1**), this operation was never finished, which allows the further assumption that Nerva must have ordered the interruption of those works at some stage, possibly on the day, when he adopted Trajan. I further suggest that Nerva finally ordered the destruction of the monument, to which the Cancellaria Reliefs belonged, at the latest after the Senate, in November of AD 97, had granted him *and Trajan together* the title *Germanicus* - for their (alleged) victory in the *bellum Suebicum*, at which neither Nerva, or Trajan had participated (!).

To further illustrate this point, I repeat in the following a passage, written for *supra*, Chapter II.3.1.a) *Nerva's victory in the bellum Suebicum October AD 97*): 'If indeed Nerva had wished to refer to his own victory over the *Suebi* in Pannonia in AD 97, when he ordered to recut Domitian's face on Frieze A into a portrait of himself (cf. here **Fig. 1**; **Figs. 1 and 2 drawing: figure 6**), this idea was perhaps not so extravagant, as we might at first glance believe. Because, provided Domitian actually had commissioned Frieze A in order to commemorate his own victorious Sarmatian War, which the emperor had fought in person in Pannonia in AD 92-93 against the Sarmatian Iazyges, and likewise against the *Suebi* [with n. 345], as one scholar has suggested [with n. 346, both at Chapter II.3.1.a)], Nerva's idea would become much better understandable (cf. *supra*, at Chapter II.3.2.)'.

I myself suggest instead that Frieze A of the Cancellaria Reliefs shows Domitian's *profectio* to his (second) Dacian war in the spring of AD 89 (cf. *infra*, in volume 3-2, at *Appendix IV.d.2.e*); and *Appendix IV.d.2.f*). Further down in this *Chapter*, I suggest that the Cancellaria Reliefs may have decorated the arch of Domitian, postulated by Filippo Coarelli (2009b; 2012) at the "Porta principale" ('main entrance') of Domitian's Palace on the Palatine. If that is true, considering at the same time that the Emperor Nerva resided in Domitian's *Domus Augustana* as well, it would be more than understandable that he had the intention to appear with a portrait of *himself* on Frieze A (cf. here **Fig. 1**, or, if possible, on both Friezes ?), which decorated after all the arch at the entrance of *his* Palace. - For the fact that Nerva lived in Domitian's Palace on the Palatine; cf. Friderike Senkbeil (2022, 242 with n. 1262).

Cf. here **Figs. 8.1; 58**, labels: PALATINE; DOMUS AUGUSTANA; "Porta principale"; Arch of Domitian ? / Cancellaria Reliefs ?

Contrary to all previous scholars, Massimo Pentiricci (2009) suggests the following. Most of the slabs of the Cancellaria Reliefs (cf. here **Figs. 1 and 2 drawing**) were found in what I call the 'Second sculptor's workshop', which Filippo Magi (1939; 1945) excavated underneath the Palazzo della Cancellaria, next to the tomb of consul Aulus Hirtius (cf. here **Figs. 58; 59**). Together with the Cancellaria Reliefs, Magi has found there architectural fragments, which belonged to an arch. Pentiricci believes that all those finds belong to the same context, which means that this Domitianic building must have been destroyed together with its pertaining Cancellaria Reliefs (cf. M. PENTIRICCI 2009, 61 with ns. 428-431; p. 62 with ns. 440-442, p. 162 with n. 97, p. 204: "§ 3. La ristrutturazione urbanistica in età flavia (Periodo 3)"; cf. pp. 204-205: "L'officina marmoraria presso il sepolcro di Irzio"). Cf. *supra.*, Chapter I.3.2.), **ns. 261; 297**; and at **n. 334**, in Chapter II.3.1.a).

For this 'Second sculptor's workshop; cf. *supra*, in Chapters I.3.1.); V.1.a.1.).

Stephanie Langer and Michael Pfanner (2018, 82, 84), who do not discuss Massimo Pentiricci (2009) in this context, are likewise of the opinion that the Cancellaria Reliefs were destroyed together with the building to which they belonged. In addition to this, they have already suggested (for different reasons than I myself) that it could have been Nerva, who ordered the destruction of the building with the Cancellaria Reliefs; cf. *supra*, in Chapters V.1.a); V.1.b); V.1.i.1.).

In my opinion, Nerva ordered the destruction of this building comprising the Cancellaria Reliefs because, after the above-mentioned decision of the Senate, those Reliefs should, of course, have shown on Frieze A *both Nerva and Trajan together, in their profectio ceremony for the bellum Suebicum*. As is well known, the slabs of the Cancellaria Reliefs are much too thin to allow major changes of such a kind, for example, the carving of a second emperor next to Domitian/ Nerva on Frieze A, for example between Minerva and Domitian/ Nerva (cf. here **Fig. 1; Figs. 1 and 2 drawing: figures 5; 6**); cf. *supra*, at Chapter II.3.2.

When trying to find out what had actually happened to the Cancellaria Reliefs after Domitian's assassination, we must also consider the fact that, like these panels (see for that below), also the building itself, where those reliefs had been attached and carved *in situ* (also the second carving phase of these reliefs; see below, and *supra*, in Chapters II.1.d; II.4.), was possibly not as yet finished. To further illustrate this point, I repeat another passage, written for *supra*, Chapter II.3.1.a):

*‘Nerva's victory in the bellum Suebicum October AD 97 ...*

‘Pfanner (1981, 516-517 with ns. 13-16, "Das Schicksal der Reliefs", quoted *verbatim supra*, n. 318, in Chapter II.1.d)) has proven, that Domitian's face on Frieze A of the Cancellaria Reliefs [here **Fig. 1; Figs. 1 and 2 drawing: figure 6**] was recut into a portrait of Nerva, when that panel was still *in situ* on its Domitianic building. Domitian was murdered on 18th September AD 96. As we have learned above [cf. *supra*, in Chapter II.3.2.], Nerva dedicated at the end of October or at the beginning of November AD 97 the laurel wreath to Iuppiter Optimus Maximus Capitolinus on the Capitoline, which, as a token of his victory over the *Suebi*, had been sent to him from Pannonia - that victory, for which Nerva should receive, together with Trajan, the title *Germanicus*. When we combine these facts, it seems reasonable to assume that this Domitianic arch, at the stage of Nerva's victory in October of AD 97, had ‘survived’ Domitian's assassination already by more than 13 months. If so, we can further assume that this arch, following Nerva's decision, to convert this monument into one that celebrated his own victory, had again become a building site.

Perhaps we can even hypothesize something else: when we consider that the Cancellaria Reliefs were not finished, when Domitian died (many parts of them have not as yet received their final finish), the place may simply have remained, since Domitian's death, an abandoned building site’.

Also Giandomenico Spinola writes (cf. below, at *The Contribution by Giandomenico Spinola on the Cancellaria Reliefs*) that, in his opinion, the building, to which the Cancellaria Reliefs belonged, had not been finished in Domitian's lifetime.

For the fact that many parts of the Cancellaria Reliefs had not received their final finish; cf. also *supra*, ns. 135-137, in Chapter I.1; Chapter II.1.b); n. 340 in Chapter II.3.1.a); and Chapter V.1.i.1.).

Assuming that what was said above is true, I suggest in this *Study* that Domitian's portrait/ the togate youth on Frieze B (**Fig. 2; Figs. 1 and 2 drawing: figure 12**) survived simply because it was not accessible to the public before the entire building, comprising the Cancellaria Reliefs, was destroyed - at the order of Nerva, as I believe; cf. *supra*, at Chapter II.3.2.

And if also that should be true, the following seems to be obvious. Only thanks to Nerva's above-suggested decisions in AD 97, thanks to the fortunate find of the Cancellaria Reliefs in the 1930s, which are still extant, and Filippo Magi's exemplary publication of them (1939; 1945), we are today in the privileged position of having the chance to *study* those panels.

*Let's now turn to the underlying ‘topographical context’ of Frieze B,  
the Porta Capena in the Servian city Wall*

In my opinion, the young Caesar Domitian is shown on Frieze B (cf. here **Fig. 2; Figs. 1 and 2 drawing: figure 12**) how he, in the 1. half of October of AD 70, in an *adventus* ceremony, and in his capacity of *praetor urbanus*, receives at the sacred boundary of the City of Rome, the *pomerium*, the newly elected Emperor

Vespasian. Domitian held the office *praetor urbanus consulari potestate* since the 1st of January AD 70 (cf. *supra*, at Chapter V.1.i.3.)).

But with the subject *adventus* of Vespasian, as Domitian wished his artists to represent it on Frieze B, were connected two problems: the *praetor urbanus* (i.e., Domitian) could only act in this capacity within the city of Rome, in addition to this we know that Vespasian was negotiating at that stage with the Senate to be granted a triumph for his victories in the Great Jewish War, from which he was just coming back (*via* his sojourn at Alexandria). For Vespasian's motivation to go from Judaea to Alexandria and for his actions there; cf. *infra*, at Chapter *The visualization of the results of this book on Domitian on our maps*; and *infra*, in volume 3-2, at *Appendix II.a*).

Vespasian's wish to celebrate a triumph, in its turn, meant (in theory), that he was not allowed to transgress the *pomerium* of Rome, the City's sacred boundary, unless the Senate had granted him this triumph. We also know that the Senate should only grant Vespasian (Titus, and Domitian !) the privilege of celebrating this triumph on the very morning of their triumphal procession, in June of AD 71 (!).

In this specific case, the Senate granted all three of them - Vespasian and Titus for their victories in the Great Jewish War - and Domitian for his contemporary actions at Rome (and/ or for his military 'adventure' in Gaul and Germany in AD 70 ?) - three separate triumphs (so Josephus, *BJ* 7,5,3), which they decided to celebrate together: this happened in June of 71 AD.

Cf. *supra*, in Chapter *Preamble*; Section III.; at point 2.); in Chapter III., with n. 458, providing references; in Chapters V.1.i.3.); and V.1.i.3.a); and *infra*, in volume 3-2, at *Appendix I.c*). - For Domitian's military 'adventure' in Gaul and Germany in AD 70; cf. *supra*, at Chapters I.1.; I.2, ns. 229; 230, n. 458 in *supra*, Chapters III. and V.1.i.c.3.) and *infra*, in volume 3-2, at *Appendix I.c*).

After what was said above, the scene, represented on Frieze B was, is therefore, in my opinion, on purpose set at the sacred boundary of Rome, the *pomerium*. The *Genius Populi Romani* (cf. **Fig. 2; Figs. 1 and 2 drawing: figure 13**), who has come with Domitian (to the *Porta Capena* in the Servian city Wall) to receive Vespasian in this *adventus* ceremony, and who, on this relief, appears not by chance *between* father and son, therefore, sets his left foot on a *cippus*, which must mark the *pomerium* line. By positioning this *pomerium cippus* within the composition of this relief right there, the artist has divided the areas *domi* (on the left hand side of the relief) and *militiae* (on the right hand side of the relief) from each other, and that for the following reasons.

Domitian in his capacity as *praetor urbanus*, and, on principle, the *Genius Senatus*, the *Genius Populi Romani*, and likewise the city goddess *Dea Roma*, were not allowed to leave the City of Rome (i.e., the area *domi*), where all four of them, therefore, appear on Frieze B (cf. here **Fig. 2; Figs. 1 and 2 drawing: figures 2; 11; 12; 13**).

Outside the City of Rome (i.e., within the area *militiae*) we see on Frieze B, on the other hand, the homecoming victorious general Vespasian (cf. here **Fig. 2; Figs. 1 and 2 drawing: figure 14**), who is currently not as yet allowed to leave this area (i.e., by entering the City of Rome, that is to say, the area *domi*). And because we know that Vespasian had approached the City of Rome by coming down the *Via Appia*, father and son are obviously meant to meet on Frieze B of the Cancellaria Reliefs at the *Porta Capena* within the Servian city Wall (cf. here **Figs. 58; 71**), although the gate itself is not represented. For a discussion of all aspects of the Cancellaria Reliefs; cf *supra*, in Chapters I.-VI.; and *infra*, at *The Contribution by Giandomenico Spinola on the Cancellaria Reliefs*.

**I myself follow Giandomenico Spinola's overall interpretation of Frieze B of the Cancellaria Reliefs, and, therefore repeat here a passage, written for Chapter III. (for the following see also *infra*, at *The Contribution by Giandomenico Spinola* in this volume) : 'Spinola's new addition to all this previous**

knowledge consists in the following observation. He has alerted me to the possible meaning of the gesture, which, on Frieze B, Vespasian makes with his right hand. The emperor lifts it and lays it on the left shoulder of the togate youth standing in front of him [in reality, Vespasian does not touch the youth's shoulder, but from a distance it looks like that] ... Since Spinola takes it for granted that Frieze B shows the original portrait of that emperor and, therefore, Vespasian and Domitian, he believes that Vespasian's gesture means that he thus bestows the (future) reign of the Empire on his younger son Domitian. Which, if true, would mean that Frieze B shows not only the very moment of the *investiture* of the Emperor Vespasian himself - as has already earlier been observed by many scholars - but at the same time the (future) *investiture*, or the "legittimazione" (so Spinola) of Domitian [my emphasis]'.

And because I follow Giandomenico Spinola's just-quoted interpretation of Frieze B of the Cancellaria Reliefs, I suggest in this *Study*, for which building Domitian may have commissioned the Cancellaria Reliefs.

**For the reasons, discussed in the following points 1.) - 5.), I believe that the Cancellaria Reliefs may have decorated one of Domitian's two arches on the Palatine.**

**1.) because of the date ('late Domitianic'), suggested for the Cancellaria Reliefs and/ or because scholars suggest that the workshop of the Cancellaria Reliefs was also active in Domitian's Palace on the Palatine, and in Domitian's *Forum/ Forum Nervae/ Forum Transitorium* (in the following called: 'Domitian's *Forum*').**

Domitian's Palace on the Palatine was erected between AD 81 until around 92; cf. John Pollini (2017b, 120); and Françoise Villedieu (2009, 246), discussed *supra*, in Chapter V.1.i.3.b); at Section III.

Hans Wiegartz (1996, 172, quoted *verbatim infra*, in volume 3-2, at Appendix IV.d.2.a)) was of the opinion that the sculptural decoration of Domitian's *Forum* and the Cancellaria Reliefs were contemporary.

Giandomenico Spinola was kind enough to tell me that, in his opinion, the Cancellaria Reliefs (cf. here **Figs. 1; 2**) are datable to the late Domitianic period (cf. *supra*, at n. 75, in Chapter I.1., see also below, at *The Contribution by Giandomenico Spinola on the Cancellaria Reliefs*).

Pierre Gros (2009, 106-107, quoting P. GROS 2004) suggests that Domitian's architect Rabirius, who built his Palace on the Palatine, created at the same time Domitian's *Forum*; cf. *infra*, in volume 3-2, at Appendix IV.d.2.a); and Appendix IV.d.2.f). Gros (2009, 106-107) reports also that, as a result of the recent excavations at Domitian's *Forum*, quoting for that Eugenio La Rocca (1998a, 1-12), "Le ricerche recenti hanno messo in evidenza tre fasi diverse di un cantiere che, cominciato nell'84, durò più di un decennio ...", quoted in more detail and discussed *infra*, in volume 3-2, at Appendix IV.d.2.a).

Also Joachim Raeder (2010, 146; cf. p. 144, with Textabbildung 51, on the "*Piroustae* (?)" of Domitian's *Forum* [cf. here **Fig. 49**]) stresses the stylistic similarities of the Cancellaria Reliefs with the sculptural decoration of Domitian's *Forum*. Cf. *supra*, n. 66, in Chapter I.1.

Klaus Stefan Freyberger (2018, 97; cf. *supra*, at Chapter V.3.) observes that the architectural fragments, found together with the Cancellaria Reliefs (here **Figs. 1; 2**), were carved by a late Domitianic workshop that was also active in Domitian's *Domus Augustana*. In addition to this, Freyberger (2018, 97) compares on stylistical grounds the architrave block, carrying the inscription PP FECIT (*CIL* VI, 40543), that was found together with the Cancellaria Reliefs, with "*Le Colonnacce*" at Domitian's *Forum* (cf. here **Fig. 49**). To this I will come back below.

For a discussion; cf. *supra*, at Chapter VI.3. *Summary of my own hypotheses concerning the Cancellaria Reliefs presented in this Study; Addition: My own tentative suggestion, to which monument or building the Cancellaria Reliefs may have belonged, and a discussion of their possible date.*

For Domitian's Palace on the Palatine most recently; cf. the last, posthumous publication (of 2020) on this subject by the late Ulrike Wulf-Rheidt (21st December 1963 - 13th June 2018). See also Aurora Raimondi Cominesi and Claire Stocks (2021; *ead.* 2023); Natascha Sojc (2021); Raimondi Cominesi (2022); and Jens Pflug (2022). My thanks are due to Hans Rupprecht Goette for sending me the article by Wulf-Rheidt (2020).

**2.) The representation of the *Piroustae* (here Fig. 49) in Domitian's *Forum* provides the date of the creation of the Cancellaria Reliefs (i.e., 'post AD 89').**

The representation of the *Piroustae* in Domitian's *Forum* (here Fig. 49) helps:

a) to date the sculptural decoration of this *Forum* itself; and -

b) because the same workshop created also the Cancellaria Reliefs (cf. *supra*, at point 1.), it allows the hypothesis, that Domitian (now Nerva) on Frieze A of the Cancellaria Reliefs (here Fig. 1) is leaving in the Spring of AD 89 for his (second) Dacian War, which was victorious and that Domitian celebrated in November/ December of AD 89 with a triumph at Rome 'over the Chatti and the Dacians'. For this date of this triumph; cf. Dietmar Kienast, Werner Eck and Matthäus Heil (2017, 109). - If true, this fact may be regarded as a *terminus post quem* for the realization of the Cancellaria Reliefs.

Cf. *infra*, in volume 3-2, at Appendix IV.d.2.f) Domitian's choice to represent the *Piroustae* (cf. here Fig. 49) in his *Forum/ Forum Nervae/ Forum Transitorium* and the date of the Cancellaria Reliefs.

For Domitian's war of AD 89; cf. Peter L. Viscusi (1973, 58-60), quoted *verbatim* and discussed *supra*, in Chapter Preamble: Domitian's negative image; at Section I. 'The intentional creation of Domitian's negative image', here presented by discussing relevant text passages from Markus Handy ("Strategien zur Legitimierung der Ermordung des Domitian", 2015) and from Peter L. Viscusi (Studies on Domitian, 1973).

**Fig. 49. Rome, Domitian's *Forum/ Forum Nervae/ Forum Transitorium*, detail from the only extant part of the colonnade on the south-east side of the *Forum*, called "Le Colonnacce". Photo: Courtesy F.X. Schütz (March 2006). Marble relief of a female figure in the attic storey of "Le Colonnacce", previously identified as Minerva but, as H. Wiegartz (1996) realized, actually depicting a representation of a people; as he observed originally 42 such representations of *gentes* had decorated this *Forum*. This figure represents the *Piroustae*, who, as Wiegartz observed, is also represented in the *Sebasteion* at Aphrodisias, where this representation is labelled as 'Piroustoi' (cf. here Fig. 50). Photo: Courtesy H.R. Goette (May 2012). The *Piroustae* were an Illyrian tribe (also called a Dalmatian tribe and a Pannonian tribe), who lived in that part of the Roman province of Illyricum, which, after the division of this province (which probably occurred in AD 9), became the Roman province of Dalmatia.**

**Fig. 50. Aphrodisias, *Sebasteion*, Iulo-Claudian period. Marble relief depicting a representation of the same people as illustrated at "Le Colonnacce", called in the pertaining inscription 'Piroustoi'. Photo: Courtesy Aphrodisias Excavations (G. Petruccioli).**

My thanks are due to Amanda Claridge, Hans Rupprecht Goette, Peter Herz, Eugenio La Rocca, Stefan Pfeiffer, Franz Xaver Schütz, Rose Mary Sheldon, and Bert Smith, whose 'combined efforts' - during the pandemic, when all the libraries were closed - have helped me to understand this very complex subject.

The enquiry began when I read a remark by the military historian Rose Mary Sheldon (2007, 199) on the effect his suppression of the Bar Kokhba Revolt may have had on Hadrian *himself*. Pursuing this question further had for me the unforeseen result that I have added to this book a detailed study on Domitian's building projects at Rome.

Cf. *infra*, in volume 3-2, at Appendix IV.c.2.); and Appendix IV.d) The summary of the research presented in Appendix IV. has led to a summary of Domitian's building projects at Rome. - To this I will come back below.

The reason being that I began to study the representations of 'peoples', which decorated the porticos of the *Hadrianeum* (here Fig. 48), interpreted by Marina Sapelli (1999) as '*provinciae fideles*', ending up with Domitian's *Forum*.

Reading Amanda Claridge's Rome guide (2010, 174-175), I came across an important finding, for which she herself did not provide a reference : at "Le Colonnacce" in Domitian's *Forum* "On the attic storey the surviving sculptured panel in the recess shows a helmeted [page 175] female carrying a shield, recently recognized (thanks to a labelled version found at Aphrodisias in Turkey) as the personification of the *Piroustae*, a people of the Danube".

When asking Amanda for advice, she thought to have found this hypothesis in a publication by R.R.R. Smith, sending me, on her own account, Bert Smith's article ("*Simulacra Gentium: The Ethne from the Sebasteion at Aphrodisias*", 1988), but in which, as Amanda herself knew, the *Piroustaie* are *not* mentioned. Also Stefan Pfeiffer (2009, 61-62) mentions the *Piroustaie* (here **Fig. 49**) in his book on the Flavians, but quotes Hans Wiegartz for this identification, likewise without providing a reference. Unfortunately I could not ask any more Hans Wiegartz (23rd January 1936 - 27th March 2008) himself for advice, since he had passed away a long time before.

**These figures of representations of 'peoples' in Domitian's Forum (cf. here Fig. 49), of which according to H. Wiegartz (1996) originally 42 had decorated this Forum, symbolized, according to Stefan Pfeiffer (2009, 61-62), 'Domitian's "Sieghaftigkeit", which in its turn guaranteed Rome's wealth'. This passage is quoted in more detail *infra*, in volume 3-2, as the epigraph of Appendix IV.d.2.e).**

Elsewhere, Pfeiffer (2018, 189; cf. *supra*, in Chapter I.2.1.a)), by analysing the themes of Domitian's self-presentation, explains what he means with "Sieghaftigkeit":

**"1. It was a key issue for Domitian to show his *virtus militaris* and his victoriousness [with n. 85, providing a reference]. Domitian in his self-presentations thus claimed his 'invincibility'.**

For a detailed discussion; cf. *infra*, in volume 3-2, at Appendix IV.d.2.a). - To this I will likewise come back below.

At my request, Stefan Pfeiffer was kind enough to write me the reference of Hans Wiegartz ("*Simulacra Gentium auf dem Forum Transitorium*", 1996), but because of all the articles of the periodical *Boreas* precisely that article is not available on the Internet, Hans Rupprecht Goette was kind enough to send me this article by Wiegartz (!). In addition to this, I may publish here with Franz Xaver Schütz's kind consent one of his photographs of "*Le Colonnacce*" (here **Fig. 49**).

And because Pierre Gros (2009, 106-107) had in the meantime returned to the older opinion that this '*Piroustaie* relief' in Domitian's *Forum* represents Minerva, (allegedly) following with this decision Maria Paola Del Moro (2007), I asked also the other above-mentioned scholars for help. As I should only find out much later, Pierre Gros (2009, 107), quoting for this opinion: "(Del Moro 2007b [*i.e.*, here M.P. DEL MORO 2007], pp. 178-187)", erroneously asserts that it was Del Moro (2007), who has re-identified the '*Piroustaie* relief' (here **Fig. 49**) with Minerva.

Hans Rupprecht Goette sent me, on his own account, his photo of the *Piroustaie* at "*Le Colonnacce*" in Domitian's *Forum* (here **Fig. 49**), which I may publish here with his kind consent. He sent me also a reference concerning the *Piroustoi* in the *Sebasteion* at Aphrodisias (cf. here **Fig. 50**); cf. R.R.R. Smith (Aphrodisias VI. *The Marble reliefs from the Julio-Claudian Sebasteion*, 2013), and a photo of the *Piroustoi* there. I knew, of course, this relief at the *Sebasteion* (cf. here **Fig. 50**), but had so far not realized that this relief and the *Piroustaie* in Domitian's *Forum* (here **Fig. 49**), are (admittedly somewhat different) copies of the same prototype (!).

Because I wanted to know, who had been *first* to recognize this, and because Pierre Gros (2009, 106-107) had in the meantime re-identified the '*Piroustaie* relief' (here **Fig. 49**) as a representation of Minerva, I asked R.R.R. Smith for advice. Bert Smith wrote me that it had been Hans Wiegartz (1996), who identified both reliefs as representations of the tribe called *Piroustaie/ Piroustoi*, a fact, which also he himself has stated; cf. Smith (2013, 91 n. 50). In addition, Bert explained to me in this E-mail that, for iconographic reasons, this relief at Domitian's *Forum* cannot possibly represent Minerva. With Bert's kind consent, I publish here his E-mail as ("*The first Contribution by R.R.R. Smith on the iconography of the representation of the Piroustaie at "Le Colonnacce" in Domitian's Forum/ Forum Nervae/ Forum Transitorium*"). Bert Smith sent me also, on his own account, the relevant parts of his publication of 2013, and the photo of the *Piroustoi* at the *Sebasteion* (here **Fig. 50**), which I may publish here with his kind consent.

Cf. *infra*, in volume 3-2, at *Appendix IV.d.2.a*) *Who invented this iconography of defeated and pacified 'nations' and what does it mean?* With The first Contribution by R.R.R. Smith.

In this *Chapter* are discussed the publications by R.R.R. Smith (1988 and 2013), in which he has studied all representations of 'nations', beginning with those of Pompeius Magnus in his theatre at Rome, but also those of Augustus's *Porticus ad Nationes* at Rome and those that derive from the 'nations' of Augustus's *Porticus ad Nationes* : the *ethne* of the *Sebasteion* at Aphrodisias (here **Fig. 50**), the 'provinces' of the *Hadrianeum* at Rome (here **Fig. 48**), and the 'peoples' of Domitian's *Forum* (here **Fig. 49**). According to R.R.R. Smith (2013, 119), Domitian's *Forum* with its 42 representations of 'peoples', may be regarded as "... another *porticus ad nationes*". Thus referring to Augustus's *Porticus ad Nationes*; cf. Smith (1988, 71-72; *id.* 2013, 114-118). Cf. *infra*, in volume 3-2, at *Appendix IV.d.2.b*; and *Appendix IV.d.2.f*). To this I will come back below.

**In this context, we should consider three very remarkable facts:**

a) of the 42 representations of 'peoples', which had originally decorated Domitian's *Forum*, only one, which represents the *Piroustaë*, is still *in situ* (here **Fig. 49**), and -

b), as Hans Wiegartz (1996) had realized, precisely that representation has also survived in the *Sebasteion* at Aphrodisias (here **Fig. 50**). At the *Sebasteion*, these altogether 50 representation of *ethne* consist of two separate blocks (the figure and its pertaining inscription), which is why we might be tempted to doubt that the lower block, carrying the inscription 'Piroustoi', was actually combined with the *correct* female figure. But that is certainly not the case. I, therefore, anticipate in the following a passage, written for *infra*, volume 3-2, at *Appendix IV.d.2.c*), which proves -

c) that this female figure has correctly been identified by Wiegartz with the 'people' called *Piroustoi/Piroustaë*:

'That the statue-type copied in those two reliefs [*i.e.*, here **Figs. 49; 50**] actually represents the *Piroustaë* is certain because the artists at the *Sebasteion* had also labelled the relief itself with the name of this people to make sure to combine the right figure with the inscribed base that identifies this female as a representation of the *Piroustoi*; cf. R.R.R. Smith (2013, 90, 118).'

Let's now return to a summary of *infra*, volume 3-2, *Appendix IV.d.2.b*).

R.R.R. Smith (1988, 58 with n. 18) writes that the representations of 'peoples' in the *Sebasteion* at Aphrodisias, *inter alia* of the *Piroustaë*, can be explained with relevant victories of Augustus : the representation of the *Piroustaë* for example refers to the wars in the area in question in 13-9 BC and in AD 6-8. In his note 18, Smith mentions the relevant ancient literary sources: "... *Piroustaë* ... - RG 26-7 and 30". Note that Augustus (RG 26-27, 30) mentions that he had incorporated the area, where the *Piroustaë* lived, into the Imperium Romanum : he says that those victories had been won by Tiberius, but he does not explicitly mention the peoples, who lived there.

**See also R.R.R. Smith (2013, 91, n. 44) for the fact that Tiberius could only defeat the *Piroustaë*, "when they were almost entirely exterminated" [so Velleius Paterculus 2.115.2-4; my emphasis] (!) :**

**"On Tiberius and the Pirousti in AD 6-9, the Tiberian historian, Velleius Paterculus (2.115.2-4) writes: '... This campaign brought the momentous war to a successful conclusion; for the Perustae and Desiades, Dalmatian tribes, who were almost unconquerable on account of the position of their strongholds in the mountains, their warlike temper, their wonderful knowledge of fighting, and, above all, the narrow passes in which they lived, were then at last pacified, not now under the mere generalship, but by the armed prowess of Caesar [*i.e.*, Tiberius] himself, and then only when they were almost entirely exterminated' (2.115.4, transl.[ation] F. W. Shipley, Loeb 1924) [my emphasis]"**

And because Pierre Gros (2009, 106-107) has (erroneously) asserted that Maria Paola Del Moro (2007) had re-identified the *Piroustaë* (here **Fig. 49**) with Minerva, I asked also Eugenio La Rocca for help, who was kind enough to send me the relevant article by Maria Paola Del Moro. Del Moro (2007) does not say in her article that the 'Piroustaë relief' (here **Fig. 49**) represents Minerva, but has instead further supported Wiegartz's (1996) relevant observations : in her excavations at Domitian's *Forum*, conducted in 2000, she found the fragments of some more of such very similar representations of 'peoples'.

With Franz Xaver Schütz's and Rose Mary Sheldon's much appreciated help I could then study the Balkan Wars of Augustus and Trajan, as well as Hadrian's actions there, which was necessary for me to understand Domitian's Wars in this area.

For Hadrian's just-mentioned actions; cf. *infra*, at *The third Contribution by Peter Herz : Der Übergang von Trajan auf Hadrian und das erste Regierungsjahr Hadrians*.

Franz conducted a special research on the internet concerning the representation of the people called *Piroustaë* at Domitian's *Forum* (here **Fig. 49**) and found, in addition to this, the following relevant publications on the internet, which turned out to be crucial for the effort to understand the design of Domitian's *Forum*.

Cf. Carl Patsch ("Archäologisch-epigraphische Untersuchungen zur Geschichte der römischen Provinz Dalmatien, 1899; *inter alia* on the *primus pilus* Statius Marrax, who was highly decorated by Domitian), Géza Alföldy ("Einheimische Stämme und *civitates* in Dalmatien unter Augustus", 1963), Dragana Grbić ("Augustan Conquest of the Balkans in the light of triumphal monuments", 2011), and Alfred Hirt ("Dalmatians and Dacians - Forms of Belonging and Displacement in the Roman Empire", 2019). Since I had asked Rose Mary Sheldon for advice concerning the *primus pilus* Statius Marrax, she had alerted me to a publication, in which the relevant inscription is discussed, and Franz found it on the Internet; cf. Hans Krummrey (2003), a Review of Marco Buonocore, *L' Abruzzo e il Molise in età romana tra storia ed epigrafia*, Vol. I-II (*Deputazione Abruzzese di Storia Patria. Studi e Testi* 21/1-2, 2002).

As a consequence of all these enquiries, Franz was kind enough to create a visualization of the area in question; cf. below, at *The first Contribution by Franz Xaver Schütz : Zur kartographischen Visualisierung historischer Landschaftselemente zwischen Rhein und Schwarzem Meer von Augustus bis Hadrian* (cf. here **Fig. 77**). The purpose of the map (here **Fig. 77**), created by Franz, is to support research that tries to understand the movements of those three men within this area, who are discussed in this *Study* : Arminius, Domitian and Hadrian.

We learn in those above-listed publications that the *Piroustaë* lived in the area that should become the Roman province of Illyricum. At first (35-33 BC) Octavian/ Augustus, during his war in Illyricum, had fought there himself "against the Iapudes and Pannonians ... in 35 BC, and against the Delmatae in 34/3"; cf. John J. Wilkes ("Illyricum", in: *OCD*<sup>3</sup> (1996) 747; cf. Dragana Grbić (2011, 132-136; cf. *infra*).

**See for those wars also Filippo Coarelli (2012, 362), who mentions them because they prevented Octavian/ Augustus from building immediately the Temple of Apollo Palatinus, after a lightning had hit the 'House of Augustus' in 36 BC: "Si può pensare che l'avvio dei lavori [*i.e.*, for the Temple of Apollo Palatinus] sia stato ritardato dai gravi impegni militari che tennero occupato Ottaviano negli anni tra il 35 e il 33 (guerre contro i Pannoni e i Dalmati, nel corso della quali egli fu ferito due volte) [my emphasis]"**.

Cf. *infra*, in volume 3-2, in *Appendix VI.*; at Section I.

Next Tiberius, under Augustus's command, had, as already mentioned above, at first fought against the *Piroustaë* in his Pannonian War (12-9 BC), which resulted in the creation of the Roman province of Illyricum. Finally, in the Dalmatian-Pannonian revolt (AD 6-9, also called *Bellum Illyricum*), which occurred in the Roman province of Illyricum, Tiberius should have the greatest problems to suppress the uprisings of the local tribes, especially that of the *Piroustaë*.

This means that in the large group of 'nations' at Augustus's *Porticus ad Nationes*, the statue of the *Pirustae* represented a 'nation' pacified by Augustus. Cf. *infra*, in volume 3-2, at *Appendix IV.d.1.*); and *Appendix IV.d.2.d.*) I myself follow Dragana Grbić's suggestion (2011, 135) that in the *Sebasteion* at Aphrodisias "The inscription of the *Pirustae* (no. 3) symbolically represents the suppression of the Dalmatian-Pannonian revolt in 9 AD". For a discussion; cf. *infra*, in volume 3-2, at *Appendix IV.d.2.d.*)

**Nota bene.** Already to Augustus his conquests in Illyricum and in the western Balkans were of the greatest importance, and Domitian, Trajan and Hadrian would use the resulting Roman provinces as a basis for their activities in Dacia. For a discussion; cf. *infra*, in volume 3-2, at *Appendix IV.d.2.c.*)

Especially helpful for the subjects discussed here was Rose Mary Sheldon's study (2020) of Arminius, chief of the Germanic Cherusci, about whom she (cf. *ead.* 2020, 1012) writes: "Arminius himself had served as a commander of a tribal troop contingent under Roman command during the revolt in 6 CE along with Velleius Paterculus, one of our main sources [my emphasis]".

Arminius had thus served as an officer in the Roman army under Tiberius who, in AD 6-9, fought in the new Roman province of Illyricum against revolting tribes, *inter alia* the *Piroustaie*.

Rose Mary Sheldon (2020) mentions also a fact that I previously did not know : this very brave and desperate resistance against the Romans of those tribes (*inter alia* of the *Piroustaie*), who lived in the area of the future Roman province of *Dalmatia*, became the motivation for Arminius, "son of Sigimer, the tribal chief of the Cherusci" (cf. R.M. SHELDON 2020, 1012), why he, with his Cherusci and other allies, planned the only successful resurrection against the Romans (so R.M. SHELDON 2020, 1025). As is well known, this ended with the defeat of P. Quinctilius Varus in the Teutoburg Forest in AD 9. To this I will come back below.

Cf. *supra*, at Chapter *What this Study is all about*; in *A Study on Hadrian's portrait-statue from Hierapydna* (cf. here **Fig. 29**); at *To conclude this Study. Since we have started this book on Domitian with Arminius* (cf. *supra*, in Chapter *What this Study is all about*), *we might just as well end it with him*; and *infra*, in volume 3-2, at *Appendix IV.d.2.d*) *The meaning of the representation of the Piroustaie within Augustus's Porticus ad Nationes at Rome. With H. Wiegartz's (1996) observations concerning the Piroustaie and their representations; and a summary of the revolt of Arminius in Germany, which he planned because he had fought under Tiberius to suppress the revolt of the Pannonian-Dalmation tribes, inter alia of the Piroustaie.*

**I had likewise so far ignored what Maria Teresa D'Alessio tells us (2017, 510 with n. 342, quoting ancient literary sources) : Octavian's/ Augustus's triple triumph in 29 BC commemorated *inter alia* his victory over the Dalmatii in 33 BC, and with the booty from this war he should finance the *Porticus Octaviae* at Rome (!). This has also been mentioned by the late Paola Ciancio Rossetto (16th October 1945 - 26th April 2022), one of the excavators of the *Porticus Octaviae*, with whom I, since 2018, have had the chance to discuss the *Porticus Octaviae* (cf. *ead.*, 2018, 41, with n. 97, 98, quoting ancient literary sources). - To the triple triumph of Octavian/ Augustus in 29 BC I will come back below.**

Both scholars in their turn did not address in their publications the fact that the relief with the representation of the *Piroustaie* of "Le Colonnacce" at Domitian's *Forum* (here **Fig. 49**) commemorates one of those tribes, whom Octavian/ Augustus had defeated in 33 BC, the *Piroustaie*.

For the *Porticus Octaviae*; cf. below and *infra*, in volume 3-2, at *A Study on the consequences of Domitian's assassination ... Or: The wider topographical context of the Arch of Hadrian alongside the Via Flaminia ...*; Chapter *Introduction*; at Section I.

**Bert Smith (2013, 119) asks, why Domitian may have decided to likewise represent the *Piroustaie* in his *Forum*, given the fact that already Tiberius (in AD 6-9), under the command of Augustus, had conquered their territory and had turned that into the Roman province of *Dalmatia*; cf. *infra*, in volume 3-2, at *Appendix IV.d.2.c.*)**

To answer that question, I have studied the iconography of the representation of the *Piroustae*; cf. *infra*, in volume 3-2, at *Appendix IV.d.2.d*).

The most important characteristic of the iconography of the *Piroustae* (here Figs. 49; 50), when compared with all the other *ethne* at the *Sebasteion* of Aphrodisias, is the fact that the military prowess of the *Piroustae* is stressed. This is first of all clear from the choice of the 'Amazonian belt' for the representation of the *Perustae* at Domitian's *Forum* and at the *Sebasteion* (here Figs. 49; 50). In addition to this, Hans Wiegartz (1996, 174) has observed that, among all other preserved *ethne* in the *Sebasteion* at Aphrodisias, the representation of the *Piroustoi* is the only one carrying weapons (!). This fact Wiegartz (1996) convincingly explained with Suetonius's judgement (*Tib. 16*), that the 'Bellum Illyricum (AD 6-9), which Tiberius fought against the *Piroustae*, had been the most difficult war since the wars against Hannibal' (!). Suetonius (*Tib. 16*) adds that Tiberius fought this war with 15 (!) legions and the same number of auxiliary troops.

As we know from Rose Mary Sheldon (2020, 1012, n. 19), among the latter were those of Arminius's above-mentioned compatriots, who should later in AD 9, now under Arminius's own command, defeat P. Quinctilius Varus and his three Roman legions.

*I suggest that Domitian ordered the representation of the Piroustae in his Forum because excellent soldiers from the Roman province of Dalmatia like T. Stadius Marrax had served in his second Dacian War*

After what was said above, the answer to the question, why Domitian decided to represent the *Piroustae* in his *Forum* (here **Fig. 49**) has, in my opinion, already been provided a long time ago.

From Carl Patsch ("Archäologisch-epigraphische Untersuchungen zur Geschichte der römischen Provinz Dalmatien, 1899) we learn the following. An inscription from Aquileia shows that T. Stadius Marrax, *primus pilus* of the *legio XIII gemina*, who came from the Roman Province Dalmatia, had been highly decorated by an emperor, whose name is omitted in this inscription. In Patsch's opinion, this soldier had served under Domitian in his campaign(s) in Dacia and had been decorated by Domitian.

Cf. Patsch (1899, 268-269, Section: "VIII. Dalmatien und Dacien"): ...

2. Pais 1163 = Dessau [*i.e.*, *ILS, Inscriptiones Latinae Selectae*, 1892-1916] 2638 (Aquileia): *T. Stadius P. f. Serg. Marrax prim(us) pil(us) leg(ionis) XIII geminae, donatus torquib(us) armillis phaleris hasta pura bis coron[is] aureis quin[que]*. Der Name Stadius gestattet die Vermuthung, dass der *primus pilus* aus Risinium-Risano stammt, wo die *gens Statia* eine angesehene Rolle [page 269] spielte. Wie Marrax vermuthlich im dacischen Kriege unter Domitian [with note 2] so wurde ein anderes Mitglied derselben Familie von Traian anlässlich der dacischen Siege decorirt: *C. I. L. III 6359* (vgl. p. 1491) ...".

In his **note 2** on p. 269, Patsch writes: "**Der Kaiser, der die Orden verliehen hat, wird verschwiegen, war also *damnatae memoriae*** [my emphasis]".

For the home town Risinium-Risano in the Roman province of Dalmatia of the soldier *T. Stadius P. f. Serg. Marrax, prim(us) pil(us) leg(ionis) XIII geminae*, whom, as Patsch (1899, 268-269) suggested, Domitian had decorated for his services in his Dacian campaign(s). Stadius Marrax was from the area of Salona, that is to say, from the territory of the tribe of the *Piroustae* (cf. here **Fig. 77**, labels: Risinium; Salona; Aquileia).

For different opinions concerning the fate of the (former) territory of the *Piroustae* under the Romans; cf. Dragana Grbić (2011, 135 with ns. 51, 52, quoted *verbatim* and discussed *infra*, in volume 3-2, at *Appendix IV.d.2.d*)), and Géza Alföldy (1963, 194, 195, quoted *verbatim infra*, in volume 3-2, at *Appendix IV.d.2.e*)).

As also mentioned by Patsch (1899, 269), another member of Stadius Marrax's family should later receive the same high military decoration under Trajan, for his services in Trajan's Dacian Wars.

Between 7th and 19th October 2020 I had the chance to discuss with Peter Herz on the telephone- and in E-mail conversations the controversy concerning the dating of the *primus pilus of Legio XIII Gemina, T. Statius P. F. Serg. Marrax*, who is known from this inscription at Aquileia. On 19th October 2020, Herz was kind enough to send me his second *Contribution* to this volume, which I publish here with his kind consent. In this text, Herz suggests that more arguments speak for the later date, therefore, Statius Marrax may actually have served in the *Legio XIII Gemina* at the end of the 1<sup>st</sup> century, that is to say, under Domitian, as suggested by Patsch (1899).

**Cf. *infra*, at *The second Contribution by Peter Herz : Anmerkungen zu Statius Marrax*.**

See also *infra*, in volume 3-2, at *Appendix IV.d.2.e) Did Domitian intentionally represent the Piroustaie in his Forum/ Forum Nervae/ Forum Transitorium? With The second Contribution by Peter Herz*, and at *Appendix IV.d.2.f) Domitian's choice to represent the Piroustaie in his Forum/ Forum Nervae/ Forum Transitorium and the date of the Cancellaria Reliefs (cf. here Figs. 1; 2)*.

**I, therefore, suggest, that Domitian ordered the representation of the *Piroustaie* in his *Forum*, because soldiers from the Roman province of Dalmatia, like T. Statius Marrax, had supported him in one of his military campaigns.**

**And because for a variety of reasons (discussed *infra*, in volume 3-2, at *Appendix IV.d.2.f)*), that can, in my opinion, only have happened in his Second Dacian War of AD 89, I further conclude that Domitian's *Forum* commemorates Domitian's victory in this war, which the emperor celebrated with a triumph over the Chatti and the Dacians in November/ December of AD 89. - It is, of course, in theory likewise possible, that Domitian's *Forum* commemorated *all* of Domitian's victories. To this I will come back below.**

To illustrate the latter point, I anticipate in the following some passages from *infra*, volume 3-2, *Appendix IV.d.2.f) Domitian's choice to represent the Piroustaie (cf. here Fig. 49) in his Forum/ Forum Nervae/ Forum Transitorium and the date of the Cancellaria Reliefs (cf. here Figs. 1; 2) ...* :

'As we have seen above (cf. *infra*, in volume 3-2, at *Appendix IV.d.1.)*), within Augustus's *Porticus ad Nationes* the representation of the *Piroustaie* may be understood as one of the 'nations' pacified by Augustus.

**In my opinion, in Domitian's *Forum* the *Piroustaie* stood instead for one of the 'provinciae fideles' of the Roman Empire under Domitian - to borrow Marina Sapelli's booktitle (1999; cf. *infra*, in volume 3-2, at *Appendix IV.d.1.)*) - who thus testified to Domitian's good government.**

We have learned above from Alfred Hirt (2019, 17 with n. 100, quoted in more detail *infra*, in volume 3-2, at *Appendix IV.d.2.e)*) that it had been the Dacian king "Diurpaneus, who waged war against Domitian (Oros. 7.10.4; Jord. Get. 76, 78)". But, when the hostilities of the Dacians first started, the people living in the adjacent Roman province of Dalmatia did not take the chance to revolt against the Romans, some Dalmatians rather joined the Roman army who fought against the Dacians, and some of these soldiers were even decorated by Domitian in recognition of their services (cf. *supra*, point 7.) [*i.e.*, T. Statius Marrax]).

We have also learned above from R.R.R. Smith (2013, 121) that the *Piroustaie*, exactly like many other comparable tribes, had also therefore been represented within the large number of 'nations' in Augustus's *Porticus ad Nationes*, because they lived on the borders of the Empire, and could thus "express the wide geographical extent of Roman rule".

**Considering also this fact, I suggest that the representation of *Piroustaie* was chosen by Domitian for his *Forum/ Forum Nervae/ Forum Transitorium*, because these people, now living in the Roman province of Dalmatia, had, under his command, successfully defended the border of the Roman Empire [my emphasis]'.**

**If true, this would prove Bert Smith's (2013, 119) above-mentioned hypothesis, according to which Domitian's *Forum*, with its 42 representations of 'peoples', may be regarded as "... another *porticus ad nationes*". For a discussion; cf. *infra*, in volume 3-2, at *Appendix IV.d.2.b*); and *Appendix IV.d.2.f*).**

Only after this Chapter had already been published in a Preview on our Webserver, did I read Paolo Liverani's (2021, 85-86) observations on Domitian's *Forum*, especially on the representations of the *gentes* or *nationes*. Concerning their meaning, he has come to a very similar conclusion, as the one just presented here:

"The choice, on the other hand, was counterbalanced but the subject of the panels decorating the attic above the frieze. **Only one of them survives in place. It portrays an armoured female figure, which has been traditionally interpreted as Minerva. In 2000, the fragments of another female figure were excavated**, and a more careful consideration of the two panels connected them with other examples of personifications on imperial monuments. The first parallel came from the well-preserved sculptural decoration of the Sebasteion in Aphrodisias, a sanctuary honouring the emperors. [with n. 15] Here the personification of the Pirusti, a tribe of the Illyricum (Dalmatia), is very similar from a typological point of view to the alleged 'Minerva'. **The two panels, therefore, represent *gentes* or *nationes*, peoples (not provinces as [page 86] usually understood) of the empire according to a motif widely employed in the imperial monuments of the Julio-Claudian period and also attested during the second century.** [with n. 16] The earlier Forum of Augustus hosted a series of dedication from several *gentes*, according to the historical sources. [with n. 17] **The Domitianic cycle, therefore, is quite traditional, alluding to the multifarious populations that made up the Roman Empire, grouped around the emperor as sign of unity [my emphasis]**". See now also Liverani (2023, 117 with ns. 15-17; *i.e.*, the Italian version of the above-quoted passage from his essay 2021).

In his **note 15**, Liverani writes: "Ungaro 2005, Del Moro 2007, 181-185".

In his **note 16**, he writes: "Liverani 1995".

In his **note 17**, he writes: "Vell. Pat. 2.39.2, cf. *CIL* VI, 31267".

Even later than that, I received the article on Domitian's *Forum* by Antonella Corsaro and Beatrice Pinna Caboni (in: A. CORSARO, B. PINNA CABONI and C. PARISI PRESICCE, "Domiziano, Nerva e il loro Foro", 2023, 74). Concerning the meaning of the represented *gentes* and *nationes* they have likewise arrived at similar conclusions as suggested here; and they likewise believe that the architect of this *Forum* was Rabirius:

**"La figura conservata nell'attico, al centro dell'intercolumnio [cf. here Fig. 49] e originariamente interpretata come Minerva, sarebbe invece parte di una sequenza politicamente e ideologicamente assai significativa, costituita dalla raffigurazione simbolica delle diverse genti (*gentes* e *nationes*), ormai incluse in un impero che si voleva rappresentare egemonico, pacificato e inclusivo sotto l'egida imperiale.** Altri contesti monumentali, quali il giulio-claudio *Sebasteion* di Afrodisia di Caria (attuale Turchia) e l'antoniniano *Hadrianeum* di Roma [with n. 24], offrono validi confronti per questo programma decorativo e per le iconografie scelte. **Purtroppo solo la figura ancora *in situ* nelle Colonnacce è stata identificata con la rappresentazione della tribù illirica dei Pirusti.** Resta incerta invece l'attribuzione di una seconda figura scoperta nel corso degli scavi del 2000, ora esposta nel Museo dei Fori Imperiali nei Mercati di Traiano, e di un frammento di testa scoperto negli scavi del 1995-97 [with n. 25]. Queste poche raffigurazioni, superstiti di una lunga teoria di almeno 45 pannelli, danno comunque contezza della varietà e della tipizzazione etnica delle figure ... **L'originalità dell'impianto del Foro Transitorio e delle soluzioni adottate ha permesso di postulare la realizzazione del progetto all'architetto Rabirio, cui si attribuiscono le brillanti soluzioni di numerose committenze imperiali, tra le quali il noto palazzo imperiale sul Palatino [with n. 26]**".

In their **note 24**, Corsaro and Pinna Caboni write: "Per il *Sebasteion*: Smith 2013; per l'*Hadrianeum*: Parisi Presicce 1999; Parisi Presicce 2005 [*i.e.*, here C. PARISI PRESICCE 2005a]; Parisi Presicce, Baldi 2023".

In their **note 25**, they write: "Wiegartz [corr: Wiegartz] 1996, pp. 171-179; Gros 2009, pp. 106-107; Pinna Caboni 2015, p. 104".

In their **note 26**, they write: "Bauer 1976-1977; Gros 2009, p. 106; Meneghini 2009, pp. 103-104; Viscogliosi 2009, p. 208; Nocera 2015, pp. 151-154".

But only when this volume was about to be sent to the press, have I found the article by Vibeke Goldbeck ("Architekturkopien? Terminologische Überlegungen zur Rezeption von Bauwerken und ihrer Ausstattung bei den Römern. Untersucht am Beispiel des Forum Augustum und der Porticus ad Nationes", 2017). Goldbeck herself quotes also another of her earlier publications ("Die Porticus ad Nationes des Augustus", 2015a), which I had likewise managed to overlook so far. At about the same time Hans Rupprecht Goette was kind enough to send me the article by David Ojeda ("A Porticus ad Nationes in Italica", 2023); cf. *infra*, in volume 3-2, at Chapter *Introductory remarks and acknowledgements*.

Ojeda (2023) discusses two more recent publications by the same author: Vibeke Goldbeck ("Die Rezeption der stadtrömischen Monumente des Augustus im Imperium Romanum", 2020); and Vibeke Goldbeck ("Monuments Abroad' - Zur Rezeption kaiserlicher Monumente im Imperium Romanum", 2021).

Goldbeck (2020, 37-38) bases her account on the same publications that I have consulted. Concerning the meaning of the *nationes* at the *Porticus ad Nationes*, the *ethne* in the *Sebasteion* at Aphrodisias (here **Fig. 50**), and the *gentes* at Domitian's *Forum/ Forum Nervae/ Forum Transitorium* (here **Fig. 49**) and at the *Hadrianeum* (here **Fig. 48**), she comes to similar hypotheses as those, already suggested by R.R.R. Smith (1988; and 2013), whom I am likewise following in this *Study*:

#### "Die Porticus ad Nationes

**In Aphrodisias steht das berühmte Sebasteion**, das im 2. Viertel des 1. Jahrhunderts n.Chr. von zwei lokalen Familien errichtet wurde [with n. 25]. Sein umfangreicher Bildschmuck zeigt Kaiser, Götter, Kaiser im Göttergewand und mythische Heroen in griechisch-hellenistischer Motivtradition. **Daneben zeigt er aber auch eine Reihe von Personifikationen, sogenannten Ethnien oder Nationes, die in der Bilderwelt des hellenistischen Kleinasien wie ein Fremdkörper wirken.** Inzwischen lässt sich das Vorkommen dieses für die Region ungewöhnlichen Motivs gut erklären. [page 38].

Hans Wiegartz hat schon 1996 auf die enge typologische Zusammengehörigkeit einer der Ethnien des Sebasteions mit der einzigen vollständig erhaltenen Gewandfigur von der Attika des Forum Transitorium aufmerksam gemacht und ein gemeinsames stadtrömisches Vorbild für beide vermutet [with n. 26]. Bei den jüngeren Grabungen auf dem Forum wurde der Kopf einer weiteren Personifikation gefunden, der die von Wiegartz vorgeschlagene Idee, an der Attika einen dem Sebasteion vergleichbaren Zyklus von *ethnē*, *nationes* oder *simulacra gentium* anzunehmen, weiter untermauert [with n. 27]. Aufgrund des Beginns der Bauarbeiten in Aphrodisias um das Jahr 20 n.Chr., muss das beiden Monumenten zugrundeliegende Vorbild spätestens in tiberischer Zeit entstanden sein. Es könnte sich dabei um die sogenannte *Porticus ad Nationes* handeln. Über diese ist wenig bekannt, sie wird aber wörtlich übereinstimmend von zwei voneinander völlig unabhängigen Quellen erwähnt [with n. 28]. Aus beiden geht hervor, dass Augustus eine Porticus errichtet und mit *simulacra omnium gentium*, also einem Zyklus von Nationenpersonifikationen ausgestattet habe. Diese Porticus habe man *Porticus ad Nationes* genannt [with n. 29]. **Es spricht manches dafür, dass die Zyklen von Personifikationen vom Sebasteion aus Aphrodisias und vom Forum Transitorium ebenso wie diejenigen vom Templum Divi Hadriani allesamt auf das Vorbild der *simulacra omnium gentium* dieser *Porticus ad Nationes* zurückgehen**, und man sich aus diesem Grunde im Umkehrschluss eine Vorstellung von deren ursprünglichen Aussehen machen kann [with n. 30; my emphasis].

In her **note 25**, Goldbeck writes: "Siehe z. B. [zum Beispiel] Smith 1988; Smith 2013.

In her **note 26**, she writes: "Wiegartz 1996".

In her **note 27**, she writes: "Siehe Ungaro [*i.e.*, here M.P. DEL MORO] 2007, 178-191 m.[it] Abb. 259-261; Meneghini 2015, 68-77 m.[it] Abb. 89".

In her **note 28**, she writes: "Plin. nat. 36, 39; Serv. Aen. 8, 721".

In her **note 29**, she writes: "Möglicherweise handelt es sich dabei um einen zeitgenössischen Rufnamen für die Porticus Vipsania. Siehe dazu Goldbeck 2015b [*i.e.*, here V. GOLDBECK 2015a], 215-217".

In her **note 30**, she writes: "Dazu ausführlich Goldbeck 2015b [*i.e.*, here V. GOLDBECK 2015a]".

For some remarks on all those new publications; cf. *supra*, in Chapter IV.1.1.h); at *The Marble Forum at the Colonia Augusta Emerita (Mérida) in Spain*; below, at *The Contribution by Walter Trillmich on the headless marble togati found in the so-called Marble Forum at Mérida in Spain, one of which looks like the togate youth on Frieze B of the Cancellaria Reliefs*; and for a detailed discussion; cf. *infra*, in volume 3-2, at Appendix IV.d.2.).

Let's now return to our main subject.

This triumph of November/ December AD 89 Domitian celebrated, together with the Roman People, at the Colosseum, where he staged in December of AD 89 a lavish banquet for his guests, 'showering' them with generous gifts, as we know from Statius (*Silvae* 1,6: *Saturnalia principis*). What Domitian did on this occasion : inviting the Roman People to a lavish banquet and presenting his guests with generous gifts (although the costum was that friends *exchanged* gifts on that occasion), were typical costums at the *Saturnalia*; cf. *infra*, in volume 3-2, at Appendix I.f.1.).

Given Domitian's choice of the date for this banquet at the *Saturnalia*, I believe that he wished to celebrate with his guests at the same time the *Vicennalia* of his fortunate escape from the *Capitolium* on 19th December AD 69; cf. *supra*, in Chapter Preamble: *Domitian's negative image*; Section III. *My own thoughts about Domitian*; at point 1.) *Domitian's escape from the Capitolium proper on 19th December AD 69*; and *infra*, in volume 3-2, at Appendix I.

For a discussion of Domitian's banquet in the Colosseum in December of AD 89; cf. Lisa Cordes (2014, 355-356), quoted *verbatim* and discussed *supra*, in Chapter Preamble: *Domitian's negative image*; at Section II. *Conclusions: Domitian's representations of his military successes and his claims to be of divine descent and to possess a divine nature*.

**And because I follow those scholars, who believe that the workshop, which created the sculptural decoration of Domitian's Forum, carved also the Cancellaria Reliefs (cf. *supra*, at point 1.)), I further suggest that Domitian/ now Nerva on Frieze A (here Fig. 1; Figs. 1 and 2 drawing: figure 6) is shown as celebrating his *profectio* ceremony in the Spring of AD 89, after which he had left Rome for this war.**

Interestingly, my good late friend Amanda Claridge (1st September 1949 - 5th May 2022) had already stated the following in her Rome guide (2010, 169):

**"The Forum of Nerva (actually built by his predecessor Domitian in commemoration of his Dacian triumph of AD 89 ...".**

Only after this Chapter had been published as a Preview of this book on Domitian on our Webserver, did I decide to add here also another passage from Amanda's Rome guide. The reason being that I had found in the meantime in T.P. Wiseman's book (2019, 112) his quotation, translation and interpretation of Virgil (*Aen.* 8. 714-723), to which we will turn in a minute.

I am referring to the passage in Amanda Claridge (2010, 174-175 with Fig. 66, quoted already in less detail above), that is dedicated to the relief with the representation of the *Piroustae* in Domitian's Forum in Rome and to the representation of the *Piroustoi* in the *Sebasteion* at Aphrodisias in Turkey (cf. here **Figs. 49; 50**):

**"On the attic storey the surviving sculptural panel in the recess shows a helmeted [cf. here Fig. 49; page 175] female carrying a shield, recently recognized (thanks to a labelled version found at Aphrodisias in Turkey [cf. here Fig. 50]) as the personification of the *Piroustae*, a people of the Danube. She was probably one of a series of subject peoples of the Empire whose painted images or effigies were paraded in Domitian's triumph as participating in and applauding his victory in Dacia in 89 and then carved in stone as part of the Forum, which commemorated his victory in permanent form" [my emphasis]."**

For a discussion; cf. *infra*, in volume 3-2, at Appendix IV.d.2.a).

When asking Amanda, whose idea *that* interpretation of those reliefs had been, she at first did not remember either. But in the midst of our long discussions of the above-summarized research on this subject, Amanda wrote me on 23rd July 2020 an E-mail (quoted *verbatim infra*, in volume 3-2, at *Appendix IV.d.2.f*), telling me, to my great surprise, that she thought that it had been her own idea to suggest that Domitian's *Forum* could commemorate Domitian's triumph of AD 89; the reason being the representation of the *Piroustaie* in this *Forum*. On 24th July 2020, Amanda wrote me an E-mail, allowing me to publish this in this book. For all that; cf. *supra*, at Chapter *Introductory remarks and acknowledgements*.

Compare with the above-quoted statement by Amanda Claridge (2010, 174-175) the following observations, made by T.P. Wiseman (2019, 112) concerning Virgil's (*Aen.* 8.714-723).

In my opinion, Virgil's imagined scene corroborates *a*) Amanda Claridge's (2010, 174-175) just-quoted hypothesis concerning the representations of 'subject peoples' in Domitian's *Forum*. Virgil's 'report' seems so far not to have been regarded as a possible motivation to create representations of subject peoples of the kind discussed here (Figs. 48-50). And that, although Virgil's description of 'this long line of conquered peoples, as varied in language as they are in costume and arms', as Wiseman (2012, 112) translates Virgil (*Aen.* 8.714-723) can, in my opinion, explain, why *b*) Augustus had commissioned his '*Porticus ad Nationes*' at Rome in the first place.

And, as we have learned above, Augustus's representations of 'subject or conquered peoples' in his *Porticus ad Nationes*, in their turn, had become the model for all the later similar reliefs discussed here : those in the *Sebasteion* at Aphrodisias (here Fig. 50), at Domitian's *Forum* (here Fig. 49), and at the *Hadrianeum* (here Fig. 48).

T.P. Wiseman (2019, 112) writes: "**Meanwhile, in 29 BC victorious Caesar [i.e., Octavian/ Augustus] returned to Rome. On 13-15 August he held three successive triumphal processions, for the Illyrian, Actian, and Alexandrian campaigns.** The following year he undertook the restoration of all the city's temples that needed repair, and in the autumn held the first of a new series of quadrennial games to celebrate the victory at Actium. **That led straight to the dedication, on 9 October 28 BC, of the temple of Apollo.**

Virgil [*Aen.* 8.714-723] presented a composite tableau of all these events as the prophetic culmination of the scenes on the shield of Aeneas :

**But Caesar [i.e., Octavian/ Augustus], who had entered the walls of Rome in a triple triumph, was consecrating an everlasting vow to the gods of Italy - three hundred great shrines throughout the whole city. The streets were loud with gladness and games and applause; at all the temples there were matrons dancing, and altars, and before the altars slain bullocks strewed the ground. He himself, seated in the snow-white threshold of gleaming Phoebus [i.e., of the Temple of Apollo Palatinus], is reviewing the gifts of nations and fixing them to the proud doors. The conquered peoples process in a long line, as varied in language as they are in costume and arms.**

**The 'gifts' of conquered peoples were of course the spoils of war. Paraded on wagons in the triumphal processions, they were now, at the end of the long sequence of celebrations, brought to the Palatine for dedication to the god [i.e., Apollo] and display at his temple. This too was a parade, and Commander Caesar [i.e., Octavian/ Augustus] had provided the space to accommodate it. Fig. 51 Fig. 46 [my emphasis]."**

I agree with Amanda Claridge (1998, 131; *ead.* 2010, 142-143; *ead.* 2014, 128 with n. 5, pp. 130, 142), Parrish Elizabeth Wright (2020, 47-49), and T.P. Wiseman (2019, 113, caption of his Fig. 51, pp. 122-128; *id.* 2022, 20-22, all quoted *verbatim infra*, in volume 3-2, in *Appendix VI.*) that *inter alia* Virgil (*Aen.* 8.714-723) proves that the Temple of Apollo Palatinus was oriented to the north-east (cf. here Figs. 58; 73), not, as most other scholars believe, to the south-west.

Virgil (*Aen.* 8.714-723) writes that this 'long line of conquered peoples are carrying gifts' that (Octavian/Augustus or they themselves?) then dedicate to Apollo Palatinus. During this entire ceremony, 'Octavian/Augustus is seated in the threshold of the Temple of Apollo, reviewing the gifts of these conquered peoples, and fixes them on the doors of the Temple of Apollo'.

Claridge, Wright and Wiseman (*op.cit.*) conclude that the Temple of Apollo Palatinus must have been oriented to the north-east, because they (in my opinion convincingly) assume that this parade of conquered peoples, carrying those 'gifts' that were then dedicated to Apollo, had come up from the *Forum Romanum*.

Wiseman (2022, 21) writes for example: "... **the long line of conquered peoples reviewed by Augustus in Virgil's imagined scene (note 80 above [quoting Virgil's *Aeneid* 8.714–23]) bring their tributary offerings from the direction of the Forum [my emphasis]**".

For a detailed discussion of the controversy concerning the orientation of the Temple of Apollo Palatinus; cf. *infra*, in volume 3-2, in *Appendix VI.*; at Section I.

Apart from the fact that I think that this passage in Virgil (*Aen.* 8.714-723) can explain, why Augustus built his *Porticus ad Nationes*, in which now not the conquered peoples themselves any more, but *representations* of them were paraded, I wish to stress here something else. This ceremony in front of the Temple of Apollo on the Palatine, imagined by Virgil, is a classic demonstration of Augustus' doctrine 'peace through victory' that has been discussed above, in Chapter *What this Study is all about*.

As rightly stated by Peter Wiseman (2019, 112), the 'gifts', carried by those 'conquered peoples' in this ceremony are, of course, Octavian/Augustus's spoils of war. These 'conquered peoples, varied in language, costume and arms', as Virgil writes, who paraded in a long line to the Temple of Apollo Palatinus, had made a number of humiliating experiences. First of all, Octavian/Augustus had deprived these peoples of their freedom and of these precious belongings. Next, some citizens of these peoples themselves, who were now carrying those 'gifts' in this ceremony, had been paraded, together with those spoils of war, in Octavian/Augustus's three triumphal processions.

And finally Octavian/Augustus, in Virgil's imagination, had the nerve to stage this ceremony, in which those citizens of these peoples had to carry *themselves* their former belongings to the Temple of Apollo Palatinus, where they would be dedicated by Octavian/Augustus (or 'voluntarily' by themselves?) to *that* god who, as Octavian/Augustus and Virgil believed, and Virgil demonstrated by describing this ceremony, had granted him his victories over those peoples (!).

Considering all that, it is very understandable, that the *Piroustaë* and Arminius, his compatriots the Cherusci, and their allies had desperately tried to avoid such humiliating experiences for themselves. To conclude this point I, therefore, repeat again, what was already written above:

'See also R.R.R. Smith (2013, 91, n. 44) for the fact that Tiberius could only defeat the *Piroustaë*, "when they were almost entirely exterminated" [so Velleius Paterculus 2.115.2-4; my emphasis]" (!)'.  
'

3.) The suggestion, first made by Filippo Magi (1939, 205), reported by Bartolomeo Nogara (1939, 8, 106, 115-116, 227), and by Antonio Maria Colini (1938 [1939], 270); cf. Heinz Kähler (1950, 30-41), Jocelyn M.C. Toynbee (1957, 19), John Henderson (2003, 249), and especially by Massimo Pentiricci (2009, 61-62; cf. *supra*, ns. 262, 263, 264, in Chapter I.3.2.), who discusses those earlier hypotheses), suggesting himself that the Cancellaria Reliefs had decorated the parallel, opposite walls of the bay of one of Domitian's arches. Cf. also *supra*, the caption of here Figs. 1 and 2 of the Cancellaria Reliefs, drawing, 'in situ'.

4.) Filippo Coarelli's (2009b, 88; *id.* 2012, 283, 286-291, 481-483) suggestion that Domitian could have dedicated the *Arcus Domitiani* on the Palatine to his father, *Divus Vespasianus*.

**The *Arcus Domitiani* of *Divus Vespasianus* ?, the Arch of Domitian at the main entrance of his Palace on the Palatine, the *Domus Augustana*, and Domitian's (alleged) Temple of Iuppiter Propugnator, the Temple of Iuppiter Invictus in front of his *Domus Augustana*.**

Remains of the western pylon of this *Arcus Domitiani* (dating to a later period) are still standing in front of Domitian's Palace on the Palatine, the '*Domus Flavia*' / *Domus Augustana* (cf. here **Figs. 8.1; 58**).

That Domitian may have dedicated the *Arcus Domitiani* to his father, *Divus Vespasianus*, is part of Coarelli's (2009b, 88; 2012, 481-483) hypothesis, according to which a visitor to Domitian's Palace, coming from the Arch of *Divus Titus* on the *Velia*, would then pass under this Arch of *Divus Vespasianus*, and finally end at the "Porta principale" on the north side of Domitian's Palace, the *Domus Augustana*, where Coarelli assumes an Arch of Domitian. Coarelli (2012, 486-491) locates at this main entrance of Domitian's *Domus Augustana* the *Pentapylon*, only recorded by the Constantinian regionary catalogues, which Coarelli identifies with the just-mentioned Arch of Domitian at the "Porta principale", interpreting it as a triumphal arch.

This northern part of Domitian's Palace, which has been called "no man's land" by Helge Finsen (1969, 8), is badly preserved, but there is no doubt that the main entrance may be located there; cf. Coarelli (2012, 487, with n. 479, providing a reference: U. WULF-RHEIDT and N. SOJC 2009, 268-272, Figs. 3; 4).

Concerning this itinerary from the Arch of *Divus Titus* on the *Velia*, via the Arch of *Divus Vespasianus* to the Arch of Domitian, Coarelli (2012, 483) convincingly suggests:

**"La scelta di 'sacralizzare' questo percorso con monumenti dedicati ai due primi imperatori flavi si spiega con l'assoluta centralità dell'elemento dinastico nella politica di Domiziano [my emphasis]"**.

Coarelli's (2009b; 2012) above-quoted assumption of these 'three arches' has been followed by Aurora Raimondi Cominesi and Claire Stocks (2021, 10; *ead.* 2023, 41), and by Raimondi Cominesi (2022, 109-110, with ns. 99-102), who assumes the main entrance to Domitian's Palace *Domus Augustana* at the same site as Coarelli (2012).

In her last, posthumously published article on Domitian's Palace, Wulf-Rheidt (2020, 188) ignores Coarelli's (2009b; *id.* 2012) ideas concerning this Arch of Domitian at the main entrance of his *Domus Augustana*. She presents the results of her own research concerning this area, the above-mentioned "no man's land". Important for our discussion here are the facts that Wulf-Rheidt (*op.cit.*) likewise assumed at this site an arch as the main entrance to the *Domus Augustana*, that this arch and the structure, to which it led, a large colonnaded court, interpreted by her as an *atrium*, were already built under Domitian, and that all this had been very much changed by later emperors, for example by Hadrian; cf. also Wulf-Rheidt (2020, 191).

**Wulf-Rheidt (2020, 188) wrote: "I risultati delle ricerche sul palazzo flavio lasciano ricostruire il seguente quadro ... il visitatore venendo dal Foro accedeva all'entrata principale sul *Clivus Palatinus* mediante un arco, nel quale doveva essere il presidio armato della guardia imperiale (fig. 2a) [my emphasis]"**.

Ricardo Mar (2009, 256, Fig. 3), Filippo Coarelli (2012, 484, Figs. 163; 164 [a plan by R. MAR 2005]) and Ulrike Wulf Rheidt (2020, 186, Fig. 2) integrated into their plans both pylons of the *Arcus Domitiani*, I myself refrain from integrating into our maps the second (eastern) pylon of the *Arcus Domitiani* for reasons explained *supra*, at Chapter VI.3.; *Addition*. This eastern pylon was found in an excavation underneath the Via di S. Bonaventura; cf. Alessandro Cassatella (1986; *id.* 1993; and here **Fig. 73**); and Maria Antonietta Tomei (1997). For a cornice of this *Arcus Domitiani*; cf. Kristine Iara (in: F. COARELLI 2009a, 505, cat. no. 108).

To the west of this western pylon of the *Arcus Domitiani*, we have copied from the map SAR 1985 two foundations, the identifications of which are hotly debated.

Vincenzo Graffeo and Patrizio Pensabene (2014; *id.* 2016-2017) have re-excavated these foundations. My thanks are due to Patrizio Pensabene, who was kind enough to send me, by request, those two publications of their excavation. Graffeo and Pensabene identify these foundations as belonging to two different imperial temples, that were both oriented to the south, and have found within the eastern foundation, which is datable to the second century AD, remains of one or two Republican phases of this temple; cf. *infra*, in volume 3-2, in *Appendix VI.*; at Section X.

I, therefore, follow Graffeo's and Pensabene's (2014; *id.* 2016-2017) tentative identification of this temple as that of Iuppiter Invictus, founded in the Republican period, possibly in the 3<sup>rd</sup> century BC. For a discussion of the scholarly debate concerning the Temple of Iuppiter Invictus; cf. *infra*, in volume 3-2, in *Appendix VI.*; at Section VII.

Since its first excavation this, allegedly one (in reality two) temple foundation(s) have been identified differently; cf. here **Figs. 8.1; 58; 73**, labels: Temple of Iuppiter INVICTUS ? or of IUPPITER STATOR ? IUPPITER VICTOR ? IUPPITER PROPUGNATOR ?

Because Filippo Coarelli (2012, 282-285, 482, with n. 468, p. 485, Figs. 164-166) (in my opinion erroneously) identifies this foundation with that of the Temple of Iuppiter Propugnator (which is only mentioned in inscriptions, dating to the Imperial period), (allegedly) built by Domitian, I have discussed *all* identifications of these (two) temple foundations in detail.

Cf. *infra*, in volume 3-2, in *Appendix VI.*; at Sections I.-XII. *A digression on Domitian's intention to emulate Augustus and Nero. Domitian built his Palace 'Domus Flavia' / the Domus Augustana on the Palatine deliberately at the site of the (real) House of Augustus. As the 'new founder of Rome', and again like Augustus, Domitian emulated also Romulus (or else compared the achievements of his entire dynasty with those of Romulus). With summaries of the recent discussions concerning the following subjects ... a temple podium, which has been identified as that of the Temple of Iuppiter Invictus (but which has also been identified as that of the Temple of Iuppiter Stator, Iuppiter Victor, and as that of the Temple of Iuppiter Propugnator) ...*

##### 5.) Paolo Liverani's (2021, 83-84) observations concerning the Arch of *Divus Titus* on the *Velia* :

"... the Arch of Titus [cf. here **Fig. 120**] in *sacra via*, [with n. 4], a monument whose construction was planned by the Roman Senate shortly before the premature death of Titus, but which had to be built and finished by his brother and successor, Domitian ... [page 84] For a better understanding of the arch's message, we have to consider that - although the honorand was Titus - **the function of the monument fitted well with Domitian's program to strengthen his own legitimacy by showing as *divi* both his brother Titus and his father Vespasian.** The latter was venerated in the temple he built at the foot of the Capitoline Hill, at the western end of the Forum Romanum [my emphasis]". For the just-quoted passage from Liverani (2021, 83-84); cf. now Liverani (2023, 115-116; *i.e.*, the Italian version of his essay of 2021).

For a detailed discussion of this passage; cf. *infra*, in volume 3-2, at *Appendix IV.d.2.f.* - The Arch of *Divus Titus* stood, of course, *not* on the *Sacra Via*, as (erroneously) asserted by Liverani (2021, 83); cf. Filippo Coarelli (2012, 480); Häuber (2017, 327). For the Arch of *Divus Titus*, the *Sacra Via*, and the Temple of *Divus Vespasianus*; cf. here **Figs. 58; 71; 73; 120**.

##### *Conclusions concerning the original function of the Cancellaria Reliefs*

Taking the above-mentioned points 1.) - 5.) together, I tentatively suggest in this *Study* that the Cancellaria Reliefs may have decorated the passageway of Domitian's *Arcus Domitianus* / Arch of *Divus Vespasianus* ? on the Palatine, which bridged the "VICUS APOLLINIS ? / "CLIVUS CAPITOLINUS" (here **Fig. 73**), or rather one of the passageways of the Arch of Domitian, which Coarelli (2009b, 88; *id.* 2012, 481-483; cf. pp. 486-491) assumes at the "Porta principale" of Domitian's Palace, the *Domus Augustana* (here **Figs. 8.1; 58**).

Cf. *supra*, in Chapter VI.3.; *Addition*; and *infra*, in volume 3-2, at *Appendix IV.d.2.f.*

But there is a problem concerning the first hypothesis : although Vespasian is represented on Frieze B, which was the reason, why I made this suggestion in the first place, both Friezes (**Figs. 1; 2; Figs. 1 and 2 drawing**) celebrate predominantly Domitian : his legitimization as (future) emperor (received from his father Vespasian; cf. below, at *The Contribution by Giandomenico Spinola on the Cancellaria Reliefs*; and mentioned already above), as well as his "personal grandeur" (cf. J. GERING 2012, 210-211) : on Frieze B we see how Domitian, already as Caesar, excelled *domi*, and on Frieze A, now himself emperor, *militiae*.

For discussions of the latter hypothesis; cf. *supra*, at n. 248 in Chapter I.2.1.b); see also *supra*, at Chapters V.1.d); V.1.i.3.); VI.3.

If, on the other hand, this Arch of Domitian at the "Porta principale" of his *Domus Augustana* has existed, as suggested by Coarelli (2009b, 88; 2012, 481-483; cf. pp. 486-491), who identifies this main entrance of the *Domus Augustana* with the *Pentapylon*, identified by Coarelli as a triumphal arch, I rather believe that the Cancellaria Reliefs could have decorated one of the passageways of *this* arch, which, in case it has existed, had presumably been erected by Domitian himself.

If this Arch of Domitian, postulated by Coarelli (2012, 481-483, 486-491) was indeed the *Pentapylon*, only mentioned in the Constantinian regional catalogues, this could mean that either the original Domitianic arch had been adapted by the following emperors to their own use, or that it had been replaced by a completely new arch.

For the *Pentapylon*; cf. Emanuele Papi ("Pentapylon", in: *LTUR* IV [1999] 78-79), who summarizes the various suggestions to locate this monument on the Palatine.

My tentative attribution of the Cancellaria Reliefs to Coarelli's (2009b; 2012) Arch of Domitian at the "Porta principale" of Domitian's Palace *Domus Augustana* (cf. here **Figs. 8.1; 58**) may (in theory) be supported by the monumental block of an architrave, which carries the far right end of a dedicatory inscription (*CIL* VI, 40543: PP FECIT). This architrave probably belonged to an arch, was found together with the Cancellaria Reliefs, and has already been mentioned above, at point 1.). From this inscription it is clear that Domitian, who had received the title *pater patriae* already in AD 81, had erected the building in question himself, to which this inscription belonged; but note that also Nerva held the title *pater patriae*. For both alternatives; cf. *supra*, at ns. 81, 82, 87, in Chapter I.1.

Also Markus Wolf suggests that Domitian had himself erected the building, to which the architrave with the inscription (*CIL* VI, 40543: PP FECIT) belonged; cf. Wolf (2015, 318-320, Figs. 6; 7 [the architrave], Figs. 8; 10 [his two reconstruction drawings of a freestanding arch and of an "ingresso monumentale", into which this architrave is integrated]; *id.* 2018, 91-94 with ns. 5, 15, Abb. 39; 40 [the architrave]; Abb. 42; 43 [his reconstruction drawings of a freestanding arch and an "Eingangsbau", into which this architrave is integrated]; and *supra*, at Chapter V.2.).

As another argument in favour of the attribution of the Cancellaria Reliefs to this (lost) Arch of Domitian at the main entrance to his Palace could be regarded the great similarities of the Cancellaria Reliefs with the Nollekens Relief (here **Fig. 36**). The reason being that Francesco Bianchini (1738, 68) had actually excavated the Nollekens Relief *within* the 'Aula Regia' of Domitian's 'Domus Flavia' / *Domus Augustana*, a fact that has been overlooked by all recent scholars. To this I will come back below.

Cf. **Figs. 8.1; 58**, labels: FORUM ROMANUM; VELIA; Arch of DIVUS TITUS; PALATINE; ARCUS DOMITIANI / DIVI VESPASIANI ?; "DOMUS FLAVIA"; DOMUS AUGUSTANA; "Porta principale"; Arch of DOMITIAN ?; Cancellaria Reliefs ?

### *Domitian's building projects in the city of Rome, considered in their entirety*

But before presenting some new observations concerning Domitian's Palace on the Palatine, I wish to at least hint at the most important finding of my research, concentrated on Domitian's building projects at Rome.

Beginning with Mario Torelli's remark (1987, 575, quoted *verbatim supra*, n. 228, in Chapter I.2.), who was first to describe Domitian's building project on the Capitoline Hill as 'pharaonic', I had at first thought that

Domitian had initiated two such 'pharaonic', but *separate* projects at Rome : 'Capitoline and adjacent areas' (cf. here **Figs. 58; 59; 71; 73**), that is to say, the area of the city (*inter alia* the *Campus Martius*), where Domitian not only erected new buildings but restored also many old ones that had been destroyed in the great fire on the *Capitolium* of AD 69 and the even larger fire of AD 80 that had destroyed great parts of the City of Rome; and the 'Colosseum city' (cf. here **Figs. 71; 72**), which had already been started by his father Vespasian : here the Flavian emperors replaced Nero's *Domus Aurea* with buildings, erected 'for the People of Rome'.

The (at least for me) surprising result of this research was that both projects were *interconnected*. To illustrate this fact, I will quote in the following only the titles of the relevant Chapters of this book.

On 6th July 2021, Eric M. Moormann had been kind enough to send me, on his own account, for a different book-project; cf. Häuber (forthcoming, FORTVNA PAPERS vol. IV on the Laocoon) two articles: by James C. Anderson Jr. ("The Date of the Thermae Traiani and the Topography of the Oppius Mons", 1985), and by Rabun Taylor, Edward O'Neill, Katherine W. Rinne, Giovanni Isidori, Michael O'Neill and R. Benjamin Gorham ("A Recently Discovered Spring Source of the Aqua Traiana at Vicarello, Lazio", 2020). From those publications it is clear that Domitian had - of course - also already started to erect the 'Baths of Trajan' (!).

Apart from the fact that this information was also crucial in the context of my book on the Laocoon that I was discussing with Eric Moormann at that very moment, this information reached me also right in time to change the title of *Appendix IV.d.4.c* in this book. See for the context of this specific *Chapter*:

*Cf. infra, in volume 3-2, at Appendix IV.d.4.) Domitian's building projects at Rome, discussed in this Study; Appendix IV.d.4.a) Domitian's building project 'Colosseum City'; Appendix IV.d.4.b) Domitian's building project comprising the Campus Martius, the Capitoline Hill and the sella between Arx and Quirinal. With detailed discussion of the Templum Pacis, and some remarks on Domitian's Villa, called Albanum; Appendix IV.d.4.c) Domitian's building projects at Rome. Conclusions arrived at in Appendix IV.d. With The first Contribution by Eugenio La Rocca. As a result of this Chapter it seems to be clear that Domitian, who destroyed the sella between the Quirinal and the Arx, in order to erect his huge forum there (the later 'Forum of Trajan'), had used this excavated material to fill in a valley on the Mons Oppius. This finding invited the further assumption that already Domitian had planned to erect at this site great public baths, the now so-called 'Baths of Trajan'. The confirmation that Domitian had actually started building those baths, reached me only afterwards [my emphasis].*

**Only after this Chapter had already been published on our Webserver as one of the Previews of this Study on Domitian, did I receive the following publications, which are likewise dedicated to the question, how Domitian had organized the destruction of the sella between the Quirinal and the Arx, in order to create his Mega-Forum, which should become the Forum of Trajan.**

I am referring to the volume, edited by Antonio Pizzo and Riccardo Montalbano (*Tra le pendici del Quirinale e il Campo Marzio in memoria di Emilio Rodríguez Almeida*, 2022), and to the exhibition catalogue *Domiziano Imperatore. Odio e amore* (2023). The editors of this catalogue, Claudio Parisi Presicce, Massimiliano Munzi, and Maria Paola Del Moro, write in their introduction ("Domiziano imperatore. Odio e amore", 2023, 12): "È stato inoltre realizzato, a cura di Sergio Fontana, un video immersivo allo scopo di rendere pienamente percepibile il taglio della sella montuosa tra i colli Campidoglio e Quirinale, intervento all'origine dei lavori per la sistemazione dell'area che sarà poi occupata dal complesso del Foro e dei Mercati di Traiano". See also the article by Massimo Vitti in this catalogue ("Lo sbancamento del 'mons' e il progetto domiziano nell'area del Foro di Traiano", 2023).

To conclude this point, I anticipate here a passage that was written for *infra*, in volume 3-2, at *Appendix IV.d.4.c*): 'My assumption of Domitian's two different 'pharaonic' projects, was wrong, in reality Domitian's

vision comprised the entire city of Rome. When trying to come to a final judgement concerning Domitian's building projects at Rome that have been discussed in this *Study*, I, therefore, suggest the following :

**1.) Domitian's enterprises were without any doubt important accomplishments for the public good.**

In addition to this, Domitian's building projects can be judged, in retrospect, not only as grand, or better, as grandiose, what their sheer size and artistic quality are concerned : we must also acknowledge that the conception of some of them was extremely far-sighted. With my latter judgement I refer to Domitian's projects of his *Mega-Forum* (the later 'Forum of Trajan') and of his great public baths (the 'Baths of Trajan'). The enormous success of both was first of all proven by the fact, that Trajan immediately 'usurped' both, as so many other of Domitian's (not only building) projects. See for example Eugenio La Rocca ("Traianus vs. Domitianus. Dalla rappresentazione del potere imperiale all'usurpazione dei monumenti pubblici", 2017).

The latter is proven, in addition to this, by the facts that Domitian's first huge 'Kaiserthermen' were copied by the 'Baths of Caracalla' and by the 'Baths of Diocletian'.

Apropos my assertion that Domitian's building projects 'were important accomplishments for the public good': this was at least true in the understanding of the ancient Romans. -

I am adding this reserve here because, as already said above (cf. *supra*, in Chapter II.3.1.c): "In antiquity ... [the Colosseum] was a theatre of ritual death"; cf. Amanda Claridge (1998, 278; *ead.* 2010, 314). And I have written elsewhere : in the Imperial period were built at Rome theatres "für Aufführungen aller Art, wie z.B. [zum Beispiel] das Colosseum (in dem hauptsächlich Tierhatzen und Gladiatorenkämpfe, aber auch theatralisch inszenierte Exekutionen stattfanden)"; cf. Häuber (2013, 153).

How Domitian himself saw the situation, we unfortunately do not know. Concerning Domitian's probable motivation to build in such indeed spectacular manner, was suggested above the following (cf. *supra*, in the Chapter *What this Study is all about*):

'The extraordinary efforts that Domitian undertook served, exactly like the comparable ones in the case of Augustus, Vespasian, Hadrian and Septimius Severus (apart from the other two motivations in the case of Domitian: "personal grandeur and family memory"), the purpose of legitimizing Domitian's reign. The actions discussed here, especially the grandiose building projects of these emperors, served therefore the purpose that all of them should duly be acknowledged by their subjects for these achievements, and, in addition to this, favourably remembered by posterity'.

**Domitian relevant actions proved to be extremely successful in all these respects, because:**

**2.) Thanks to Domitian's enterprises and those of his family, Rome is still nowadays basically a Flavian city.**

I have borrowed the formulation of my 2.) point from the two epigraphs of Eric M. Moormann's article ("Domitian's remake of Augustan Rome and the Iseum Campense", 2018, 161), which read: "A visitor to Rome today cannot avoid the Flavians" [with n. 1], and: "To the modern visitor the centre of Rome presents itself as essentially a Flavian city" [with n. 2]". In his **note 1**, Moormann writes: "Darwall-Smith 1996, 17 ...". In his **note 2**, he writes: "Boyle 2003, 29 ...".

And in his most recent discussion of this subject; cf. Moormann ("Domitian's Reshaping of Rome", 2021, 43-44; *id.* 2023, 62, quoted *verbatim supra*, in Chapter *Preamble*; Section III.; at point 3.)), he even writes:

"Due to Titus' [page 44] **premature death in September 81, Domitian could shape the town into a real Domitianopolis** without trespassing the ambitions of his father and brother (fig. 1) [with n. 4; my emphasis]".

In his **note 4**, Moormann writes: "On Domitian's rebuilding of Rome, see, among others, Frederick 2003, and, most recently, Moormann 2018".

**Also the way, how Domitian's building sites were organized, was innovative:**

For example the organization of the gigantic building site of the future 'Forum of Trajan'. For that; cf. Patrizio Pensabene and Javier Á. Domingo (2016-2017). The same was true for the acquisition of the building material needed for Domitian's building projects, which was imported from all over the Mediterranean. Not surprisingly, most of those marble blocks, imported from far away marble quarries, that carry consular dates, and which were excavated at the quartiere Testaccio, at the place called *La Marmorata*, had been brought there under Domitian; cf. Pensabene and Domingo (2016-2017, 573 with n. 161).

The area at the quartiere Testaccio, called in past centuries *La Marmorata* (cf. here **Figs. 102; 102.4; 103**), is located on the left hand bank of the Tiber, and to the south of the Aventine. Most scholars identify this area, in my opinion erroneously, with the *Emporium*, mentioned by Livy (35,10,12; 41,27,8) together with the *Porticus Aemilia*, which has been identified by the same scholars, in my opinion likewise erroneously, with the enormous *opus incertum* building at *La Marmorata*. In reality, we do not know the ancient name of this area.

For a detailed discussion; cf. *supra*, at *A Study on the colossal portrait of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori at Rome* (cf. here **Fig. 11**). With The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great); at Part II. *Ancient Rome's new commercial river port, at La Marmorata. With discussions of the 'Porticus Aemilia' (in reality identifiable as Navalía) and of the Horrea Aemiliana*. With The sixth Contribution by Peter Herz : Rom. Strukturen der Versorgung; and with The second Contribution by Franz Xaver Schütz : Wie schwer war der ägyptische Obelisk, der heute auf der Piazza di S. Giovanni in Laterano in Rom steht?

***Let's now turn to Domitian's Palace on the Palatine, his Domus Augustana***

Apart from the findings concerning this building discussed below, I myself do not add in this book any new hypotheses concerning the importance of Domitian's overall design of his Palace. Fortunately this question is precisely what other scholars are or were interested in, for example Ulrike Wulf-Rheidt (2020), and Aurora Raimondi Cominesi (2022), both of whom approach this subject from different perspectives : on the basis of her own decade-long research on the subject, Wulf-Rheidt (2020) has documented the precise chronology of all the different parts of the *Domus Augustana*, whereas Raimondi Cominesi (2022), who does not herself discuss Wulf-Rheidt (2020), tries to judge *all* these building phases.

Cf. now the article by Jens Pflug (2022) on this subject. His intention is to document the most recent research of Ulrike Wulf-Rheidt on the subject, whose collaborator he has been. He writes in: "Note de l'auteur ... I risultati qui pubblicati si fondano per buona parte anche sull'attività di Ulrike Wulf-Rheidt ... scomparsa il 13 giugno 2018 ... e dunque non più in grado di pubblicare lei stessa molti degli esiti del suo lavoro".

Pflug (2022) is obviously unaware of the fact that Wulf-Rheidt had fortunately still been able to publish many of her relevant results herself (although her last article appeared posthumously); in this article, Wulf Rheidt has even illustrated her results in part with the same plans and reconstructions as those published now by Pflug (2022); cf. Wulf-Rheidt (2020). For some of the illustrations, published by Pflug (2022); cf. already Wulf-Rheidt and Sojc (2009).

Raimondi Cominesi (2022) comes to the, in my opinion, convincing conclusion that, when judged in retrospect, Domitian's design of his *Domus Augustana* as a 'Palace fitting the needs of a Roman emperor' has (likewise) proven to be extremely far-sighted. Having myself studied in this book almost all of Domitian's other building projects at Rome (cf. *supra*), Raimondi Cominesi's result does not come as a real surprise though.

In addition, Raimondi Cominesi (2022, 115, with n. 122) makes the following important observation concerning Domitian's Palace: "**In the Chronicle of 354, Domitian's house is cited as one of the emperor's public works** [my emphasis]". For a discussion of this text of the Chronographer of AD 354, who refers to this building as to Domitian's "*Palatium*"; cf. *supra*, at Chapter IV.1.1.g).

This late antique author, who created the "Codex-Calendar of A. D. 354", was called "Furius Dionysius Filocalus"; cf. for both quotes Michele Renée Salzman (1990, pp. X, 3), he was also referred to as "Chronigraphus anni CCCLIII"; cf. Theodor Mommsen (1892, 14). And Filippo Coarelli refers to Filocalus's "Codex-Calendar" as to the "fasti *Filocaliani*"; cf. Coarelli (2012, 247, n. 254, quoted *verbatim infra*, in volume 3-2, in *Appendix VI.*; at Section VII.).

**Considering at the same time that all three Flavian emperors together reigned for less than 30 years, and Domitian for 15 years, I can only admire their achievements.**

Cf. *supra*, in Chapter *Preamble ...*; Section III.; at point 5.); and *infra*, in volume 3-2, at *Appendix IV.d.4.c*).

*The Nollekens Relief (here Fig. 36) leads us to some new results, presented in this book on Domitian, that concern Domitian's Palace Domus Augustana on the Palatine, and which, in their turn, are inter alia based on finds, excavated there in 1720-1726 by F. Bianchini (cf. id. 1738)*

*Some measured reconstruction drawings  
of Domitian's Palace Domus Augustana by the architect G. Leith (1913; cf. here Figs. 108-110)*

a) Cf. *infra*, at *The Contribution by Amanda Claridge in this volume : A note for Chrystina Häuber : Drawings of the interior order of the Aula Regia of the Palace of Domitian on the Palatine, once in the British School at Rome*; cf. here **Figs. 108-110**.

**Figs. 108-110. Domitian's Palace 'Domus Flavia' / Domus Augustana on the Palatine. Measured reconstruction drawings, "in pencil, pen and black ink reconstructing in cross section the Aula Regia, Peristyle and Triclinium" (so A. CLARIDGE, *op.cit.*), by the architect G. Leith (1913), who integrated some of the originally 8 colossal statues that had decorated the 'Aula Regia' and some of the architectural fragments, excavated likewise there and published by F. Bianchini (1738). Gordon Leith created these drawings, when he held a scholarship of South Africa at the British School at Rome in 1913. From: M.A. Tomei (1999, Figs. 225; 228; 229; 230. We have also copied the captions of her figures).**

My thanks are due to Francesca Deli, Assistant Librarian at the British School at Rome, for scanning these illustrations in Tomei's (1999) publication for me.

***The 'Domus Flavia' and other modern names, attributed to parts of Domitian's Palace Domus Augustana***

(In theory) I side with Filippo Coarelli (2012, 494) and T.P. Wiseman (2019, 34, both quoted *verbatim* and discussed *infra*, in volume 3-2, in *Appendix VI.*; at Section I.) that Domitian's Palace on the Palatine was called 'Domus Augustana', and that the name 'Domus Flavia', attributed by many scholars to the western part of this Palace, is not only not recorded in our ancient sources, but, in addition to this, misleading. The reason being that, in reality, the (alleged) difference between those two parts (the western, allegedly representative part of the 'Domus Flavia', and the eastern, allegedly private part, of the *Domus Augustana*), which many scholars assert, does not exist. See for this new observation now also Roberta Alteri (2023, 29). For this older, but wrong opinion; cf. Wulf-Rheidt (2020, 186 n. 11, with references). What this point is concerned, also Wulf-Rheidt (2020, 186) had come to the same conclusion as Coarelli, Wiseman and Alteri (*op.cit.*), but she nevertheless still used the term 'Domus Flavia'. I say "(in theory)", because I have decided to add the lettering "DOMUS FLAVIA" on our maps, simply because most scholars (at least those, quoted in the following discussion) use this wrong term in their publications. But I write the term DOMUS FLAVIA with inverted commas, in order to indicate that this is 'the so-called *Domus Flavia*'.

For all the (modern) names, attributed over time to the different parts in Domitian's 'Domus Flavia' / *Domus Augustana*; cf. *supra*, at Chapter *V.1.i.3.b*); Sections I.; II.

Amanda Claridge's (*op.cit.*) decision to call these parts, reconstructed by Gordon Leith (here **Figs. 108-110**), "*Aula Regia*, *Peristyle* and *Triclinium*", reflects the current usage, as applied by Filippo Coarelli (2008, plan on p. 177), and by Natascha Sojc (2021, 134, Fig. 2, who calls the '*Triclinium*' "*Cenatio Iovis*" though), and on our maps here **Figs. 8.1; 58; 73**. Claridge herself (2010, 150, Fig. 57) referred to the so-called '*Triclinium*' as to the "Banquet Hall".

Important for the discussion of Gordon Leith's reconstruction drawings (here **Figs. 108-110**) is the fact that the '*Aula Regia*' (which already F. BIANCHINI 1738 had called that way; cf. the lettering on his Tab. II = here **Fig. 8**) was excavated by Francesco Bianchini (1720-1726), whereas the '*Peristyle*' and the '*Triclinium*' / '*Cenatio Iovis*' were only excavated by Pietro Rosa (1861-64), at the order of the French Emperor Napoleon III (therefore these digs are often referred to as to the '*French excavations*', so for example in the title of M.A. TOMEI's article, 1999).

For both excavations; cf. Silvano Cosmo (1990, Fig. 8 = here **Fig. 39**), and for the '*French excavations*'; cf. *infra*, in volume 3-2, in *Appendix I.c*); and in *Appendix VI.*; at Section I.

Concerning the reconstruction drawings by Gordon Leith, I repeat here a passage that was written for *supra*, Chapter *Introductory remarks and acknowledgements*:

'As far as I can see, the drawings (here **Figs. 108-110**) represent the only *measured* reconstructions of the interior order of the '*Aula Regia*' and of other parts of Domitian's '*Domus Flavia*' within his *Domus Augustana* (the '*Peristyle*' and the '*Triclinium*' / '*Cenatio Iovis*' [cf. here **Figs. 8.1; 58**]), into which the colossal statues (that had originally decorated the '*Aula Regia*'), as well as some of the architectural fragments are integrated, that Francesco Bianchini had excavated (1720-1726) within the '*Aula Regia*' (he found only two of those colossal statues in a secondary context immediately next to the '*Aula Regia*') and published (posthumously) in 1738. The author of those drawings (here **Figs. 108-110**) is the architect Gordon Leith (1885-1965) from South Africa, who had in 1913 a scholarship at the British School at Rome ... For Bianchini's measured plans, the two reliefs, and some of the architectural fragments, excavated by him within the '*Aula Regia*' of Domitian's '*Domus Flavia*' / *Domus Augustana* on the Palatine and published by himself (1738); cf. here **Figs. 8; 9; 36; 37**.

Cf. *supra*, at Chapter V.1.i.3.b) J. Pollini's discussion (2017b) of the allegedly '*lost*' Nollekens Relief (cf. here **Fig. 36**), which he compares with the *Cancellaria Reliefs* (cf. here **Figs. 1; 2; Figs. 1 and 2 drawing**) and Domitian's '*Domus Flavia*' / *Domus Augustana*. With The Contribution by Amanda Claridge'.

b) Francesco Bianchini (Verona 13th December 1662 - 2nd March 1729 Roma) excavated in 1720-1726 (published posthumously 1738) within Domitian's '*Aula Regia*' the above-mentioned, in the true sense of the word spectacular sculptures and architectural fragments and published his finds (1738), accompanied by measured plans of the '*Aula Regia*' (his Tab. II) and of the excavated area (his Tab. VIII; both here **Fig. 8**), and by beautiful engravings of some of his finds (his Tab. III; IV; VI; VII; cf. here **Figs. 9; 36; 37**).

For Monsignore Francesco Bianchini, who was an eminent scholar and since 1703 "Commissario alle Antichità di Roma"; cf. Paolo Liverani (2000, 67, quoted *verbatim* and discussed *supra*, in Chapter V.1.i.3.b); at Section I.).

**Fig. 8. F. Bianchini's (1738) measured plans of the '*Aula Regia*' (his Tab. II), and of that part of Domitian's *Domus Augustana*, where he conducted his excavations (1720-1726; his Tab. VIII): at the '*Basilica*', the '*Aula Regia*' and the '*Lararium*' (all three located within the so-called '*Domus Flavia*'; cf. here **Figs. 8.1; 58**). Note that on Bianchini's plans North is not in the middle of the top border, as on our maps. Our maps are oriented according to '*Grid North*' (cf. here **Figs. 58; 73**), as the official photogrammetric data of Roma Capitale (that comprise the current cadastre), on which all our maps are based. See for the orientation of Bianchini's plan Tab. II our **Fig. 8.1**.**

For '*Grid North*' (German: '*Gitternord*'); cf. Franz Xaver Schütz (2017, 696-704, Abb. 3; 4; 6); Häuber (2017, 62, caption of Fig. 3.5 [= here **Fig. 58**]). For the caption of our updated map **Fig. 58**; cf. *infra*, in volume 3-2, at *A Study of the Consequences of Domitian's assassination ... Or: The wider topographical context of the Arch of Hadrian...*; Chapter *Introduction*; at Section I.

**Fig. 8.1. Detail of our map Fig. 58, with georeferenced overlay of F. Bianchini's plan of the 'Aula Regia' (cf. *id.* 1738, his Tab. II = here Fig. 8). This visualization shows that Bianchini's ground-plan of the 'Aula Regia' (his Tab. II) had to be rotated clockwise by circa 135° before it was possible to integrate it into our map Fig. 58, which is oriented according to 'Grid North'. F.X. Schütz, visualization created with the "AIS ROMA" (22-I-2023).**

**Fig. 9. F. Bianchini's plates (1738, Tab. III and IV). They show some of the architectural fragments, which he found in his excavations (1720-1726) in the 'Aula Regia'. In the caption of his Tab. III, Bianchini mentioned the author of the relevant drawing and etching: "Balthassar Gabbuggiani delin. et sculp."**

Francesco Bianchini (1738, 50-54) described the unique size and decoration of the 'Aula Regia' (quoted *verbatim supra*, at Chapter V.1.i.3.b); Section III.). To this I will come back below.

### *New research on the Nollekens Relief, which Francesco Bianchini excavated in 1722 in the 'Aula Regia'*

c) John Pollini (2017b) 'found' the (allegedly) lost Nollekens Relief and publishes a photograph of it (of 1914; here Fig. 36), which shows it before the damages since World War II: then it still comprised the portrait of Domitian, which is now lost. John generously provided me with this photo, that I may publish here with his kind consent.

Whereas Pollini (2017b) himself assumes an (erroneous) findspot for this relief within Domitian's Palace, I myself found the following. Bianchini (1738, 68; cf. his Tab. VI, an etching of the Nollekens Relief) writes explicitly that he excavated the Nollekens Relief in the 'Aula Regia' of Domitian's 'Domus Flavia'.

For Bianchini's excavations; cf. also Silvano Cosmo (1990, 837, Fig. 8 [= here Fig. 39]) and *supra*, in Chapter V.1.i.3.b).

In order to present the recent discussion on the Nollekens Relief, I summarize some text passages, written for *supra*, Chapter V.1.i.3.b) J. Pollini's discussion (2017b) of the allegedly 'lost' Nollekens Relief (cf. here Fig. 36), which he compares with the Cancellaria Reliefs (cf. here Figs. 1; 2; Figs. 1 and 2 drawing).

**Fig. 36. The Nollekens Relief, on display above the fire place in the White Hall of the Gatchina Palace near St. Petersburg, marble, 88 x 139 cm. F. Bianchini (1738, 68, his Tab. VI, an etching of the Nollekens Relief) found this relief in 1722 in the 'Aula Regia' of Domitian's 'Domus Flavia' / 'Domus Augustana'; cf. S. Cosmo (1990, 837 Fig. 8); J. Pollini (2017b, 120, 124; cf. p. 98, Fig. 1. We have copied from this illustration Pollini's numbering of the figures, which are represented on this relief). Pollini suggests (in my opinion convincingly) that it shows the togate *triumphator* Domitian, sacrificing in AD 89 just outside Domitian's *Porta Triumphalis*; after which, the emperor would begin his (last) triumphal procession. Photograph, taken in 1914, when the relief was still preserved in its restored state of the 18<sup>th</sup> century. Courtesy John Pollini.**

**The caption of Pollini's (2017b) Fig. 1 (= here Fig. 36) reads: "Photograph taken in 1914 of the Nollekens Relief ... [the author provides a reference for that on p. 107 with n. 47]. Note that only the heads of nos. 6 [*i.e.*, of Domitian], 8 [*i.e.*, of the Genius Senatus] and 10 [*i.e.*, of a boy ministrant] in the foreground and of all the background figures are ancient [my emphasis]"**.

After discussing Chapter V.1.i.3.b) with Rose Mary Sheldon, mentioning to her that I still needed to check, whether or not Domitian held one of the consulships of AD 89, she was kind enough to answer me by E-mail: "Domitian was consul every year of his reign except 89, 91, 93, 94 and 96. Pat Southern [1997], Domitian, p. 35". See also Dietmar Kienast, Werner Eck and Matthäus Heil (2017, 110).

Pollini suggests (2017b, 120 with n. 106; cf. *supra*, in Chapter V.1.i.3.b); Section IV.) that the Nollekens Relief shows Domitian sacrificing in AD 89. Pollini himself has not realized that, because of the representation of

both *consules* (**figures 7 and 9**) on the Nollekens Relief, this is in theory actually possible, because, as mentioned above, in that year Domitian did not himself hold one of the consulships (cf. *supra*, at Chapter VI.3).

Pollini (2027b, 118) writes: "To the left and right of the personified Senate [on Fig. 36], **two figures in the background, nos. 7 and 9, are distinguished by their togas ... they are undoubtedly the two consuls** [my emphasis]"; cf. Pollini (2017b, 114-115), where he observes that Domitian's two lictors (nos. 1 and 4 on Fig. 36) with "*fasces laureati* which imperial *fasces* bore usually on the occasion of a triumph [with n. 76; page 115] ... Both lictors wear low, common-style shoes (*calcei*) ... Both are *paludati*, wearing not a civic toga but a tunic and a military cloak, fastened with a round *fibula* [my emphasis]".

To this I should like to add that **figure 7** in the background is indeed wearing a *toga*, the lower seam of which, as well as its *lacinia* are visible at the bottom of the relief, immediately above the lettering "7". This *consul* is, therefore, obviously wearing a similar *toga* as Domitian (**figure 6**), who is standing right in front of him. Of the *toga* of the other *consul*, **figure no. 9**, we see the folds of the *umbo* on his left shoulder. For the names of the different parts of the *toga*, for example *lacinia* and *umbo*; cf. Hans Rupprecht Goette (1990, 3, Abb. 2).

For a detailed discussion; cf. *supra*, in Chapter V.1.i.3.b); at Sections I.; III.

Domitian [on the Nollekens Relief; here **Fig. 36**] is wearing a *toga* and is crowned with a laurel wreath, and the *fasces* (with axes attached !) of his two lictors (who, as mentioned above, are clad in military dress; see also J. POLLINI 2017b, 118) are likewise adorned with laurels. Pollini, therefore, in my opinion convincingly, suggests that Domitian is shown in the course of performing this sacrifice just *outside* the *Porta Triumphalis*, and that immediately after that will begin Domitian's triumphal procession. In Pollini's opinion (2017b, 120 with n. 106, referring to Suet., *Dom.* 6,1), the sacrifice depicted on the Nollekens Relief must refer to Domitian's last triumph of AD 89 (for that; cf. *supra*, n. 232, in Chapter I.2., and in Chapter VI.3.; *Addition*).

Paolo Liverani (2021, 88) rejects Pollini's hypothesis: **Pollini's "... triumphal connotation is based on weak evidence and must remain hypothetical** [my emphasis]. Liverani (2021, 88) identifies the represented figures on the Nollekens Relief exactly like Pollini (2017b) himself, but he does not consider in his reasoning the figures in the background (cf. here **Fig. 36: figure 3**, a soldier, and **figures 7 and 9**, two togate men), whom Pollini, in my opinion convincingly, interprets as the *consules*.

Liverani (2021, 88) has not realized that the figures, which he *has* mentioned, are positioned according to strict observations of their relevant spatial restrictions that were assumed by the Romans : the right-hand half of the Nollekens Relief represents the area *domi* (with the *Dea Roma* and the *Genius Senatus*, who are constrained to remain within the *pomerium* of Rome; not by chance the *consules* appear on that side of the relief), the left-hand half of the relief represents the area *militiae* instead (here we see the two *paludate* lictors, *having axes attached to their rods*, their *fasces* are adorned with laurels, as well as one soldier). Domitian thus stands on the Nollekens Relief *between* figures that belong to the areas *militiae* and *domi*.

This the artist has shown by the distribution of the figures. In addition to this, Domitian, wearing a *toga*, is crowned with a laurel wreath, and is shown in the act of sacrificing. And because I believe (because of the presence of the *two consules*) that Pollini is right in suggesting that the scene, visible on the Nollekens Relief, shows an event of AD 89, I, therefore, wonder what *else* this panel could represent, than what Pollini (2017b) himself suggests.

Liverani (2021, 88) also ignores the fact that Francesco Bianchini (1738, 68) found the Nollekens Relief in 1722 within the *'Aula Regia'* (cf. *supra*, at Chapter V.1.i.3.b); Section II.). And because Bianchini documented in great detail the marble decoration of this hall (cf. F. BIANCHINI 1738, 48-68, Tab. III.; IV. = here **Fig. 9**; cf. *supra*, at Chapter V.1.i.3.b); Section III.), we know also that "the major theme of the *'Aula Regia'* was the celebration of Domitian's military victories": so Eugenio Polito (2009, 506, quoted *verbatim supra*, at Chapter V.1.i.3.b); Section III.).

For the above-quoted passage from Paolo Liverani (2021, 88); cf. now Liverani (2023, 120; *i.e.*, the Italian version of Liverani's essay of 2021).

**To conclude.** Also Pollini (2017b) himself ignores the fact that the Nollekens Relief was actually found within the *'Aula Regia'*. Considering at the same time that the overall theme of this magnificent hall was the praise of Domitian's military victories, which the emperor had celebrated with triumphs, I therefore maintain my earlier judgement (as first formulated, *infra*, in volume 3-2, at Appendix IV.c.1.)). Namely that Pollini's interpretation of the Nollekens Relief, according to which it shows Domitian sacrificing in AD 89 at the *Porta Triumphalis* before beginning his (last) triumphal procession, is sound.

*The architectural fragments, excavated by Bianchini within the 'Aula Regia': the famous 'Trofei Farnese'*

d) Some of the architectural fragments, found by Francesco Bianchini in 1720-1726 in the *'Aula Regia'* and published by him (1738), are on display in the courtyard of the Palazzo Farnese at Rome. These are the famous *'Trofei Farnese'* (cf. here Fig. 5.1.); cf. *supra*, at Chapters *Introductory remarks and acknowledgements*; and *Preamble*; Section II., and at Chapter V.1.i.3.b); Section III.

**Fig. 5.1. The two 'Trofei Farnese' in the cortile of Palazzo Farnese at Rome. These are two ensembles of architectural fragments, mostly found by Francesco Bianchini in his excavations (1720-1726; published 1738) on the Palatine, within the 'Aula Regia' of Domitian's Palace 'Domus Flavia' / Domus Augustana. Cf. K. Stemmer (1971, Abb. 1 [here on the left], with the fragment of the colossal cuirassed marble statue of 'Domitian as Jupiter'; here Fig. 5), Photo: J. Felbermeyer, D-DAI-Rom 35.566. Cf. K. Stemmer (1971, Abb. 2 [here on the right], with a fragment of one of the slabs with a representation of a 'province', from the porticos of the Hadrianeum at Rome; cf. here Fig. 48), Photo J. Felbermeyer, D-DAI-Rom 35.567.**

For the *Hadrianeum*; cf. *infra*, in volume 3-2, at *A Study of the consequences of Domitian's assassination ... Or : The wider topographical context of the Arch of Hadrian alongside the Via Flaminia, which led to the (later) Hadrianeum.*

*One of the fragments of the 'Trofei Farnese', possibly found by Bianchini in the 'Aula Regia', belonged to a colossal cuirassed statue (8 m high), which represented 'Domitian as Jupiter'*

e) On the left hand photo of the *'Trofei Farnese'* (cf. here Fig. 5.1) appears in the background on the right the fragment of a colossal marble statue, measuring 102 x 90 cm; cf. Klaus Stemmer (1971, 567). This fragment belongs to a portrait-statue of a man, wearing an incredibly rich decorated cuirass (here Fig. 5) with a huge *gorgoneion* on the chest, as well as a *paludamentum*, part of which is left on the man's left shoulder. - What its quality is concerned, this fragment (here Fig. 5) has certainly once belonged to one of the very best sculptures that I can present in this *Study*.

Stemmer (1971) convincingly dates this fragment (here Fig. 5) to the Flavian period and identifies the represented man with Domitian; followed by Anne Wolfsfeld (2014; *ead.* 2021; cf. *infra*).

My thanks are due to Hans Rupprecht Goette for sending me, on request, also this article by Klaus Stemmer (1971), as well as, on his own account, the relevant pages from Anne Wolfsfeld's book of 2021.

**Fig. 5. Fragment of a colossal cuirassed marble statue of 'Domitian as Iuppiter' (102 x 90 cm). This statue was, according to K. Stemmer (1971), hollow and, provided Domitian was represented standing, it was originally circa 8 m high, and because of the huge *gorgoneion* on the chest of his cuirass, it showed the emperor assimilated to the god Jupiter.**

This fragment is on display in the left hand one of the *'Trofei Farnese'* in the cortile of Palazzo Farnese at Rome (cf. here Fig. 5.1). It may belong to Francesco Bianchini's finds (excavated 1720-1726, published 1738) within the *'Aula Regia'* in Domitian's Palace on the Palatine, the *'Domus Flavia' / Domus*

*Augustana*. This has already been suggested by K. Stemmer (1971, 566, 579-580) on the basis of the documentation that is available for this fragment. See also F. Bianchini's (1738, 48-68, with Tab. II; Tab. VIII = both here Fig. 8) own documentation of his excavations comprising measured plans, and S. Cosmo's (1990, Fig. 8 = here Fig. 39) findings concerning Bianchini's excavations.

For the photos illustrated here; cf. K. Stemmer (1971, Abb. 3-6;), Photos: G. Singer; D-DAI-ROM-71.175-71.178. K. Stemmer's (1971, 571, Abb. 7) reconstruction drawing of this colossal cuirassed portrait of 'Domitian as Jupiter' is here reproduced after A. Wolfsfeld (2014, 215, Abb. 6).

Stemmer (1971, 566, 579-580) has based his own, in my opinion convincing suggestion, that the fragment (here Fig. 5) was found within the 'Aula Regia', on ancient literary sources, and on information concerning the collections of the family Farnese and concerning the provenance of the fragment (here Fig. 5).

For the 'Trofei Farnese' (here Fig. 5.1) and for this fragment of a colossal portrait of 'Domitian as Jupiter' (here Fig. 5), possibly from the 'Aula Regia' of his *Domus Augustana*; cf. also *supra*, in Chapter *Preamble: Domitian's negative image*; Section II. *Conclusions: Domitian's representations of his military successes and his claims to be of divine descent and to possess a divine nature*.

As already Francesco Bianchini (1738, 50-54), also Natascha Sojc (2021, 234) stresses the fact that, when compared with all other rooms in the Imperial Palaces on the Palatine, the 'Aula Regia' is unique, both what its size and what its magnificent decoration is concerned: "The outstanding size and decoration of the Aula Regia, with columns of coloured marble, including pinkish *pavonazzetto* and yellowish *giallo antico*, and the 3.50 m high statues in green basalt, now in Parma, make it the most elaborate room of the imperial palaces on the Palatine known today. The hall also seems to have set new standards in comparison with public buildings existing in Rome at Domitian's time as it was only later surpassed in terms of size and splendour when the Basilica Ulpia was built in Trajan's Forum [my emphasis]".

To give an impression of the decoration of the 'Aula Regia', I quote in the following a passage that was written for *supra*, Chapter VI.3. *Summary of my own hypotheses concerning the Cancellaria Reliefs presented in this Study*; *Addition: My own tentative suggestion, to which monument or building the Cancellaria Reliefs may have belonged, and a discussion of their possible date* :

'Bianchini (1738, 68) says explicitly that the reliefs here Fig. 36 [*i.e.*, the Nollekens Relief] and Fig. 37 ['the other relief'] were found in that hall of Domitian's Palace (called already by Bianchini 'Aula Regia'), where also "the colossal basalt statues of Hercules and Bacchus/Dionysus with Pan (now in Parma's Galleria Nazionale)" were excavated, as Pollini writes (cf. *id.* 2017b, 101, n. 11, quoting for that, F. BIANCHINI 1738, 54 and 58) ... Bianchini's (1738) excellent etchings comprise also a measured ground-plan of the 'Aula Regia' (his Tab. II. = here Fig. 8; cf. here Fig. 8.1); and a representation of a uniquely rich decorated marble column base (cf. his Tab. III. = here Fig. 9). This column base belongs to a pair of *giallo antico* columns (cf. p. 50: "mai state osservate") that flanked the main entrance to the 'Aula Regia' in the north (cf. here Figs. 8; 8.1), the plinth of which is decorated with trophies; as well as other finds from that hall (cf. p. 54): a detail of a marble entablature, decorated with a winged Victoria, who is crowning a trophy (illustrated on his Tab. IV. = here Fig. 9 [to this I will come back below]). Bianchini's illustrations (1738, Tab. III. and IV. = here Fig. 9) therefore show that at least one of the iconographic themes of the enormous 'Aula Regia' was certainly the celebration of Domitian's military victories. According to Eugenio Polito (2009, 506, quoted *verbatim supra*, in Chapter V.1.i.3.b); Section III.), this was the major subject of the 'Aula Regia' [my emphasis]'.

For the meaning of the above-mentioned "winged Victoria" in Domitian's 'Aula Regia'; cf. now Sam Heijnen ("Living up to expectations. Hadrian's military representation in freestanding sculpture", 2020). Heijnen discusses such figures, which appear in the "tropy type" of (representations of) the cuirasses, for example of Domitian, which celebrate his victories in Germania, and on the cuirasses of Vespasian and Titus, celebrating their victories in the Great Jewish Revolt (or War), and on the cuirass of Hadrian's statue from Hierapydna.

Cf. *supra*, at *A Study on Hadrian's portrait-type from Hierapydna* (cf. here Fig. 29).

In addition to this, I repeat in the following two passages, written for *supra*, Chapter V.1.i.3.b); Section III. Does the design of the Nollekens Relief reflect the topographical context, for which Domitian had commissioned it ? :

“Bianchini (1738, 50-52) described and illustrated (cf. his Tab. III. = here Fig. 9) also the fact that the bases of the columns that flanked the main entrance to the ‘Aula Regia’ were decorated with trophies and with the *corona civica*. This iconographic detail may perhaps be read as Domitian's claim to have also had an important part in his father Vespasian's victory in the civil war of AD 68/69. Rita Paris (1994b, 82-83, quoted *verbatim supra*, in Chapter V.1.i.3.a)), actually gives Domitian credit for that [my emphasis] ...

Bianchini (1738, 50-54) was especially interested in the weapons appearing on the marble reliefs, he discussed (cf. his Tab. III; IV. = here Fig. 9), attributing the represented trophies, *inter alia* woolen caps, to Germanic Peoples. Given the extremely high quality of those marbles, it is certainly worth while to study this topic in depth. - As I should only later realize, Joachim Raeder (2010, 141, quoted in more detail *verbatim infra*) seems so far to be the only scholar, who has identified those weapons (“die auf die Dakerkriege Domitians verweisen”), but he does not explain, how he has arrived at this judgement.

Some of the reliefs representing trophies, ‘excavated’ and documented by Bianchini (1738) in the ‘Aula Regia’, are still extant and on display in the cortile of Palazzo Farnese at Rome, the famous ‘Farnese trophies’ (cf. here Fig. 5.1). They were also drawn by Giovanni Battista Piranesi; cf. Patrizio Pensabene (1979). Cf. M. DURRY 1921; P.H. von BLANCKENHAGEN 1940; and C. GASPARRY 2007, summarized by E. POLITO 2009, 509, quoted *verbatim supra*) [my emphasis]’.

The overall impression of the ‘Aula Regia’ must indeed have been overwhelming. Let's try to imagine for a moment what it has looked like : According to Bianchini (1738, 50, who mentioned the correct measurements; cf. *infra*) the ground-plan of the ‘Aula Regia’ has a larger width than the central nave of the Basilica of S. Peter in Rome, and the decoration of this hall was among the most luxurious ones known at Bianchini's time. The shaft of the columns, decorating the ‘Aula Regia’, were carved from different coloured marbles, the bases of those columns and the architraves, belonging to them, were carved from white marble and richly decorated with reliefs.

Unfortunately we do not know, whether or not those reliefs, in addition to this, had been painted. But we should consider that, according to Pollini (2017b, 113) the Nollekens Relief (here Fig. 36) was painted.

The walls of the ‘Aula Regia’ were covered with veneer of different coloured marbles and likewise exuberantly decorated with exquisite marble reliefs, as documented by Bianchini (1738, 48-68; cf. here Fig. 36, the Nollekens Relief and Fig. 37, ‘the other relief’). To all this we must add in our imagination, as suggested by Klaus Stemmer (1971, 579-580), that the 8 m high cuirassed portrait-statue of ‘Domitian as Jupiter’ (here Fig. 5) was on display in the southern apse of the ‘Aula Regia’ (*i.e.*, exactly opposite the main entrance to the ‘Aula Regia’ on its north side (cf. here Figs. 8; 8.1; 58).

Note that Stemmer (*op.cit.*) calls this curved wall an “Apsis”. Also Filippo Coarelli (2012, 495) writes about the ‘Aula Regia’: “Il lato corto meridionale comunica con il peristilio tramite due porte, al centro delle quale si inserisce un'abside, in cui non è difficile identificare il luogo destinato all'imperatore”. Bianchini (see the lettering on his plan Tab. II; here Figs. 8; 8.1), on the other hand, called this curved wall a “Tribunal”.

According to Amanda Claridge the ground-plan of the ‘Aula Regia’ was “38 m. long by 31 m. wide (128 X 104 RF [Roman Feet])”; cf. Claridge (1998, 135; *ead.* 2010, 148).

In the 8 niches of the ‘Aula Regia’ (here Fig. 8) stood originally colossal ideal statues, carved from green Basanite (*basanites*), a volcanic rock from the Wadi Hammamat in Egypt : the statue of Hercules is 3,73 m high (for all this information; cf. the Homepage of the Galleria Nazionale at Parma; see below). Bianchini (1738, 54, Tab. XIX; XX, representing etchings of those two statues) found in his excavation in 1724 two of those colossal statues in secondary context immediately adjacent to the ‘Aula Regia’, and Gordon Leith has integrated into his reconstruction drawing of the ‘Aula Regia’ some of those colossal statues (here Fig. 108). As mentioned above, the two colossal statues, excavated by Bianchini, the ‘Dionysos, supported by a satyr’ (Inv. Nr. GN 969), and the Hercules (Inv. Nr. GN 970, carved from *basanites*, and 3,73 m high) are on display at the Galleria Nazionale of Parma.

Cf. online at: <<https://complessopilotta.it/opera/scultura-colossale-raffigurante-eracle/>>;

<<https://complessopilotta.it/opera/scultura-colossale-raffigurante-dioniso-con-satiro/>> [last visit: 11-I-2023].

Basanite (*basanites*) is a volcanic rock; cf. Walter Maresch, Olaf Medenbach and Hans Dieter Trochim (1996, 108, 114, 118, 120, 122).

*The colossal portrait of 'Domitian as Jupiter' (here Fig. 5) in the 'Aula Regia' and Statius (IV 2,41ff.)*

Of course also Klaus Stemmer (1971, 579-580) has asked himself, which hall in his Palace Domitian may have chosen for his famous *Coenatio Iovis*, the banquet, described by Statius (IV 2,41ff.), to which Domitian had also invited his poet. Stemmer (1971, 579-580) suggests that the *Coenatio Iovis* had taken place at the 'Aula Regia'.

As the name 'Coenatio Iovis' for the 'Triclinium' (here Figs. 8.1; 58; 73; 108-110) proves, most other scholars believe that the banquet, described by Statius, had instead been staged at the 'Triclinium'. See most recently Aurora Raimondi Cominesi (2022, 113 with n. 115): "**The notorious banquet described by Statius, in which Domitian towers over his guests as Jupiter from the heavens** [my emphasis]".

In her **note 115**, Raimondi Cominesi writes: "Stat. *Silv.* 4.2. The hall in which the banquet took place is usually identified with the so-called Cenatio Iovis in the Domus Flavia ...".

See for the *Coenatio Iovis* (Statius, *Silvae* 4.2) also Antony Augoustakis and Emma Buckley (2021, 162), who do not address the question where this banquet was staged though.

**Interestingly, Ulrike Wulf-Rheidt (2020, 189) mentioned that 'it is very probable that all the major rooms of the 'Domus Flavia' were used for the great banquets': "È molto probabile che gli ambienti principali della Domus Flavia venissero utilizzati per i grandi banchetti".**

Also Natasch Sojc (2021, 134) writes, "**that the Aula Regia was probably used ... for ... a large-scale banquet** [my emphasis]".

It is tempting to believe that the presence of this colossal portrait-statue of 'Domitian as Jupiter' (here Fig. 5), if that was actually 8 m high and indeed on display in the apse of the 'Aula Regia', as suggested by Stemmer (1971, 579-580), whom I am following here, could have influenced Statius's (IV 2,41ff.) text. If so, this could mean that Stemmer (1971, 580) was likewise right in locating the banquet called *Coenatio Iovis* at the 'Aula Regia'.

**I myself follow the findings of Bianchini (1738, 48-68, Tab. III.; IV. = here Fig. 9) and Polito (2009, 509), both discussed and quoted *verbatim supra*, in Chapter V.1.i.3.b); at Section III., who have proven that the overall iconographic theme of Domitian's 'Aula Regia' was 'the celebration of Domitian's military victories'. All the other scholars, consulted in this Study, who have studied the 'Aula Regia' in Domitian's Palace *Domus Augustana*: Stemmer (1971), Claridge (1998; *ead.* 2010), Mar (2009), Coarelli (2012), Wolfsfeld (2014; *ead.* 2021), Pollini (2017b), Wulf-Rheidt (2020), Sojc (2021), Raimondi Cominesi and Stocks (2021), Raimondi Cominesi (2022), or Alteri (2023), have overlooked this important fact.**

Only when this volume was about to be sent to the press, have I realized that Joachim Raeder (2010, 141) seems to be the only exception, because he writes: "Aufgrund der Waffendarstellungen im Fries [cf. p. 142, his Textabbildung 49.a-b; cf. F. BIANCHINI 1738, Tab. II-IV = here Figs. 8; 9], die auf die Dakerkriege des Domitian verweisen, und der Ziegelstempel im Mauerwerk, muß die 'Aula Regia' und deren dekorative Ausstattung in der Zeit zwischen 86/89 n. Chr. und 93/94 n. Chr. entstanden sein [my emphasis]".

We will next discuss in detail the following statements : 'the Romans believed, that their supreme god Jupiter granted them their military victories', and that, at least in the case of Alexander the Great, 'the theology of rule was based on the belief that the god and the reigning sovereign were identical'.

In addition to this, it has been stated, 'that Domitian's *virtus* 'invincibility', which was on principle expected from Roman emperors, guaranteed Rome's wealth''. To put on display the colossal portrait of

**'Domitian as Jupiter' (here Fig. 5) in the 'Aula Regia', the by far most magnificent hall of his Palace, where Domitian could also stage banquets, therefore made sense. Unfortunately we ignore, whom those 8 colossal *basanites* statues in the 'Aula Regia' represented. But one thing is clear, the 'Statue of Dionysos, supported by a satyr' (i.e., showing the god being tipsy?), would have been an excellent decoration for a hall, also used for banquets.**

This fragment of a colossal cuirassed portrait-statue of 'Domitian as Jupiter' (here Fig. 5), has most recently been discussed in great detail by Anne Wolfsfeld (2014, 215, Abb. 6 [= here Fig. 5]; *ead.* 2021). Wolfsfeld (2014, 200; *ead.* 2021, 130-131, 308-310) does not address Stemmer's (1971, 566, 579-580) above-mentioned hypotheses, according to which this fragment was found by Bianchini within the 'Aula Regia', and that this colossal statue of 'Domitian as Iuppiter' was on display in the apse of this hall. Nor does Wolfsfeld add herself new information to the provenance of the fragment. Concerning Domitian's self-presentation on the other hand, she formulates, on the basis of her analysis of numerous of Domitian's cuirassed statues, the important observation of Domitian's 'persönlicher "Siegesprogramm"; cf. Wolfsfeld (2014, 203).

Wolfsfeld (2014, 203) does not address in this context the fact that Stefan Pfeiffer (2009) has already discussed this subject in detail. I, therefore, repeat here a passage that was already quoted above, at point 2.):

**'Also Stefan Pfeiffer (2009, 61-62) mentions the *Pirousta* (here Fig. 49) in his book on the Flavians ... These figures of representations of 'peoples' symbolized, according to Pfeiffer (2009, 61-62), Domitian's "Sieghaftigkeit", which in its turn guaranteed Rome's wealth.**

**Elsewhere, Stefan Pfeiffer (2018, 189) ... by analysing the themes of Domitian's self-presentation, explains what he means with "Sieghaftigkeit": "1. It was a key issue for Domitian to show his *virtus militaris* and his victoriousness ... [my emphasis]". Domitian in his self-presentations thus claimed his 'invincibility'. For a discussion; cf. *infra*, in volume 3-2, at Appendix IV.d.2.a)'.**

We have just learned from Stefan Pfeiffer (2018, 189, and *id.* 2009, 61-62) that Domitian's '*virtus militaris* and his 'victoriousnes' guaranteed Rome's wealth''.

In the following, we will turn to three different ways, how Domitian's claim to possess the *virtus* 'invincibility' was visually expressed: **I.)** by demonstrating Domitian's *pietas* towards the gods (cf. here Fig. 1); **II.)** by creating a meaningful topographical context : locating Domitian's Palace on the Palatine 'opposite' the Republican Temple of Iuppiter Invictus (cf. here Figs. 8.1; 8.1); and **III.)** by identifying Domitian with the 'invincible' Alexander the Great, as is shown on the 'Relief Ruesch' (cf. here Fig. 7).

**Ad I.) Domitian's claim to possess the *virtus* 'invincibility' is expressed by the demonstration of his *pietas* towards the gods (cf. here Fig. 1; Figs. 1 and 2 drawing).**

In this context, I repeat here a text, written for *supra*, Chapter V.1.b):

**'I therefore rather maintain my own suggestion, made above, that Frieze A of the Cancellaria Reliefs [here Fig. 1; Figs. 1 and 2 drawing] visualizes the most important aspect of the one *virtus*, expected on principle from a Roman emperor : his 'invincibility' [my emphasis] (cf. *supra*, at n. 282; C. HÄUBER 2017, 22, 520-521). - See also John Pollini (2017b, 124, quoted *verbatim infra*, in volume 3-2, at Appendix IV.c.1.)).**

... because in this complex construction of a Roman emperor's *virtus*, only his *virtus* - in the case of Domitian on Frieze A [here Fig. 1; Figs. 1 and 2 drawing; figures 6; 5], his *pietas* in regard to the gods, expressed on Frieze A especially by Domitian's [figure 6] relation to Minerva [figure 5], his personal patron goddess, who is therefore characterized by means of the composition as being 'closest' to him - can help him to successfully strive for, and finally attain *victoria*, or 'invincibility' - but not without decisive and ultimate divine interference ! Because *victoria* could only be granted by the gods. - As already mentioned above: **'At**

**Jupiter's orders and under his guidance the Romans fought their wars, and to him they consequently attributed their military victories** [my emphasis]' (cf. *supra*, in Chapter III. at n. 431: "cf. H. MEYER 2000, 126 ..."). ... I have elsewhere regretted the following fact: "Roman 'pagan' religion was not codified, nor was the complex rôle of the Roman emperor", and find that it is tempting to regard the above-mentioned construction of the emperor's *virtus*, in its distinct reciprocity with the gods, as part of the 'theology of the rôle of the Roman emperor', especially, when we consider that some scholars have already coined the term: ">theology< of the imperial cult" (for both quotes; cf. C. HÄUBER 2014a, 728, 720 with n. 284, providing references). And already Mario Torelli had used the term: "teologia imperiale" (cf. *id.*: "Providentiae, Ara", in: *LTUR* IV [1999], 166).

As I have only realized after this Chapter was written, already Tonio Hölscher (2009b, 59-60, quoted in more detail *supra*, in Chapter IV.1.1.) writes about Alexander the Great: "**Die Theologie der Herrschaft hatte die Identität von Gott und Herrscher zur Grundlage**" ('The theology of rule was based on the identity of god and sovereign'; my emphasis)''.

Hölscher's (2009b, 59-60) just-quoted observation concerning the doctrine of 'identity of god and sovereign', leads us to the comments made by Mario Torelli (1987, 579) about the Flavian emperors, to which we will now turn.

**Ad II.) Domitian's claim to possess the *virtus* 'invincibility' is expressed by the location of his Palace on the Palatine 'opposite' the Republican Temple of Iuppiter Invictus (cf. here Fig. 58).**

*Mario Torelli (1987, 579) on Domitian's claim to possess the 'quality invincibility' as his permanent virtus*

Torelli's findings, discussed in the following, have been overlooked by recent scholars: for example by Anne Wolfsfeld (2014; 200 with n. 96, Abb. 7; *ead.* 2021). Like Klaus Stemmer (1971, 573-579), she discusses in great detail Domitian's notorious colossal equestrian statue called *Equus Domitiani*, and asserts (erroneously) like Stemmer (1971, 575) that the Flavian emperors Vespasian and Titus did not commission colossal portraits of themselves.

For the *Equus Domitiani*, which was erected in the *Forum Romanum*; cf. also Cairoli F. Giuliani ("Equus: Domitianus", in: *LTUR* II [1995] 228-229, Figs. 77-80, and *supra*, at n. 267, in Chapter I.3.2.); cf. also Lisa Cordes (2014, 346-355); Eric M. Moormann (2018, 168 with ns. 46, 47; *id.* 2021, 46 n. 12); Jane Feijfer (2021, 78); Antony Augoustakis and Emma Buckley (2021, 161-162, with n. 15); and most recently Gian Luca Gregori and Valerio Astolfi (2023, 161); see also *supra*, at *A Study on the colossal portrait of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori at Rome (cf. here Fig. 11). With The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great); at Part I.*

There I have already quoted, what I repeat here again; cf. Moormann (2018, 169): "The monument [*i.e.*, the *Equus Domitiani*] was officially given by the Senate to honour Domitian's victory over the Chatti and Dacians in A.D. 89".

For the reworking of Nero's *colossus* at the order of the Emperor Titus, mentioned by Torelli (1987, 579) in the below-quoted passage; cf. Claudia Lega ("Colossus: Nero", in: *LTUR* I [1993] 295-298, esp p. 296).

Eric M. Moormann (2018, 164 with ns. 18, 19, pp. 166, 168-169), although he likewise quotes Lega (1993) in his note 18, does not address the fact that, according to Dio Cassius (LXVI, 15, 1), the face of the *Colossus Neronis*, which had at first the facial traits of Nero, then, under Vespasian, represented the god Sol, had been reworked under Titus into a portrait of himself.

In the following, I anticipate some passages, written for *infra*, in volume 3-2, in *Appendix VI.*; at Section VI.

Torelli (1987, 578-579) discusses the itinerary of a visitor, coming up from the *Velia*, with the *colossus* of Nero/Titus and the Arch of *Divus Titus* (here **Fig. 120**) to the Arch of Domitian (interpreted by F. COARELLI 2009b; *id.* 2012; cf. *supra*, at point 4.) as Arch of *Divus Vespasianus*, whom I am following here) and the (presumed) Temple of Iuppiter Victor immediately to the west of it, both of which stood right in front of the façade of Domitian's '*Domus Flavia*' / *Domus Augustana* (cf. for both here **Figs. 8.1; 58**).

Torelli (1987, 579), like later also Filippo Coarelli (2009b; 2012; discussed *supra*, at point 4.)) assumes arches of all three Flavian emperors in this area, all of them standing, according to Torelli (*op.cit.*), next to a Temple of Jupiter: the Arch of Titus (next to the Temple of Iuppiter *Stator*), an Arch of Vespasian (next to the Temple of Iuppiter *Propugnator*) and an Arch of Domitian (*i.e.*, Coarelli's Arch of *Divus Vespasianus*, next to the Temple of Iuppiter *Victor*). Then Torelli (1987, 579) analyses the 'message' of this third, just-described topographical context in regard to the reigning Flavian emperor, who resides in this Palace, Domitian.

As already said above at point 4.), the identification of the temple podium (which are in reality two different foundations) in front of Domitian's '*Domus Flavia*' / *Domus Augustana* (here **Figs. 8.1; 58**) is hotly debated; I myself, following Vincenzo Graffeo and Patrizio Pensabene (2014; *id.* 2016-2017), identify the podium on the right, standing immediately adjacent to the *Arcus Domitiani*/ Arch of *Divus Vespasianus* ?, with that of the Temple of Iuppiter Invictus. Graffeo and Pensabene found out in their excavations that the Temple of Iuppiter Invictus had one or two Republican building phase, and also one Imperial phase.

Cf. *infra*, in volume 3-2, in *Appendix VI.*; at Sections III.-V.; IV.; VII.-X.

The same is also true for the locations of the Temples of Iuppiter *Stator*, Iuppiter *Victor*, and Iuppiter *Propugnator*, mentioned by Torelli (1987, 579), all of which are now located elsewhere than assumed by Torelli. For a detailed discussion; cf. *infra*, in volume 3-2. in *Appendix VI.* The *Turris Chartularia*, for example, to the south-east of the Arch of *Divus Titus* on the *Velia* (here **Fig. 120**), which Torelli (1987, 579) took for the Temple of Iuppiter *Stator*, cannot possibly be identified with this temple.

Cf. Coarelli (2012, 282 with n. 387); Häuber (2017, 327); and *infra*, in volume 3-2, in *Appendix V.*; at Section IV. *The (now twelve) different locations of the Temple of Iuppiter Stator, marked on the map Fig. 73.*

Torelli (1987, 579) interpreted the topographical situation, which he described (Arch of Titus/ Temple of Iuppiter *Stator*; Arch of Vespasian/ Temple of Iuppiter *Propugnator*; and Arch of Domitian/ Temple of Iuppiter *Victor*) as follows.

***The "triumphatores Flavi" identified themselves with Iuppiter, and by means of the epithet 'Victor' of the Temple of Jupiter on the Palatine Domitian claimed the 'quality' invincibility as his permanent virtue :***

**"La triplice presenza di Iuppiter presso questi congerie verrebbe a sancire l'identificazione dei *triumphatores Flavi* con la somma divinità del pantheon romano: in particolare, l'epiteto di Victor del tempio palatino verrebbe ad assumere il significato di una "qualità", di una permanente virtù, dell'imperatore vivente [*i.e.*, Domitian], che sembra - al pario della statua colossale del Sol, opportunamente riadoperata - presagire ancora una volta le tendenze ideologiche tardo-antiche [my emphasis]"**.

With the "statua colossale del Sol, opportunamente riadoperata", Torelli (1987, 579) referred to the *colossus* of the Emperor Nero, at first on display in the *vestibulum* of his *Domus Aurea*. At the order of the Emperor Vespasian, Nero's facial traits of this colossal bronze statue had been changed after his death into those of the god Sol.

Like Torelli, and contrary to other scholars, I believe that this statue, which was 100-120 Roman feet high, had already been finished in Nero's lifetime; cf. Häuber (2014a, 704 with ns. 100-103). Torelli (1987, 579) further refers to the assertion that, at the order of the Emperor Titus, the head of Nero's *colossus* (currently having the facial traits of the god Sol) had been reworked into a portrait of Titus. To this we will now turn.

In her discussion of the colossal head of Hadrian (now Constantine the Great); cf. *infra*, in volume 3-2, in *Appendix VI.*; at Section *VI.*, Cécile Evers (1991, 796) writes: "L'existence d'un si gigantesque portrait d'empereur au IIe siècle [*i.e.*, of Hadrian] - la tête seule [cf. here **Fig. 11**] fait 1,74 m, l'ensemble dépassait probablement les 9 m peut surprendre. **Cependant les statues colossales sont loin d'être une innovation du Bas-Empire. L'une des plus célèbres, on s'en souviendra, est celle de Néron mesurant plus de 30 m de haut** [with n. 65] et qui a subi de nombreux avatars. **L'empereur lui avait donné ses traits et l'avait placée dans le vestibule de son palais. Vespasien l'avait transformée en Sol, et son fils Titus, si l'on en croit Dion Cassius** [with n. 66], **l'aurait affublée de son propre portrait** [my emphasis]".

In her **note 65**, Evers writes: "J. GAGÉ ... [*i.e.*, here J. GAGÉ 1928] 106-122; Th. PEKARY ... [*i.e.*, here T. PEKARY 1985] 81". - See also Claudia Lega: "Colossus: Nero", in: *LTUR I* (1993) 295-298.

In her **note 66**, she writes: "DION CASSIUS, LXVI, 15, 1".

Although I myself, contrary to Mario Torelli (1987, 579) ... believe that the temple podium in question did not belong to the Temple of Iuppiter Victor, but instead to the Republican Temple (with two Imperial building phases) of Iuppiter Invictus (cf. here **Figs. 8.1; 58**), Torelli (1987, 579) is nevertheless right with his just-quoted suggestion, what the presence of this Jupiter Temple in front of the '*Domus Flavia*'/ *Domus Augustana* may have meant to Domitian's self-presentation: standing immediately next to the Arch of Domitian/ the Arch of *Divus Vespasianus* ?, and erected, as it was, at a site, which a visitor of Domitian's Palace would have reached shortly after having seen the *colossus* of Nero/ Titus on the *Velia*, and the Arch of *Divus Titus* on the *Velia* (cf. here **Fig. 120**).

I suggest that Torelli's (1987, 579) just-quoted interpretation may also be applied to the Nollekens Relief ([discussed above]; cf. *supra*, at Chapter *V.1.i.3.b*) and here **Fig. 36**), and likewise to the 8m high *colossus* of 'Domitian as Jupiter' (here **Fig. 5**), discussed here, the iconography of which thanks to Torelli's above-quoted observations (1987, 579) has become much better understandable now'.

If Nero's over 30 m high (gilded ?) bronze *colossus* on the *Velia*, glittering in the sun, had indeed received the facial traits of Titus, Domitian's colossal *Equus Domitiani*, which stood to the west of it on the *Forum Romanum*, appears in a very different 'light'. Domitian's *Equus Domitiani* may thus have been designed to 'counterbalance' Nero's/ Titus's *colossus*, compare the relevant observations by Eric M. Moormann (2018, 168-169 with n. 48); but note that Moormann (2018, 164 with n. 18) takes for granted that this *colossus* represented the god Sol at that stage.

But if the Emperor Titus had indeed ordered that the head of Nero's *colossus*, at that stage representing the god Sol, was reworked into a portrait of himself, the situation changes accordingly. Some visitors to the *Forum Romanum* and to the *Velia* (here **Figs. 58; 73**), who had been impressed there by these colossal portrait-statues of the Flavian Emperors Titus and Domitian, had perhaps afterwards the chance to visit also Domitian's Palace on the Palatine. Those people might even have thought that Domitian's 8 m high marble portrait of himself 'as Jupiter' in his '*Aula Regia*' (cf. here **Fig. 5**), when compared with those two other *colossi*, seemed a relatively 'modest' statement about himself.

Only after this Chapter had already been published in a Preview on our Webserver, did I find the important observation by Pier Luigi Tucci (2022, 224-225, with Fig. 20, Section: "Il Colosso"), who describes and illustrates the enormous *visual* impact, which Nero's *colossus* must have had on Vespasian's *Templum Pacis* (!).

Let's now return to Domitian's claim to possess the *virtus* 'invincibility'.

**Despite the negative image, created at the order of the Emperor Trajan, in which all that had been denied Domitian, recent scholars were able to demonstrate the in reality great importance of Domitian's victorious military campaigns.**

Cf. *supra*, at the Chapter Preamble : *Domitian's negative image*; Section I. 'The intentional creation of Domitian's negative image', here presented by discussing relevant text passages from Markus Handy ("Strategien zur Legitimierung der Ermordung des Domitian", 2015) and from Peter L. Viscusi (*Studies on Domitian*, 1973).

Considering at the same time what John Brian Campbell (1996, 491) writes: "Domitian was the first reigning emperor since Claudius in 43 to campaign in person, visiting the Rhine once, and the Danube three times", we may conclude the following. It is first of all no wonder that, at Domitian's Palace on the Palatine (here Figs. 8; 8.1; 9; 58; 73; 108-110), 'the major theme of the 'Aula Regia' was the celebration of Domitian's military victories', as Polito (2009, 506) has observed.

Although in the 'Aula Regia' Domitian is not *himself* portrayed as the victorious general of his military campaigns. His victories are instead - at least in the case of those fragments of its sculptural decoration that had survived until Bianchini (1738) excavated them (cf. here **Figs. 8; 9**) - 'alluded to' by the choice of the sculptural decoration of this hall that comprises trophies of various kinds. But we may just as well imagine that there existed also representations of the victorious general Domitian 'in action'. If some more of such representations (apart from the *Equus Domitiani*, which we know from coins; cf. *LTUR* II [1995] Fig. 80) had existed somewhere, they were probably, like the *Equus Domitiani*, destroyed by those, who, after Domitian's assassination and *damnatio memoriae*, created Domitian's negative image.

I myself know of only one such surviving representation of the victorious general Domitian, the 'Relief Ruesch' (cf. here **Fig. 7**), in which Domitian's head has not by chance been defaced after his *damnatio memoriae*, and to which we will now turn.

**Ad III.) Domitian's claim to possess the *virtus* 'invincibility' by identifying himself with the 'invincible' Alexander the Great, as is shown on the 'Relief Ruesch' (cf. here Fig. 7).**

**The 'Relief Ruesch' will be discussed in the following for three reasons: a) it shows Domitian's *Alexander imitatio*, b) it proves that this kind of innovative composition, hitherto attributed to the Trajanic/Hadrianic period, was - of course - likewise already invented at the order of Domitian, and c) because its current state of preservation seems to illustrate the title of the recent exhibition on Domitian at Rome, called: *Domiziano Imperatore. Odio e amore*.**

To begin with the above-mentioned exhibition on Domitian at Rome : the accompanying catalogue with the same title is edited by Claudio Parisi Presicce, Massimiliano Munzi and Maria Paola Del Moro (2023).

In order to summarize the scholarly discussion of the 'Relief Ruesch' (here **Fig. 7**), I repeat in the following some passages that were written for another *Chapter*, in which I have discussed this relief in great detail (cf. *supra*, in *Preamble: Domitian's negative image*; Section III. *My own thoughts about Domitian*); at point 5.).

[Because this *Chapter The major results of this book on Domitian* has been published on our Webserver as a Preview for this *Study* on Domitian, I have, after this date, only changed few details of the following text any more. Some passages of the *Preamble* itself, on the other hand, have still greatly been enlarged.]

**Ad a) The 'Relief Ruesch' and Domitian's claim of 'invincibility' by imitating Alexander the Great.**

'Dietrich Willers (2021, 81, 86-87 with n. 40, Taf. 11,1 [= here Fig. 7]), in his discussion of the 'Relief Ruesch', which shows Domitian in a battle scene, without wearing a helmet, points out that not wearing a helmet ... has been interpreted by ancient and modern commentators *inter alia* as follows: Alexander the Great and other commanders, who followed his model, thus stressed their invincibility [my emphasis].

On 14th October 2021, Hans Rupprecht was kind enough to send me, on his own account, an article by Dietrich Willers, in which the author discusses the 'Relief Ruesch', a marble relief that represents a cavalry battle of Romans against Germanic troops ("Relief mit Reiterschlacht", 2021, with his Taf. 11; Taf. 13 [= here Fig. 7]).

Willers (2021) writes that the collector Arnold Ruesch (1882-1929), best known for the '*Guida Ruesch*' (1908; 1911), the excellent guide of the Museo Archeologico Nazionale, Napoli, which he edited, had acquired the 'Relief Ruesch' in 1920 at an art dealer's in Rome.

Ruesch himself, as Willers (2021) writes, had already realized that the design of the central group on the 'Relief Ruesch', a cuirassed Roman *imperator*, wearing the *paludamentum*, and a German immediately opposite him, both on horseback, shows striking similarities with the two protagonists on the famous Alexander Mosaic from the 'Casa del Fauno' in Pompeii, now at the Museo Archeologico Nazionale, Napoli. This extraordinary fact led Bernard Andreae (1956) to assert that the 'Relief Ruesch' must be a modern forgery, to the effect that henceforth this relief was not discussed by archaeologists any more. As a matter of fact, I myself had not even known of this relief.

Willers (2021) reports that Ruesch had built a villa at Zürich to accommodate his collection. After his death his antiques were sold and dispersed, and in 1977 his Villa was destroyed. Fortunately in 2019 the Antikensammlung Bern of the Universität was able to acquire as loans from private collectors some of the antiques formerly in Ruesch's collection (comprising the 'Relief Ruesch', here Fig. 7), in addition, the owner of the 'Relief Ruesch' had obviously agreed that it could recently be restored.

This restoration of the 'Relief Ruesch' has proven that already in antiquity the face of the Roman *imperator* on this relief had deliberately been destroyed. Willers (2021, 79, 83-84, 89, 94), who is able to disprove that the 'Relief Ruesch' can possibly be a modern forgery, follows the judgement of earlier scholars by dating it Domitianic, *inter alia* by convincingly comparing it with the Cancelleria Reliefs (here Figs. 1; 2; Figs. 1 and 2 drawing).

And, as already suggested by Arnold von Salis (1947, 99-100), Willers (2021, 89-90, Taf. 11; Taf. 13, 2-5 [= here Fig. 7]) is able to demonstrate that the head of this rider was originally a portrait of Domitian, whose face had obviously been destroyed as a result of the emperor's *damnatio memoriae*. Domitian is fighting against Germanic soldiers, identified by Willers (2021, 90) with the Chatti, whom Domitian defeated in AD 83, as he writes.

**Fig. 7. 'Relief Ruesch', ex collection Arnold Ruesch (Zürich), who bought it in 1920 at an art dealer's in Rome (provenance unknown). Cavalry battle of Romans against Germanic soldiers (the Chatti ?, or Marcomanni or Quadi ?), the Roman *imperator* is Domitian. Marble, 74 x 108,8 cm. Domitian's head was defaced because of his *damnatio memoriae*, but the relief has nevertheless been re-used in antiquity. Private collection. On loan at the Antikensammlung Bern of the Universität. From D. Willers (2021, Taf. 11; Taf. 13,1: detail of the *imperator*, Taf. 13,2-4: details of the head of the *imperator*; Taf. 13,5: right profile of the bust of Domitian, Rome, Musei Capitolini, inv. no. MC 1156) ...**

'Dietrich Willers (2021, 74 n. 1) writes that the Antikensammlung Bern der Universität is planning "eine Sonderausstellung mit Dauerleihgaben aus dem einstigen Bestand der Sammlung Ruesch". And in an E-mail of 20th October 2021, he mentioned to me that he has sent an offprint of his article (2021) to Bernard Andreae, who answered Willers that he agrees with him that the 'Relief Ruesch' (here Fig. 7) is ancient. On 24th October 2021, Dietrich Willers has written me another E-mail, kindly granting me the permission to mention our correspondence here.' ...

'Apropos, the striking similarities of the composition of the 'Relief Ruesch' and of the Alexander Mosaic. I am, of course, aware of the fact that, for chronological reasons, Domitian and his artists could not possibly have known the Alexander Mosaic at Pompeii, but rather either its prototype, a famous painting, which Willers (2021, 81) dates to around 300 BC, or else other copies of this prototype.

Between February 4th and 24th 2022, and again on the 1st of January 2023, I could discuss with Andrew Stewart in E-mail correspondences the 'Relief Ruesch' (here **Fig. 7**) and the Alexander Mosaic. As Stewart wrote me, the prototype of this mosaic was a (now lost) painting, which, being a "four-colour-painting", is clearly datable in the fourth century BC, and was, in his opinion, still created in Alexander's lifetime. Later it was brought by the Romans as war booty from Macedonia to Rome, "after 168 or after 148 BC", as Stewart suggested, where it was henceforth copied in a variety of media; cf. Stewart (1993, 133 with n. 37). Andrew was also kind enough to provide me with his relevant publication; cf. Stewart (*Faces of Power: Alexander's image and Hellenistic politics*, 1993, 130-150, Chapter: "2. The Alexander Mosaic: A Reading").

On the 1st of January 2023, I had written Andrew Stewart again, asking him, whether the date "after 148 BC" could possibly mean that he assumed that this Greek painting had been on display at the *Porticus Metelli* (the later *Porticus Octaviae*), but Andrew Stewart was kind enough to answer me immediately that he himself has never suggested this'.

For the *Porticus Octaviae*; cf. *supra*, at point 2.).

'I had asked Andrew Stewart this question, because we know that in 146 BC Metellus Macedonicus had brought to Rome and put on display in his *Porticus Metelli* the famous statue group *turma Alexandri*, which Alexander the Great had dedicated in the sanctuary of Zeus at Dion in Macedonia. *The turma Alexandri* showed Alexander the Great together with those of his *hetairoi* fallen at the Granikos (334 BC): a group of 25 equestrian bronze statues and further nine infantrymen, all by Lysippos; cf. Häuber (2014a, 532). - To Alexander the Great and his *hetairoi* I will come back below.

Cf. below, in this Section III.; and *infra*, in volume 3-2, at *A Study on the consequences of Domitian's assassination ...; Introduction; Section I., at 4.) Hadrian's Parforceritt in November AD 97 from Moesia Inferior to Mogontiacum (Mainz). The discussion of this 'itinerary' of Hadrian brings us another time back to the Porticus Octaviae, because there was on display the famous turma Alexandri; and at Chapter VI.1.*

On 14th January 2023, I was told by Kris Seaman that Andrew Stewart had passed away the day before. What his own scholarly production is concerned, which was thus prematurely interrupted, this clearly means a great loss to the entire scholarly field of archaeology. But this loss is especially felt by his friends and colleagues, who had the privilege of knowing him personally, and with whom Andrew used to share his vast knowledge so generously.

Likewise since February 2022, I had the chance to discuss with Filippo Coarelli the 'Relief Ruesch' (which he actually knew, but of which he ignored, of course, its current whereabouts) and the Alexander Mosaic. Coarelli told me that he is in the course of preparing an exhibition on Alexander the Great, organized by the Museo Archeologico Nazionale, Napoli; the Alexander Mosaic will be restored on this occasion. On 31st March 2023, Coarelli was kind enough to write me the reference of the catalogue of this exhibition, that will be opened on 29th May 2023 at the Museo Archeologico Nazionale, Napoli: Filippo Coarelli and Eugenio Lo Sardo (a cura di), *Alessandro Magno e l'Oriente. La scoperta e lo stupore*.

I am not a specialist in *militaria*, but I wish at least to mention a fact that other scholars, more knowledgeable in this field, might like to study in more detail.

I am referring to the soldier, to the right of Amanda Claridge's (2013) (alleged) Hadrian (of his portrait-type Delta Omikron ( $\Delta$ ); here **Fig. 3**) in Scene LXXII of Trajan's Column (here **Figs. 4; 4.1**), who (like Willers's 2021 Chatti on the 'Relief Ruesch'; here **Fig. 7**) is only wearing long trousers and is armed with a shield. This soldier on Trajan's column (here **Figs. 4; 4.1**) according to Karl Strobel (2017, 318) may be identified as a "Markomanne" or as a "Quade", who, in Trajan's First Dacian War (in 102 AD), which is represented in Scene LXXII on Trajan's Column, belonged to Rome's auxiliary troops; so also Willers (2021, 90 with n. 90). - To this relief on Trajan's Column and to Hadrian's portrait-type (here **Figs. 4 ?; 4.1 ?; 3**) I will come back below.

If those Germanic soldiers on the 'Relief Ruesch' (here **Fig. 7**) really were Marcomanni or Quadi, not Chatti, those were Germanic tribes, whom Domitian had only to deal with in AD 89, as we have learned above from Peter L. Viscusi (1973, 53-63), who discusses also the fact that Domitian celebrated in AD 89 a double triumph over the Chatti and the Dacians. If the Germanic soldiers, visible on the 'Relief Ruesch', were those of the later war, this relief could be dated 'after AD 89', exactly as, in my opinion, the Cancellaria Reliefs (cf. *supra*, at point 2.) and here **Figs. 1; 2; Figs. 1 and 2 drawing**), with which Willers (2021) himself compares the 'Relief Ruesch'. For Domitian's campaign against the Marcomanni and Quadi (in AD 89), and Domitian's double triumph over the Chatti and the Dacians in AD 89; cf. *supra*, in Chapter *Preamble: Domitian's negative image*; at Section I."

**In the following, I allow myself digressions on Amanda Claridge's (alleged) portrait of Hadrian on Trajan's Column, Scene LXXII (here Figs. 4; 4.1), in reality a slinger from the *Baleares*, and on the portraits of Hadrian of the portrait-type Delta Omikron (here Fig. 3)**

**Amanda Claridge (2013, 12) commented on Scene LXXII of Trajan's Column (here Figs. 4; 4.1) as follows: "Band 11: lxxii Trajan surveys the last battle of the First [Dacian] War. Focal point: Stonethrower [my emphasis]". Claridge (2013, 13 with n. 80, pp. 14, 15, her plate 15 [= here Fig. 4]) tentatively identified this "Stonethrower" on here Figs. 4; 4.1 with Hadrian, represented in the here-so-called portrait-type Delta Omikron ( $\Delta o$ ) (cf. here Fig. 3).**

Although the head of this man (here **Fig. 4**) strikingly resembles portraits of Hadrian of this portrait-type (here **Fig. 3**), I do not follow Claridge's (2013) identification.

Scene LXXII of Trajan's Column (here **Fig. 4.1**) represents the decisive third battle in the third campaign of Trajan's First Dacian War, an event that took place in AD 102. Hadrian was a Senator, who, if represented on **Figs. 4; 4.1**, should have been depicted as wearing the *calcei patricii*; he had served from AD 96 on as senatorial tribune of *Legio V Macedonica* in *Moesia Inferior*, and from November AD 97 until January 98 as senatorial tribune of *Legio XXII Primigenia* at Mogontiacum (Mainz) in Upper Germany. Since AD 100, Hadrian was married to Trajan's great-niece Sabina. In Trajan's First Dacian war, Hadrian was Trajan's *comes expeditionis Dacicae* (since 101 AD), and he would earn the *dona militaria* in this war.

Apart from the fact that we should ask ourselves in the first place:

- a.) whether or not Hadrian could have appeared at all in a similar context as the "Stonethrower" in the battle, represented in Scene LXXII of Trajan's Column (here **Fig. 4.1**). Personally, I rather believe that we should expect him to appear in Trajan's entourage (which is also visible on **Fig. 4.1**), but in all of these scenes on Trajan's Column Hadrian is conspicuously *absent*, as most scholars agree; and -
- b.) whether Hadrian could have acted as a "Stonethrower", as Claridge (2013, 13 with n. 80, pp. 14, 15, her plate 15 [= here **Fig. 4**; cf. here **Fig. 4.1**]) refers to him, that is to say, as a slinger, a specialized weapon type, which Hadrian was presumably not trained in. - My thanks are due to the military historian Rose Mary Sheldon for discussing this question with me.

The "Stonethrower", as Claridge (2013) refers to this man on **Figs. 4; 4.1**, is fighting bare-headed and with bare feet. Amanda Claridge's suggestion to identify this man (and some other figures on Trajan's Column) with Hadrian has been rejected by Karl Strobel (2017, 65 with n. 48). I myself follow those scholars, who identify this man as a slinger from the *Baleares* (of whom altogether four are represented on the entire frieze; cf. here **Figs. 4; 4.1; 4.2; 4.3**, all of them fighting bare-headed and with bare feet). Cf. Jonathan Coulston's Website (2013; quoted by K. STROBEL 2017, 309, n. 2); Tonio Hölscher (2017, 28), and Christian Heitz (2017, 131, with n. 16).

Below, in the middle: portrait of Hadrian of the Delta Omikron ( $\Delta$ o)-type. Madrid, Museo Nacional del Prado (inv. no. 176-E.), found in Italy. Photo: D-DAI-MAD-WIT-R-20-91-05 (Witte).

Below right: bust of Hadrian of the Delta Omikron ( $\Delta$ o)-type. London, private collection. From: H.R. Goette (2021, 112, Abb. 45 (III Nr. 4)).

Figs. 4. Scene LXXII on Trajan's Column. Amanda Claridge's (2013, 12, 13) "Stonethrower", whom she tentatively identified with Hadrian, (allegedly) represented in the here-so-called portrait-type Delta Omikron ( $\Delta$ o) (cf. here Fig. 3). In reality, this man is a slinger from the *Baleares*. To the right of this slinger appears a Germanic soldier, wearing long trousers, who is armed with a shield, who may perhaps be identified as a Marcomanne or as a Quade. From: A. Claridge (2013, 15, pl. 15).

Fig. 4.1. Scene LXXII on Trajan's Column. Amanda Claridge (2013, 12) commented on Scene LXXII of Trajan's Column (here Figs. 4; 4.1) as follows: "Band 11: lxxii Trajan surveys the last battle of the First [Dacian] War. Focal point: Stonethrower". Claridge (2013, 13 with n. 80, pp. 14, 15, her plate 15 [= here Fig. 4]) tentatively identified this "Stonethrower" on here Figs. 4; 4.1 with Hadrian, represented in the here-so-called portrait-type Delta Omikron ( $\Delta$ o) (cf. here Fig. 3).

*A Study on the consequences of Domitian's assassination :*

*Nerva is forced to adopt Trajan and Trajan creates Domitian's negative image to consolidate his own reign. With Hadrian's adoption manquée in late October or at the beginning of November of AD 97, his 20-year long road to his accession and his thanksgivings for it, his Temple complex in the Campus Martius.*

*Or: The wider topographical context of the Arch of Hadrian alongside the Via Flaminia which led to the (later) Hadrianeum and to Hadrian's Temples of Diva Matidia (and of Diva Sabina?).*

*With discussions of Hadrian's journey from Moesia Inferior to Mogontiacum (Mayence [Mainz]) in order to congratulate Trajan on his adoption by Nerva, and of Hadrian's portrait-type Delta Omikron ( $\Delta$ o) (cf. here Fig. 3).*

*With The fourth and the fifth Contribution by Peter Herz, with The first Contribution by Franz Xaver Schütz (cf. here Fig. 77), with The Contribution by John Bodel, and with The second Contribution by Angelo Geißen; Introduction; at Sections IX.; and XI.; and in Chapter VI.1. My 2. Conclusion: In this context it is interesting to analyse the process by which Hadrian finally became emperor; at Trajan's adoption by Nerva and Hadrian's Parforceritt from Moesia Inferior to Mogontiacum [Mainz] to congratulate Trajan on his adoption;*

*at The circumstances that had brought Trajan to Mogontiacum and Domitian's negative image, created by Tacitus and Pliny at the order of Trajan to legitimize his own accession; at Trajan presented Hadrian in AD 106 with the signet-ring that he himself had received on the occasion of his adoption by Nerva. With a discussion of the meaning of this gesture; and at Chapters VI.2.; VI.2.1.; VI.2.2.; VI.2.3.; and VI.2.4. A. Claridge (2013) has identified the head of the "Stonethrower" in the battle Scene LXXII on Trajan's Column (here Figs. 4; 4.1) as a copy of Hadrian's portrait-type Delta Omikron ( $\Delta$ o) ...*

**In order to summarize my own research on Hadrian's portrait-type Delta Omikron ( $\Delta$ o), I quote in the following only the titles of the just-mentioned Chapters VI.2., VI.2.1., VI.2.2., and VI.2.3., in: *A Study on the consequences of Domitian's assassination*, adding to these titles some comments :**

**Chapter VI.2.** Hadrian's portrait-type Delta Omikron ( $\Delta$ o). The Emperor Hadrian issued coins with this portrait-type in AD 117 on tetradrachmas at Alexandria (cf. here Fig. 137) and on *aurei* in AD 138 at Rome [so my own hypothesis], *inter alia* with his DIVIS PARENTIBVS on the reverse (cf. here Fig. 139), on all of

which Hadrian looks straight ahead. This portrait-type is also known from two marble heads and two marble busts (cf. here **Fig. 3**). In all of them Hadrian turns to his left. The date of those marble portraits is debated.

**Concerning this portrait-type we need to answer the following questions, 1.) when exactly was this youthful likeness of Hadrian created? This is connected with the further question: had Hadrian commissioned its prototype in order to commemorate a specific event in his youth?; and 2.), what was Hadrian's intention at the end of his life [so my own hypothesis], when he ordered for the first-time marble portraits in the round of himself of this portrait-type? [my emphasis]**

For the tetradrachmas, issued by the Emperor Hadrian at Alexandria in AD 117 (here **Fig. 137**), on which appear for the first time Hadrian's portrait-type Delta Omikron ( $\Delta\omicron$ ) (here **Fig. 3**), see also *infra*, at *The first Contribution by Angelo Geißen: Bemerkungen zur frühen Münzprägung Hadrians in Alexandria*.

For the *aurei*, issued by the Emperor Hadrian at Rome (here **Fig. 139**); cf. Martin Beckmann ("The Gold Coinage of Hadrian AD 130-138", 2019), quoted and discussed by Hans Rupprecht Goette (2021, 24 n. 67, p. 124, Abb. 56, pp. 25-27). According to Beckmann (2019, 151), the *aurei* (here **Fig. 139**) were issued: "presumably around mid-138"; cf. Beckmann (2019, 152) on here **Fig. 139**: "The inscription on the obverse clearly labels the portrait as that of Hadrian ... The die analysis shows that two of the three known dies bearing this youthful portrait were used at the very end of Hadrian's coinage; the links do not rule out a posthumous issue, though they do not prove it either".

**Note that Martin Beckmann (2019, 152) himself observes that the meaning of the series of *aurei*, to which Hadrian's *aureus* (here **Fig. 139**) belongs, is "dynastic", but without coming himself to the obvious conclusion that his observation may be explained with the fact that, on 28th February AD 138 AD, Hadrian had adopted Antoninus Pius. - To this I will come back below.**

**Chapter VI.2.1.** H.R. Goette's (2021) discussion of Hadrian's portrait-type Delta Omikron ( $\Delta\omicron$ ) (cf. here **Fig. 3**). Concerning the 1.) question, Goette chooses the fact that in AD 106, during the Second Dacian War, the Emperor Trajan presented Hadrian with the signet ring, which he himself had received from Nerva on the occasion of his adoption by him [in late October or at the beginning of November of AD 97]; concerning the 2.) question, Goette suggests that those marble portraits (cf. here **Fig. 3**) were commissioned by the Emperor Antoninus Pius, who, with the left turn of those portraits, a possible *Alexander imitatio*, honoured the newly created *Divus Hadrianus*, who was intentionally represented young'.

Compare for that also below, *The third Contribution by Peter Herz : Der Übergang von Trajan auf Hadrian und das erste Regierungsjahr Hadrians*, and at *The fourth Contribution by Peter Herz : Wann wurde Trajan von Nerva adoptiert?*

**Chapter VI.2.2.** Additional information that is of importance for the discussion of Hadrian's portrait-type Delta Omikron ( $\Delta\omicron$ ) (cf. here **Fig. 3**); Hadrian and Alexander the Great; Hadrian's adoption by Trajan, as propagated by Hadrian; The tetradrachma issued by Hadrian in AD 137/138 at Alexandria to commemorate his adoption of Antoninus Pius (cf. here **Fig. 138**)'.

**In the following, I anticipate a passage from Chapter VI.2.2., in: *A Study on the consequences of Domitian's assassination* :**

'The tetradrachma, issued by Hadrian at Alexandria in AD 137/138 [here **Fig. 138**] has been discussed by Angelo Geißen in his article ("AION - AETERNITAS. Welche numismatischen Zeugnisse reflektieren die Vollendung der Sothis-Periode unter Antoninus Pius?", 2010). See for the coin (here **Fig. 138**) also Andrea Carandini (2019, 92: § 121, Fig. 33). According to Geißen (*op.cit*), this tetradrachma commemorated Hadrian's *pronoia/ providentia* for the *continuitas imperi*, because it referred to Hadrian's adoption of (the future)

Antoninus Pius who, in his turn, and following Hadrian's wishes, had immediately before adopted (the future) Marcus Aurelius and Lucius Verus'.

Concerning the apparent paradox that Hadrian could announce with the coin-type (here **Fig. 138**), issued at Alexandria in AD 137/138, his adoption of Antoninus Pius, that would only take place on 25th February AD 138; cf. the following: we know that Augustus, as a consequence of his correction of Julius Caesar's calendar reform, had fixed 29th August as the official date of the Egyptian New Year (cf. *infra*, in volume 3-2, n. 545, at *Appendix II.c*)).

This tetradrachma (here **Fig. 138**) has so far not been considered by those scholars, who are interested in the marble copies of Hadrian's portrait-type Delta Omikron ( $\Delta\omicron$ ) (here **Fig. 3**) discussed here.

The *providentia* of the reigning emperor for the *continuitas imperii* appears on coins since Nerva. This may be traced back to the habit of some (adopted) emperors since Tiberius to represent the *ara Providentiae* on their coins, which had exactly the same meaning; cf. Mario Torelli ("Providentia, Ara", in *LTUR*, IV, 1999, 165-166, figs. 66-67); Häuber (2014a, 712 with n. 199).

**Chapter VI.2.3.** My own interpretation of Hadrian's portrait-type Delta Omikron ( $\Delta\omicron$ ) (cf. here **Fig. 3**). **Concerning the 1.) question, I suggest that Hadrian (who, in my opinion, looks in this portrait-type like a man who is circa 20 years old) commissioned his Delta Omikron portrait-type at an unknown date. He thus either wished to commemorate his circa 1800 km long Parforceritt in November of AD 97 from Moesia Inferior to Mogontiacum (Mainz), which he undertook (together with some 'companions') to congratulate Trajan on his adoption by Nerva, or else the beginning of the resulting 20 year-long cooperation with Trajan (that ended with his adoption? by Trajan, and with his own accession : on the 9th and 11th August of AD 117, respectively). Concerning the 2.) question, I suggest that Hadrian ordered the marble copies of this portrait-type (here **Fig. 3**) as part of the propagation of his *providentia* for the *continuitas imperii* : Hadrian's adoption on 25th February AD 138 of Antoninus Pius (immediately after Antoninus Pius, in his turn, had adopted Marcus Aurelius and Lucius Verus). I suggest this because Hadrian commemorated his adoption of Antoninus Pius also with his tetradrachma, issued at Alexandria in 137/ 138 (here **Fig. 138**). I regard, therefore, the assumption as plausible, although it is currently not provable that, as a part of this propagation, Hadrian had still himself issued in AD 138 the *aurei* with this portrait-type and his adoptive parents ('DIVIS PARENTIBVS'), Trajan and Plotina (here **Fig. 139**). These *aurei*, like the marble portraits (here **Fig. 3**), apart from hinting at the fact that Hadrian had now himself adopted a son, hinted also at Hadrian's own *adoption manquée* (his own 'missed' adoption: by Trajan, immediately before Nerva had adopted Trajan) in late October or at the beginning of November of AD 97. **And because of 'the turn to their left' of those portraits (here **Fig. 3**), a possible *Alexander imitatio*, Hadrian may also have claimed to have decided (in November of AD 97), at the age of 21, 'to conquer for himself his Roman Empire', similarly as Alexander (together with his *hetairoi* - and his soldiers) had conquered his, starting at the age of 20 [my emphasis]'****

For the above-mentioned *dies adoptionis* and the *dies imperii* of Hadrian; cf. *supra*, n. 331, at Chapter II.2.; and *infra*, in volume 3-2, at *Appendix IV.c.1.*). See also *infra*, at *The fifth Contribution by Peter Herz : Der Ritt Hadrians nach Mogontiacum*, as well as *infra*, at *The first Contribution by Franz Xaver Schütz : Zur kartographischen Visualisierung historischer Landschaftselemente zwischen Rhein und Schwarzem Meer von Augustus bis Hadrian* (cf. here **Fig. 77**).

Only after this *Chapter* was written, did I realize that Hans-Ulrich Cain (2019, 2) has likewise discussed Hadrian's portrait-type Delta Omikron ( $\Delta\omicron$ ), coming for different reasons to exactly the same conclusions concerning the date and meaning of the marble copies of this type (here **Fig. 3**) as I myself. I have added a discussion of Cain's findings to my relevant Chapter in: *A Study of the consequences of Domitian's assassination*, and anticipate here the title of this Section:

**Chapter VI.2.3.** Why does Hadrian's portrait-type Delta Omikron ( $\Delta\omicron$ ) appear on his *aurei* of AD 138 with his DIVIS PARENTIBVS on the reverses (here **Fig. 139**)? The answer is provided by a comparison of those

*aurei* with Hadrian's tetradrachma (cf. here **Fig. 138**), issued at Alexandria in AD 137/ 138 to commemorate his adoption of the future Antoninus Pius on 25th February AD 138.

With a discussion of the observations by H.-U. Cain (2019, 1-2) concerning Hadrian's portrait-type Delta Omikron ( $\Delta\omicron$ ) (cf. here **Fig. 3**), and concerning the portrait-types of his successors, all adopted in AD 138: the portrait-type of the future Antoninus Pius, created on the occasion of his adoption by Hadrian, which intentionally shows great similarities with Hadrian's own later portraits; and of the portrait-types of the future Marcus Aurelius and Lucius Verus, created on the occasion of their adoptions by Antoninus Pius, that are intentionally very similar as Hadrian's youthful portrait-type Delta Omikron ( $\Delta\omicron$ ) (for these portrait-types of Antoninus Pius, Marcus Aurelius and Lucius Verus; cf. H.-U. CAIN 2019, 1-2, Abb. 1-3).

**Cain (2019, 2) writes that Hadrian "in seinen letzten Lebensjahren 136–138 n. Chr. sein eigenes Jugendbildnis [here Fig. 3] aktualisieren ließ, als ihm die Nachfolgeregelung zu einem vordringlichen Anliegen geworden war".**

That is to say, 'when the organization of his succession had become a major concern', or in other words, when Hadrian concentrated on the 'providentia for the *continuitas imperii*'.

Let's now return to the 'Relief Ruesch' (here **Fig. 7**).

**Ad b) The 'Relief Ruesch' shows that this kind of composition was already commissioned by Domitian**

'In addition, Willers (2021, 84, 91, 93, 98) convincingly points out that the 'Relief Ruesch' proves that still another artistic innovation, commonly attributed to Trajan (or rather Hadrian?), had already been invented at the order of Domitian - as we might perhaps not otherwise expect, after having read this entire *Study*. - Willers thus refers to the famous relief representing a cavalry battle that shows Trajan in exactly the same iconography as Domitian is represented on the 'Relief Ruesch' (here **Fig. 7**).

For "The Great Trajanic Frieze. Trajan [now Constantine] on horseback, early Hadrianic. Rome, Arch of Constantine ...", also for the other relief, inserted into the opposite side of this central passageway of the Arch of Constantine at Rome, representing the *adventus* of Trajan [now Constantine]; cf. Diana E.E. Kleiner (1992, 222, Figs. 185 [= here **Fig. 7.1**]; 186). For 'The Great Trajanic Frieze', Trajan [now Constantine] on horseback; cf. also Willers (2021, 84 with n. 21); and R.R.R. Smith (2021, 24-25 with n. 97).

**Fig. 7.1. 'The Great Trajanic Frieze', showing Constantine the Great, leading a cavalry battle. Rome, Arch of Constantine. The relief had originally shown Trajan, whose portrait was recut into one of Constantine the Great. In the central passageway of the Arch of Constantine the inscriptions LIBERATORI VRBIS and FVNDATORI QVIETIS were added to these reliefs of Trajan/ Constantine, which refer to Constantine (in recognition of his defeat of Maxentius at the Pons Mulvius in AD 312). Photo: C. Faraglia, Neg. D-DAI-Rom 37.328. - Diana E.E. Kleiner (1992, 222, Fig. 185) dates both reliefs: "early Hadrianic".**

Cf. Ian Archibald Richmond, Donald Emrys Strong and John Robert Patterson ("pons Mulvius", in: *OCD*<sup>3</sup> [1996] 1219 [the emphasis is by the authors themselves]).

**R.R.R. Smith (2021, 24-25 with n. 97) convincingly points out that the representation of Trajan in 'The Great Trajanic Frieze' (here Fig. 7.1), when compared to the 'real actions' of an emperor during a war, turns out to be extremely unrealistic.**

In his note 97, Smith writes: "The Great Trajanic Frieze (re-used on the Arch of Constantine [= here Fig. 7.1]), with the emperor leading a cavalry charge in battle himself, is a rare example of a clearly 'unreal' monumental narrative: Touati 1987. On such public narratives of imperial action, Fittschen 1972; Hölscher 2003; 2019: ch.[apter] 4 [my emphasis]".

My thanks are due to Bert Smith, for sending me on 11th January 2022 his above-quoted article ("*Maiestas Serena: Roman Court Cameos and Early Imperial Poetry and Panegyric*", 2021).

I myself would call the iconography of Roman emperors, as pictured on (Figs. 7; 7.1), as that of 'a dashing hero on horseback, like Alexander the Great' ...

**Ad c) The 'Relief Ruesch' has been reused in antiquity. All its phases taken together possibly illustrate the title of the exhibition on Domitian, recently on display at Rome in the Musei Capitolini, Villa Caffarelli: *Domiziano Imperatore. Odio e amore*; cf. Claudio Parisi Presicce, Massimiliano Munzi and Maria Paola Del Moro (2023)**

'Much debated in the past, and also discussed by Willers (2021, 79 n. 6, pp. 93-94), is the fact that the 'Relief Ruesch' (here Fig. 7), although fragmentary, and with Domitian's portrait defaced, was nevertheless re-used in antiquity. This assumption is based on two facts: the breaks of the relief were smoothed and the great holes, one of them in the middle of the relief, which were made in antiquity, but at a second moment (*i.e.*, in the course of the reworking), were created in a way that the figures of Domitian and of his horse remained intact.

Willers (2021, 80 with n. 9, p. 94 with n. 82) is able to disprove the hypothesis of earlier scholars, according to whom the 'Relief Ruesch' had been *created* as a "Brunnenverkleidung" ('a decoration of a fountain'), apart from its iconography, which does not suit such a purpose, its holes were obviously made at a second moment. Most importantly, the 'Relief Ruesch' was definitely not exposed to water, because that would clearly be visible; cf. Willers (2021, 80): "Spuren von fließendem Wasser sind auf der Reliefseite der Platte nicht vorhanden".

Willers does not discuss the suggestion, formulated in the sales catalogue of the Collection Ruesch, *Katalog Fischer 1936* (which Willers himself quotes), where the 'Relief Ruesch' has the catalogue number 238. The author suggests: "Nachträgliche Verwendung dieses Reliefs als Brunnenverkleidung" ('secondary use as decoration of a fountain'), which I find (in theory) plausible, although the fact remains that the relief does not show any traces of such a use.

Willers himself, who ... compares the 'Relief Ruesch' with the Cancellaria Reliefs (here Figs. 1; 2; Figs. 1 and 2 drawing), concludes that we ignore for both (*i.e.*, the Cancellaria Reliefs and the 'Relief Ruesch'), to which buildings they may originally have belonged. Willers (2021, 94), therefore, ends his article with an admonition regarding the need to further study 'Domitian's Rome':

**"Es bleibt die Aufgabe, die Begehungen des domitianischen Roms zu intensivieren [my emphasis]"**.

I can only agree and have ... chosen Dietrich Willers's phrase as the first epigraph of this *Study* on Domitian; cf. *supra*, at Chapter I.1.

Contrary to Willers, who does not suggest where the building may have stood, to which the 'Relief Ruesch' originally belonged, nor what its purpose was, when the relief was re-used, I myself have an idea concerning both questions. Since I follow Filippo Coarelli (2009b, 88; *id.* 2012, 283, 286-291, 481-483, 486-491; cf. *supra*, at point 4.) in assuming that the Domitianic arch in front of Domitian's 'Domus Flavia' / *Domus Augustana* on the Palatine was possibly dedicated to *Divus Vespasianus*, I suggest that the Cancellaria Reliefs decorated either the opposite walls in the passageway of this arch, or, because of the content of both Friezes, possibly rather a passageway of the Arch of Domitian, which Coarelli postulates at the "Porta principale" of Domitian's Palace *Domus Augustana* on the Palatine (cf. here Figs. 1 and 2 of the Cancellaria Reliefs, drawing, 'in situ' and Figs. 8.1; 58) ... Cf. also *supra*, at point 4.).

**'Provided my hypothesis is true that the Cancellaria Reliefs decorated one of Domitian's two arches on the Palatine, and considering at the same time Willers's (2021, 79 n. 6, p. 83, n. 18) observation that the**

**Cancellaria Reliefs (here Figs. 1; 2) and the 'Relief Ruesch' (here Fig. 7) show great stylistic similarities, I suggest as a working hypothesis that the 'Relief Ruesch' (the provenance of which is not recorded) may originally also have belonged to the sculpture decoration of Domitian's Palace on the Palatine.**

Only after this Chapter was written, did I realize that Willers (2021, 84) mentions the fact that on the Palatine has been found a fragmentary relief with the representation of a horse (cf. here **Fig. 4.1.2**) that looks very similar like Domitian's horse on the 'Relief Ruesch': "Bloesch hat seinerzeit auf die enge Verwandtschaft des Feldherrnpferdes auf unserem Relief [cf. here **Fig. 7**] mit dem Pferd eines fragmentierten Reliefblocks vom Palatin aufmerksam gemacht [with n. 25]".

In his **note 25**, Willers writes: "Bloesch 1943, 204; [von] Blanckenhagen 1940 [p. 65, I. f)], Taf. 20 Abb. 58 [quoted *verbatim supra*, in Chapter *V.1.i.3.b*); at Section *III.*]"

**Fig. 4.1.2. Fragmentary marble relief with representation of a horse. Found on the Palatine. This is the above-mentioned relief, about which D. Willers (2021, 84 with n. 25) writes: "Bloesch hat seinerzeit auf die enge Verwandtschaft des Feldherrnpferdes auf unserem Relief [*i.e.*, the 'Relief Ruesch'; here Fig 7] mit dem Pferd eines fragmentierten Reliefblocks vom Palatin aufmerksam gemacht" ('Bloesch [1943, 204] at his time has observed the close relationship between Domitian's horse on the 'Relief Ruesch' with the horse on a fragmentary marble block from the Palatine'). From: P.H. von Blanckenhagen (1940, 65, I. f), Taf. 20 Abb. 58).**

My thanks are due to Francesca Deli, Assistant Librarian at the British School at Rome, for scanning also this illustration in von Blanckenhagen's book (1940) for me.

**'As is well known, Domitian had friends, who remained faithful to him after his assassination.**

One such proof of fidelity is Domitian's famous portrait in the Musei Capitolini, Palazzo dei Conservatori (inv. no. MC 1156); for this hypothesis; cf. Häuber (2017, 167).

This portrait of Domitian has been chosen for the cover of the essay volume *God on Earth : Emperor Domitian*, edited by Aurora Raimondi Cominesi, Nathalie de Haan, Eric M. Moormann and Claire Stocks (2021), and appears also on the cover of the exhibition catalogue *Domiziano Imperatore. Odio e amore*, edited by Claudio Parisi Presicce, Massimiliano Munzi and Maria Paola Del Moro (2023)

Elsewhere, I was able to find the findspot of this portrait of Domitian in the Via Rattazzi on the Esquiline; cf. Häuber (1991, 57-58 with n. 251, by identifying this bust with find reports, published in *NSc* 1898, 391, and *BullCom* 26, 1898, 350; cf. p. 351: "Tutti gli oggetti di questa sezione sono conservati nel Magazzino Archeologico all'Orto Botanico; cf. *HELBIG*<sup>4</sup> II (1966) Nr. 1752, "Fragmentierte Büste des Domitian" (H. v. HEINTZE): "Gefunden wahrscheinlich auf dem Esquilin zwischen 1894 und 1904. Erst im Antiquarium auf dem Caelius, dann im Konservatorenpalast, Sala degli Arazzi 3").

Dietrich Willers (2021, Taf. 13,5; cf. Taf. 13,2-4 [= here **Fig. 7**]) has compared a photo of this portrait of Domitian with the head of the Roman *imperator* on the 'Relief Ruesch' in order to prove that the protagonist of this relief is likewise Domitian.

Another example is Domitian's nurse Phyllis, who, thanks to her prudent actions, even secured Domitian a burial in his *Templum Gentis Flaviae*, literally 'together with his beloved Iulia Titi', the daughter of his brother Titus, in the same cinerary urn (!). Phyllis had educated both Domitian and Iulia Titi (Suet., *Dom.* 17; 22); *Diva Iulia Titi* had been first, whom Domitian had buried in the *Templum Gentis Flaviae*. After Domitian's assassination, Phyllis cremated his corpse in her *Villa* on the *Via Latina*; she then secretly carried Domitian's ashes to the *Templum Gentis Flaviae*, where she mixed them with those of Iulia Titi (Suet., *Dom.* 17).

Online at: <[https://penelope.uchicago.edu/Thayer/L/Roman/Texts/Suetonius/12Caesars/Domitian\\*.html#17](https://penelope.uchicago.edu/Thayer/L/Roman/Texts/Suetonius/12Caesars/Domitian*.html#17)> [last visit: 31-XII-2022].

Cf. Filippo Coarelli ("Gens Flavia, Templum", in: *LTUR* II [1995] 368); Coarelli (2009b, 94 with n. 309); Eugenio La Rocca (2009, 228 with n. 45); Häuber (2017, 167; cf. *supra*, at Chapter IV.1.1.h); Barbora Chabrečková (2017, 40); Maria Paola Del Moro (2021, 185 with n. 2; *ead.* 2023, 167 with n. 2); and Eric M. Moormann (2021, 46 with n. 16; *id.* 2023, 59 with n. 17). Dietmar Kienast, Werner Eck and Matthäus Heil (2017, 109) comment on Domitian's death and burial as follows: "18. Sept.[ember] 96 *Tod*: Ermordet (Suet. *Domit.* 17, 3). **Heimliche Beisetzung im templum gentis Flaviae** [my emphasis]".

I, therefore, add something else to my working hypothesis concerning the 'Relief Ruesch' (here **Fig. 7**). For the time being we cannot know, whether the person, who re-used the 'Relief Ruesch', knew that, in its original state, it had represented Domitian. Nor, if so, whether or not this person was hostile to Domitian. Although all of this is so far unknown, the following possibility remains. Perhaps it was another person, faithful to Domitian, who took the 'Relief Ruesch', after Domitian's portrait had been defaced, thus possibly preventing its complete destruction, kept it as a memory of Domitian, and, by means of those holes, put it on display somewhere'.

Wie man an diesem Kapitel *The major results of this book on Domitian* ('*Die wichtigsten Ergebnisse dieses Buches über Domitian*') sieht, bleibt noch viel zu tun, wenn wir Domitian und seinen Bauten in Rom gerecht werden möchten.

**Chapter: The major results of this book on Domitian  
(‘Die wichtigsten Ergebnisse dieses Buches über Domitian’)**

Der hier folgende Text ist eine deutsche Übertragung des englischen Textes, auch die englischen Zitate aus meinen eigenen Publikationen wurden ins Deutsche übertragen. Die Unterteilung von Kapiteln (Chapters) erfolgt in meinem englischen Text nach Sections; den Begriff ‘Section’ habe ich mit ‘Abschnitt’ übersetzt. Die Bezeichnung ‘Fig.’ für ‘Abb.’ wurde dagegen beibehalten.

Im ersten Teil dieser Zusammenfassung ist von den Cancellariareliefs die Rede, die Domitian in Auftrag gegeben hat. Was ihre Interpretation betrifft, folge ich Filippo Magi (1939; 1945) und hoffe die Argumente jener Gelehrten widerlegen zu können, die seinen Hypothesen in jüngerer Zeit widersprochen haben. Ich hoffe außerdem, Magis Thesen mit neu entdeckten Befunden unterstützen zu können, die mich dazu bewogen haben vorzuschlagen, dass diese Reliefs ursprünglich den Durchgang eines von Domitians Bögen auf dem Palatin geziert haben. Gleichfalls neu ist die in diesem Buch verfolgte Idee, die Inhalte, die auf den Cancellariareliefs dargestellt sind, mit jenen zu vergleichen, die auf dem *pyramidion* des *Obeliscus Pamphilius* / dem Domitiansobelisken erscheinen, der Gianlorenzo Berninis Vierströmebrunnen auf der Piazza Navona in Rom bekrönt, sowie mit den Inhalten, die *expressis verbis* in den hieroglyphischen Inschriften dieses Obelisken formuliert sind. Dabei haben wir festgestellt, dass in beiden Monumenten die ‘Legitimation Domitians, als römischer Kaiser zu herrschen’, betont wird. Als nächstes folgt eine kurze Zusammenfassung jener Ergebnisse dieses Buches, die sich auf Domitians Bauprojekte in Rom beziehen. Als Ergebnis dieser Studie hat sich ergeben, dass Domitian (oder besser gesagt, alle drei flavischen Kaiser zusammengenommen) dafür gesorgt hat, ‘dass Rom auch heutzutage im Grunde eine flavische Stadt ist’. Ein dritter, sehr viel umfangreicherer Teil, dieser Zusammenfassung ist Domitians Palast auf dem Palatin gewidmet, seiner *‘Domus Flavia’/ Domus Augustana*. In diesem Zusammenhang werden Funde diskutiert, die Francesco Bianchini innerhalb der *‘Aula Regia’* ausgegraben hat, und die posthum im Jahre 1738 veröffentlicht worden sind. Die ausgewählten Kunstwerke zeigen ‘‘Domitians Anspruch, die *virtus* ‘Unbesiegbarkeit’ zu besitzen‘‘, die ‘grundsätzlich von allen Römischen Kaisern erwartet wurde’, und die ihrerseits ‘Roms Reichtum garantierte’. Die soeben in gnomischen Zeichen zitierten Feststellungen sind Zitate von Gelehrten, deren Publikationen im folgenden Text diskutiert werden.

Am 20. März 2023 haben Franz Xaver Schütz und ich eine frühere Version dieses Kapitels als Vorschau dieser *Studie* über Domitian auf unserem Webserver publiziert:  
Online at: <<https://FORTVNA-research.org/FORTVNA/FP3.html>>.

**Figs. 1 und 2 Zeichnung. F. Magis Zeichnungen von Fries A und B der Cancellariareliefs. Aus: F. Magi (1945, Tav. Agg. D 1 und 2). Die Platten, aus denen die Friese A und B bestehen (A1-A4 und B1-B4), und die Figuren (1-17) auf beiden Friesen sind nummeriert wie in S. Langer and M. Pfanner (2018, 19, Abb. 2).**

Diese beiden Zeichnungen Magis geben seine Rekonstruktion der Cancellariareliefs wieder; vergleiche F. Magi (1945, Tav. I), nach der die Reliefs in den Musei Vaticani, Museo Gregoriano Profano, aufgestellt worden sind. Diese Rekonstruktion der Reliefs erscheint auch auf den Photos hier **Figs. 1; 2**.

**Ich folge hier Magis Rekonstruktion (1945) der Cancellariareliefs; hierbei handelt es sich um die wichtigste Voraussetzung für unsere Visualisierung Figs. 1 und 2 der Cancellariareliefs, Zeichnung, ‘in situ’ (s.u.).**

Mein Dank gilt Giandomenico Spinola und Claudia Valeri von den Vatikanischen Museen, mit denen ich am 24. September 2018 und am 8. März, 9. Mai und 19. September 2019 die Gelegenheit hatte, die Cancellariareliefs vor den Originalen zu untersuchen. Wir haben festgestellt, dass S. Langers und M. Pfanners Annahme einer zusätzlichen Marmorplatte für Fries B (zwischen B1 und B2) auf einer Reihe von Irrtümern beruht (vergleiche *dies.* 2018, 29-31, ihre Taf. 10,1, Abb. 7a; 7b, S. 50, 52-53, 68, 70, 76): Diese betreffen die technischen Besonderheiten der Platten B1 und B2 sowie Mißverständnisse von Magis (1945)

Beschreibung der fünf Vestalischen Jungfrauen auf den Platten B1 und B2. Langer und Pfanner (2018, 29, 73, 76) selbst sehen eine Bestätigung ihrer Hypothese darin, dass dagegen auf Fries B die Darstellung von allen sechs Vestalinnen zu erwarten sei.

Ranuccio Bianchi Bandinelli (1946-48, 259) hat zu Fries B bemerkt, dass immer nur fünf Vestalische Jungfrauen (wie auf Fries B dargestellt) an offiziellen Auftritten teilnehmen konnten, weil die sechste hätte zurückbleiben müssen, um das Feuer der Vesta zu hüten.

Ich habe deshalb den Religionswissenschaftler Jörg Rüpke gefragt, ob das durch antike Quellen belegt sei, und wie viele Vestalinnen üblicherweise bei offiziellen Zeremonien erschienen seien. Jörg Rüpke war so freundlich, meine Fragen zu beantworten und kommt zu dem Schluß: "Kurzum, denkbar ist die Pflicht, dass eine stets Feuerwache hatte". Außerdem hat er mir zugestanden, seine Email als seinen ersten Beitrag in diesem Band abzudrucken.

Vergleiche *The first Contribution by Jörg Rüpke in this volume on the question, how many Vestal Virgins we might expect to appear at public ceremonies, such as the one shown on Frieze B of the Cancellaria Reliefs (cf. here Fig. 2)* (vergleiche *Den ersten Beitrag von Jörg Rüpke in diesem Band zu der Frage, wie viele Vestalische Jungfrauen wir bei öffentlichen Zeremonien erwarten dürfen wie der, die auf Fries B der Cancellariareliefs dargestellt ist (vergleiche hier Fig. 2)*).

**Somit haben mich Giandomenico Spinola, Claudia Valeri und Jörg Rüpke tatkräftig dabei unterstützt, Magis Rekonstruktion der Länge von Fries B der Cancellariareliefs zu verifizieren.**

Siehe oben, im Kapitel *Introductory remarks and acknowledgements* (*Einführende Bemerkungen und Dank*); und im Kapitel *V.1.d. The reconstruction, in my opinion erroneous, of the length of Frieze B by S. Langer and M. Pfanner (2018) and the correct reconstruction of the length of Frieze B by F. Magi (1945), whom I am following here (cf. here Figs. 1; 2; Figs. 1 and 2 drawing; and Figs. 1 and 2 of the Cancellaria Reliefs, drawing, 'in situ')*. *With a discussion of how many Vestal Virgins we might expect to appear at public ceremonies, such as the one shown on this panel, and with The first Contribution by Jörg Rüpke.* (*Kapitel V.1.d. Die meiner Ansicht nach irrtümliche Rekonstruktion der Länge von Fries B seitens S. Langer und M. Pfanner (2018) und die korrekte Rekonstruktion der Länge von Fries B seitens F. Magi (1945), dem ich hier folge (vergleiche hier Figs. 1; 2; Figs. 1 und 2 Zeichnung; und Figs. 1 und 2 der Cancellariareliefs, Zeichnung, 'in situ')*). *Mit Diskussion der Frage, wie viele Vestalische Jungfrauen wir bei öffentlichen Zeremonien erwarten können, wie jener, die auf diesem Fries dargestellt ist, und mit Dem ersten Beitrag von Jörg Rüpke*).

Claudia Valeri und Giandomenico Spinola haben mir auch dabei geholfen, die Frage zu beantworten, ob der Kopf Vespasians auf Fries B (vergleiche hier **Figs. 1 und 2 Zeichnung; Figur 14**) das Ergebnis einer Überarbeitung ist oder nicht. Dass dieser Kopf überarbeitet worden sei, hatte zum ersten Mal Marguerite McCann behauptet (1972, 251 mit Anm. 8; s.o., zu **Anm. 111**, in Kapitel *I.1.*), und später Marianne Bergmann (1981, 24; s.o., zu **Anm. 111, 115, 190**, in Kapitel *I.1.*), deren Hypothese viele Gelehrten gefolgt sind (s.o., in Kapitel *I.1.1.*).

Stephanie Langer und Michael Pfanner (2018, 60 mit Anm. 49-52; s.o., in Kapitel *V.1.h.1.*) stellen fest, dass diese Hypothesen von McCann (1972) und Bergmann (1981) abgelehnt worden sind. Nach Bergmanns Hypothese (1981, 23-24, Taf. 11; 12; 9, S. 25), war der Kaiser auf Fries B ursprünglich Domitian, dessen Kopf angeblich in das noch vorhandene Bildnis Vespasians umgearbeitet worden sei.

Langer und Pfanner haben zu dieser Diskussion neue Beobachtungen beigesteuert, die ihrer Meinung nach beweisen, dass der Kaiser auf Fries B ursprünglich Domitian gewesen ist (vergleiche *dies.* 2018, 57-58, 72-74, Abb. 22-24; Abb. 23: sie illustrieren ihre Beobachtungen mit diesem Photo nach einem Gipsabguss, das den Hals Vespasians zeigt; dabei ist zu beachten, dass alle von ihnen anhand dieser Abbildung angesprochenen Details auf dem Originalrelief ganz anders aussehen; vergleiche ihr Kapitel 2.9.4). Dazu ausführlich; s.o., Kapitel *V.1.h.2.*

Um das Ergebnis mitzuteilen, das Giandomenico Spinola, Claudia Valeri und ich erzielt haben, als wir gemeinsam den Hals Vespasians auf Fries B der Cancellarieliefs studiert haben, zitiere ich im Folgenden eine Textpassage, die für oben, das Kapitel *Introductory remarks and acknowledgements* (Einführende Bemerkungen und Dank) verfasst worden ist:

‘Das andere Detail, dass ich noch einmal am 9. Mai 2019 vor dem Original studieren wollte, war der Hals des Kaisers auf Fries B. Langer und Pfanner (2018; s.o., im Kapitel V.1.h.2.) behaupten, dass Vespasians Kehlkopf eine Falte am Hals des dargestellten Mannes überschneidet, eine angebliche Tatsache, die ihrer Ansicht nach beweist, dass diese Falte zu einem früheren Portrait gehöre, und dass Vespasians Kehlkopf folglich erst zu einem späteren Zeitpunkt skulptiert worden sei. Langer and Pfanner kommen deshalb zu dem Schluss, dass Vespasians kompletter Kopf durch Überarbeitung dieses angeblich früheren Portraits entstanden sein müsse. Ihre Schlussfolgerung basiert allerdings auf einer falschen Beobachtung: vor dem Original ist deutlich zu sehen - mit und ohne Unterstützung einer Lampe - dass diese Falte statt dessen erst eingeritzt worden ist, *nachdem* Vespasians Kehlkopf bereits skulptiert worden war. Was wir auf Fries B sehen, ist demnach der erste und einzige Kehlkopf, der an dieser Figur skulptiert worden ist - eine Tatsache, die zweifellos beweist, dass es sich bei dem vorhandenen Portrait Vespasians um den originalen Kopf des Kaisers auf Fries B handelt (s.o., Kapitel V.1.h.2.).

Damit sind nun auch Magis Annahmen bezüglich des Vespasiansportraits bewiesen, das er für den originalen Kopf des auf Fries B dargestellten Kaisers hielt (vergleiche ders. 1939, wörtlich zitiert oben, in Anm. 112, in Kapitel I.1.; sowie ders. 1945) [Hervorhebung von mir].

**Fig. 1.** Musei Vaticani, Museo Gregoriano Profano ex Lateranense (inv. nos. 13389-13391). Fries A der Cancellarieliefs. *Profectio* Kaiser Domitians 83, 89 oder 92 n. Chr. Das Gesicht Domitians (**Figur 6**) ist nach seiner Ermordung und *damnatio memoriae* in das Kaiser Nervas umgearbeitet worden, das Relief stellt somit nun meiner Meinung nach die (angebliche) *profectio* Kaiser Nervas zu seinem *bellum Suebicum* im Jahre 97 n. Chr. dar. Vergleiche oben, in den Kapiteln I.-VI., besonders **Anm. 232**, im Kapitel I.2.); Kapitel II.3.1.a); und II.3.3.a). Sowie unten, in Band 3-2., in *Appendix IV.d.2.e*); und *Appendix IV.d.2.f*): meiner Meinung nach ist Domitians *Profectio* zu seinem Zweiten Dakischen Krieges im Frühjahr des Jahres 89 n. Chr. dargestellt, der mit einem Sieg endete, den Domitian im November/ Dezember 89 mit seinem (letzten) Triumph gefeiert hat; s.o., in Kapitel II.3.1.a); II.3.2.; V.1.b); V.1.c): zu Nervas Usurpation dieser *Profectio*-Szene Domitians.

**Fig. 2.** Musei Vaticani, Museo Gregoriano Profano ex Lateranense (inv. nos. 13392-13395). Fries B der Cancellarieliefs. *Adventus* Vespasians in Rom in der 1. Hälfte des Oktober 70 n. Chr., seine Krönung durch *Victoria* mit der *corona civica*, weil er den Bürgerkrieg 68-69 n. Chr. beendet hat, und seine Einsetzung als neuer römischer Kaiser. Die Geste, dass Vespasian dem vor ihm stehenden Caesar Domitian seine erhobene rechte Hand auf die linke Schulter legt, bedeutet die Legitimation Domitians als zukünftiger Herrscher (in Wirklichkeit berührt Vespasians Hand die Schulter Domitians gar nicht, aber aus der Entfernung sieht es so aus).

**Figs. 1 und 2** der Cancellarieliefs, Zeichnung ‘*in situ*’. Visualisierung auf der Basis von F. Magis Zeichnungen (1945), hier ‘**Figs. 1 und 2** Zeichnung’.

Ausgehend von Hypothesen, zuerst vorgeschlagen von F. Magi (1939, 205, wörtlich zitiert, s.o., Anm. 112, im Kapitel I.1.), und mitgeteilt von B. Nogara (1939, 8, 106, 115-116, 227; s.o., Anm. 4; 6, im Kapitel I.1.), und von A.M. Colini (1938 [1939], 270); vergleiche H. Kähler (1950, 30-41), J.M.C. Toynbee (1957, 19), J. Henderson (2003, 249), und besonders M. Pentiricci (2009, 61-62; s.o., Anm. 262, 263, 264, in Kapitel I.3.2.), will diese Visualisierung die Cancellarieliefs so zeigen, als seien sie an zwei gegenüberliegenden parallelen Wänden im Durchgang eines Bogens angebracht, den Domitian erbaut hat. Es machte nur Sinn, diese Visualisierung zu versuchen, weil beide Friese mit Sicherheit zusammengehörten, was unter anderem durch die Tatsache bewiesen ist, dass die Friese gleich hoch sind. Da umstritten ist, zu welchem Gebäudetyp sie gehört haben, wollten wir wissen, ob womöglich die Kompositionen beider Friese so angelegt worden sind, dass Beziehungen zwischen Figuren auf beiden erkennbar werden, sobald beide

Friese an gegenüberliegenden Wänden angebracht sind, und somit zusammen betrachtet werden können. Die Voraussetzung einer derartigen Fragestellung war die korrekte Anbringung beider Friese an gegenüberliegenden Wänden im Durchgang eines Bogens. Wir wussten, dass das theoretisch aus zwei Gründen möglich sei: *a)* waren beide Friese auf allen Seiten von identischen, plastisch ausgebildeten Profilen gerahmt; *b)* haben sich diese plastischen Profile teilweise auf der rechten Schmalseite von Fries A und teilweise auf der linken Schmalseite von Fries B erhalten. Wir konnten deshalb (zuerst, im Jahr 2020, die Photographien, hier Figs. 1; 2), und jetzt die Zeichnungen beider Friese, die wir für diese Operation genutzt haben, in der Weise montieren, dass wir diese Schmalseiten der Friese, die sich nun in unserer Rekonstruktion gegenüber stehen, als gemeinsame Basis unserer Rekonstruktion gewählt haben. (In dieser Abbildung unserer Rekonstruktion befinden sich diese beiden Schmalseiten der beiden Friese auf der Seite ganz unten). Für diese Rekonstruktion nutzten wir (zuerst the Photographien von Fries A und B der Vatikanischen Museen, unsere Figs. 1 und 2; beide geben Magis Rekonstruktion von 1945 wieder), und jetzt Magis eigene Zeichnungen (1945) der beiden Friese. In unserer Visualisierung liegen diese (erst die Photos), jetzt diese Zeichnungen 'gleichsam auf dem Rücken', um zeigen zu können, wie antike Betrachter, die durch den Durchgang dieses Bogens gegangen sind, diese Friese sehen konnten. Unsere beiden Visualisierungen zeigen *a)*, dass die Betrachter, die diesen Durchgang passierten, den Eindruck gehabt haben müssen, dass sie sich 'zusammen mit den Prozessionen bewegten', die auf beiden Friesen dargestellt sind; und *b)*, dass es tatsächlich eine derartige Beziehung zwischen den beiden Friesen gibt, nach denen wir Ausschau gehalten hatten. Die entsprechenden Figuren sind Kaiser Domitian (jetzt Nerva) auf Fries A (Figur 6) und der jugendliche Togatus auf Fries B (Figur 12) - wenn sich beide Friese *in situ* befinden, dann stehen sich diese Figuren versetzt gegenüber. Vor unserer Rekonstruktion ist diese Tatsache nicht beobachtet worden. Und da beide Figuren die beiden Prozessionen anführen, die sich auf diesen Friesen, 'zusammen mit den Betrachtern, in dieselbe Richtung bewegen', stellt sich heraus, dass es sich bei diesen Figuren um die Hauptpersonen beider Reliefs handelt. Beide Fakten unterstützen die Annahme, dass die Cancellariareliefs die horizontalen Friese im Durchgang eines von Domitians Bögen gewesen sind. Wenn man gleichzeitig bedenkt, dass Domitian die entsprechende Architektur in Auftrag gegeben hatte, dann unterstützen beide Fakten gleichzeitig die hier vorgeschlagene Hypothese, derzufolge der jugendliche Togatus auf Fries B mit dem jungen Caesar Domitian identifiziert werden kann, der auf Fries B in seiner Eigenschaft als *praetor urbanus* tätig wird.

Ich schlage außerdem versuchsweise vor, dass die Cancellariareliefs den Durchgang des 'Arcus Domitiani' dekoriert haben könnten, der auf dem Palatin, vor Domitians Palast 'Domus Flavia' / Domus Augustana stand, und bezüglich dessen F. Coarelli (2009b, 88; ders. 2012, 283, 286-291, 481-483, 486-491) vorschlägt, dass Domitian diesen Bogen seinem Vater, dem *Divus Vespasianus*, geweiht haben könnte; oder eher einen der drei Durchgänge des Domitiansbogens, den Coarelli an der "Porta principale" ('Haupteingang') von Domitians *Domus Augustana* annimmt. Diesen identifiziert Coarelli mit dem *Pentapylon*, den er sich als Triumphbogen vorstellt (vergleiche für die Lokalisierung beider Bögen, hier Fig. 58).

F.X. Schütz und C. Häuber 2022, Rekonstruktion (s.o., in Kapitel I.3.2.; Kapite IV.1.d); V.1.h.1.); V.1.i.3.); und VI.3.; Addition ('Zusatz'); s.u., in Band 3-2, in *Appendix IV.d.2.f); Appendix IV.d.4.b); und Appendix VI.; Abschnitt VII.*

Fig. 28. Der *Obeliscus Pamphilius*/ der Obelisk Domitians. Aus dem Iseum Campense. Er bekrönt Gianlorenzo Berninis Vierströmebrunnen auf der Piazza Navona in Rom. Aus: C. Häuber (2017, 156, Fig. 5.5.2). Photos: F.X. Schütz (5-IX-2019). Mit freundlicher Genehmigung von F.X. Schütz. Photo: Cesare D'Onofrio (1921-2003). Aus: G. Simonetta, L. Gigli und G. Marchetti [2004] 122, Fig. 8. Die Bildunterschrift lautet: "La fontana dei Quattro fiumi, ripresa zenitale dall'alto della chiesa di Sant'Agnese". Mit freundlicher Genehmigung von L. Gigli. Photo: L. Gigli (Dezember 2003). Mit freundlicher Genehmigung von L. Gigli.

Vergleiche Fig. 101.a. G.B. Cipriani (1823, mit Tav. 1; 2): seine Diskussion und seine Kupferstiche der 12 (ägyptischen) Obelisk in Rom. Die Bildunterschrift seiner Tav. 1 lautet: "Dodici Obelisch Egizj, che si

osservano rialzati ad ornamento della Città di Roma, posti secondo ordine della loro rievazione" ('die 12 ägyptischen Obelisken, die zum Schmuck der Stadt Rom wieder aufgerichtet worden sind, zeitlich nach dem Datum ihrer Wiederaufstellung angeordnet'). Die Bildunterschrift seiner Tav. 2 lautet: "Fusti dei dodici Obelisci dei Egizj, che si osservano rialzati ad ornamento della Città di Roma, posti secondo il grado della loro altezza" ('die Schäfte der 12 ägyptischen Obelisken, die zum Schmuck der Stadt Rom wieder aufgerichtet worden sind, nach ihrer Höhe angeordnet'). Ciprianis Zeichnungen dieser 12 Obelisken sind maßstäblich: der höchste ist der Lateransobelisk. Cipriani hat auch den Obelisk Domitians diskutiert und gezeichnet, den er in seinem Text und auf diesen Tafeln: "Agonale di Piazza Navona" nennt, siehe seinen Tav. 1 und 2 (jeweils der 5. Obelisk von links).

Für eine Diskussion des Buches von Giovanni Battista Cipriani (1823), siehe unten: *Den zweiten Beitrag von Franz Xaver Schütz : Wie schwer war der ägyptische Obelisk, der heute auf der Piazza di S. Giovanni in Laterano in Rom steht?*

In meiner früheren Studie zum Obelisk Domitians (2017), bin ich zu folgendem Ergebnis gelangt:

"Im Zusammenhang meiner Studien zum *Iseum Campense* sind einige neue Argumente aufgetaucht, die, meiner Meinung nach, die alte Auffassung stützen, derzufolge Domitian seinen Obelisk tatsächlich für dieses Heiligtum in Auftrag gegeben hatte, der sich heute auf Gianlorenzo Berninis berühmtem Vierströmebrunnen auf der Piazza Navona befindet [vergleiche hier **Fig. 28**] ... In einer der Inschriften dieses Obelisken, die [auf Ägyptisch verfasst, und] in Hieroglyphen geschrieben sind, formuliert Domitian seine Hoffnung, dass sowohl seine Zeitgenossen, als auch die Nachwelt immer die Leistungen seiner Familie, der flavischen Dynastie, in Erinnerung behalten werden, besonders ihre Wohltaten für das römische Volk. Domitian betont, dass es seiner Familie gelungen sei, den Staat zu konsolidieren, der ernsthaft gelitten habe unter denen 'die zuvor regiert hatten' (das heißt, den Kaisern der Julisch-Claudischen Dynastie)"; vergleiche Häuber (2017, 21; vergleiche S. 158-168, zu Domitians Obelisk und seinen Inschriften. Mein Zitat auf S. 21 stützt sich unter anderem auf Forschungen von K. LEMBKE 1994 und J.-C. GRENIER 2009). Siehe oben, **Anm. 466**, in Kapitel IV.1., für diese Zitate im Detail.

Für das *pyramidion* und die Texte des Obelisken Domitians siehe auch Emanuele M. Ciampini (2004, 156-167; ders. 2005, wieder abgedruckt im Kapitel IV.1.1.d); sowie s.o., das ganze Kapitel IV. *Frieze B of the Cancelleria Reliefs* (cf. here **Fig. 2**) and the *Obeliscus Pamphilius / Domitian's obelisk* (cf. here **Fig. 28**), besonders Kapitel IV.1.1.a) - IV.1.1.h) ('Kapitel IV. Fries B der Cancelleriareliefs (vergleiche hier **Fig. 2**) und der *Obeliscus Pamphilius / Domitians Obelisk* (vergleiche hier **Fig. 28**')); sowie s.u., in Band 3-2, in *Appendix II.a-e) Again on the Egyptianizing marble relief allegedly from Ariccia at the Museo Nazionale Romano, Palazzo Altemps (Fig. 111) - a representation of the Egyptian festival of New Year?* ('Appendix II.a-e) *Nochmals zum ägyptisierenden Marmorrelief, angeblich aus Ariccia, im Museo Nazionale Romano, Palazzo Altemps (Fig. 111) - eine Darstellung des Ägyptischen Neujahrsfestes?* ).

Wie soeben erwähnt, werden in dieser neuen Studie die Inhalte vom Obelisk Domitians (der Reliefs auf seinem *pyramidion* und die seiner hieroglyphischen Inschriften) mit den Inhalten des Frieses B der Cancelleriareliefs verglichen, die gleichfalls von Domitian in Auftrag gegeben worden sind. Meiner Meinung nach vermitteln beide Kunstwerke dieselbe politische Botschaft, und lassen außerdem erkennen, wie Domitian sich selbst gesehen hat.

Diese Studie ist hauptsächlich Domitian gewidmet, und versucht die Frage zu beantworten, warum Domitian diese, wie es scheint, 'verzweifelte' Notwendigkeit empfand, auf eine 'so pharaonische Weise' zu bauen, wie (ähnlich) zuerst von Mario Torelli formuliert worden ist (1987, 575, wörtlich zitiert in diesem Buch in **Anm. 228**, s.o., im Kapitel I.2.). Diese berühmte Eigenschaft Domitians ist von Stephanie Langer and Michael Pfanner (2018, 41 mit Anm. 23) sehr treffend als "Bauwut" bezeichnet worden. Siehe oben, in **Anm. 480**, in Kapitel VI.3.; und wird diskutiert unten, in Band 3-2, im *Appendix IV.d.4.b) Domitian's building project comprising the Campus Martius, the Capitoline Hill and the sella between Arx and Quirinal. With detailed*

*discussion of the Templum Pacis and some remarks on Domitian's Villa, called Albanum ('Domitians Bauprojekt, welches das Marsfeld, den Kapitolsberg und die sella zwischen Arx und Quirinal umfasste. Mit detaillierter Diskussion des Templum Pacis, und einigen Bemerkungen zu Domitians Villa, die Albanum genannt wurde').*

Selbstverständlich ist Domitians Baupolitik bereits von früheren Gelehrten untersucht worden. Persönlich favorisiere ich diesbezüglich die folgenden Beobachtungen:

Eric M. Moormann (2018, 162) erwähnt "three fields of interest in Domitian's building policy" ('drei Themen in Domitians Baupolitik'), die von Jens Gering (2012, 210-211) definiert worden seien: "personal grandeur, family memory and legitimization" ('eigene Größe, Familiengedenken und Legitimation').

Meiner Meinung nach können die Inhalte vom Fries B der Cancellariereiefs auf dieselbe Weise charakterisiert werden. Und wenn wir die Inhalte des Domitiansobelisken studieren, kommen wir, meines Erachtens, zu genau demselben Ergebnis.

Um die letzte Behauptung zu illustrieren, will ich ein Beispiel aus einer der hieroglyphischen Inschriften des Domitiansobelisken nennen, und werde dieses Zitat dann mit dem Inhalt des Frieses B der Cancellariereiefs vergleichen. Meiner Meinung nach geht es in beiden Beispielen um die Legitimierung Domitians als Kaiser, die er von seinem Vater Vespasian (und von seinem Bruder Titus) erhalten hat.

Diese beiden Beispiele weisen jedoch zwei große Unterschiede auf: während Vespasian auf Fries B der Cancellariereiefs noch als Lebender dargestellt ist, wird er in diesem hieroglyphischen Text auf Domitians Obelisk als *Divus Vespasianus* bezeichnet; und, im Unterschied zu Fries B, auf dem Titus gar nicht erscheint (da er zum fraglichen Zeitpunkt in Jerusalem war), erklärt diese hieroglyphische Inschrift, dass Domitian seine Herrschaft (über das Römische Weltreich) auch von seinem älteren Bruder, *Divus Titus*, erhalten habe. Im Fall von Fries B der Cancellariereiefs ist eine Interpretation der dargestellten Szene natürlich abhängig von der Frage, wen die beiden darauf erscheinenden Protagonisten darstellen. Ich persönlich folge Filippo Magi (1939; *ders.* 1945), indem ich diese beiden Figuren (hier **Fig. 2**; **Figs. 1 und 2 Zeichnung: Figuren: 14; 12**) mit Kaiser Vespasian und seinem jüngeren Sohn Domitian identifiziere.

Die Hypothese, derzufolge nicht nur diese hieroglyphische Inschrift auf dem Obelisken Domitians, sondern auch die Ikonographie vom Fries B der Cancellariereiefs beweisen, dass Domitian die an der Entstehung beider Kunstwerke beteiligten Personen angewiesen hatte, seine Legitimation als Kaiser zu thematisieren, ist meines Erachtens das interessanteste Ergebnis meines Buches. Ich habe deshalb für diese Studie folgenden Titel gewählt:

*The Cancellaria Reliefs and Domitian's Obelisk in Rome in context of the legitimization of Domitian's reign. With studies on Domitian's building projects in Rome, his statue of Iuppiter Optimus Maximus Capitolinus, the colossal portrait of Hadrian (now Constantine the Great), and Hadrian's portrait from Hierapydna in Honour of Rose Mary Sheldon.*

*(Die Cancellariereiefs und der Obelisk Domitians in Rom im Kontext der Legitimierung Domitians als Herrscher. Mit Studien zu Domitians Bauprojekten in Rom, seiner Statue des Iuppiter Optimus Maximus Capitolinus, dem kolossalen Portrait Hadrians (jetzt Konstantins des Großen), und Hadrians Portrait aus Hierapydna zu Ehren von Rose Mary Sheldon).*

Für jene, die sich wundern, warum auch Kaiser Hadrian im Titel dieser Studie über Domitian erscheint: Sie werden sehen, dass es mir nur über den Umweg dieser, um Hadrian kreisenden Themen, gelungen ist, wichtige, auf Domitian bezogene Fakten zu finden. Das Studium des kolossalen Hadriansportraits (jetzt Konstantins des Großen, im Konservatorenpalast, hier **Fig. 11**) hatte zum Beispiel die Identifizierung des Statuentyps von Domitians (vierter) Kultstatue des Iuppiter Optimus Maximus Capitolinus zur Folge (hier **Fig. 10**), und die Beschäftigung mit Hadrians Portraitstatue aus Hierapydna (hier **Fig. 29**) führte, *via* Hadrians militärischen Kampagnen, zu Domitians Dakischen Kriegen, und resultierte in meinem Datierungsvorschlag für Domitians Cancellariereiefs. Die letzte zusätzliche Studie in diesem Band 'zu den

Folgen von Domitians Ermordung' (die eine Diskussion von Hadrians Tempelkomplex auf dem Marsfeld enthält), führte zu dem (für mich) überraschenden Ergebnis, dass Domitians nach wie vor negatives Image eine 'Auftragsarbeit' Trajans gewesen ist. Ich wiederhole deshalb im Folgenden einen Text, der für oben, das Kapitel *Introductory remarks and acknowledgements* ('Einführende Bemerkungen und Dank') verfasst worden ist:

'Das Studium von Hadrians militärischen Kampagnen ... erbrachte neue Erkenntnisse bezüglich Domitians Dakischen Kriegen, und hat zur Beantwortung der Frage geführt, zu welcher militärischen Kampagne Domitian (jetzt umgearbeitet in Nerva) auf Fries A der Cancellarieliefs aufbricht (hier **Fig. 1; Figs. 1 und 2 Zeichnung: Figur 6**). Ein anderes Resultat besteht in der Identifizierung der kolossalen Statue des Jupiter in der Eremitage in St. Petersburg (hier **Fig. 10**) als Kopie der kolossalen (Gold-Elfenbein?-) Kultstatue des Jupiter in Domitians (viertem) Tempel des Iuppiter Optimus Maximus Capitolinus. Dieser Statuentyp des Jupiter (hier **Fig. 10**) (und seine Varianten) war in der Antike außerordentlich erfolgreich und wurde auch in Statuettenformat als Kapitolinische Trias, zusammen mit Juno und Minerva, kopiert (hier **Fig. 13**). Die berühmteste Kopie dieses Statuentyps in Statuettenformat ist mit Sicherheit die Statuette des 'Euripides' im Louvre in Paris (hier **Fig. 12**). Wie Hans Rupprecht Goette (forthcoming) zeigen konnte, wurde dieses Werk im Auftrag Francesco Ficoronis geschaffen, indem eine kopflose Kopie des Jupiter aus einer solchen Kapitolinischen Trias in den tragischen Dichter 'verwandelt' worden ist.

Ich sage nicht, dass es unmöglich wäre, diese Daten über Domitians militärische Kampagnen, oder bezüglich seiner Kultstatue des Iuppiter Optimus Maximus Capitolinus auf anderem Wege zu eruieren, Tatsache ist nur, dass ich sie *auf diesem Wege* gefunden habe'.

Vergleiche auch den Titel jener Studie, die ich als letzte diesem Buch über Domitian beigefügt habe; s.u., im Band 3-2: *A Study on the consequences of Domitian's assassination ...*

(*Eine Studie zu den Folgen von Domitians Ermordung: Nerva wird gezwungen, Trajan zu adoptieren, und Trajan kreiert Domitians negatives Image, um seine eigene Herrschaft zu konsolidieren. Mit Hadrians adoption manquée im späten Oktober oder Anfang November 97 n. Chr., seinem 20 Jahre dauernden Weg zur Herrschaft, und seinem Dank dafür, der Errichtung seines Tempelkomplexes auf dem Marsfeld.*

Oder: *Der weitere topographische Kontext des Hadriansbogens an der Via Flaminia, der zu dem (späteren) Hadrianeum führte und zu Hadrians Tempeln der Diva Matidia (und der Diva Sabina?). Mit Diskussionen von Hadrians Reise von Moesia inferior nach Mogontiacum (Mainz), um Trajan zu seiner Adoption durch Nerva zu gratulieren, und von Hadrians Portrait-Typ Delta Omikron ( $\Delta o$ ) (vergleiche hier **Fig. 3**). Mit Dem vierten und fünften Beitrag von Peter Herz, mit Dem Beitrag von Franz Xaver Schütz, mit Dem Beitrag von John Bodel, und mit Dem zweiten Beitrag von Angelo Geißen'.*

### **Beginnen wir mit dem hieroglyphischen Text auf dem Obelisken Domitians, den ich oben erwähnt habe.**

Vergleiche hierzu Emanuele M. Ciampini (2004, 163-164). Im folgenden Zitat habe ich Ciampinis Zeichnung der entsprechenden hieroglyphischen Inschrift weggelassen, und gleichfalls die Transliteration des ägyptischen Textes, ich zitiere ausschließlich seine italienische Übersetzung des Textes:

"Lato verso Corso Rinascimento (est)

Pyramidion - Domiziano di fronte [*corr.*: fronte] a Mut, seguito da un'altra figura

H. 22 Horo [das heißt, Domitian]: Quello per il quale dei e uomini fanno lode;

H. 23 quando riceve la regalità da suo padre **Vespasiano il dio**, [Seite 164]

H. 24 dal fratello maggiore **Tito il dio**, mentre il suo ba si muove verso la volta celeste [die fett geschriebenen Passagen hat der Autor selbst so markiert]".

## Wenden wir uns nun Fries B der Cancellariareliefs zu.

Im Folgenden drucke ich einen Text ab, der für ein anderes Kapitel dieses Buches verfasst worden ist; s.u., in Band 3-2, *‘Eine Studie zu den Folgen von Domitians Ermordung .... Einführung; Abschnitt I. Die Motivation, diese Studie zu verfassen: ... und die darin behandelten Themen, die von den begleitenden Abbildungen und ihren zugehörigen Bildunterschriften erzählt werden’*.

Der folgende Text gehört zu einer dieser Abbildungen, unserer Romkarte hier **Fig. 58**.

**‘3.) Vespasians 500 Kilometer langer Weg auf der Via Appia von Brindisi nach Rom, wo er in der 1. Hälfte des Oktober 70 n. Chr. an der Porta Capena der Servianischen Stadtmauer angekommen ist (hier Fig. 2; Figs. 1 und 2 Zeichnung und Fig. 58).**

Auch Vespasians Heimkehr nach Rom wird in diesem Buch über Domitian diskutiert, weil ich vorschlage, dass Fries B der Cancellariareliefs (vergleiche **Fig. 2; Figs. 1 und 2 Zeichnung; Figur 14**) Vespasian darstellt, der, von Alexandria kommend, nach seiner 500 km langen Reise von Brindisi auf der *Via Appia*, soeben sein Ziel, die Stadt Rom, erreicht hat.

Hier wird er feierlich empfangen von den Repräsentanten der Stadt Rom (von links nach rechts): der Stadtgöttin *Dea Roma*, fünf Vestalischen Jungfrauen, dem *Genius Senatus*, dem amtierenden *praetor urbanus* (das heißt, seinem Sohn, dem Caesar Domitian), und dem *Genius Populi Romani*. Dieses Relief zeigt gleichzeitig, wie Vespasian das erste Mal als Kaiser in der Stadt Rom ankommt, oder, anders gesagt, seinen feierlichen *adventus* in Rom, der, wie wir heute wissen, in der 1. Hälfte des Oktober 70 n. Chr. stattgefunden hat’. - Für dieses Datum; s.o. **Anm. 195**, in Kapitel *I.1.1*. Meine hier soeben vorgetragene Interpretation dieser Szene wird im Folgenden im Detail erläutert.

*Meines Erachtens stellten die Figuren des Kaisers auf diesem Relief und des jugendlichen, vor ihm stehenden Togatus (Fig. 2; Figs. 1 und 2 Zeichnung; Figuren 14; 12), von Anfang an Vespasian und seinen Sohn Domitian dar*

Mit dieser Auffassung folge ich Filippo Magis (1939; *ders.* 1945) Interpretation der beiden wichtigsten Figuren auf Fries B (vergleiche hier **Fig. 2; Figs. 1 und 2 Zeichnung; Figuren 12; 14**), und hoffe, dass ich in meinem Buch Magis Hypothese mit weiteren Fakten stützen kann. Außer Diana E.E. Kleiner (1992, 191, Fig. 158, oben wörtlich zitiert, zu **Anm. 394**, in Kapitel *III*.), Stefan Pfeiffer (2009, 62, oben wörtlich zitiert als Motto von Kapitel *V.1.i.3.*), John Pollini (2017b, 115-118, s.o., **Anm. 72**, in Kapitel *I.1.*), und Barbora Chabrečková (2017, 65-67, Figs. XXIX-XXXII, s.o., **Anm. 73**, in Kapitel *I.1.*), Rose Mary Sheldon (2023, in press; Kapitel 7; Abschnitt: "The Cancellaria Reliefs", mit Anm. 61-69; s.o., **Anm. 74**, in Kapitel *I.1.*), Giandomenico Spinola und Claudia Valeri (beide Vatikanische Museen), siehe oben, *Introductory remarks and acknowledgements* (*‘Einführende Bemerkungen und Dank’*), und unten, in *The Contribution by Giandomenico Spinola on the Cancellaria Reliefs* (*‘Beitrag von Giandomenico Spinola zu den Cancellariareliefs’*; weiter unten zum Teil wörtlich zitiert), die gleichfalls Magi folgen, haben die meisten Gelehrten Magis diesbezügliche Hypothesen abgelehnt, und wir haben in diesem Buch gesehen, dass es einige Mühe gekostet hat, die Argumente dieser Autoren als falsch zu erweisen.

Zwei der Argumente, die immer gegen Magis Interpretation angeführt worden sind, dass Fries B Vespasians *adventus* im Jahre 70 n. Chr. darstellen könne, lauteten, dass sich die entsprechenden Autoren Vespasian bei dieser Gelegenheit nur als Militär gekleidet vorstellen konnten, sowie begleitet von Mitgliedern seiner siegreichen Armee, denn schließlich sei er ja zu diesem Zeitpunkt von seinen Siegen im Großen Jüdischen Krieg zurück gekehrt. Aber genau das ist nicht wahr. Ich wiederhole hier deshalb eine Textpassage, die für oben, das Kapitel *V.1.i.3.*) verfasst worden ist:

*‘... nach Cassius Dio 65,10, legte Vespasian, sobald er 70 n. Chr. in Italien in Brundisium (Brindisi) gelandet war, seine militärische Kleidung ab und legte zivile Kleidung an - das ist zumindest wie Jocelyn M.C. Toynbee (1957, 4-5 mit Anm. 1 auf Seite 5, s.o., zu **Anm. 201**, in Kapitel *I.1.1.*) and Elisabeth Keller (1967, 211,*

s.o., zu **Anm. 415**, in Kapitel *III.*), meiner Meinung nach überzeugend, diese Textstelle interpretiert haben; Cassius Dio teilt uns überdies mit, dass Vespasian von Brindisi aus nach Rom ging. Das bedeutet übrigens, dass Vespasian die *Via Appia* heraufgekommen ist, und dass deshalb die Szene auf Fries B der Cancellarieliefs an der *Porta Capena* in der Servianischen Stadtmauer spielt [vergleiche hier **Fig. 58**] - ohne, dass dieses Stadttor auf dem Relief dargestellt wäre.

Dass Vespasian auf Fries B der Cancellarieliefs in dem dargestellten Moment mit *tunica* und *toga* bekleidet erscheint, ist demnach historisch, das trifft überdies auch für die Behauptung zu, dass er nach Rom im Oktober 70 n. Chr. zurückgekehrt sei, selbst die irritierendste Besonderheit der Szene auf Fries B ist wahr: wir wissen außerdem, dass Vespasian ohne seine Armee nach Rom zurückkehrte (siehe dazu jetzt aber oben, im Kapitel *V.1.i.3.a*)'.

Zu den soeben zitierten Tatsachen kommt eine Beobachtung von Rita Paris (1994b, 81-83) hinzu, welche die Autorin bereits selbst auf den Kaiser bezogen hat, der auf Fries B der Cancellarieliefs erscheint (vergleiche hier **Fig. 2; Figs. 1 und 2 Zeichnung: Figuren 14; 16**). Dieser Kaiser (**Figur 14**) wird von *Victoria* (**Figur 16**) mit der *corona civica* gekrönt, eine Ehre, die nur Augustus und Vespasian zuteil geworden ist, weil beide in der Lage gewesen sind, einen Bürgerkrieg zu beenden. Der Kaiser auf Fries B war mit Sicherheit nicht Augustus (das hat auch noch kein Gelehrter behauptet), da die Art der *toga*, mit der er bekleidet ist, erst unter Domitian modern werden sollte; vergleiche hierzu Hans Rupprecht Goette (1990, 40, 41, Taf. 12, 5), und da Vespasian die *corona civica* auch auf einem Relief des *Templum Gentis Flaviae* trägt (hier **Fig. 33**), muss auch der Kaiser auf Fries B der Cancellarieliefs von Anfang an Vespasian gewesen sein, wie Rita Paris (1994b, 82) zu Recht bemerkt hat.

Ich zitiere im Folgenden die Textpassage aus oben, Kapitel *Introductory remarks and acknowledgements* ('Einführende Bemerkungen und Dank'), die sich auf diese Beobachtung von Rita Paris bezieht:

'Nebenbei bemerkt, hatte Rita Paris (1994b) bereits vor langer Zeit ein Argument angeführt, das zweifelsfrei beweist, dass der Kaiser auf Fries B der Cancellarieliefs von Anfang an Vespasian war. In ihrer Diskussion eines der Marmorreliefs vom *Templum Gentis Flaviae*, das, meines Erachtens, Vespasians *adventus* in Rom im Oktober 70 zeigt [Paris selbst glaubt irrtümlich, die Szene spiele in Benevent; siehe dazu unten], erwähnt Paris, dass Vespasian auf diesem Relief die *corona civica* trage (s.o.; im Kapitel *V.1.i.3.a*) und hier **Fig. 33**). Paris (1994b, 81-83) betont in ihrer Beschreibung dieses Reliefs, dass die Krönung mit dieser spezifischen Krone, *a*) von Plinius (*HN* 16,3) als "l'emblema più fulgido del valore militare", als 'der glänzendste Beweis militärischer Fähigkeiten' angesehen wurde, wobei diese Auszeichnung wesentlich höher zu bewerten gewesen sei, als die Dekoration mit allen anderen Kronen, die für militärische Siege verliehen werden konnten, and *b*), dass Vespasian auf diese Weise geehrt worden sei, weil er, dank seiner siegreichen militärischen Kampagne, es vermocht hatte, den Bürgerkrieg von 68-69 zu beenden. - Genau wie Augustus vor ihm, der gleichfalls die *corona civica* erhielt, weil er ebenfalls einen Bürgerkrieg beendet hatte (s.o.; im Kapitel *V.1.i.3.a*) und hier **Fig. 35**)'.

Hinzu kommt, dass einige Gelehrte die Meinung vertreten, dass Filippo Magi keineswegs als erster festgestellt habe, dass der Kaiser auf Fries B der Cancellarieliefs Vespasian darstellt, indem sie (irrtümlich) behauptet haben, dass diese Tatsache zuerst von 'S. Fuchs 1938' publiziert worden sei, allerdings ohne diese Behauptung mit einem Zitat zu belegen. Diesen Gelehrten war die Tatsache unbekannt, dass Magi bereits in seinem Artikel von 1939 den Kaiser auf Fries B mit Vespasian identifiziert hatte (s.o.; **Anm. 112**, in Kapitel *I.1.*, wo die entsprechende Passage aus F. MAGI 1939, 205, wörtlich zitiert ist).

Ich danke Michaela Fuchs, die diese Publikation für mich gefunden hat: es ist Siegfried Fuchs 1937: aber der Autor erwähnt darin die Cancellarieliefs gar nicht. Kein Wunder, denn die Marmorplatten B3 und B4 von Fries B, mit dem Portrait Vespasians (vergleiche hier **Figs. 1 und 2 Zeichnung: Figur 14**), sollten erst 1938 gefunden werden (!) (s.o., **Anm. 113**, in Kapitel *I.1.*).

Für eine detaillierte Diskussion; s.o., **Anm. 5; 113; 191**, im Kapitel *I.1.*, besonders unter: *The Siegfried-Fuchs-Saga* ('Die Siegfried-Fuchs-Saga'). Die ganze Geschichte erinnert mich an ein berühmtes Buch von Carl Robert, auf das mich vor vielen Jahren mein verstorbener Doktorvater, Andreas Linfert, hingewiesen hatte - der Titel dieses Werkes sollte sprichwörtlich werden:

*Archaeologische Maerchen aus alter und neuer Zeit (1886).*

Bereits Magi wußte (1945; wie alle späteren Gelehrten), dass die Erforschung der Cancellariareliefs noch weiter erschwert worden ist und zwar auf Grund von Entscheidungen, die offensichtlich Domitian getroffen hatte, der die Cancellariareliefs in Auftrag gegeben hat [zumindest bezüglich dieses einen Punktes sind sich fast alle Forscher einig].

Die uns bekannten antiken Schriftquellen beschreiben nämlich zum Beispiel sehr detailliert Vespasians Ankunft in Rom im Oktober 70 n. Chr.; vergleiche Cassius Dio (65,9-10) und Flavius Josephus (*BJ* 7,2; 7,4,1). Aber diese Autoren schildern *a*) keine derartige *adventus* Zeremonie in Rom, noch erwähnen sie *b*) Domitian in diesem Zusammenhang (!). Ganz im Gegenteil, wir wissen nämlich aus diesen Schriftquellen, dass das erste Zusammentreffen von Vater und Sohn [Vespasian und Domitian] (das ja auf Fries B dargestellt zu sein scheint), nach vier Jahren der Trennung, statt dessen bereits ein paar Tage (?) früher, und zwar in Benevent stattgefunden hatte. Deshalb muss sich Domitian in Wirklichkeit unter den Leuten befunden haben, *mit denen gemeinsam* sein Vater Vespasian bei dieser Gelegenheit in Rom angekommen ist. Für eine detaillierte Diskussion; s.o., im Kapitel *V.1.i.3.*).

Im Gegensatz zu mir folgen die meisten anderen Autoren jenen Gelehrten, die (meiner Meinung nach irrtümlich) behauptet haben, dass der Kopf des Kaisers (oder sogar die Köpfe von beiden Figuren [das heisst, von Vespasian und Domitian]) auf Fries B überarbeitet worden seien. Ich habe diese Forschungsmeinungen sehr detailliert diskutiert (s.o., Kapitel *I.1; I.1.1.; V.1.i.3; VI.3.*); meiner Ansicht nach haben diese Gelehrten, auf Grund ihrer Interpretationen, ein großes Durcheinander bewirkt. Mit dem Ergebnis, dass gegenwärtig die meisten Autoren glauben, dass Fries B im (angeblichen) Originalzustand einen anderen Kaiser dargestellt habe (die meisten Forscher glauben: Domitian), hinzu kommt, dass viele Gelehrte glauben, dass der jugendliche Togatus vor dem Kaiser unter keinen Umständen ein Portrait sein könne.

Gegen Magis Identifizierung des jugendlichen Togatus vor dem Kaiser auf Fries B als Domitian (hier **Fig. 2: Figs. 1 und 2 Zeichnung: Figur 12**), sind von diesen Gelehrten drei Argumente angeführt wurden; *a*) da er Senator gewesen sei (vergleiche dazu unten), hätte Domitian mit den *calcei patricii* angetan dargestellt werden müssen, der jugendliche Togatus trägt aber nur die einfachen *calcei*, die für einen *eques* passend waren; *b*) die Gesichtszüge des jugendlichen Togatus seien nicht die eines Portraits; und *c*), falls der jugendliche Togatus tatsächlich ein Portrait Domitians (gewesen) sein sollte, hätte dieses Portrait nach Domitians Ermordung und *damnatio memoriae* zerstört werden müssen.

Um Punkt *a*) zu illustrieren, in dem es um die (angeblich) 'falschen' Schuhe geht, die Domitian auf Fries B trägt, zitiere ich im Folgende eine Passage aus unten, in Band 3-2, in *A Study on the consequences of Domitian's assassination ...; Introduction; Section XI* ('Eine Studie zu den Folgen von Domitians Ermordung ... Einführung; Abschnitt XI'):

'An anderer Stelle in diesem Buch sind die Probleme diskutiert worden, die dadurch entstanden sind, dass einige der 34 Figuren, die auf den Cancellariareliefs erscheinen (vergleiche hier **Figs. 1; 2; Figs. 1 und 2 Zeichnung**), mit dem 'falschen' Schuhwerk bekleidet sind.

**Siehe oben, im Kapitel I.1. The discussion of the Cancellaria Reliefs, or the story of a dilemma: wrong shoes or wrong interpretations? (I.1. Die Diskussion der Cancellariareliefs, oder die Geschichte eines Dilemmas: falsche Schuhe oder falsche Interpretationen?').**

In diesem Fall habe ich ein volles Kalenderjahr gebraucht, um die wissenschaftliche Diskussion zu diesen 'falschen' Schuhen zu analysieren. Nur um zu dem Ergebnis zu gelangen (s.o., Kapitel I.1., zu **Anm. 144**), wie gleichfalls vorgeschlagen von Stephanie Langer und Michael Pfanner (2018, 76-77 mit Anm. 123, wörtlich zitiert, s.o., in Kapitel I.1., zu **Anm. 193**), dass alle diese Probleme mit der Annahme der einfachen Tatsache erklärt werden können, dass die ausführenden Künstler Fehler gemacht haben. Langer und Pfanner (*op.cit.*) diskutieren die Darstellung des *Genius Senatus* auf Fries B der Cancellariareliefs (hier **Fig. 2; Figs. 1 und 2 Zeichnung: Figur 11**), der mit den einfachen *calcei* bekleidet ist (was passend für *equites* wäre), anstatt die *calcei patricii* zu tragen (was passend für Senatoren ist. Vergleiche zu *calcei patricii*, s.o., Kapitel I.1., zu **Anm. 145**).

Langer und Pfanner (2018, 66, Kapitel 2.9.3) schreiben: "**Fehler finden sich oft bei den Schuhen (A: Figuren 2, 3, 7, 8, 12, 15, 16, 17; B: Figuren 8?, 12, 14, 15, 17; s.[iehe] dazu jeweils im Kapitel 2.8 unter "Technisches"): Sei es, dass sie vergessen und nachträglich eingeritzt wurden, oder dass es Verwechslungen mit der anschließenden Figur gab ... [Hervorhebung von mir]**". Für eine Diskussion; s.o., Kapitel V.1.d).

Bei **Figur 12** auf Fries B, die Langer und Pfanner (2018, 66) in diesem Zusammenhang erwähnen, handelt es sich um den jugendlichen Togatus, den ich mit Domitian identifiziere (vergleiche hier **Figs. 1 und 2 Zeichnung**). In ihrer Besprechung dieser Figur; vergleiche Langer und Pfanner (2018, 55-56, Kapitel 2.8: "Figur 12 Junger Mann in Toga"), wo sie erwähnen, dass dieser Togatus die "einfachen *calcei*" trägt, gehen die Autoren leider nicht darauf ein (wie nach ihrem oben zitierten Statement auf S. 66 eigentlich zu erwarten wäre), warum **Figur 12** ihrer Ansicht nach mit den 'falschen' Schuhen bekleidet sei.

***Zu Punkt a) Warum der jugendliche Togatus auf Fries B die einfachen calcei trägt,  
und warum er der agierende praetor urbanus, und deshalb Domitian ist***

Ich folge diesbezüglich Erika Simon und Jocelyn M.C. Toynbee, die beobachtet haben, dass der jugendliche Togatus auf Fries B, den sie mit Domitian identifizieren, keineswegs die 'falschen' Schuhe trägt.

Vergleiche Simon (1960, 134-135; *dies.* 1963, 10; wörtlich zitiert, s.o., in **Anm. 175, 181**, in Kapitel I.1.). Simon erkennt an, dass der Kopf des jugendlichen Togatus sein Portrait sei (sie erklärt auch, warum er dieses Schuhwerk trägt), und identifiziert diese Figur mit Domitian, der in seiner Amtsausübung als *praetor urbanus* dargestellt sei (siehe dazu unten). Nach Simons Meinung konnte Domitian deshalb Vespasian in dieser *adventus* Zeremonie empfangen, weil er zum fraglichen Zeitpunkt der am höchsten rangierende Magistrat war, der in Rom anwesend gewesen sei.

Und ich folge auch Jocelyn M.C. Toynbee (1957, 7-8, wörtlich zitiert, s.o., in **Anm. 176**, in Kapitel I.1.), die annimmt, dass der jugendliche Togatus, den auch sie mit Domitian identifiziert, mit den einfachen *calcei* bekleidet sei, weil er auch *Princeps Iuventutis* war. Um diesen Sachverhalt näher zu erläutern, zitiere ich im Folgenden eine Textpassage aus Kapitel I.1.1.:

'Falls tatsächlich der amtierende Magistrat *praetor urbanus* im jugendlichen Togatus des Frieses B portraitiert ist, wie Erika Simon (1963, 10; s.o., zu **Anm. 181** und in **Anm. 175**, und oben, zu **Anm. 456**, in Kapitel III.) vorschlägt, dann ist das nur möglich, wie Jocelyn M.C. Toynbee (1957, 7-8) schreibt, wenn dieser *praetor urbanus* Domitian im Jahre 70 n. Chr. war. Nur in diesem einen Fall konnte dieser Magistrat, der dem Senat angehörte, trotzdem mit den 'einfachen *calcei*' bekleidet dargestellt werden, die typisch für Mitglieder des Ritterstandes waren. Diese Schuhe waren nämlich auch passend für den *Princeps Iuventutis*, ein Titel, den Domitian zum fraglichen Zeitpunkt ebenfalls führte [mit **Anm. 186**: 'wie vorgeschlagen von J.M.C. TOYNBEE 1957, 7-8 (wörtlich zitiert in **Anm. 176)**']'.

Domitian hatte seit dem 1. Januar 70 n. Chr. die Magistratur *praetor urbanus consulari potestate* inne. Wir wissen auch, dass Domitian bereits am 21. Dezember 69 n. Chr. den Titel *Princeps iuventutis* erhalten hatte (für beides; s.o., zu **Anm. 189**, in Kapitel I.1.). Vergleiche **Jocelyn M.C. Toynbee** (1957, 8 mit Anm. 11, wörtlich zitiert, s.o., zu **Anm. 205**, im Kapitel I.1.1.), **die vorschlägt, dass der jugendliche Togatus auf Fries B der Cancellariareliefs den jungen Domitian in seiner Eigenschaft als Princeps iuventutis darstelle, "a title that marked him out from other senators as heir presumptive to the Empire [ein Titel, der ihn von den anderen Senatoren hervorhob, als mutmaßlicher Thronfolger'; Hervorhebung von mir]**".

Zu Simons (1960, 134-135; dies. 1963, 10) Beobachtung möchte ich hinzufügen, dass es nur wenigen römischen Magistraten erlaubt war, einen neu gewählten Kaiser in einer *adventus* Zeremonie zu empfangen, darunter dem *praetor urbanus*, was bedeutet, dass das dargestellte Alter des jugendlichen Togatus auf Fries B von entscheidender Bedeutung für die Identifizierung dieses Mannes ist. Die anderen Magistrate, die einen Kaiser in einer *adventus* Zeremonie empfangen durften, waren der *praefectus urbi* und die *consules*. Der Mann, der die Magistratur *praefectus urbi* bekleidete, "was always a senator ... usually a senior ex-consul" ('war immer ein Senator ... üblicherweise ein älterer ehemaliger Konsul'), wie Theodore John Cadoux und R.S.O. Tomlin (1996, 1239) festgestellt haben (s.o., zu **Anm. 183**, in Kapitel *I.1.*), der deshalb definitiv sehr viel älter war als der jugendliche Togatus. Dasselbe galt während der Republik auch für die *consules*, aber nicht für Domitian! Für eine detaillierte Diskussion dieser Thematik; s.o., Kapitel *V.1.h.1.*). Ich zitiere hier deshalb in deutscher Übersetzung eine Textpassage aus diesem Kapitel:

'Die soeben erwähnten Bestimmungen bezüglich des Mindestalters für alle Magistraturen in republikanischer Zeit, die unter anderem die *consules* betrafen, "were often disregarded as imperial relatives and protégés were signalled by the bestowal upon them of the consulship"; vergleiche Peter Sidney Derow (1996, 384) ... Mit seiner oben zitierten Bemerkung, dass die traditionelle Bestimmung bezüglich des Mindestalters für das Konsulat in der Kaiserzeit mißachtet wurde, hat Derow mit Sicherheit Recht, wenn man bedenkt, in welchem Alter Titus zum ersten Mal Konsul wurde (mit 30?) und Domitian (mit 19) ... sein [das heißt: Vespasians] Sohn Domitian (geboren am 24. Oktober 51 n. Chr.) wurde zum ersten Mal "cos. suff." im März-Juni 71 n. Chr. (das heißt, im Alter von 19 Jahren); vergleiche Kienast, Eck und Heil (2017, 109, 110)'.

**Zu den Punkten b) und c). Die Kontroverse, ob der jugendliche Togatus auf Fries B ein Portrait ist oder nicht, der Beweis, dass es Domitian ist, und der Grund, warum dieses Portrait nicht zerstört wurde**

Ich selbst folge in diesem Buch jenen Gelehrten, die den jugendlichen Togatus auf Fries B mit Domitian identifizieren, aber ich habe auch sehr ausführlich die Argumente jener Forscher analysiert, die diese Tatsache abstreiten (s.o., Kapitel *I.1.*; *I.1.1.*; *V.1.i.3.*; *VI.3.*). Ich sehe keine Möglichkeit, die Gelehrten des 'anderen Lagers' von meiner eigenen diesbezüglichen Meinung zu überzeugen, zum Beispiel durch Anwendung der üblichen Methode, die Forscher 'beider Lager' anwenden: nämlich indem ich selbst die Gesichtszüge des jugendlichen Togatus beschreibe. Ich habe deshalb eine andere Richtung bei meinen diesbezüglichen Forschungen eingeschlagen, und zwar, indem ich mich auf Kontexte konzentriert habe; es gibt zwei Kontexte, die in diesem Zusammenhang von Bedeutung sind. Der eine Kontext ist die Topographie des Ortes in Rom, wo die auf Fries B dargestellte Szene stattfindet. Wir wissen, dass Vespasian, von Brindisi kommend, in dem Moment, der auf Fries B zu sehen ist, soeben in Rom ankommt, und zwar auf der *Via Appia*. Der Ort, an dem sich Vespasian und Domitian auf Fries B treffen, muss daher, auf Grund verschiedener Gesetze und religiöser Vorschriften, die *Porta Capena* in der Servianischen Stadtmauer sein. Die damit zusammenhängenden Probleme für beide, Vater und Sohn, werden weiter unten erklärt.

**Dass zu dieser Zeit das Pomerium im Bereich der Porta Capena noch dem Verlauf der Servianischen Stadtmauer entsprach, lässt sich unmissverständlich der Lokalisierung von zwei Gebäuden unmittelbar außerhalb der Porta Capena ablesen.**

Gemeint sind das *Mutatorium Caesaris* an der *Via Appia* in der augusteischen *Regio I* und das *Senaculum*, die sich beide, auf Grund ihrer Funktionen, außerhalb des *Pomeriums* befinden mussten. Das *Mutatorium Caesaris* war das Gebäude, "where emperors changed from military to civilian garb on returning from campaign [in the East]" ('wo die Kaiser ihre militärische Kleidung ab-, und ihre zivile Kleidung anlegten, wenn sie von ihren militärischen Kampagnen [aus dem Osten] zurückkehrten'); vergleiche Häuber (2014a, 274). Der Grund hierfür war, dass sie nur in ziviler Kleidung die Stadt Rom betreten durften. Und im Gebäude namens *Senaculum* (von denen es in Rom drei Stück gab) trafen sich Vertreter des Senats mit Personen, die (aus den verschiedensten Gründen) das *Pomerium*, die heilige Grenze der Stadt Rom, nicht überschreiten, das heißt, die Stadt nicht betreten durften. Laura Asor Rosa (2001) ist es gelungen, das *Mutatorium Caesaris* außerhalb der *Porta Capena* genau zu lokalisieren, weshalb wir es in unsere Karten eintragen konnten.

Vergleiche F. Coarelli ("Murus Servii Tullii"; Mura Republicanae: Porta Capena", in: *LTUR* III [1996] 325); Giuseppina Pisani Sartorio ("Mutatorium Caesaris", in: *LTUR* III [1996] 335); Coarelli ("Senaculum", in: *LTUR* IV [1999] 264-265; Laura Asor Rosa (2001), zusammengefasst in Häuber (2014a, 274-275).

Für Vespasians Heimkehr nach Rom, und für das *Pomerium* und seine Funktionen, die Vespasian in der hier geschilderten Situation beachten musste; s.o., Kapitel *Preamble*; Section III.; point 2.) ('Abschnitt III., zu Punkt 2. '); und zu **Anm. 199**, in Kapitel *I.1.1*. Vergleiche unsere Karten hier **Figs. 58; 71**, Beschriftungen: Servian city Wall; PORTA CAPENA; VIA APPIA; REGIO I; site of MUTATORIUM CAESARIS.

Kehren wir nun wieder zurück zum Fries B der Cancellarieliefs.

Der andere Kontext ist der jugendliche Togatus, gesehen in Relation zu den Figuren, die auf Fries A dargestellt sind. Um das zu untersuchen, haben Franz Xaver Schütz und ich folgende Visualisierung erstellt: **Figs. 1 und 2 der Cancellarieliefs, Zeichnung, 'in situ'**. **Visualisierung auf der Basis von F. Magis Zeichnungen (1945), hier 'Figs. 1 und 2 Zeichnung'**. Siehe oben, die Bildunterschriften zu diesen Abbildungen.

Wir haben uns zu dieser Visualisierung entschlossen, weil wir uns gefragt haben, ob die Annahme, dass die Cancellarieliefs die gegenüberliegenden Wände im Durchgang eines Bogens dekoriert hatten (die von mehreren Gelehrten vorgeschlagen worden ist), uns dabei helfen könnten, mehr über diese Reliefs zu erfahren.

Erst nachdem wir im Jahre 2020 unsere erste Visualisierung der Cancellarieliefs 'in situ' mit den Photos hier **Figs. 1; 2** angefertigt hatten, konnte ich den ähnlichen Versuch von John Henderson (2003, 249, Figs. 48; 49) studieren, den Massimo Pentiricci (2009, 61 mit Anm. 427) erwähnt hat. Für eine Diskussion; s.o. Kapitel *I.3.2.*, mit **Anm. 263**. Henderson (2003, 249, Figs. 48; 49) benutzte für seine Visualisierung, die Zeichnungen von Filippo Magi (1945 = hier **Figs. 1 und 2 Zeichnung**), aber er stellte dem Fries A den Fries B "reversed right/left", das heißt : eine seitenverkehrte Darstellung von Fries B gegenüber. Auch Henderson hat auf diese Weise Beziehungen der Figuren auf den Friesen A und B untereinander gefunden. Da ein antiker Betrachter den Fries B jedoch unter keinen Umständen jemals hätte seitenverkehrt sehen können, sind wir bei unserer eigenen Methode geblieben, diese Visualisierung zu versuchen. Jetzt, im Jahre 2022, gleichfalls auf der Basis von Magis Zeichnungen.

Völlig unerwartet haben wir auf diese Weise (zuerst 2020, mit den Photos hier **Figs. 1; 2**) den Kontext des jugendlichen Togatus innerhalb dieses Friespaares gefunden. Wenn sich diese Reliefs *in situ* befanden (vergleiche hier **Figs. 1 und 2, Cancellaria Reliefs, 'in situ'**), dann stand der jugendliche Togatus auf Fries B (**Figur 12**) versetzt gegenüber der Figur Domitians/ Nervas auf Fries A (**Figur 6**). Beide Männer führen die Prozessionen an, die auf beiden Friesen dargestellt sind, und sind deshalb ihre Hauptfiguren. Wenn man gleichzeitig bedenkt, dass Domitian die Cancellarieliefs in Auftrag gegeben hat, dann ist es konsequent anzunehmen, dass der jugendliche Togatus, der die Prozession der Repräsentanten der Stadt Rom zu dem Treffen mit dem heimkommenden neuen Kaiser Vespasian in einer *adventus* Zeremonie anführt, der amtierende *praetor urbanus* und Caesar Domitian sein muss; zumal der jugendliche Togatus auch das richtige Alter hat: Domitian war in der ersten Hälfte des Oktober 70 n. Chr. 18 Jahre alt. Um diesen Punkt weiter zu erläutern, zitiere ich im Folgenden eine Textpassage aus oben, Kapitel *V.1.i.3.*):

``Wenn das der Fall ist, dann ist Domitian [das heißt, der jugendliche Togatus] auf Fries B somit nur erkennbar auf Grund einer Kombination seiner Handlung - er führt die empfangende Partei in einer *adventus* Zeremonie an - mit dem spezifischen topographischen Kontext, wo diese Aktion stattfindet, dessen Bedeutung wir soeben analysiert haben [das heißt, im Kapitel *V.1.i.3.*; siehe dazu unten].

Obwohl dennoch das Faktum bestehen bleibt, dass der Kopf des jugendlichen Togatus, **Figur 12** auf Fries B (hier **Figs. 1 und 2 Zeichnung**), nicht zerstört worden ist, weshalb einige Gelehrte behauptet haben, dass

deshalb dieser Kopf des jugendliche Togatus auf keinen Fall als Portrait Domitians angesehen werden könne, da ein derartiges Portrait nach der *damnatio memoriae* des Kaisers selbstverständlich hätte zerstört werden müssen.

Während ich selbst ein Szenario entwickelt habe, um dieses Faktum zu erklären [das heißt, warum der Kopf des jugendlichen Togatus nicht zerstört worden ist] (s.o., in Kapitel II.3.1.a) [worauf ich unten zurückkommen werde], mit Verweis auf Kapitel II.3.2.), bietet John Henderson (2003) eine andere Lösungsmöglichkeit des Problems, die meinem Vorschlag nicht widerspricht, da beide Hypothesen als sich gegenseitig ergänzend betrachtet werden könnten.

Henderson (2003, 246) schreibt:

"On Relief 'B', we recognise the features of dear old Vespasian in the front-rank figure to right who is being crowned by a Victory launch. And we wonder if (we can ever decide if) the young man he is paired with has an individualised, or blankly idealising, visage [with n. 54]: a youthful Domitian, or some worthy public servant? A Domitian, some agree (never, in any event, a square-jaw Titus) - a princeling Domitian re-imag(in)ed in a two decades retrospect from the meat of his reign, and hence a Domitian unlike his former self? So Magi reckoned, and 'A' is thus pinpointed as the start or finale of some (major? enough to call for massive sculpture ...) campaign under Domitian's auspices, while 'B' must B [*corr.*: be] a contemporaneous resuscitation of an occasion way back in Vespasian's era - bringing together father and (second) son. If Nerva displaced the head on Domitian's neck in 'A', **perhaps the dead and damned Domitian escaped defacement in 'B' precisely because he looks (so) little like Domitian?** [Hervorhebung von mir]".

In seiner **Anmerkung 54**, schreibt Henderson: "His [das heißt, von **Figur 12**, des jugendlichen Togatus] eyes bigger and deeper than the lictors' [das heißt, von **Figur 1** and **10** auf Fries B], his face more individualised than theirs, at least (Simon [1960] 134; Bonanno [1976] 56)". - Hierbei ist zu beachten, dass Anthony Bonanno (1976, 56-57) mehr als nur das einzige, von Henderson zitierte, Argument anführt, das ihn dazu bewogen hat, den Kopf des jugendlichen Togatus als ein Portrait Domitians anzusehen".

**Um diesen Punkt abzuschließen: Ich selbst frage in diesem Buch, ob Fries B, als er sich noch *in situ* an dem domitianischen Gebäude befand, zu dem er gehörte, überhaupt zugänglich für Personen gewesen ist, die ihn hätten beschädigen können (s.o., Kapitel II.3.2.); während John Henderson (2003, 246), der davon ausgeht, dass Fries B zugänglich war, fragt, ob der jugendliche Togatus möglicherweise als Domitian gar nicht erkennbar gewesen ist, weshalb er deshalb nicht beschädigt worden sei.**

#### *Warum der Kopf des jugendlichen Togatus/ Domitian auf Fries B nicht beschädigt worden ist*

Den meisten Gelehrten, die bislang die Cancellariareliefs diskutiert haben, war die Tatsache unbekannt, dass Nerva (theoretisch) einen Grund hatte, warum er Domitians Bogen usurpiert hat (vorausgesetzt, diese Hypothese ist wahr), für den die Cancellariareliefs geschaffen worden waren: sein Sieg im *bellum Suebicum*. Für den gesamten, sehr komplexen, Vorgang; s.o., Kapitel II.3.1.a; II.3.2; II.3.3.a); V.1.c; V.1.i.3.).

Der Statthalter von Pannonien, nicht Nerva, hatte diese siegreiche militärische Kampagne geleitet, aber weil Nerva der regierende Kaiser war, wurde dieser Sieg ihm zugeschrieben. Der Statthalter von Pannonien sandte deshalb Nerva, als Zeichen seines Sieges, einen Lorbeerkranz nach Rom, den Nerva im späten Oktober oder Anfang November 97 n. Chr. in einer feierlichen Zeremonie dem Iuppiter Optimus Maximus Capitolinus geweiht hat; im Laufe derselben feierlichen Zeremonie auf dem Kapitol hat Nerva dann Trajan adoptiert, "whom he had previously appointed governor of Upper Germany, as his son, co-emperor, and successor" (vergleiche J.B. CAMPBELL 1996, 1038-1039; s.o., **Anm. 322**, in Kapitel II.1.e)). Trajan befand sich zu diesem Zeitpunkt in Mogontiacum/ Mainz.

Vergleiche hierzu oben, Kapitel II.3.2; und II.3.3.a), sowie unten, *Den vierten Beitrag von Peter Herz* in diesem Band ("Wann wurde Trajan von Nerva adoptiert?"). Vergleiche auch unten, in Band 3-2, in *A Study*

*on the consequences of Domitian's assassination: Nerva is forced to adopt Trajan and Trajan creates Domitian's negative image to consolidate his own reign ... ('Eine Studie zu den Folgen von Domitians Ermordung: Nerva wird gezwungen, Trajan zu adoptieren, und Trajan kreiert Domitians negatives Image, um seine eigene Herrschaft zu konsolidieren ...').*

**Als Konsequenz dieser beiden Fakten (Nervas Sieg im *bellum Suebicum* und seiner Adoption Trajans) hat der Senat im November 97 n. Chr. sowohl Nerva, als auch Trajan, für ihren Sieg im *bellum Suebicum*, den Titel *Germanicus* verliehen; diesen Titel hat Nerva seiner offiziellen Titulatur hinzugefügt, und auch Trajan hat ihn akzeptiert.**

Meiner Meinung nach erlaubt diese Abfolge von Ereignissen die Annahme, dass Nerva, sobald er die Nachricht von seinem Sieg im *bellum Suebicum* erfuhr, den Auftrag erteilt hat, das Portrait Domitians auf Fries A der Cancellariareliefs in sein eigenes Portrait umzuarbeiten. Wie deutlich erkennbar ist (vergleiche hier **Fig. 1**), ist diese Operation niemals abgeschlossen worden. Das wiederum erlaubt den weiteren Schluss, dass Nerva irgendwann die Unterbrechung dieser Arbeiten angeordnet haben muss, möglicherweise an dem Tag, an dem er Trajan adoptiert hat. Ich schlage des Weiteren vor, dass Nerva schließlich die Zerstörung des Monumentes angeordnet hat, zu dem die Cancellariareliefs gehörten. Als spätesten Zeitpunkt hierfür schlage ich vor, dass dies erfolgt sein wird, nachdem der Senat, im November 97 n. Chr., ihm (Nerva) und Trajan den Titel *Germanicus* zugestanden hatte - für ihren (angeblichen) Sieg im *bellum Suebicum*, an dem weder Nerva, noch Trajan teilgenommen hatten (!).

Um dieses Thema weiter zu verdeutlichen, wiederhole ich im Folgenden einen Text, der für oben, Kapitel *II.3.1.a) Nerva's victory in the bellum Suebicum October AD 97* ('Kapitel *II.3.1.a) Nervas Sieg im bellum Suebicum im Oktober 97 n. Chr.*') geschrieben worden ist:

'Falls Nerva, als er den Auftrag erteilt hat, das Gesicht Domitians auf Fries A in ein Portrait seiner selbst umzuarbeiten (vergleiche hier **Fig. 1**; **Figs. 1 und 2 Zeichnung: Figur 6**), tatsächlich den Wunsch gehabt haben sollte, auf seinen Sieg über die *Suebi* in Pannonien im Jahre 97 n. Chr. zu verweisen, dann war diese Idee womöglich gar nicht so extravagant, wie wir vielleicht auf den ersten Blick meinen könnten. Denn, vorausgesetzt Domitian hätte tatsächlich Fries A in Auftrag gegeben, um, wie eine Forscherin vorgeschlagen hat [mit **Anm. 346**; s.o., in Kapitel *II.3.1.a)*], an seinen eigenen Sieg im Sarmatischen Krieg zu erinnern, den der Kaiser persönlich in den Jahren 92-93 n. Chr. in Pannonien gegen die Sarmatischen Iazygen, und ebenfalls gegen die *Suebi* [mit **Anm. 345**] erfochten hatte, dann würde Nervas Idee sehr viel verständlicher werden (s.o., Kapitel *II.3.2.)*'.

Ich persönlich schlage dagegen vor, dass Fries A der Cancellariareliefs Domitians *profectio* zu seinem (zweiten) Dakischen Krieg im Frühjahr 89 n. Chr. darstellt (s.u., im Band 3-2, in *Appendix IV.d.2.e)*; und *Appendix IV.d.2.f)*. Weiter unten in diesem Kapitel schlage ich vor, dass die Cancellariareliefs den Domitiansbogen dekoriert haben könnten, den Filippo Coarelli (2009b; 2012) an der "Porta principale" (dem 'Haupteingang') von Domitians Palast auf dem Palatin annimmt. Falls das wahr sein sollte, und wenn wir gleichzeitig berücksichtigen, dass Kaiser Nerva gleichfalls in Domitians *Domus Augustana* residiert hat, dann wäre es mehr als verständlich, dass er mit einem *eigenen* Portrait auf Fries A erscheinen wollte (vergleiche hier **Fig. 1**, oder, wenn möglich, auf beiden Friesen ?), die ja - nach dieser Theorie - immerhin den Bogen am Eingang *seines* Palastes zierten. - Vergleiche für die Tatsache, dass Nerva in Domitians Palast auf dem Palatin gelebt hat: Friderike Senkbeil (2022, 242, mit Anm. 1262).

Vergleiche hier **Figs. 8.1; 58**, Beschriftungen: PALATINE; DOMUS AUGUSTANA; "Porta principale"; Arch of Domitian ? / Cancellaria Reliefs ?

Im Unterschied zu allen früheren Gelehrten, schlägt Massimo Pentiricci (2009) Folgendes vor. Die meisten Platten der Cancellariareliefs (vergleiche hier **Figs. 1 und 2 Zeichnung**) stammen aus dem von mir so genannten 'Second sculptor's workshop' (der 'zweiten Bildhauerwerkstatt'), die Filippo Magi (1939; 1945)

unter dem Cancellariapalast, neben dem Grab des Konsuls Aulus Hirtius, ausgegraben hat. Zusammen mit den Cancellariareliefs hat Magi dort Architekturfragmente angetroffen, die zu einem Bogen gehören. Pentiricci ist der Auffassung, dass all das ursprünglich aus demselben Kontext stammt, weshalb dieses domitianische Gebäude, zusammen mit den Cancellariareliefs, abgerissen worden sein müsse (vergleiche M. PENTIRICCI 2009, 61 mit Anm. 428-431; S. 62 mit Anm. 440-442, S. 162 mit Anm. 97, S. 204: "§ 3. La ristrutturazione urbanistica in età flavia (Periodo 3)"; vergleiche S. 204-205: "L'officina marmoraria presso il sepolcro di Irzio"); s.o., Kapitel I.3.2.), **Anm. 261; 297**; und zu **Anm. 334**, in Kapitel II.3.1.a).

Zu dieser 'zweiten Bildhauerwerkstatt'; s.o., Kapitel I.3.1.); V.1.a.1.).

Stephanie Langer und Michael Pfanner (2018, 82, 84), die Massimo Pentiricci (2009) in diesem Zusammenhang nicht zitieren, sind ebenfalls der Ansicht, dass das Gebäude, zu dem sie gehörten, zusammen mit den Cancellariareliefs abgerissen worden sei. Des Weiteren haben sie bereits vorgeschlagen (wegen anderer Gründe als ich), dass es Nerva gewesen sein könnte, der die Zerstörung des Gebäudes mit den Cancellariareliefs in Auftrag gab; s.o., Kapitel V.1.a); V.1.b); V.1.i.1.).

Meiner Ansicht nach hat Nerva das Gebäude mit den Cancellariareliefs zerstören lassen, weil diese Reliefs nach dem oben erwähnten Senatsbeschluss natürlich auf Fries A *Nerva und Trajan zusammen, in ihrer gemeinsamen profectio* Zeremonie für das *bellum Suebicum* hätten darstellen müssen. Bekanntlich sind aber die Marmorplatten der Cancellariareliefs viel zu dünn, als dass eine größere Veränderung möglich gewesen wäre, zum Beispiel die zusätzliche Reliefdarstellung eines zweiten Kaisers, neben dem Domitian/ Nerva auf Fries A, zum Beispiel zwischen Minerva und Domitian/ Nerva (hier **Fig. 1; Figs. und 2** **Zeichnung: Figur 5 und 6**); vergleiche hierzu oben, Kapitel II.3.2.

Bei dem Versuch herauszufinden, was tatsächlich nach Domitians Ermordung mit den Cancellariareliefs geschehen ist, müssen wir berücksichtigen, dass das Gebäude selbst, nicht nur die Reliefs (siehe dazu unten), womöglich noch gar nicht fertiggestellt war. An diesem Gebäude sind die Marmorplatten der Cancellariareliefs befestigt, und *in situ* skulptiert worden (auch die zweite Phase der Überarbeitung dieser Reliefs; siehe dazu unten, und oben, in den Kapiteln II.1.d; II.4.). Um diesen Punkt weiter zu erläutern, folgt hier eine weitere Textpassage aus oben, Kapitel II.3.1.a):

#### *'Nervas Sieg im bellum Suebicum im Oktober 97 n. Chr. ...*

'Pfanner (1981, 516-517 mit Anm. 13-16, "Das Schicksal der Reliefs", wörtlich zitiert oben, in **Anm. 318**, in Kapitel II.1.d)) hat bewiesen, dass Domitians Gesicht auf Fries A der Cancellariareliefs [hier **Fig. 1; Figs. und 2** **Zeichnung: Figur 6**] in ein Portrait Nervas umgearbeitet worden ist, als sich dieser Fries noch *in situ* an seinem domitianischen Gebäude befunden hat. Domitian wurde am 18. September 96 n. Chr. ermordet. Wie wir bereits erfahren haben (s.o., im Kapitel II.3.2.), weihte Nerva Ende Oktober oder Anfang November 97 n. Chr. jenen Lorbeerkranz dem Iuppiter Optimus Maximus Capitolinus auf dem Kapitol, der ihm, als Zeichen seines Sieges über die *Suebi*, aus Pannonien geschickt worden war - jenes Sieges, für den Nerva, zusammen mit Trajan, den Titel *Germanicus* verliehen bekommen sollte. Wenn wir diese Fakten kombinieren, scheint es vernünftig anzunehmen, dass dieser Bogen Domitians, zum Zeitpunkt von Nervas Sieg im Oktober 97, Domitians Ermordung bereits um mehr als 13 Monate 'überlebt' hatte. Falls das der Fall gewesen ist, dann können wir weiter mutmaßen, dass dieser Bogen wieder zur Baustelle geworden ist - und zwar als Folge von Nervas Entscheidung, dieses Bauwerk in eines umzuwandeln, das seinen eigenen Sieg verherrlichen sollte.

Vielleicht können wir diesen Gedanken sogar noch weiter 'spinnen'. Wenn wir bedenken, dass die Cancellariareliefs noch nicht fertiggestellt waren, als Domitian starb (ihnen fehlt an vielen Stellen das letzte *finish*), dann erlaubt diese Beobachtung vielleicht die Schlussfolgerung, dass es sich bei diesem Ort seit Domitians Tod um eine verlassene Baustelle gehandelt hat'.

Auch Giandomenico Spinola schreibt, s.u., im *Beitrag von Giandomenico Spinola über die Cancellariareliefs*, dass seiner Meinung nach das Gebäude, zu dem die Cancellariareliefs gehört haben, zu Lebzeiten Domitians noch gar nicht fertiggestellt worden war.

Vergleiche für die Tatsache, dass viele Teile der Cancellariareliefs noch nicht ihr *final finish* erhalten hatten, außerdem, s.o., **Anm. 135-137**, in Kapitel *I.1.*; Kapitel *II.1.b*); **Anm. 340** in Kapitel *II.3.1.a*); und Kapitel *V.1.i.1.*).

Da ich das, was oben gesagt wurde, für möglich halte, schlage ich in diesem Buch vor, dass das Portrait Domitians/ des jugendlichen Togatus auf Fries B (hier **Fig. 2; Figs. 1 und 2 Zeichnung: Figur 12**), einfach deshalb überlebt hat, weil es der Öffentlichkeit gar nicht zugänglich war bis zu dem Zeitpunkt, als das gesamte Gebäude, zusammen mit den Cancellariareliefs, zerstört wurde. - Was meiner Meinung Nerva in Auftrag gegeben hat; s.o., Kapitel *II.3.2*.

Falls all das wahr sein sollte, dann befinden wir uns heute nur deshalb in der privilegierten Lage, diese Friese überhaupt studieren zu können, dank der oben vermuteten Entscheidungen Nervas im Jahre 97 n. Chr., und den glücklichen Umständen, dass die Cancellariareliefs in den 1930er Jahren wiedergefunden wurden, heute noch vorhanden sind, sowie, dass Filippo Magi (1939; 1945) sie so vorbildlich publiziert hat.

***Wenden wir uns nun dem `topographischen Kontext` zu, welcher der Darstellung auf  
Fries B zu Grunde liegt, der Porta Capena in der Servianischen Stadtmauer***

Meiner Meinung nach ist der junge Caesar Domitian auf Fries B (hier **Fig. 2; Figs. 1 und 2 Zeichnung: Figur 12**) dargestellt, wie er, in der 1. Hälfte des Monats Oktober 70 n. Chr., in seiner Eigenschaft als *praetor urbanus*, den neu gewählten Kaiser Vespasian in einer *adventus* Zeremonie an Roms heiliger Stadtgrenze, dem *Pomerium*, in Empfang nimmt. Domitian hatte die Magistratur *praetor urbanus consulari potestate* seit dem 1. Januar 70 n. Chr. inne (s.o., Kapitel *V.1.i.3.*)).

Aber mit dem Thema *adventus* Vespasians, so wie es nach Domitians Vorstellungen auf Fries B dargestellt werden sollte, waren zwei Probleme verbunden: der *praetor urbanus* (das heißt, Domitian) konnte in dieser Eigenschaft nur innerhalb des *Pomeriums* der Stadt Rom tätig werden, hinzu kommt, dass wir wissen, dass Vespasian zu diesem Zeitpunkt mit dem Senat verhandelte, damit ihm dieser für seine Siege im Großen Jüdischen Krieg einen Triumph gewähre. Von diesem Krieg kam Vespasian gerade zurück (nach seinem Aufenthalt in Alexandria). Für Vespasians Motivation, sich aus Judaea nach Alexandria zu begeben, und für seine dortigen Aktivitäten; s.u., Kapitel *The visualization of the results of this book on Domitian on our maps* ('Die Visualisierung der Resultate dieses Buchs über Domitian auf unseren Karten'); vergleiche auch unten, im Band 3-2, in *Appendix II.a*).

Vespasians Wunsch, einen Triumph zu feiern, bedeutete (theoretisch) seinerseits, dass es Vespasian nicht erlaubt war, das *pomerium* Roms zu überschreiten, die heilige Grenze der Stadt, solange ihm der Senat diesen Triumph nicht gewährt haben würde. Wir wissen auch, dass der Senat Vespasian (Titus, und Domitian !) das Privileg, einen Triumph feiern zu dürfen, erst am Morgen ihres Triumphzuges zugestehen würde, das heißt, im Juni 71 n. Chr. (!).

In diesem speziellen Fall verlieh der Senat den drei Männern drei separate Triumphe (so Josephus, *BJ* 7,5,3) - Vespasian und Titus für ihre Siege im Großen Jüdischen Krieg - und Domitian für seine gleichzeitigen Aktionen in Rom (und/ oder für sein militärisches 'Abenteuer' in Gallien und Germanien im Jahre 70 n. Chr. ?). Aber Vespasian, Titus und Domitian entschlossen sich, nur einen, gemeinsamen Triumph zu feiern: das geschah im Juni 71 n. Chr.

Siehe oben, im Kapitel *Preamble*; Abschnitt *III.*; zu Punkt 2.); Kapitel *III.*, mit **Anm. 458**, mit Bibliographie; oben, Kapitel *V.1.i.3.*); *V.1.i.3.a*); und unten, in Band 3-2, in *Appendix I.c*). - Für Domitians militärisches 'Abenteuer' in Gallien and Germanien im Jahre 70 n. Chr.; s.o., Kapitel *I.1.*; *I.2*, **Anm. 229; 230**, **Anm. 458** in oben, Kapitel *III.*; und Kapitel *V.1.i.c.3.*), sowie unten, im Band 3-2, in *Appendix I.c*).

Nach dem oben Gesagten wurde meiner Meinung die Szene, die wir auf Fries B sehen, mit Absicht an die heilige Grenze Roms, das *Pomerium*, verlegt. Der *Genius Populi Romani* (hier **Fig. 2; Figs. 1 und 2 Zeichnung: Figur 13**), der mit Domitian (zur *Porta Capena* in der Servianischen Stadtmauer) gekommen ist, um Vespasian in dieser *adventus* Zeremonie in Empfang zu nehmen, und der, auf diesem Relief nicht zufällig zwischen Vater und Sohn erscheint, setzt deshalb seinen linken Fuss auf einen *cippus*, welcher die Linie des *Pomeriums* markieren muss. Indem der Künstler diesen *Pomeriums-cippus* innerhalb seiner Komposition genau an dieser Stelle platzierte, hat er die Areale *domi* (auf der linken Seite des Reliefs) und *militiae* (auf der rechten Seite des Reliefs) von einander getrennt, und zwar aus folgenden Gründen.

Domitian in Amtsausübung seiner Magistratur *praetor urbanus*, und, aus Prinzip, dem *Genius Senatus*, dem *Genius Populi Romani*, und gleichfalls der Stadtgöttin *Dea Roma*, war es nicht erlaubt, die Stadt Rom zu verlassen (das heisst, das Areal *domi*), weshalb alle vier auf dieser Seite des Frieses B erscheinen (hier **Fig. 2; Figs. 1 und 2 Zeichnung: Figuren 2; 11; 12; 13**). Der Grund hierfür war, dass die Konstruktionen der beiden Genien (des Senats und des römischen Volkes) und der Göttin Roma so beschaffen waren, dass alle drei innerhalb der heiligen Stadtgrenze Roms, dem *Pomerium*, verbleiben mussten.

Außerhalb der Stadt Rom (das heißt im Areal *militiae*) sehen wir dagegen auf Fries B den heimkehrenden siegreichen General Vespasian (hier **Fig. 2; Figs. 1 und 2 Zeichnung: Figur 14**), dem es augenblicklich noch nicht erlaubt ist, dieses Areal zu verlassen (nämlich die Stadt Rom zu betreten, das heisst, das Areal *domi*). Und weil wir wissen, dass sich Vespasian der Stadt Rom auf der *Via Appia* genähert hatte, ist die Darstellung auf Fries B der Cancellariareliefs offensichtlich so gemeint, dass sich Vater und Sohn an der *Porta Capena* der Servianischen Stadtmauer treffen (hier **Figs. 58; 71**), obwohl das Stadttor selbst nicht dargestellt ist. Für eine Diskussion aller Aspekte der Cancellariareliefs; s.o., Kapitel I.-VI.; sowie unten, *Den Beitrag von Giandomenico Spinola über die Cancellariareliefs*.

**Ich selbst folge Giandomenico Spinolas gesamter Interpretation von Fries B der Cancellariareliefs und wiederhole hier deshalb eine Textpassage, die für Kapitel III. geschrieben wurde; vergleiche zum Folgenden unten, *Den Beitrag von Giandomenico Spinola über die Cancellariareliefs* :**

‘Spinolas Beitrag zu unseren früheren Erkenntnissen besteht in folgender Beobachtung. Er hat mich auf die mögliche Bedeutung der Geste hingewiesen, die Vespasian auf Fries B mit seiner rechten Hand ausführt. Der Kaiser hebt sie und legt sie auf die linke Schulter des vor ihm stehenden jugendlichen Togatus [in Wirklichkeit berührt Vespasian die Schulter des jungen Mannes gar nicht, aber aus der Entfernung sieht es so aus] ... Da Spinola voraussetzt, dass Fries B das originale Portrait dieses Kaisers zeigt, und deshalb Vespasian und Domitian, glaubt er, dass Vespasians Geste meine, dass er auf diese Weise die (zukünftige) Herrschaft über das Römische Weltreich auf seinen jüngeren Sohn Domitian überträgt. Was, falls das der Wahrheit entspricht, bedeuten würde, dass Fries B nicht nur den genauen Moment der Einsetzung von Kaiser Vespasian selbst zeigt - wie schon früher von vielen Gelehrten beobachtet worden ist - sondern gleichzeitig die (zukünftige) Einsetzung, oder die "legittimazione" (so Spinola) von Domitian als Kaiser [Hervorhebung von mir]’.

Und weil ich Giandomenico Spinolas soeben zitierter Interpretation von Fries B der Cancellariareliefs folge, schlage ich in diesem Buch vor, für welches Gebäude Domitian seine Cancellariareliefs in Auftrag gegeben haben könnte.

**Die Punkte 1.) - 5.), die im Folgenden diskutiert werden sollen, sprechen meines Erachtens dafür, dass die Cancellariareliefs einen der beiden Bögen Domitians auf dem Palatin dekoriert haben können.**

**1.) wegen der Datierung (‘spätdomitianisch’), die für die Cancellariareliefs vorgeschlagen wird, und/ oder weil einige Gelehrte vorschlagen, dass die Werkstatt der Cancellariareliefs auch in Domitians**

**Palast auf dem Palatin tätig war und auf Domitians Forum/ Forum Nervaes/ Forum Transitorium (im Folgenden 'Domitians Forum' genannt).**

Domitians Palast auf dem Palatin wurde 81 nach Chr. begonnen und um 92 n. Chr. fertig gestellt; vergleiche John Pollini (2017b, 120) und Françoise Villedieu (2009, 246), diskutiert oben, in Kapitel V.1.i.3.b); Abschnitt III.

Hans Wiegartz (1996, 172, wörtlich zitiert unten, im *Appendix IV.d.2.a*)), war der Ansicht, dass die Skulpturenausstattung von Domitians Forum und die Cancelleriareliefs gleichzeitig entstanden sind.

Giandomenico Spinola war so freundlich mir mitzuteilen, dass die Cancelleriareliefs (hier **Figs. 1; 2**) seiner Meinung nach spätdomitianisch datierbar sind (s.o., zu **Anm. 75**, in Kapitel I.1., vergleiche auch unten, *Den Beitrag von Giandomenico Spinola* in diesem Buch).

Pierre Gros (2009, 106-107, der P. GROS 2004 zitiert) schlägt vor, dass Domitians Architect Rabirius, der seinen Palast auf dem Palatin erbaute, gleichzeitig Domitians Forum errichtet habe; siehe dazu unten, in Band 3-2, in *Appendix IV.d.2.a*); und *Appendix IV.d.2.f*). Gros (2009, 106-107) berichtet außerdem, dass, als Ergebnis der neuen Ausgrabungen von Domitians Forum, wofür er Eugenio La Rocca (1998a, 1-12) zitiert, "Le ricerche recenti hanno messo in evidenza tre fasi diverse di un cantiere che, cominciato nell'84, durò più di un decennio ..." ('die neuen Untersuchungen haben drei Bauphasen des Forums erkennen lassen, beginnend 84 n. Chr., hat die Bauzeit mehr als ein Jahrzehnt gedauert'). Diese Textpassage ist ausführlicher zitiert und diskutiert unten, in Band 3-2, in *Appendix IV.d.2.a*).

Auch Joachim Raeder (2010, 146; vergleiche S. 144, mit Textabbildung 51, zu den *Piroustae* (?) vom Forum Domitians [vergleiche hier **Fig. 49**]) betont die stilistischen Ähnlichkeiten der Cancelleriareliefs und der skulpturalen Ausstattung von Domitians Forum. Siehe oben, **Anm. 66**, in Kapitel I.1.

Klaus Stefan Freyberger (2018, 97; s.o. im Kapitel V.3.) stellt fest, dass die Fragmente von Bauornamentik, die zusammen mit den Cancelleriareliefs gefunden wurden (hier **Figs. 1; 2**), von einer spätdomitianischen Werkstatt skulptiert wurden, die auch in Domitians Palast auf dem Palatin, der *Domus Augustana*, tätig war. Außerdem vergleicht Freyberger (2018, 97), wegen stilistischer Ähnlichkeiten, den Architravblock mit der Inschrift PP FECIT (CIL VI, 40543), der zusammen mit den Cancelleriareliefs gefunden wurde, mit "Le Colonnacce" in Domitians Forum (vergleiche hier **Fig. 49**). - Darauf werde ich unten noch einmal zurückkommen.

Für eine Diskussion; s.o., Kapitel VI.3. *Summary of my own hypotheses concerning the Cancelleria Reliefs presented in this Study; Addition: My own tentative suggestion, to which monument or building the Cancelleria Reliefs may have belonged, and a discussion of their possible date.*

(*Zusammenfassung meiner eigenen Hypothesen bezüglich der Cancelleriareliefs, die in dieser Studie zur Sprache kommen; Zusatz: Mein Vorschlag, zu welchem Monument oder Gebäude die Cancelleriareliefs gehört haben können, mit einer Diskussion ihrer möglichen Datierung*).

Vergleiche die neueste Literatur zum Palast des Domitian auf dem Palatin: Siehe die letzte, posthum (2020) erschienene Publikation zu diesem Thema von Ulrike Wulf-Rheidt (21. Dezember 1963 - 13. Juni 2018). Vergleiche auch Aurora Raimondi Cominesi and Claire Stocks (2021; und *dies.* 2023); Natascha Sojc (2021); Raimondi Cominesi (2022); and Jens Pflug (2022). Hans Rupprecht Goette danke ich für die Übersendung des Artikels von Wulf-Rheidt (2020).

**2.) Die Darstellung der Piroustae (hier Fig. 49) in Domitians Forum liefert das Datum für die Entstehung der Cancelleriareliefs (das heißt: 'nach 89 n. Chr.').**

Die Darstellung der *Piroustae* in Domitians Forum (hier **Fig. 49**) hilft:

a) bei der Datierung der skulpturalen Ausstattung des Forums selbst; und -

b) weil dieselbe Werkstatt auch die Cancelleriareliefs anfertigte (s.o., zu Punkt 1.)), erlaubt diese Tatsache den Schluss, dass Domitian (jetzt Nerva) auf Fries A der Cancelleriareliefs (hier **Fig. 1**) dargestellt ist, wie er im Frühjahr des Jahres 89 n. Chr. zu seinem (zweiten) Dakischen Krieg aufbricht. Domitian beendete diesen Krieg mit einem Sieg, den er im November/ Dezember 89 mit einem Triumph in Rom 'über die Chatti und die Daker' feierte.

- Wenn das der Fall ist, dann kann man diese Tatsache als *terminus post quem* für die Realisierung der Cancellariareliefs werten.

Vergleiche unten, in Band 3-2, in *Appendix IV.d.2.f) Domitian's choice to represent the Piroustaie* (cf. here **Fig. 49**) in his Forum/ Forum Nervae/ Forum Transitorium and the date of the Cancellaria Reliefs.

(*Domitians Entscheidung, die Piroustaie (vergleiche hier Fig. 49) in seinem Forum/ Forum Nervae/ Forum Transitorium darstellen zu lassen und die Datierung der Cancellariareliefs*).

Vergleiche für Domitians Krieg im Jahre 89 n. Chr.: Peter L. Viscusi (1973, 58-60), wörtlich zitiert und diskutiert oben, im Kapitel *Preamble: Domitian's negative image*; Section I. *'The intentional creation of Domitian's negative image', here presented by discussing relevant text passages from Markus Handy ('Strategien zur Legitimierung der Ermordung des Domitian', 2015) and from Peter L. Viscusi (Studies on Domitian, 1973).*

(*Preamble: Domitians negatives Image; Abschnitt I. 'Die absichtliche Kreierung von Domitian's negativem Image', hier präsentiert anhand der Diskussion relevanter Textpassagen aus Markus Handy ('Strategien zur Legitimierung der Ermordung des Domitian', 2015) und aus Peter L. Viscusi (Studies on Domitian, 1973)*).

**Fig. 49. Rom, Forum Domitians/Forum Nervae/ Forum Transitorium, Detail des einzig erhaltenen Teils der Portikus auf der Südostseite des Forums, der "Le Colonnacce" genannt wird. Photo: Mit freundlicher Genehmigung von F.X. Schütz (März 2006).**

**Marmorrelief einer weiblichen Figur der Attikazone von "Le Colonnacce". Photo: Mit freundlicher Genehmigung von H.R. Goette (Mai 2012).**

Früher wurde diese Figur mit Minerva identifiziert, bis H. Wiegartz (1996) erkannt hat, dass es sich um die allegorische Darstellung eines Volksstamms handelt, wobei ursprünglich insgesamt 42 derartige Figuren von *gentes* dieses Forum dekoriert hätten. Wiegartz erkannte, dass es sich in diesem Fall um die Darstellung der *Piroustaie* handelt, da er eine Replik dieser Figur im *Sebasteion* von Aphrodisias entdeckt hatte, wo sie als *'Piroustoi'* beschriftet ist (vergleiche hier Fig. 50).

Die *Piroustaie/ Piroustoi* waren ein Volksstamm aus Illyrien (sie werden auch als dalmatischer und als pannonischer Volksstamm bezeichnet), der in jenem Teil der römischen Provinz Illyricum lebte, der, nach der Teilung dieser Provinz (die wahrscheinlich 9 n. Chr. erfolgt ist), die römische Provinz Dalmatien werden sollte.

**Fig. 50. Aphrodisias, Sebasteion, entstanden in iulisch-claudischer Zeit. Marmorrelief, das denselben Volksstamm darstellt wie das Relief von "Le Colonnacce" (hier Fig. 49). In der zugehörigen Inschrift wird diese Figur als *'Piroustoi'* bezeichnet. Photo: Mit freundlicher Genehmigung der Ausgrabungen von Aphrodisias (G. Petruccioli).**

Mein Dank gilt Amanda Claridge, Hans Rupprecht Goette, Peter Herz, Eugenio La Rocca, Stefan Pfeiffer, Franz Xaver Schütz, Rose Mary Sheldon und Bert Smith, deren 'konzertierte Aktionen' - während der Pandemie, als alle Bibliotheken geschlossen waren - mir geholfen haben, dieses sehr komplexe Thema zu verstehen.

Die entsprechenden Recherchen begannen damit, dass ich eine Bemerkung der Militärhistorikerin Rose Mary Sheldon (2007, 199) gelesen habe, die sich die Frage gestellt hat, welchen Effekt Hadrians Unterdrückung der Bar Kochba Revolte auf ihn *selbst* gehabt haben mag. Ich habe diese Frage weiter verfolgt, was den unvorhergesehenen Effekt hatte, dass ich diesem Buch eine detaillierte Studie zu Domitians Bauprojekten in Rom hinzugefügt habe.

Vergleiche unten, in Band 3-2, in *Appendix IV.c.2.)*; und *Appendix IV.d) The summary of the research presented in Appendix IV. has led to a summary of Domitian's building projects at Rome.*

(*Die Zusammenfassung der Forschungen, die in Appendix IV. präsentiert wird, führte zu einer Zusammenfassung von Domitians Bauprojekten in Rom*). - Darauf werde ich unten noch einmal zurückkommen.

Der Grund war, dass ich begonnen habe, die Reliefs mit allegorischen Darstellungen von 'Völkern' zu studieren, welche die Portiken des *Hadrianeums* (hier **Fig. 48**) dekoriert haben, und die Marina Sapelli (1999) als Darstellungen von *'provinciae fideles'* ('treuen Provinzen') interpretiert hat. Diese Reliefs haben mich zu Domitians *Forum* geführt.

Als ich den Romführer von Amanda Claridge (2010, 174-175) zu Rate zog, fand ich eine bedeutende Erkenntnis, für die sie selbst aber nicht die Quelle zitiert hat: In "*Le Colonnacce*", in Domitians Forum, "On the attic storey the surviving sculptured panel in the recess shows a helmeted [Seite 175] female carrying a shield, recently recognized (thanks to a labelled version found at Aphrodisias in Turkey) as the personification of the *Piroustae*, a people of the Danube" ('In der Attikazone von "*Le Colonnacce*" in Domitians Forum hat sich ein Relief erhalten, das eine weibliche Gestalt mit einem Helm und einem Schild darstellt (dank einer mit einer Inschrift versehenen Version dieser Figur, die in Aphrodisias in der Türkei gefunden wurde [vergleiche hier Fig. 50]) ist diese Figur als Personifikation der *Piroustae* identifiziert worden, einem Volk, das an der Donau lebte').

Als ich Amanda um Rat fragte, glaubte sie, diese Hypothese in einer Publikation von R.R.R. Smith gefunden zu haben, und schickte mir, von sich aus, R.R.R. Smiths Artikel ("*Simulacra Gentium: The Ethne from the Sebasteion at Aphrodisias*", 1988), in welchem, wie auch Amanda selbst wußte, die *Piroustae* aber gar nicht erwähnt werden. In seinem Buch über die Flavier (2009, 61-62), erwähnt auch Stefan Pfeiffer die *Piroustae* (hier Fig. 49), er zitiert aber Hans Wiegartz für diese Identifizierung, allerdings ebenfalls, ohne die entsprechende Publikation zu zitieren. Leider konnte ich nicht mehr Hans Wiegartz (23. Januar 1936 - 27. März 2008) selbst um Rat fragen, weil er schon lange zuvor verstorben war.

Diese allegorischen Darstellungen von 'Völkern' in Domitians Forum (vergleiche hier Fig. 49), von denen es nach Hans Wiegartz (1996) ursprünglich 42 in diesem Forum gegeben hat, symbolisieren, nach Ansicht von Stefan Pfeiffer (2009, 61-62), 'Domitians "Sieghaftigkeit", eine Eigenschaft des Kaisers, die ihrerseits Roms Reichtum garantierte', wie Pfeiffer schreibt. Pfeiffer's entsprechende Textpassage ist in ausführlicherer Form unten, in Band 3-2, als Motto von Appendix IV.d.2.e) zitiert.

In einem anderen Zusammenhang hat Pfeiffer (2018, 189; s.o., im Kapitel I.2.1.a)), im Zusammenhang seiner Analyse der Themen von Domitians Selbstdarstellung, erklärt, was er mit "Sieghaftigkeit" meint:

"1. It was a key issue for Domitian to show his *virtus militaris* and his victoriousness [mit Anm. 85, wo er Literatur zitiert]" ('1. Für Domitian war von größter Bedeutung, seine *virtus militaris* und seine Sieghaftigkeit zu zeigen'). Demnach behauptete Domitian in seinen Selbstdarstellungen, die Eigenschaft 'invincibility' ('Unbesiegbarkeit') zu besitzen.

Für eine detaillierte Diskussion, siehe unten, im Band 3-2, in Appendix IV.d.2.a). - Auch darauf werde ich unten noch einmal zurückkommen.

Auf meine Bitte hin, hat mir Stefan Pfeiffer freundlicherweise das Zitat 'Hans Wiegartz ("*Simulacra Gentium* auf dem Forum Transitorium", 1996)' geschrieben, aber da von allen Artikeln der Zeitschrift *Boreas* ausgerechnet dieser Beitrag nicht im Internet verfügbar ist, war Hans Rupprecht Goette so freundlich, mir, von sich aus, diesen Aufsatz von Wiegartz zu schicken (!). Außerdem darf ich hier mit dem freundlichen Einverständnis von Franz Xaver Schütz eine seiner Photographien von "*Le Colonnacce*" veröffentlichen (vergleiche hier Fig. 49).

Und da inzwischen Pierre Gros (2009, 106-107) zu der alten Auffassung zurückgekehrt war, dass das 'Piroustae Relief' in Domitians Forum statt dessen Minerva darstellt, eine Auffassung, mit der er (angeblich) Maria Paola Del Moro (2007) folgt, habe ich auch die übrigen oben genannten Gelehrten um Hilfe gebeten. Wie ich erst sehr viel später feststellen sollte, hat Pierre Gros (2009, 107), der für diese Meinung: "(Del Moro 2007b [das heißt, hier M.P. DEL MORO 2007]. S. 178-187)" zitiert, irrtümlich behauptet, dass es Del Moro (2007) gewesen sei, die das 'Piroustae Relief' (hier Fig. 49) wieder mit Minerva identifiziert habe.

Hans Rupprecht Goette schickte mir daraufhin, von sich aus, sein Photo der allegorischen Darstellung der *Piroustae* in "*Le Colonnacce*" in Domitians Forum (hier Fig. 49), das ich hier mit seinem freundlichen Einverständnis publizieren darf. Hans schickte mir außerdem ein Literaturzitat bezüglich der *Piroustoi* im

*Sebasteion* von Aphrodisias (vergleiche hier **Fig. 50**), und zwar: R.R.R. Smith (*Aphrodisias VI. The Marble reliefs from the Julio-Claudian Sebasteion*, 2013), sowie ein Photo der *Piroustoi*. Ich kannte natürlich dieses Relief des *Sebasteions* (hier **Fig. 50**), hatte aber bis zu diesem Zeitpunkt selbst noch nicht bemerkt, dass dieses Relief und das der *Piroustae* in Domitians *Forum* (hier **Fig. 49**) (zugegebenermaßen etwas verschiedene) Kopien desselben Prototyps sind (!).

Weil ich wissen wollte, wer das *zuerst* bemerkt hatte, und weil Pierre Gros (2009, 106-107) inzwischen das '*Piroustae* Relief' (hier **Fig. 49**) wieder als Darstellung der Minerva identifiziert hatte, bat ich R.R.R. Smith um Rat. Bert Smith schrieb mir, dass es Hans Wiegartz (1996) gewesen sei, der beide Reliefs als allegorische Darstellung des Volkes der *Piroustae/ Piroustoi* identifiziert hat, eine Tatsache, auf die auch er selbst hingewiesen hat; vergleiche Smith (2013, 91 Anm. 50). Bert erklärte mir in seiner Email außerdem, dass, auf Grund ikonographischer Besonderheiten, das Relief in Domitians *Forum* unter keinen Umständen Minerva darstellen kann. Mit Berts freundlichem Einverständnis publiziere ich hier seine Email als ("*The first Contribution by R.R.R. Smith on the iconography of the representation of the Piroustae at "Le Colonnacce" in Domitian's Forum/ Forum Nervae/ Forum Transitorium*") ('*Der erste Beitrag von R.R.R. Smith zur Ikonographie der allegorischen Darstellung der Piroustae in "Le Colonnacce" von Domitian's Forum/ Forum Nervae/ Forum Transitorium*'). Bert Smith schickte mir außerdem, von sich aus, die entsprechenden Passagen seiner Publikation aus dem Jahre 2013, sowie eine Photographie der *Piroustoi* im *Sebasteion* (hier **Fig. 50**), die ich mit seinem freundlichen Einverständnis hier publizieren darf.

Vergleiche unten, im Band 3-2, in *Appendix IV.d.2.a) Who invented this iconography of defeated and pacified 'nations' and what does it mean? With The first Contribution by R.R.R. Smith.* ('*Wer hat diese Ikonographie der besiegten und befriedeten 'Nationen' erfunden, und was bedeutet sie ? Mit Dem ersten Beitrag von R.R.R. Smith*').

In diesem Kapitel werden die Publikationen von R.R.R. Smith (1988 und 2013) diskutiert, in denen er alle allegorischen Darstellungen von '*nationes*' untersucht hat, beginnend mit denen des Pompeius Magnus in seinem Theater in Rom, aber auch denen der *Porticus ad Nationes* des Augustus in Rom, sowie denen, die von den '*nationes*' der *Porticus ad Nationes* des Augustus abgeleitet worden sind: Die sogenannten *ethne* des *Sebasteions* in Aphrodisias (hier **Fig. 50**), die '*Provinzen*' des *Hadrianeums* in Rom (hier **Fig. 48**), und die '*Völker*' von Domitians *Forum* (hier **Fig. 49**). Nach R.R.R. Smith (2013, 119) kann Domitians *Forum* mit seinen 42 Darstellungen von '*Völkern*', als "... another *porticus ad nationes*" ('eine zweite *Porticus ad Nationes*') angesehen werden. Womit, wenn das den Tatsachen entsprechen sollte, Domitians *Forum* auf diese Weise bewußt auf die *Porticus ad Nationes* des Augustus bezogen wäre; vergleiche Smith (1988, 71-72; ders. 2013, 114-118). Vergleiche auch unten, im Band 3-2, in *Appendix IV.d.2.b*; und *Appendix IV.d.2.f*). Darauf werde ich später noch einmal zurückkommen.

**In diesem Zusammenhang sollten wir drei sehr bemerkenswerte Fakten bei unseren Überlegungen mit berücksichtigen:**

a) von den 42 allegorischen Darstellungen von '*Völkern*', welche Domitians *Forum* ursprünglich geschmückt hatten, befindet sich nur noch eine *in situ*, die Darstellung der *Piroustae* (hier **Fig. 49**), und -

b), wie Hans Wiegartz (1996) beobachtete, genau diese Darstellung ist auch im *Sebasteion* von Aphrodisias erhalten geblieben (hier **Fig. 50**). Im *Sebasteion* bestehen diese insgesamt 50 Darstellungen von *ethne* jeweils aus zwei separaten Blöcken (Figur und Inschrift), weshalb wir versucht sein könnten zu bezweifeln, dass der untere Block mit der Inschrift '*Piroustoi*', mit der richtigen weiblichen Figur (auf dem oberen Block) kombiniert worden ist. Aber das ist mit Sicherheit nicht der Fall. Ich zitiere deshalb im Folgenden vorab eine Textpassage, die für unten, Band 3-2, *Appendix IV.d.2.c*) geschrieben worden ist, und die

c) beweist, dass diese weibliche Gestalt von Wiegartz berechtigterweise mit dem '*Volk*' namens *Piroustoi/ Piroustae* identifiziert worden ist:

‘Dass der Statuentyp, den diese beiden Reliefs kopieren [das heißt, hier **Figs. 49; 50**] tatsächlich die *Piroustaie* darstellt, ist sicher, weil die Künstler des *Sebasteions* auch das Relief selbst mit dem Namen dieses Volkes beschriftet hatten, um sicher zu gehen, die richtige Figur mit jener Basis mit der Inschrift zu kombinieren, welche diese weibliche Gestalt als Darstellung der *Piroustoi* identifiziert; vergleiche R.R.R. Smith (2013, 90, 118)‘.

Kehren wir nun zu einer Zusammenfassung von unten, Band 3-2, *Appendix IV.d.2.b*) zurück.

R.R.R. Smith (1988, 58 mit Anm. 18) schreibt, dass die Darstellungen der ‘Völker’ im *Sebasteion* in Aphrodisias, unter anderem der *Piroustaie*, mit den entsprechenden Siegen des Augustus erklärt werden können: Die Darstellung der *Piroustaie* zum Beispiel beziehe sich auf die Kriege in dieser Gegend von 13-9 v. Chr. und von 6-8 n. Chr. In seiner Anmerkung 18, erwähnt Smith die entsprechenden antiken Schriftquellen: ‘... *Piroustaie* ... - RG [*Res Gestae, Tatenbericht des Augustus*] 26-7 and 30“. Nota bene, Augustus (RG [*Res Gestae, Tatenbericht des Augustus*] 26-27, 30) erwähnt die Tatsache, dass er das Gebiet, wo die *Piroustaie* lebten, in das Imperium Romanum integriert habe: er schreibt, dass diese Siege von Tiberius erfochten worden seien, aber er erwähnt nicht die Volksstämme, die dort lebten.

**Vergleiche R.R.R. Smith (2013, 91, n. 44) für die Tatsache, dass Tiberius erst dann die *Piroustaie* hatte besiegen können, ‘when they were almost entirely exterminated [so Velleius Paterculus 2.115.2-4; Hervorhebung von mir]’ (‘als sie fast vollständig ausgerottet waren’) (!) :**

**“On Tiberius and the Pirousti in AD 6–9, the Tiberian historian, Velleius Paterculus (2.115.2-4) writes: ‘... This campaign brought the momentous war to a successful conclusion; for the Perustae and Desiadates, Dalmatian tribes, who were almost unconquerable on account of the position of their strongholds in the mountains, their warlike temper, their wonderful knowledge of fighting, and, above all, the narrow passes in which they lived, were then at last pacified, not now under the mere generalship, but by the armed prowess of Caesar [das heißt, Tiberius] himself, and then only when they were almost entirely exterminated’ (2.115.4, transl.[ation] F. W. Shipley, Loeb 1924) [Hervorhebung von mir]“.**

Und weil Pierre Gros (2009, 106-107) (irrtümlich) behauptet hat, dass Maria Paola Del Moro die *Piroustaie* (hier **Fig. 49**) wieder mit Minerva identifiziert habe, bat ich auch Eugenio La Rocca um Hilfe, der so freundlich war, mir den entsprechenden Artikel von Maria Paola Del Moro zu schicken. Del Moro (2007) sagt in ihrem Artikel keineswegs, dass das ‘*Piroustaie* Relief’ (hier **Fig. 49**) Minerva darstellt. Sie hat statt dessen die entsprechenden Beobachtungen von Wiegartz (1996) weiter unterstützt: in ihren Ausgrabungen auf Domitians *Forum*, die sie im Jahr 2000 durchführte, fand sie nämlich Fragmente von einigen weiteren, sehr ähnlichen allegorischen Darstellungen von ‘Völkern’.

Mit der sehr willkommenen Unterstützung von Franz Xaver Schütz und Rose Mary Sheldon konnte ich dann die Kriege des Augustus und Trajan auf dem Balkan, sowie Hadrians dortige Aktivitäten studieren, was in meinem Fall nötig war, um die dort geführten Kriege *Domitians* überhaupt verstehen zu können.

Für Hadrians soeben erwähnte Aktivitäten auf dem Balkan; vergleiche unten, zu *The third Contribution by Peter Herz : Der Übergang von Trajan auf Hadrian und das erste Regierungsjahr Hadrians* (‘Der dritte Beitrag von Peter Herz in diesem Band’).

Franz unternahm eine spezielle Recherche im Internet bezüglich der allegorischen Darstellung des Volksstamms der *Piroustaie* auf Domitians *Forum* (hier **Fig. 49**) und fand obendrein folgende diesbezügliche Publikationen im Internet, die sich für das Verständnis der Gestaltung von Domitians *Forum* als von entscheidender Bedeutung erweisen sollten.

Vergleiche Carl Patsch (‘Archäologisch-epigraphische Untersuchungen zur Geschichte der römischen Provinz Dalmatien, 1899; unter anderem zu dem *primus pilus* Statius Marrax, der von Domitian

hoch ausgezeichnet worden ist), Géza Alföldy ("Einheimische Stämme und civitates in Dalmatien unter Augustus", 1963), Dragana Grbić ("Augustan Conquest of the Balkans in the light of triumphal monuments", 2011), und Alfred Hirt ("Dalmatians and Dacians - Forms of Belonging and Displacement in the Roman Empire", 2019). Da ich Rose Mary Sheldon bezüglich des *primus pilus* Statius Marrax um Rat gefragt hatte, wies sie mich auf eine Publikation hin, in der die entsprechende Inschrift diskutiert wird, und die Franz ebenfalls im Internet fand; vergleiche Hans Krummrey (2003; Rezension von Marco Buonocore, *L'Abruzzo e il Molise in età romana tra storia ed epigrafia*, Vol. I-II (Deputazione Abruzzese di Storia Patria. Studi e Testi 21/1-2, 2002).

Als Folge aller dieser Recherchen war Franz so freundlich, eine Visualisierung des entsprechenden Areals anzufertigen; vergleiche unten zu *The first Contribution by Franz Xaver Schütz : Zur kartographischen Visualisierung historischer Landschaftselemente zwischen Rhein und Schwarzem Meer von Augustus bis Hadrian* (vergleiche hier **Fig. 77**). ('Der erste Beitrag von Franz Xaver Schütz zu diesem Band'). Mit der Karte (hier **Fig. 77**), die Franz angefertigt hat, sollen Forschungen unterstützt werden, die versuchen, die Bewegungen jener drei Männer innerhalb dieses Gebietes zu verstehen, die in diesem Buch diskutiert werden : Arminius, Domitian und Hadrian.

Wir erfahren in den oben aufgeführten Publikationen, dass die *Piroustaie* im Gebiet der späteren römischen Provinz Illyricum lebten. Zuerst (35-33 v. Chr.) hatte hier Octavian/ Augustus persönlich während seines 'Illyrischen Krieges' gekämpft, "against the Iapudes and Pannonians ... in 35 BC, and against the Delmatae in 34/3" ('gegen die Iapuden und die Pannonier ... im Jahre 35 v. Chr., und gegen die Delmatae im Jahre 34/33'); vergleiche John J. Wilkes ("Illyricum", in: *OCD*<sup>3</sup> (1996) 747. Vergleiche auch Dragana Grbić (2011, 132-136), worauf ich unten zurückkommen werde.

**Vergleiche für diese Kriege auch Filippo Coarelli (2012, 362), der si erwähnt, weil sie Octavian/ Augustus daran gehindert haben, seinen Tempel für Apollo Palatinus unmittelbar nach dem Blitzeinschlag in das 'Haus des Augustus' im Jahre 36 BC zu erbauen: "Si può pensare che l'avvio dei lavori [i.e., for the Temple of Apollo Palatinus] sia stato ritardato dai gravi impegni militari che tennero occupato Ottaviano negli anni tra il 35 e il 33 (guerre contro i Pannoni e i Dalmati, nel corso della quali egli fu ferito due volte) [Herorhebung von mir]".**

Vergleiche hierzu unten, im Band 3-1, im *Appendix VI.*, Abschnitt I.

Als nächstes hatte Tiberius, wie oben bereits erwähnt, unter dem Kommando des Augustus, zunächst in seinem 'Pannonischen Krieg' (12-9 v. Chr.) gegen die *Piroustaie* gekämpft, was die Gründung der römischen Provinz Illyricum zur Folge hatte. Schließlich sollte Tiberius, auf Grund der 'Dalmatisch-Pannonischen Revolte' (6-9 n. Chr., die auch 'Bellum Illyricum' genannt wird), und die sich in der römischen Provinz Illyricum ereignet hat, die größten Schwierigkeiten haben, die Aufstände der einheimischen Volksstämme zu unterdrücken, und besonders den der *Piroustaie*.

Das wiederum bedeutet, dass in der großen Gruppe von 'Nationen' in der *Porticus ad Nationes* des Augustus die Statue der *Pirustae* eine von Augustus befriedete 'Nation' darstellte. Siehe unten, im Band 3-2, in *Appendix IV.d.1.*); und *Appendix IV.d.2.d*). Ich persönlich folge dem Vorschlag von Dragana Grbić (2011, 135), dass im *Sebasteion* in Aphrodisias "The inscription of the *Pirustae* (no. 3) symbolically represents the suppression of the Dalmatian-Pannonian revolt in 9 AD" ('dass sich die Inschrift der *Piroustaie* (no. 3) auf die Unterdrückung der Dalmatisch-Pannonischen Revolte im Jahre 9 n. Chr. bezieht'). Für eine Diskussion dieser Hypothesen, siehe unten, im Band 3-2, *Appendix IV.d.2.d*).

**Nota bene. Bereits für Augustus selbst waren seine Eroberungen in Illyrien und im westlichen Balkan von größter Bedeutung, später sollten Domitian, Trajan und Hadrian die hier entstandenen römischen Provinzen als Basis ihrer Unternehmungen in Dakien nutzen. Siehe unten, im Band 3-2, in *Appendix IV.d.2.c*).**

**Als besonders hilfreich für die Diskussion der hier betrachteten Themen hat sich Rose Mary Sheldons Studie (2020) über Arminius erwiesen, "chief of the Germanic Cerusci" ('Fürst der germanischen Cherusker'), über den sie (dies. 2020, 1012) schreibt: "Arminius himself had served as a commander of a tribal troop contingent under Roman command during the revolt in 6 CE along with Velleius Paterculus, one of our main sources [Hervorhebung von mir]".**

Arminius hatte demnach als Offizier in der römischen Armee unter Tiberius gedient als dieser, 6-9 n. Chr., in der neuen römischen Provinz Illyricum gegen die dort lebenden revoltierenden Volksstämme kämpfte, unter anderem die *Piroustaе*.

Rose Mary Sheldon (2020) berichtet etwas, was mir zuvor unbekannt war: dieser mutige und verzweifelte Kampf jener dalmatischen Volksstämme (unter anderem der *Piroustaе*) gegen die Römer, die im Gebiet der zukünftigen römischen Provinz Dalmatia lebten, wurde für Arminius zum Anlass, zusammen mit seinen Cheruskern und weiteren Alliierten, den einzigen Aufstand gegen die Römer zu planen, der erfolgreich sein sollte (so R.M. SHELDON 2020, 1025). Das endete bekanntlich im Jahre 9 n. Chr. mit der Niederlage des P. Quinctilius Varus im Teutoburger Wald. Darauf werde ich unten noch einmal zurückkommen.

Siehe oben, Kapitel *What this Study is all about* ('Worum es in dieser Studie geht'); und unten, im Band 3-2, in *Appendix IV.d.2.d) The meaning of the representation of the Piroustaе within Augustus's Porticus ad Nationes at Rome. With H. Wiegartz's (1996) observations concerning the Piroustaе and their representations; and a summary of the revolt of Arminius in Germany, which he planned because he had fought under Tiberius to suppress the revolt of the Pannonian-Dalmatian tribes, inter alia of the Piroustaе.*

(*Die Bedeutung der allegorischen Darstellung der Piroustaе in der Porticus ad Nationes des Augustus in Rom. Mit den Beobachtungen von H. Wiegartz (1996) bezüglich der Piroustaе und den Darstellungen dieses Volksstamms; und einer Zusammenfassung der Revolte des Arminius in Germanien, die er geplant hat, weil er unter Tiberius kämpfte, als dieser die Revolte der Pannonisch-Dalmatischen Volksstämme unterdrückt hat, unter anderem der Piroustaе*).

**Außerdem war mir bislang entgangen, worauf Maria Teresa D'Alessio aufmerksam gemacht hat (vergleiche dieselbe 2017, 510 mit Anm. 342, die antike Schriftquellen zitiert). Auch die jüngst verstorbene Paola Ciancio Rossetto (16. Oktober 1945 - 26. April 2022) hat das erwähnt (vergleiche dies. 2018, 41, mit Anm. 97, 98, die antike Schriftquellen zitiert), eine der Ausgräberinnen der *Porticus Octaviae*, mit der ich seit 2018 das Glück hatte, die *Porticus Octaviae* diskutieren zu können : Der dreifache Triumph des Octavian/ Augustus im Jahre 29 v. Chr. erinnerte unter anderem an den Sieg des Octavian / Augustus über die Dalmatii im Jahre 33 v. Chr., und mit der Beute aus diesem Krieg sollte er den Bau der *Porticus Octaviae* in Rom finanzieren (!). - Zum dreifachen Triumph des Octavian/ Augustus im Jahre 29 v. Chr. werde ich unten noch einmal zurückkommen.**

Beide Forscherinnen haben ihrerseits in ihren Publikationen nicht die Tatsache angesprochen, dass das Relief mit den *Piroustaе* in "Le Colonnacce" in Domitians Forum (hier **Fig. 49**) einen jener 'dalmatischen Volksstämme' darstellt, die Octavian/ Augustus im Jahre 33 v. Chr. besiegt hatte.

Für eine Diskussion der *Porticus Octaviae*, s.u., und in Band 3-2, zu *A Study on the consequences of Domitian's assassination ... Or: The wider topographical context of the Arch of Hadrian alongside the Via Flaminia ...*; Chapter *Introduction*; Section I. (*Eine Studie zu den Folgen von Domitians Ermordung ... Oder: Der weitere topographische Kontext des Hadriansbogens an der Via Flaminia ...*; Kapitel *Einführung*; Abschnitt I.').

**Bert Smith (2013, 119) fragt, warum sich auch Domitian dazu entschlossen haben mag, die *Piroustaе* in seinem Forum darstellen zu lassen, wenn man die Tatsache bedenkt, dass bereits Tiberius (6-9 n. Chr.), unter dem Kommando des Augustus, ihr Gebiet erobert, und in die Römische Provinz Dalmatia umgewandelt hatte; s.u., im Band 3-2, in *Appendix IV.d.2.c*).**

Um diese Frage beantworten zu können, habe ich mich mit der Ikonographie der allegorischen Darstellung der *Piroustaе* beschäftigt; s.u., im Band 3-2, in *Appendix IV.d.2.d*).

Die wichtigste Besonderheit der Ikonographie der *Piroustaie* (hier Figs. 49; 50), wenn man sie mit den Ikonographien der übrigen Darstellungen von *ethne* ('Völkern') im *Sebasteion* von Aphrodisias vergleicht, besteht darin, dass im Fall der *Piroustaie* ihre militärische Tapferkeit betont wird. Das wird bereits anhand der Wahl des 'Amazonengürtels' klar, mit dem die Darstellungen der *Piroustaie* in Domitians *Forum* und im *Sebasteion* ausgestattet sind (hier Figs. 49; 50). Hans Wiegartz (1996, 174) hat außerdem beobachtet, dass von allen erhaltenen Darstellungen von *ethne* im *Sebasteion* von Aphrodisias die *Piroustoioi* der einzige Volksstamm sind, der bewaffnet dargestellt wird (!). Diese Tatsache hat Wiegartz (1996) überzeugend mit dem Urteil des Sueton (*Tib.* 16) erklärt, demzufolge es sich 'bei dem *Bellum Illyricum* (dem 'Illyrischen Krieg', 6-9 n. Chr.), den Tiberius u.a. gegen die *Piroustaie* geführt hatte, um den schwierigsten Krieg seit den Kriegen gegen Hannibal gehandelt habe' (!). Sueton (*Tib.* 16) fügt hinzu, dass Tiberius diesen Krieg mit 15 (!) Legionen geführt hatte, und mit derselben Anzahl von Auxiliärtruppen.

Wie wir von Rose Mary Sheldon (2020, 1012, n. 19) erfahren, gehörten zu diesen Auxiliärtruppen auch jene Landsleute des Arminius, die dann später im selben Jahr AD 9, nun aber unter dem Kommando des Arminius, P. Quinctilius Varus und seine drei römischen Legionen besiegen sollten.

*Ich schlage vor, dass Domitian die Darstellung der Piroustaie in seinem Forum in Auftrag gegeben hat, weil ausgezeichnete Soldaten aus der römischen Provinz Dalmatia, wie T. Stadius Marrax, in seinem zweiten Dakischen Krieg gedient hatten*

Nach allem, was oben gesagt wurde, ist meiner Meinung nach die Frage, warum sich Domitian dazu entschlossen hat, die *Piroustaie* in seinem *Forum* (hier Fig. 49) darstellen zu lassen, bereits vor langer Zeit beantwortet worden.

Von Carl Patsch ("Archäologisch-epigraphische Untersuchungen zur Geschichte der römischen Provinz Dalmatien, 1899) erfahren wir Folgendes. Eine Inschrift aus Aquileia zeigt, dass T. Stadius Marrax aus der römischen Provinz Dalmatia, der *primus pilus* der *legio XIII gemina* gewesen ist, von einem Kaiser hoch dekoriert worden war, dessen Name in dieser Inschrift weggelassen worden ist. Nach Patsch's Meinung hatte dieser Soldat in Domitians Dakischem Krieg(en) gedient, und war von Domitian für seine Dienste mit jenen Orden dekoriert worden, die in dieser Inschrift aufgezählt werden.

Vergleiche Patsch (1899, 268-269, Abschnitt: "VIII. Dalmatien und Dacien"): "...

2. Pais 1163 = Dessau [das heißt, *ILS, Inscriptiones Latinae Selectae*, 1892-1916] 2638 (Aquileia): T. Stadius P. f. Serg. Marrax prim(us) pil(us) leg(ionis) XIII geminae, donatus torquib(us) armillis phaleris hasta pura bis coron[is] aureis quin[que]. Der Name Stadius gestattet die Vermuthung, dass der *primus pilus* aus Risinium-Risano stammt, wo die *gens Statia* eine angesehene Rolle [Seite 269] spielte. Wie Marrax vermuthlich im dacischen Kriege unter Domitian [mit Anm. 2] so wurde ein anderes Mitglied derselben Familie von Traian anlässlich der dacischen Siege decorirt: C. I. L. III 6359 (vgl. p. 1491) ...".

In seiner **Anm. 2** auf S. 269, schreibt Patsch: "Der Kaiser, der die Orden verliehen hat, wird verschwiegen, war also *damnatae memoriae* [Hervorhebung von mir]".

Vergleiche für die Heimatstadt 'Risinium' des Soldaten T. Stadius P. f. Serg. Marrax, *prim(us) pil(us) leg(ionis) XIII geminae* in der römischen Provinz Dalmatia, den, wie Patsch (1899, 268-269) vorschlug, Domitian für seine Dienste in dem Dakischen Krieg(en) des Kaisers ausgezeichnet hat, hier. Stadius Marrax stammte aus der Gegend von Salona, das heißt, aus dem Gebiet des Volksstamms der *Piroustaie* (vgl. hier Fig. 77, Beschriftung; Risinium; Salona; Aquileia)

Vergleiche für die verschiedenen Forschungsmeinungen bezüglich des Schicksals des (ehemaligen) Gebietes der *Piroustaie* unter den Römern: Dragana Grbić (2011, 135 mit Anm. 51, 52, wörtlich zitiert und diskutiert; s.u., im Band 3-2, in *Appendix V.d.2.d*) und Géza Alföldy (1963, 194, 195, wörtlich zitiert: s.u., im Band 3-2, in *Appendix IV.d.2.e*)).

Wie Patsch (1899, 269) außerdem mitteilte, sollte ein anderes Mitglied seiner Familie unter Trajan dieselbe hohe militärische Auszeichnung erhalten.

Zwischen dem 7. und 19. Oktober 2020 hatte ich Gelegenheit, in Telefongesprächen und mit Hilfe von Emails mit Peter Herz den *primus pilus* der *Legio XIII Gemina*, T. Staius P. F. Serg. Marrax zu diskutieren, der von dieser Inschrift in Aquileia bekannt ist, und der unterschiedlich datiert worden ist. Am 19. Oktober 2020 war Herz so freundlich, mir seinen zweiten *Beitrag* zu diesem Buch zu schicken, den ich hier mit seinem freundlichen Einverständnis publizieren darf. In diesem Text schlägt Herz vor, dass mehr Argumente für die spätere Datierung sprechen. Deshalb kann Staius Marrax tatsächlich am Ende des 1. Jahrhunderts n. Chr. in der *Legio XIII Gemina* gedient haben, das heißt, unter Domitian, wie von Patsch (1899) vorgeschlagen worden ist.

**Vergleiche unten, *The second Contribution by Peter Herz : Anmerkungen zu Staius Marrax* ('Der zweite Beitrag von Peter Herz in diesem Band').**

Siehe auch unten, im Band 3-2, in *Appendix IV.d.2.e) Did Domitian intentionally represent the Piroustaie in his Forum/ Forum Nervae/Forum Transtorium? With The second Contribution by Peter Herz*; und in *Appendix V.d.2.f) Domitian's choice to represent the Piroustaie in his Forum/ Forum Nervae/ Forum Transitorium and the date of the Cancellaria Reliefs (cf. here Figs. 1; 2)*.

(*Hat Domitian die Piroustaie absichtlich in seinem Forum/ Forum Nervae/ Forum Transitorium darstellen lassen? Mit Dem zweiten Beitrag von Peter Herz; und im Appendix IV.d.2.f). Domitians Entscheidung, die Piroustaie in seinem Forum/ Forum Nervae/ Forum Transitorium darstellen zu lassen und das Datum der Cancellariareliefs (vergleiche hier Figs. 1; 2)*).

**Ich schlage deshalb vor, dass Domitian die Darstellung der *Piroustaie* in seinem *Forum* angeordnet hat, weil ihn Soldaten aus der römischen Provinz Dalmatia, wie zum Beispiel T. Staius Marrax, bei seinen Kriegszügen unterstützt hatten.**

**Und da das, meiner Meinung nach, aus einer Reihe von Gründen (diskutiert unten, im Band 3-2, in *Appendix IV.d.2.f)*, nur in Domitians Zweitem Dakischen Krieg des Jahres 89 n. Chr. geschehen sein kann, schlage ich ferner Folgendes vor : Die statuarische Ausstattung von Domitians *Forum* sollte an Domitians Sieg in diesem Krieg erinnern, den der Kaiser im November/ Dezember 89 n. Chr. mit einem Triumph über die Chatti und die Daker, gefeiert hat. - Es ist, selbstverständlich theoretisch ebenfalls möglich, dass Domitians *Forum* an alle Siege Domitians erinnern sollte. Darauf werde ich unten noch einmal zurückkommen.**

Um das oben Gesagte näher zu erläutern, zitiere ich im Folgenden einige Passagen aus unten, *Appendix IV.d.2.f) Domitian's choice to represent the Piroustaie (cf. here Fig. 49) in his Forum/ Forum Nervae/ Forum Transitorium and the date of the Cancellaria Reliefs (cf. here Figs. 1; 2)*.

(*Domitians Entscheidung, die Piroustaie (vergleiche hier Fig. 49) in seinem Forum/ Forum Nervae/ Forum Transitorium darstellen zu lassen und die Datierung der Cancellariareliefs (vergleiche hier Figs. 1; 2)*):

``Wie wir ... gesehen haben (s.u., im Band 3-2, in *Appendix IV.d.1.)*), kann die Darstellung der *Piroustaie* in der *Porticus ad Nationes* des Augustus als eine der befriedeten 'Nationen' des Augustus interpretiert werden.

**In Domitians *Forum* repräsentierten die *Piroustaie* dagegen, meiner Meinung nach, eine der 'provinciae fideles' ('treuen Provinzen') des römischen Reiches unter Domitian - um Marina Sapellis Buchtitel von 1999 auszuleihen; s.u., im Band 3-2, in *Appendix IV.d.1.)*) - die auf diese Weise Domitians gute Herrschaft bezeugt haben.**

**Wir haben ... von Alfred Hirt erfahren (2019, 17 mit Anm. 100, ausführlicher zitiert unten, im Band 3-2, in *Appendix IV.d.2.e)*), dass es der Dakische König "Diurpaneus [war], who waged war against Domitian**

(Oros. 7.10.4; Jord. Get. 76, 78)" ('dass der Dakische König Diurpaneus gegen Domitian einen Krieg angefangen hatte'). Als die Feindlichkeiten der Daker begannen, hatten die Volksstämme, die in der benachbarten römischen Provinz Dalmatia lebten, nun aber nicht etwa die Gelegenheit ergriffen, gegen die Römer zu revoltieren. Einige Bewohner der Provinz Dalmatia sind statt dessen in die römische Armee eingetreten, die gegen die Daker kämpfte, und einige dieser Soldaten sind sogar von Domitian in Anerkennung ihrer Dienste mit Orden ausgezeichnet worden (s.o., Punkt 7.) [das heißt, T. Statius Marrax]).

Wir haben oben außerdem von R.R.R. Smith (2013, 121) gehört, dass die *Piroustaë*, genau wie viele andere vergleichbare Volksstämme, auch deshalb innerhalb der großen Anzahl von 'Nationen' in der *Porticus ad Nationes* des Augustus dargestellt worden waren, weil sie an den Grenzen des römischen Weltreichs lebten und auf diese Weise "express the wide geographical extent of Roman rule" ('die große Ausdehnung der römischen Herrschaft zum Ausdruck bringen konnten').

**Da ich diese Tatsache mit berücksichtige, schlage ich vor, dass sich Domitian auch deshalb zur Darstellung der *Piroustaë* in seinem *Forum/ Forum Nervae/ Forum Transitorium* entschlossen hat, weil Soldaten dieses Volksstamms, der jetzt in der römischen Provinz Dalmatia lebte, unter seinem persönlichen Kommando erfolgreich die Grenze des römischen Weltreichs verteidigt hatten [Hervorhebung von mir]''.**

**Wenn das der Wahrheit entsprechen sollte, dass würde dies die oben erwähnte Hypothese von R.R.R. Smith (2013, 119) beweisen, derzufolge das *Forum* Domitians, mit seinen 42 Darstellungen von 'Volksstämmen', als "... another porticus ad nationes" ('eine zweite *Porticus ad Nationes* [wie jene des Augustus']) betrachtet werden kann. Für eine Diskussion; s.u., im Band 3-2, in *Appendix IV.d.2.b*); und im *Appendix IV.d.2.f*).**

Erst nachdem dieses Kapitel in einer Vorschau auf unserem Webserver veröffentlicht worden war, habe ich Paolo Liveranis (2021, 85-86) Beobachtungen zu Domitians *Forum* gelesen, besonders bezüglich der allegorischen Darstellungen der *gentes* oder *nationes*. Was ihre Bedeutung betrifft, so ist er zu sehr ähnlichen Schlussfolgerungen gelangt, wie jenen, die hier soeben präsentiert worden sind:

"The choice, on the other hand, was counterbalanced but the subject of the panels decorating the attic above the frieze. **Only one of them survives in place. It portrays an armoured female figure, which has been traditionally interpreted as Minerva. In 2000, the fragments of another female figure were excavated,** and a more careful consideration of the two panels connected them with other examples of personifications on imperial monuments. The first parallel came from the well-preserved sculptural decoration of the Sebasteion in Aphrodisias, a sanctuary honouring the emperors. [mit Anm. 15] Here the personification of the Pirusti, a tribe of the Illyricum (Dalmatia), is very similar from a typological point of view to the alleged 'Minerva'. **The two panels, therefore, represent *gentes* or *nationes*, peoples (not provinces as [Seite 86] usually understood) of the empire according to a motif widely employed in the imperial monuments of the Julio-Claudian period and also attested during the second century.** [mit Anm. 16] The earlier Forum of Augustus hosted a series of dedication from several *gentes*, according to the historical sources. [mit Anm. 17] **The Domitianic cycle, therefore, is quite traditional, alluding to the multifarious populations that made up the Roman Empire, grouped around the emperor as sign of unity [Hervorhebung von mir]''.**

In seiner **Anm. 15**, schreibt Liverani: "Ungaro 2005, Del Moro 2007, 181-185".

In seiner **Anm. 16**, schreibt er: "Liverani 1995".

In seiner **Anm. 17**, schreibt er: "Vell. Pat. 2.39.2, cf. *CIL* VI, 31267".

Vergleiche jetzt Liverani (2023, 117 mit Anm. 15-17; das heißt, die italienische Version der oben zitierten Passage aus P. LIVERANI 2021).

Noch später habe ich den Artikel über das *Forum Domitians* von Antonella Corsaro und Beatrice Pinna Caboni erhalten (in: A. CORSARO, B. PINNA CABONI und C. PARISI PRESICCE, "Domiziano, Nerva e il loro Foro", 2023, 74). Bezüglich der Bedeutung der dargestellten *gentes* und *nationes* sind sie zu ähnlichen Schlüssen gelangt wie hier von mir vorgeschlagen; und sie glauben gleichfalls, dass der Architekt dieses *Forums* Rabirius war:

**"La figura conservata nell'attico, al centro dell'intercolumnio [cf. here Fig. 49] e originariamente interpretata come Minerva, sarebbe invece parte di una sequenza politicamente e ideologicamente assai significativa, costituita dalla raffigurazione simbolica delle diverse genti (*gentes* e *nationes*), ormai incluse in un impero che si voleva rappresentare egemonico, pacificato e inclusivo sotto l'egida imperiale.** Altri contesti monumentali, quali il giulio-claudio *Sebasteion* di Afrodisia di Caria (attuale Turchia) e l'antoniniano *Hadrianeum* di Roma [with n. 24], offrono validi confronti per questo programma decorativo e per le iconografie scelte. **Purtroppo solo la figura ancora *in situ* nelle Colonnacce è stata identificata con la rappresentazione della tribù illirica dei Pirusti.** Resta incerta invece l'attribuzione di una seconda figura scoperta nel corso degli scavi del 2000, ora esposta nel Museo dei Fori Imperiali nei Mercati di Traiano, e di un frammento di testa scoperto negli scavi del 1995-97 [with n. 25]. Queste poche raffigurazioni, superstiti di una lunga teoria di almeno 45 pannelli, danno comunque contezza della varietà e della tipizzazione etnica delle figure ... **L'originalità dell'impianto del Foro Transitorio e delle soluzioni adottate ha permesso di postulare la realizzazione del progetto all'architetto Rabirio, cui si attribuiscono le brillanti soluzioni di numerose committenze imperiali, tra le quali il noto palazzo imperiale sul Palatino [with n. 26]"**.

In ihrer **Anmerkung 24**, schreiben Corsaro und Pinna Caboni: "Per il *Sebasteion*: Smith 2013; per l'*Hadrianeum*: Parisi Presicce 1999; Parisi Presicce 2005 [*i.e.*, here C. PARISI PRESICCE 2005a]; Parisi Presicce, Baldi 2023".

In ihrer **Anmerkung 25**, schreiben sie: "Wiegartz [*corr.*: Wiegartz] 1996, pp. 171-179; Gros 2009, pp. 106-107; Pinna Caboni 2015, p. 104".

In ihrer **Anmerkung 26**, schreiben sie: "Bauer 1976-1977; Gros 2009, p. 106; Meneghini 2009, pp. 103-104; Viscogliosi 2009, p. 208; Nocera 2015, pp. 151km-154".

Aber erst als dieser Band in Druck gegeben werden sollte, habe ich den Artikel von Vibeke Goldbeck gefunden ("Architekturkopien? Terminologische Überlegungen zur Rezeption von Bauwerken und ihrer Ausstattung bei den Römern. Untersucht am Beispiel des Forum Augustum und der Porticus ad Nationes", 2017). Goldbeck selbst zitiert einen weiteren ihrer früheren Aufsätze ("Die Porticus ad Nationes des Augustus", 2015a), den ich bislang ebenfalls übersehen hatte. Zu ungefähr derselben Zeit war Hans Rupprecht Goette so freundlich, mir den Aufsatz von David Ojeda zu schicken ("A Porticus ad Nationes in Italica", 2023); s.u., in Band 3-2, im Kapitel *Introductory remarks and acknowledgements*.

Ojeda (2023) diskutiert zwei weitere neuere relevante Aufsätze derselben Autorin: Vibeke Goldbeck ("Die Rezeption der stadtrömischen Monumente des Augustus im Imperium Romanum", 2020); und Vibeke Goldbeck ("Monuments Abroad' - Zur Rezeption kaiserlicher Monumente im Imperium Romanum", 2021).

Goldbeck (2020, 37-38) stützt ihre Argumentation auf dieselben Publikationen, die auch ich für diesen Themenkomplex konsultiert habe. Und bezüglich der Interpretation der *nationes* in der *Porticus ad Nationes*, der *ethne* im *Sebasteion* von Aphrodisias (hier **Fig. 50**) und der *gentes* im *Forum Domitians*/ dem *Forum Nervae*/ *Forum Transitorium* (hier **Fig. 49**) und im *Hadrianeum* (hier **Fig. 48**) kommt sie zu ähnlichen Hypothesen wie bereits R.R.R. Smith (1988; und 2013), dem auch ich in dieser Studie folge:

### **"Die Porticus ad Nationes**

**In Aphrodisias steht das berühmte Sebasteion**, das im 2. Viertel des 1. Jahrhunderts n.Chr. von zwei lokalen Familien errichtet wurde [mit Anm. 25]. Sein umfangreicher Bildschmuck zeigt Kaiser, Götter, Kaiser im Göttergewand und mythische Heroen in griechisch-hellenistischer Motivtradition. Daneben zeigt er aber auch eine Reihe von Personifikationen, sogenannten Ethnien oder *Nationes*, die in der Bilderwelt des

hellenistischen Kleinasien wie ein Fremdkörper wirken. Inzwischen lässt sich das Vorkommen dieses für die Region ungewöhnlichen Motivs gut erklären. [Seite 38].

Hans Wiegartz hat schon 1996 auf die enge typologische Zusammengehörigkeit einer der Ethnien des Sebasteions mit der einzigen vollständig erhaltenen Gewandfigur von der Attika des Forum Transitorium aufmerksam gemacht und ein gemeinsames stadtrömisches Vorbild für beide vermutet [mit Anm. 26]. Bei den jüngeren Grabungen auf dem Forum wurde der Kopf einer weiteren Personifikation gefunden, der die von Wiegartz vorgeschlagene Idee, an der Attika einen dem Sebasteion vergleichbaren Zyklus von *ethnē*, *nationes* oder *simulacra gentium* anzunehmen, weiter untermauert [mit Anm. 27]. Aufgrund des Beginns der Bauarbeiten in Aphrodisias um das Jahr 20 n.Chr., muss das beiden Monumenten zugrundeliegende Vorbild spätestens in tiberischer Zeit entstanden sein. Es könnte sich dabei um die sogenannte *Porticus ad Nationes* handeln. Über diese ist wenig bekannt, sie wird aber wörtlich übereinstimmend von zwei voneinander völlig unabhängigen Quellen erwähnt [mit Anm. 28]. Aus beiden geht hervor, dass Augustus eine Porticus errichtet und mit *simulacra omnium gentium*, also einem Zyklus von Nationenpersonifikationen ausgestattet habe. Diese Porticus habe man *Porticus ad Nationes* genannt [mit Anm. 29]. **Es spricht manches dafür, dass die Zyklen von Personifikationen vom Sebasteion aus Aphrodisias und vom Forum Transitorium ebenso wie diejenigen vom Templum Divi Hadriani allesamt auf das Vorbild der *simulacra omnium gentium* dieser *Porticus ad Nationes* zurückgehen**, und man sich aus diesem Grunde im Umkehrschluss eine Vorstellung von deren ursprünglichen Aussehen machen kann [mit Anm. 30; Hervorhebung von mir].

In ihrer **Anmerkung 25** schreibt Goldbeck: "Siehe z. B. [zum Beispiel] Smith 1988; Smith 2013.

In ihrer **Anmerkung 26** schreibt sie: "Wiegartz 1996".

In ihrer **Anmerkung 27** schreibt sie: "Siehe Ungaro [= hier M.P. DEL MORO] 2007, 178-191 m.[it] Abb. 259-261; Meneghini 2015, 68-77 m.[it] Abb. 89".

In ihrer **Anmerkung 28** schreibt sie: "Plin. nat. 36, 39; Serv. Aen. 8, 721".

In ihrer **Anmerkung 29** schreibt sie: "Möglicherweise handelt es sich dabei um einen zeitgenössischen Rufnamen für die Porticus Vipsania. Siehe dazu Goldbeck 2015b [= hier V. GOLDBECK 2015a], 215–217".

In ihrer **Anmerkung 30** schreibt sie: "Dazu ausführlich Goldbeck 2015b [= hier V. GOLDBECK 2015a]".

Für einige Bemerkungen zu diesen Publikationen; s.o., in Chapter IV.1.1.h); zu *The Marble Forum at the Colonia Augusta Emerita (Mérida) in Spain*; s.u., zu *The Contribution by Walter Trillmich on the headless marble togati found in the so-called Marble Forum at Mérida in Spain, one of which looks like the togate youth on Frieze B of the Cancellaria Reliefs*.

(Kapitel IV.1.1.h); zu *Das Marmorforum in der Colonia Augusta Emerita (Mérida) in Spanien*; s.u., *Der Beitrag von Walter Trillmich zu den kopflosen Marmortogati, die im sogenannten Marmorforum in Mérida in Spanien gefunden worden sind, von denen einer so aussieht wie der junge Mann in der Toga of Fries B der Cancellaria Reliefs*); und für eine detaillierte Diskussion; s.u., in Band 3-2, im *Appendix IV.d.2.*)

Kehren wir nun zu unserem Hauptthema zurück.

Domitian hat diesen Triumph vom November/ Dezember 89 n. Chr. zusammen mit dem Volk von Rom, gefeiert, im Kolosseum. Dort hat er für seine Gäste im Dezember 89 ein verschwenderisches Bankett organisiert, bei dem er sie mit Geschenken buchstäblich 'überschüttet' hat, wie Statius (*Silvae* 1,6: *Saturnalia principis*) berichtet.

Was Domitian bei dieser Gelegenheit tat : das Volk von Rom zu einem üppigen Bankett einzuladen und seinen Gäste großzügige Geschenke zu machen (obwohl es Sitte war, dass Freunde bei dieser Gelegenheit Geschenke *austauschten*), waren typische Gebräuche bei den Saturnalien; s.u., im Band 3-2, in *Appendix I.f.1.*).

Wenn man fragt, warum sich Domitian dazu entschlossen haben mag, dieses Bankett im Zeitraum der Saturnalien zu veranstalten (die vom 17.-23. oder bis zum 25. Dezember andauerten, je nachdem, welchen Kalender man zu Rate zieht), dann glaube ich, dass er den Wunsch hatte, gleichzeitig mit seinen Gästen die *Vicennalia* (das 20jährige Jubiläum) seiner geglückten Flucht vom *Capitolium* am 19. Dezember 69 n. Chr. zu

feiern; s.o., im Kapitel *Preamble: Domitian's negative image; Section III. My own thoughts about Domitian; at point 1.) Domitian's escape from the Capitolium proper on 19th December AD 69* (s.o. Kapitel *Preamble : Domitians negatives Image; Abschnitt III. Meine eigenen Gedanken zu Domitian; zu Punkt 1.) Domitians Flucht vom Capitolium am 19. Dezember 69 n. Chr.*); vergleiche auch unten, in Band 3-2, zu *Appendix I*.

Vergleiche für eine Diskussion von Domitians Bankett im Colosseum im Dezember 89 n. Chr.: Lisa Cordes (2014, 355-356), wörtlich zitiert und diskutiert oben, im Kapitel *Preamble : Domitian's negative image; II. Conclusions : Domitian's representations of his military successes and his claims to be of divine descent and to possess a divine nature*.

(*Preamble : Domitians negatives Image; Abschnitt II. Schlussfolgerungen : Domitians Darstellungen seiner militärischen Erfolge und sein Anspruch, göttlicher Abstammung und göttlicher Natur zu sein*).

**Und da ich jenen Gelehrten folge, die glauben, dass die Werkstatt, welche für die skulpturale Ausstattung von Domitians Forum verantwortlich war, auch die Cancellariareliefs schuf (s.o., zu Punkt 1.), schlage ich außerdem vor, dass auf Fries A dargestellt ist, wie Domitian (hier Fig. 1; Figs. 1 und 2 Zeichnung: Figur 6) seine *profectio*-Zeremonie im Frühling des Jahres 89 n. Chr. feiert, nach der er Rom für diesen Krieg verlassen sollte.**

Interessanterweise hatte meine gute, kürzlich verstorbene Freundin Amanda Claridge (1. September 1949 - 5. Mai 2022), bereits in ihrem Romführer (2010, 169) Folgendes geschrieben:

**"The Forum of Nerva (actually built by his predecessor Domitian in commemoration of his Dacian triumph of AD 89 ... [Hervorhebung von mir]"**.

(*Das Nervaforum (in Wirklichkeit von seinem Vorgänger Domitian zur Erinnerung an seinen Dakischen Triumph 89 n. Chr. erbaut ...*).

Erst nachdem wir dieses Kapitel als Vorschau für dieses Buch über Domitian auf unserem Webserver publiziert hatten, habe ich beschlossen, hier eine weitere Textpassage aus Amandas Romführer anzufügen. Der Grund war, dass ich in der Zwischenzeit in T.P. Wisemans Buch (2019, 112) seine Übersetzung und Interpretation von Vergil (*Aen.* 8, 714-723) gefunden hatte, dem wir uns gleich zuwenden werden.

Ich meine die Bemerkungen von Amanda Claridge (2010, 174-175, mit Fig. 66, die oben bereits weniger ausführlich zitiert worden sind), und die sich auf das Relief mit der Darstellung der *Piroustaie* in Domitians Forum in Rom beziehen, und auf die Darstellung der *Piroustoi* im *Sebasteion* von Aphrodisias in der Türkei (vergleiche hier **Figs. 49; 50**):

**"On the attic storey the surviving sculptural panel in the recess shows a helmeted [vergleiche hier Fig. 49; Seite 175] female carrying a shield, recently recognized (thanks to a labelled version found at Aphrodisias in Turkey [vergleiche hier Fig. 50]) as the personification of the *Piroustaie*, a people of the Danube. She was probably one of a series of subject peoples of the Empire whose painted images or effigies were paraded in Domitian's triumph as participating in and applauding his victory in Dacia in 89 and then carved in stone as part of the Forum, which commemorated his victory in permanent form" [Hervorhebung von mir]"**.

Für eine Diskussion s.u., im Band 3-2, in *Appendix IV.d.2.a*).

Als ich Amanda fragte, wessen Idee *diese* Interpretation der Reliefs gewesen sei, konnte sie sich auch in diesem Fall zunächst nicht erinnern. Aber mitten in unseren langen Diskussionen der oben zusammengefassten Studien zu diesem Thema schrieb mir Amanda am 23. Juli 2020 eine Email (wörtlich zitiert unten, im Band 3-2, in *Appendix IV.d.2.f*)), in der sie mir, zu meiner großen Überraschung, mitteilte, sie glaube, der Vorschlag, dass Domitians Forum womöglich an Domitians Triumph von 89 n. Chr. erinnern sollte, sei ihre eigene Idee gewesen; der Grund hierfür sei die Darstellung der *Piroustaie* in diesem Forum

gewesen. Und am 24. Juli 2020 schrieb mir Amanda eine Email, in der sie mir erlaubt hat, das in diesem Buch zu erwähnen. Siehe für all das oben, Kapitel *Introductory remarks and acknowledgements* ('Einführende Bemerkungen und Dank').

Vergleiche mit den oben zitierten Bemerkungen von Amanda Claridge (2010, 174-175) die folgenden Beobachtungen, die T.P. Wiseman (2019, 112) zu Vergil (*Aen.* 8.714-723) gemacht hat.

Meiner Meinung nach bestätigt Vergils erfundene Szene *a*) die soeben zitierte Hypothese von Amanda Claridge (2010, 174-175) bezüglich der Darstellungen von 'unterworfenen Völkern' im *Forum* Domitians. Vergils 'Bericht' scheint bislang noch nicht als möglicher Anlass erkannt worden zu sein, die hier diskutierten Darstellungen von unterworfenen Völkern anzufertigen (vergleiche hier **Figs. 48-50**). Und das, obwohl Vergils Beschreibung 'dieser langen Reihe von eroberten Völkern, die sowohl nach Sprache, als auch nach Bekleidung und Bewaffnung verschieden sind', wie Wiseman (2012, 112) Vergil (*Aen.* 8.714-723) übersetzt, meiner Meinung nach erklären kann, warum *b*) Augustus die 'Porticus ad Nationes' in Rom in Auftrag gegeben hatte.

Wie wir oben gehört haben, waren ihrerseits die Darstellungen der 'unterworfenen oder eroberten Völker' in der *Porticus ad Nationes* des Augustus das Vorbild aller späteren, hier diskutierten Reliefs geworden : denen im *Sebasteion* von Aphrodisias (hier **Fig. 50**), in Domitians *Forum* (hier **Fig. 49**), und im *Hadrianeum* (hier **Fig. 48**).

T.P. Wiseman (2019, 112) schreibt:

**"Meanwhile, in 29 BC victorious Caesar [i.e., Octavian/ Augustus] returned to Rome. On 13-15 August he held three successive triumphal processions, for the Illyrian, Actian, and Alexandrian campaigns. The following year he undertook the restoration of all the city's temples that needed repair, and in the autumn held the first of a new series of quadrennial games to celebrate the victory at Actium. That led straight to the dedication, on 9 October 28 BC, of the temple of Apollo.**

**Virgil [Aen. 8.714-723] presented a composite tableau of all these events as the prophetic culmination of the scenes on the shield of Aeneas :**

**But Caesar [i.e., Octavian/ Augustus], who had entered the walls of Rome in a triple triumph, was consecrating an everlasting vow to the gods of Italy - three hundred great shrines throughout the whole city. The streets were loud with gladness and games and applause; at all the temples there were matrons dancing, and altars, and before the altars slain bullocks strewed the ground. He himself, seated in the snow-white threshold of gleaming Phoebus [i.e., of the Temple of Apollo Palatinus], is reviewing the gifts of nations and fixing them to the proud doors. The conquered peoples process in a long line, as varied in language as they are in costume and arms.**

**The 'gifts' of conquered peoples were of course the spoils of war. Paraded on wagons in the triumphal processions, they were now, at the end of the long sequence of celebrations, brought to the Palatine for dedication to the god [i.e., Apollo] and display at his temple.** This too was a parade, and Commander Caesar [i.e., Octavian/ Augustus] had provided the space to accommodate it. Fig. 51 Fig. 46 [Hervorhebung von mir]".

Ich stimme mit Amanda Claridge (1998, 131; *dies.* 2010, 142-143; *dies.* 2014, 128, mit Anm 5, S. 130, 142), Parrish Elizabeth Wright (2020, 47-49), und T.P. Wiseman (2019, 113, Bildunterschrift seiner Fig. 51, S. 122-128; *ders.* 2022, 20-22, alle unten wörtlich zitiert, im Band 3-2, in *Appendix VI.*) darin überein, dass unter anderem Vergil (*Aen.* 8.714-723) beweist, dass der Tempel des Apollo Palatinus nach Nordosten orientiert war (vergleiche hier **Figs. 58; 73**), und nicht, wie die meisten anderen Gelehrten glauben, nach Südwesten.

Vergil (*Aen.* 8.714-723) beschreibt, wie diese 'lange Reihe von eroberten Völkern, die (Weih-)Geschenke herbeitragen', die (Octavian/ Augustus oder sie selbst?) dann dem Apollo Palatinus weihen. 'Während

dieser ganzen Zeremonie sitzt Octavian/ Augustus auf der Schwelle des Apollotempels und begutachtet die Parade dieser eroberten Völker. Er nimmt die (Weih-)geschenke von ihnen in Empfang und befestigt sie an den Türen des Apollotempels'.

Claridge, Wright und Wiseman (a.a.O.) gelangen zu dem (meiner Meinung nach überzeugenden) Ergebnis, dass der Tempel des Apollo Palatinus nach Nordosten orientiert gewesen sein muss, weil sie annehmen, dass diese Parade von eroberten Völkern, die diese (Weih-)geschenke herbeitragen, die dann dem Apollo geweiht werden, vom *Forum Romanum* herauf zum Palatin gekommen seien.

Wiseman (2022, 21) schreibt zum Beispiel diesbezüglich: "... **the long line of conquered peoples reviewed by Augustus in Virgil's imagined scene (note 80 above [quoting Virgil's Aeneid 8.714-23]) bring their tributary offerings from the direction of the Forum** [Hervorhebung von mir]".

Für eine ausführliche Diskussion der Kontroverse bezüglich der Orientierung des Tempels des Apollo Palatinus; s.u., in Band 3-2, in *Appendix VI*; im Abschnitt I.

Außer der Tatsache, dass ich glaube, dass Vergils Text (*Aen.* 8.714-723) erklären kann, warum Augustus die *Porticus ad Nationes* erbaut hat, in der nun nicht mehr die eroberten Völker selbst vorgeführt wurden, sondern *allegorische Darstellungen* von ihnen, möchte ich aber noch auf etwas anderes hinweisen. Bei dieser Zeremonie vor dem Tempel des Apollo auf dem Palatin, die Vergil erfunden hat, handelt es sich um eine klassische Demonstration von Augustus' Doktrin 'peace through victory' ('Frieden durch Sieg'), die oben, im Kapitel *What this Study is all about* ('Worum es in dieser Studie geht') besprochen worden ist.

Wie Peter Wiseman (2019, 112) zutreffend feststellt, handelt es sich bei diesen 'Geschenken', die von den 'eroberten Völkern' in dieser Zeremonie herbeigetragen werden, natürlich um die Kriegsbeute des Octavian/ Augustus. Diese 'eroberten Völker, nach Sprache, Bekleidung und Bewaffnung verschieden', wie Vergil schreibt, die in dieser Zeremonie in einer langen Reihe zum Tempel des Apollo Palatinus kamen, hatten eine ganze Reihe von demütigenden Erfahrungen machen müssen. Zunächst waren diese eroberten Völker von Octavian/ Augustus ihrer Freiheit und dieser wertvollen Besitztümer beraubt worden. Als nächstes waren die einzelnen Bürger dieser Völker, die nun diese 'Geschenke' in dieser Zeremonie herbeitrugen, zusammen mit dieser Kriegsbeute, in den drei Triumphzügen des Octavian/ Augustus 'vorgeführt' worden.

Und schließlich hatte Octavian/ Augustus obendrein, zumindest in Vergils Erzählung, die Stirn besessen, diese Zeremonie zu organisieren, in der die einzelnen Bürger dieser eroberten Völker nun *selbst* ihre ehemaligen Besitztümer zum Tempel des Apollo Palatinus tragen mussten, wo sie dann von Octavian/ Augustus (oder 'freiwillig' von ihnen selbst?) *dem* Gott geweiht wurden, der ihm, wie Octavian/ Augustus und Vergil glaubten, und Vergil mit der Beschreibung dieser Zeremonie gezeigt hat, die Siege über diese Völker gewährt hatte (!).

Wenn man das alles bedenkt, dann wird es sehr verständlich, dass die *Piroustae* and Arminius, seine Landsleute die Cherusci, und ihre Verbündeten so verzweifelt versucht haben, sich derartige demütigende Erfahrungen zu ersparen. Um diesen Punkt abzuschließen, wiederhole ich deshalb noch einmal, was oben bereits gesagt worden ist:

'See also R.R.R. Smith (2013, 91, n. 44) for the fact that Tiberius could only defeat the *Piroustae*, "when they were almost entirely exterminated" [so Velleius Paterculus 2.115.2-4; my emphasis]" (!)'.  
(Vergleiche R.R.R. Smith (2013, 91, Anm. 44) für die Tatsache, dass Tiberius die *Piroustae* nur besiegen konnte, "als sie fast ausgerottet waren" [so Velleius Paterculus 2.115.2-4; Hervorhebung von mir]" (!).-

3.) Der Vorschlag, zuerst unterbreitet von Filippo Magi (1939, 205), wie berichtet von Bartolomeo Nogara (1939, 8, 106, 115-116, 227), und von Antonio Maria Colini (1938 [1939], 270); vergleiche Heinz

Kähler (1950, 30-41), Jocelyn M.C. Toynbee (1957, 19), John Henderson (2003, 249), und besonders von Massimo Pentiricci (2009, 61-62; s.o., Anm. 262, 263, 264, in Kapitel I.3.2), der diese früheren Hypothesen diskutiert, und der selbst vorschlägt, dass die Cancellarieliefs die parallelen, gegenüberstehenden Wände eines Durchgangs von einem Bogen Domitian dekoriert hätten. Siehe auch oben, die Bildunterschrift von hier Figs. 1 und 2 der Cancellarieliefs, Zeichnung, 'in situ'.

4.) Filippo Coarellis Vorschlag (2009b, 88; ders. 2012, 283, 286-291, 481-483), dass Domitian den *Arcus Domitiani* auf dem Palatin seinem Vater, dem *Divus Vespasianus*, geweiht haben könnte.

**Der *Arcus Domitiani*/ des *Divus Vespasianus* ?, der Bogen Domitians am Haupteingang seines Palastes auf dem Palatin, der *Domus Augustana*, und Domitians (angeblicher) Tempel des Iuppiter Propugnator, der Tempel des Iuppiter Invictus vor seiner *Domus Augustana*.**

Reste des westlichen Pylons dieses *Arcus Domitiani* (die einer späteren Epoche angehören) stehen noch vor Domitians Palast auf dem Palatin, der '*Domus Flavia*'/ *Domus Augustana* (vergleiche hier Figs. 8.1; 58).

Dass Domitian möglicherweise den *Arcus Domitiani* seinem Vater, dem *Divus Vespasianus*, geweiht hat, ist Teil von Coarellis Hypothese (2009b, 88; ders. 2012, 481-483), derzufolge ein Besucher von Domitians Palast, der vom Bogen des *Divus Titus* auf der *Velia* heraufkam, dann unter dem Bogen des *Divus Vespasianus* hindurchging, um schließlich an der "Porta principale" (dem 'Haupteingang') auf der Nordseite von Domitians Palast anzukommen, der *Domus Augustana*, wo Coarelli einen Bogen des Domitian annimmt. An diesem Haupteingang von Domitians *Domus Augustana* nimmt Coarelli (2012, 486-491) das *Pentapylon* an, ein Monument, das ausschließlich in den Konstantinischen Regionenkatalogen genannt wird, und das Coarelli mit dem eben erwähnten Bogen des Domitian an der "Porta principale" identifiziert, den er sich als Triumphbogen vorstellt.

Dieser nördliche Teil von Domitians Palast, den Helge Finsen (1969, 8) als "no man's land" bezeichnet hat, ist sehr schlecht erhalten. Es besteht aber kein Zweifel, dass an dieser Stelle der Haupteingang des Palastes lokalisiert werden kann; vergleiche Coarelli (2012, 487, mit Anm. 479, der hierzu Literatur angibt: U. WULF-RHEIDT und N. SOJC 2009, 268-272, Figs. 3; 4).

Bezüglich dieses Weges vom Bogen des *Divus Titus* auf der *Velia*, vorbei am Bogen des *Divus Vespasianus* zum Bogen des Domitian, schlägt Coarelli (2012, 483) überzeugend Folgendes vor:

**"La scelta di 'sacralizzare' questo percorso con monumenti dedicati ai due primi imperatori flavi si spiega con l'assoluta centralità dell'elemento dinastico nella politica di Domiziano [my emphasis]".**

(Die Entscheidung, diesen Weg 'sakral zu überhöhen', mit Monumenten, die den beiden ersten flavischen Kaisern dediziert sind, erklärt sich aus der absolut zentralen Bedeutung der flavischen Dynastie in Domitians Politik').

Der oben zitierten Annahme von Coarellis (2009b; 2012) 'drei Bögen' sind Aurora Raimondi Cominesi und Claire Stocks (2021, 10; dies. 2023, 41), sowie Raimondi Cominesi (2022, 109-110, mit Anm. 99-102) gefolgt, wobei letztere den Haupteingang zu Domitians Palast *Domus Augustana* an derselben Stelle annimmt wie Coarelli (2012).

In ihrem letzten, posthum erschienenen Artikel über Domitians Palast, geht Wulf-Rheidt (2020, 188) auf Coarellis (2009b; 2012) Ideen bezüglich dieses Domitiansbogens am Haupteingang seiner *Domus Augustana* nicht ein. Sie selbst präsentiert die Ergebnisse ihrer Forschungen zu dem oben erwähnten "no man's land". Wichtig für unser hier diskutiertes Thema sind die Tatsachen, dass auch Wulf-Rheidt (a.a.O) an derselben Stelle wie Coarelli einen Bogen als Haupteingang zur *Domus Augustana* annahm, dass dieser Bogen und der anschließende große Hof, den sie als *atrium* interpretierte, bereits von Domitian erbaut worden ist, und dass

dieses ganze Ensemble sehr stark von späteren Kaisern verändert werden sollte, zum Beispiel von Hadrian; vergleiche hierzu auch Wulf-Rheidt (2020, 191).

**Wulf-Rheidt (2020, 188) schrieb: "I risultati delle ricerche sul palazzo flavio lasciano ricostruire il seguente quadro ... il visitatore venendo dal Foro accedeva all'entrata principale sul *Clivus Palatinus* mediante un arco, nel quale doveva essere il presidio armato della guardia imperiale (fig. 2a) [Hervorhebung von mir]"**.

(`Die Erforschung des flavischen Palastes erlaubt es, folgende Vorstellung zu entwickeln ... ein Besucher, der vom Forum kam, näherte sich einem Bogen, dem Haupteingang [des Palastes] am *Clivus Palatinus*, in dem sich die Garnison der bewaffneten kaiserlichen Garde befunden haben muss`).

In die Pläne von Ricardo Mar (2009, 256, Fig. 3), Filippo Coarelli (2012, 484, Figs. 163; 164 [ein Plan von R. MAR 2005]) und Ulrike Wulf-Rheidt (2020, 186, Fig. 2) sind beide Pylone des *Arcus Domitiani* eingetragen, ich selbst habe in unsere Karten den zweiten (östlichen) Pylon des *Arcus Domitiani* nicht integriert, aus Gründen, die oben, in Kapitel VI.3.; *Addition* (`Zusatz`) erklärt werden. Dieser östliche Pylon wurde in einer Ausgrabung unter der Via di S. Bonaventura entdeckt (vergleiche hier **Fig. 73**). Für ein Gebäckfragment dieses *Arcus Domitiani*; vergleiche Kristine Iara (in: F. COARELLI 2009a, 505, Kat. Nr. 108).

Westlich vom westlichen Pylon des *Arcus Domitiani* haben wir aus der Karte SAR 1985 zwei Fundamente kopiert, deren Identifizierung heftig umstritten ist.

Vincenzo Graffeo und Patrizio Pensabene (2014; *dies.* 2016-2017) konnten diese Fundamente erneut ausgraben. Mein Dank gilt Patrizio Pensabene, der, auf meinen Wunsch hin, so freundlich war, mir diese beiden Publikationen ihrer Ausgrabung zu schicken. Graffeo und Pensabene schreiben diese Fundamente zwei verschiedenen kaiserzeitlichen Tempeln zu, die beide nach Süden orientiert waren, und innerhalb des östlichen der beiden Fundamente, das ins zweite Jahrhundert n. Chr. datierbar ist, haben sie eine oder zwei republikanische Phasen dieses Tempels gefunden; s.u., in Band 3-2; in *Appendix VI.*; Abschnitt X.

Ich folge deshalb Graffeos und Pensabenes (2014; *id.* 2016-2017) Vorschlag, diesen Tempel mit dem des Iuppiter Invictus zu identifizieren, der während der Republik, möglicherweise im 3. Jh. v. Chr., gegründet worden war. Für eine Diskussion der Forschungsmeinungen zum Tempel des Iuppiter Invictus; s.u., im Band 3-2, im *Appendix VI.*; Abschnitt VII.

Seit seiner ersten Ausgrabung ist dieses angeblich eine Tempelfundament (in Wirklichkeit sind es jedoch zwei Tempelfundamente) unterschiedlich identifiziert worden; vergleiche hier **Fig. 58**, Beschriftungen: Temple of Iuppiter INVICTUS ? or of IUPPITER STATOR ? IUPPITER VICTOR ? IUPPITER PROPUGNATOR ?

Weil Filippo Coarelli (2012, 282-285, 482, mit Anm. 468, S. 485, Figs. 164-166) (meiner Meinung nach irrtümlich) dieses Fundament mit dem des Tempels für Iuppiter Propugnator identifiziert hat (der nur in kaiserzeitlichen Inschriften erwähnt wird), (angeblich) erbaut von Domitian, habe ich *alle* Identifizierungen dieser (beiden) Tempelfundamente im Detail untersucht.

Siehe unten, im Band 3-2, im *Appendix VI.*; Abschnitte I.-XII. *A digression on Domitian's intention to emulate Augustus and Nero. Domitian built his Palace `Domus Flavia' the Domus Augustana on the Palatine deliberately at the site of the (real) House of Augustus. As the `new founder of Rome', and again like Augustus, Domitian emulated also Romulus (or else compared the achievements of his entire dynasty with those of Romulus). With summaries of the recent discussion concerning the following subjects ... a temple podium, which has been identified as that of the Temple of Iuppiter Invictus (but which has also been identified as that of the Temple of Iuppiter Stator, Iuppiter Victor, and as that of the Temple of Iuppiter Propugnator) ...*

(`Ein Exkurs zu Domitians Ziel, Augustus und Nero nachzuahmen. Domitian erbaute seinen Palast `Domus Flavia`/ die Domus Augustana absichtlich an der Stelle des (wirklichen) Hauses des Augustus. Als der `neue Gründer Roms`, und gleichfalls wie Augustus, ahmte Domitian auch Romulus nach (oder verglich die diesbezüglichen Leistungen seiner gesamten Dynastie mit denen des Romulus). Mit Zusammenfassungen der aktuellen Diskussion zu folgenden Themen ... ein Tempelpodium, das als das des Tempels des Iuppiter Inuictus identifiziert worden ist (aber auch als das des Tempels des Iuppiter Stator, Iuppiter Victor, und als das des Tempels für Iuppiter Propugnator) ...`).

##### 5.) Paolo Liverani's (2021, 83-84) Beobachtungen zum Bogen des *Divus Titus* auf der *Velia*:

"... **the Arch of Titus** in *sacra via*, [mit Anm. 4], a monument whose construction was planned by the Roman Senate shortly before the premature death of Titus, but which had to be built and finished by his brother and successor, Domitian ... [Seite 84] For a better understanding of the arch's message, we have to consider that - although the honorand was Titus - **the function of the monument fitted well with Domitian's program to strengthen his own legitimacy by showing as *divi* both his brother Titus and his father Vespasian**. The latter was venerated in the temple he built at the foot of the Capitoline Hill, at the western end of the Forum Romanum [Hervorhebung von mir]". Vergleiche für die oben zitierte Passage aus Liverani (2021, 83-84) jetzt auch Liverani (2023, 115-116; das heißt, the italiensche Version seines Artikels von 2021).

Für eine detaillierte Diskussion dieser Passage; s.u., im Band 3-2, in *Appendix IV.d.2.f)*. - Der Bogen des *Divus Titus* überbrückte natürlich *nicht* die *Sacra Via*, wie Liverani (a.a.O.) (irrtümlich) behauptet; vergleiche Filippo Coarelli (2012, 480); Häuber (2017, 327). Für den Bogen des *Divus Titus*, die *Sacra Via* und den Tempel des *Divus Vespasianus*; vergleiche hier **Figs. 58; 71; 73**.

##### *Schlussfolgerungen zur ursprünglichen Funktion der Cancellariareliefs*

**Gestützt auf die oben erwähnten Punkte 1.) - 5.), schlage ich in dieser Studie vor, dass die Cancellariareliefs den Durchgang von Domitians *Arcus Domitiani*/ Bogen des *Divus Vespasianus* auf dem Palatin geschmückt haben, der den "VICUS APOLLINIS ? / "CLIVUS CAPITOLINUS" überbrückte (hier Fig. 73), oder eher einen der Durchgänge des Domitiansbogens, den Coarelli (2009b, 88; *ders.* 2012, 481-483; vergleiche S. 486-491) an der "Porta pincipale" ('Haupteingang') von Domitians Palast, der *Domus Augustana* (hier Figs. 8.1; 58), annimmt.**

Siehe oben, Kapitel VI.3.; *Addition* ('Zusatz'); und unten, im Band 3-2, *Appendix IV.d.2.f)*.

Aber bezüglich der ersten Hypothese gibt es ein Problem : obwohl Vespasian auf Fries B dargestellt ist, was zunächst der Grund für mich gewesen ist, diesen Vorschlag zu unterbreiten, feiern beide Friese (**Figs. 1; 2; Figs. 1 und 2 Zeichnung**) hauptsächlich Domitian : seine Legitimation als (zukünftigem) Kaiser (die er von seinem Vater Vespasian erhält; s.u., Den Beitrag von *Giandomenico Spinola* in diesem Band; was oben bereits erwähnt wurde), sowie seine "personal grandeur" ('eigene Größe') (cf. J. GERING 2012, 210-211): auf Fries B sehen wir, wie Domitian bereits als Caesar *domi* brilliert hat, und auf Fries A, nun selbst Kaiser, *militiae*.

Für eine Diskussion der letzteren Hypothese; s.o., **Anm. 248**, in Kapitel I.2.1.b); vergleiche auch Kapitel V.1.d); V.1.i.3.); VI.3.

Falls dagegen dieser Domitiansbogen an der "Porta pincipale" seiner *Domus Augustana* existiert hat, wie Coarelli (2009b, 88; 2012, 481-483; vergleiche S. 486-491) vorschlägt, dann glaube ich eher, dass die Cancellariareliefs einen der Durchgänge *dieses* Bogen dekoriert haben könnten, der, falls er existiert haben sollte, von Domitian selbst erbaut worden sein wird. Coarelli (a.a.O) identifiziert diesen Haupteingang der *Domus Augustana* mit dem *Pentapylon*, ein Monument, das er sich als Triumphbogen vorstellt

Falls dieser Domitiansbogen, den Coarelli (2012, 481-483, 486-491) an dieser Stelle annimmt, tatsächlich das *Pentapylon* war, welches ausschließlich in den Konstantinischen Regionenkatalogen erwähnt

wird, dann könnte dies bedeuten, dass dieser domitianische Bogen von den folgenden Kaisern ihren eigenen Bedürfnissen angepasst worden war, oder, dass er durch einen komplett neuen Bogen ersetzt worden ist.

Vergleiche für das *Pentapylon*: Emanuele Papi ("Pentapylon", in: *LTUR* IV [1999] 78-79), der die verschiedenen Vorschläge bezüglich der Lokalisierung dieses Monuments auf dem Palatin zusammenfasst.

Mein Vorschlag, die Cancellarieliefs dem Domitiansbogen Coarellis (2009b; *id.* 2012) an der "Porta principale" ('Haupteingang') von Domitians Palast *Domus Augustana* (hier **Figs. 8.1, 58**) zuzuschreiben, wird möglicherweise durch den Fund eines monumentalen Architravblocks unterstützt, welcher das rechte Ende einer Bauinschrift enthält (*CIL* VI, 40543: PP FECIT). Dieser Architrav gehörte wahrscheinlich zu einem Bogen, wurde zusammen mit den Cancellarieliefs gefunden, und wurde bereits oben unter Punkt 1.) erwähnt. Diese Inschrift beweist, dass Domitian, der den Titel *pater patriae* ('Vater des Vaterlandes') bereits im Jahre 81 n. Chr. erhalten hatte, das entsprechende Gebäude selbst errichtet hatte, zu dem diese Inschrift gehörte; es ist jedoch zu beachten, dass auch Nerva den Titel *pater patriae* trug. Vergleiche für beide Alternativen; s.o., zu **Anm. 81, 82, 87**, in Kapitel I.1.

Auch Markus Wolf ist der Ansicht, dass Domitian das Gebäude selbst errichtet hatte, zu dem der Architrav mit der Inschrift (*CIL* VI, 40543: PP FECIT) gehört hat; vergleiche Wolf (2015, 318-320, Figs. 6; 7 [der Architrav], Figs. 8; 10 [seine beiden Rekonstruktionszeichnungen eines freistehenden Bogens und eines "ingresso monumentale" ('monumentalen Eingangs'), in den dieser Architrav integriert ist]; *ders.* 2018, 91-94, mit Anm. 5, 15, Abb. 39; 40 [der Architrav]; Abb. 42; 43 [seine Rekonstruktionszeichnungen eines freistehenden Bogens und eines "Eingangsbaus", in welche dieser Architrav integriert ist]; siehe auch oben, Kapitel V.2.).

Als ein weiteres Argument für die Zuschreibung der Cancellaria Reliefs an diesen (ehemaligen) Domitiansbogen am Haupteingang seines Palastes könnte man die großen Ähnlichkeiten der Cancellarieliefs mit dem Nollekens Relief (hier **Fig. 36**) anführen. Der Grund hierfür ist die Tatsache, dass Francesco Bianchini (1738, 68) das Nollekens Relief buchstäblich in der 'Aula Regia' von Domitians 'Domus Flavia' / *Domus Augustana* ausgegraben hat, eine Tatsache, die von allen neueren Gelehrten übersehen worden ist. Hierauf werde ich später zurückkommen.

Vergleiche **Figs. 8.1; 58**, labels: FORUM ROMANUM; VELIA; Arch of DIVUS TITUS; PALATINE; ARCUS DOMITIANI / DIVI VESPASIANI ?; "DOMUS FLAVIA"; DOMUS AUGUSTANA; "Porta principale"; Arch of DOMITIAN ?; Cancellaria Reliefs ?

### *Domitians Bauprojekte in der Stadt Rome, als Ganzes betrachtet*

Ehe ich mich einigen neuen Beobachtungen zu Domitians Palast auf dem Palatin zuwende, möchte ich das wichtigste Ergebnis meiner Forschungen zu Domitians Bauprojekten in Rom vorstellen.

Ausgehend von Mario Torellis Bemerkung (1987, 575, wörtlich zitiert oben, in **Anm. 228**, in Kapitel I.2.), der als erster Domitians Bauprojekt auf dem Kapitolsberg als 'pharaonisch' bezeichnet hat, habe ich zunächst Folgendes geglaubt : Dass Domitian zwei derartige 'pharaonische', aber *verschiedene* Projekte in Rom betrieben habe. Das eine habe 'den Kapitolinischen Hügel und angrenzende Gebiete' umfasst (vergleiche hier **Figs. 58; 59; 71; 73**), das heißt, jenes Stadtgebiet (unter anderem das Marsfeld), wo Domitian nicht nur neue Gebäude erbaute, sondern wo er auch viele alte restauriert hat, die beim großen Brand auf dem *Capitolium* im Jahre 69 n. Chr. zerstört wurden, sowie bei dem noch größeren Brand im Jahre 80 n. Chr., bei dem große Teile der Stadt Rom zerstört worden waren; sowie die 'Colosseum city' ('die Colosseumsstadt') (hier **Figs. 71; 72**), deren Errichtung bereits von seinem Vater Vespasian begonnen worden war: hier haben die flavischen Kaiser Nero's *Domus Aurea* mit Gebäuden ersetzt, die sie 'für das Volk von Rom' errichtet haben.

Das (zumindest für mich) überraschende Resultat dieser Forschungen war die Erkenntnis, dass diese beiden Bauprojekte Domitians *zusammenhängen*. Um diese Tatsache zu illustrieren, zitiere ich im Folgenden die Titel der entsprechenden Kapitel dieses Buches.

Am 6. Juli 2021 war Eric M. Moormann so freundlich, mir von sich aus - und zwar für ein anderes Buchprojekt; vergleiche Häuber (in Vorbereitung, FORTVNA PAPERS vol. IV über den Laokoon) - zwei Artikel zu schicken : Von James C. Anderson Jr. ("The Date of the Thermae Traiani and the Topography of the Oppius Mons", 1985), und von Rabun Taylor, Edward O'Neill, Katherine W. Rinne, Giovanni Isidori, Michael O'Neill und R. Benjamin Gorham ("A Recently Discovered Spring Source of the Aqua Traiana at Vicarello, Lazio", 2020). Diese beiden Publikationen beweisen, dass - selbstverständlich - bereits Domitian damit begonnen hatte, die 'Trajansthermen' zu erbauen (!).

Abgesehen davon, dass sich diese Tatsache auch als entscheidend für den Kontext meines Buches über den Laokoon erweisen sollte, den ich damals gerade mit Eric Moormann diskutierte, hat mich diese Information auch noch im richtigen Zeitpunkt erreicht, um den Titel meines *Appendix IV.d.4.c*) im Band 3-2 dieser Studie über Domitian zu ändern. Vergleiche für den Kontext dieses spezifischen Kapitels :

Siehe unten, **im Band 3-2, in *Appendix IV.d.4.) Domitian's building projects at Rome, discussed in this Study;***

*Appendix IV.d.4.a) Domitian's building project 'Colosseum City';*

*Appendix IV.d.4.b) Domitian's building project comprising the Campus Martius, the Capitoline Hill and the sella between Arx and Quirinal. With detailed discussion of the Templum Pacis, and some remarks on Domitian's Villa, called Albanum;*

***Appendix IV.d.4.c) Domitian's building projects at Rome. Conclusions arrived at in Appendix IV.d. With The first Contribution by Eugenio La Rocca.***

*As a result of this Chapter it seems to be clear that Domitian, who destroyed the sella between the Quirinal and the Arx, in order to erect his huge forum there (the later 'Forum of Trajan'), had used this excavated material to fill in a valley on the Mons Oppius. This finding invited the further assumption that already Domitian had planned to erect at this site great public baths, the now so-called 'Baths of Trajan'. The confirmation that Domitian had actually started building those baths, reached me only afterwards [Hervorhebung von mir].*

(`Appendix IV.d.4.) Domitians Bauprojekte in Rom, die in diesem Band diskutiert werden;

*Appendix IV.d.4.a) Domitians Bauprojekt 'Colosseum Stadt';*

*Appendix IV.d.4.b) Domitians Bauprojekt, welches das Marsfeld, den Kapitolsberg und die sella ('Sattel') zwischen der Arx und dem Quirinal umfasste. Mit detaillierter Diskussion des Templum Pacis, und einigen Bemerkungen zu Domitians Villa, die Albanum genannt wurde;*

***Appendix IV.d.4.c) Domitians Bauprojekte in Rome. Ergebnisse, die in Appendix IV.d erzielt worden sind. Mit Dem ersten Beitrag von Eugenio La Rocca.***

*Als Ergebnis dieses Kapitels scheint klar zu sein, dass Domitian, der die sella ('Sattel') zwischen dem Quirinal und der Arx zerstört hat, um an dieser Stelle sein riesiges Forum zu errichten (das spätere 'Trajansforum'), mit diesem ausgegrabenen Material ein Tal auf dem Mons Oppius zugeschüttet hat. Diese Erkenntnis erlaubte die weitergehende Vermutung, dass bereits Domitian an dieser Stelle eine große öffentliche Thermenanlage geplant hatte, die heute sogenannten 'Trajansthermen'. Die Bestätigung, dass Domitian tatsächlich damit begonnen hatte, diese Thermenanlage zu errichten, erreichte mich erst später [Hervorhebung von mir]).*

**Erst nachdem dieses Kapitel als eine der Vorschauen für diese Studie zu Domitian auf unserem Webserver publiziert war, habe ich folgende Publikationen erhalten, die gleichfalls die Frage stellen, wie Domitian die Zerstörung der sella zwischen dem Quirinal und der Arx bewerkstelligt hat, um an deren Stelle sein Mega-Forum zu errichten, welches das Trajansforum werden sollte.**

Es handelt sich um den Band, den Antonio Pizzo und Riccardo Montalbano herausgegeben haben (*Tra le pendici del Quirinale e il Campo Marzio in memoria di Emilio Rodríguez Almeida*, 2022) und um den Ausstellungskatalog *Domiziano Imperatore. Odio e amore* (2023). Die Herausgeber dieses Kataloges, Claudio Parisi Presicce, Massimiliano Munzi, and Maria Paola Del Moro, schreiben in ihrer Einführung ("Domiziano

imperatore. Odio e amore", 2023, 12): "È stato inoltre realizzato, a cura di Sergio Fontana, un video immersivo allo scopo di rendere pienamente percepibile il taglio della sella montuosa tra i colli Campidoglio e Quirinale, intervento all'origine dei lavori per la sistemazione dell'area che sarà poi occupata dal complesso del Foro e dei Mercati di Traiano". Vergleiche auch den Aufsatz in diesem Katalog von Massimo Vitti ("Lo sbancamento del *mons*" e il progetto domiziano nell'area del Foro di Traiano", 2023).

Um diesen Punkt abzuschließen, nehme ich im Folgenden eine Textpassage vorweg, die für unten, im Band 3-2, *Appendix IV.d.4.c*), geschrieben wurde:

„Meine Annahme von Domitians zwei verschiedenen ‚pharaonischen‘ Projekten war falsch, in Wirklichkeit umfasste Domitians Vision die gesamte Stadt Rom. Bei dem Versuch, zu einem abschließenden Urteil bezüglich Domitians Bauprojekten in Rom zu kommen, die in diesem Buch behandelt worden sind, schlage ich deshalb Folgendes vor:

### **1.) Bei diesen Unternehmungen Domitians handelte es sich zweifellos um bedeutende Verbesserungen des öffentlichen Wohls.**

Außerdem können Domitians Bauprojekte, im Nachhinein betrachtet, nicht nur als groß, oder besser, als großartig, bezeichnet werden, nicht nur, was ihre tatsächliche Größenordnung, sondern auch, was ihre künstlerische Qualität betrifft : wir müssen auch anerkennen, dass die Konzeption einiger dieser Bauten extrem weitsichtig geplant worden war.

Mit der letzteren Beurteilung beziehe ich mich auf Domitians Projekte seines *Mega-Forums* (dem ‚Trajansforum‘) und dem seiner großen öffentlichen Thermenanlage (den ‚Trajansthemen‘). Der enorme Erfolg beider Projekte wird zuallererst dadurch erwiesen, dass Trajan beide sofort ‚usurpiert‘ hat, wie im Fall von so vielen anderen Konzeptionen Domitians (nicht nur Bauprojekten). Vergleiche zum Beispiel Eugenio La Rocca ("Traianus vs. [versus] Domitianus. Dalla rappresentazione del potere imperiale all'usurpazione dei monumenti pubblici", 2017).

Letzteres ist außerdem durch die Tatsachen bewiesen, dass Domitians erste riesige ‚Kaiserthermen‘ von den ‚Caracallathermen‘ und den ‚Diocletiansthermen‘ kopiert worden sind.

Apropos, meine Behauptung, dass Domitians Bauprojekte ‚Bedeutende Verbesserungen des öffentlichen Wohls darstellten‘: das traf zumindest nach der Vorstellung der antiken Römer zu. - Ich füge hier diese Einschränkung hinzu, weil, wie bereits oben gesagt (s.o., im Kapitel *II.3.1.c*): "In antiquity ... [the Colosseum] was a theatre of ritual death"; vergleiche Amanda Claridge (1998, 278; *dies.* 2010, 314). Und ich selbst habe an anderem Ort geschrieben : in der Kaiserzeit wurden in Rom Theater errichtet "für Aufführungen aller Art, wie z.B. [zum Beispiel] das Colosseum (in dem hauptsächlich Tierhatzen und Gladiatorenkämpfe, aber auch theatralisch inszenierte Exekutionen stattfanden)"; cf. Häuber (2013, 153).

Wie Domitian diese Situation selbst beurteilt hat, wissen wir leider nicht. Bezüglich Domitians wahrscheinlicher Motivation, diese wirklich eindrucksvollen Architekturen zu errichten, wurde oben Folgendes vorgeschlagen (s.o., im Kapitel *What this Study is all about* [‚Worum es in dieser Studie geht‘]): ‚Die außerordentlichen Anstrengungen, die Domitian unternahm, dienten, genau wie in den vergleichbaren Fällen des Augustus, Vespasian, Hadrian und Septimius Severus (außer den beiden anderen Motivationen im Fall Domitians: ‚eigene Größe‘ und ‚Familiengedenken‘), dem Zweck, Domitians Herrschaft zu legitimieren. Die hier erwähnten Aktivitäten, besonders die großartigen Bauprojekte dieser Kaiser, dienten deshalb dem Zweck, dass sie selbst für ihre Leistungen bereits zu Lebzeiten von ihren Untertanen entsprechende Anerkennung erfuhren, und überdies positiv von der Nachwelt in Erinnerung behalten würden‘.

**Domitians diesbezügliche Aktivitäten haben sich, was alle dieser Aspekte betrifft, als extrem erfolgreich herausgestellt, und zwar aus folgendem Grund :**

**2.) Auf Grund von Domitians Unternehmungen und denen seiner Familie ist Rom im Grunde auch heute noch eine flavische Stadt.**

Für die Formulierung meines 2.) Punktes habe ich mich auf die beiden Motti von Eric M. Moormanns Artikel ("Domitian's remake of Augustan Rome and the Iseum Campense", 2018, 161) gestützt, die lauten:

""A visitor to Rome today cannot avoid the Flavians"" [mit Anm. 1], und: ""To the modern visitor the centre of Rome presents itself as essentially a Flavian city"" [mit Anm. 2]". In seiner **Anmerkung 1**, schreibt Moormann: "Darwall-Smith 1996, 17 ...". Und in seiner **Anmerkung 2**, schreibt er: "Boyle 2003, 29 ...".

Und in seiner letzten Diskussion dieses Themas; vergleiche Moormann ("Domitian's Reshaping Rome", 2021, 43-44; *ders.* 2023, 62, wörtlich zitiert; s.o., im Kapitel *Preamble*; Abschnitt *III.*; zu Punkt 3.)), schreibt er sogar: "**Due to Titus' [page 44] premature death in September 81, Domitian could shape the town into a real Domitianopolis** without trespassing the ambitions of his father and brother (fig. 3) [mit Anm. 4; Hervorhebung von mir]".

In seiner **Anm. 4**, schreibt Moormann: "On Domitian's rebuilding of Rome, see, among others, Frederick 2003, and, most recently, Moormann 2018".

### **Auch die Organisation von Domitians Baustellen war innovativ :**

Zum Beispiel die Organisation der gigantischen Baustelle des zukünftigen 'Trajansforums'; vergleiche Patrizio Pensabene und Javier Á. Domingo (2016-2017). Dies trifft analog auch für die Beschaffung des Baumaterials für Domitians Bauprojekte zu, das aus dem gesamten Mittelmeergebiet importiert werden musste. Es überrascht nicht, dass die meisten frischen Marmorblöcke, die aus weit entfernten Steinbrüchen stammten, und mit Hilfe von Konsulardaten datiert sind, die im Stadtviertel Testaccio, in 'La Marmorata', in Ausgrabungen zu Tage kamen, aus der Zeit Domitians stammten; vergleiche Pensabene und Domingo (2016-2017, 573 mit Anm. 161).

Das Gebiet im Stadtviertel Testaccio, das in vergangenen Jahrhunderten *La Marmorata* hieß (vergleiche hier **Figs. 102; 102.4; 103**), befindet sich auf dem linken Tiberufer, südlich vom Aventin. Die meisten Gelehrten identifizieren dieses Gebiet, meines Erachtens irrtümlich, mit dem *Emporium*, das Livius (35,10,12; 41,27,8) zusammen mit der *Porticus Aemilia* erwähnt, die von denselben Gelehrten, meiner Meinung nach ebenfalls irrtümlich, mit dem riesigen *opus incertum* Gebäude im Stadtgebiet *La Marmorata* identifiziert wird. In Wirklichkeit kennen wir den antiken Namen dieser Gegend nicht.

Für eine detaillierte Diskussion; s.o., *A Study on the colossal portrait of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori at Rome (cf. here Fig. 11)*. With The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great); Part II. *Ancient Rome's new commercial river port, at La Marmorata. With discussions of the 'Porticus Aemilia' (in reality identifiable as Navalía) and of the Horrea Aemiliana.* With The sixth Contribution by Peter Herz : Rom. Strukturen der Versorgung; and with The second Contribution by Franz Xaver Schütz : Wie schwer war der ägyptische Obelisk, der heute auf der Piazza di S. Giovanni in Laterano in Rom steht?

(*Eine Studie zum kolossalen Portrait des Hadrian (jetzt Konstantins des Großen) im Hof des Palazzo dei Conservatori in Rom (vergleiche hier Fig. 11)*. Mit Dem Beitrag von Hans Rupprecht Goette; Teil II. *Der neue Handelshafen des antiken Rom, bei La Marmorata. Mit Diskussionen der 'Porticus Aemilia' (in Wirklichkeit als Navalía identifizierbar) und der Horrea Aemiliana.* Mit Dem sechsten Beitrag von Peter Herz : Rom. Strukturen der Versorgung'); und mit Dem zweiten Beitrag von Franz Xaver Schütz : Wie schwer war der ägyptische Obelisk, der heute auf der Piazza di S. Giovanni in Laterano in Rom steht?').

### **Wenden wir uns nun Domitians Palast auf dem Palatin zu, seiner Domus Augustana**

Abgesehen von den weiter unten diskutierten neuen Erkenntnissen zu diesem Gebäudekomplex, steuere ich in diesem Buch keine eigenen Hypothesen bezüglich der Bedeutung von Domitians Gesamtgestaltung seines Palastes bei. Glücklicherweise sind, beziehungsweise waren, an diesem Thema andere Gelehrte interessiert,

zum Beispiel Ulrike Wulf-Rheidt (2020), sowie Aurora Raimondi Cominesi (2022), die sich diesem Thema aus unterschiedlichen Perspektiven genähert haben: Auf der Basis ihrer eigenen, jahrzehntelangen Forschungen zu diesem Thema, legte Wulf-Rheidt (2020) eine Dokumentation der genauen Chronologie aller Teile der *Domus Augustana* vor, während Raimondi Cominesi (2022), die selbst Wulf-Rheidt (2020) nicht diskutiert, ihrerseits versucht, *alle* diese Bauphasen zu beurteilen.

Vergleiche jetzt den Aufsatz von Jens Pflug (2022) zu diesem Thema. Sein Vorhaben ist, die neuesten Forschungen von Ulrike Wulf-Rheidt zu diesem Thema zu dokumentieren, deren Mitarbeiter er gewesen ist. Er schreibt in: "Note de l'auteur ... I risultati qui pubblicati si fondano per buona parte anche sull'attività di Ulrike Wulf-Rheidt ... scomparsa il 13 giugno 2018 ... e dunque non più in grado di pubblicare lei stessa molti degli esiti del suo lavoro".

Pflug (2022) ist offenbar nicht die Tatsache bewusst, dass Wulf-Rheidt glücklicherweise noch in der Lage gewesen ist, viele ihrer diesbezüglichen Ergebnisse selbst zu publizieren (obwohl ihr letzter Aufsatz erst posthum erschienen ist); in diesem Aufsatz hat Wulf Rheidt ihre Ergebnisse zum Teil sogar mit denselben Plänen und Rekonstruktionen illustriert, die jetzt auch Pflug (2022) publiziert; vergleiche Wulf-Rheidt (2020). Im Übrigen sind einige der Illustrationen im Aufsatz von Pflug (2022) bereits von Wulf-Rheidt and Sojc (2009) publiziert worden.

Raimondi Cominesi (2022) kommt zu dem, meiner Meinung nach überzeugendem Schluss, dass, im Nachhinein betrachtet, Domitians Gestaltung seiner *Domus Augustana* als eines 'Palastes, der den Bedürfnissen eines römischen Kaisers entspricht', sich (ebenfalls) als extrem weitsichtig erwiesen hat. Da ich in diesem Buch nahezu alle anderen Bauprojekte Domitians in Rom studiert habe (s.o.), überrascht mich persönlich dieses Ergebnis von Raimondi Cominesi nicht. Hinzu kommt, dass Raimondi Cominesi (2022, 115, mit Anm. 122) bezüglich Domitians Palast eine weitere sehr wichtige Beobachtung macht: "**In the Chronicle of 354, Domitian's house is cited as one of the emperor's public works** [Hervorhebung von mir]".

Für eine Diskussion dieses Textes des 'Chronographer of AD 354', der dieses Gebäude als Domitians "*Palatium*" bezeichnet; s.o., Kapitel IV.1.1.g). Dieser spätantike Autor, der den "Codex-Calendar of A. D. 354" schuf, hieß "Furius Dionysius Filocalus"; vergleiche für beide Zitate Michele Renée Salzman (1990, pp. XX, 3), und wird auch "Chronographus anni CCCLIII" genannt; vergleiche Theodor Mommsen (1892, 14). Filippo Coarelli bezeichnet den "Codex Calendar" des Filocalus als "*fasti Filocaliani*"; vergleiche Coarelli (2012, 247, Anm. 254, wörtlich zitiert; s.u., in Band 3-2, im *Appendix VI.*; im Abschnitt VII.)

**Wenn man gleichzeitig bedenkt, dass alle drei flavischen Kaiser zusammen weniger als 30 Jahre regiert haben, und Domitian davon lediglich 15 Jahre, dann kann ich nur bewundern, was sie geleistet haben.**

Siehe oben, Kapitel *Preamble ...*; Abschnitt III. *My own thoughts about Domitian* ('Meine eigenen Gedanken zu Domitian'); zu Punkt 5.); und unten, im Band 3-2, in *Appendix IV.d.4.c*).

*Das Nollekens Relief (hier Fig. 36) führt uns zu einigen neuen Erkenntnissen, die in diesem Buch über Domitian vorgestellt werden. Diese beziehen sich auf Domitians Palast Domus Augustana auf dem Palatin, und basieren ihrerseits unter anderem auf Funden, die F. Bianchini dort in den Jahren 1720-1726 ausgegraben hat (vergleiche ders. 1738)*

*Einige bemaßte Rekonstruktionszeichnungen von Domitians Palast Domus Augustana des Architekten G. Leith (1913; vergleiche hier Figs. 108-110)*

a) Siehe unten, *The Contribution by Amanda Claridge in this volume : A note for Chrystina Häuber : Drawings of the interior order of the Aula Regia of the Palace of Domitian on the Palatine, once in the British School at Rome; cf. here Figs. 108-110.*

(‘Der Beitrag von Amanda Claridge in diesem Band : Eine Notiz für Chrystina Häuber : Zeichnungen der inneren Ordnung der Aula Regia in Domitians Palast auf dem Palatin, die sich früher in der British School in Rom befunden haben’).

**Figs. 108-110. Domitians Palast ‘Domus Flavia’/ Domus Augustana auf dem Palatin. Bemaßte Rekonstruktionszeichnungen, "in pencil, pen and black ink reconstructing in cross section the Aula Regia, Peristyle and Triclinium" (so A. CLARIDGE, a.a.O), des Architekten G. Leith (1913), der einige der ursprünglich 8 Kolossalstatuen in seine Zeichnungen integriert hat, welche die ‘Aula Regia’ geschmückt hatten, sowie einige Architekturfragmente, die dort ebenfalls von F. Bianchini ausgegraben wurden, und die (1738) publiziert worden sind. G. Leith schuf diese Zeichnungen, als er 1913 ein Stipendium von Südafrika an der British School at Rome hatte. Aus: M.A. Tomei (1999, Figs. 225; 228; 229; 230. Wir haben auch die Bildunterschriften ihrer Abbildungen kopiert).**

Ich danke Francesca Deli, Assistant Librarian der British School at Rome, die diese Illustrationen aus Tomeis Artikel (1999) für mich gescannt hat.

#### **Die ‘Domus Flavia’ und andere moderne Namen, mit denen Teile von Domitians Palast Domus Augustana bezeichnet worden sind**

(Theoretisch) folge ich Filippo Coarelli (2012, 494) und T.P. Wiseman (2019, 34, beide wörtlich zitiert im Band 3-2, *Appendix VI.*; Abschnitt I.), die feststellen, dass Domitians Palast auf dem Palatin ‘Domus Augustana’ genannt wurde, und dass der Name ‘Domus Flavia’, mit dem viele Gelehrte den westlichen Teil dieses Palastes bezeichnen, nicht nur nicht in antiken Schriftquellen überliefert wird, sondern obendrein irreführend ist. Der Grund hierfür ist die Tatsache, dass der (angebliche) Unterschied zwischen diesen beiden Teilen (dem westlichen, angeblich repräsentativen Teil, der ‘Domus Flavia’, und dem östlichen, angeblich privaten Teil, der *Domus Augustana*), den viele Gelehrte postulieren, in Wirklichkeit nicht existiert.

Vergleiche für diese neue Beobachtung jetzt auch Roberta Alteri (2023, 29). Für diese ältere, aber irrtümliche Forschungsmeinung; vergleiche Wulf-Rheidt (2020, 186 Anm. 11, mit Bibliographie). Was diesen Punkt betrifft, war auch Wulf-Rheidt (2020, 186) zu demselben Schluss gelangt wie Coarelli, Wiseman und Alteri (a.a.O.), sie benutzte aber dennoch weiterhin die Bezeichnung ‘Domus Flavia’.

Ich sage "(theoretisch)", weil ich trotzdem beschlossen habe, die Beschriftung "DOMUS FLAVIA" unseren eigenen Karten hinzuzufügen, und zwar einfach deshalb, weil die meisten Gelehrten (zumindest die, welche in der folgenden Diskussion erwähnt werden) diese falsche Bezeichnung in ihren Publikationen benutzen. Ich setze jedoch die Bezeichnung DOMUS FLAVIA auf unseren Karten in Anführungszeichen, um zu zeigen, dass es sich um ‘die sogenannte *Domus Flavia*’ handelt.

Für alle (modernen) Name, mit denen im Laufe der Zeit die verschiedenen Teile von Domitians ‘Domus Flavia’/ *Domus Augustana* bezeichnet worden sind; s.o., Kapitel V.1.i.3.b); Abschnitte I.; II.

Mit ihrer Entscheidung, jene Teile des Palastes, die Gordon Leith rekonstruiert hat (hier **Figs. 108-110**), als ‘Aula Regia, Peristyle und Triclinium’ zu bezeichnen, folgte Amanda Claridge (a.a.O.) der aktuellen Terminologie, wie sie zum Beispiel von Filippo Coarelli (2008, Plan auf S. 177) angewandt wird, sowie von Natascha Sojc (2021, 134, Fig. 2, die allerdings das ‘Triclinium’ als “*Cenatio Iovis*” bezeichnet), sowie auf unseren Karten hier **Figs. 8.1; 58; 73**. Claridge selbst (2010, 150, Fig. 57) bezeichnete dagegen das sogenannte ‘Triclinium’ als “Banquet Hall”.

Wichtig für die Diskussion von Gordon Leiths Rekonstruktionszeichnungen (hier **Figs. 108-110**) ist die Tatsache, dass die ‘Aula Regia’ (die schon F. BIANCHINI 1738 so bezeichnet hatte; vergleiche die Beschriftung seiner Tab. II = hier **Fig. 8**) bereits von Francesco Bianchini (1720-1726) ausgegraben worden ist,

während das *'Peristyle'* und das *'Triclinium'/'Cenatio Iovis'* erst von Pietro Rosa (1861-64) ausgegraben werden sollten, im Auftrag des französischen Kaisers Napoleon III. (weshalb diese Ausgrabungen häufig als *'die französischen Ausgrabungen'* bezeichnet werden, so zum Beispiel im Titel des Artikels von M.A. TOMEI von 1999).

Für beide Ausgrabungen; vergleiche Silvano Cosmo (1990, Fig. 8 = hier **Fig. 39**), und für die *'französischen Ausgrabungen'*: s.u., im Band 3-2, in *Appendix I.c*); und im *Appendix VI.*; Abschnitt I.

Bezüglich der Rekonstruktionszeichnungen von Gordon Leith wiederhole ich im Folgenden eine Textpassage, die für oben, Kapitel *Introductory remarks and acknowledgements* (*'Einführende Bemerkungen und Dank'*) verfasst worden ist:

*'So weit ich sehe, stellen diese Zeichnungen (hier **Figs. 108-110**) die einzigen bemaßten Rekonstruktionen der inneren Ordnung der *'Aula Regia'* und anderer Teile von Domitians *'Domus Flavia'* innerhalb seiner *Domus Augustana* dar (dem *'Peristyle'* und dem *'Triclinium'/'Cenatio Iovis'* [vergleiche hier **Figs. 8.1; 58**]), in welche die kolossalen Statuen (die ursprünglich die *'Aula Regia'* geschmückt hatten), sowie einige Architekturfragmente integriert worden sind, die Francesco Bianchini innerhalb der *'Aula Regia'* (1720-1726) ausgegraben hatte (er fand nur zwei dieser kolossalen Statuen in einem sekundären Kontext unmittelbar neben der *'Aula Regia'*), und die posthum 1738 veröffentlicht worden sind. Der Autor dieser Zeichnungen (hier **Figs. 108-110**) ist der Architect Gordon Leith (1885-1965) aus Südafrika, der im Jahre 1913 ein Stipendium an der British School at Rome hatte ... Für Bianchinis bemaßte Pläne, die beiden Reliefs, und einige der Architekturfragmente, die er innerhalb der *'Aula Regia'* von Domitians *'Domus Flavia'/'Domus Augustana* auf dem Palatin ausgegraben, und später publiziert hat (1738); vergleiche hier **Figs. 8; 9; 36; 37**.*

Siehe oben, Kapitel *V.1.i.3.b*) *J. Pollini's discussion (2017b) of the allegedly 'lost' Nollekens Relief (cf. here Fig. 36), which he compares with the Cancelleria Reliefs (cf. here Figs. 1; 2; Figs. 1 and 2 drawing) and Domitian's 'Domus Flavia'/'Domus Augustana. With The Contribution by Amanda Claridge'*. (*'Kapitel V.1.i.3.b*). *J. Pollinis Diskussion (2017b) des angeblich 'verlorenen' Nollekens Reliefs (vergleiche hier Fig. 36), das er mit den Cancelleriareliefs vergleicht (vergleiche hier Figs. 1; 2; Figs. 1 und 2 Zeichnung) und Domitians 'Domus Flavia'/'Domus Augustana. Mit Dem Beitrag von Amanda Claridge'*).

b) Francesco Bianchini (Verona 13. Dezember 1662 - 2. März 1729 Rom) hat in den Jahren 1720-1726 (posthum publiziert 1738) innerhalb von Domitians *'Aula Regia'* die oben erwähnten, unglaublich qualitätvollen Skulpturen und Architekturfragmente ausgegraben, sowie seine Funde (1738) publiziert, ergänzt mit bemaßten Plänen der *'Aula Regia'* (seine Tab. II) und des von ihm ausgegrabenen Areals (seine Tab. VIII; beide hier **Fig. 8**), sowie mit schönen Stichen einiger seiner Funde (seine Tab. III; IV; VI; VII; vergleiche hier **Figs. 9; 36; 37**).

Vergleiche für Monsignore Francesco Bianchini, der ein hervorragender Wissenschaftler war, und seit 1703 "Commissario alle Antichità di Roma": Paolo Liverani (2000, 67, wörtlich zitiert und diskutiert, s.o., Kapitel *V.1.i.3.b*); zu Abschnitt I.).

**Fig. 8. F. Bianchinis (1738) bemaßte Pläne der *'Aula Regia'* (seine Tab. II), und jenes Teils von Domitians *Domus Augustana*, wo er seine Ausgrabungen (1720-1726) durchgeführt hatte (seine Tab. VIII): innerhalb der *'Basilica'*, der *'Aula Regia'* und des *'Larariums'* (alle drei Säle befinden sich innerhalb der *'Domus Flavia'*; vergleiche hier **Figs. 8.1; 58**). Beachten Sie bitte, dass sich auf Bianchinis Plänen Norden nicht in der Mitte des oberen Randes befindet, wie auf unseren Karten. Unsere Karten sind nach *'Grid North'* orientiert; vergleiche hier **Figs. 58; 73**), genau wie die offiziellen photogrammetrischen Daten von Roma Capitale (die das aktuelle Kataster enthalten), auf denen alle unsere Karten basieren. Vergleiche für die Orientierung von Bianchinis Plan Tab. II unsere Fig. 8.1.**

Für *'Grid North'* (deutsch: *'Gitternord'*); vergleiche Franz Xaver Schütz (2017, 696-704, Abb. 3; 4; 6); Häuber (2017, 62, Bildunterschrift von Fig. 3.5 [= hier **Fig. 58**]). Für die Bildunterschrift unsere aktualisierten Karte

**Fig. 58;** s.u., im Band 3-2, zu *A Study on the consequences of Domitian's assassination ... Or : The wider topographical context of the Arch of Hadrian...* ; Chapter Introduction; at Section I.  
(*Eine Studie zu den Folgen von Domitians Ermordung ... Oder : Der weitere Kontext des Hadriansbogens ...*; Kapitel Einführung; Abschnitt I.).

**Fig. 8.1.** Detail unsere Karte Fig. 58, mit georeferenziertem Overlay von F. Bianchinis Plan der *'Aula Regia'* (vergleiche *ders.* 1738, seine Tab. II = hier Fig. 8). Diese Visualisierung zeigt, dass Bianchinis Grundriss der *'Aula Regia'*, sein Plan Tab. II, im Uhrzeigersinn um circa 135° gedreht werden musste, ehe es möglich wurde, ihn in unsere Karte Fig. 58 zu integrieren, die nach *'Grid North'* orientiert ist. F.X. Schütz, Visualisierung, erstellt mit dem "AIS ROMA" (22-I-2023).

**Fig. 9.** F. Bianchinis Tafeln (1738, Tab. III und IV). Sie zeigen einige der Architekturfragmente, die er in seinen Ausgrabungen (1720-1726) innerhalb der *'Aula Regia'* gefunden hat. In der Bildunterschrift seiner Tab. III erwähnte Bianchini den Autor der entsprechenden Zeichnung und des Stichs: "Balthassar Gabbuggiani delin. et sculp."

Francesco Bianchini (1738, 50-54) beschrieb die einmalige Größe und Ausstattung der *'Aula Regia'* (wörtlich zitiert; s.o., Kapitel V.1.i.3.b); Abschnitt III.). Darauf werde ich unten noch einmal zurückkommen.

*Neue Forschungen zum Nollekens Relief,  
das Francesco Bianchini im Jahre 1722 in der 'Aula Regia' ausgegraben hat*

c) John Pollini (2017b) *'fand'* das (angeblich) verlorene Nollekens Relief und publiziert eine Photographie (von 1914; hier Fig. 36), welche das Relief vor seinen Beschädigungen seit dem Zweiten Weltkrieg wiedergibt : damals umfasste es noch das Portrait Domitians, das jetzt verloren ist. John hat mir großzügigerweise dieses Photo zur Verfügung gestellt, das ich hier mit seinem freundlichen Einverständnis publizieren darf. Während Pollini (2017b) selbst einen (irrtümlichen) Fundort für dieses Relief innerhalb von Domitians Palast annimmt, habe ich Folgendes entdeckt. Bianchini (1738, 68; vergleiche seine Tab. VI, ein Stich des Nollekens Reliefs) schreibt ausdrücklich, dass er das Nollekens Relief in der *'Aula Regia'* von Domitians *'Domus Flavia'* ausgegraben habe. Für Bianchinis Ausgrabungen; vergleiche auch Silvano Cosmo (1990, 837, Fig. 8 [= hier Fig. 39]) und oben, in Kapitel V.1.i.3.b).

Um die neuere Diskussion über das Nollekens Relief vorstellen zu können, fasse ich im Folgenden einige Textpassagen zusammen, die für oben, Kapitel V.1.i.3.b), verfasst worden sind : J. Pollini's discussion (2017b) of the allegedly *'lost'* Nollekens Relief (cf. here Fig. 36), which he compares with the Cancellaria Reliefs (cf. here Figs. 1; 2; Figs. 1 and 2 drawing) ...

(*Kapitel V.1.i.3.b*) J. Pollinis Diskussion (2017b) des angeblich *'verlorenen'* Nollekens Reliefs (vergleiche hier Fig. 36), das er mit den Cancellariareliefs (hier Figs. 1; 2; Figs. 1 und 2 Zeichnung) vergleicht ...).

**Fig. 36.** Das Nollekens Relief, aufgestellt über dem Kamin im Weißen Saal des Gatchina Palastes in der Nähe von St. Petersburg, Marmor, Maße: 88 x 139 cm. F. Bianchini (1738, 68, seine Tab. VI, ein Stich des Nollekens Reliefs) fand das Relief im Jahre 1722 in der *'Aula Regia'* von Domitians *'Domus Flavia'*/*Domus Augustana*; vergleiche S. Cosmo (1990, 837, Fig. 8); J. Pollini (2017b, 120, 124; vergleiche S. 98, Fig. 1 (= hier Fig. 36). Von dieser Abbildung haben wir Pollinis Nummerierung der Figuren kopiert, die auf diesem Relief dargestellt sind). Pollini schlägt (meiner Meinung nach überzeugend) vor, dass dieses Relief den mit einer Toga bekleideten *triumphator* Domitian darstellt, wie er im Jahre 89 n. Chr., unmittelbar vor Domitians *Porta Triumphalis*, ein Opfer vollzieht; danach wird der Kaiser seinen (letzten) Triumphzug beginnen. Photographie, aufgenommen 1914, als das Relief noch in seinem restaurierten Zustand des 18. Jahrhunderts erhalten war. Mit freundlicher Genehmigung von John Pollini.

Die Bildunterschrift von Pollini's (2017b) Fig. 1 (= hier Fig. 36) lautet: "Photograph taken in 1914 of the Nollekens Relief ... [der Autor liefert dazu ein Zitat auf S. 107 mit Anm. 47]. Note that only the heads of

**nos. 6** [das heißt, des Domitian], **8** [das heißt, des *Genius Senatus*] **and 10** [das heißt, eines Opferdieners] **in the foreground and of all the background figures are ancient** [Hervorhebung von mir]".

Nachdem ich Kapitel *V.1.i.3.b*) mit Rose Mary Sheldon diskutiert, und ihr gegenüber erwähnt hatte, dass ich noch prüfen müsse, ob Domitian womöglich selbst eines der Konsulate des Jahres 89 n. Chr. bekleidet hatte, war sie so freundlich, mir per Email zu antworten: "Domitian was consul every year of his reign except 89, 91, 93, 94 and 96. Pat Southern [1997], Domitian, p. 35". Vergleiche auch Dietmar Kienast, Werner Eck und Matthäus Heil (2017, 110).

Pollini schlägt vor (2017b, 120 mit Anm. 106; s.o., Kapitel *V.1.i.3.b*); Abschnitt *IV.*), dass das Nollekens Relief Domitian bei einem Opfer im Jahre 89 n. Chr. zeigt. Pollini selbst hat nicht realisiert, dass das wegen der Darstellung der beiden *consules* (**Figuren 7 und 9**) auf dem Nollekens Relief theoretisch tatsächlich möglich ist, weil, wie oben erwähnt, Domitian in diesem Jahr nicht selbst eines der Konsulate übernommen hatte (s.o., Kapitel *VI.3*).

Pollini (2027b, 118) schreibt: "To the left and right of the personified Senate [auf **Fig. 36**], **two figures in the background, nos. 7 and 9, are distinguished by their togas ... they are undoubtedly the two consuls** [Hervorhebung von mir]"; vergleiche Pollini (2017b, 114-115), **wo er feststellt, dass die beiden Liktores Domitians (die Figuren Nr. 1 und 4 auf Fig. 36) mit "fasces laureati which imperial fasces bore usually on the occasion of a triumph** [mit Anm. 76; S. 115] ... **Both lictors wear low, common-style shoes (calcei) ... Both are paludati, wearing not a civic toga but a tunic and a military cloak, fastened with a round fibula** [Hervorhebung von mir]".

Hierzu möchte ich hinzufügen, dass **Figur 7** im Hintergrund des Reliefs tatsächlich mit einer *toga* bekleidet ist, deren unterer Saum, sowie ihre *lacinia* unten auf dem Relief sichtbar sind, unmittelbar über der Beschriftung "7". Dieser *consul* trägt deshalb offensichtlich eine ähnliche *toga* wie Domitian (**Figur 6**), der unmittelbar vor ihm steht. Von der *toga* des anderen *consuls*, **Figur 9**, sehen wir die Falten des *umbo* auf seiner linken Schulter. Für die Bezeichnungen der verschiedenen Teile der *toga*, zum Beispiel *lacinia* and *umbo*; vergleiche Hans Rupprecht Goette (1990, 3, Abb. 2).

Für eine detaillierte Diskussion; s.o., Kapitel *V.1.i.3.b*); Abschnitte *I.* und *III.*

Domitian trägt [auf dem Nollekens Relief; hier **Fig. 36**] eine *toga* und einen Lorbeerkranz, und die *fasces* (mit eingesteckten Beilen !) seiner beiden Liktores (die, wie erwähnt, militärische Kleidung tragen; vergleiche auch J. POLLINI 2017b, 118) sind gleichfalls mit Lorbeer geschmückt. Deshalb schlägt Pollini, meiner Meinung nach überzeugend, vor, dass Domitian dargestellt ist, wie er dieses Opfer vor der *Porta Triumphalis* vollzieht, und dass unmittelbar danach Domitians Triumphzug beginnen wird. Nach Pollinis Meinung (2017b, 120 mit Anm. 106, der sich auf Suet., *Dom.* 6,1 bezieht), muss sich das auf dem Nollekens Relief dargestellte Opfer auf Domitians letzten Triumph im Jahre 89 n. Chr. beziehen (vergleiche dafür oben, **Anm. 232**, in Kapitel *I.2.*, und Kapitel *VI.3.*; *Addition* ['Zusatz']).

Paolo Liverani (2021, 88) lehnt Pollinis Hypothese ab : **Pollini's "... triumphal connotation is based on weak evidence and must remain hypothetical** [Hervorhebung von mir]". Liverani (2021, 88) identifiziert die auf dem Nollekens Relief dargestellten Figuren genau wie Pollini (2017b) selbst, aber er berücksichtigt bei seiner Argumentation nicht die Figuren im Hintergrund (vergleiche hier **Fig. 36: Figur 3**, ein Soldat, und die **Figuren 7 und 9**, zwei Männer in der Toga), die Pollini, meiner Meinung nach überzeugend, als die beiden *consules* interpretiert.

Liverani (2021, 88) hat übersehen, dass jene Figuren, die er *erwähnt*, so auf diesem Relief angeordnet sind, dass die nach römischer Vorstellung für sie geltenden strikten räumlichen Vorschriften genau beachtet worden sind : auf der rechten Hälfte des Nollekens Relief sehen wir das Areal *domi* (mit der *Dea Roma* und dem *Genius Senatus*, die innerhalb des *pomeriums*, der heiligen Grenze Roms, bleiben mußten; nicht zufällig erscheinen auch die *consules* auf dieser Reliefseite), die linke Reliefseite stellt dagegen das Areal *militiae* dar

(hier erscheinen die beiden militärisch gekleideten Liktores, deren Beile an ihren *fasces* befestigt sind, ihre *fasces* sind außerdem mit Lorbeer geschmückt, sowie ein Soldat). Domitian steht demnach auf dem Nollekens Relief 'zwischen Figuren, die zu den Arealen *militiae* und *domi* gehören'.

All das hat der Künstler mittels der Verteilung der Figuren auf dem Relief zum Ausdruck gebracht. Außerdem trägt Domitian eine *toga* und einen Lorbeerkranz, und ist als Opfernder dargestellt. Und da ich (wegen der Gegenwart *beider consules*) glaube, dass Pollini Recht hat mit seinem Vorschlag, dass die auf dem Nollekens Relief sichtbare Szene ein Ereignis des Jahres 89 n. Chr. wiedergibt, frage ich mich deshalb, was dieses Relief *alternativ* zu dem Vorschlag darstellen könnte, den Pollini (2017b) selbst unterbreitet.

Liverani (2021, 88) ist außerdem die Tatsache entgangen, dass Francesco Bianchini (1738, 68) das Nollekens Relief im Jahre 1722 in der 'Aula Regia' gefunden hat (s.o., Kapitel V.1.i.3.b); Abschnitt II.). Und da Bianchini sehr detailliert die Ausstattung dieses Saales mit Marmorreliefs dokumentiert hat (vergleiche F. BIANCHINI 1738, 48-68, Tab. III.; IV. = beide hier **Fig. 9**; s.o., Kapitel V.1.i.3.b); Abschnitt III.), wissen wir auch, dass das 'Hauptthema der 'Aula Regia' die Verherrlichung von Domitians militärischen Siegen war': so Eugenio Polito (2009, 506, wörtlich zitiert oben, im Kapitel V.1.i.3.b); Abschnitt III.).

Vergleiche für die oben zitierte Passage aus Paolo Liverani (2021, 88) jetzt Liverani (2023, 120; das heißt, die italienische Version von Liveranis Aufsatz 2021).

**Fazit.** Auch Pollini (2017b) selbst ist die Tatsache unbekannt, dass das Nollekens Relief tatsächlich innerhalb der 'Aula Regia' gefunden wurde. Wenn man gleichzeitig berücksichtigt, dass das übergreifende ikonographische Thema dieses prächtigen Saales die Verherrlichung von Domitians militärischen Siegen war, die der Kaiser mit Triumphen gefeiert hatte, dann bleibe ich bei meinem früheren Urteil (zuerst formuliert unten, in Band 3-2, in *Appendix IV.c.1.*). Nämlich, dass Pollinis Interpretation, derzufolge das Nollekens Relief Domitian im Jahre 89 n. Chr. beim Opfer vor der *Porta Triumphalis* zeigt, unmittelbar bevor er seinen (letzten) Triumphzug beginnen sollte, vernünftig klingt.

#### *Die Architekturfragmente, die Bianchini in der 'Aula Regia' ausgegraben hat : die berühmten 'Trofei Farnese'*

d) Einige der Architekturfragmente, die Francesco Bianchini von 1720-1726 in der 'Aula Regia' gefunden, und 1738 publiziert hat, sind im Hof des Palazzo Farnese in Rom ausgestellt. Hierbei handelt es sich um die berühmten 'Trofei Farnese' (vergleiche hier **Fig. 5.1.**); s.o., Kapitel *Introductory remarks and acknowledgements; Preamble; Section II.* ('Kapitel *Einführende Bemerkungen und Dank; und Preamble; Abschnitt II.*'); und Kapitel V.1.i.3.b); Abschnitt III.

**Fig. 5.1.** Die beiden 'Trofei Farnese' im Hof des Palazzo Farnese in Rom. Hierbei handelt es sich um zwei Gruppen von Architekturfragmenten, von denen die meisten Francesco Bianchini in seinen Ausgrabungen (1720-1726; publiziert 1738) auf dem Palatin, in der 'Aula Regia' von Domitians 'Palast *Domus Flavia*' / *Domus Augustana* gefunden hat. Vergleiche K. Stemmer (1971, Abb. 1 [hier auf der linken Seite], mit dem Fragment der kolossalen Panzerstatue des 'Domitian als Jupiter'; hier Fig. 5), Photo: J. Felbermeyer, D-DAI-Rom 35.566. Vergleiche K. Stemmer (1971, Abb. 2 [hier auf der rechten Seite], mit einem Relieffragment mit Darstellung einer 'Provinz', von den Portiken des *Hadrianeums* in Rom; vergleiche hier Fig. 48), Photo J. Felbermeyer, D-DAI-Rom 35.567.

Für das *Hadrianeum*; vergleiche unten, in Band 3-2, zu *A Study of the consequences of Domitian's assassination ... Or : The wider opographical context of the Arch of Hadrian alongside the Via Flaminia, which led to the (later) Hadrianeum ...* ('Eine Studie zu den Folgen von Domitians Ermordung ... Oder : Der weitere topographische Kontext des Hadriansbogens an der Via Flaminia, der zum (späteren) Hadrianeum führte ...').

*Eins der Fragmente der 'Trofei Farnese', das möglicherweise von Bianchini in the 'Aula Regia' gefunden worden ist, gehörte zu einer (ursprünglich 8 m hohen) Panzerstatue, die 'Domitian as Jupiter' darstellte*

e) Auf dem linken Photo der 'Trofei Farnese' (vergleiche hier Fig. 5.1) erscheint im Hintergrund rechts das Fragment einer kolossalen Marmorstatue, Maße: 102 x 90 cm; vergleiche Klaus Stemmer (1971, 567). Dieses Fragment gehört zur Portraitstatue eines Mannes, der einen unglaublich reich dekorierten Panzer trägt (hier Fig. 5), mit einem riesigen *gorgoneion* auf der Brust, und einem *paludamentum*, von dem ein Teil auf der linken Schulter des Mannes erhalten geblieben ist. - Was die Qualität betrifft, hat dieses Fragment (hier Fig. 5) mit Sicherheit zu den besten Skulpturen gehört, die ich in diesem Band vorstellen kann.

Stemmer (1971) datiert dieses Fragment (hier Fig. 5) überzeugend flavisch und identifiziert den dargestellten Mann mit Domitian; gefolgt von Anne Wolfsfeld (2014; dies. 2021; s.u.). Ich danke Hans Rupprecht Goette, der mir, auf meinen Wunsch hin, auch diesen Aufsatz von Klaus Stemmer (1971) geschickt hat, sowie, von sich aus, die entsprechenden Seiten aus Anne Wolfsfelds Buch (2021).

**Fig. 5. Fragment der kolossalen Panzerstatue 'Domitians als Jupiter', Marmor, Maße: 102 x 90 cm. Nach Ansicht von K. Stemmer (1971) war diese Statue hohl, und, falls Domitian stehend dargestellt war, ursprünglich circa 8 m hoch, und wegen des riesigen *gorgoneions* auf der Brust des Panzers, zeigte sie den Kaiser angeglichen an den Gott Jupiter.**

Dieses Fragment befindet sich im linken der beiden 'Trofei Farnese' im Hof des Palazzo Farnese in Rom (vergleiche hier Fig. 5.1). Es kann zu den Funden gehört haben, die Francesco Bianchini innerhalb der 'Aula Regia' in Domitians Palast auf dem Palatin entdeckt hat, der 'Domus Flavia' / Domus Augustana (ausgegraben 1720-1726; publiziert 1738). Bereits K. Stemmer (1971, 566, 579-580) schlug dies vor, auf der Basis der Dokumentation, die für dieses Fragment zur Verfügung steht. Vergleiche auch F. Bianchinis eigene Dokumentation seiner Ausgrabungen, die bemaßte Pläne umfasst (ders. 1738, 48-68, mit Tab. II; Tab. VIII = beide hier Fig. 8), sowie S. Cosmos (1990, Fig. 8 = hier Fig. 39) Erkenntnisse zu Bianchinis Ausgrabungen.

Vergleiche für die hier abgebildeten Photos: K. Stemmer (1971, Abb. 3-6), Photos: G. Singer; D-DAI-ROM-71.175-71.178. K. Stemmers (1971, 571, Abb. 7) Rekonstruktionszeichnung dieses kolossalen Panzerportraits des 'Domitian als Jupiter' wird hier reproduziert nach A. Wolfsfeld (2014, 215, Abb. 6).

Stemmer (1971, 566, 579-580) hat seinen eigenen, meiner Meinung nach überzeugenden Vorschlag, demzufolge das Fragment (hier Fig. 5) innerhalb der 'Aula Regia' gefunden worden sei, auf antike Schriftquellen gestützt, sowie auf Informationen über die Sammlungen der Familie Farnese und bezüglich der Provenienz des Fragments (hier Fig. 5).

Für die 'Trofei Farnese' (hier Fig. 5.1) und für dieses Fragment eines kolossalen Portraits des 'Domitian als Jupiter' (hier Fig. 5), möglicherweise aus der 'Aula Regia' seiner Domus Augustana; siehe auch oben, Kapitel Preamble: Domitian's negative image; Section II. Conclusions: Domitian's representations of his military successes and his claims to be of divine descent and to possess a divine nature

(Preamble : Domitians negatives Images; Abschnitt II. Schlussfolgerungen : Domitians Darstellungen seiner militärischen Siege und sein Anspruch, göttlicher Abstammung und göttlicher Natur zu sein').

Wie bereits Francesco Bianchini (1738, 50-54), betont auch Natascha Sojc (2021, 234) die Tatsache, dass die 'Aula Regia', wenn man sie mit allen anderen Räumen der kaiserlichen Paläste auf dem Palatin vergleicht, einmalig ist, sowohl, was ihre Größe, als auch, was ihre prächtige Ausstattung betrifft : "The outstanding size and decoration of the Aula Regia, with columns of coloured marble, including pinkish *pavonazzetto* and yellowish *giallo antico*, and the 3.50 m high statues in green basalt, now in Parma, make it the most elaborate room of the imperial palaces on the Palatine known today. The hall also seems to have set new standards in comparison with public buildings existing in Rome at Domitian's time as it was only later surpassed in terms of size and splendour when the Basilica Ulpia was built in Trajan's Forum [Hervorhebung von mir]".

Um einen Eindruck der Ausstattung der *'Aula Regia'* zu vermitteln, zitiere ich im Folgenden eine Textpassage, die für oben, das Kapitel VI.3. geschrieben worden ist: *Summary of my own hypotheses concerning the Cancellaria Reliefs presented in this Study; Addition: My own tentative suggestion, to which monument or building the Cancellaria Reliefs may have belonged, and a discussion of their possible date* ('Kapitel VI.3. Zusammenfassung meiner eigenen Hypothesen bezüglich der Cancellariareliefs, die in dieser Studie vorgestellt werden; Zusatz: Mein eigener Vorschlag, zu welchem Monument oder Gebäude die Cancellariareliefs gehört haben können, und eine Diskussion ihrer möglichen Datierung'):

'Bianchini (1738, 68) sagt ausdrücklich, dass die Reliefs hier **Fig. 36** [das heißt, das Nollekens Relief] und **Fig. 37** [das andere Relief] in jenem Saal von Domitians Palast (der bereits von Bianchini als *'Aula Regia'* bezeichnet worden ist) gefunden worden sind, wo auch "the colossal basalt statues of Hercules and Bacchus/Dionysus with Pan (now in Parma's Galleria Nazionale)" ausgegraben wurden, wie Pollini schreibt (vergleiche *ders.* 2017b, 101, Anm. 11, der hierzu F. BIANCHINI 1738, 54 und 58 zitiert) ... **Zu Bianchinis (1738) ausgezeichneten Stichen gehört ein bemaßter Grundriss der *'Aula Regia'* (seine Tab. II. = hier Fig. 8; vergleiche hier Fig. 8.1); und die Darstellung einer einmalig reich skulptierten Säulenbasis (vergleiche seine Tab. III. = hier Fig. 9). Diese Säulenbasis gehört zu einem Paar *giallo antico* Säulen (vergleiche S. 50: "mai state osservate" [ihresgleichen sind noch niemals gesehen worden]), welche den Haupteingang der *'Aula Regia'* im Norden flankierten (vergleiche hier Figs. 8; 8.1), und deren Plinthe mit Trophäen verziert ist; als auch andere Funde aus diesem Saal (vergleiche S. 54): Fragment eines Marmorgebälks, das mit einer geflügelten *Victoria* dekoriert ist, die ein *tropaion* bekrönt (dargestellt auf seiner Tab. IV. = hier Fig. 9 [darauf werde ich unten zurückkommen]). Bianchinis Abbildungen (1738, Tab. III. und IV. = hier Fig. 9) zeigen demnach, dass mit Sicherheit zumindest eines der ikonographischen Themen der ungeheuer großen *'Aula Regia'* die Verherrlichung von Domitians militärischen Siegen war. Nach Ansicht von Eugenio Polito (2009, 506, wörtlich zitiert oben, in Kapitel V.1.i.3.b); Abschnitt III.), handelte es sich hierbei um das Hauptthema der *'Aula Regia'* [Hervorhebung von mir]'**

Vergleiche jetzt für die Bedeutung der oben erwähnten Darstellung einer "*Victoria* mit Flügeln" in Domitians *'Aula Regia'*: Sam Heijnen ("Living up to expectations. Hadrian's military representation in freestanding sculpture", 2020). Derartige Figuren kommen in Heijns (2020) Muskelpanzern vom "trophy type" ('Trophäen Typ') vor. Zum Beispiel auf (Darstellungen von) Muskelpanzern Domitians, die seine Siege in Germanien verherrlicht haben, und auf Muskelpanzern von Vespasian und Titus, die deren Siege in der Großen Jüdischen Revolte (oder Krieg) feiern, und auf dem Muskelpanzer Hadrians seiner Portraitstatue aus Hierapydna (hier **Fig. 29**). Siehe oben, zu *A Study on Hadrian's portrait-statue from Hierapydna (cf. here Fig. 29)* ('Eine Studie zu Hadrians Portraitstatue aus Hierapydna (vergleiche hier **Fig. 29**)').

Außerdem wiederhole ich im Folgenden zwei Textpassagen, die für oben, Kapitel V.1.i.3.b); Section III. geschrieben worden sind: *Does the design of the Nollekens Relief reflect the topographical context, for which Domitian had commissioned it?* ('Kapitel V.1.i.3.b); Abschnitt III. *Bezieht sich die Gestaltung des Nollekens Reliefs auf den topographischen Kontext, für den Domitian es in Auftrag gegeben hat?*'):

'Bianchini (1738, 50-52) beschrieb und illustrierte (vergleiche seine Tab. III. = hier Fig. 9) auch die Tatsache, dass die Basen der Säulen, die den Haupteingang der *'Aula Regia'* flankierten, mit Trophäen und mit der *corona civica* verziert waren. Dieses ikonographische Detail kann vielleicht als Anspruch Domitians interpretiert werden, einen bedeutenden Anteil am Sieg seines Vaters Vespasian im Bürgerkrieg von 68/69 n. Chr. gehabt zu haben. Rita Paris (1994b, 82-83, wörtlich zitiert oben, im Kapitel V.1.i.3.a)), gesteht Domitian genau das zu [Hervorhebung von mir] ...

Bianchini (1738, 50-54) war besonders an den Waffen interessiert, die auf den Marmorreliefs dargestellt sind, die er besprochen hat (vergleiche seine Tab. III; IV. = hier Fig. 9), wobei er die dargestellten Trophäen, unter anderem Wollmützen, germanischen Völkern zuschrieb. Wenn man die hervorragende Qualität dieser Marmorreliefs bedenkt, dann würde es sich sicher lohnen, dieses Thema intensiv zu studieren. - Wie ich erst später bemerken sollte, scheint Joachim Raeder (2010, 141, unten ausführlicher

wörtlich zitiert) der einzig Gelehrte zu sein, der diese Waffen identifiziert hat ("die auf die Dakerkriege Domitians verweisen"), aber er teilt nicht mit, wie er zu diesem Urteil gelangt ist.

Einige der Reliefs mit Darstellungen von Trophäen, die Bianchini (1738) in der *'Aula Regia'* 'ausgegraben' und dokumentiert hat, sind noch erhalten und im Hof des Palazzo Farnese in Rom ausgestellt, die berühmten 'Trofei Farnese' (vergleiche hier **Fig. 5.1**). Die 'Trofei Farnese' sind auch von Giovanni Battista Piranesi gezeichnet worden; vergleiche Patrizio Pensabene (1979. Siehe auch M. DURRY 1921; P.H. von BLANCKENHAGEN 1940; und C. GASPARRY 2007, zusammengefasst von E. POLITO 2009, 509, oben wörtlich zitiert) [Hervorhebung von mir].

Der Gesamteindruck der *'Aula Regia'* muss in der Tat überwältigend gewesen sein. Versuchen wir für einen Moment uns vorzustellen, wie die *'Aula Regia'* ausgesehen hat : Nach Bianchini (1738, 50, der die genauen Maße mitteilte, s.u.) war die *'Aula Regia'* breiter als das Mittelschiff der Basilica von S. Peter in Rom, und die Dekoration dieses Saales gehörte zu den luxuriösesten, die zur Zeit Bianchinis bekannt waren. Die Schäfte der Säulen, welche die *'Aula Regia'* schmückten, waren aus verschiedenen farbigen Marmorsorten skulptiert, die Basen dieser Säulen und ihre Architrave bestanden aus weißem Marmor und waren üppig mit Reliefs verziert.

Leider wissen wir nicht, ob diese Reliefs zusätzlich noch farbig gefasst waren. Wir sollten aber berücksichtigen, dass nach Ansicht von John Pollini (2017b, 113) das Nollekens Relief (hier **Fig. 36**) bemalt gewesen ist.

Die Wände der *'Aula Regia'* waren mit Platten aus verschiedenen farbigen Marmorsorten verkleidet und ebenfalls verschwenderisch mit ausgezeichneten Marmorreliefs geschmückt, wie von Bianchini dokumentiert (1738, 48-68; vergleiche hier **Fig. 36**, das Nollekens Relief, und **Fig. 37**, 'das andere Relief'). Zu all dem müssen wir in unserer Vorstellung hinzufügen, wie von Klaus Stemmer (1971, 579-580) vorgeschlagen, dass die 8 m hohe Panzerstatue 'Domitians als Jupiter' (hier **Fig. 5**) in der südlichen Apsis der *'Aula Regia'* aufgestellt war, das heißt, genau gegenüber vom Haupteingang der *'Aula Regia'* auf ihrer Nordseite (vergleiche hier **Figs. 8; 8.1; 58**).

Beachten Sie, dass Stemmer (a.a.O.) diese Mauer mit halbrundem Grundriss als "Apsis" bezeichnet. Auch Filippo Coarelli (2012, 195) schreibt über die *'Aula Regia'*: "Il lato corto meridionale comunica con il peristilio tramite due porte, al centro delle quale si inserisce un'abside, in cui non è difficile identificare il luogo destinato all'imperatore". Bianchini (vergleiche die Beschriftung auf seinem Plan Tab. II; hier **Figs. 8; 8.1**) bezeichnete diese Mauer mit halbrundem Grundriss dagegen als "Tribunal".

Nach Amanda Claridge war der Grundriss der *'Aula Regia'* '38 m lang und 31 m breit (128 x 104 RF ['Römische Fuß']); vergleiche Claridge (1998, 135; dies. 2010, 148).

In den 8 Nischen der *'Aula Regia'* (hier **Fig. 8**) standen ursprünglich kolossale Idealstatuen aus grünem Basanit (*basanites*), einem vulkanischen Gestein aus dem Wadi Hammamat in Ägypten : die Statue des Herkules ist 3,73 m hoch (vergleiche für alle diese Informationen die Homepage der Galleria Nazionale in Parma; s.u.). Bianchini (1738, 54, Tab. XIX; XX, zwei Stiche, die diese beiden Statuen darstellen) fand in seiner Ausgrabung im Jahre 1724 zwei dieser kolossalen Statuen in sekundärem Kontext unmittelbar neben der *'Aula Regia'*, und Gordon Leith hat einige dieser kolossalen Statuen in seine Rekonstruktionszeichnung der *'Aula Regia'* integriert (hier **Fig. 108**). Wie oben erwähnt, befinden sich die beiden Kolossalstatuen, die Bianchini ausgegraben hat, der 'Dionysos, auf einen Satyr gestützt' (Inv. Nr. GN 969), und der Herkules (Inv. Nr. GN 970, aus *basanites*, der 3,73 m hoch ist) in der Galleria Nazionale von Parma.

Vergleiche online at:

<<https://complessopilotta.it/opera/scultura-colossale-raffigurante-eracle/>>;

<<https://complessopilotta.it/opera/scultura-colossale-raffigurante-dioniso-con-satiro/>> [last visit: 11-I-2023].

Basanit (*basanites*) ist ein vulkanisches Gestein; vergleiche Walter Maresch, Olaf Medenbach und Hans Dieter Trochim (1996, 108, 114, 118, 120, 122).

*Das kolossale Portrait des 'Domitian als Jupiter' (hier Fig. 5) in der 'Aula Regia' und Statius (IV 2,41ff.)*

Selbstverständlich hat sich auch Klaus Stemmer (1971, 579-580) gefragt, welchen Saal in seinem Palast Domitian für seine berühmte *Coenatio Iovis* gewählt haben mag, das Bankett, das Statius (IV 2,41ff.) beschrieben hat, und zu dem Domitian auch seinen Dichter eingeladen hatte. Stemmer (1971, 579-580) schlägt vor, dass die *Coenatio Iovis* in der 'Aula Regia' stattgefunden habe.

Wie der Name 'Coenatio Iovis' für das 'Triclinium' beweist (hier **Figs. 8.1; 58; 73; 108-110**) glauben die meisten Gelehrten dagegen, dass das von Statius beschriebene Bankett statt dessen im 'Triclinium' durchgeführt worden war. Vergleiche zuletzt Aurora Raimondi Cominesi (2022, 113 mit Anm. 115): "**The notorious banquet described by Statius, in which Domitian towers over his guests as Jupiter from the heavens** [Hervorhebung von mir]".

In ihrer **Anmerkung 115**, schreibt Raimondi Cominesi: "Stat. *Silv.* 4.2. The hall in which the banquet took place is usually identified with the so-called Cenatio Iovis in the Domus Flavia ...".

Vergleiche für die *Coenatio Iovis* (Statius, *Silvae* 4.2) auch Antony Augoustakis und Emma Buckley (2021, 162), die sich allerdings nicht die Frage stellen, wo dieses Bankett veranstaltet worden ist.

**Interessanterweise erwähnte Ulrike Wulf-Rheidt (2020, 189), dass 'es sehr wahrscheinlich ist, dass die wichtigsten Räume der 'Domus Flavia' für die großen Bankette genutzt worden sind': "È molto probabile che gli ambienti principali della Domus Flavia venissero utilizzati per i grandi banchetti".**

**Auch Natascha Sojc (2021, 134) schreibt, "that the Aula Regia was probably used ... for ... a large-scale banquet [my emphasis]".**

Es ist natürlich verlockend zu glauben, dass die Gegenwart dieser kolossalen Portraitstatue des 'Domitian als Jupiter' (hier **Fig. 5**), falls diese tatsächlich 8 m hoch gewesen ist und wirklich in der Apsis der 'Aula Regia' aufgestellt war, wie Stemmer (1971, 579-580) vorschlägt, dem ich hier folge - den Text des Statius (IV 2,41ff.) beeinflusst haben könnte. Wenn das der Fall gewesen ist, könnte das bedeuten, dass Stemmer (1971, 580) gleichfalls Recht hatte, als er das Bankett namens *Coenatio Iovis* in der 'Aula Regia' angenommen hat.

**Ich selbst folge den Erkenntnissen von Bianchini (1738, 48-68, Tab. III.; IV. = hier Fig. 9) und Polito (2009, 509), beide wörtlich zitiert und diskutiert; s.o., im Kapitel V.1.i.3.b); im Abschnitt III., die bewiesen haben, dass das übergreifende ikonographische Thema von Domitians 'Aula Regia' 'die Verherrlichung von Domitians militärischen Siegen' ist. Alle anderen Gelehrten, die für dieses Buch über Domitian konsultiert worden sind, und welche die 'Aula Regia' in Domitians Palast auf dem Palatin studiert haben: Stemmer (1971), Claridge (1998; *dies.* 2010), Mar (2009), Coarelli (2012), Wolfsfeld (2014; *dies.* 2021), Pollini (2017b), Wulf-Rheidt (2020), Sojc (2021), Raimondi Cominesi und Stocks (2021), Raimondi Cominesi (2022) oder Alteri (2023), haben diese wichtige Tatsache übersehen.**

**Erst als das Manuskript dieses Bandes in die Druckerei geschickt werden sollte, habe ich festgestellt, dass Joachim Raeder (2010, 141) diesbezüglich die einzige Ausnahme zu sein scheint, er schreibt nämlich: "Aufgrund der Waffendarstellungen im Fries [vergleiche S. 142, seine Textabbildung 49.a-b; vergleiche F. BIANCHINI 1738, Tab. II-IV = hier Figs. 8; 9], die auf die Dakerkriege des Domitian verweisen, und der Ziegelstempel im Mauerwerk, muß die 'Aula Regia' und deren dekorative Ausstattung in der Zeit zwischen 86/89 n. Chr. und 93/94 n. Chr. entstanden sein [my emphasis]".**

Als Nächstes werden wir im Detail folgende Behauptungen diskutieren : `die Römer glaubten, dass ihnen ihr oberster Gott Jupiter ihre militärischen Siege verlieh', und dass, zumindest im Fall von Alexander dem Großen, `die Theologie der Herrschaft auf dem Glauben beruhte, dass der Gott und der regierende Herrscher identisch seien'.

Außerdem ist festgestellt worden, ``dass Domitians *virtus* `Unbesiegbarkeit', die grundsätzlich von jedem römischen Kaiser erwartet wurde, den Reichtum Roms garantierte''. Es machte deshalb Sinn, die kolossale Portraitstatue `Domitians als Jupiter' (hier Fig. 5) in der `Aula Regia' aufzustellen, dem bei weitem prächtigsten Saal seines Palastes, wo Domitian auch Bankette veranstalten konnte. Leider wissen wir nicht, wen diese 8 kolossalen Basanitstatuen in der `Aula Regia' darstellten. Aber eins ist sicher, die `Statue des Dionysos, gestützt auf einen Satyr' (das heißt, die den Gott angetrunken zeigte?), wäre eine ausgezeichnete Dekoration für einen Saal gewesen, der auch für Bankette genutzt wurde.

Dieses Fragment einer kolossalen Panzerstatue des `Domitian als Jupiter' (hier Fig. 5) ist zuletzt und sehr ausführlich von Anne Wolfsfeld behandelt worden (2014, 215, Abb. 6 [= hier Fig. 5]; dies. 2021). Wolfsfeld (2014, 200; dies. 2021, 130-131, 308-310) diskutiert nicht Stemmers (1971, 566, 579-580) oben erwähnte Hypothesen, denen zufolge dieses Fragment von Bianchini in der `Aula Regia' gefunden worden sei, und dass diese kolossale Statue des `Domitian als Jupiter' in der Apsis dieses Saales aufgestellt war. Noch fügt Wolfsfeld selbst neue Erkenntnisse zur Provenienz dieses Fragments hinzu. Andererseits formuliert sie, was Domitians Selbstdarstellung betrifft, auf der Basis ihrer Analyse zahlreicher Panzerstatuen Domitians, die bedeutende Erkenntnis von Domitians `persönlicher "Siegesprogrammatische"; vergleiche Wolfsfeld (2014, 203).

Wolfsfeld (2014, 203) erwähnt in diesem Kontext nicht die Tatsache, dass bereits Stefan Pfeiffer (2009) dieses Thema im Detail untersucht hat. Ich wiederhole hier deshalb eine Textpassage, die bereits oben, unter Punkt 2.) zitiert worden ist:

`Auch Stefan Pfeiffer (2009, 61-62) erwähnt die *Pirousta* (hier Fig. 49) in seinem Buch über die Flavier ... Diese Figuren von allegorischen Darstellungen von `Völkern' symbolisierten, so Pfeiffer (2009, 61-62), Domitians "Sieghaftigkeit", eine Eigenschaft des Kaisers, die ihrerseits Roms Reichtum garantierte, wie Pfeiffer schreibt.

An anderem Ort hat Pfeiffer (2018, 189), im Zusammenhang seiner Analyse der Themen von Domitians Selbstdarstellung, erklärt, was er mit "Sieghaftigkeit" meint: "1. It was a key issue for Domitian to show his *virtus militaris* and his victoriousness [mit Anm. 85, wo er Literatur zitiert] (`1. Für Domitian war von größter Bedeutung, seine *virtus militaris* und seine Sieghaftigkeit zu zeigen' [Hervorhebung von mir])". Demnach behauptete Domitian in seinen Selbstdarstellungen, die Eigenschaft `invincibility' (`Unbesiegbarkeit') zu besitzen. Für eine Diskussion; s.u., im Band 3-2, in *Appendix IV.d.2.a*'.

Wir haben soeben von Stefan Pfeiffer gelernt (2018, 189 und ders. 2009, 61-62), dass Domitians ``*virtus militaris* und seine `Sieghaftigkeit' Roms Reichtum garantierten''.

Im Folgenden werden wir uns den drei verschiedenen Formen zuwenden, wie Domitians Anspruch, die *virtus* `invincibility' (`Unbesiegbarkeit') zu besitzen, bildlich zum Ausdruck gebracht wurde: *I.*) indem Domitians *pietas* gegenüber den Göttern betont wurde (vergleiche hier Fig. 1); *II.*) mit Hilfe eines bedeutungsvollen topographischen Kontextes : indem Domitians Palast auf dem Palatin `gegenüber' dem republikanischen Tempel des Iuppiter Invictus errichtet wurde (vergleiche hier Figs. 8.1; 58); und *III.*) indem Domitian mit dem `unbesiegbaren' Alexander dem Großen identifiziert wurde, wie auf dem `Relief Ruesch' geschehen (vergleiche hier Fig. 7).

**Ad I.) Domitians Anspruch, die *virtus* 'Unbesiegbarkeit' zu besitzen, wird durch die Demonstration seiner *pietas* gegenüber den Göttern zum Ausdruck gebracht (vergleiche hier Fig. 1; Figs. 1 und 2 Zeichnung).**

In diesem Kontext wiederhole ich im Folgenden einen Text, der für oben, Kapitel V.1.b) geschrieben wurde :

**''Ich bleibe daher lieber bei meinem eigenen Vorschlag, den ich oben unterbreitet habe, demzufolge Fries A der Cancellariareliefs [vergleiche hier Fig. 1; Figs. 1 und 2 Zeichnung] den wichtigsten Gesichtspunkt jener einen *virtus* darstellte, die grundsätzlich von jedem römischen Kaiser erwartet wurde : seine 'Unbesiegbarkeit' [Hervorhebung von mir] (s.o., zu Anm. 282; C. HÄUBER 2017, 22, 520-521). - Vergleiche auch John Pollini (2017b, 124, wörtlich zitiert unten, im Band 3-2, in *Appendix IV.c.1.*)).**

... Auf Grund dieser komplexen Konstruktion der *virtus* eines römischen Kaisers konnte ausschließlich seine *virtus* - im Fall von Domitian auf Fries A [der Cancellariareliefs; hier **Fig. 1; Figs. 1 und 2 Zeichnung; die Figuren 6; 5**] nur seine *pietas* in Bezug auf die Götter, auf Fries A besonders Domitians [**Figur 6**] Beziehung zu Minerva [**Figur 5**], seiner persönlichen Schutzgöttin, die deshalb, mit Mitteln der Komposition, als ihm am 'nächsten' stehend charakterisiert ist - ihm dabei helfen, erfolgreich danach zu streben, und schließlich dieses Ziel, *victoria* oder 'Unbesiegbarkeit' zu erreichen - aber nicht ohne entscheidendes letztendliches göttliches Eingreifen ! Und zwar deshalb, weil *victoria* nur von den Göttern gewährt werden konnte. - Wie bereits oben erwähnt : **'Auf die Veranlassung von Jupiter und unter seiner Leitung führten die Römer ihre Kriege, und ihm haben sie konsequenterweise ihre militärischen Siege zugeschrieben** [Hervorhebung von mir]' (s.o. Kapitel III., zu Anm. 431: "cf. H. MEYER 2000, 126 ...") ...

Ich habe an anderem Ort die folgende Tatsache bedauert : 'Weder die römische 'pagane' Religion, noch die komplexe Rolle des römischen Kaisers sind kodifiziert worden', und finde es verlockend, die oben erwähnte Konstruktion der *virtus* eines Kaisers, in ihrer klaren Wechselbeziehung mit den Götter, als Teil der 'Theologie der Rolle des römischen Kaisers', anzusehen, besonders, wenn wir bedenken, dass einige Gelehrte bereits den Begriff '>Theologie< des Kaiserkultes' geprägt haben (für beide Zitate; vergleiche C. HÄUBER 2014a, 728, 720 mit Anm. 284, mit Literatur). Und schon Mario Torelli hatte den Begriff "teologia imperiale" eingeführt (vergleiche *ders.*: "Providentia, Ara", in: *LTUR* IV [1999] 166).

Wie ich erst bemerkt habe, nachdem dieses Kapitel geschrieben war, hat bereits Tonio Hölscher (2009b, 59-60, ausführlicher zitiert oben, in Kapitel IV.1.1.) über Alexander den Großen bemerkt : **"Die Theologie der Herrschaft hatte die Identität von Gott und Herrscher zur Grundlage"** (Hervorhebung von mir)''.

Hölschers (2009b, 59-60) soeben zitierte Beobachtung bezüglich der Doktrin der 'Identität von Gott und Herrscher', führt uns zu den Kommentaren von Mario Torelli (1987, 579) über die flavischen Kaiser, mit denen wir uns als Nächstes beschäftigen werden.

**Ad II.) Domitians Anspruch, die *virtus* 'Unbesiegbarkeit' zu besitzen, wurde dadurch zum Ausdruck gebracht, dass sein Palast auf dem Palatin 'gegenüber' von dem republikanischen Tempel des Iuppiter Invictus erbaut wurde (vergleiche hier Figs. 8.1; 58).**

**Mario Torelli (1987, 579) zu Domitians Anspruch, die 'Qualität Unbesiegbarkeit' als seine ständige *virtus* zu besitzen**

Torellis Forschungsergebnisse, die im Folgenden diskutiert werden, sind von neueren Gelehrten übersehen worden : Zum Beispiel von Anne Wolfsfeld (2014; 200 mit Anm. 96, Abb. 7; *dies.* 2021). Ebenso wie Klaus Stemmer (1971, 573-579) untersucht sie sehr detailliert Domitians berühmte kolossale Reiterstatue namens *Equus Domitiani* und behauptet (irrtümlich), wie Stemmer (1971, 575), dass die flavischen Kaiser Vespasian und Titus keine kolossalen Portraits von sich selbst in Auftrag gegeben hätten.

Vergleiche für den *Equus Domitiani*, der auf dem *Forum Romanum* errichtet wurde, auch Cairoli F. Giuliani ("Equus: Domitianus", in: *LTUR* II [1995] 228-229, Figs. 77-80, und oben, zu Anm. 267, in Kapitel I.3.2.); siehe

auch Lisa Cordes (2014, 346-355); Eric M. Moormann (2018, 168 mit Anm. 46, 47; *ders.* 2021, 46 Anm. 12); Jane Feijfer (2021, 78); Antony Augustakis und Emma Buckley (2021, 161-162, mit Anm. 15); und zuletzt Gian Luca Gregori und Valerio Astolfi (2023, 161); sowie oben, zu *A Study on the colossal portrait of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori at Rome (cf. here Fig. 11). With The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great); at Part I.*

(*‘Eine Studie zum kolossalen Portrait Hadrians (jetzt Konstantins des Großen im Hof des Palazzo dei Conservatori in Rom (vergleiche hier Fig. 11). Mit Dem Beitrag von Hans Rupprecht Goette zur Überarbeitung des Hadriansportraits (jetzt ein Portrait Konstantins des Großen); in Teil I.’*

Darin habe ich bereits zitiert, was ich hier noch einmal wiederhole; vergleiche Moormann (2018, 169): "The monument [das heißt, der *Equus Domitiani*] was officially given by the Senate to honour Domitian's victory over the Chatti and Dacians in AD 89".

Für die Umarbeitung von Neros *colossus* im Auftrag des Kaisers Titus, auf die Torelli (1987, 579) in der unten zitierten Textpassage anspielt; vergleiche Claudia Lega ("Colossus: Nero", in: *LTUR I* [1993] 295-298, besonders S. 296).

Eric M. Moormann (2018, 164 mit Anm. 18, 19, S. 166, 168-169) diskutiert nicht die Tatsache, dass, nach Cassius Dio (LXVI, 15,1), das Gesicht des *Colossus Neronis*, das zuerst die Züge Neros trug, und dann, unter Vespasian, den Sonnengott darstellte, unter Titus in ein Portrait seiner selbst umgearbeitet worden war, und das, obwohl er gleichfalls Lega (1993) in seiner Anm. 18 zitiert.

Im Folgenden wiederhole ich einige Textpassagen, die für Band 3-2, *Appendix VI.*; Abschnitt VI., verfasst wurden.

Torelli (1987, 578-579) beschreibt den Weg eines Besuchers, der von der *Velia* kommend, mit dem *colossus* des Nero/ Titus und dem Bogen des *Divus Titus* (hier **Fig. 120**), zum Bogen des Domitian (identifiziert von F. COARELLI 2009b; *id.* 2012; s.o., unter Punkt 4.) als Bogen des *Divus Vespasianus*, dem ich hier folge) und dem (angeblichen) Tempel des Iuppiter Victor unmittelbar westlich davon, die beide genau vor der Fassade von Domitians '*Domus Flavia*' / *Domus Augustana* standen (vergleiche für beide hier **Figs. 8.1; 58**).

Torelli (1987, 579), wie später auch Filippo Coarelli (2009b; 2012; diskutiert oben, unter Punkt 4.)), nimmt Bögen für alle drei flavischen Kaiser in dieser Gegend an, wobei alle nach Torelli (a.a.O.) neben einem Jupitertempel standen : der Bogen des Titus (neben dem Tempel des Iuppiter *Stator*), ein Bogen Vespasians (neben dem Tempel des Iuppiter *Propugnator*), und ein Bogen des Domitian (das heißt, Coarellis Bogen des *Divus Vespasianus*, neben dem Tempel des Iuppiter *Victor*). Als Nächstes analysiert Torelli (1987, 579) die 'Botschaft' dieses dritten, soeben beschriebenen topographischen Kontextes in Bezug auf den regierenden flavischen Kaiser, der in diesem Palast residiert, Domitian.

Wie oben bereits unter Punkt 4.) gesagt, ist die Identifizierung des Tempelpodiums (in Wirklichkeit handelt es sich um zwei verschiedene Fundamente) vor Domitians '*Domus Flavia*' / *Domus Augustana* (hier **Figs. 8.1; 58**) heftig umstritten; ich selbst folge Vincenzo Graffeo und Patrizio Pensabene (2014; *id.* 2016-2017) und identifiziere das rechte der beiden Fundamente, das unmittelbar neben dem *Arcus Domitiani*/ Bogen des *Divus Vespasianus* ? steht, mit dem des Tempels des Iuppiter *Invictus*, der in der Republik erbaut wurde, und der eine oder zwei republikanische und eine kaiserzeitliche Bauphase hatte, wie Graffeo und Pensabene in ihren Ausgrabungen feststellen konnten; s.u., Band 3-2, *Appendix VI.*; Abschnitte III.-V.; VII.-X.

Dasselbe trifft analog auch für die Lokalisierungen der Tempel für Iuppiter *Stator*, Iuppiter *Victor*, und Iuppiter *Propugnator* zu, die Torelli (1987, 579) erwähnt, die aber gegenwärtig alle an anderen Orten lokalisiert werden als von Torelli angenommen. Für eine ausführliche Diskussion; s.u., Band 3-2, *Appendix VI.*). Die *Turris Chartularia* zum Beispiel, südöstlich vom Bogen des *Divus Titus* auf der *Velia*, die Torelli

(1987, 579) für den Tempel des Iuppiter Stator hielt, kann unmöglich mit diesem Tempel identifiziert werden.

Vergleiche hierzu Coarelli (2012, 282 mit Anm. 387); Häuber (2017, 327); s.u. in Band 3-2, in *Appendix V.*; Abschnitt IV. *The (now twelve) different locations of the Temple of Iuppiter Stator, marked on the map Fig. 73.* ('Die (jetzt zwölf) verschiedenen Lokalisierungen des Tempels des Iuppiter Stator, die auf unserer Karte Fig. 73 eingezeichnet sind').

Torelli (1987, 579) interpretierte die topographische Situation, die er beschrieb (Bogen des Titus/ Tempel des Iuppiter Stator; Bogen des Vespasian/ Tempel des Iuppiter Propugnator; und Bogen des Domitian/ Tempel des Iuppiter Victor) wie folgt.

**Die "triumphatores Flavi" identifizierten sich selbst mit Jupiter, und mittels des Beinamens 'Victor' des Jupitertempels auf dem Palatin beanspruchte Domitian für sich selbst die 'Qualität' Unbesiegbarkeit als seine ständige virtus:**

"La triplice presenza di Iuppiter presso questi congerie verrebbe a sancire l'identificazione dei *triumphatores Flavi* con la somma divinità del pantheon romano: in particolare, l'epiteto di Victor del tempio palatino verrebbe ad assumere il significato di una "qualità", di una permanente virtù, dell'imperatore vivente [das heißt, Domitian], che sembra - al pario della statua colossale del Sol, opportunamente riadoperata - presagire ancora una volta le tendenze ideologiche tardo-antiche [Hervorhebung von mir]".

Mit der "statua colossale del Sol, opportunamente riadoperata" ('der Kolossalstatue des Sol, die zweckmäßig umgearbeitet worden war'), bezog sich Torelli (1987, 579) auf den *colossus* des Kaisers Nero, der zuerst im *vestibulum* seiner *Domus Aurea* gestanden hatte. Auf Anordnung des Kaisers Vespasian waren nach Neros Tod Neros Gesichtszüge dieser kolossalen Bronzestatue in die des Sonnengottes umgewandelt worden.

Wie Torelli, und im Gegensatz zu anderen Gelehrten, glaube ich, dass diese Statue, die 100-120 römische Fuß hoch war, bereits zu Lebzeiten Neros fertiggestellt worden war; vergleiche Häuber (2014a, 704 mit Anm. 100-103). Torelli (1987, 579) bezieht sich überdies auf die Behauptung, dass, auf Anordnung des Kaisers Titus, der Kopf von Neros *colossus* (der zu diesem Zeitpunkt die Gesichtszüge des Gottes Sol trug) in ein Portrait des Titus umgearbeitet worden war. Dem werden wir uns jetzt zuwenden.

Im Zusammenhang ihrer Diskussion des kolossalen Kopfes des Hadrian (jetzt Konstantins des Großen; hier **Fig. 11**) (s.u., im Band 3-2. *Appendix VI.*; Abschnitt VI.), schreibt Cécile Evers (1991, 796):

"L'existence d'un si gigantesque portrait d'empereur au II<sup>e</sup> siècle [das heißt, von Hadrian] - la tête seule [vergleiche hier **Fig. 11**] fait 1,74 m, l'ensemble dépassait probablement les 9 m peut surprendre. **Cependant les statues colossales sont loin d'être une innovation du Bas-Empire. L'une des plus célèbres, on s'en souviendra, est celle de Néron mesurant plus de 30 m de haut** [mit Anm. 65] et qui a subi de nombreux avatars. **L'empereur lui avait donné ses traits et l'avait placée dans le vestibule de son palais. Vespasien l'avait transformée en Sol, et son fils Titus, si l'on en croit Dion Cassius** [mit Anm. 66], **l'aurait affublée de son propre portrait** [Hervorhebung von mir]".

In ihrer **Anm. 65**, schreibt Evers: "J. GAGÉ ... [das heißt, hier J. GAGÉ 1928] 106-122; Th. PEKARY ... [das heißt, hier T. PEKARY 1985] 81". - Vergleiche auch Claudia Lega: "Colossus: Nero", in: *LTUR I* (1993) 295-298.

In ihrer **Anm. 66**, schreibt sie: "DION CASSIUS, LXVI, 15, 1".

Obwohl Ich selbst, im Gegensatz zu Mario Torelli (1987, 579) ... glaube, dass das fragliche Tempelpodium nicht zum Tempel des Iuppiter Victor gehörte, sondern statt dessen zu dem republikanischen Tempel (mit zwei kaiserzeitlichen Bauphasen) des Iuppiter Invictus (vergleiche hier **Figs. 8.1; 58**), hat Torelli (1987, 579) mit seinem soeben zitierten Vorschlag Recht, was das Vorhandensein dieses Jupitertempels vor der *Domus*

*Flavia*/ *Domus Augustana* für Domitians Selbstdarstellung gehabt haben mag : Neben dem Bogen des Domitian/ dem Bogen des *Divus Vespasianus* ? stehend, und errichtet, wie er war, an der Stelle, die ein Besucher von Domitians Palast erreicht haben würde, kurz nachdem er den *colossus* des Nero/ Titus auf der *Velia*, und den Bogen des *Divus Titus* auf der *Velia* gesehen hatte (vergleiche hier **Fig. 120**).

Ich schlage vor, dass Torellis (1987, 579) soeben zitierte Interpretation auch auf das Nollekens Relief angewandt werden kann ([das oben besprochen wurde]; s.o., Kapitel *V.1.i.3.b*) und hier **Fig. 36**), und gleichermaßen auf den hier diskutierten, 8m hohen *colossus* von 'Domitian als Jupiter' (hier **Fig. 5**), dessen Ikonographie jetzt, dank der oben zitierten Beobachtungen Torellis (1987, 579), sehr viel verständlicher geworden ist'.

Falls Neros über 30 m hoher (vergoldete ?) Bronzekoloss auf der *Velia*, in der Sonne glitzernd, tatsächlich die Gesichtszüge des Titus erhalten hatte, dann erscheint Domitians kolossaler *Equus Domitiani*, der westlich davon auf dem *Forum Romanum* stand, in einem ganz anderen 'Licht'. Domitians *Equus Domitiani* kann dann nämlich als ein 'Gegengewicht' zum *colossus* des Nero/ Titus konzipiert worden sein. Vergleiche die diesbezüglichen Beobachtungen von Eric M. Moormann (2018, 168-169 mit Anm. 48); zu beachten ist allerdings, dass Moormann (2018, 164 mit Anm. 18) davon ausgeht, dass dieser *colossus* zu diesem Zeitpunkt den Gott Sol darstellte.

Wenn jedoch Kaiser Titus tatsächlich den Auftrag erteilt haben sollte, dass der Kopf von Neros *colossus*, der zu diesem Zeitpunkt den Sonnengott darstellte, in ein Portrait seiner selbst umgearbeitet wurde, dann ändert sich die Situation entsprechend. Einige Besucher des *Forum Romanum* und der *Velia* (vergleiche hier **Figs. 58; 73**), die von diesen beiden kolossalen Portraitstatuen der flavischen Kaiser Titus und Domitian beeindruckt worden waren, hatten danach vielleicht die Gelegenheit, auch noch Domitians Palast auf dem Palatin zu besuchen. Diese Leute haben vielleicht sogar gedacht, dass Domitians 8 m hohes Marmorportrait von sich selbst 'als Jupiter' in seiner '*Aula Regia*' (vergleiche hier **Fig. 5**), wenn man es mit diesen beiden anderen *colossi* verglich, eine relativ 'bescheidene' Aussage über sich selbst zu sein schien.

Erst nachdem dieses Kapitel in einer Vorschau auf unserem Webserver veröffentlicht worden war, habe ich die bedeutende Beobachtung von Pier Luigi Tucci (2022, 224-225, mit Fig. 20, Abschnitt: "Il Colosso") gefunden, der die enorme visuelle Wirkung erkannt hat, die Neros *colossus* auf Vespasians *Templum Pacis* gehabt haben muss (!).

Kehren wir nun zu Domitians Anspruch zurück, die *virtus* 'Unbesiegbarkeit' zu besitzen.

**Trotz des negativen Images, das im Auftrag Kaiser Trajans geschaffen wurde, und in dem Domitian all das abgesprochen worden war, konnten einige Gelehrte neuerdings die in Wirklichkeit große Bedeutung von Domitians militärischen Siegen nachweisen.**

Siehe oben, im Kapitel *Preamble : Domitian's negative image; Section I. 'The intentional creation of Domitian's negative image', here presented by discussing relevant text passages from Markus Handy ("Strategien zur Legitimierung der Ermordung des Domitian", 2015) and from Peter L. Viscusi (Studies on Domitian, 1973).* ('Preamble : Domitians negatives Image; Abschnitt I. 'Die absichtsvolle Kreierung von Domitians negativem Image', hier vorgestellt, indem relevante Textpassagen aus Markus Handy ("Strategien zur Legitimierung der Ermordung Domitians", 2015) und von Peter L. Viscusi diskutiert werden (Studies on Domitian, 1973').

Wenn man gleichzeitig bedenkt, was John Brian Campbell (1996, 491) schreibt: "Domitian was the first reigning emperor since Claudius in 43 to campaign in person, visiting the Rhine once, and the Danube three times", können wir folgende Schlüsse ziehen. Erstens ist es kein Wunder, dass in Domitians Palast auf dem Palatin (hier **Figs. 8; 8.1; 9; 58; 73; 108-110**), "das ikonographische Hauptthema der '*Aula Regia*' die Verherrlichung von Domitians militärischen Siegen war", wie Polito (2009, 506) festgestellt hat.

Obwohl in der *'Aula Regia'* Domitian nicht *selbst* als der siegreiche Feldherr seiner Kriege portraitiert wird. Auf seine Siege wird statt dessen lediglich 'angespielt' - zumindest im Fall der Fragmente der Skulpturenausstattung dieses Saales, die bis zu diesem Zeitpunkt noch überlebt hatten, als Bianchini (1738) sie ausgraben sollte (vergleiche hier **Figs. 8; 9**) - mittels der Wahl der Skulpturenausstattung dieses Saales, die verschiedene Trophäen enthält. Wir können jedoch davon ausgehen, dass es auch Darstellungen des siegreichen Feldherrn Domitian 'in Aktion' gab. Falls mehr solcher Darstellungen (außer dem *Equus Domitiani*, den wir von Münzen kennen; vergleiche *LTUR* II [1995] Fig. 80) irgendwo existiert hatten, waren sie wahrscheinlich, genau wie der *Equus Domitiani* selbst von denen zerstört worden, die, nach Domitians Ermordung und *damnatio memoriae*, Domitians negatives Image geschaffen haben.

Ich persönlich kenne nur eine einzige derartige überlebende Darstellung des siegreichen Feldherrn Domitian, das 'Relief Ruesch' (vergleiche hier **Fig. 7**), auf dem Domitians Gesicht nicht zufällig nach seiner *damnatio memoriae* zerstört worden ist, und dem wir uns jetzt zuwenden wollen.

**Ad III.) Domitians Anspruch, die *virtus* 'Unbesiegbarkeit' zu besitzen, indem er sich mit dem 'unbesiegbaren' Alexander dem Großen identifiziert hat; vergleiche das 'Relief Ruesch' (hier Fig. 7).**

Das 'Relief Ruesch' wird im Folgenden aus drei Gründen diskutiert : es zeigt *a)* Domitians *Alexander imitatio*, und beweist *b)* dass diese innovative Komposition, die bislang der trajanisch/ hadrianischen Zeit zugeschrieben worden ist - wie mir scheint selbstverständlich - bereits als Auftrag Domitians entwickelt wurde, und *c)* weil der Erhaltungszustand dieses Reliefs den Titel einer Ausstellung über Domitian zu illustrieren scheint, die kürzlich in Rom zu sehen war: *Domiziano Imperatore. Odio e amore* ('Kaiser Domitian. Haß und Liebe').

Der begleitende Katalog der oben erwähnten Ausstellung über Domitian in Rom hatte denselben Titel und wurde herausgegeben von Claudio Parisi Presicce, Massimiliano Munzi und Maria Paola Del Moro (2023).

Um die wissenschaftliche Diskussion zum 'Relief Ruesch' (hier **Fig. 7**) zusammenzufassen, wiederhole ich im Folgenden einige Textpassagen aus einem anderen Kapitel, in dem das Relief ausführlich besprochen worden ist (s.o., in *Preamble: Domitian's negative image; Section III. My own thoughts about Domitian; at point 5.*) (*Preamble: Domitians negatives Image; Abschnitt III. Meine eigenen Gedanken über Domitian'; zu Punkt 5.*).

[Weil dieses Kapitel *Die wichtigsten Ergebnisse dieses Buches über Domitian* auf unserem Webserver als Vorschau für diese Studie über Domitian veröffentlicht worden ist, habe ich, nach diesem Datum, nur noch wenige Details in dem hier folgenden Text aktualisiert. Dagegen sind einige der zu Grunde liegenden Passagen der *Preamble* selbst nach diesem Datum noch erheblich erweitert worden.]

**Ad a) Das 'Relief Ruesch' und Domitians Anspruch der 'Unbesiegbarkeit', die er mit seiner *Alexander imitatio* zum Ausdruck gebracht hat.**

'Dietrich Willers (2021, 81, 86-87 mit Anm. 40, Taf. 11,1 [= hier Fig. 7]), in seiner Besprechung des 'Relief Ruesch', welches Domitian, ohne einen Helm zu tragen, in einer Schlachtszene zeigt, stellt fest, dass 'keinen Helm zu tragen'... von antiken und modernen Kommentatoren unter anderem wie folgt interpretiert worden sei : Alexander der Große und andere Feldherren, die seinem Vorbild gefolgt sind, hätten auf diese Weise ihre Unbesiegbarkeit betont [Hervorhebung von mir].

Hans Rupprecht Goette war so freundlich, mir, von sich aus, am 14. Oktober 2021 den Artikel von Dietrich Willers zu schicken, in dem der Autor das 'Relief Ruesch' behandelt, ein Marmorrelief, das eine Reiterschlacht von Römern gegen Germanen darstellt ("Relief mit Reiterschlacht", 2021, mit seinen Taf. 11; Taf. 13 [= hier **Fig. 7**]).

Willers (2021) schreibt, dass der Sammler Arnold Ruesch (1882-1929), bestens bekannt auf Grund der *'Guida Ruesch'* (1908; 1911), dem ausgezeichneten Führer des Museo Archeologico Nazionale in Neapel, den er herausgab, das *'Relief Ruesch'* im Jahre 1920 bei einem Kunsthändler in Rom erworben hatte.

Ruesch hatte nach Willers (2021) bereits selbst erkannt, dass die Gestaltung der zentralen Reitergruppe des *'Relief Ruesch'*, die einen gepanzerten römischen *imperator*, der ein *paludamentum* trägt, und einen Germanen, ihm genau gegenüber, zeigt, verblüffende Ähnlichkeiten mit den beiden Protagonisten auf dem berühmten Alexandermosaik aus der *'Casa del Fauno'* in Pompeji aufweist, das sich heute im Museo Archeologico Nazionale in Neapel befindet. Ausgehend von dieser außerordentlichen Tatsache, hat Bernard Andreae (1956) behauptet, dass das *'Relief Ruesch'* eine moderne Fälschung sei; und das wiederum hatte zur Folge, dass seither dieses Relief aus der archäologischen Diskussion verschwunden ist. Ich persönlich wußte nicht einmal von der Existenz dieses Reliefs.

Willers (2021) berichtet, dass Ruesch in Zürich für seine Sammlung eine Villa erbaut hatte. Nach seinem Tod wurden seine Antiken verkauft und sind seither zerstreut, und im Jahre 1977 wurde seine Villa zerstört. Glücklicherweise konnte im Jahre 2019 die Antikensammlung Bern der Universität einige der Antiken ex Sammlung Ruesch von einigen privaten Sammlern als Leihgaben erwerben (unter anderem das *'Relief Ruesch'*; hier **Fig. 7**). Außerdem hatte der Eigentümer des *'Relief Ruesch'* offenbar zugestimmt, dass es kürzlich restauriert werden konnte.

Diese Restaurierung des *'Relief Ruesch'* hat gezeigt, dass bereits in der Antike das Gesicht des römischen *imperator*s auf dem Relief absichtlich zerstört worden war. Willers (2021, 79, 83-84, 89, 94), der beweisen kann, dass das *'Relief Ruesch'* unmöglich eine moderne Fälschung sein kann, folgt mit seiner domitianischen Datierung des Reliefs dem Urteil früherer Gelehrter, unter anderem, indem er das *'Relief Ruesch'* überzeugend mit den Cancellariareliefs vergleicht (hier **Figs. 1; 2; Figs. 1 und 2 Zeichnung**).

Und, wie bereits Arnold von Salis vorschlug (1947, 99-100), ist Willers (2021, 89-90, Taf. 11; Taf. 13, 2-5 [= hier **Fig. 7**]) in der Lage zu zeigen, dass der Kopf des Reiters ursprünglich ein Portrait des Domitian war, dessen Gesicht offensichtlich als eine Folge der *damnatio memoriae* des Kaisers zerstört worden ist. Domitian kämpft auf dem *'Relief Ruesch'* gegen germanische Soldaten, die Willers (2021, 90) mit den Chatti identifiziert, die, wie Willers schreibt, Domitian im Jahre 83 n. Chr. besiegt habe.

**Fig. 7. *'Relief Ruesch'*, aus der Sammlung Arnold Ruesch (Zürich), der es 1920 bei einem Kunsthändler in Rom erworben hatte (Provenienz unbekannt). Reiterschlacht von Römern gegen germanische Soldaten (die Chatti ?), der römische *imperator* ist Domitian. Marmor, 74 x 108,8 cm. Domitians Gesicht wurde wegen seiner *damnatio memoriae* zerstört, aber das Relief wurde trotzdem in der Antike wiederverwendet. Privatsammlung. Leihgabe in der Antikensammlung Bern der Universität. Aus: D. Willers (2021, Taf. 11; Taf. 13,1: Detail des *imperator*s, Taf. 13,2-4: Details vom Kopf des *imperator*s; Taf. 13,5: Rechtes Profil der Büste des Domitian, Rom, Musei Capitolini, Inv. Nr. MC 1156) '....**

*'Dietrich Willers (2021, 74 Anm. 1) schreibt, dass die Antikensammlung Bern der Universität "eine Sonderausstellung mit Dauerleihgaben aus dem einstigen Bestand der Sammlung Ruesch" plane. Und in einer E-mail vom 20 Oktober 2021 erzählte er mir, dass er einen Sonderdruck seines Aufsatzes (2021) Bernard Andreae geschickt habe, der Willers antwortete, dass er mit ihm einverstanden sei, dass das *'Relief Ruesch'* (hier **Fig. 7**) antik ist. Am 24. Oktober 2021 hat mir Dietrich Willers nochmals eine Email geschrieben, in der er mir freundlicherweise erlaubt hat, unsere Korrespondenz hier zu erwähnen' ...*

*'Apropos, die verblüffenden Ähnlichkeiten der Kompositionen des *'Relief Ruesch'* und des Alexandermosaiks. Mir ist natürlich bewusst, dass, aus chronologischen Gründen, Domitian und seine Künstler unmöglich das Alexandermosaik in Pompeji gekannt haben können, sondern nur entweder das zu Grunde liegende Original, ein berühmtes Gemälde, das Willers (2021, 81) um 300 v. Chr. datiert, oder alternativ andere Kopien dieses Originals.*

Zwischen dem 4. und 24. Februar 2022, und nochmals am 1. Januar 2023, konnte ich das 'Relief Ruesch' und das Alexandermosaik in Email-Korrespondenzen mit Andrew Stewart diskutieren. Wie Stewart mir schrieb, war das Original des Mosaiks ein (heute) verlorenes Gemälde, das, weil es ein "four-colour-painting" war, eindeutig ins 4. Jahrhundert v. Chr. datierbar sei. Dieses Gemälde war seiner Meinung nach noch zu Lebzeiten Alexanders geschaffen worden. Später wurde dieses Gemälde als Kriegsbeute von Makedonien nach Rom gebracht, "after 168 or after 148 BC", wie Stewart vorschlug, wo es daraufhin in verschiedenen Medien kopiert werden sollte; vergleiche Stewart (1993, 133 mit Anm. 37). Andrew war so freundlich, mir auch seine entsprechende Publikation zu schicken; vergleiche Stewart (*Faces of Power: Alexander's image and Hellenistic politics*, 1993, 130-150, Chapter: "2. The Alexander Mosaic: A Reading").

Am 1. Januar 2023 hatte ich Andrew Stewart erneut in einer Email gefragt, ob das von ihm angegebene Datum "after 148 BC" möglicherweise bedeuten könnte, dass er annimmt, dass dieses griechische Gemälde als Beute in der *Porticus Metelli* in Rom (der späteren *Porticus Octaviae*) ausgestellt gewesen sei. Stewart war so freundlich, mir sofort zu antworten, dass er das selbst niemals vorgeschlagen habe''.

Für die *Porticus Octaviae*; s.o. zu Punkt 2.).

Ich hatte Andrew Stewart diese Frage gestellt, weil wir wissen, dass Metellus Macedonicus im Jahre 146 v. Chr. die berühmte Statuengruppe *turma Alexandri* nach Rom gebracht, und in seiner *Porticus Metelli* aufgestellt hatte, die Alexander der Große ins Heiligtum des Zeus von Dion in Makedonien geweiht hatte. Die *turma Alexandri*, ein Werk des Lysipp, stellte Alexander den Großen zusammen mit jenen seiner *hetairoi* ('Gefährten') dar, die 334 v. Chr. am Granikos gefallen waren: eine Bronzegruppe von 25 Reiterstatuen und weiteren 9 Infanteriesoldaten; vergleiche Häuber (2014a, 532). - Zu Alexander dem Großen und seinen *hetairoi* werde ich unten noch einmal zurückkommen.

Siehe unten, in Band 3-2, in *A Study on the consequences of Domitian's assassination ...; Introduction; Section I.; at itinerary 4.) Hadrian's Parforceritt in November AD 97 from Moesia Inferior to Mogontiacum (Mainz). The discussion of this 'itinerary' of Hadrian brings us another time back to the Porticus Octaviae, because there was on display the famous turma Alexandri.*

('Eine Studie zu den Folgen von Domitians Ermordung ...; Einführung; Abschnitt I., zur Reiseroute 4.) *Hadrian's Parforceritt im November 97 n. Chr. von Moesia inferior nach Mogontiacum (Mainz). Die Diskussion dieser 'Reiseroute' Hadrians bringt uns erneut zurück zur Porticus Octaviae, weil dort die berühmte turma Alexandria ausgestellt war*); und zu Kapitel VI.1.

Am 14. Januar 2023 habe ich von Kris Seaman erfahren, dass Andrew Stewart am Tag zuvor verstorben war. Was sein eigenes wissenschaftliches Werk betrifft, das auf diese Weise vorzeitig unterbrochen wurde, bedeutet dies offensichtlich für die gesamte wissenschaftliche Disziplin der Archäologie einen schweren Verlust. Ganz besonders empfinden dies jedoch seine Freunde und Kollegen, die den Vorzug genossen haben, Andrew persönlich zu kennen, und mit denen er sein enormes Wissen so großzügig geteilt hat.

Ebenfalls seit Februar 2022 hatte ich Gelegenheit, das 'Relief Ruesch' mit Filippo Coarelli zu besprechen (er kannte es sogar, wusste aber natürlich nicht, wo es sich augenblicklich befindet), sowie das Alexandermosaik. Coarelli erzählte mir, dass er augenblicklich an der Vorbereitung einer Ausstellung über Alexander den Großen arbeite, die vom Museo Archeologico Nazionale in Neapel vorbereitet wird; das Alexandermosaik soll aus diesem Anlass restauriert werden. Am 31. März 2023 war Coarelli so freundlich, mir das Zitat des Katalogs zu dieser Ausstellung zu schreiben, die am 29. Mai 2023 im Museo Archeologico Nazionale in Neapel eröffnet worden ist: Filippo Coarelli und Eugenio Lo Sardo (Hrsg.), *Alessandro Magno e l'Oriente. La scoperta e lo stupore*.

Ich selbst bin kein Spezialist, was *militaria* anlangt, aber ich möchte hier auf eine Tatsache hinweisen, die andere Gelehrte, die in diesem Bereich kenntnisreicher sind als ich, vielleicht Lust haben, im Detail zu untersuchen.

Ich beziehe mich auf den Soldaten in Szene LXXII auf der Trajanssäule (hier **Figs 4; 4.1**), der sich zur Rechten des Mannes befindet, den Amanda Claridge (2013) als (angeblichen) Hadrian (seines Portrait-Typs Delta Omikron ( $\Delta$ ); hier **Fig. 3**) identifiziert hat, und der (wie die von Willers 2021 auf dem 'Relief Ruesch' als Chatti identifizierten Germanen; hier **Fig. 7**) nur mit langen Hosen bekleidet, und mit einem Schild bewaffnet ist. Nach Ansicht von Karl Strobel (2017, 318), kann dieser Soldat auf der Trajanssäule (hier **Figs. 4; 4.1**) als "Markomanne" oder "Quade" identifiziert werden, die in Trajans Erstem Dakischen Krieg (im Jahre 102 n. Chr.), der in Szene LXXII der Trajanssäule dargestellt ist, zu den römischen Auxiliartuppen gehört haben; so auch Willers (2021, 90 mit Anm. 90). - Zu diesem Relief auf der Trajanssäule und zu Hadrians Portrait-Typ (hier **Figs. 4 ?; 4.1 ?; 3**) werde ich später noch einmal zurückkommen.

Wenn diese germanischen Soldaten auf dem 'Relief Ruesch' (hier **Fig. 7**) in Wirklichkeit nicht Chatti, sondern Markomannen oder Quaden wären, dann würde es sich um germanische Stämme handeln, mit denen sich Domitian erst im Jahre 89 n. Chr. auseinandersetzen musste, wie wir oben von Peter L. Viscusi (1973, 53-63) gelernt haben, der außerdem die Tatsache beschreibt, dass Domitian im Jahre 89 n. Chr. einen doppelten Triumph über die Chatti und die Daker gefeiert hat. Falls demnach die germanischen Soldaten, die auf dem 'Relief Ruesch' erscheinen, jene des späteren Krieges sind, dann könnte dieses Relief 'nach 89 n. Chr.' datiert werden, genau so wie meiner Ansicht nach die Cancellariareliefs (s.o., zu Punkt 2.) und hier **Figs. 1; 2; Figs. 1 und 2 Zeichnung**), mit denen auch Willers (2021) das 'Relief Ruesch' vergleicht.

Für Domitians Feldzug gegen die Markomannen und die Quaden (im Jahre 89 n. Chr.), sowie Domitians doppelten Triumph über die Chatti und die Daker im Jahre 89 n. Chr.; s.o., Kapitel *Preamble: Domitian's negative image*; at Section I. ('*Preamble: Domitians negatives Image*; zu Abschnitt I.')

**Im Folgenden erlaube ich mir einen Exkurs zu dem (angeblichen) Hadrian, den Amanda Claridge auf der Trajanssäule entdeckt hat, in der Szene LXXII (hier Figs. 4; 4.1; in Wirklichkeit ein Schleuderer von den Balearen), und zu den Bildnissen Hadrians vom Portrait-Typ Delta Omikron (hier Fig. 3)**

Amanda Claridge (2013, 12) hat die Szene LXXII auf der Trajanssäule (hier **Figs. 4; 4.1**) wie folgt kommentiert: "Band 11: lxxii Trajan surveys the last battle of the First [Dacian] War. Focal point: Stonethrower [Hervorhebung von mir]". Claridge (2013, 13 mit Anm. 80, S. 14, 15, ihre plate 15 [= hier **Fig. 4**]) identifiziert diesen "Stonethrower" ('Steinewerfer') auf hier **Figs. 4; 4.1** versuchsweise mit Hadrian, der im hier sogenannten Delta Omikron ( $\Delta$ ) Portrait-Typ dargestellt sei (vergleiche hier **Fig. 3**).

Obwohl der Kopf dieses Mannes (hier **Fig. 4**) den Portraits Hadrians dieses Portraittyps (hier **Fig. 3**) verblüffend ähnelt, folge ich dieser Identifizierung von Claridge nicht.

Die Szene LXXII der Trajanssäule (hier **Fig. 4.1**) stellt die entscheidende dritte Schlacht in Trajans drittem Feldzug in seinem Ersten Dakischen Krieg dar, die im Jahre 102 n. Chr. stattfand. Hadrian war ein Senator, der, wenn er auf **Figs. 4; 4.1** wiedergegeben worden wäre, mit den *calcei patricii* (den Schuhen, die von den Senatoren getragen wurden) hätte dargestellt werden müssen; er hatte seit 96 n. Chr. als senatorischer Tribun der *Legio V Macedonica* in Moesia *Inferior* gedient, und von November 97 n. Chr. bis Januar 98 n. Chr. als senatorischer Tribun der *Legio XXII Primigenia* in Mogontiacum (Mainz) in Obergermanien.

Seit 100 n. Chr. war Hadrian mit Trajans Großnichte Sabina verheiratet. In Trajans Erstem Dakischen Krieg war Hadrian Trajans *comes expeditionis Daciae* (seit 101 n. Chr.), und er sollte sich in diesem Krieg die *dona militaria* verdienen.

Abgesehen davon, dass wir uns zuallererst fragen sollten:

a.) ob Hadrian in einem ähnlichen Kontext hätte erscheinen können wie der "Stonethrower" in der Schlacht der Szene LXXII der Trajanssäule (hier Fig. 4.1). Persönlich glaube ich eher, wir sollten erwarten, dass er zu Trajans Entourage gehörte (die auch auf Fig. 4.1 dargestellt ist), aber in all diesen Szenen der Trajanssäule fällt auf, dass Hadrian in Trajans Entourage eben *nicht* vorkommt, worüber sich die meisten Gelehrten einig sind; und -

b.) ob Hadrian als "Stonethrower" hätte aktiv werden können, wie Claridge (2013, 13 mit Anm. 80, S. 14, 15, ihre plate 15 [= hier Fig. 4; vergleiche Fig. 4.1]) ihn nennt, das heißt, als ein Schleuderer, eine spezialisierte Waffengattung, in der Hadrian vermutlich nicht ausgebildet war. - Ich danke der Militärgeschichtlerin Rose Mary Sheldon, die diese Frage mit mir diskutiert hat.

Der "Stonethrower", wie Claridge (2013) diesen Mann auf Figs. 4; 4.1, nennt, kämpft barhäuptig und barfuß. Der Vorschlag von Amanda Claridge, diesen Mann (und einige andere Personen auf der Trajanssäule) mit Hadrian zu identifizieren, ist von Karl Strobel (2017, 65 mit Anm. 48) abgelehnt worden.

Ich selbst folge jenen Gelehrten, die diesen Mann als einen Schleuderer von den *Baleares* identifizieren (von denen insgesamt vier auf dem ganzen Fries dargestellt sind; vergleiche hier Figs. 4; 4.1; 4.2; 4.3, die alle mit bloßem Kopf und barfuß kämpfen).

Vergleiche die Website von Jonathan Coulston (2013; zitiert nach K. STROBEL 2017, 309, Anm. 2); Tonio Hölscher (2017, 28), und Christian Heitz (2017, 131, mit Anm. 16).

**Figs. 4. Szene LXXII der Trajanssäule. Der "Stonethrower" von Amanda Claridge (2013, 12, 13), den sie versuchsweise mit Hadrian identifiziert hat, (angeblich) dargestellt im hier sogenannten Delta Omikron (Δο) Portrait-Typ (hier Fig. 3). In Wirklichkeit ist dieser Mann ein Schleuderer von den *Baleares*. Zur Rechten dieses Schleuderers erscheint ein germanischer Soldat, der mit langen Hosen bekleidet und mit einem Schild bewaffnet ist, und der vielleicht als ein Markomane oder als ein Quade identifiziert werden kann. Aus: A. Claridge (2013, 15, pl. 15).**

**Fig. 4.1. Szene LXXII der Trajanssäule. Amanda Claridge (2013, 12) kommentierte die Szene LXXII der Trajanssäule (hier Figs. 4; 4.1) wie folgt: "Band 11: lxxii Trajan surveys the last battle of the First [Dacian] War. Focal point: Stonethrower". Claridge (2013, 13 mit Anm. 80, S. 14, 15, ihre plate 15 [= hier Fig. 4]) identifizierte diesen "Stonethrower" auf hier Figs. 4; 4.1 mit Hadrian, dargestellt in dem hier sogenannten Delta Omikron (Δο) Portrait-Typ (vergleiche hier Fig. 3).**

Für eine Diskussion aller dieser Themen; s.u., im Band 3-2, in:

*A Study on the consequences of Domitian's assassination :*

*Nerva is forced to adopt Trajan and Trajan creates Domitian's negative image to consolidate his own reign. With Hadrian's adoption manquée in late October or at the beginning of November of AD 97, his 20-year long road to his accession and his thanksgivings for it, his Temple complex in the Campus Martius.*

*Or: The wider topographical context of the Arch of Hadrian alongside the Via Flaminia which led to the (later) Hadrianeum and to Hadrian's Temples of Diva Matidia (and of Diva Sabina?). With discussions of Hadrian's journey from Moesia Inferior to Mogontiacum (Mayence [Mainz]) in order to congratulate Trajan on his adoption by Nerva, and of Hadrian's portrait-type Delta Omikron ( $\Delta o$ ) (cf. here **Fig. 3**).*

*With The fourth and the fifth Contribution by Peter Herz, with The first Contribution by Franz Xaver Schütz, with The Contribution by John Bodel, and with The second Contribution by Angelo Geißen;*

*at the Introduction; Sections IX. and XI.; and in Chapter VI.1. My 2. Conclusion: In this context it is interesting to analyse the process by which Hadrian finally became emperor; at Trajan's adoption by Nerva and Hadrian's Parforceritt from Moesia Inferior to Mogontiacum [Mainz] to congratulate Trajan on his adoption; at The circumstances that had brought Trajan to Mogontiacum and Domitian's negative image, created by Tacitus and Pliny at the order of Trajan to legitimize his own accession; at Trajan presented Hadrian in AD 106 with the signet-ring that he himself had received on the occasion of his adoption by Nerva. With a discussion of the meaning of this gesture; and at Chapters VI.2.; VI.2.1.; VI.2.2.; VI.2.3., and VI.2.4. A. Claridge (2013) has identified the head of the "Stonethrower" in the battle Scene LXXII on Trajan's Column (here **Figs. 4; 4.1**) as a copy of Hadrian's portrait-type Delta Omikron ( $\Delta o$ ) ...*

*(Eine Studie zu den Folgen von Domitians Ermordung :*

*Nerva wird gezwungen, Trajan zu adoptieren, und Trajan kreierte Domitians negatives Image, um seine eigene Herrschaft zu konsolidieren. Mit Hadrians adoption manquée im späten Oktober oder Anfang November 97 n. Chr., seinem 20 Jahre dauernden Weg zur Herrschaft, und seinem Dank dafür, der Errichtung seines Tempelkomplexes auf dem Marsfeld. Oder: Der weitere topographische Kontext des Hadriansbogens an der Via Flaminia, der zu dem (späteren) Hadrianeum führte und zu Hadrians Tempeln der Diva Matidia (und der Diva Sabina?). Mit Diskussionen von Hadrians Reise von Moesia inferior nach Mogontiacum (Mainz), um Trajan zu seiner Adoption durch Nerva zu gratulieren, und von Hadrians Portrait-Typ Delta Omikron ( $\Delta o$ ) (vergleiche hier **Fig. 3**).*

*Mit Dem vierten und fünften Beitrag von Peter Herz, mit Dem Beitrag von Franz Xaver Schütz, mit Dem Beitrag von John Bodel, und mit Dem zweiten Beitrag von Angelo Geißen;*

*in der Einführung; Abschnitte IX. und XI.; und im Kapitel VI.1. Meine 2. Schlussfolgerung: In diesem Kontext ist es interessant, den Prozess zu analysieren, der dazu geführt hat, dass Hadrian schließlich selbst Kaiser geworden ist; in Trajans Adoption durch Nerva und Hadrians Parforceritt von Moesia inferior nach Mogontiacum [Mainz], um Trajan zu seiner Adoption zu gratulieren; in Die Umstände, die Trajan nach Mainz gebracht hatten und Domitians negatives Image, das von Tacitus und Plinius im Auftrag von Trajan kreierte wurde, um seine eigene Herrschaft zu legitimieren; in Trajan schenkte Hadrian im Jahre 106 den Siegelring, den er selbst aus Anlass seiner Adoption von Nerva erhalten hatte. Mit einer Diskussion der Bedeutung dieser Geste; und in den Kapiteln VI.2.; VI.2.1.; VI.2.2.; VI.2.3.; und VI.2.4. A. Claridge (2013) hat den Kopf des "Stonethrowers" in der Schlachtszene LXXII auf der Trajanssäule (hier **Figs. 4; 4.1**) als eine Kopie von Hadrians Portrait-Typ Delta Omikron ( $\Delta o$ ) identifiziert ...).*

**Um meine eigenen Forschungen zu Hadrians Portrait-Typ Delta Omikron ( $\Delta o$ ) zusammenzufassen, zitiere ich im Folgenden nur die Titel der soeben erwähnten Kapitel VI.2., VI.2.1., VI.2.2., und VI.2.3., in:**

***A Study on the consequences of Domitian's assassination (Eine Studie zu den Folgen von Domitians Ermordung'), und werde diesen Titeln einige Kommentare hinzufügen :***

**^Kapitel VI.2. Hadrians Portrait-Typ Delta Omikron ( $\Delta o$ ).** Kaiser Hadrian prägte Münzen mit diesem Portrait-Typ im Jahre 117 n. Chr. auf Tetradrachmen in Alexandria (vergleiche hier **Fig. 137**) und auf aurei (Goldmünzen) in Rom im Jahre 138 n. Chr. [so meine eigene Hypothese], unter anderem mit seinen DIVIS PARENTIBVS auf der Rückseite (vergleiche hier **Fig. 139**), auf allen diesen Münzen schaut Hadrian geradeaus nach vorn. Dieser Portrait-Typ wird außerdem von zwei Marmorköpfen und zwei Marmorbüsten

überliefert (vergleiche hier **Fig. 3**). In allen diesen Marmorportraits wendet sich Hadrian zu seiner Linken. Die Datierung dieser Marmorportraits ist umstritten.

**Bezüglich dieses Portrait-Typs müssen wir zwei Fragen beantworten:**

- 1.) wann genau wurde dieses jugendliche Bildnis Hadrians geschaffen? Damit ist eine weitere Frage verbunden: Hatte Hadrian das Original diese Portraits in Auftrag gegeben, um an ein besonderes Ereignis in seiner Jugend zu erinnern?; und -
- 2.), was war Hadrians Absicht am Ende seines Lebens [so meine eigene Hypothese], als er zum ersten Mal rundplastische Marmorbildnisse von sich selbst in diesem Portrait-Typ in Auftrag gab?.

Vergleiche für die Tetradrachmen, die Kaiser Hadrian im Jahre 117 n. Chr. in Alexandria prägen ließ (vergleiche hier **Fig. 137**), auf denen zum ersten Mal Hadrians Portrait-Typ Delta Omikron ( $\Delta\omicron$ ) erscheint (hier **Fig. 3**): s.u., *The first Contribution by Angelo Geißen* ('Der erste Beitrag von Angelo Geißen'): *Bemerkungen zur frühen Münzprägung Hadrians in Alexandria*.

Vergleiche für die *aurei*, die Kaiser Hadrian in Rom prägen ließ (hier **Fig. 139**): Martin Beckmann ("The Gold Coinage of Hadrian AD 130-138", 2019), zitiert und diskutiert von Hans Rupprecht Goette (2021, 24 Anm. 67, S. 124, Abb. 56, S. 25-27). Nach Ansicht von Beckmann (2019, 151) wurden die *aurei* (hier **Fig. 139**) herausgegeben: "presumably around mid-138"; vergleiche Beckmann (2019, 152) und hier **Fig. 139**: "The inscription on the obverse clearly labels the portrait as that of Hadrian ... The die analysis shows that two of the three known dies bearing this youthful portrait were used at the very end of Hadrian's coinage; the links do not rule out a posthumous issue, though they do not prove it either".

**Bedenken Sie, dass Martin Beckmann (2019, 152) selbst bemerkt, dass die Serie der aurei, zu denen Hadrians aureus (hier Fig. 139) gehört, "dynastic" sei, jedoch ohne selbst die offensichtliche Schlussfolgerung aus dieser Bemerkung zu ziehen, indem er diese Beobachtung mit Hadrians Adoption des Antoninus Pius am 25. Februar 138 n. Chr. in Verbindung bringt. - Darauf werde ich später noch einmal zurückkommen.**

**Kapitel VI.2.1.** H.R. Goettes (2021) Diskussion von Hadrians Portrait-Typ Delta Omikron ( $\Delta\omicron$ ) (vergleiche hier **Fig. 3**). Bezüglich der 1.) Frage, wählt Goette die Tatsache, dass Kaiser Trajan, im Jahre 106 n. Chr., während des Zweiten Dakischen Krieges, Hadrian den Siegelring geschenkt hat, den er selbst von Nerva erhalten hatte aus Anlass seiner Adoption durch ihn [im späten Oktober oder zu Beginn des November im Jahre 97 n. Chr.]; bezüglich der 2.) Frage, schlägt Goette vor, dass diese Marmor Portraits (vergleiche hier **Fig. 3**) von Kaiser Antoninus Pius in Auftrag gegeben worden seien, der, mit der Linkswendung dieser Portraits, einer möglichen *Alexander imitatio*, den neu kreierten *Divus Hadrianus* geehrt habe, der absichtlich jung dargestellt worden sei'.

Vergleiche hierzu auch unten, *The third Contribution by Peter Herz* ('Der dritte Beitrag von Peter Herz') : *Der Übergang von Trajan auf Hadrian und das erste Regierungsjahr Hadrians*, und *The fourth Contribution by Peter Herz* ('Der vierte Beitrag von Peter Herz') : *Wann wurde Trajan von Nerva adoptiert ?*

**Kapitel VI.2.2.** Zusätzliche Informationen, die für die Diskussion von Hadrians Portrait-Typ Delta Omikron ( $\Delta\omicron$ ) von Bedeutung sind (vergleiche hier **Fig. 3**); Hadrian und Alexander der Große; Hadrians Adoption durch Trajan, wie sie von Hadrian dargestellt wurde; Die Tetradrachme, die Hadrian im Jahre 137/138 in Alexandria herausgegeben hat, um an seine Adoption des Antoninus Pius zu erinnern (vergleiche hier **Fig. 138**)'.

**Im Folgenden zitiere ich eine Textpassage aus Kapitel VI.2.2., in: A Study on the consequences of Domitian's assassination ('Eine Studie zu den Folgen von Domitians Ermordung') :**

'Die Tetradrachme, die Hadrian im Jahre 137/ 138 n. Chr. in Alexandria herausgab [hier **Fig. 138**] ist von Angelo Geißen in seinem Aufsatz ("AIQN - AETERNITAS. Welche numismatischen Zeugnisse reflektieren

die Vollendung der Sothis-Periode unter Antoninus Pius?", 2010) diskutiert worden. Vergleiche für diese Münze (hier **Fig. 138**) auch Andrea Carandini (2019, 92: § 121, Fig. 33). Nach Ansicht von Geißen (a.a.O), erinnerte diese Tetradrachme an Hadrians *pronoia/providentia* für die *continuitas imperii* [die Vorsorge des regierenden Kaisers für das Weiterbestehen der Herrschaft], da sie sich auf Hadrians Adoption des (zukünftigen) Antoninus Pius bezog, der seinerseits, und auf Hadrians Wunsch, unmittelbar zuvor (die zukünftigen) Marcus Aurelius und Lucius Verus adoptiert hatte'.

Zum scheinbaren Paradoxon, dass Hadrian mit dem Münz-Typ (hier **Fig. 138**), der in Alexandria im Jahre 137/138 geprägt wurde, auf die Adoption des Antoninus Pius hinweisen konnte, die erst am 25. Februar des Jahres 138 n. Chr. stattfinden sollte: Wir wissen, dass Augustus, als Folge seiner Korrektur von Julius Caesars Kalenderreform (s.u., im Band 3-2, **Anm. 545**, in *Appendix II.c*), das Datum des Ägyptischen Neujahrsfestes auf den 29. August festgelegt hatte.

Diese Tetradrachme (hier **Fig. 138**) ist bislang noch nicht von jenen Gelehrten in ihre Überlegungen mit einbezogen worden, die an den hier diskutierten Marmorkopien von Hadrians Portrait-Typ Delta Omikron (Δο) (here **Fig. 3**) interessiert sind.

Die *providentia* des regierenden Kaisers für die *continuitas imperii* erscheint auf Münzen seit Nerva. Das kann zurückverfolgt werden auf die Sitte einiger (adoptierter) Kaiser seit Tiberius, die *ara Providentiae* auf ihren Münzen darzustellen, was genau dieselbe Bedeutung hatte; vergleiche Mario Torelli ("Providentia, Ara", in *LTUR*, IV, 1999, 165-166, Figs. 66-67); Häuber (2014a, 712 mit Anm. 199).

**‘Kapitel VI.2.3. Meine eigene Interpretation von Hadrians Portrait-Typ Delta Omikron (Δο) (vergleiche hier Fig. 3). Bezüglich der 1.) Frage schlage ich vor, dass Hadrian (der meiner Meinung nach in diesem Portrait-Typ wie ein circa 20 Jahre alter Mann aussieht) diesen Delta Omikron Portrait-Typ zu einem unbekanntem Zeitpunkt in Auftrag gegeben hat. Er wollte damit entweder an seinen circa 1800 km langen Parforceritt im November des Jahres 97 n. Chr. von Moesia inferior nach Mogontiacum (Mainz) erinnern, den er (zusammen mit ‘Gefährten’) unternahm, um Trajan zu seiner Adoption durch Nerva zu gratulieren, oder aber an den Beginn seiner daraus resultierenden 20 Jahre langen Zusammenarbeit mit Trajan (die mit seiner Adoption? durch Trajan, und mit dem Beginn seiner eigenen Herrschaft als Kaiser endete : am 9. beziehungsweise am 11. August 117 n. Chr.).**

Bezüglich der 2.) Frage schlage ich vor, dass Hadrian die Marmorkopien dieses Portrait-Typs (hier **Fig. 3**) als Teil der öffentlichen Darstellung seiner *providentia* für die *continuitas imperii* in Auftrag gegeben hat : Hadrians Adoption des Antoninus Pius am 25. Februar 138 n. Chr. (unmittelbar nachdem Antoninus Pius seinerseits Marcus Aurelius und Lucius Verus adoptiert hatte). Ich schlage dies vor, weil Hadrian seine Adoption des Antoninus Pius auch mit der Prägung der Tetradrachme im Jahre 137/ 138 in Alexandria dokumentiert hat (hier **Fig. 138**). Ich erachte deshalb die folgende Annahme als plausibel, obwohl sie gegenwärtig nicht beweisbar ist, dass nämlich Hadrian noch selbst, als Teil dieser öffentlichen Darstellung seiner Vorsorge für den Weiterbestand der Herrschaft, im Jahre 138 die *aurei* mit diesem Portrait-Typ und seinen Adoptiveltern ('DIVIS PARENTIBVS'), Trajan und Plotina herausgegeben hat (hier **Fig. 139**). Abgesehen von der Tatsache, dass diese *aurei*, ebenso wie diese Marmorportraits (hier **Fig. 3**), darauf hinweisen, dass Hadrian nun auch selbst einen Sohn adoptiert hatte, weisen sie außerdem auf Hadrians eigene *adoption manquée* hin (seine eigene ‘verpasste’ Adoption : durch Trajan, unmittelbar bevor Nerva den Trajan adoptiert hatte) im späten Oktober oder zu Beginn des November 97 n. Chr. **Und wegen der ‘Wendung zu ihrer Linken’ dieser Portraits (hier Fig. 3), einer möglichen Alexander imitatio, kann Hadrian möglicherweise auf diese Weise überdies behauptet haben, dass er im Alter von 21 Jahren beschlossen habe (im November des Jahres 97 n. Chr.), ‘sich das römische Weltreich zu erobern’, ähnlich wie Alexander (zusammen mit seinen *hetairoi* [‘Gefährten’] - und seinen Soldaten) das seine eroberte, der damit im Alter von 20 Jahren begonnen hatte [Hervorhebung von mir]’.**

Für die oben erwähnten Daten, *dies adoptionis* und *dies imperii* Hadrians; s.o., **Anm. 331**, in Kapitel II.2.; und unten, im Band 3-2, in *Appendix IV.c.1.*). Siehe auch unten, zu *The fifth Contribution by Peter Herz* ('Der fünfte Beitrag von Peter Herz') : *Der Ritt Hadrians nach Mogontiacum*, sowie zu *The first Contribution by Franz Xaver Schütz* ('Der Beitrag von Franz Xaver Schütz'): *Zur kartographischen Visualisierung historischer Landschaftselemente zwischen Rhein und Schwarzem Meer von Augustus bis Hadrian* (vergleiche hier **Fig. 77**).

Erst nachdem dieses Kapitel fertiggestellt war, stellte ich fest, dass auch Hans-Ulrich Cain (2019, 2) das Portrait Hadrians vom Delta Omikron ( $\Delta\omicron$ )-Typ untersucht hat. Bezüglich der Datierung der Marmorkopien dieses Portrait-Typs und ihrer Bedeutung (hier **Fig. 3**) kommt er zu denselben Ergebnissen wie ich. Dem entsprechenden Kapitel, in: *A Study of the consequences of Domitian's assassination* ('Eine Studie zu den Folgen von Domitians Ermordung'), dessen Titel im Folgenden zitiert wird, habe ich deshalb eine Diskussion von Cains Erkenntnissen hinzugefügt:

``**Chapter VI.2.3.** Why does Hadrian's portrait-type Delta Omikron ( $\Delta\omicron$ ) appear on his *aurei* of AD 138 which show his DIVIS PARENTIBVS on the reverses (here **Fig. 139**)? The answer is provided by a comparison of those *aurei* with Hadrian's tetradrachma (cf. here **Fig. 138**), issued at Alexandria in AD 137/ 138 to commemorate his adoption of the future Antoninus Pius on 25th February AD 138.

With a discussion of the observations by H.-U. Cain (2019, 1-2) concerning Hadrian's portrait-type Delta Omikron ( $\Delta\omicron$ ) (here **Fig. 3**), and concerning the portrait-types of his successors, all adopted in AD 138: the portrait-type of the future Antoninus Pius, created on the occasion of his adoption by Hadrian, which intentionally shows great similarities with Hadrian's own later portraits; and of the portrait-types of the future Marcus Aurelius and Lucius Verus, created on the occasion of their adoptions by Antoninus Pius, that are intentionally very similar as Hadrian's youthful portrait-type Delta Omikron ( $\Delta\omicron$ ) (for these portrait-types of Antoninus Pius, Marcus Aurelius and Lucius Verus; cf. H.-U. CAIN 2019, 1-2, Abb. 1-3). Cain (2019, 2) writes that Hadrian "in seinen letzten Lebensjahren 136–138 n. Chr. sein eigenes Jugendbildnis [here **Fig. 3**] aktualisieren ließ, als ihm die Nachfolgeregelung zu einem vordringlichen Anliegen geworden war".

That is to say, 'when the organization of his succession had become a major concern', or in other words, when Hadrian concentrated on the 'providentia for the *continuitas imperii*'".

(**Kapitel VI.2.3.** Warum erscheint Hadrians Portrait-Typ Delta Omikron ( $\Delta\omicron$ ) auf seinen *aurei* des Jahres 138 n. Chr., auf deren Rückseiten seine DIVIS PARENTIBVS dargestellt sind (hier **Fig. 139**)? Die Antwort zeigt ein Vergleich dieser *aurei* mit Hadrians Tetrachme (vergleiche hier **Fig. 138**), die er 137/ 138 n. Chr. in Alexandria herausgegeben hat, um an seine Adoption des zukünftigen Antoninus Pius am 25. Februar 138 n. Chr. zu erinnern.

Mit einer Diskussion von H.-U. Cains Beobachtungen (2019, 1-2) bezüglich Hadrians Portrait-Typ Delta Omikron ( $\Delta\omicron$ ) (hier **Fig. 3**) und bezüglich der Portrait-Typen seiner Nachfolger, die alle im Jahre 138 n. Chr. adoptiert worden sind: Dem Portrait-Typ des Antoninus Pius, der anlässlich seiner Adoption durch Hadrian kreiert worden ist, und der absichtlich große Ähnlichkeiten mit Hadrians eigenen späteren Portrait-Typen aufweist; sowie der Portrait-Typen der zukünftigen Mark Aurel und Lucius Verus, die aus Anlass ihrer Adoptionen durch Antoninus Pius geschaffen worden sind, und die absichtlich Hadrians jugendlichem Portrait-Typ Delta Omikron ( $\Delta\omicron$ ) sehr ähnlich sind (vergleiche für diese Portrait-Typen des Antoninus Pius, des Mark Aurel und Lucius Verus : H.-U. CAIN, 2019, 1-2, Abb. 1-3). Cain (2019, 2) schreibt, dass Hadrian "in seinen letzten Lebensjahren 136–138 n. Chr. sein eigenes Jugendbildnis [here **Fig. 3**] aktualisieren ließ, als ihm die Nachfolgeregelung zu einem vordringlichen Anliegen geworden war".

Oder anders gesagt, als sich Hadrian auf die 'providentia für die *continuitas imperii*' konzentriert hat').

Kehren wir nun zurück zum 'Relief Ruesch' (hier **Fig. 7**).

**Ad b) Das 'Relief Ruesch' zeigt, dass diese Art der Komposition bereits von Domitian in Auftrag gegeben worden ist.**

'Willers (2021, 84, 91, 93, 98) weist außerdem überzeugend auf Folgendes hin : das 'Relief Ruesch' beweise, dass eine weitere künstlerische Innovation, die üblicherweise Trajan (oder eher Hadrian?) zugeschrieben werde, bereits im Auftrag Domitians entwickelt worden sei - wie wir vielleicht auch nicht anders erwarten würden, nachdem wir diese ganze Studie gelesen haben. - Willers bezieht sich damit auf das berühmte

Relief einer Reiterschlacht, die Trajan in genau derselben Ikonographie vorführt wie Domitian auf dem 'Relief Ruesch' dargestellt ist (hier **Fig. 7**).

Vergleiche für dieses Relief, "The Great Trajanic Frieze. Trajan [now Constantine] on horseback, early Hadrianic. Rome, Arch of Constantine ...", auch für das andere Relief, das im mittleren Durchgang des Konstantinsbogens in die gegenüberliegende Wand eingelassen ist, und auf dem der *adventus* Trajans [jetzt Konstantins des Großen] erscheint:

Diana E.E. Kleiner (1992, 222, Figs. 185 [= hier **Fig. 7.1**]; 186). Für den 'Großen Trajanischen Fries', Trajan [jetzt Konstantin] zu Pferde; vergleiche auch Willers (2021, 84 mit Anm. 21); und R.R.R. Smith (2021, 24-25 mit Anm. 97).

**Fig. 7.1. 'Der Große Trajanische Fries'. Dargestellt ist Konstantin der Große, der in einer Schlacht einen Kavallerieangriff anführt. Rom, Konstantinsbogen. Das Relief hatte ursprünglich Trajan dargestellt, dessen Bildnis in das Konstantins des Großen umgearbeitet wurde. Im mittleren Durchgang des Konstantinbogens wurden die Inschriften LIBERATORI VRBIS und FVNDA TORI QUIETIS [dem Befreier der Stadt Rom und dem Begründer der Ruhe] zu diesen Reliefs des Trajan/ Konstantin hinzugefügt, die sich auf Konstantin beziehen (in Anerkennung seines Sieges über Maxentius am Pons Mulvius im Jahre 312 n. Chr.). Photo: C. Faraglia, Neg. D-DAI-Rom 37.328. - Diana E.E. Kleiner (1992, 222, Fig. 185) datiert beide Reliefs: "early Hadrianic".**

Vergleiche Ian Archibald Richmond, Donald Emrys Strong and John Robert Patterson ("pons Mulvius", in: *OCD*<sup>3</sup> [1996] 1219 [Hervorhebung von den Autoren]).

**R.R.R. Smith (2021, 24-25 mit Anm. 97) stellt überzeugend fest, dass sich die Darstellung Trajans auf 'Dem Großen Trajanischen Fries' (hier **Fig. 7.1**), wenn man sie mit den 'wirklichen Handlungen' eines Kaisers während eines Krieges vergleicht, als extrem unrealistisch herausstellt.**

In seiner **Anm. 97**, schreibt Smith: "The Great Trajanic Frieze (re-used on the Arch of Constantine [= hier **Fig. 7.1**]), with the emperor leading a cavalry charge in battle himself, is a rare example of a clearly 'unreal' monumental narrative: Touati 1987. On such public narratives of imperial action, Fittschen 1972; Hölscher 2003; 2019: ch.[apter] 4 [Hervorhebung von mir]".

Mein Dank gilt Bert Smith, der mir am 11. Januar 2022 seinen oben zitierten Aufsatz geschickt hat ("*Maiestas Serena: Roman Court Cameos and Early Imperial Poetry and Panegyric*", 2021).

Ich persönlich würde die Ikonographie römischer Kaiser, die auf den **Figs. 7; 7.1** dargestellt ist, bezeichnen als die 'eines schneidigen Helden zu Pferde, wie Alexander der Große' ...

**Ad c) Das 'Relief Ruesch' ist in der Antike wiederverwendet worden. Alle seine Phasen zusammengenommen illustrieren vielleicht den Titel einer Ausstellung über Domitian, die kürzlich in Rom, in den Kapitolinischen Museen, Villa Caffarelli zu sehen war: *Domiziano Imperatore. Odio e amore* ('Kaiser Domitian. Haß und Liebe'); vergleiche Claudio Parisi Presicce, Massimiliano Munzi und Maria Paola Del Moro (2023)**

'Viel diskutiert in der Vergangenheit, und gleichfalls von Willers (2021, 79 Anm. 6, S. 93-94), ist die Tatsache, dass das 'Relief Ruesch' (hier **Fig. 7**), obwohl nur fragmentarisch erhalten, und mit dem Gesicht Domitians zerstört, trotzdem in der Antike wiederverwendet worden ist.

Diese Annahme stützt sich auf zwei Fakten: Zum einen sind die Brüche des Reliefs geglättet worden, außerdem wurden die großen Löcher, mit denen das Relief durchbohrt wurde, eines in der Mitte des Reliefs,

die in der Antike, aber sekundär, angefertigt worden sind (das heißt, im Zusammenhang der Wiederverwendung), so angebracht, dass dabei die Figuren des Domitian und seines Pferdes unversehrt geblieben sind.

Willers (2021, 80 mit Anm. 9, S. 94 mit Anm. 82) gelingt es, die Hypothese früherer Gelehrter zu widerlegen, derzufolge das 'Relief Ruesch' als "Brunnenverkleidung" *konzipiert* worden sei. Abgesehen von der Ikonographie des Reliefs, die zu einem derartigen Zweck nicht passen würde, sind diese Löcher auch ganz offensichtlich zu einem späteren Zeitpunkt angefertigt worden. Am wichtigsten ist die Beobachtung, dass das 'Relief Ruesch' eindeutig nicht mit Wasser in Berührung gekommen ist, denn das wäre mit Sicherheit sichtbar; vergleiche Willers (2021, 80): "Spuren von fließendem Wasser sind auf der Reliefseite der Platte nicht vorhanden".

Willers spricht nicht den Vorschlag an, der im Verkaufskatalog der Sammlung Ruesch, *Katalog Fischer 1936*, unterbreitet worden ist (den Willers selbst zitiert), wo das 'Relief Ruesch' die Katalognummer 238 hat. Der Autor schlägt vor: "Nachträgliche Verwendung dieses Reliefs als Brunnenverkleidung", was ich (theoretisch) für plausibel halte, obwohl die Tatsache bestehen bleibt, dass das Relief keinerlei Spuren einer derartigen Verwendung aufweist.

Willers selbst, der ... das 'Relief Ruesch' mit den Cancellariareliefs vergleicht (hier **Figs. 1; 2; Figs. 1 und 2 Zeichnung**), kommt zu dem Schluss, dass wir für beide (das heißt, die Cancellariareliefs und das 'Relief Ruesch') nicht wissen, zu welchen Gebäuden sie ursprünglich gehört haben. Willers (2021, 94) beendet deshalb seinen Aufsatz mit einer Ermahnung bezüglich der Notwendigkeit, das 'Rom Domitians' weiter zu erforschen:

**"Es bleibt die Aufgabe, die Begehungen des domitianischen Roms zu intensivieren [my emphasis]"**.

Dem kann ich nur beipflichten .... weshalb ich diesen Ausspruch von Dietrich Willers als erstes Motto dieser Studie über Domitian gewählt habe; s.o., zu Kapitel 1.1.

Im Gegensatz zu Willers, der nicht vorschlägt, wo das Gebäude gestanden haben mag, zu dem das 'Relief Ruesch' ursprünglich gehörte, noch was seine Funktion war, als es wiederverwendet worden ist, habe ich selbst bezüglich beider Fragen eine Idee.

Da ich Filippo Coarelli folge (2009b, 88; *ders.* 2012, 283, 286-291, 481-483, 486-491; s.o., zu Punkt 4.)), indem ich annehme, dass der domitianische Bogen vor Domitians 'Domus Flavia' / *Domus Augustana* auf dem Palatin möglicherweise dem *Divus Vespasianus* gewidmet war, schlage ich vor, dass die Cancellariareliefs entweder die gegenüberliegenden Wände der Durchfahrt dieses Bogens dekorierten, oder, wegen der Inhalte beider Friese, vielleicht eher einen der Durchgänge des Domitiansbogens, den Coarelli an der "Porta principale" von Domitians Palast *Domus Augustana* auf dem Palatin annimmt (vergleiche hier **Figs. 1 und 2 der Cancellariareliefs, Zeichnung, 'in situ'** und **Figs. 8.1; 58**)... Siehe auch oben zu Punkt 4.).

**'Voraussetzend, dass meine Hypothese richtig ist, derzufolge die Cancellariareliefs einen der beiden Bögen Domitians auf dem Palatin schmückten, und gleichzeitig die Beobachtung von Willers (2021, 79 Anm. 6, S. 83, Anm. 18) berücksichtigend, dass die Cancellariareliefs (hier Figs. 1; 2) und das 'Relief Ruesch' (hier Fig. 7) große stilistische Ähnlichkeiten aufweisen, schlage ich als Arbeitshypothese vor, dass das 'Relief Ruesch' (dessen Provenienz nicht überliefert ist) ursprünglich ebenfalls Teil der Skulpturenausstattung von Domitians Palast auf dem Palatin gewesen sein kann.**

Erst nachdem dieses Kapitel fertig war, ist mir aufgefallen, dass Willers (2021, 84) die Tatsache erwähnt, dass auf dem Palatin ein Relieffragment mit Darstellung eines Pferdes gefunden worden sei (vergleiche hier **Fig. 4.1.2**), das sehr ähnlich aussieht wie Domitians Pferd auf dem 'Relief Ruesch': "Bloesch hat seinerzeit auf die enge Verwandtschaft des Feldherrnpferdes auf unserem Relief [hier **Fig. 7**] mit dem Pferd eines fragmentarischen Reliefblocks vom Palatin aufmerksam gemacht [with n. 25]".

In seiner **Anm. 25**, schreibt Willers: "Bloesch 1943, 204; [von] Blanckenhagen 1940 [p. 65, I. f)], Taf. 20, Abb. 58 [wörtlich zitiert, oben, in Kapitel *V.1.i.3.b*); im Abschnitt *III.*]".

**Fig. 4.1.2. Fragmentarischer Marmorblock mit Relief eines Pferdes, vom Palatin. Hierbei handelt es sich um das Relief, über das D. Willers (2021, 84 mit Anm. 25) schreibt: "Bloesch [1943, 204] hat seinerzeit auf die enge Verwandtschaft des Feldherrnpferdes auf unserem Relief [das heißt, dem 'Relief Ruesch'; vergleiche hier Fig. 7] mit dem Pferd eines fragmentarischen Reliefblocks vom Palatin aufmerksam gemacht". Aus: P.H. von Blanckenhagen (1940, 65, I. f), Taf. 20 Abb. 58).**

Mein Dank gilt Francesca Deli, Assistant Librarian der British School at Rome, die auch diese Abbildung für mich aus dem Buch von P.H. von Blanckenhagen (1940) gescannt hat.

### **‘Bekanntlich hatte Domitian Freunde, die ihm nach seiner Ermordung treu geblieben sind.**

Ein Beweis dieser Treue ist Domitians berühmtes Portrait in den Kapitولينischen Museen, im Konservatorenpalast (Inv. Nr. MC 1156); vergleiche für diese Hypothese Häuber (2017, 167).

Dieses Portrait Domitians ist für den Umschlag des Essaybandes *God on Earth : Emperor Domitian* ausgewählt worden, herausgegeben von Aurora Raimondi Cominesi, Nathalie de Haan, Eric M. Moormann und Claire Stocks (2021), und erscheint auch auf dem Umschlag des Ausstellungskataloges *Domiziano Imperatore. Odio e amore*, herausgegeben von Claudio Parisi Presicce, Massimiliano Munzi und Maria Paola Del Moro (2023)

An anderem Ort habe ich den Fundort dieses Portraits des Domitian in der Via Rattazzi auf dem Esquilin ermitteln können; vergleiche Häuber (1991, 57-58 mit Anm. 251, indem ich diese Büste mit Fundberichten identifiziert habe, publiziert in den *NSc* 1898, 391, und im *BullCom* 26, 1898, 350; vergleiche S. 351: "Tutti gli oggetti di questa sezione sono conservati nel Magazzino Archeologico all'Orto Botanico; vergleiche *HELBIG*<sup>4</sup> II (1966) Nr. 1752, "Fragmentierte Büste des Domitian" (H. v. HEINTZE): "Gefunden wahrscheinlich auf dem Esquilin zwischen 1894 und 1904. Erst im Antiquarium auf dem Caelius, dann im Konservatorenpalast, Sala degli Arazzi 3").

Dietrich Willers (2021, Taf. 13,5; vergleiche seine Taf. 13,2-4 [= hier **Fig. 7**]) hat ein Photo dieses Domitiansportraits mit dem Kopf des römischen *imperator* auf dem 'Relief Ruesch' verglichen, um zu beweisen, dass der Protagonist dieses Relief ebenfalls Domitian ist.

Ein anderes Beispiel ist Domitians Amme Phyllis, die, dank ihrer klugen Aktionen, dem Domitian sogar eine Bestattung in seinem *Templum Gentis Flaviae* gesichert hat, buchstäblich 'zusammen mit seiner geliebten Iulia Titi', der Tochter seines Bruders Titus, und zwar in derselben Aschurne (!). Phyllis hatte sowohl Domitian als auch Iulia Titi erzogen (Suet., *Dom.* 17; 22); die *Diva Iulia Titi* war die erste gewesen, die Domitian im *Templum Gentis Flaviae* bestattet hatte. Nach Domitians Ermordung, verbrannte Phyllis seinen Leichnam in ihrer *Villa* an der *Via Latina*; dann trug sie die Asche Domitians heimlich zum *Templum Gentis Flaviae*, wo sie diese mit jener der Iulia Titi vermischt hat (Suet., *Dom.* 17).

Online at: <[https://penelope.uchicago.edu/Thayer/L/Roman/Texts/Suetonius/12Caesars/Domitian\\*.html#17](https://penelope.uchicago.edu/Thayer/L/Roman/Texts/Suetonius/12Caesars/Domitian*.html#17)> [last visit: 31-XII-2022].

Vergleiche Filippo Coarelli ("Gens Flavia, Templum", in: *LTUR* II [1995] 368); Coarelli (2009b, 94 mit Anm. 309); Eugenio La Rocca (2009, 228 mit Anm. 45); Häuber (2017, 167; siehe auch oben, zu Kapitel *IV.1.1.h*); Barbora Chabrečková (2017, 40); Maria Paola Del Moro (2021, 185 mit Anm. 2; *dies.* 2023, 167 mit Anm. 2); und Eric M. Moormann (2021, 46 mit Anm. 16; *ders.* 2023, 59 mit Anm. 17). Dietmar Kienast, Werner Eck und Matthäus Heil (2017, 109) kommentieren Domitians Tod und Bestattung wie folgt: "18. Sept.[ember] 96 *Tod* : Ermordet (Suet. *Domit.* 17, 3). **Heimliche Beisetzung im templum gentis Flaviae** [Hervorhebung von mir]".

Ich füge deshalb meiner Arbeitshypothese zum 'Relief Ruesch' (hier **Fig. 7**) noch etwas hinzu.

Gegenwärtig können wir nicht wissen, ob der Person, die das 'Relief Ruesch' wiederverwendet hat, bewusst war, dass es in seinem ursprünglichen Zustand Domitian dargestellt hatte. Noch, falls das der Fall war, ob diese Person dem Domitian feindlich gesonnen war oder nicht. Obwohl all das bislang unbekannt ist, bleibt auch die folgende Möglichkeit bestehen. Vielleicht handelte es sich um eine weitere Person, die Domitian treu geblieben war. Diese Person kann das 'Relief Ruesch' an sich genommen haben, nachdem Domitians Portrait auf dem Relief zerstört worden war, und hat auf diese Weise womöglich sogar die komplette Zerstörung des Reliefs verhindert. Dann behielt sie das 'Relief Ruesch' als Erinnerung an Domitian, und hat es mittels dieser Löcher vielleicht irgendwo aufgehängt'.

Wie man an diesem Kapitel *The major results of this book on Domitian* ('Die wichtigsten Ergebnisse dieses Buches über Domitian') sieht, bleibt noch viel zu tun, wenn wir Domitian und seinen Bauten in Rom gerecht werden möchten.

*The visualization of the results of this book on Domitian on our maps*  
(*Die Visualisierung der Resultate dieses Buches über Domitian auf unseren Karten*)

Änderungen auf unseren erweiterten und verbesserten Karten gegenüber den ersten Versionen von 2017.

Der Titel unserer Karte Fig. 58 lautet jetzt: "Karte des Marsfeldes in Rom in der Kaiserzeit, mit anschließenden Stadtgebieten, 2023". Vergleiche für die erste Version dieser Karte, die ein kleineres Areal Roms wiedergibt, Häuber (2017, 63, Fig. 3.5) .

Der Titel unserer Karte Fig. 59 lautet jetzt: "Karte des Marsfeldes in Rom in der Kaiserzeit, mit anschließenden Stadtgebieten, und mit der aktuellen Topographie, 2023". Auf dieser Karte sind die photogrammetrischen Daten sichtbar (die das aktuelle Kataster enthalten), auf denen alle unsere Karten basieren. Vergleiche für die erste Version dieser Karte, die ein kleineres Areal Roms wiedergibt, Häuber (2017, 69, Fig. 3.7).

Die photogrammetrischen Daten, auf denen die Karten Figs. 58; 59 basieren, wurden uns großzügigerweise vom Sovraintendente ai Beni Culturali von Roma Capitale zur Verfügung gestellt. C. Häuber, Rekonstruktionen. Diese Karten wurden mit dem "AIS ROMA" gezeichnet (C. Häuber und F.X. Schütz 2017, aktualisiert 2023).

The title of our map Fig 58 is now: "Map of the *Campus Martius* at Rome in the Imperial period, showing also adjacent areas, 2023". For the first version of this map, comprising a smaller area: Häuber (2017, 63, Fig. 3.5).

The title of our map Fig 59 is now: "Map of the *Campus Martius* at Rome in the Imperial period, showing also adjacent areas, and comprising the current layout of the city, 2023". On this map the photogrammetric data (comprising the current cadastre), on which all our maps are based, is visible. For the first version of this map, comprising a smaller area: Häuber (2017, 69, Fig. 3.7).

The photogrammetric data, on which the maps Figs. 58; 59 were based, were generously provided by the Sovraintendente ai Beni Culturali of Roma Capitale. C. Häuber, reconstructions. These maps were drawn with the "AIS ROMA" (C. Häuber and F.X. Schütz 2017, updated 2023).

On 14th December 2022, Franz Xaver Schütz and I have published an earlier version of this Chapter on our Webserver as a Preview for this *Study* on Domitian:

Online at: <<https://FORTVNA-research.org/FORTVNA/FP3.html>>.

Die Karten Figs. 58 und 59 wurden für das Buch über Domitian (FORTVNA PAPERS III) aktualisiert, indem alle in diesem Buch erwähnten, und im kartierten Bereich der Stadt lokalisierbaren Ortsbezeichnungen (Toponyme) darauf eingezeichnet worden sind. Eine Besonderheit dieses Buches sind die Beschreibungen von 'Wegen nach Rom' und 'Wegen durch die Stadt Rom', die auf diesen Karten nachvollziehbar werden. Dabei handelt es sich in chronologischer Reihenfolge um folgende Ereignisse:

**1.) Rom, Bürgerkrieg, 18.-21. Dezember 69 n. Chr.: Wege des Flavius Sabinus und des Domitian :**

Am 18. Dezember 69 n. Chr. begibt sich Flavius Sabinus, *praefectus urbi* (Vertreter des Kaisers in der Stadt und 'Polizeichef') und älterer Bruder Vespasians, zusammen mit seinen Leuten und Personen, die auf der Seite Vepasians stehen, von seiner *Domus* auf dem Quirinal aus zum Palatin, um mit Kaiser Vitellius die Modalitäten von dessen Abdankung abschließend zu verhandeln.

Als sie den *Lacus Fundani* (beim *Fons Cati*) auf dem Quirinal erreicht haben, werden Flavius Sabinus und seine Begleiter (die 'Flavier') überraschend von den Soldaten des Vitellius (den 'Vitellianern') angegriffen, flüchten sich in die befestigte *Area Capitolina* auf dem *Capitolium* (den Heiligen Bezirk des Iuppiter Optimus Maximus Capitolinus) auf der südlichen Kuppe des Kapitols, und werden in der Nacht vom 18. auf den 19. Dezember von den Vitellianern belagert. In dieser Nacht werden auch die Söhne des Flavius Sabinus und Domitian zu ihm gebracht.

Zu den Begleitern des Flavius Sabinus gehören einflußreiche Ritter und Senatoren, die amtierenden Konsuln, sowie die Offiziere der *cohortes urbanae* und der *vigiles*, die Flavius Sabinus direkt unterstellt sind; vergleiche hierzu Alexander Heinemann (2016, 191, Abb. 3), der ebenfalls die hier beschriebenen Wege diskutiert, jedoch, im Unterschied zu mir, die Auffassung vertritt, dass sich Flavius Sabinus auf die nördliche Kuppe des Kapitols, die *Arx*, begeben habe.

Am Morgen des 19. Dezember wird der Tempel des Iuppiter Optimus Maximus Capitolinus in Brand gesteckt, die Vitellianer dringen in die befestigte *Area Capitolina* ein, und während die meisten Flavier getötet werden, gelingt einigen wenigen, u.a. auf Grund von Verkleidungen, die Flucht. So auch Domitian, der sich, als *Isiacus* oder Isispriester gekleidet, einer Prozession anschließen kann, die das *Capitolium* verlässt. Flavius Sabinus und seine Söhne werden gefangen genommen und dem Vitellius auf dem Palatin in der '*Domus Tiberiana*' vorgeführt; später werden sie getötet. Auch Vitellius wird (am 20. Dezember) getötet und sein Leichnam in den Tiber geworfen. Am 22. Dezember erkennt der Senat Vespasian als neuen Kaiser an; Vespasian selbst betrachtete dagegen den 1. Juli 69 n. Chr. als seinen *dies imperii* (siehe dazu unten, unter 2.)).

Domitian begibt sich nach seiner gelungenen Flucht vom *Capitolium* entweder zu einem Freigelassenen seines Vaters ins Stadtviertel *Velabrum*, oder zur Mutter eines Schulkameraden nach Trastevere (*Transtiberim*), die ihn vor den Vitellianern verstecken. Nach der Eroberung Roms durch die flavischen Truppen unter M. Antonius Primus am 20. Dezember, kommt Domitian am 21. Dezember aus seinem Versteck, wird auf Veranlassung des Gaius Licinius Mucianus als Caesar und *Princeps iuventutis* anerkannt und feierlich von den flavischen Soldaten zur *Domus* seines Vaters Vespasian auf dem Quirinal geleitet. Dort war Domitian geboren worden; er selbst sollte später an dieser Stelle das *Templum Gentis Flaviae* errichten, in dem er, neben anderen Familienmitgliedern, seinen Vater, *Divus Vespasianus*, und seinen Bruder, *Divus Titus*, beigesetzt hat. - Soweit meine eigene Interpretation dieses gesamten Geschehens, das kontrovers diskutiert wird.

Für ausführliche Diskussionen aller Forschungsmeinungen zu diesen Vorgängen; s.o., Kapitel *Preamble: Domitian's negative image*; Section III. *My own thoughts about Domitian. With The second Contribution by Eugenio La Rocca: Una nota sul labirinto del Palatino; at points 1.) and 5.)* ('*Preamble. Domitians negatives Image; Abschnitt III. Meine eigenen Gedanken zu Domitian. Mit Dem zweiten Beitrag von Eugenio La Rocca: Eine Notiz zum Labyrinth auf dem Palatin; zu den Punkten 1.) und 5.)*'); und Kapitel IV.; Kapitel V.1.i.3.); und Kapitel *The major results of this book on Domitian* ('*Die wichtigsten Ergebnisse dieses Buches über Domitian*'); und im Band 3-2, zu *Appendix I.* und *Appendix IV.*

**2.). Rom, 1. Hälfte Oktober 70 n. Chr. : Ankunft Kaiser Vespasians auf der Via Appia an der Porta Capena:** Der Tod Kaiser Neros (Sommer 68 n. Chr) hatte zur unmittelbaren Folge gehabt, dass Vespasian sein Oberkommando im Jüdischen Krieg niederlegte; vergleiche Rose Mary Sheldon (2007, 141; wörtlich zitiert, s.o., **Anm. 412**, im Kapitel III.).

Dieser Krieg hatte im Sommer 66 begonnen, als im Tempel von Jerusalem die Opfer für Roma und den römischen Kaiser untersagt, und die römische Besatzung in der Stadt ermordet worden waren; vergleiche Sheldon (2007, 134); Eck (2022, Sp. 494-495). Für den Kult der Göttin Roma und den Kaiser in den östlichen römischen Provinzen; vergleiche Stefan Pfeiffer (2010b, 23, 24; wörtlich zitiert in: C. HÄUBER 2017, 341, Anm. 94). - Siehe aber unten, zu den Gründen für diese Revolte.

Cestius Gallus, der Stadthalter von Syrien, war daraufhin mit seinen Soldaten angerückt, hatte bei der Rückkehr jedoch erhebliche Einbußen erlitten, da alle Soldaten der XII. Legion getötet wurden. Als Kaiser Nero davon erfuhr, entschloss er sich, keine diplomatische Lösung dieses Konflikts anzustreben, sondern sandte im Jahre 67 Vespasian als Legat nach Judaea, mit einem Heer von 60.000 Mann; Vespasians älterer Sohn Titus kam aus Ägypten mit einer weiteren Legion hinzu (!); vergleiche für das Ganze sehr detailliert Sheldon (2007, 133-139; s.u., im Kapitel V.1.i.3.)).

Erst nachdem wir dieses Kapitel bereits auf unserem Webserver publiziert hatten, fand Franz Xaver Schütz weitere Informationen bezüglich des Anlasses zu diese Revolte im Jahre 66 n. Chr. Siehe oben, Chapter *Preamble; Section III.; at point 2.*): unter dem Präfekten von *Judaea*, Gessius Florus, hatte die veränderte Politik Neros zu einer noch stärkeren Auspönderung des Landes geführt; vergleiche hierzu u.a. Werner Eck (2022, Sp. 494). (s.o. `Kapitel *Preamble*; Abschnitt *III.*; zu Punkt 2.)`).

Bis zum Sommer 68 hatte Vespasian bereits wunschgemäß *Judaea* größtenteils unterworfen; vergleiche hierzu Eck (2022, Sp. 495); Sheldon (2007, 141).

Nach Neros Tod folgte der Bürgerkrieg (68-69), das sogenannte `Vierkaiserjahr`. Erst als sich in diesem Bürgerkrieg, zu Ende des Jahres 69, die flavische Partei durchgesetzt hatte, wurden die Kampfhandlungen im Jüdischen Krieg wieder aufgenommen. Titus sollte dann im Jahre 70 Jerusalem erobern und den Tempel zerstören; vergleiche Eck (2022, Sp. 495); sowie sehr detailliert Sheldon (2007, 141-146).

Zurück zu Vespasian. Im Sommer des Jahres 69 begab sich Vespasian - ohne seine Soldaten - von *Judaea* nach Alexandria, um dort die Getreideflotten, die demnächst nach Rom aufbrechen sollten, aufzuhalten und auf diese Weise Rom unter Druck setzen zu können; vergleiche Trevor Luke (2018, 195; wörtlich zitiert, s.o., in Kapitel *II.3.1.c*)).

Und um selbst Kaiser zu werden, entschloss sich Vespasian, wie Emmanuelle Rosso (2007, 127) treffend formuliert hat, für "l'investiture égyptienne" in Alexandria, das heißt, für `die ägyptische Investitur` (das heißt, die Einsetzung als neuer ägyptischer Pharao). Vespasian habe im Übrigen gar keine andere Wahl gehabt, stellt Rosso (2007, 127) fest, da er der erste römische Kaiser gewesen sei, der nicht mit einem *divus* verwandt gewesen ist: "Vespasien était précisément le premier empereur de l'histoire du principat à n'avoir aucun lien de parenté avec un *diuus*".

Als Abschluss der Zeremonien, die Vespasian als dem neuen Pharao galten, ließ ihn dann der *praefectus aegypti*, Ti. Iulius Alexander, ein Freund seines Sohnes Titus, von den in Alexandria stationierten Legionen am 1. Juli 69 n. Chr. als *Imperator* (Kaiser) akklamieren; vergleiche Häuber (2014a, 152-153). Das war der bereits oben erwähnte *dies imperii* Vespasians. Für alle diese hochkomplexen Vorgänge und deren Bedeutung; s.u., in Band 3-2, in *Appendix II.a*).

Nachdem Ende des Jahres 69 die Kampfhandlungen im Jüdischen Krieg wieder aufgenommen worden waren, und Vespasian das Oberkommando seinem älteren Sohn Titus übertragen hatte (vergleiche W. ECK 2022, Sp. 495; R.M. SHELDON 2007, 141), kehrte Vespasian nach Italien zurück.

In Brindisi angekommen, legte Vespasian seine militärische Kleidung ab, und zivile Kleidung an und machte sich auf den 500 km langen Weg nach Rom, wo er in der 1. Hälfte Oktober 70 n. Chr. eintraf; s.o., **Anm. 195**, in Kapitel *I.1.1*. Da Vespasian von Brindisi kam, muss er Rom, auf der *Via Appia* reisend, an der *Porta Capena* innerhalb der Servianischen Stadtmauer erreicht haben (vergleiche hier **Fig. 58**).

Meines Erachtens ist dieser *adventus* Vespasians in der 1. Hälfte des Oktober 70 n. Chr. auf Fries B der Cancellaria Reliefs dargestellt (hier **Fig. 2; Figs. 1 und 2 Zeichnung: Figuren 14** [Vespasian] und **12** [Domitian]): Vespasian wird auf diesem Relief von den Repräsentanten der Stadt Rom empfangen (von links nach rechts), der Stadtgöttin *Dea Roma*, fünf Vestalinnen, dem Genius des Senats und dem Genius des römischen Volkes, sowie dem amtierenden *praetor urbanus*, seinem jüngeren Sohn und Caesar, Domitian; Domitian hatte seit dem 1. Januar 70 die Magistratur *praetor urbanus consulari potestate* inne.

Vergleiche hierzu oben, Kapitel *V.1.i.3.*); Kapitel *The major results of this book on Domitian* (`Die wichtigsten Ergebnisse dieses Buches über Domitian`); sowie unten, in Band 3-2, in *A Study on the consequences of Domitian's assassination ... Introduction; Section I.* (`Eine Studie der Folgen von Domitians Ermordung ...; Einführung; Abschnitt I.`).

### **3.) Rom, Juni 71 n. Chr.: Der Weg vom Iseum Campense zur *Porticus Octaviae*, den Vespasian und Titus (und Domitian ?) am Morgen ihres gemeinsamen Triumphzugs gegangen sind :**

Titus war erst kurz vor ihrem Triumph im Juni 71, zusammen mit seinem siegreichen Heer, aus dem Großen Jüdischen Krieg nach Rom zurückgekehrt. Vespasian und Titus verbrachten dann zusammen mit ihren Soldaten die Nacht vor dem gemeinsamen Triumphzug auf dem Marsfeld, in der Nähe des ägyptischen Heiligtums Iseum Campense und der *Villa Publica*. Am folgenden Morgen (das heißt, vor dem Beginn ihres

Triumphzugs) begaben sich Vespasian und Titus (und Domitian ?) zur *Porticus Octaviae* am *Circus Flaminius*, wo sie sich mit Vertretern des Senats trafen, die ihnen (erst zu diesem späten Zeitpunkt !) offiziell mitteilten, dass der Senat dem Vespasian und dem Titus für ihre Siege im Großen Jüdischen Krieg Triumphe zugestanden habe, sowie dem Domitian einen eigenen Triumph für seine gleichzeitigen Aktivitäten in Rom. Dieses Treffen fand in der *Porticus Octaviae* statt, weil sich dieses Gebäude außerhalb der heiligen Stadtgrenze Roms, dem *pomerium*, befand. Nota bene: Wir wissen von Flavius Josephus (*Bellum Judaicum* 7,5,3), der diesen Text im Auftrag von Vespasian und Titus verfasst hat (s.o., **Anm. 201**, in Kapitel I.1.1.), dass der Senat bei dieser Gelegenheit allen drei Männern: Vespasian, Titus und Domitian, je einen separaten Triumph zugestanden hatte; sie beschlossen allerdings, *gemeinsam einen Triumph* zu feiern.

Der hier beschriebene Weg von Vespasian, Titus (und Domitian) ist bislang in der Forschung noch nicht diskutiert worden, Ich habe mich bereits 2017 mit ihm beschäftigt und eine mögliche Route vorgeschlagen, nachdem Franz Xaver Schütz und ich den entsprechenden Teil des Stadtgrundrisses rekonstruiert hatten; cf. Häuber (2017, 191202); s.u., in Band 3-2, in *A Study on the consequences of Domitian's assassination ...; Introduction; Section I. ('Eine Studie zu den Folgen von Domitians Ermordung ...; Einführung; Abschnitt I.')* wo ich diese Forschungen fortgesetzt habe.

#### **4.) Rom, Juni 71 n. Chr.: Der Weg, des Triumphzugs von Vespasian, Titus und Domitian :**

Hierzu gibt es sehr verschiedene Vorschläge, die ich bereits 2017 und erneut in diesem Buch im Detail diskutiert habe. Mit dieser Thematik hängen zwei weitere, ebenfalls umstrittene Fragestellungen zusammen: Welchen Verlauf hatte das Pomerium zum fraglichen Zeitpunkt, und welches Tor haben Vespasian, Titus und Domitian als ihre *Porta Triumphalis* gewählt? Auch für die ausführliche Diskussionen dieser Themen; s.u., in Band 3-2, in *A Study on the consequences of Domitian's assassination ...; Introduction; Section I. ('Eine Studie zu den Folgen von Domitians Ermordung ...; Einführung; Abschnitt I.')*.

#### **5.) Rom: Unter der Herrschaft Domitians: Der Weg vom Forum zu Domitian's Palast auf dem Palatin :**

Sobald Domitian seinen Palast auf dem Palatin, die *Domus Augustana*, vollendet hatte (Bauzeit circa 81-92 n. Chr.), schuf er einen repräsentativen Aufgang dorthin, indem er die Straße *Vicus Apollinis* ?/ '*Clivus Palatinus*' anlegen liess. Diese Straße führte vom Titusbogen (das heisst, dem Bogen des *Divus Titus*) auf der *Velia*, der sich in der Nähe des *Forum Romanum* befindet, hinauf auf den Palatin zu seinem Palast.

Filippo Coarelli (2009b, 88; ders. 2012, 481-483, 486-491) hat diesen Weg und seine Bedeutung für Domitian beschrieben. Der '*Arcus Domitiani*' ('Domitianischer Bogen'), der vor der Fassade seines Palastes stand und den '*Clivus Palatinus*' überspannte, und von dem noch Reste eines der Pylone (die aus späterer Zeit stammen) sichtbar sind, kann nach Coarellis Ansicht von Domitian seinem Vater, dem *Divus Vespasianus*, geweiht worden sein. Der *Clivus* führte dann, so Coarelli, nach einer Linkskurve zum Haupteingang des Palastes, wo Coarelli einen dritten Bogen, und zwar für Domitian, annimmt, den er mit dem aus den Constantinischen Regionenkatalogen bekannten *Pentapylon* identifiziert, und den er sich als einen Triumphbogen vorstellt.

Die Motivation Domitians, den Weg zu seinem Palast mit Hilfe dieser Bögen für den *Divus Titus* und für den *Divus Vespasianus* 'sakral zu überhöhen', wie Coarelli (2012, 483) sich ausdrückt, hat er sehr treffend formuliert:

**"La scelta di 'sacralizzare' questo percorso con monumenti dedicati ai due primi imperatori flavi si spiega con l'assoluta centralità dell'elemento dinastico nella politica di Domiziano [Hervorhebung von mir]"**.

Der Bereich des Haupteingangs auf der Nordseite von Domitians Palast ist sehr stark zerstört, weshalb sich Coarellis Hypothese, hier einen Triumphbogen für Domitian anzunehmen, augenblicklich nicht verifizieren lässt (siehe dazu unten). Aber bereits Ulrike Wulf-Rheidt und Natascha Sojc (2009, 268-272, Figs. 3; 4), auf die sich Coarelli (2012) bei seinem Vorschlag berufen hat, und Wulf-Rheidt (2020, 188), die jedoch ihrerseits Coarellis (2012) Hypothese nicht erwähnt, lokalisieren an derselben Stelle wie Coarelli den Haupteingang der *Domus Augustana*, und zwar stellt sich Wulf-Rheidt (2020, 188) diesen Haupteingang zum Palast ebenfalls in Form eines Bogens vor. Des Weiteren konnte Wulf-Rheidt (2020, 188) feststellen, dass dieser Haupteingang zu Domitians *Domus Augustana* mit Sicherheit bereits zur Zeit Domitians existiert hat.

Ausgehend von der Beobachtung anderer Gelehrter; s.o., Kapitel *The major results of this book on Domitian* ('Die wichtigsten Ergebnisse dieses Buches über Domitian'), dass die Cancellariareiefs spätdomitianisch datierbar seien und dass die Werkstatt, welche die Cancellaria Reliefs geschaffen hat, auch im Palast Domitians auf dem Palatin und auf seinem *Forum/ Forum Nervae/ Forum Transitorium* tätig war, schlage ich selbst in diesem Buch Folgendes vor.

Die Cancellariareiefs (hier **Figs. 1; 2; Figs. 1 und 2 Zeichnung; Figs. 1 und 2 der Cancellariareiefs, Zeichnung, 'in situ'**) waren möglicherweise im Durchgang von Domitians Bogen des *Divus Vespasianus* auf dem Palatin angebracht. Oder vielleicht eher in einem der Durchgänge des Domitiansbogens, den Coarelli am Haupteingang der *Domus Augustana* lokalisiert. Und zwar wegen der Inhalte der Friese, die beide Domitian verherrlichen, andererseits wird mit der Geste Vespasians auf Fries B (**Figs. 1 und 2 Zeichnung: Figuren: 14; 12**), der seine rechte Hand auf die linke Schulter Domitians legt (in Wirklichkeit berührt Vespasians Hand Domitians Schulter gar nicht, aber aus der Entfernung sieht es so aus), hervorgehoben, dass Domitian die Legitimation seiner Herrschaft von seinem Vater, dem *Divus Vespasianus*, erhalten hat; s.o., Kapitel III., wo ich diese Hypothese Giandomenico Spinolas, die er mir freundlicherweise am 24. September 2018 mitgeteilt hat, und der ich hier folge, zitiert habe; siehe auch oben, im Kapitel *The major results of this book on Domitian* ('Die wichtigsten Ergebnisse dieses Buches über Domitian'); sowie unten, in *The Contribution by Giandomenico on the Cancellaria Reliefs* ('Der Beitrag von Giandomenico Spinola zu den Cancellariareiefs'), wo seine Hypothese publiziert ist.

Diese Tatsache passt meiner Meinung nach sehr gut zu Coarelli's (2012, 483) oben zitierter Beobachtung, 'dass für die Politik Domitians der Hinweis auf seine Dynastie von zentraler Bedeutung' gewesen sei.

Die Cancellariareiefs sind in grobianischer Weise von dem Gebäude abgenommen worden, an dem sie ursprünglich angebracht waren, da sie jedoch im Depot einer Bildhauerwerkstatt angetroffen worden sind, sollten sie womöglich (zum Teil) wiederverwendet werden. Des Weiteren haben bereits andere Forscher vermutet, dass das Gebäude, zu dem die Cancellariareiefs gehört hatten, zusammen mit diesen Reliefs absichtlich zerstört worden sei. Vorausgesetzt, dass es diesen von Coarelli postulierten Domitiansbogen am Haupteingang von Domitians *Domus Augustana* tatsächlich gegeben haben sollte, dann würde meine Hypothese, die Cancellariareiefs an diesem Bogen anzubringen, auf Grund von Tatsachen gestützt, die Wulf-Rheidt (2020, 188) feststellen konnte. Dieser Eingangsbereich von Domitians Palast auf dem Palatin ist nämlich von den nachfolgenden Kaisern sehr stark verändert worden, was offensichtlich bedeutet, dass im Zuge dieser Veränderungen die domitianische Phase dieses Haupteingangs zerstört worden ist.

Für eine Diskussion dieses 5. Weges, den man auf unserer Karte **Fig. 58** nachvollziehen kann, vom Forum zu Domitians Palast, sowie zu meiner Hypothese, dass die Cancellariareiefs an einem dieser beiden Bögen Domitians auf dem Palatin angebracht gewesen sein könnten; s.o., Kapitel *The major results of this book on Domitian* ('Die wichtigsten Ergebnisse dieses Buches über Domitian'); sowie Kapitel VI.3; *Addition (Zusatz)*; und für die Auffindung der Cancellariareiefs in einer Bildhauerwerkstatt; s.o., Kapitel V.1.; V.1.a); V.1.a.1.).

Für die Hypothese, dass das Gebäude, zu dem die Cancellariareiefs gehört hatten, zusammen mit den Reliefs zerstört worden sei, zitiere ich eine Textpassage aus oben, dem Kapitel *The major results of this book on Domitian* ('Die wichtigsten Ergebnisse dieses Buches über Domitian'):

''Im Unterschied zu allen früheren Gelehrten, schlägt Massimo Pentiricci (2009) Folgendes vor. Die meisten Platten der Cancellariareiefs (vergleiche hier **Figs. 1 und 2 Zeichnung**) stammen aus dem von mir so genannten 'Second sculptor's workshop' (der 'zweiten Bildhauerwerkstatt'), die Filippo Magi (1939; 1945) unter dem Cancellariapalast neben dem Grab des Konsuls Aulus Hirtius, ausgegraben hat. Zusammen mit den Cancellariareiefs hat Magi dort Architekturfragmente angetroffen, die zu einem Bogen gehören. Pentiricci ist der Auffassung, dass all das ursprünglich aus demselben Kontext stammt, weshalb dieses domitianische Gebäude zusammen mit den Cancellariareiefs abgerissen worden sein müsse.

Vergleiche M. PENTIRICCI 2009, 61 mit Anm. 428-431; S. 62 mit Anm. 440-442, S. 162 mit Anm. 97, S. 204: "§ 3. La ristrutturazione urbanistica in età flavia (Periodo 3)"; vergleiche S. 204-205: "L'officina

marmoraria presso il sepolcro di Irzio"); s.o., Kapitel I.3.2.), zu **Anm. 261; 297**; und zu **Anm. 334**, in Kapitel II.3.1.a). Zu dieser 'zweiten Bildhauerwerkstatt'; s.o., Kapitel I.3.1.); V.1.a.1.).

Stephanie Langer und Michael Pfanner (2018, 82), die Massimo Pentiricci (2009) in diesem Zusammenhang nicht zitieren, sind ebenfalls der Ansicht, dass das Gebäude, zu dem sie gehörten, zusammen mit den Cancellariereiefs abgerissen worden sei. Des Weiteren haben sie bereits vorgeschlagen (wegen anderer Gründe als ich), dass es Nerva gewesen sein könnte, der die Zerstörung des Gebäudes mit den Cancellariereiefs in Auftrag gab; s.o., Kapitel V.1.a); V.1.b); V.1.i.1.)'.

### **Die folgenden Textpassagen stammen aus der folgenden Studie im Band 3-2:**

*A Study on the consequences of Domitian's assassination:*

*Nerva is forced to adopt Trajan and Trajan creates Domitian's negative image to consolidate his own reign. With Hadrian's adoption manquée in late October or at the beginning of November of AD 97, his 20-year long road to his accession and his thanksgivings for it, his Temple complex in the Campus Martius. Or :*

*The wider topographical context of the Arch of Hadrian alongside the Via Flaminia which led to the (later) Hadrianeum and to Hadrian's Temples of Diva Matidia (and of Diva Sabina?). With discussions of Hadrian's journey from Moesia Inferior to Mogontiacum (Mayence) in order to congratulate Trajan on his adoption by Nerva, and of Hadrian's portrait-type Delta Omikron ( $\Delta\omicron$ ) (cf. here Fig. 3). With The fourth and the fifth Contribution by Peter Herz, with The first Contribution by Franz Xaver Schütz (cf. here Fig. 77), with The Contribution by John Bodel, and with The second Contribution by Angelo Geißen;*

*INTRODUCTION; Section I. The motivation to write this Chapter:*

*W. Eck's (2019b) new interpretation of the inscription CIL VI 40518 (cf. here Fig. 91.1), the decision to correct my own relevant errors in my earlier Study (2017), and the subjects discussed here, as told by the accompanying figures and their pertaining captions:*

Der Titel lautet, ins Deutsche übersetzt:

*Eine Studie zu den Folgen von Domitians Ermordung:*

*Nerva wird gezwungen, Trajan zu adoptieren und Trajan gibt das negative Image von Domitian in Auftrag, um seine eigene Herrschaft zu konsolidieren. Mit Diskussionen der adoption manquée Hadrians im späten Oktober oder Anfang November 97 n. Chr., von Hadrians 20 Jahre dauerndem Weg zu seinem eigenen Herrschaftsbeginn und seinem Dank dafür, der Errichtung seines Tempel Komplexes auf dem Marsfeld.*

*Oder: Der weitere topographische Kontext des Hadriansbogens an der Via Flaminia, der zum (späteren) Hadrianeum führte und zu Hadrians Tempel der Diva Matidia (und der Diva Sabina ?). Mit Diskussionen von Hadrians Reise von Moesia inferior nach Mogontiacum (Mainz), um Trajan zu seiner Adoption durch Nerva zu gratulieren, und zu Hadrians Portraittyp Delta Omikron ( $\Delta\omicron$ ) (vergleiche hier Fig. 3). Mit Dem vierten und fünften Beitrag von Peter Herz, mit Dem Beitrag von Franz Xaver Schütz (vergleiche hier Fig. 77) mit Dem Beitrag von John Bodel, und mit Dem zweiten Beitrag von Angelo Geißen;*

*EINFÜHRUNG; Abschnitt I. Die Motivation, dieses Kapitel zu verfassen: ... und die in diesem Kapitel behandelten Themen, die von den begleitenden Abbildungen und ihren zugehörigen Bildunterschriften erzählt werden.*

"Let's begin with the, in my opinion, easiest approach to the complex subjects, discussed in this Chapter (which, in reality, is another monograph within this Study on Domitian): by looking at the following illustrations and by reading the captions of those figures.

All our maps, now updated and illustrated in the following, were already published in my earlier Study of 2017. They are two large maps of the *Campus Martius* at Rome and adjacent areas: here Fig. 58 (this map shows the ancient buildings, discussed in my earlier Study of 2017 and in this new book), and the map Fig. 59 (this map shows the ancient buildings and the modern topography together). This map can, therefore, help the user to find the precise sites of those ancient buildings more easily, when walking through Rome.

The maps that are details of those two larger maps: are here **Figs. 60; 61; 64, 65 and 66**. All of them are characterized by different additions to the maps **Figs. 58 and 59**, and some of the cartographic details they contain are addressed in this *Introduction ...*".

**"Please note the corrections on our updated maps here Figs. 58; 59; 60; 61; 62; 63; 64; 65; 66.**

Our maps here **Figs. 58; 59; 60; 61; 62; 63; 64; 65; 66**, first published in 2017 and illustrated here again, have been updated in the meantime. I maintain my hypothesis concerning the north-south axis, drawn on **Figs. 62; 64; 65; 66**, but I have corrected seven cartographic details in those maps:

### *The seven cartographic corrections on our updated maps*

#### **1.) the structure, labelled as "Tempio di Siepe" -**

on the first versions of the maps here **Figs. 58; 59; 60; 62; 63; 64; 65; 66** (cf. C. HÄUBER 2017, **Figs. 3.5; 3.7; 3.7.1; 5.2; 3.7.3; 3.7.5.a; 3.7.5.b; 3.7.5.c**), and located within the first cortile of the Collegio Capranica at Palazzo Capranica, may instead be identified with *the western half of the apse* of the Temple of *Diva Matidia*.

[In my earlier *Study* (2017), I had also discussed an alternative hypothesis (which I now believe is true), namely that the "Tempio di Siepe" stood to the north of this first cortile of the Collegio Capranica. For a detailed discussion; cf *infra* in this Chapter, at Section VI.]

This I have realized thanks to two visits on site at the Palazzo Capranica on 19th April 2018 and on 27th November 2019. Previously neither the Torre Capranica, nor the first cortile within the Collegio Capranica, the Teatro Capranica with its grandiose staircase (the "Scalone". For the Torre Capranica, the Teatro and the Scalone; cf. here **Figs. 62; 66**), nor the basements of Palazzo Capranica were accessible to me. These visits were kindly arranged for me by the art historian Laura Gigli, Arch. Giuseppe Simonetta, Arch. Gabriella Marchetti, and Arch. Marco Setti, who also accompanied me and gave me guided tours to the palazzo and to the architectural remains in its basements.

In addition to this, I have studied the article by Simonetta and Gigli, which comprises Simonetta's reconstructed ground-plan of the Temple of *Diva Matidia* that is based on the architectural remains documented by them in the basements of Palazzo Capranica (cf. *id.* 2018 [2021], 128-129 with n. 7, pp. 164-165, Fig. 1 = here **Figs. 67; 67.1**).

Giuseppe Simonetta has drawn his reconstructed ground-plan of the Temple of *Diva Matidia* with a thin green line; cf. here **Figs. 67; 67.1**. On our map **Fig. 58**, Simonetta's ground-plan of the Temple of *DIVA MATIDIA* is likewise drawn with a thin green line, whereas on all our other maps (here **Figs. 59-66**), Simonetta's ground-plan of the Temple of *Diva Matidia* is drawn with a thin red line.. All this is in detail discussed below in Section VI. of this Chapter.

Consequently, the "Tempio di Siepe" did not stand within the first cortile of the Collegio Capranica, as I myself (2017) and other scholars have (erroneously) suggested. According to my current knowledge, the "Tempio di Siepe", which, according to Alò Giovannoli's etching (1616; cf. here **Fig. 69.2**) stood 'behind Palazzo Capranica', cannot be located precisely, which is why it does not appear on our maps any more. For a discussion; cf. *infra*, in Sections IX and XII. of this *Introduction*;

#### **2.) Hadrian's basilicas within his Temple complex, dedicated to *Diva Matidia* and to *Diva Marciana* :**

as already mentioned above, concerning the identifications of the two basilicas, dedicated by Hadrian to *Diva Matidia* and *Diva Marciana*, respectively, I believe now that they may possibly be identified with the structures immediately to the west and east of my Temple of *Diva Matidia*, which on my maps of 2017 are labelled as follows: "Halls belonging to the Temple of [DIVA] MATIDIA ?". Whereas now they are labelled: "Halls belonging to the Temple of DIVA MATIDIA ? or BASILICA I ?; Halls belonging to DIVA MATIDIA ? or BASILICA II ?

The reason for this change of ideas is again Simonetta's reconstructed ground-plan of the Temple of *Diva Matidia* (cf. G. SIMONETTA and L. GIGLI 2018 [2021], 164-165, Fig. 1 = here **Figs. 67; 67.1**). We have integrated Simonetta's reconstruction of his Temple of *Diva Matidia* into our maps here **Figs. 58; 59; 60; 62; 64;**

65; 66. Whereas Simonetta himself has drawn the ground-plan of his Temple of *Diva Matidia* with a green line, I have drawn it with a red line (the exception being our map Fig. 58, where it is likewise drawn with a green line) to show that this is Simonetta's reconstruction of this ancient building (normally I draw the ground-plans of ancient buildings as red *areas*).

When we compare our resulting new ground-plan of the Palazzo Capranica (here Figs. 58; 59; 60; 62; 63; 64; 65; 66) with the representation of the Temple of *Diva Matidia* on Hadrian's medallion, which shows his Temple of *Diva Matidia* (here Fig. 68), the just-mentioned conclusion seems to be obvious.

The reason being that our new ground-plan of Palazzo Capranica has three parts, with Simonetta's reconstructed ground-plan of his Temple of *Diva Matidia* (here Figs. 67; 67.1) in the precise geometric centre (at the site of the Teatro Capranica on Nolli's ground-plan of Palazzo Capranica; cf. here Figs. 62; 63), flanked by two smaller areas of exactly the same sizes on either side (at the site of the Torre Capranica in the west, and at the site of the "Scalone", grand staircase, of the Teatro in the east, respectively). Exactly as the Temple of *Diva Matidia*, represented on Hadrian's medallion (here Fig. 68), which shows three *aediculae*: a larger one in the centre, with the seated cult-statue of *Diva Matidia*, flanked on either side by smaller *aediculae* of equal sizes, each with a standing female statue. And immediately adjacent to those two smaller *aediculae* follow on Hadrian's medallion (here Fig. 68) the two basilicas. In my reconstruction of 2017, I had instead located those two basilicas at the (presumed) site of the Church of S. Salvatore in Aquiro ?/ the 'Casa Giannini', and at the site of the Church of S. Maria in Aquiro, that is to say, to the west and to the east of Piazza Capranica (cf. here Fig. 66).

This change of ideas concerning the locations of Hadrian's two basilicas has, of course, consequences that are in detail discussed *infra*, in the caption of here Fig. 68. There, I have come to the following conclusion:

'If the two basilicas, dedicated by Hadrian to *Diva Matidia* and to *Diva Marciana*, stood instead at the sites of my so-called 'Halls', flanking my Temple of *Diva Matidia* on either side, we need to explain, what kind of ancient buildings were standing at the site of the Church of S. Salvatore in Aquiro ? and at the site of the Church of S. Maria in Aquiro'.

Besides, when comparing my new hypothesis concerning Hadrian's two basilicas with Heinz-Jürgen Beste's and Henner von Hesberg's reconstructions of their Precinct and Temple of *Diva Matidia* (2015, 242, Fig. 28; Tav. II, K; cf. here Fig. 64), they have basically suggested the same arrangements of those three buildings: the Temple of *Diva Matidia* in the centre, flanked on either side by the two basilicas of equal size, dedicated to *Diva Matidia* and *Diva Marciana*, respectively. With the crucial difference that in Beste's and von Hesberg's reconstructions (here Fig. 64) *these three buildings are located more to the south* than in my own reconstruction, with their Temple of *Diva Matidia* standing right in the middle of Piazza Capranica, in front of Palazzo Capranica;

### 3.) my new reconstruction of the ground-plan of the Temple of *Diva Sabina* ? :

thanks to the relevant critique by Francesca Dell'Era (2020, 118 with n. 40), who has rejected (the northern part of) my reconstruction of the Temple of *Diva Sabina* ? in my earlier *Study* (2017), I have now changed my reconstruction of the Temple of *Diva Sabina* ? accordingly. In my new reconstruction, the ground-plan of my Temple of *Diva Sabina* ? does not 'overlap' any more the area of the Istituto di S. Maria in Aquiro, where Fedora Filippi and Francesca Dell'Era have conducted their excavations; cf. Filippi and Dell'Era (2015, 220, Fig. 1; see also here Fig. 66). As Dell'Era (2020, 118 with n. 40) states, no finds that could be attributed to such a temple, have occurred within the area excavated by them. To my new reconstruction of the Temple of *Diva Sabina* ? (cf. here Fig. 66) I will come back below; cf. *infra* in this *Introduction*, at the Sections XII. and XIII.;

### 4.) the ground-plan of the Palazzo Capranica, drawn by Giambattista (G.B.) Nolli on his Large Rome map (1748):

In the updated versions of our maps Figs. 59; 60; 62; 63; 64; 65; 66, shown here, the ground-plan of the Palazzo Capranica is not any more drawn with red broken lines, but instead with black broken lines. The reasons for this decision are explained in detail above (cf. *supra*, the caption of Fig. 66). This palazzo stands on the north-side of Piazza Capranica (here Fig. 62.8). In the first versions of our maps here Figs. 59; 60; 62; 63; 64; 65; 66, I had copied the ground-plan of this palazzo from Giambattista (G.B.) Nolli's Large Rome map

(1748; cf. here **Figs. 62; 62.1; 62.1.A; 62.2; 63**). Nolli's drawing of the ground-plan of Palazzo Capranica had been the reason for me in my earlier *Study* of 2017 to (tentatively) assume the Temple of *Diva Matidia* at the site of Palazzo Capranica, because of the similarity of Nolli's ground-plan of Palazzo Capranica with Hadrian's medallion (here **Fig. 68**), which shows his Temple of *Diva Matidia*. Giuseppe Simonetta and Laura Gigli (2018 [2021], 128-129 with n. 7, pp. 164-165, Fig. 1 = here **Figs. 67; 67.1**) have now followed my relevant hypothesis.

**5.) the course of the "Acqua Sallustiana" or of the *Amnis Petronia*, the *Palus Caprae*, and the *Euripus* :**

Contrary to the first versions of the maps here **Figs. 58; 59; 60; 62; 65**, I have now added between the *Thermae Agrippae* and the eastern end of the *Euripus* an extension of the "Acqua Sallustiana" and/ or of the *Amnis Petronia*, which now ends at the *Euripus*; this water course thus emptied into it. In the first versions of our maps, this watercourse, coming down from the *Fons Cati* on the Quirinal, ended at the *Thermae Agrippae*; because I followed Filippo Coarelli's hypothesis (and still do so), according to which this water course had emptied into the (former) *Palus Caprae*, which he, like other scholars, has located there, assuming that it extended from there further in westerly direction; cf. Coarelli ("Petronia Amnis", in: *LTUR* IV [1999] 81; cf. *id.* 1997, 16: Fig. "2. Pianta del Campo Marzio intorno al 100", labels AMNIS PETRONIA; ARA MARTIS; VILLA PUBLICA; SAEPTA; PALUS CAPRAE); cf. here **Figs. 58; 59; 60; 65**; labels: QUIRINAL; FONSI CATI; AMNIS PETRONIA ?; DELTA; SAEPTA; "ACQUA SALLUSTIANA" ? and/ or AMNIS PETRONIA ?; THERMAE AGRIPPAE; ( Former site of the PALUS CAPRAE ); EURIPUS.

All just-mentioned subjects are hotly debated; cf. Häuber (2017, 204-217). In this text I have declared to mark on our maps all the different suggestions concerning the identifications and locations of the topographical features in question, especially of those watercourses. And because several scholars have suggested that the watercourse discussed here emptied into the *Euripus*, I have now also drawn the above-mentioned addition of this watercourse accordingly.

Contrary to those scholars, Valentino Gasparini (2018, 88 with n. 61) follows Leonardi *et al* (2010, 86) in assuming the following: "... a series of well loggings recently drilled in the entire area of the Campus Martius seems to suggest that the *amnis Petronia* was probably not able to overtake the difference in altitude between the flood plain and the area of the meander, and it had likely to flow South, reaching the Tiber in front of the Tiber island [with n. 61]".

Gasparini (2018, 88 with n. 61) does not discuss in this context the fact that also several earlier scholars had suggested exactly the same course of the *Amnis Petronia* (flowing in southerly direction, and reaching the Tiber in front of the Island) which I have, therefore, likewise drawn on our maps and discussed in my text. Nor does Gasparini (*op.cit*) mention the fact that (again) other scholars have rejected precisely this hypothesis.

I myself have added to this discussion the new observations that the existence of this water course, flowing in a southerly direction, is proven by *lineaments* in the photogrammetric data/ the current cadastre (cf. here **Figs. 58; 59**); cf. Häuber (2017, 208-209, 213-214). But this fact, in my opinion, does not preclude the assumption that (other) parts of the "Acqua Sallustiana"/ *Amnis Petronia* could have flowed in westerly direction - and then drained into the *Euripus*.

See for those watercourses, especially for the "Acqua Sallustiana", as well as for the *Palus Caprae*; also Giuseppina Pisani Sartorio (2017, 41, with ns. 56, 57, who provides further references, not discussed by myself in 2017).

When studying these subjects for my book of 2017, I have discussed the matter for a long period of time with Valentino Gasparini. He then and now in his relevant publication (2018, 90-91), in my opinion convincingly, suggests that it was not Agrippa, who created the *Euripus*, as had hitherto been taken for granted, but already Pompeius Magnus. Gasparini kindly allowed me at the time to quote passages *verbatim* from his own relevant manuscript in advance of publication, and I have also followed some of his ideas. See now Gasparini ("Bringing the East Home to Rome. Pompey the Great and the *Euripus* of the Campus Martius", 2018). Because Gasparini (2018) does not mention our relevant discussions, nor addresses the relevant observations, made in my published text (2017), I repeat in the following, the relevant results, which I maintain here.

Cf. Häuber (2017, 212):

"At about the same time, Valentino Gasparini has mentioned to me in a telephone conversation the fact that R. Leonardi, S. Pracchia, S. Buonaguro, M. Laudato and N. Saviane (2010) have formulated different hypotheses concerning the *Palus Caprae* than those mentioned above. Since I am *a*) not a geologist myself, and *b*) the publication by R. Leonardi *et al.* 2010 has caused a very lively discussion, I refrain from trying to summarize all these new findings in this context.

On the other hand, the toponym 'chiavica' of the Church of S. Lucia *della Chiavica*/ del Gonfalone obviously refers to a man-made hydraulic installation, which, if true, could mean that the Romans had drained the *Palus Caprae* by means of several channels (as in the case of the drained swamps personally known to me), and likewise described for Rome by A. Corazza and L. Lombardi (1995, 181). It is certainly worth while to study Coarelli's two 'emissarii' and the very location and the strange course of the *Euripus* under that perspective as well. **Although Valentino Gasparini tells me that R. Leonardi *et al.* (2010) suggest instead that the *Euripus* functioned as 'imissario' of the *Palus Caprae*, since they explain the depression, indicated by the toponyms of the Churches of S. Andrea *della Valle*, and of the Chiesa Nuova/ S. Maria in *Vallicella* [for both Churches; cf. here Fig. 59] differently than hitherto assumed.**

**All these hypotheses concerning the geology of the area just-mentioned, could, of course, only be proven, provided the *Euripus* had been sloping down from the north-west to the south-east. The seeming paradox alone, when looking on a map, on which the *Euripus* is marked (cf. here Figs. 3.5; 3.7 [= here Figs. 58; 59]), that this water course emptied into the Tiber upstream (instead of flowing downstream), cannot, in my opinion, really be judged, as long as the original landscape of the area in question has not been reconstructed in all its relevant details [my emphasis]".**

Whereas Gasparini (2018, 88-89, with ns. 63-69) follows the hypothesis of Leonardi *et al.* (2010) that the *Euripus* served the purpose of leading water of the Tiber, 'from west to east', into the *Campus Martius*; most other scholars suggest that the water of the *Euripus* flowed in the opposite direction ('from east to west'), and thus emptied into the Tiber.

In my earlier *Study* of 2017, I have quoted the opinions of scholars concerning the above-mentioned topics, who come from very different disciplines, which is why in many of these cases, those scholars did not know of each other's research. Therefore, these very complex interrelated problems can, in my opinion, only be solved, once all those available data are considered *together*, and that *by a group of competent scholars who come from all those disciplines*.

After having written this down, I discussed the matter with Franz Xaver Schütz, especially Gasparini's (2018, 88-89) hypothesis, according to which the water in the *Euripus* flowed 'from west to east' into the *Campus Martius*. A hypothesis which, as I have stated in (2017, 212, quoted *verbatim supra*) could only be verified, 'as soon as the original landscape of the area in question has been reconstructed in all its relevant details'.

**Franz Xaver Schütz told me on that occasion that he intends to create precisely that, a DTM ('digital terrain model') of the *Campus Martius*, using for this visualization of the ancient landscape my map here Fig. 59; cf. Franz Xaver Schütz (FORTVNA PAPERS, vol. I, forthcoming);**

#### 6.) The *Clivus Capitolinus*, leading from the *Forum Romanum* to the *Area Capitolina* on the *Capitolium* :

Contrary to the first version of our map Fig. 3.5 of 2017 (= for the updated map; cf. here Fig. 58), I have now reconstructed the last section of the *Clivus Capitolinus* differently, by drawing it as a curve. The reason being that it occurred to me that visitors to the *Area Capitolina* (the sacred Precinct of the Temple of Iuppiter Optimus Maximus Capitolinus) would thus have been able to *see* the façade of this temple *in front of them*, when approaching it. Unfortunately this part of the *Clivus Capitolinus* is not preserved, due to a landslide. For the *Area Capitolina* and the *Clivus Capitolinus*, which led to it; cf. Häuber (2005, 18-21, 41-42, with Abb. 2-5 (= here Figs. 74-76 and Fig. 73). See here Fig. 73, for a documentation of the small preserved part of the *Clivus Capitolinus*. As explained in detail in Häuber (2005, 18-55, Abb. 2-5 = here Figs. 73-76), I myself refrain from drawing a reconstruction of the *Area Capitolina* on the *Capitolium* - contrary to many other scholars, whose hypotheses I have discussed and mapped in this article.

As I only realize now, already Filippo Coarelli has drawn the *Clivus Capitolinus* ending with a similar curve (cf. *LTUR* I [1993] 432, "Fig. 126. *Campus Martius*. Pianta del c. M. [*Campus Martius*] in età augustea (da F. Coarelli [*i.e.*, here F. COARELLI 1983a], in *Città e architettura* [1983], 43)".

**7.) The main entrance of Domitian's Palace on the Palatine, the *Domus Augustana*.**

Contrary to the first version of our map **Fig. 3.5** of 2017 (= for the updated map; cf. here **Fig. 58**), I have now adapted that detail of the north side of the ground-plan of the *Domus Augustana*, where its main entrance was located, and which is very badly preserved. I have corrected this detail according to the most recent findings, published posthumously by the late Ulrike Wulf-Rheidt (2020, 185, Fig. 1). In the first versions of our maps, we had drawn the ground-plan of the *Domus Augustana* after the map SAR 1985. For a detailed discussion of this subject; cf. *supra*, at Chapter *The major results of this book on Domitian* ('*Die wichtigsten Ergebnisse dieses Buches über Domitian*').

*List of illustrations (for the illustrations, see volume 3-2)*

**Abb. 1.** Mario Torelli, teaching us members of the "Corsi estivi di Lingua e Cultura Italiana dell'Università del Sacro Cuore di Milano" in the summer of 1979. The photo shows Torelli in the Museo Archeologico Nazionale at Naples in front of the marble bust of Pindar (cf. here **Fig. 51**), which he explains to us. Photo: Courtesy Rose Mary Sheldon. See above, at Chapter *Dedication*; and below, at *The second Contribution by R.R.R. Smith: Note on the function of the 'Atrium House' at Aphrodisias* (cf. here **Figs. 51; 52**).

**Fig. 1.** Musei Vaticani, Museo Gregoriano Profano ex Lateranense (inv. nos. 13389-13391). Frieze A of the Cancellaria Reliefs. *Profectio* of Domitian in AD 83, 89 or 92. After the emperor's assassination and *damnatio memoriae*, Domitian's face on Frieze A (figure 6) has been reworked into a portrait of the Emperor Nerva. Therefore, the panel now probably represents Nerva's (alleged) *profectio* to his *bellum Suebicum* in AD 97. Cf. *supra*, in Chapter *What this Study is all about*; in Chapters I.-VI.; especially in Chapter I.2., with **n. 232**), in Chapters II.3.1.a); II.3.3.a), and in *The major results of this book on Domitian*; and *infra*, in volume 3-2, at Appendix IV.d.2.e); and Appendix IV.d.2.f): in my opinion, this relief represents Domitian's *profectio* to his Second Dacian War in the spring of AD 89 that ended with his victory, celebrated with his (last) triumph in Rome in November/ December 89. Cf. *supra*, in Chapters II.3.1.a); II.3.2.; V.1.b); V.1.c): for Nerva's motivation to usurp this *profectio* relief of Domitian. See also below, at *The Contribution by Giandomenico Spinola on the Cancellaria Reliefs*.

**Fig. 1.1.** Drawing of the head of Domitian (now Nerva) on Frieze A of the Cancellaria Reliefs and of the portrait of Nero of his fourth portrait-type in Munich. After: H. Meyer (2000, 130, Figs. 237; 239). H. Meyer reproduced photographs of both heads on the same page of his book, where their skulls are intentionally reproduced as having the same sizes. Based on a photocopy of that page, on which both heads were illustrated together and thus showed both heads at the same scale, I made the drawings of both heads, that are here reproduced on top of each other. Drawing: C. Häuber (2023).

**Fig. 2.** Musei Vaticani, Museo Gregoriano Profano ex Lateranense (inv. nos. 13392-13395). Frieze B of the Cancellaria Reliefs. *Adventus* of Vespasian at Rome in the first half of October of AD 70, his coronation by *Victoria* with the *corona civica* for having ended the civil war AD 68-69, and his investiture as the new Roman emperor. The fact that Vespasian lays his lifted right hand on the left shoulder of Caesar Domitian, who is standing right in front of him, means the legitimization of Domitian's future reign (in reality, Vespasian's hand does not touch Domitian's shoulder, but from a distance it looks like this). See above, in Chapter *What this Study is all about*, in Chapters I.-VI., in *The major results of this book on Domitian*, and below, at *The second Contribution by Laura Gigli: Il Potere dell'immagine*; at *The first Contribution by Jörg Rüpke on the question, how many Vestal Virgins we might expect to appear at public ceremonies, such as the one shown on Frieze B of the Cancellaria Reliefs*; and at *The Contribution by Giandomenico Spinola on the Cancellaria Reliefs*.

**Figs. 1 and 2 drawing.** F. Magis drawing of Frieze A and B of the Cancellaria Reliefs. From: F. Magis (1945, Tav. Agg. D 1 and 2). The slabs of both panels (A1-A4 and B1-B4) and the figures of both Friezes (1-17) are numbered, as in S. Langer and M. Pfanner (2018, 19, Abb. 2).

**Figs. 1 and 2 of the Cancellaria Reliefs, drawing, 'in situ'.** Visualization created on the basis of F. Magis drawings (1945), here **'Figs. 1 and 2 drawing'**.

Based on hypotheses, first suggested by F. Magis (1939, 205, quoted *verbatim* in **n. 112**, in Chapter I.1.), and reported by B. Nogara (1939, 8, 106, 115-116, 227), and by A.M. Colini (1938 [1939], 270); cf. H. Kähler (1950, 30-41), J.M.C. Toynbee (1957, 19), J. Henderson (2003, 249), and especially M. Pentiricci (2009, 61-62; cf. *supra*, **ns. 262, 263, 264**, in Chapter I.3.2.), this visualization intends to show the Cancellaria Reliefs, as if attached to the opposite, parallel walls in the bay of an arch, built by Domitian.

It made only sense to try this reconstruction, because both panels certainly belonged together, a fact, which is *inter alia* proven by their equal heights. Since it is debated over which kind of building those panels may have belonged, we wanted to know, whether or not the compositions of both friezes were designed in order

to stress relationships among the figures appearing on both panels, once mounted on opposite walls and viewed together. The prerequisite for this kind of inquiry was the correct positioning of both friezes, when both were attached to opposite walls in the bay of an arch. We knew that this could, in theory, be done for two reasons: *a*) both friezes were originally framed on all sides by identical projecting ledges; *b*) these projecting ledges are partly preserved on the right hand small side of Frieze A and partly on the left hand small side of Frieze B. We could, therefore, mount (first, in 2020, the photographs, here **Figs. 1; 2**), now the drawings of both panels, used for this operation by basing our reconstruction on this common axis of those two small sides of the panels which, in our reconstruction, now stand opposite each other. (In this illustration of our reconstruction those two small sides of both panels appear at the bottom of the page). For our reconstruction we used (first the photographs of Frieze A and B of the Vatican Museum, here **Figs. 1 and 2**, both of which follow Magi's reconstruction of 1945), now Magi's own drawings (1945) of both Friezes. In our visualization, these (first the photos), now the drawings are 'lying on their backs' in order to show, how an ancient beholder, passing through the bay of this arch, would have seen both panels.

Both visualizations demonstrate *a*) that the beholder who passed through this bay must have had the impression of 'moving together' with the processions that are depicted on both friezes; and *b*) that there is indeed one such relationship amongst those two panels that we were looking for. The figures in question are the Emperor Domitian (now Nerva) on Frieze A (figure 6) and the togate youth on frieze B (figure 12) - when both panels are *in situ*, these two figures stand almost opposite each other. Prior to our reconstruction, this fact had not been observed. And because both figures are heading the two processions 'that are moving on these panels together with the beholder in the same direction' these two figures turn out to be the most important persons on both panels. Both facts support the assumption that the Cancelleria Reliefs had been the horizontal panels in the bay of one of Domitian's arches. Considering also that Domitian commissioned the structure in question, both facts support at the same time the hypothesis suggested here that the togate youth on Frieze B may be identified as the young Caesar Domitian, who is represented on Frieze B in his capacity as *praetor urbanus*.

I tentatively suggest, in addition to this, that the Cancelleria Reliefs may have decorated the bay of the 'Arcus Domitiani', which stood on the Palatine, in front of Domitian's Palace 'Domus Flavia' / *Domus Augustana* and which, according to F. Coarelli (2009b, 88; *id.* 2012, 283, 286-291, 481-483, 486-491), Domitian may have dedicated to his father, *Divus Vespasianus*; or rather one of the three bays of the Arch of Domitian, which Coarelli assumes at the "Porta principale" of Domitian's *Domus Augustana*. Coarelli identifies this arch with the *Pentapylon*, believing that this was a triumphal arch (for the location of both arches; cf. here **Fig. 58**). F.X. Schütz and C. Häuber 2022, reconstruction (cf. *supra*, at Chapters I.3.2.; V.1.d); V.1.h.1.); V.1.i.3.); VI.3.; Addition; and at *The major results of this book on Domitian*; see also *infra*, in volume 3-2, at Appendix IV.d.2.f); Appendix IV.d.4.b); and Appendix VI.; at Section VII.).

See below, at *The Contribution by Walter Trillmich on the headless marble togati found in the so-called Marble Forum at Mérida in Spain, one of which looks like the togate youth on Frieze B of the Cancelleria Reliefs*.

**Fig. 3. Above:** portrait of Hadrian of the Delta Omikron ( $\Delta o$ )-type. Villa Hadriana near Tivoli, Museo (inv. no. 2260). Left: From: H.R. Goette (2021, 113, Abb. 46a (III Nr. 3); Photo: G. Fittschen-Badura); in the middle and right: Photos: D-DAI-ROM 72.635; 79.17774 (G. Fittschen-Badura).

**Below, left:** bust of Hadrian of the Delta Omikron ( $\Delta o$ )-type. Columbia, Missouri, University Museum (inv. no. 89.1). From: H.R. Goette (2021, 108, Abb. 44a (III Nr. 1)).

**Below, in the middle:** portrait of Hadrian of the Delta Omikron ( $\Delta o$ )-type. Madrid, Museo Nacional del Prado (inv. no. 176-E.), found in Italy. Photo: D-DAI-MAD-WIT-R-20-91-05 (Witte).

**Below right:** bust of Hadrian of the Delta Omikron ( $\Delta o$ )-type. London, private collection. From: H.R. Goette (2021, 112, Abb. 45 (III Nr. 4)). See above, at *The major results of this book on Domitian*; below, at *The first Contribution by Angelo Geißen: Bemerkungen zur frühen Münzprägung Hadrians in Alexandria*; and at *The fifth Contribution by Peter Herz: Der Ritt Hadrians nach Mogontiacum*.

**Figs. 4.** Scene LXXII on Trajan's Column. Amanda Claridge's (2013, 12, 13) "Stonethrower", whom she tentatively identified with Hadrian, (allegedly) represented in the here-so-called portrait-type Delta Omikron ( $\Delta o$ ) (cf. here **Fig. 3**). In reality, this man is a slinger from the *Baleares*. To the right of this slinger

appears a Germanic soldier, wearing long trousers, who is armed with a shield, who may perhaps be identified as a Marcomanne or as a Quade. From: A. Claridge (2013, 15, pl. 15).

**Fig. 4.1.** Scene LXXII on Trajan's Column. Amanda Claridge (2013, 12) commented on Scene LXXII of Trajan's Column (here Figs. 4; 4.1) as follows: "Band 11: lxxii Trajan surveys the last battle of the First [Dacian] War. Focal point: Stonethrower". Claridge (2013, 13 with n. 80, pp. 14, 15, her plate 15 [= here Fig. 4]) tentatively identified this "Stonethrower" on here **Figs. 4; 4.1** with Hadrian, represented in the here-so-called portrait-type Delta Omikron ( $\Delta\omicron$ ) (cf. here **Fig. 3**).

From: <<http://www.trajans-column.org/?flagallery=trajans-column-scenes-xlvi-lxxviii-46-78#PhotoSwipe1673612947018>> [last visit 13-I-2023].

**Fig. 4.1.1.** The Column of Trajan, seen from the south (with the columns of the *Basilica Ulpia* in the foreground). Photo: F.X. Schütz (March 2006).

**Fig. 4.1.2.** Fragmentary marble relief with representation of a horse. Found on the Palatine. This is the relief, about which D. Willers (2021, 84 with n. 25) writes: "Bloesch hat seinerzeit auf die enge Verwandtschaft des Feldherrnpferdes auf unserem Relief [*i.e.*, the 'Relief Ruesch'; here **Fig 7**] mit dem Pferd eines fragmentierten Reliefblocks vom Palatin aufmerksam gemacht" ('Bloesch [1943, 204] at his time has observed the close relationship between Domitian's horse on the 'Relief Ruesch' with the horse on a fragmentary marble block from the Palatine'). From: P.H. von Blanckenhagen (1940, 65, I. f), Taf. 20 Abb. 58).

**Fig. 5.** Fragment of a colossal cuirassed marble statue of 'Domitian as Iuppiter' (102 x 90 cm). This statue was, according to K. Stemmer (1971), hollow and, provided Domitian was represented standing, it was originally circa 8 m high, and because of the huge gorgoneion on the chest of his cuirass, it showed the emperor assimilated to the god Jupiter.

This fragment is on display in the left hand one of the 'Trofei Farnese' in the cortile of Palazzo Farnese at Rome (cf. here **Fig. 5.1**). It may belong to Francesco Bianchini's finds (excavated 1720-1726, published 1738) within the 'Aula Regia' in Domitian's Palace on the Palatine, the 'Domus Flavia' / *Domus Augustana*. This has already been suggested by K. Stemmer (1971, 566, 579-580) on the basis of the documentation that is available for this fragment. See also F. Bianchini's (1738, 48-68, with Tab. II; Tab. VIII = both here **Fig. 8**) own documentation of his excavations comprising measured plans, and S. Cosmo's (1990, Fig. 8 = here **Fig. 39**) findings concerning Bianchini's excavations.

For the photos illustrated here; cf. K. Stemmer (1971, Abb. 3-6;), Photos: G. Singer; D-DAI-ROM-71.175-71.178. K. Stemmer's (1971, 571, Abb. 7) reconstruction drawing of this colossal cuirassed portrait of 'Domitian as Jupiter' is here reproduced after A. Wolfsfeld (2014, 215, Abb. 6).

**Fig. 5.1.** The two 'Trofei Farnese' in the cortile of Palazzo Farnese at Rome. These are two ensembles of architectural fragments, mostly found by Francesco Bianchini in his excavations (1720-1726; published 1738) on the Palatine, within the 'Aula Regia' of Domitian's Palace 'Domus Flavia' / *Domus Augustana*. Cf. K. Stemmer (1971, Abb. 1 [here on the left], with the fragment of the colossal cuirassed marble statue of 'Domitian as Jupiter'; here **Fig. 5**), Photo: J. Felbermeyer, D-DAI-Rom 35.566. Cf. K. Stemmer (1971, Abb. 2 [here on the right], with a fragment of one of the slabs with a representation of a 'province', from the porticos of the *Hadrianeum* at Rome; cf. here **Fig. 48**), Photo J. Felbermeyer, D-DAI-Rom 35.567.

**Fig. 6, left.** Torso of a cuirassed statue, Domitianic (representing Titus or Vespasian, the restored head does not belong), his cuirass is decorated with a Victoria, sacrificing a bull. Found in the Baths of Caracalla at Rome. Musei Vaticani, Museo Chiaramonti (inv. no. 1250). Cf. C. Parisi Presicce (2000, 28, 39, at cat. no. 13). See below, at *The second Contribution by Claudia Valeri on the two headless cuirassed statues of Flavian emperors at the Museo Chiaramonti (inv. nos. 1250; 1254; cf. here Fig. 6, left and right)*.

**Fig. 6, right.** Torso of a cuirassed statue, Domitianic (representing Domitian?), 1,02 m high (the restored head does not belong), his cuirass is decorated with the *lupa*, suckling the infants Romulus and Remus. Found in

the Baths of Caracalla at Rome. Musei Vaticani, Museo Chiaramonti (inv. no. 1254). Cf. C. Parisi Presicce (2000, 28, 39, cat. no. 13). Parisi Presicce's tentative identification of this headless torso with Domitian may be supported by the fact that Domitian identified himself with Romulus; cf. *supra*, in Chapter *Preamble*; Section III., at point 4.); and below, at *The second Contribution by Claudia Valeri on the two headless cuirassed statues of Flavian emperors at the Museo Chiaramonti* (inv. nos. 1250; 1254; cf. here **Fig. 6, left and right**).

**Fig. 7.** 'Relief Ruesch', ex collection Arnold Ruesch (Zürich), who bought it in 1920 at an art dealer's in Rome (provenance unknown). Cavalry battle of a Roman emperor (Domitian) against Germanic soldiers (the Chatti ?, or Marcomanni or Quadi ?). Marble, 74 x 108,8 cm. Domitian's head was defaced because of his *damnatio memoriae*, but the relief has nevertheless been re-used in antiquity. Private collection. On loan at the Antikensammlung Bern of the Universität. From D. Willers (2021, Taf. 11; Taf. 13,1: detail of the emperor, Taf. 13,2-4: details of the head of the *imperator*; Taf. 13,5: right profile of the bust of Domitian, Rome, Musei Capitolini, inv. no. MC 1156).

**Fig. 7.1.** 'The Great Trajanic Frieze', showing Constantine the Great, leading a cavalry battle. Rome, Arch of Constantine. The relief had originally shown Trajan, whose portrait was recut into one of Constantine the Great. In the central passageway of the Arch of Constantine the inscriptions LIBERATORI VRBIS and FVNDATORI QUIETIS were added to these reliefs of Trajan/ Constantine, which refer to Constantine (in recognition of his defeat of Maxentius at the *Pons Mulvius* in AD 312). Photo: C. Faraglia, Neg. D-DAI-Rom 37.328. - Diana E.E. Kleiner (1992, 222, Fig. 185) dates both reliefs: "early Hadrianic".

**Fig. 8.** F. Bianchini's (1738) measured plans of the 'Aula Regia' (his Tab. II), and of that part of Domitian's *Domus Augustana*, where he conducted his excavations (1720-1726; his Tab. VIII): at the 'Basilica', the 'Aula Regia' and the 'Lararium' (all three located within the so-called 'Domus Flavia'; cf. here **Figs. 8.1; 58**). Note that on Bianchini's plans North is not in the middle of the top border, as on our maps. Our maps are oriented according to 'Grid North' (cf. here **Figs. 58; 73**), as the official photogrammetric data of Roma Capitale (that comprise the current cadastre), on which all our maps are based. See for the orientation of Bianchini's plan Tab. II our **Fig. 8.1**.

**Fig. 8.1.** Detail of our map **Fig. 58**, with georeferenced overlay of F. Bianchini's plan of the 'Aula Regia' (cf. *id.* 1738, his Tab. II = here **Fig. 8**). This visualization shows that Bianchini's ground-plan of the 'Aula Regia' (his Tab. II) had to be rotated clockwise by circa 135° before it was possible to integrate it into our map **Fig. 58**, which is oriented according to 'Grid North'. F.X. Schütz, visualization created with the "AIS ROMA" (22-I-2023).

**Fig. 8.2.** Domitian's Palace on the Palatine, his 'Domus Flavia' / *Domus Augustana*. In the foreground we see the 'Peristyle' with the labyrinth fountain. Looking to the north-east (compare for the orientation of this photo the map here **Fig. 73**), we see what is left of the southern walls of the 'Aula Regia'. The Church in the background is the Chiesa di S. Bonaventura. Photo: Franz Xaver Schütz (1-III-2015). See *supra*, in Chapter *Preamble*; Section III.; at point 4.); and below, at *The second Contribution by Eugenio La Rocca: Una nota sul labirinto del Palatino*.

**Fig. 9.** F. Bianchini's plates (1738, Tab. III and IV). They show some of the architectural fragments, which he found in his excavations (1720-1726) in the 'Aula Regia'. In the caption of his Tab. III, Bianchini mentioned the author of the relevant drawing and etching: "Balthassar Gabbuggiani delin. et sculp."

**Fig. 10.** Colossal acrolithic statue of Jupiter. St. Petersburg, Hermitage (inv. no. GP-4155), from Castel Gandolfo. Cf. C. Parisi Presicce (2006b, 146, Fig. 47, copied after M.B. PIOTROVSKIJ and O.J. NEVEROV 2003, fig. on p. 200).

**Fig. 27.** The *census* represented on the 'Altar of Domitius Ahenobarbus' (the Paris-Munich Relief), marble. Paris, Louvre (MA 975). Photos: Courtesy H.R. Goette.

For discussions of **Figs. 21-27**; cf. *infra*, in volume 3-2, at *Appendix IV.a*) D. Filippi (1998) on the 'first gate of the Capitolium' (*Tac.*, Hist. 3,71,1-2), an arch, excavated by A.M. Colini in the 1940s, the *Porta Pandana*, and the arch, visible on the 'burning of debt records' relief of the *Anaglypha Hadriani* (**Fig. 21**).

**Fig. 28.** The Obeliscus Pamphilius/ Domitian's obelisk. From the Iseum Campense. On display on top of Gianlorenzo Bernini's 'Fountain of the Four Rivers' in the Piazza Navona at Rome. From: C. Häuber (2017, 156, Fig. 5.5.2). Photos: F.X. Schütz (5-IX-2019). Courtesy F.X. Schütz. Photo: Cesare D'Onofrio (1921-2003). From: G. Simonetta, L. Gigli and G. Marchetti [2004] 122, Fig. 8. The caption reads: "La fontana dei Quattro

fiumi, ripresa zenitale dall'alto della chiesa di Sant'Agnese". Courtesy: L. Gigli. Photo: L. Gigli (December 2003). Courtesy: L. Gigli. See *supra*, in Chapter *What this Study is all about*; in *Preamble*, at Section II.; in Chapter IV.; and in *The major results of this book on Domitian*; and below, at *The first Contribution by Emanuele M. Ciampini: La regalità domiziana: una nota egittologica*.

**Fig. 29.** Over lifesize cuirassed statue of the Emperor Hadrian, 2,68 m high (comprising the plinth), 2,54 m high (without the plinth), his cuirass is decorated with an Athena/ *Palladion*, crowned by two winged Victories, who is standing on the *lupa*, suckling the infants Romulus and Remus. Hadrian sets his left foot on a small human figure (representing the Roman Province of *Judaea?*). Found at Hierapydna in Crete. Istanbul, Archaeological Museum (inv. no. 50).

In my opinion, the prototype of this portrait of Hadrian belonged with the inscription *CIL VI 974 = 40524 = here Fig. 29.1* to the victory monument, dedicated in honour of Hadrian by the Senate and the Roman People in AD 134/5 (so G. ALFÖLDY 1996 = here **Fig. 29.1**), in AD 135 (so C. BARRON 2018), or in AD 135/6 (so W. ECK 2003, 162, n. 35) to commemorate his victory in the Bar Kokhba Revolt. Photos: Courtesy H.R. Goette (April 2023).

**Fig. 29.1.** Fragmentary inscription (*CIL VI 974 = 40524*), marble, once belonging to an honorary statue of the Emperor Hadrian, dedicated to him by the Senate and the Roman People to commemorate his victory in the Bar Kokhba Revolt (so W. ECK 2003, 162-165; M. FUCHS 2014; C. BARRON 2018); and according to G. Alföldy (at: *CIL VI* [1996] 40524, who restored the inscription as shown here) and M. Fuchs (2014, 130) erected within the *cella* of the Temple of *Divus Vespasianus* in the *Forum Romanum*. From: M. Fuchs (2014, 131, Fig. 8: "*CIL, VI, Pars VIII, Fasc. II* [1996], 40524". According to C. Barron (2018, who follows in this respect W. ECK 1999-2003), the honorary statue, to which this inscription belonged, stood "beneath (in front of?)" the Temple of *Divus Vespasianus*, its inscription is kept in the Capitoline Museums, Rome (inv. no. NCE 2529), and is datable: "135 CE Sep 15th to 135 CE Dec 9th". C. Evers (1991, 797, n. 72), according to whom this inscription was found in the *Forum Romanum*, asks, whether it belonged to the colossal statue of Hadrian (now Constantine the Great), here **Fig. 11**. In my opinion, this dedication belonged to the honorary statue, after which Hadrian's portrait-statue from Hierapydna at Istanbul (here **Fig. 29**) and almost 30 replicas of this portrait were copied. See above, at *A Study on Hadrian's portrait-statue from Hierapydna* (cf. here **Fig. 29**); and *infra*, in volume 3-2, at *Appendix IV.c.2*.

**Fig. 30.** *Sestertius* of Domitian, issued AD 95/96, representing a decastyle temple, which M. Torelli (1987) has identified with the *Templum Gentis Flaviae*. BMC, p. 406, n. 12, R.H. Darwall-Smith (1996, 281, Plate XVIII, Fig. 30). From W. Haberey (1960, Taf. 42, Abb. 1: "Bronzemedaille des Domitian vom Jahre 95-96 n. Chr. aus Grab I"). Cf. R. Paris (1994b, 26, Fig. 14). From: E. Nash (1961, 371, Fig. 452: "Sestertius of the 17th consulate of Domitian (95/96 A.D.)").

**Fig. 31.** "Rilievo Terme Vaticano".

**Above:** Photo of the reconstruction of this relief in the Museo della Civiltà Romana at the EUR (inv. no. 3725), created in plaster on the basis of both fragmentary reliefs that are kept in the Museo Nazionale Romano and in the Vatican Museums. From: R. Paris (1994b, 28, Fig. 16: "Il rilievo del Museo Vaticano e quello del Museo Nazionale Romano ricongiunti in un calco del Museo della Civiltà Romana").

**In the middle:** Fragmentary marble relief, Museo Nazionale Romano, Rome (inv. no. 165), representing a decastyle temple in the pediment of which appears 'Rome's foundation story'. Photo; D-DAI Rom Photo Parker (PK) 2283: "Sculpture - Alto rilievo representing the Temple of Romulus; now in a stone-mason's yard in Via Alessandrina".

There is a plaster cast on display at the Museo Gregoriano Profano of this relief in the Museo Nazionale Romano, placed above the original fragment, owned by this collection.

**Below:** Fragmentary marble relief, Città del Vaticano, Museo Gregoriano Profano (inv. no. 9506), with an emperor (whose head is restored with a portrait of Trajan), accompanied *inter alia* by two lictors, shown in the act of sacrificing. Both fragments belong together. The fact that these lictors carry fasces to which no axes are attached means that the temple stands within the *pomerium*; cf. S. Langer and M. Pfanner (2018, 142-157),

whose further suggestion I likewise follow that this relief does not represent a procession, as hitherto believed, but rather a sacrifice. Cf. R. Paris (1994b, 32, Figs. 1; 2). I have numbered the six figures on the relief myself, following S. Langer and M. Pfanner (2018, 147, Abb. 53). Many scholars take for granted that the "Rilievo Vaticano" was found in the Forum of Trajan. This assumption is not true, as already stated by M. Torelli (1987, 504 n. 6, quoted *verbatim infra*, in volume 3-2, at *Appendix I.g.3.*). M. Torelli's (1987, 564-567, Fig. 2) identification of the temple, represented on this relief, with the *Templum Gentis Flaviae*, which I myself follow here, is debated. See below, at *The Contribution by Eric M. Moormann: Can We Reconstruct the Templum Gentis Flaviae?*; and at *The first Contribution by Claudia Valeri on the "Rilievo Terme Vaticano"* (cf. here **Fig. 31**).

**Figs. 32.A-E.** Marble fragment of a state relief, the here-so-called "Rilievo Foro Romano". Rome, Forum Romanum, near S. Maria Antiqua. This is at least, where H.R. Goette saw this fragment in 1981, who suggests that this fragment belongs to the "Rilievo Terme Vaticano"; cf. Goette (1983). A-C: photos of this fragment: Courtesy H.R. Goette. Cf. Goette (1983, 241, Abb. 1-3. The caption reads: "Relieffragment. Rom, bei S. Maria Antiqua". D: measured reconstruction drawing, combining the "Rilievo Vaticano" (cf. here **Fig. 31**, **below**) and the "Rilievo Foro Romano" (cf. here **Fig. 32.A**). From Goette (1983, 243, Abb. 5. The caption reads: "Rekonstruktionszeichnung der Relieftteile 1 [= here **Fig. 31**, **below**; **Fig. 32.A**] und 4 [= here **Fig. 31**, **below**]". E: measured reconstruction drawing of the entire togate man, incorporating the fragment. From Goette (1983, 243, Abb. 6. The caption reads: "Rekonstruktion der ganzen Figur mit Fragment Abb. 1 [= here **32.A**]". Drawings D-E: M. Reinbold. From: Goette (1983, 239, Abbildungsnachweis).

**Fig. 33.** Reconstruction drawing of a relief that once belonged to the *Templum Gentis Flaviae*. Represented is Vespasian's *adventus* into Rome in October of AD 70. From: R. Paris (1994b, 91: "Tav. V. Proposta di ricostruzione parziale della scena con rilievo storico". Drawing: "arch. Gloria Marconi"). Cf. *supra*, in *Chapters IV.1.1.h*); and *VI.1.i.3.a*); and below, at *The Contribution by Eric M. Moormann: Can We Reconstruct the Templum Gentis Flaviae?*; at *The second Contribution by Jörg Rüpke: Tempel-Gräber*; and at *The Contribution by Mario Torelli on the Templum Gentis Flaviae*.

**Fig. 34.** Reconstruction drawing of a relief that once belonged to the *Templum Gentis Flaviae*. Represented is a sacrifice in front of Augustus' Temple of Quirinus on the Quirinal. From: R. Paris (1994b, 90: "Tav. IV. Proposta di ricostruzione parziale della scena con sacrificio, davanti al Tempio di Quirino". Drawing: "arch. Gloria Marconi"). Cf. *supra*, in *Chapters IV.1.1.h*); and *VI.1.i.3.a*); and below, at *The Contribution by Eric M. Moormann: Can We Reconstruct the Templum Gentis Flaviae?*; at *The second Contribution by Jörg Rüpke: Tempel-Gräber*; and at *The Contribution by Mario Torelli on the Templum Gentis Flaviae*.

**Fig. 35.** *Aureus* of Augustus, mint of Rome, 12 BC. Showing the doorway of the (real) House of Augustus on the Palatine, with the *corona civica* above the door and two laurel trees on either side. Cf. T.P. Wiseman (2019, 9, Fig. 3). RIC P Augustus 419. Sutherland 1984.74. Photo: © The Trustees of the British Museum.

**Fig. 36.** The Nollekens Relief, on display above the fire place in the White Hall of the Gatchina Palace near St. Petersburg, marble, 88 x 139 cm. F. Bianchini (1738, 68, his Tab. VI, an etching of the Nollekens Relief) found this relief in 1722 in the 'Aula Regia' of Domitian's 'Domus Flavia' / *Domus Augustana*; cf. S. Cosmo (1990, 837 Fig. 8); J. Pollini (2017b, 120, 124; cf. p. 98, Fig. 1. We have copied from this illustration Pollini's numbering of the figures, which are represented on this relief). Pollini suggests (in my opinion convincingly) that it shows the togate triumphator Domitian, sacrificing in AD 89 just outside Domitian's *Porta Triumphalis*; after which, the emperor would begin his (last) triumphal procession. Photograph, taken in 1914, when the relief was still preserved in its restored state of the 18<sup>th</sup> century. Courtesy John Pollini.

**The caption of Pollini's (2017b) Fig. 1 (= here Fig. 36) reads:** "Photograph taken in 1914 of the Nollekens Relief ... [the author provides a reference for that on p. 107 with n. 47]. Note that only the heads of nos. 6 [*i.e.*, of Domitian], 8 [*i.e.*, of the *Genius Senatus*] and 10 [*i.e.*, of a boy ministrant] in the foreground and of all the background figures are ancient [my emphasis]". See *supra*, at Chapter *V.1.i.3.b*); and at *The major results of this book on Domitian*.

**Fig. 37.** The other fragmentary marble relief, found by Francesco Bianchini in 1722 within the 'Aula Regia' of the 'Domus Flavia', shows four female representations or divinities in Greek dress. From F. Bianchini (1738) Tab. VII: "Fragmentum anaglyphi repertum in Palatio Caesarum intra Hortos Farnesianos MDCCXXII Hieronymus Rossi incid.". Cf. *supra*, in Chapter V.1.i.3.b); at Section III.

**Fig. 38.** Bronze *drachma*, issued by Antoninus Pius at Alexandria in 144/145 AD: it shows a woman's head, a star, a crescent, and a crab. Cf. A. Geißen (2010, 213, Taf. 63, Abb. 4). Roman Provincial Coinage (RPC) vol. IV.4, 13544. Online at : <<https://rpc.ashmus.ox.ac.uk/coins/4/13544>>. See *infra*, in volume 3-2, at Appendix II. a).

**Fig. 39.** S. Cosmo's plan of the (former) Orti Farnesiani on the Palatine in Rome. From S. Cosmo: "Aspetti topologici e topografici degli Orti farnesiani come premessa alla conservazione ambientale" (1990, 837, Fig. 8). He marks on his plan of the Orti Farnesiani, where Francesco Bianchini and Pietro Rosa had excavated. See below, in volume 3-2, at Appendix VI.

**Fig. 40.** Pietro Canonica (1869-1959), equestrian statue of Simon Bolívar, bronze (1934). Since 1960 (again) on display on the Piazzale Simon Bolívar, the terrace in the Valle Belle Arti underneath the British School at Rome, opposite the equestrian statue of José de San Martín, which appears on the photos illustrated here in the foreground, seen from behind. The latter was erected in 1957 on the square now called Piazza José de San Martín, the terrace, which is located below Via Omero in the Valle Belle Arti, and opposite the Piazzale Simon Bolívar (Photos: F.X. Schütz 18-IX-2019).

**Fig. 41.** Pietro Canonica (1869-1959), 'Monumento all'Umile Eroe' ('monument of a modest hero'; 1937), bronze. Statue of a mule, which is part of his 'monumento agli Alpini'. This monument is on display in front of the Fortezzuola at the Villa Borghese in Rome, which accommodates the Museo Pietro Canonica. (Photos: F.X. Schütz 03-IX-2019).

**Fig. 42.** Pietro Canonica, his inscription that belongs to his statues of the mule Scudela and of the Alpino (cf. here Fig. 41). Cf. below, at *The first Contribution by Laura Gigli concerning Pietro Canonica's statue of the mule Scudela*. Photos: Courtesy F.X. Schütz.

**Fig. 43.** Map of the Valle Belle Arti in Rome and of the adjacent Villa Borghese. OSM (Open Street Map, detail). Last visit: 5th October 2019.

For discussions of here Figs. 40-43; cf. *supra*, in Chapter VI.2.

**Fig. 44.** Bronze *sestertius* of Marcus Aurelius, reverse. Represented is the Temple of Hermes-Thot (Hermes Trismegistos), dedicated by Marcus Aurelius at Rome as a thanksgiving after the rain miracle (AD 172/173 or 174?) in the war against the Quadi.

**Fig. 45.** Colossal marble herms representing the god Hermes. From the Temple of Hermes-Thot (Hermes Trismegistos), dedicated by Marcus Aurelius at Rome as a thanksgiving after the rain miracle (AD 172/173 or 174?) in the war against the Quadi. Roma, Parco Borghese, Parco dei Daini. Photos: F.X. Schütz 10-III-2020. For discussions of Figs. 44; 45; cf. *infra*, in volume 3-2. at Appendix II.a).

**Fig. 46.** Beneventum, Arch of Trajan, built AD 114-118, general view of 'city side'.

Left and right panels in the attic of the Arch of Trajan at Beneventum ('city side'). We see "Jupiter in the company of other important state gods [who] extends his thunderbolt to Trajan, his viceregent on earth - a gesture of divine approbation to rule and to conquer on behalf of the Roman People"; cf J. Pollini (2012, 105, with Figs. II.39b-c). On the right hand side panel appear the togate Emperor Trajan, a bearded and cuirassed man to his left (*i.e.*, in front of him), who has the same size as Trajan, and further to the left two adult *togati*, all standing in front of an arch. G. Koeppel (1969, 188-189, Fig. 15) suggested that the two *togati*, who are represented at the scale of children, are the two *consules* of Rome, who receive Trajan outside the *pomerium* of Rome to tell him that the Senate has granted him the celebration of a triumph. Koeppel compared this relief

with Vespasian and the togate youth (in his opinion Domitian) on Frieze B of the Cancelleria Reliefs (cf. here **Fig. 2; Figs. 1 and 2 drawing; figures 14** [Vespasian]: **12** [Domitian]).

D.E.E. Kleiner (1992, 228, Fig. 193) and A. Schmidt-Colinet (2005, 108-112, Abb. 9a; 9b) suggest that the bearded and cuirassed man to the left of Trajan may be identified with Hadrian.

Right hand side panel in the attic of the Arch of Trajan at Beneventum ('city side'). Detail, showing the head of the bearded and cuirassed man, identified by Kleiner (1992) and Schmidt-Colinet (2005) as Hadrian.

Right hand panel in the middle register of the Arch of Trajan at Beneventum ('city side'), where the adult male figures are differentiated by three different scales. The tallest figure is the togate Emperor Trajan on the right, who is accompanied by some of his lictors of almost the same size. In front of Trajan appears a man, who is smaller than Trajan and his lictors. He seems to have guided the three men on the left to Trajan, two of them are togate; compared with the emperor, these men reach only up to his chest, as if they were children. Cf. H.R. Goette (1990, 130 cat. Bb9 Benevent, Trajansbogen, Taf. 16,2).

Left and right panels in the lowest register of the Arch of Trajan at Beneventum ('city side'). They "depict two parts of the same scene, which has been identified as the *adventus* into Rome of Trajan as the new emperor in 99. The togate emperor stands before the entrance to the city, surrounded by a full contingent of twelve lictors, and guided by the warden of the city (*praefectus urbi*). The *Genius Senatus* and the *Genius Populi Romani* ... are there to greet him"; cf. D.E.E. Kleiner (1992, 227).

Cf. H.R. Goette (1990, 130 cat. Bb9 Benevent, Trajansbogen, Taf. 15.3,4).

All photos: Courtesy H.R. Goette (5th and 6th February 2017).

**Fig. 47.** Plaster cast of a colossal marble head of Constantine the Great, 0,59 m high. According to K. Fittschen (2014, 58), this portrait was inserted into a (standing), probably cuirassed statue that was circa 3,30 m high. From the Forum of Trajan. Roma, Museo dei Fori Imperiali (inv. no. FT 10337). This plaster cast is on display at the Abgußsammlung of the Freie Universität Berlin. Photos: Courtesy H.R. Goette.

Because this head of Constantine the Great (here **Fig. 47**) probably belonged to a cuirassed statue; cf. Fittschen (2014, 58), which was typical of Christian emperors; cf. La Rocca (2000, 24 with n. 168, Fig. 23), I wonder, whether this could have been the portrait-statue, described by Eusebius (*Hist. Eccl.* 10,4,16). If so, Constantine was represented in this statue seated. Eusebius copied the pertaining inscription, set (and therefore presumably also composed) by Constantine himself, who added it to the statue, dedicated to him by the Senate after his victory over Maxentius, and which, according to Eusebius, the Senate had erected 'a Roma nel luogo più pubblico di tutti'; cf. Parisi Presicce (2006b, 140 with n. 15). In this 'personal statement', Constantine claimed that 'thanks to the salvation bringing sign [that this portrait-statue of Constantine, at the explicit order of the emperor, was holding in its right hand - and which some earlier scholars have identified with a cross], which is the true proof of *virtus*, I have saved and liberated Rome from the tyrant [*i.e.*, Maxentius], and thanks to my liberation, I have restored the Senate and the Roman People to their old image and to their old splendour'; cf. Kähler (1960, 391).

**Fig. 48.** Marble reliefs from the porticoes of the *Hadrianeum* at Rome, representing personifications of cities and peoples of the Roman Empire, military and naval trophies. Antonine period. Rome, courtyard of the Palazzo dei Conservatori, Roma, Palazzo Massimo alle Terme (Museo Nazionale Romano), and Napoli, Museo Archeologico Nazionale. Photos: Courtesy H.R. Goette.

**Fig. 49.** Rome, Domitian's *Forum/ Forum Nervae/ Forum Transitorium*, detail from the only extant part of the colonnade on the south-east side of the *Forum*, called "*Le Colonnacce*". Photo: Courtesy F.X. Schütz (March 2006). Marble relief of a female figure in the attic storey of "*Le Colonnacce*", previously identified as Minerva but, as H. Wiegartz (1996) realized, actually depicting a representation of a people; as he observed originally 42 such representations of *gentes* had decorated this *Forum*. This figure represents the *Piroustae*, who, as Wiegartz observed, is also represented in the *Sebasteion* at Aphrodisias, where this representation is labelled as '*Piroustoi*' (cf. here **Fig. 50**). Photo: Courtesy H.R. Goette (May 2012). The *Piroustae* were an Illyrian tribe (also called a Dalmatian tribe and a Pannonian tribe), who lived in that part of the Roman province of *Illyricum*, which, after the division of this province (which probably occurred in AD 9), became the Roman province of *Dalmatia*. See below, at *The second Contribution by Peter Herz: Anmerkungen zu Statius Marrax*; and

at *The first Contribution by R.R.R. Smith on the iconography of the representation of the Piroustae at "Le Colonnacce" in Domitian's Forum/ Forum Nervae/ Forum Transitorium* (cf. here **Fig. 49**).

**Fig. 50.** Aphrodisias, *Sebasteion*, Iulo-Claudian period. Marble relief depicting a representation of the same people as illustrated at "Le Colonnacce", called in the pertaining inscription 'Piroustoi'. Photo: Courtesy Aphrodisias Excavations (G. Petruccioli).

**Fig. 51.** The Greek lyric poet Pindar, identified by the inscription in Greek (ΠΙΝΔΑΡΟΣ). Found at Aphrodisias, at the 'Atrium House'. From R.R.R. Smith (*JRS* 1990, Pl. 6). Cf. *supra*, at Chapter *Dedication*; and below, at *The second Contribution by R.R.R. Smith : Note on the function of the 'Atrium House' at Aphrodisias*.

**Fig. 52.** Ground-plan of the absidal building at Aphrodisias, called 'Atrium House' by R.R.R. Smith in his second *Contribution*. It is located adjacent to the *Sebasteion*. From: R.R.R. Smith (*JRS* 1990, Pl. 4).

For **Figs. 51; 52:** see *supra*, at Chapter *Dedication*; and below, at *The second Contribution by R.R.R. Smith : Note on the function of the 'Atrium House' at Aphrodisias*.

**Fig. 53.** Colossal head of *Divus Titus*, marble (the marble has so far not been tested). H 1,52 m. Napoli, Museo Archeologico Nazionale (inv. no. 110892). Found at Rome, "in 1873 in via Pastrengo during the excavations for the construction of the Ministry of Finance" (so E. La Rocca 2020b, 379), close to the north-west corner of the Baths of Diocletian. We owe to R. Lanciani (1872-1873, 229), to M.C. Capanna (2008, 177 with n.1), and to E. La Rocca (2009; 2020b) the identification of this portrait of Titus with the cult-statue of *Divus Titus* in the *Templum Gentis Flaviae*. From: E. La Rocca (2020b, Figs. 4-7).

**Fig. 54.** Portrait of Flavia Domitilla *minor*, the sister of the Emperor Domitian, on modern bust, marble. H. 0,75, of the head 0,32 m. Roma, Museo Torlonia (MT 527). Cf. S. Settis and C. Gasparri (2020, 152, cat. no. 9, F. CORAGGIO). Photos: © Fondazione Torlonia.

**Fig. 55.** Colossal portrait of Domitian's sister Flavia Domitilla *minor*, marble. H. 0,61 m. Copenhagen, Ny Carlsberg Glyptothek (inv. no. 3186). Cf. F.S. Johansen (1995, 40-41 Nr. 9). Photos: Courtesy H.R. Goette.

**Fig. 55.1.** Colossal portrait of Iulia Titi, the daughter of the Emperor Titus, marble. H. 0,83, of the head 0,47 m. Roma, Museo Nazionale Romano, Palazzo Altemps (inv. no. 8638). Cf. D.E.E. Kleiner (1992, 179, Fig. 147); F. Coarelli (2009a, 416, cat. no. 12 ([E. ROSSO])). Photo: D-DAI 57.618.

**Fig. 56.** Archaeological plan of the area of the Baths of Diocletian. Cf. C. Pietrangeli 1977, tav. 2 (drawing: C. Buzzetti and E. Gatti). From: E. La Rocca (2020b, Fig. 8): "1. Area dove era ubicato il *templum gentis Flaviae*; 2. Il luogo dove è stata rinvenuta la testa colossale di Tito [cf. here **Fig. 53**]; 3. Edificio in laterizio dove è stato rinvenuto il mosaico con tiaso marino e le tre Grazie; 4. Il luogo dove sono stati rinvenuti i rilievi Hartwig [for those; cf. *supra*, at Chapter *V.1.i.3.a*], and here **Figs. 33; 34**"]".

**Fig. 56a.** The same archaeological plan, with additions by L. Kosmopoulos. Cf. Kosmopoulos (in: E. LA ROCCA and L. KOSMOPOULOS 2023, 126, Fig. 29). The caption reads: "L'area occupata dal *templum gentis Flaviae* (in rosso), secondo l'ipotesi ricostruttiva del podio di Filippo Coarelli, nell'ambito delle terme di Diocleziano. 2: luogo in cui è stata trovata la testa colossale di Tito [cf. here **Fig. 53**]; 3: ambiente absidato con il mosaico marino (elaborazione di L. Kosmopoulos su disegno di Carlo Buzzetti, e con aggiunte da Coarelli 2014a, fig. 52 e da La Rocca 2021, fig. 8)".

**Fig. 57.** Archaeological plan of the Baths of Diocletian (detail). Cf. C. Pietrangeli 1977, tav. 3, with additions by E. La Rocca. From: E. La Rocca (2020b, Fig. 10: detail of his Fig. 9). The caption of his Fig. 10 reads: "Dettaglio della pianta a fig. 09. Con una linea rossa è segnalato il perimetro della recinzione del *templum gentis Flaviae* (da Pietrangeli 1977, tav. 3, con aggiunte dell'a.[utore])".

For **Figs. 53-57**; cf. *supra*, in Chapter IV.1.1.h); at Section *Did Domitian bury in his Templum Gentis Flaviae also his mother and his sister, Flavia Domitilla maior and minor ?*; and at *Let's now turn to Eugenio La Rocca's and Lorenzo Kosmopoulos's (2023) observations concerning the Templum Gentis Flaviae*.

**Fig. 58.** Map of the *Campus Martius* at Rome in the Imperial period, showing also adjacent areas. C. Häuber & F.X. Schütz, "AIS ROMA", reconstruction 2023. For the first version of this map, comprising a much smaller area; cf. Häuber (2017, 63, Fig. 3.5).

The photogrammetric data, on the basis of which the maps here **Fig. 58; 58.1; 58.2; 59; 60; 61; 62; 63; 64; 65; 66; 70; 71; 72; 73; 74; 75; 76** were drawn, were generously provided by the Sovrintendente ai Beni Culturali of Roma Capitale.

**Fig. 58.1**, first sketch. Overlay of our updated map **Fig. 58** of the '*Campus Martius* in the Imperial period with adjacent areas, 2023' with the street level of the OSM data, showing the site of the ancient *Pons Sublicius*. C. Häuber and F.X. Schütz, "AIS ROMA", reconstruction, 2023. The photogrammetric data, on the basis of which **Fig. 58** was first drawn (cf. C. HÄUBER 2017, 63, Fig. 3.5), were generously provided by the Sovrintendente ai Beni Culturali of Roma Capitale. For the OSM data; cf. OSM.org [11-VI-2023].

**Fig. 58.2**, first sketch. Enlarged detail of **Fig. 58.1**. By enlarging the map **Fig. 58.1**, many more street names became visible in the street level of the OSM data. Some of those streets belong to the 'street fan' in Trastevere. This 'street fan', that is to say, those converging modern roads, may be regarded as *lineaments*, which indicate the point, where once had stood the ancient *Pons Sublicius*. C. Häuber and F.X. Schütz, "AIS ROMA", reconstruction, 2023. The photogrammetric data, on the basis of which **Fig. 58** was first drawn (cf. C. HÄUBER 2017, 63, Fig. 3.5), were generously provided by the Sovrintendente ai Beni Culturali of Roma Capitale. For the OSM data; cf. OSM.org [11-VI-2023].

For **Fig. 58.1** and **Fig. 58.2**; cf. *supra*, in *A Study on the colossal portrait of Hadrian (now Constantine the Great) ...; Part II. Ancient Rome's new commercial river port, at La Marmorata; Section III.; at The controversy concerning the location of the Pons Sublicius (cf. here Figs. 58; 58.1; 58.2; 73)*.

**Fig. 59.** Map of the *Campus Martius* in the Imperial period, showing also adjacent areas, and comprising the current layout of the city. C. Häuber and F.X. Schütz, "AIS ROMA", reconstruction, updated 2023. For the first version of this map (cf. C. HÄUBER 2017, 69, Fig. 3.7). On this map the photogrammetric data (comprising the current cadastre, on the basis of which **Fig. 59** was first drawn) are visible; they were generously provided by the Sovrintendente ai Beni Culturali of Roma Capitale.

**Fig. 60.** Map of the Iseum Campense in the *Campus Martius*. C. Häuber and F.X. Schütz, "AIS ROMA". From: C. HÄUBER 2017, 71, Fig. 3.7.1, updated 2023 (= detail of the map here **Fig. 59**).

**Fig. 61.** Map of the Iseum Campense, detail of the map here **Fig. 60**, with one addition: comparison of G. Gatti's (1960) and A. Ten's (2015) locations and reconstructions of the Arco di Camilliano and of the Arco di Giano alla Minerva; cf. Häuber (2017, 73, Fig. 3.7.1.1).

**Fig. 62.** Map of the *Campus Martius* between the Piazza Colonna and the Palazzo Venezia. Overlay of Giambattista (G.B.) Nolli's georeferenced Large Rome map (1748) and of the photogrammetric data, with integration of our own cartographic information of the map here **Fig. 59**. F.X. Schütz and C. Häuber, "AIS ROMA", reconstruction 2017, updated 2023. Cf. Häuber (2017, 127, Fig. 5.2).

For discussions of the illustrations here **Figs. 62-69.2**; cf. *infra*, in volume 3-2, at *A Study on the consequences of Domitian's assassination ...; INTRODUCTION*; at Section I. *The motivation to write this Study*; and at Sections II.-VII. (on the Precinct and Temple of *Diva Matidia*).

**Fig. 62.1.** The Large Rome Map of Giambattista (G.B.) Nolli (1748). The sheet of his map shown here comprises the area chosen for our map **Fig. 62**.

**Fig. 62.1.A.** The Large Rome Map of Giambattista (G.B.) Nolli (1748). Detail of the original sheet of his map, illustrated on **Fig. 62.1.**, showing the Piazza Capranica, the Piazza Capranica to the north of it, and the former Palazzo della Confraternità del Rosario to the south of it; today this palazzo has the mailing address: 'Piazza Capranica number 78'. For the current street names; cf. here **Figs. 64; 66**.

**Fig. 62.1.B.** The seven cipollino columns of the here-so-called porticus with cipollino columns, as drawn by Giambattista (G.B.) Piranesi and published by himself as an etching, accompanied by a pertaining text. From: Giambattista Piranesi (*Antichità Romane* I, 1756, page 10, number 77, Tav. XIV, fig. 1).

**Fig. 62.2.** The *Campus Martius* between the Pantheon and the Palazzo Capranica. Overlay of Nolli's georeferenced Large Rome map (1748) and of the photogrammetric data. F.X. Schütz and C. Häuber "AIS ROMA", reconstruction 2023.

**Fig. 62.3.** The *Campus Martius* between the Pantheon and the Palazzo Capranica in the official photogrammetric data of Roma Capitale. To the buildings between the Palazzo Capranica and the Via del Seminario, which are discussed in this *Study*, we have added the current house numbers. F.X. Schütz and C. Häuber "AIS ROMA", reconstruction 2023. For the street names; cf. here **Figs. 64; 66**.

**Fig. 62.4, left.** Aerial photograph of the *Campus Martius* between the Pantheon and the former Palazzo della Confraternità del Rosario/ Piazza Capranica no. 78 (taken on 11th June 1990), and published in the *Atlante di Roma* (2. edition of 1992); cf. G. Maltese and D. Tinacci (1992, 48, Fig. 42).

**Fig. 62.4, right.** The *Campus Martius* between the Pantheon and the Palazzo Capranica. Overlay of the georeferenced aerial photograph of the *Atlante di Roma* of this area (here **Fig. 62.4, left**) and of the photogrammetric data. F.X. Schütz and C. Häuber "AIS ROMA", reconstruction 2023.

**Fig. 62.5.** The *Campus Martius* between the Pantheon and the Via dei Pastini. Overlay of the current cadastre with the current OSM ('Open Street Map') data, layer 'buildings'. F.X. Schütz and C. Häuber "AIS ROMA", reconstruction 2023.

**Fig. 62.6.** Colour photograph, showing the Piazza Capranica, seen from the Torre Capranica, looking southwest. The Torre Capranica is integrated into the western part of the Palazzo Capranica, which stands on the north-side of Piazza Capranica. Roma, collezione Dott. Richard Sasson, 'A World Apart'. Photo: Signora Francesca Maiolino. Courtesy Dott. Richard Sasson and per gentile concessione del fotografo Francesca Maiolino. Cf. *infra*, in volume 3-2, at *A Study on the consequences of Domitian's assassination ... Or: The wider topographical context of the Arch of Hadrian alongside the Via Flaminia which led to the (later) Hadrianeum and to Hadrian's Temples of Diva Matidia (and of Diva Sabina?)*; INTRODUCTION; at Section III. *The Precinct and Temple of Diva Matidia: my new research, motivated by Francesca Dell'Era's (2020) critique of my first reconstruction of the Temple of Diva Sabina?*

**Fig. 62.7.** The fragmentary monolithic shaft of the cipollino column, which still stands *in situ* on the east side of the Vicolo della Spada d'Orlando in the *Campus Martius*, being partly inserted into the west wall of the Ospizio/ Casa degli Orfani/ Collegio di S. Maria in Aquiro; cf. here **Figs. 64; 66**. It is debated, to which ancient building it had belonged, and which orientation this porticus originally had. In my opinion, this cipollino column is the only still extant one of the columns of the here-so-called porticus with cipollino columns, which Giambattista (G.B.) Nolli had still in part documented on his Large Rome map (1748; cf. here **Figs. 62; 62.1; 62.1.A**), and Giambattista (G.B.) Piranesi on one of his etchings (cf. here **Fig. 62.1.B**). Colour photographs: Courtesy L. Gigli (13-VII-2022).

**Fig. 62.8.** Two colour photographs, showing the façade of the Palazzo Capranica on the north-side of Piazza Capranica (with the Torre Capranica, integrated into the west end of the palazzo), and a drawing of its façade, with indication of its various building phases.

Note that this palazzo was built in several different building phases, proceeding gradually 'from east to west'; cf. Laura Gigli (2015, 11-20). Roma, collezione Dott.ssa Laura Gigli. Photos and drawing: Arch. Marco Setti. Courtesy Dott.ssa Laura Gigli and per gentile concessione del Arch. Marco Setti. These illustration have been published by Laura Gigli (2015, 12, Fig. "1. L'ombra proiettata sul palazzo Capranica dal campanile della chiesa di Santa Maria in Aquiro"; p. 14, Fig. "2. La facciata del palazzo Capranica"; and p. 14, Fig. "3. Rilievo del prospetto con l'individuazione e delle fasi costruttive e localizzazione del salone all'interno della torre"). For discussions; cf. *supra*, at Fig. 62.6.

**Fig. 62.9.** C. Huelsen (1899, between pp. 152, 153) his reconstructed plan of the area of the *Campus Martius*, between the Pantheon, the Palazzo Capranica and the Temple of *Diva Matidia*.

**Fig. 62.10.** Huelsen (1912, 141; cf. p. 131, Abb. 86, p. 137, Abb. 87) his two reconstructed plans of the area of the *Campus Martius*, between the Pantheon, the Palazzo Capranica and the Temple of *Diva Matidia*.

**Fig. 62.11.** The *Campus Martius*, showing the area between the Pantheon and the Palazzo Capranica, with the former Palazzo della Confraternità del Rosario/ Piazza Capranica no. 78. Overlay of here Fig. 62.2, Nolli's Large Rome map (1748), georeferenced, with here Fig. 62.4, right, Overlay of the georeferenced aerial photograph of the *Atlante di Roma* of this area and of the photogrammetric data.

**Fig. 63.** Overlay of Giambattista (G.B.) Nolli's Large Rome map (1748, enlarged) and the photogrammetric data (cf. here Fig. 62, detail), showing the ground-plan of the Palazzo Capranica at the Piazza Capranica. F.X. Schütz & C. Häuber, "AIS ROMA", reconstruction 2017, updated 2023. Cf. Häuber (2017, 77, Fig. 3.7.3).

**Fig. 64.** Detail of our map of the *Campus Martius* in the Imperial period (cf. here Fig. 59) between the Piazza Montecitorio and the *Saepta*, published in my earlier Study; cf. Häuber (2017, 87, Fig. 3.7.5.a), with later additions. With the reconstructions of the Precinct and of the Temple of *Diva Matidia* by H.-J. Beste and H. v. Hesberg (2015, 242, Fig. 28; Tav. II, K), and with my own reconstructions of these buildings (2017, updated 2023), and with G. Simonetta's reconstructed ground-plan of the Temple of *Diva Matidia*; cf. G. Simonetta and L. Gigli (2018 [2021] 164-165, Fig. 1 = here Figs. 67; 67.1).

**Fig. 64.1.** Detail of Antonio Tempesta's bird's-eye-view map of Rome (1593) with his representation of the Arco di Portogallo, which at this time still bridged the *Via Flaminia/ Via Lata/ Via del Corso*. In the following, I repeat a text passage from above, in Chapter *Introductory remarks and acknowledgements*:

'And when we were discussing the location of the former Arco di Portogallo on the *Via Flaminia/ Via Lata/ Via del Corso*, which was destroyed in 1622, Franz Xaver Schütz has made a relevant research and found a hitherto not recognized representation of the former Arco di Portogallo on Tempesta's bird's-eye-view map of Rome (1593; cf. here Fig. 64.1). Antonio Tempesta has even labelled this Arch: "arcus por / tugalli". See the inserted box on here Fig. 64.1, with the enlarged detail of Tempesta's map with the labelled Arco di Portogallo, which we have turned around, so that the inscription is legible.

**Fig. 65.** My own reconstruction of the Precinct of *Diva Matidia*. With the Temple of *Diva Matidia*, seen in relation to the *Saepta* (restored by Hadrian), both connected with an (imaginary) symmetry- axis: the light blue line, labelled: North-south axis, which, like the *Saepta*, is oriented towards the celestial North Pole), and the Precinct of *Diva Matidia*, seen in relation to the (later) Temple of *Diva Sabina* ?, the *Hadrianeum* and the Arch of Hadrian on the *Via Flaminia/ Via Lata/ Via del Corso*. With my own reconstructions of these buildings (2017, updated 2023), and with G. Simonetta's reconstructed ground-plan of the Temple of *Diva Matidia*; cf. G. Simonetta and L. Gigli (2018 [2021] 164-165, Fig. 1 = here Figs. 67; 67.1). Cf. Häuber (2017, 92-98; p. 93, Fig. 3.7.5b), updated 2023.

*A Study on the consequences of Domitian's assassination ... Or: The wider topographical context of the Arch of Hadrian alongside the Via Flaminia which led to the (later) Hadrianeum and to Hadrian's Temples of Diva Matidia (and of Diva Sabina?); INTRODUCTION; at Section XIII. Further new research related to my Temple of Diva Matidia and to my Temple of Diva Sabina?: observations at the Palazzo Serlupi Crescenzi and at the Palazzo Capranica.*

**Fig. 66.4.** R. Lanciani's plan (1883a, Tav. I-II) and the sheet of his map *FUR* (1893-1901, fol. 15), which document the here-so-called 'Lanciani's porticus'. This plan and his map, created by Lanciani, belong to his discussion (1881, 270; 1883a, 15) of a porticus, excavated and documented by him in 1871, 1879 and 1881 'at the junction of the square in front of the Pantheon with the Via dei Pastini', or, when we look at his plan and his map: this porticus stood immediately to the north-west and to the south of the junction of the roads Via dei Pastini and Via degli Orfani (cf. here **Fig. 66**). Whereas Lanciani himself (erroneously) attributed this porticus to an (alleged) colonnaded forecourt of the Pantheon, his porticus stood in reality within the area of the Precinct of *Diva Matidia*.

Lanciani (1881; 1883a, Tav. I-II; *FUR*, fol 15) excavated his porticus, which he (erroneously) attributed to the (alleged) colonnaded forecourt of the Pantheon, in reality within the area of Beste's and von Hesberg's Precinct of *Diva Matidia* (cf. here **Fig. 64**). 'Lanciani's porticus' was oriented to the west (!) (cf. here **Fig. 66.1**). Its existence precludes Beste's and von Hesberg's entire reconstructions of their Precinct and Temple of *Diva Matidia*. The reason being that Beste and von Hesberg (2015, 242, Fig. 28; Tav. II, K; cf. here **Fig. 64**) assume within their reconstructions of the Precinct and Temple of *Diva Matidia* the western branch of their "portico su tre lati", which is oriented to the east (!), at exactly the same site, where 'Lanciani's porticus' actually stood.

The reason for Lanciani's relevant error was the fact that he himself had not realized that the cadastre, on which he had based his plan of 1883a, as well as his map *FUR* (both here **Fig. 66.4**), contained an error in this area. Because of this error, 'Lanciani's porticus' appears on his own plan and map circa 13 m to the west of its true location. This fact, in its turn, had the effect that on Lanciani's plan and map (here **Fig. 66.4**) 'Lanciani's porticus' actually seems to be located immediately to the north-east of the Pantheon (!). Lanciani's relevant error concerning his porticus, that had allegedly belonged to a (never existing) colonnaded forecourt of the Pantheon, has been followed by almost all subsequent scholars.

**Fig. 66.5.** Map of the area, where R. Lanciani has documented the find of his porticus (cf. here **Fig. 66.4**). This map shows 'the junction of the "Piazza della Rotonda" (the square in front of the Pantheon) with the "Via dei Pastini"' - as Lanciani referred to the findspot of the here-so-called 'Lanciani's porticus' (cf. R. LANCIANI, *NSc* 1881, 270; 1883a, 15) - and, in addition to this, the "Via degli Orfani".

To illustrate Lanciani's explicit descriptions (*NSc* 1881, 270; *BullCom* 1883a, 15) of the precise location of his porticus, which he himself documented on a plan (cf. *id.* *BullCom* 1883a, Tav. I-II) and on his map (*FUR*, fol. 15; cf. for both here **Fig. 66.4**), we have ourselves created the map discussed here. This map shows 'the junction of the "Piazza della Rotonda" (the square in front of the Pantheon) with the "Via dei Pastini"' - as Lanciani (*NSc* 1881, 270) referred to the findspot of his porticus, and, in addition to this, the "Via degli Orfani". We used for this map the official OSM (Open Street Map-data, layers: buildings and streets. Our resulting map, with the letterings "Piazza della Rotonda", "Via dei Pastini" and "Via degli Orfani", shows that the 'square in front of the Pantheon, called "Piazza della Rotonda"' actually reaches as far north-east as to the junction of the two roads "Via degli Orfani" and "Via dei Pastini". This means that Lanciani, also with his note *NSc* 1879, 14 must have referred to his porticus. F.X. Schütz and C. Häuber "AIS ROMA", reconstruction 2023.

**Fig. 67.** Arch. G. Simonetta (drawing: arch. M. Setti), site-plan of the ancient and medieval architectural finds in the basements of Palazzo Capranica, with his reconstruction of the ground-plan of the Temple of *Diva Matidia*. Courtesy arch. G. Simonetta. Cf. Giuseppe Simonetta and Laura Gigli (2018 [2021] 164-165, Fig. 1). The architect Giuseppe Simonetta and the art-historian Laura Gigli have followed my hypothesis, published in my earlier study (2017), according to which the Palazzo Capranica was built 'on top of' Hadrian's Temple of *Diva Matidia* (for my relevant updated map; cf. here **Fig. 66**). See Simonetta and Gigli (2018 [2021] 128-129, n. 7). Based on his analysis of all the architectural remains in the basements of Palazzo Capranica, arch. Simonetta has created a reconstructed ground-plan of the Temple of *Diva Matidia*. Simonetta's plan illustrated here shows all the architectural finds in the basements of Palazzo Capranica. His reconstructed ground-plan of the Temple of *Diva Matidia* is highlighted in green; the architectural remains highlighted in "viola" are in part datable to the Middle Ages. Cf. G. Simonetta and L. Gigli (2018, 614 [a detailed caption of this plan, which refers to the fact that in this article their original coloured plan Fig. 1, which is illustrated here, is published in black and white], p. 615, Fig. 1). In Simonetta's opinion (cf. G. SIMONETTA and L. GIGLI 2018 [2021] 164), the Temple of *Diva Matidia* may have been erected by re-using a building of the Republican period. For discussions; cf. *supra*, at **Fig. 65**.

**Fig. 67.1.** Slightly changed version of the plan here **Fig. 67**. Those changes were added at my request by adding to this plan an arrow indicating north, a scale, and some street names. Arch. G. Simonetta (drawing: arch. M. Setti), site-plan of the ancient and medieval architectural finds in the basements of Palazzo Capranica, with his reconstruction of the ground-plan of the Temple of *Diva Matidia*. Courtesy arch. G. Simonetta. For discussions; cf. *supra*, at **Fig. 65**.

**Fig. 68.** Reverse of a bronze medallion, issued by Hadrian, with representation of the Temple of *Diva Matidia* and its two pertaining Basilicas. From Häuber (2017, 104, Fig. 3.7.6). After: M. Fuchs 2014, 137 Fig. 19 "Medaillon. Wien, Kunsthistorisches Museum, Inv. MK 9876". Cf. chapter II; Again Augustus' Meridian floor and G. Gatti's reconstruction of the "Campo Marzio centrale": his location of the *Saepta*, and some new observations concerning the Iseum Campense; and Figs. 3.7; 3.7.1; 3.7.5.a [= here **Figs. 59; 60; 64**]]. For discussions; cf. *supra*, at **Fig. 65**.

**Fig. 69.1.** "Tempio di Siepe", an ancient building that was documented within Palazzo Capranica at Piazza Capranica. Drawing, plan and section. Windsor 12138. After: *LTUR* V (1999) 315. Fig. 10. From: Häuber (2017, 80, Fig. 3.7.4). Cf. chapter II; Again Augustus' Meridian floor and G. Gatti's reconstruction of the "Campo Marzio centrale": his location of the *Saepta*, and some new observations concerning the Iseum Campense; The "Tempio di Siepe"; and Figs. 3.7; 3.7.1; 3.7.5a; 3.7.5b; 3.7.5c; 5.2 [= here **Figs. 59; 60; 64; 65; 66; 62**]]. For discussions; cf. *supra*, at **Fig. 65**.

**Fig. 69.2.** Alò Giovannoli (*Vedute delle vestigi antichi di Roma*, 1616; 1619, plate 39), his etching of the "Tempio di Siepe". Since I was unable to read Giovannoli's caption of his etching in its entirety, Laura Gigli was kind enough to read and transcribe it for me, sending me the result by Email of 4th November 2022:

"A sin. dida Monogramma Alo (lettere composte in unità) Gol (lettere composte in unità) (= Alò Giovannoli)  
La u è = alla v. Io nella copia della didascalìa userei comunque la v  
CON OSSERVAZIONI MIE

**Fig. 77.** Franz Xaver Schütz, map: "Kartographische Visualisierung. Landschaftselemente zwischen Rhein und Schwarzem Meer von Augustus bis Hadrian". See below, at *The first Contribution by Franz Xaver Schütz: Zur kartographischen Visualisierung historischer Landschaftselemente zwischen Rhein und Schwarzem Meer von Augustus bis Hadrian*, Abb. 1.

**Fig. 78.** G. Gatti, reconstruction of the Central *Campus Martius*, based on the fragments of the Severan Marble plan, with the Iseum and the Serapeum and the piazza in between them. G. Gatti (1943-1944, 121, tav. 4; after: *LTUR* III [1996] Fig. 69). Note that on Gatti's plan the sanctuary is labelled: ISEVM ET SERAPEVM, whereas on the Severan Marble Plan, the sanctuary is labelled: SERAPAEVM (cf. *LTUR* I [1993] Fig. 122a).

**Fig. 79.** Drawings after scenes in structures called mammisis ('house of birth') in Egypt. From: J.-C. Goyon (1988, 34-35, **Figs. 8-10; drawings**).

The caption of his **Fig. 8** in J.-C. Goyon (1988, 34) reads: "A scene from the mammisi at Philae. Here the divine child is nursed, modeled by the god Khnum, given years of life by the god Thoth, and, at the right, offered a pectoral by Augustus in his role as pharaoh. (Adapted from Champollion 1935: pl. LXXXVI, 1)".

The caption of his **Fig. 9** in J.-C. Goyon (1988, 35) reads: "The birth of the child-god Harpre ('Horus-the-Son') before Amun-Re, the goddess Nekhbet, and Cleopatra VII. The winged scarab above the child is identified as the King of Upper and Lower Egypt, the solar god Khepri, who appears each morning and is identified with Harpre, the son of Amun. The scene is from the destroyed mammisi of Armant. (Adapted from Lepsius 1849-59, pt. IV: pl. 60, a)".

The caption of his **Fig. 10** in J.-C. Goyon (1988, 35) reads: "Divine nurses from the destroyed mammisi of Armant. (Adapted from Lepsius 1849-59, pt. IV: pl. 59, c)".

The caption of his **Fig. 12** in J.-C. Goyon (1988, 37) reads: "Procession from the Temple of Horus at Edfu. The train of priests, led by the pharaoh, carries divine images of the Living Falcon and the falcon-headed Horakhty ('Horus-of-the-Two-Horizons'). (Adapted from Chassinat 1960b: pl. CLIV)".

**Fig. 80.** *Denarius*, issued by Domitian in AD 95/96, BMC 243, reverse, allegedly representing Domitian's Temple of Iuppiter Custos. In reality it does not even necessarily show a temple of Jupiter at all. Cf. R.H. Darwall-Smith (1996, 111, 156, 280, Fig. 32d on Plate XIX).

For discussions of the illustrations here **Figs. 80-87**; cf. *infra*, in volume 3-2, at *Appendix I.g.1.*

**Fig. 81.** *Denarius*, issued by Domitian in AD 95/96, BMC 240, reverse, representing Domitian's Temple of Isis within the Iseum Campense. Cf. R.H. Darwall-Smith (1996, 139, 145, 280, Fig. 32b on Plate XIX).

L. Bricault and R. Veymiers (2018, 148- 149, Fig. 5).

**Fig. 82.** *Denarius*, issued by Domitian in AD 95/96, BMC 238, reverse, representing Domitian's Temple of Serapis within the Iseum Campense. Cf. R.H. Darwall-Smith (1996, 145, 280, Fig. 31b on Plate XIX).

**Fig. 83.** *Denarius*, issued by Domitian in AD 95/96, BMC 242, reverse, representing Domitian's (fourth) Temple of Iuppiter Optimus Maximus Capitolinus. Cf. R.H. Darwall-Smith (1996, 107, 280, Fig. 34 on Plate XX). See below, at *The first Contribution by Peter Herz on the inscription (CIL VI 2059.11)*, which reports on a meeting of the Arvel brethren on 7th December 80 at the Temple of Ops in Capitolio, among them Titus and Domitian: Titus vows to restore and dedicate what would become Domitian's (fourth) Temple of Iuppiter Optimus Maximus Capitolinus.

**Fig. 84.** *Denarius*, issued by Domitian, BMC 241 (undated), allegedly showing the round Temple of Minerva Chalcidica, within which its cult-statue is visible. In reality this temple is not identified. Cf. R.H. Darwall-

Smith (1996, 125, 280, Fig. 33 on Plate XX); cf. *LTUR* III (1996) 476, Fig. 174: "... Denario di Domiziano del 94-96 d.C. BMCEmp II, 346 N. 241 tav. 67.7". The represented statue-type is called 'Athena in corsa'.

**Fig. 85.** Left foot of a marble statue of Serapis, on display on the Via di S. Stefano del Cacco in Rome, at the junction with the Via del Piè di Marmo. We may ask, whether this foot had originally belonged to a 'Bryaxix-type' cult-statue of Serapis in the *Serapeum* of the Iseum Campense, which was rebuilt by Domitian after the great fire of AD 80, and again restored by Septimius Severus. Photos: F.X. Schütz.

**Fig. 86.** Fragmentary colossal marble statue (2,28 m high; the head is 0,55 m high) of the Domitianic period, representing the standing goddess Isis, one of the famous 'statue parlanti' of Rome, the so-called 'Madama Lucrezia'. Rome, Piazza S. Marco (cf. here **Fig. 59**). Possibly found at the Iseum Campense and here identified as the cult-statue of Isis, commissioned by Domitian for his Temple of Isis within the Iseum Campense. Photo: F.X. Schütz (24-IX-2013). From: Häuber (2017, 141).

**Fig. 87.** Statue of the veiled Isis. Musei Capitolini, Palazzo Nuovo (inv. no. 744/S). Archivio Fotografico dei Musei Capitolini, Neg. no. F.00958 (Colantoni). © Roma, Sovrintendenza Capitolina ai Beni Culturali; cf. J. Eingartner (1991, 113, Kat. 9, Taf. IX; X). This statue is regarded by some scholars as the best copy after the cult-statue of Isis in her temple at the Iseum Campense, allegedly built by Caligula.

**Fig. 88.** Marble portrait of the Emperor Septimius Severus of his 'Serapis portrait-type' or 'Haupttypus' ('main type'). Rome, Musei Capitolini, Palazzo Nuovo (inv. no. MC 461). It may well be that the alabaster bust actually belongs to the portrait. From: C. Häuber (2014a, 814, Fig. 127; cf. B 26; B 28). Cf. *infra*, in volume 3-2, at *Appendix I.g.2.*

**Fig. 89.** Marble relief from the tomb of the Haterii, with representations of six buildings in Rome. Città del Vaticano, Musei Vaticani, Museo Gregoriano Profano (inv. no. 9997). From: C. Häuber (2014a, 480, Fig. 116). Suggested date: between the late Flavian period and 120 AD; cf. Häuber (2014a, 415, 170 with n. 178; cf. p. 794: it may have been created under Domitian, and if so, documents what this part of Rome looked like at his time).

**Fig. 90.** Same as Fig. 89. Detail with the "ARCUS AD ISIS". From: C. Häuber (2014a, 480, Fig. 117a).

**Figs. 91-94.** The first three reliefs are on display in the staircase of the Palazzo dei Conservatori (Musei Capitolini) at Rome. **Fig. 91:** the *adventus* relief of Hadrian from the former Arch of Hadrian alongside the *Via Flaminia/ Via Lata/ Via del Corso* in Rome, that led in Hadrian's lifetime to his Temple complex dedicated to the women of his adoptive family and later to the *Hadrianeum*; from: M. Fuchs (2014, 132, Fig. 12); **Fig. 92:** the *apotheosis* of Sabina (from the Arco di Portogallo); from: M. Fuchs (2014, 149, Fig. 21); **Fig. 93:** the *adlocutio* relief (from the Arco di Portogallo); from: M. Fuchs (2014, 139, Fig. 22); **Fig. 94:** the fourth relief is on display in the Palazzo Torlonia at Rome; from: M. Fuchs (2014, 135, Fig. 16); cf. pp. 133, 138: this panel shows a *supplicatio* scene and demonstrates, according to Fuchs, Hadrian's *clementia*.

**Fig. 91.1.** Fragment of a monumental marble inscription (*CIL* VI 40518). From: M. Fuchs (2014, 137, Abb. 20). The author was first to attribute this inscription to the Arch of Hadrian on the *Via Flaminia*. W. Eck (2019b, 199, Abb. 3) suggests a new reconstruction and dating of this inscription and rejects M. Fuchs's attribution of this inscription to this Arch of Hadrian.

Cf. *infra*, in volume 3-2, at *A Study on the consequences of Domitian's assassination ... Or: The wider topographical context of the Arch of Hadrian alongside the Via Flaminia which led to the (later) Hadrianeum and to Hadrian's Temples of Diva Matidia (and of Diva Sabina?)*; at Chapter I. *The Arch of Hadrian alongside the Via Flaminia and the four marble reliefs belonging to it* (cf. here **Figs. 91-94**).

**Fig. 95, above.** From: S. Keay, M. Millett, L. Paroli and K. Strutt (2005, 273, Fig. 8.1. The caption reads: "The geographical context of the Claudian and Trajanic phases of Portus").

**Fig. 95, below.** From: S. Keay, M. Millett, L. Paroli and K. Strutt (2005, 274, Fig. 8.2. The caption reads: "Pre-Trajanic Harbour. Summary plan showing the evidence for the Claudian and first-century AD layout of Portus").

**Fig. 96.** From: S. Keay, M. Millett, L. Paroli and K. Strutt (2005, 280, Fig. 8.4. The caption reads: "Trajanic Harbour. Summary plan showing the evidence for the Trajanic and mid-Imperial layout of Portus").

**Fig. 97.** From: S. Keay, M. Millett, L. Paroli and K. Strutt (2005, 292, Fig. 8.6. The caption reads: "Late Antique Harbour. Summary plan showing the evidence for the late antique layout of Portus. The approximate extent of cemetery evidence from the field survey is shown by hatching").

**Figs. 98; 99.** Marble relief with a representation of ships in the *Portus Augusti* at Portus. Roma, Museo Torlonia (MT 430). © Fondazione Torlonia. Photo: Lorenzo De Masi.

Cf. S. Tuccinardi (2020, 176-177, cat. 26). Cf. p. 178, for the detail illustrated here on **Fig. 99** of the three figures in the "cabina" of the left ship, a bearded man on the left (according to S. Tuccinardi 'obviously the owner of the ship, who has commissioned this relief'; and in C. Cecamore's 2019, 169 [in my opinion erroneous] opinion, the Emperor Septimius Severus), a woman in the middle and a man on the right, shown in the course of sacrificing at an altar standing in front of this group.

**Fig. 100.** Attic panel from the Quadrifrons at Leptis Magna, marble. Represented is, according to D.E.E. Kleiner (1992, 341, 342, Fig. 310): "the *concordia augustorum* [i.e., of Augustus Caracalla on the left and Augustus Septimius Severus on the right, performing together the gesture *dextrarum iunctio* - between them we see Severus's younger son, Caesar Geta, and to the left of Caracalla Iulia Domna], Septimius Severus, his family, the tutelary deities of his family and of Leptis Magna". Archaeological Museum of Tripoli (Libya). Photo: Courtesy Hans R. Goette (February 2008).

**Fig. 101.** The obelisk standing in Piazza di S. Giovanni in Laterano at Rome, the 'Lateran Obelisk', commissioned by Pharaoh Tuthmosis III for the Temple complex of Amun in Karnak at Thebes (today Luxor). Rose granite from Aswan. Augustus had originally planned to bring this tallest of extant obelisks from Karnak to Rome, but it was only brought there in AD 357 under Constantius II, who erected it on the *spina* of the *Circus Maximus*; cf. Häuber (2017, 427-428: "Appendix 5. L. Habachi (2000) on the Lateran obelisk (Fig. 5.1 [= here **Fig. 101**])"). From: Häuber (2017, 115, Fig. 5.1). (photo: F.X. Schütz 27-IX-2015).

For discussions of the illustrations on here **Fig. 95, above - Fig. 107** :

Cf. *supra*, in Chapter IV.1.1.c); at *A Study on the colossal portrait of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori at Rome*; at Part II. *Ancient Rome's new commercial river part, at La Marmorata*; at Section IV. *The Statio Marmorum and the 'sculpture industry' at La Marmorata ... With some remarks on the heaviest object, ever transported on the Tiber in antiquity: the Lateran Obelisk (Fig. 101)*; below, at *The second Contribution by Franz Xaver Schütz: Wie schwer war der ägyptische Obelisk, der heute auf der Piazza di S. Giovanni in Laterano in Rom steht?*; and *infra*, in volume 3-2, in *Appendix I.d.1.a)*; and in *Appendix VI.*; at Section VII.

**Fig. 101.a.** Cf. G.B. Cipriani (1823, with Tav. 1; 2), his discussion and etchings of the 12 (Egyptian) obelisks in Rome. The caption of his Tav. 1 reads: "Dodici Obelischi Egizj, che si osservano rialzati ad ornamento della Città di Roma, posti secondo ordine della loro rievazione". The caption of his Tav. 2 reads: "Fusti dei dodici Obelischi dei Egizj, che si osservano rialzati ad ornamento della Città di Roma, posti secondo il grado della loro altezza". Cipriani's etchings of those 12 obelisks are measured: the tallest one is the Lateran Obelisk. Cipriani has also discussed and drawn Domitian's obelisk, which he refers to in his text and on his plates as: "Agonale di Piazza Navona", see his Tav. 1; Tav. 2 (in both Domitian's obelisk is the fifth from left); as well as

the Antinous Obelisk, called by him "Aureliano della Passeggiata [on the Pincio]", see his Tav. 1 (the Antinous Obelisk is the second from right); Tav. 2 (the Antinous Obelisk is the fourth from right).

**Fig. 101.1.** The Antinous Obelisk on the Pincio in Rome, also known as the 'Barberini Obelisk' and as 'Monte Pincio Obelisk'. Originally commissioned by Hadrian for the tomb of Antinous at Antinoopolis, or for a cenotaph of Antinous at Rome, the location of which is controversial. 'Elagabalus' copied Augustus' concept of placing an obelisk on the *spina* in the *Circus Maximus*, when he erected this obelisk on the *spina* of the *Circus Varianus* in the *horti Spei Veteris*; Cf. ns. 113, 114, and chapters Domitian's Obelisk, Obeliscus Pamphilus, Appendix 8, Chapter VIII. EPILOGUE (photo: F.X. Schütz 20-IX-2015). Cf. Häuber (2017, 346, caption of Fig. 9, which has been slightly changed). Cf. *supra*, in *A Study on Hadrian's portrait-statue from Hierapydna* (cf. here Fig. 29); at *The research published in my earlier Study (2017): on the tomb of Antinous at Antinoopolis, on his (alleged) tomb at Hadrian's Villa near Tivoli, on his cenotaph at Rome, and on the two pertaining Antinous Obelisks*.

**Fig. 102.** *La Marmorata* at the Testaccio, with integration of the buildings documented on the Severan Marble Plan. Of these buildings, the 'NAVALIA' are marked by lettering, they have been identified by L. Cozza and P.L. Tucci (2006). Earlier this huge structure had - in Cozza's and Tucci's (2006; and P.L. TUCCI's 2012), and in my own opinion - erroneously been identified with the *Porticus Aemilia*; as still believed by many scholars. From: L. Cozza and P.L. Tucci (2006, 196, Fig. 12 [TUCCI]), the caption reads: "I *navalia* nella zona di Testaccio (da COARELLI 1974 p. 295, con modifiche di L. COZZA e P. L. TUCCI)".

**Fig. 102.1.** Ground-plan of the Republican *opus incertum* building at *La Marmorata*, which has been identified with the *Porticus Aemilia* outside *Porta Trigemina* and as *Navalia*. From G.-J. Burgers (*et al.* 2015, 200-201, Fig. 3: "Layout of the *Porticus Aemilia* with the numbering of the aisles and pillars [after Gatti 1934, pl. II. Graphics by V. De Leonardis]").

**Fig. 102.2.** Two reconstruction drawings of the *opus incertum* building at *La Marmorata*, with integrations of the fragments 23 and 24 of the Severan Marble Plan, on which it is represented. On fragment 23 appears the main inscription of this building, of which only the letters 'JLIA' remain.

**Fig. 102.2** shows two reconstructions of the main inscription of the *opus incertum* building.

**Above:** restored as 'AEMI]LIA'. From: G. Carettoni, L. Cozza, A.M. Colini and G. Gatti (*La pianta marmorea di Roma antica. FORMA VRBIS ROMAE*, 1960, testo, p. 95: "schema topografico". Photo: © Sovrintendenza Capitolina ai Beni Culturali).

**Below:** restored as 'NAVA]LIA'. From: L. Cozza and P.L. Tucci ("Navalia", 2006, 179, Fig. 1). The caption of their Fig. 1 reads: "In alto, l'edificio in *opus incertum* sulla Forma Urbis [*i.e.*, the Severan Marble Plan] con l'iscrizione NAVA]LIA (da GATTI 1934, fig. 7, aggiornato e integrato da L. Cozza e P. L. Tucci). In basso, la pianta dell'edificio in *opus incertum* ricostruita in base a scavi e rilievi: gli asterischi indicano le parti tuttora visibili (da GATTI 1934, tav. II, con aggiornamenti di L. Cozza e P. L. Tucci)". Cf. F. de Caprariis (2022, 120, Fig. 5.2), from whom I have borrowed the comparison of both reconstructions of this inscription presented here. The caption of F. de Caprariis's Fig. 5.2 reads: "Fig. 5.2: (*porticus*) *Aemilia* or *Nauvalia*. On the right, fragment 23 of the Marble Plan: note the inscription JLIA (© Sovrintendenza Capitolina)". F. de Caprariis's Fig. 5.2, above, is obviously a detail of her Fig. 5.1 on p. 119, the caption of which reads: "Fig. 5.1: Testaccio and Trastevere. The archaeological evidence and the Severan Marble Plan (from G. Carettoni-Cozza-Colini-Gatti 1960)".

**Fig. 102.3.** G. Giovannetti (2016, 24, Fig. 8: "Carta archeologica di Testaccio (da Gatti 1934)". With the *opus incertum* building, labelled as 'PORTICVS AEMILIA'.

Inserted box on top right:

G. Giovannetti: drawing of the structures standing in front of the '*Porticus Aemilia*'/ *Navalia* that are visible on fragments 24c and 24d of the Severan Marble Plan; cf. Giovannetti (2016, 22, Fig. 7: "Riproduzione della parte inferiore della lastra 24c e della 24d, elaborazione grafica dell'autore"), who labels these three buildings as 1, 2 and 3. Comprising *tabernae*, they served, according to Giovannetti, commercial functions, but apart

from appearing on the Severan Marble Plan they are, in his opinion, otherwise not datable. But note that E. Rodríguez Almeida (1993a, 20) dated those structures to the Trajanic period. Cf. here **Fig. 102.3** for the location of those structures between the *'Porticus Aemilia' / Navalia* and the port building on the bank of the Tiber.

**Fig. 102.4.** View of *La Marmorata*, etching from Étienne Dupérac's (circa 1520-1604) book (*I vestigi dell'antichità di Roma*, 1575, tav. 23).

Cf. R. Lanciani (III [1990], 192, Fig. 143). The caption reads: "Etienne Du Pérac, *Veduta della Marmorata e dell'Aventino*. Incisione, ne 'I vestigi dell'antichità di Roma', Roma 1575, tav. 23".

The caption of Dupérac's etching reads: "Vestigij d'una parte del monte Auentino che guarda verso Ponente, et il Tevere, quale [Oggi si scriverebbe *la quale*] per esser molto ruinata [Inserisce il concetto della rovina non quello del degrado] non ui si vede altro che muri spezati et rotti, Anchor che antichamente nella sumita [Inserisce il segno di abbreviazione sopra la u e la m indicante il raddoppio del consonante, vuole dire *in alto in cima alla sommità*] ui / fossero bellissimoi Tempj et edificij, nel segno A uogliono [Allude a fonti antiche che parlano di saline] chi ivi fossero le saline, hoggidi questo luoco si chiama la marmorata, perche ui si scaricano diuerse pietre di mischio et di marmo qualli si trouano [*come quelle che si trovano*] al porto d' / Ostia, nel segno B. è l'altra rippa del fiume doue arrivano tutti gli vascielli [oggi sarebbe *vascelli*] et mercantie che uengono per la marina in Roma". The comments on Dupérac's text in the square brackets are those written to me by Laura Gigli on 19th April 2022.

**Fig. 102.5.** Marble altar found in 1739 [corr.: 1737] at *La Marmorata*. London, British Museum (inv. no. 1914,0627.1), 0,72 m high. Date: 69-79 AD. From its inscription (*CIL VI 301*) we learn that it was dedicated to Hercules by Primigenius Iuencianus, a slave or freedman of the Emperor Vespasian, who calls himself in this inscription a *tabularius a marmoribus* (a "book-keeper in the marble trade"). Primigenius Iuencianus was, likewise according to the comments on this altar by the Curator of the British Museum (quoted after D. BOOMS 2016), "an official involved in the marble trade under Vespasian". Photo: © The Trustees of the British Museum.

Cf. <[https://www.britishmuseum.org/collection/object/G\\_1914-0627-1](https://www.britishmuseum.org/collection/object/G_1914-0627-1)> [last visit: 12-IV-2022].

**Fig. 102.6.** The Republican structure in the *Forum Holitorium* (a 'covered road', or porticoed street), leading from a north-westerly direction to the *Porta Carmentalis* in the Servian city Wall. Photos: Courtesy Franz Xaver Schütz (11-V-2022).

**Fig. 102.7.** Altar of *Magna Mater* and *Navisalvia*, which refers to the legend of Claudia Quinta and to the arrival of the sacred stone of Magna Mater at Rome in 204 BC. Rome, Musei Capitolini. Cf. A. D'Alessio (2014, 11, Fig. 8: "Roma, Musei Capitolini: altare della *Mater Deum* e di *Navisalvia*". Photo: © Sovrintendenza Capitolina ai Beni Culturali).

**Fig. 103.** Map of Rome. On the left bank of the Tiber we see the quartiere Testaccio with the Monte Testaccio and the Basilica of San Paolo fuori le Mura, on the right bank of the Tiber there are the quartiere Portuense and the Church of Santa Passera. IGM (Istituto Geografico Militare). Scale: 1: 25.000.

**Fig. 104.** Colossal marble statue of the River God Tiber, Paris, Louvre (MA 593). Cf. A. Heinemann (2018, 717, Fig. 3). Colossal marble statue of the River God Nile, Città del Vaticano, Musei Vaticani, Museo Chiaramonti (inv. no. 2300). Cf. A. Heinemann (2018, 216, Fig. 2). Photo: D-DAI Rom 81.2187. Domitian commissioned these two statues of the River Gods Tiber and Nile for his Temple of Serapis at his newly erected Iseum Campense, where they were on display in the huge water basin of the Exedra; cf. here, the maps **Figs. 58-61**; and *infra*, in volume 3-2, at *Appendix I.g.2.*; and at *Appendix II.a*).

**Fig. 105.** Detail of the plinth of this colossal marble statue of the River God Tiber, Paris, Louvre (MA 593), showing a relief with a small ship on the Tiber, with which a huge block of marble is transported. From: P. Pensabene and J.Á. Domingo (2016-2017, 573, Fig. 15). Courtesy P. Pensabene and J.Á. Domingo. Cf. *supra*, at

*A Study on the colossal portrait of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori at Rome; at Part II. Ancient Rome's new commercial river part, at La Marmorata; and below, at The sixth Contribution by Peter Herz: Rom. Strukturen der Versorgung.*

**Fig. 106.** The same relief, a greater section of the scene: three ships and also the men, who are hauling the ship with the marble block on the left hand side of the relief. From the Paper Museum of Cassiano Dal Pozzo, Windsor, Royal Library (RL 8739). Cf. A. Claridge and E. Doderò (*The Paper Museum of Cassiano dal Pozzo*, Series A, Part III, *Sarcophagi and Reliefs*, 4 vols., London: Royal Collection Trust (2022, 853-854, cat. no. 563). Photo: Courtesy Royal Collection Trust / © Her Majesty Queen Elizabeth II 2022. Cf. *supra*, at *A Study on the colossal portrait of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori at Rome; at Part II. **Fig. 107.** Golden medallion, issued under Antoninus Pius, representing the arrival of the sacred snake of Asclepius at Rome in 291 BC. From: F. Coarelli ("Navalia", in: *LTUR* III [1996] 339-340, Fig. 64). The caption of this illustration reads: "Insula Tiberina. Medaglione di Antonino Pio. Cohen II, 271 N. 17 (da Gneccchi, *Medaglioni romani* II, tav. 43,1). Disegno di G. Besnier, *L'île Tibérine dans l'antiquité* (1902), fig. 19". Cf. *supra*, at *A Study on the colossal portrait of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori at Rome; at Part II. Ancient Rome's new commercial river part, at La Marmorata.*

**Figs. 108-110.** Domitian's Palace 'Domus Flavia' / *Domus Augustana* on the Palatine. Measured reconstruction drawings, "in pencil, pen and black ink reconstructing in cross section the *Aula Regia*, *Peristyle* and *Triclinium*" (so A. CLARIDGE in her *Contribution*), by the architect G. Leith (1913), who integrated some of the originally 8 colossal statues that had decorated the 'Aula Regia' and some of the architectural fragments, excavated likewise there and published by F. Bianchini (1738). Gordon Leith created these drawings, when he held a scholarship of South Africa at the British School at Rome in 1913. From: M.A. Tomei (1999, Figs. 225; 228; 229; 230. We have also copied the captions of her figures). See above, in Chapter *The major results of this book on Domitian; and below, at The Contribution by Amanda Claridge: A note for Chrystina Häuber: Drawings of the interior order of the Aula Regia of the Palace of Domitian on the Palatine, once in the British School at Rome.*

**Fig. 111.** Fragmentary Roman marble relief allegedly from Ariccia. Found in a secondary context in a tomb at Albano Laziale close to the *Via Appia*; cf. Letizia Rustico (in: *Palazzo Altemps Guida* 2011, 61), suggested date: 100 AD. 'It could originally have been part of the marble revetment of a small tomb on the *Via Appia*', as suggested to me by Letizia Rustico on 19th December 2012 (cf. *infra*, in volume 3-2, n. 481, in *Appendix II.b*). The relief shows in the upper register a shrine in a porticus, with a seated goddess (probably Isis) and several other cult images, all in separate shrines, and in the lower register a cultic dance, performed 'in front of those cult statues'. Roma, Museo Nazionale Romano, Palazzo Altemps (inv. no. 7255). From: C. Häuber (2014a, 483, Fig. 120).

**Fig. 112.** *Sestertius*, issued by Vespasian in AD 71, Rome. With the *Dea Roma* on the reverse, seated on Rome's 'seven hills', thus referring to the *Septimontium* festival, which Vespasian had revived. Cf. A. Fraschetti ("Montes", in: *LTUR* III (1996) 285, Fig. 186: "Sesterzio di Vespasiano del 71 d. C. RIC II, 69 N. 442"). From: The British Museum. Obverse: IMP CAESAR VESPASIANVS AVG P M T P P P COS III; reverse: S C ROMA; RIC 2.1, 108, p. 67: "Roma seated right on the seven hills; to left wolf and twins; to right, River Tiber". Photo: © The Trustees of the British Museum.

Online at: <[https://www.britishmuseum.org/collection/object/C\\_1872-0709-477](https://www.britishmuseum.org/collection/object/C_1872-0709-477)> [last visit: 7-V-2023].

**Fig. 113.** *Sestertius* of Vespasian, AE, Rome, AD 71. On the obverse we see a naked portrait bust of Vespasian, as if he were a god or a dead hero, crowned with a laurel wreath like a *triumphator*, in addition to this, we see Jupiter's *aegis* on Vespasian's chest. By means of his *aegis*, Vespasian is equated with Jupiter, and that in a very peculiar iconography. Vespasian is wearing Jupiter's *aegis* similarly as Minerva does on Frieze A of the Cancellaria Reliefs (cf. here **Fig. 1; Figs. 1 and 2 drawing: figure 5**), but without attaching it to a garment or a

cuirass, it rather seems, as if the *aegis* were part of his own body. On the reverse is represented the Temple of Isis at the Iseum Campense in Rome. As L. Bricault and R. Veymiers (2018, 142) were able to demonstrate, this is the Temple of Isis, commissioned by Vespasian. Cf. M.J. Versluys *et al.* (2018, 158-159). Photo: © Münzkabinet, Staatliche Museen zu Berlin. See above, in Chapter *Preamble*; at Section II.; and *infra*, in volume 3-2, at *Appendix II.a*).

**Fig. 114.** Drawing after a coin issued by Septimius Severus, showing the temple of Aphrodite-Astarte at Paphos in Cyprus, who is represented as a *baitylos*, with *thymiateria* and doves on the roofs of the porticos surrounding her temple. From: C. Häuber (2014a, 483, Fig. 121). Cf. *infra*, in volume 3-2. at *Appendix II.a*).

**Fig. 115.** Monte Cavo, "once home of the federal sanctuary of the Latin League, dedicated to Jupiter *Latialis*" (C. VALERI 2021, 138), seen from the site of the former *auguraculum* on the *Arx* ; cf. Häuber (2017, 314-315), and from the roof terrace of the FAO on the Aventine. Photos: F.X. Schütz (2010; 2008).

**Fig. 116.** Visit of the Monte Cavo of a group of the British School, 1984. From: T.P. Wiseman (*A short history of the British School at Rome*, 1990a, PLATE X (b): "Donald Bullough (far right) in the Campagna, with (left to right) Tony Alcock, Sheila Gibson, Christine Häuber, Caroline Mauduit and the author [T.P. Wiseman]").

In the following, I anticipate a text from volume 3-2: "I found another interesting observation by Frederick G. Naerebout (2021, 149): 'he [Domitian] preferred to stay at his Alban villa at the site of the ancient sanctuary of Jupiter Latiaris [with n. 15: quoting: 'Plin. HN 3.69''']'. - But note that Domitian did not live at this sanctuary, he was only able to *see* its former site from his *Villa*, as Claudia Valeri (2021, 137-138) writes, who describes the landscape surrounding Domitian's *Albanum*: 'The *ager Albanus* held many sources of attraction ... the scenery of the mythological deeds of the first [page 138] Latin peoples. On one side, the eye could rest on the crater lake of Albano and the surrounding hills, in particular Monte Cavo, once home of the federal sanctuary of the Latin League, dedicated to Jupiter *Latialis*'"; cf. *infra*, in volume 3-2, at *Appendix IV.d.4.b*) *Domitian's building project comprising the Campus Martius, the Capitoline Hill and the sella between Arx and Quirinal. With detailed discussion of the Templum Pacis, and some remarks on Domitian's Villa, called Albanum.*

**Fig. 117.** Wall-painting from the north wall of the *triclinium* in the Casa di M. Fabius Secundus in Pompeji (V,4,13), Museo Archeologico Nazionale, Napoli, datable to the beginning of the 1st century AD (last phase of the III. style). Probably a copy after a painting in an Augustan building at Rome. From: F. Coarelli (2012, 165-167, Fig. 39). Cf. *infra*, in volume 3-2, in *Appendix VI.*; at Section VI.

**Fig. 118.** *Didrachma*, 297 BC, showing on the reverse the Ogulnian monument with the *lupa*, suckling the infants Romulus and Remus. Roma, Musei Capitolini, Medagliere. Cf. C. Parisi Presicce (2000, 21, Fig. 21). Cf. *infra*, in volume 3-2, at *Appendix IV.c*).

**Fig. 119.** Franz Xaver Schütz, drawing: "The earth with indication of meridians (longitudes) and latitudes". Marked are also the "Tropic of Cancer" and the "Tropic of Capricorn". From: F.X. Schütz 2017, 692, Abb. 1. Cf. *infra*, in volume 3-2, at *Appendix II.c*).

**Fig. 120.** The Arch of *Divus Titus* on the *Velia* in Rome. Cf. Paolo Liverani (2021, 83-84): "We can exemplify what is at stake by examining the decoration on the Arch of Titus ... a monument whose construction was planned by the Roman Senate shortly before the premature death of Titus, but which had to be built and finished under his brother and successor, Domitian". Cf. Diana E.E. Kleiner (1992, 183): "The inscription on the attic of the Arch of Titus indicates that the monument was erected by the senate and people of Rome in honour of the divine Titus, son of the divine Vespasian".

The bay of the Arch of *Divus Titus* on the *Velia* is decorated with two famous relief panels, the "spoils scene" and the "triumph relief", and at the apex of the vault of this arch there is a relief representing "the apotheosis of Titus"; cf. Diana E.E. Kleiner (1992, 187, Fig. 155, p. 188, Fig. 156, p. 189, Fig. 157). On the 'spoils scene' stands at the far right an arch (*i.e.*, the *Porta Triumphalis*), through which the triumphal procession is marching, This arch is crowned by what seems to be statue groups. The centre of those statues is occupied by

Domitian on horseback, accompanied to his left by his walking personal patron goddess Minerva, both are flanked on either side by the triumphal quadrigas of Vespasian and Titus, each of which pulled by four horses; cf. Diana E.E. Kleiner (1992, 185, Fig. 155). Photos: Courtesy Franz Xaver Schütz (4-IX-2019).

**Fig. 121.** The Arch of Titus in the *Circus Maximus*. Reproduced are here three illustrations from M. Buonfiglio 2017, p. 171, Fig. "8. Ricostruzione del prospetto dell'Arco di Tito (Sovrintendenza Capitolina - Dipartimento di Architettura UniRomaTre - Laboratorio Rilievo e Tecniche Digitali)"; p. 177, Fig. "15. L'emiciclo del Circo Massimo con la ricostruzione dell'Arco di Tito. In nero le murature ad oggi esistenti, in grigio le parti nascoste o ipotizzate (elab.[orazione] grafica M. Buonfiglio su rilievo Zetema)"; p. 179, Fig. "17. L'arco di Tito al Circo Massimo (ricostruzione M. Buonfiglio, A. Ciancio, A. Vecchione)".

**Fig. 122.** "Erstes Institutsgebäude auf dem Kapitol, Sitz des Instituts 1836 bis 1877. Architekt Johann Michael Knapp. Giebelskulpturen Emil Wolff. Ansicht in idealer Umgebung. Titelvignette der Monumenti inediti pubblicati dall'Istituto di Corrispondenza Archeologica, Vol. II, Roma e Parigi 1834/38"; cf. A. Rieche (1979, caption of her cat. no. 20; the name of the artist, who drew this "Titelvignette" is not indicated). This Vignette appears also on the cover of this catalogue, from where it was copied for this illustration; cf. p. 8 (Impressum): "Umschlagfoto: Helmut Schwanke, DAI Rom". In the background on the right of this drawing Pietro Rosa's excavations on the Palatine (1861-1870) are visible. Cf. *infra*, in volume 3-2, at *Appendix I.e*) *It is conceivable that Vitellius (cf. Suet., Vit. 15,3), on December 19th AD 69, could actually have watched the fighting on the Capitolium, while staying at the 'Domus Tiberiana' on the Palatine.*

**Fig. 123.** Views of the *Capitolium* and of the *Arx*, seen from the area of the '*Domus Tiberiana*' on the Palatine. Marked are from left to right: the Basilica of St. Peter, the Synagogue, the Capitolium, with: the former Archäologisches Institut des Deutschen Reiches (the '*Laspeyres-Bau*'), the '*Casa Tarpea*' (the former '*Protestantisches Krankenhaus*' and immediately below it in the valley the Church of S. Maria della Consolazione), the former Istituto di Corrispondenza (the '*Knapp-Bau*'), the southern terrace of the Palazzo Caffarelli (built on top of the Temple of Iuppiter Optimus Maximus Capitolinus), the Palazzo Caffarelli, the '*Tabularium*' (with the Palazzo Senatorio, built on top of it), and the *Arx*, with the Campanile of the Church of S. Maria in Aracoeli, and the Monument for Victor Emanuel II. Photos: Franz Xaver Schütz (26-VIII-2019). For discussions; cf. *supra*, at **Fig. 122**.

**Fig. 124.** Views of the '*Casa Tarpea*', the '*Knapp Bau*' (former Istituto di Corrispondenza Archeologica), and the '*Domus Tiberiana*' on the Palatine, seen from the southern terrace of the Palazzo Caffarelli on the Capitolium, which was erected 'on top of' the Temple of Iuppiter Optimus Maximus Capitolinus. Photos: Franz Xaver Schütz (26-VIII-2019). For discussions; cf. *supra*, at **Fig. 122**.

**Fig. 125.** Architectural fragments, datable to the Republican period, on display at the Porticus of the Dei Consentes on the *Clivus Capitolinus*. These fragments have been attributed to five different buildings. No, thanks to the new findings, published M. GRAWEHR 2022, even to seven! Cf. *infra*, in volume 3-2, at *Appendix I.e*) *It is conceivable that Vitellius (cf. Suet., Vit. 15,3), on December 19th AD 69, could actually have watched the fighting on the Capitolium, while staying at the 'Domus Tiberiana' on the Palatine.* Photos: Franz Xaver Schütz, 26-VIII-2019.

Disegno del frammento 36b della Pianta marmorea severiana con integrazione ipotetica dell'edificio insieme agli altri frammenti attribuiti all'area circostante al Foro di Traiano (montaggio di Riccardo Montalbano)".

Cf. *infra*, in volume 3-2, at *A Study on the Consequences of Domitian's assassination ... Or: The wider topographical context of the Arch of Hadrian alongside the Via Flaminia which led to the (later) Hadrianeum and to Hadrian's Temples of Diva Matidia (and of Diva Sabina?)*; and below, at *The Contribution by John Bodel: The Label Inscribed on Fragment 36b of the Severan Marble Plan*; and at *The second Contribution by Angelo Geißen: Zum 'Hadrianeum' auf Münzen des Antoninus Pius*.

**Fig. 137.** The first coins, issued by the Emperor Hadrian at Alexandria in AD 117, show Hadrian's earliest portrait-type. See below, at *The first Contribution by Angelo Geißen: Bemerkungen zur frühen Münzprägung Hadrians in Alexandria*.

The four extant marble portraits in the round, which show Hadrian in his Delta Omikron ( $\Delta\omicron$ ) portrait-type (cf. here **Fig. 3**), were obviously based on those coins, but it is debated, who had commissioned those portraits, Hadrian or Antoninus Pius. I myself suggest that Hadrian commissioned those portraits still himself in AD 138, as part of the propagation of his *providentia* for the *continuitas imperii*: Hadrian's adoption on 25th February AD 138 of Antoninus Pius (immediately after Antoninus Pius, in his turn, had adopted Marcus Aurelius and Lucius Verus). I suggest this because Hadrian commemorated his adoption of Antoninus Pius also with his *tetradrachma*, issued at Alexandria in 137/ 138 (here **Fig. 138**). I regard, therefore, the assumption as plausible, although it is currently not provable that, as a part of this propagation, Hadrian had still himself issued in AD 138 the *aurei* with this portrait-type (here **Figs. 137; 3**) and his adoptive parents ('DIVIS PARENTIBVS'), Trajan and Plotina (here **Fig. 139**). These *aurei*, like the

*tetradrachma* (here **Fig. 138**), and the marble portraits (here **Fig. 3**), hinted, in my opinion, at the fact that Hadrian had now himself adopted a son.

**Fig. 138.** *Tetradrachma*, issued by Hadrian in 137/ 138 at Alexandria, to commemorate his adoption of Antoninus Pius. Cf. A. Geissen ("ΑΙΩΝ - ΑΙΤΕΡΝΙΤΑΣ. Welche numismatischen Zeugnisse reflektieren die Vollendung der Sothis-Periode unter Antoninus Pius?", 2010).

**Fig. 139.** The *aurei*, issued in AD 138, with Hadrian's first portrait-type (cf. here **Figs. 3; 137**) and on the reverse with the portraits of his adoptive parents, *Divus Traianus* and *Divia Plotina* ('DIVIS PARENTIBVS'). It is debated, who had issued those coins, Hadrian or Antoninus Pius; cf. Martin Beckmann ("The Gold Coinage of Hadrian AD 130-138", 2019); and Hans Rupprecht Goette (2021, 24 n. 67, p. 124, Abb. 56, pp. 25-27). In my opinion, those *aurei* had still been issued by Hadrian himself in AD 138, as part of the propagation of his *providentia* for the *continuitas imperii*.

For discussions of the coins here **Figs. 137; 138; 139; 140; 141.1; 141.2; 142; 143; 144; 145; and-146**; cf. *supra*, in Chapter *The major results of this book on Domitian*; and in greater detail *infra*, in volume 3-2. at *A Study on the consequences of Domitian's assassination ...*; at Chapter VI.2.3. *My own interpretation of Hadrian's portrait-type Delta Omikron (Λο)* (cf. here **Figs. 137; 3**); at *How adoptions could be visualized on coins: Nerva/Trajan, Trajan/Hadrian, Hadrian/Aelius Caesar, Hadrian/ Antoninus Pius, Antoninus Pius/Marcus Aurelius*.

**Fig. 140.** *Denarius*, issued by Trajan. Nerva gives Trajan the globe of 'world rule'. Cf. D.C.A. Shotter (1983, 225): "Trajan's accession issue shows Nerva handing Trajan a globe with the legend PROVID P M TR P COS II [with n. 67]".

In the following, I anticipate a text passage from volume 3-2, *A Study on the consequences of Domitian's assassination ...*; Chapter VI.2.3.; at Section *How adoptions could be visualized on coins: Nerva/Trajan, Trajan/Hadrian, Hadrian/Aelius Caesar, Hadrian/ Antoninus Pius, Antoninus Pius/Marcus Aurelius*:

'Nerva gives Trajan the globe, which means: by his adoption, Nerva endows Trajan with 'world rule'. Mario Torelli ("Providentia, Ara", in: *LTUR* IV [1999] 166) writes: "... da Nerva in poi fino ad epoca tardo imperiale l'ara [*providentiae*] è sostituita dalla scena della consegna del globo al successore, simbolicamente omologa alla raffigurazione dell'altare [*i.e.*, the *ara Providentiae Augustae*]". - Torelli (*op. cit.*) himself does not provide a reference for this coin (here **Fig. 140**). But see Torelli (1992, 109, 119-120, Fig. 15) for discussions of the *ara Providentiae Augustae* and of the meaning of late antique coins which represent the "scena della consegna del globo al successore". To my great surprise, this coin (here **Fig. 140**) was *not* issued by Nerva, as I had expected, when reading Torelli's (1999, 166) account, but instead in AD 98 by Trajan *himself*. In addition to this, D.C.A. Shotter (1983, 225) states explicitly that "The adoption [of Trajan] is not commemorated on the coinage of Nerva".

**Fig. 141.1.** *Aureus*, issued by Trajan in AD 112/113 at Rome. Obverse: Trajan, laureate and wearing the *paludamentum*. Reverse: his divinized natural father. From E. La Rocca (2021, 92 Fig. 19) The caption reads: "Traiano, aureo della zecca di Roma (112-113 d.C.). Recto: effigie laureata di Traiano. Verso: effigie del *divus pater Traianus* (foto Heritage Auctions, Inc., Auction 3056 [3. 8. 2017], Lot 30007)". Courtesy: E. La Rocca.

**Fig. 141.2.** *Aureus*, issued by Trajan in AD 112/113 at Rome. Obverse: Trajan, laureate and wearing the *paludamentum*. Reverse: his two divinized fathers, his natural father *Taianus pater* and Nerva. From E. La Rocca (2021, 92 Fig. 18) The caption reads: "Traiano, aureo della zecca di Roma (112-113 d.C.). Recto: effigie laureata di Traiano. Verso: effigie affrontate dei *divi Nerva e Traianus pater* (foto Fritz Rudolf Künker GMBH and Co. KG, Auction 168 [12. 3. 2010], Lot 7742)". Courtesy: E. La Rocca.

**Fig. 142.** *Aureus*, issued by the Emperor Hadrian in AD 117 at Rome. Trajan gives Hadrian the globe of 'world rule'.

Cf. Stack's Bowers and Ponterio Sixbid Numismatic Auctions The January 2013 N.Y. I.N.C Session I Lot 5001 11. Jan. 2013: "RIC -3c (Denarius) ... Among the earliest coinage issues of Hadrian, it depicts a youthful

beardless portrait of the emperor. The reverse type depicts Trajan and Hadrian clasping hands, with "ADOPTIO" in the exergue. This directly references Hadrian's adoption by Trajan, testifying to Hadrian's legitimacy as the new emperor of Rome"... "IMP. CAES. TRAIAN. HADRIANO OPT. AVG. GER. DAC'. Laureate, draped and cuirassed bust of Hadrian right. Reverse: `PARTHIC. DIVI TRAIAN. AVG. F.P.M. TR. P. COS. P.P. ADOPTIO'. Trajan and Hadrian standing, facing each other, clasping right hands". - Contrary to this description, comparisons with the portraits of Hadrian on the *aurei* here **Figs. 145; 146** show that also this coin represents Hadrian bearded.

**Fig. 143.** Coins, issued in AD 136 in Mylasa in *Caria* on the occasion of Hadrian's adoption of his first adoptive son, L. Ceionius Commodus, who was after his adoption called Aelius Caesar. From: Fabrice Delrieux (2017, 232 Abb. 5, 5-6).

In the following, I anticipate a text passage from volume 3-2, *A Study on the consequences of Domitian's assassination ...*; at Chapter VI.2.1. H.R. Goette's (2021) discussion of Hadrian's portrait-type Delta Omikron ( $\Delta\omicron$ ; cf. here **Figs. 137; 3**):

`Cf. Hans Rupprecht Goette (2021, 26, note 70). In his **note 70**, Goette writes: "Zur Adoption des L. Ceionius Commodus, dann als designierter Nachfolger L. Aelius Caesar, durch Hadrian zwischen 19. 7. und 29. 8. 136 s.[iehe] Kienast - Eck - Heil, 2017, 123. 126. Diese Sukzessionspläne zerschlugen sich durch Aelius Caesars Tod am 1. 1. 138, woraufhin (am 25. 2. 138) der spätere Antoninus Pius [von Hadrian] adoptiert und zum Caesar ernannt wurde. - Die Nachfolgeregelung Hadrians 136 wurde durch die sich anblickenden Portraits des Kaisers und Aelius Caesar auf Münzen verbildlicht, s. F. Delrieux, Les frappes provinciales romaines de Mylasa en Carie, in: L. Bricault *et al.* (Hrsg.), Festschr.[ift] M. Amandry (Bordeaux 2017) 232 Abb. 5, 5-6".

**Fig. 144.** Coins issued by the Emperor Antoninus Pius in AD 144/ 145 AD to commemorate the marriage of his daughter Faustina *minor* with (the future) Marcus Aurelius.

See the discussion of those coins by Angelo Geissen (2010, 213, with n. 10, quoted *verbatim* in C. HÄUBER 2014a, 728-729 with n. 6): "This marriage: ``[diente] doch vorzüglich dazu, die römische Herrscherideologie zu propagieren, die den Fortbestand der Dynastie und damit die Fürsorge und den Schutz der Bevölkerung auf ihre Fahnen geschrieben hatte''".

In the following, I anticipate a text passage from volume 3-2, *A Study on the consequences of Domitian's assassination ...*; Chapter VI.2.3.; at Section *How adoptions could be visualized on coins: Nerva/Trajan, Trajan/Hadrian, Hadrian/Aelius Caesar, Hadrian/ Antoninus Pius, Antoninus Pius/Marcus Aurelius*:

`Antoninus Pius issued on this occasion [in AD 144/145] coins showing on the obverse a portrait of himself, and on the reverse a portrait of (the future) Marcus Aurelius, his adoptive son, whom Antoninus Pius had adopted at Hadrian's wishes. As Angelo Geissen (2010, 214-216 with ns. 15-18, Taf. 64, 8-11), by analysing Antoninus Pius's coin editions, is able to show, Antoninus Pius declared (the future) Marcus Aurelius as "Thronfolger" (Caesar) not already at the moment of Marcus's adoption on 25th February AD 138 (as had been intended by Hadrian), but only, on the reverses of his coins since 141/ 142. Later, Antoninus Pius declared (the future) Marcus Aurelius as his "Koregent" (co-regent, co-emperor), but not already on the occasion of Marcus's marriage with his daughter Faustina *minor* in AD 145, but only after Faustina *minor* had given birth to their first child in AD 147 (!)'.`

**Fig. 145.** *Aureus*, issued by Hadrian in AD 117/118 in Rome. Staatliche Museen zu Berlin, Preußischer Kulturbesitz. Cf. "SMB-digital Online collections database Hadrianus ... In the following, I anticipate a text passage from volume 3-2, *A Study on the consequences of Domitian's assassination ...*; Chapter VI.2.3.; at Section *How adoptions could be visualized on coins: Nerva/Trajan, Trajan/Hadrian, Hadrian/Aelius Caesar, Hadrian/Antoninus Pius, Antoninus Pius/Marcus Aurelius*:

'Whereas Nerva's adoption of Trajan, because ... announced by Nerva in public, was not contested, Hadrian's (alleged?) adoption by Trajan *was* ... Considering this point, Anthony R. Birley (1996, 662) wrote: "A single aureus with the reverse HADRIANO TRAIANO CAESARI (*BM Coins, Rom. Emp.* 3. lxxxvi, 124 [= here **Fig. 146**]) cannot dispel the rumours that Plotina had staged an adoption after Trajan died"... If Trajan had indeed himself ordered this coin-type, as seems to be the case, he must have done that in connection with his adoption of Hadrian, which he (allegedly) did on his death-bed. A similar question has been discussed in a different context by the scholars, whom Martin Beckmann (2019, 151-152) follows: they suggest that part (of the scheduled editions of?) those *aurei*, issued by Hadrian in AD 138 (*inter alia* here **Fig. 139**), without any problems, could also have been coined after Hadrian's death, at the order of Antoninus Pius'.

**Fig. 147.** *Denarius*, issued by Nero in AD 67-68 at Rome. On the reverse a seated Iuppiter Custos. Cf. <<https://en.numista.com/catalogue/pieces246244.html>>: "RIC I#69 ... Obverse: Head of Nero, laureate, right, with beard, Lettering: IMP NERO CAESAR AVG PP, Reverse, Lettering: IVPPITER CVSTOS, Jupiter, bare to waist, cloak round lower limbs, holding thunderbolt in right hand and long sceptre in left".

**Fig. 148.** *Denarius*, issued by Vespasian in AD 76 at Rome. On the reverse a standing Jupiter Custos. Cf. <<https://en.numista.com/catalogue/pieces249759.html>>: "RIC II.1# 850 ... Obverse: Head of Vespasian, laureate, left, Lettering: IMP CAESAR VESPASIANVS AVG, Reverse: Jupiter, bearded, naked, standing facing, sacrificing out of patera in right hand over low garlanded altar and holding vertical sceptre in left, Lettering: IOVIS CVSTOS".

**Fig. 149.** *Denarius*, issued under Titus in AD 76 at Rome. On the reverse a standing Jupiter Custos. Cf. <<https://en.numista.com/catalogue/pieces249772.html>>: "RIC II,1#863 ... Obverse: Head of Titus, laureate, right, Lettering: T CAESAR IMP VESPASIAN, Reverse: Jupiter, bearded, naked, standing facing, sacrificing out of patera in right hand over low garlanded altar and holding long vertical sceptre in left, Lettering: IOVIS CVSTOS".

For the coins, illustrated on here **Figs. 147-149**, cf. *infra*, in volume 3-2, at *Appendix I.d) Domitian's escape from the Capitolium on 19th December AD 69, which happened on the festival of the Opalia, one day of the Saturnalia*.

**Fig. 150.** 'Venus from the Esquiline', marble statue in the Musei Capitolini, Palazzo dei Conservatori, Rome (inv. no. MC 1141). From: Häuber (2014a, 40-41, Figs. 16 a-f; cf. pp. 745-776). Cf. *supra*, at Chapter I.3.1; and *infra*, in volume 3-2, at: *A Study on the consequences of Domitian's assassination ...*; Chapter VI.2.3.; at *Hadrian's Delta Omikron (Δο)-portrait-type ... and the 'Venus from the Esquiline' (cf. here Fig. 150)*.

**Fig. 151.** *Hemidrachma* with portrait of Livia, issued by Augustus before 9/10 AD at Alexandria. From Häuber (2017, 343-345 with ns. 103-106, Fig. 7).

**Fig. 152.** *Obol*, issued by Augustus at Alexandria with portrait of Augustus, and on the reverse the legend: *Patros Patridos*, referring to Augustus's title *Pater Patriae* bestowed upon him in 2 BC. From: Häuber (2017, 343-345 with ns. 103-106, Fig. 8).

The coins here **Figs. 151; 152** are kept at the Universität zu Köln, Institut für Altertumskunde. For both coins; cf. Angelo Geißen ("Comments by Angelo Geißen: Augustus und das liebe Geld", in: C. HÄUBER 2017, 732-733, with references).

**Fig. 153.** Giambattista (G.B.) Nolli's Large Rome map (1748) detail, showing the area under the steep western slope of the Aventine in Rome (below the Basilica of S. Sabina). Nolli labelled the stone pillars in the Tiber, which were visible at his time, as "Vestigia del Ponte Sublicio".

**Fig. 154.** The Tiber in Rome with the mouth of the *Cloaca Maxima*. Above it, we see on the eastern bank of the Tiber the round temple, which stood to the west of the *Forum Boarium*. To the north of the round temple are visible the Temple of Portunus and the Palazzo dell'Anagrafe, underneath of which parts of the *Horrea Aemiliana* have been excavated; all these buildings were erected in the old commercial river port of Rome, the *Portus Tiberinus*. Photos: Courtesy Franz Xaver Schütz (23-III-2006).

For discussions of the illustrations here **Figs. 151-154**; cf. *supra*, in *A Study on the colossal portrait of Hadrian (now Constantine the Great) ...*; at Part II. *Ancient Rome's new commercial river port, at La Marmorata*; at Section I. *Introduction*.

**Fig. 155.** Roman wall-painting, 'Aldobrandini Wedding'. Città del Vaticano, Musei Vaticani, Biblioteca (inv. no. 69631). From: C. Häuber (2014a, 831, Fig. 156. Cf. Appendix V; B 30).

Cf. *supra*, in *A Study on Domitian's cult-statue of Iuppiter Optimus Maximus Capitolinus* (cf. here **Fig. 10**); at Part I. *The wall painting 'Aldobrandini Wedding' in the Vatican Museums and the statuette of the 'Euripides' in the Louvre* (cf. here **Fig. 12**), which has been discussed together with it..

*The Contribution by John Bodel: The Label Inscribed on Fragment 36b of the Severan Marble Plan*

This *Contribution* belongs to the following *Chapter* in volume 3-2:

*A Study on the consequences of Domitian's assassination :*

*Nerva is forced to adopt Trajan and Trajan creates Domitian's negative image to consolidate his own reign. With Hadrian's adoption manquée in late October or at the beginning of November of AD 97, his 20-year long road to his accession and his thanksgivings for it, his Temple complex in the Campus Martius.*

*Or : The wider topographical context of the Arch of Hadrian alongside the Via Flaminia which led to the (later) Hadrianeum and to Hadrian's Temples of Diva Matidia (and of Diva Sabina?). With discussions of Hadrian's journey from Moesia Inferior to Mogontiacum (Mayence) in order to congratulate Trajan on his adoption by Nerva, and of Hadrian's portrait-type Delta Omikron ( $\Delta o$ ) (cf. here Fig. 3). With The fourth and the fifth *Contribution* by Peter Herz, with The first *Contribution* by Franz Xaver Schütz (cf. here Fig. 77), with The *Contribution* by John Bodel, and with The second *Contribution* by Angelo Geißen.*

### The Label Inscribed on Fragment 36b of the Severan Marble Plan

To judge from the photograph shown by Claudio Parisi Presicce (hereafter “PP”) in Figure 9 of his recently published article on fragment 36b of the Severan Marble Plan (Parisi Presicce 2021: 221) and, in higher resolution, at the Stanford Digital Forma Urbis Project (36b , [https://formaurbis.stanford.edu/fragment.php?record=183]), the small mark after the letters TEM looks more like a flaw or chip in the face of the stone than a regular triangular interpunct of the sort described. The mark shown after JNAE on the fragment photographed in Figure 10, on the other hand -- appearing at medial height and more clearly exhibiting the serifed triangular shape -- does look like a mark of punctuation indicating word end and line end. As PP observes, the two marks differ. On the latter fragment horizontal and vertical lines of ordination still visible above and below the letters and to the right of N suggest that the lettering there was more carefully carved than in fragment 36b, as indeed a comparison of the letter forms themselves confirms.

As it happens, the abbreviation TEM for *tem(plum)* is found rarely in Latin inscriptions and so is inherently less plausible than other possible interpretations here [note 1]. If the letters are understood in this way, and the label identified a putative Temple of the Deified Plotina and Trajan, the next letters after *tem(plum)* should indicate the title *Divus* (whether of Plotina or Trajan), as noted by Chrystina Häuber elsewhere in this volume (chapter I.2 “The wider topographical context. . .”) [note 2]. More importantly, consideration of the drawings of inscriptions on the Severan Marble Plan compiled by Emilio Rodríguez Almeida and reproduced by PP at Figure 11 shows wide variation in the use of spacing and line breaks (seldom, it seems, interpuncts) to articulate the labels of the buildings represented. Generally, words were not separated by either interpuncts or spacing but were occasionally (and haphazardly) divided between lines [note 3]. Evidently, the disposition and arrangement of the text labels was dictated mainly by the lines outlining the shapes of the buildings, which defined fields of varying shape and orientation into which the relevant labels were fit [note 4]. So in fragment 36b the letters are written out in a single row beneath an inscribed line evidently representing the inner wall of a porticoed structure near its upper left corner (according to the orientation of the lettering), with the letters occupying the interior space (Figure 1).

Figure 1. Photo of Fragment 36b of the Severan Marble Plan,  
from the Stanford Digital Forma Urbis Project

In at least one instance, however, a single word shows “extra” space internally, between letters within the word, for reasons not clearly determined by the configuration of the available space. The drawing of the legend on fragment 672 by Rodríguez Almeida reproduced by PP exhibits extra space between A and E in precisely the word for “temple” used elsewhere in labels on the Marble Plan, *aedes*. Inspection of the original source, a drawing in *Cod. Vat. Lat.* 3439 reproduced at the Stanford Digital Forma Urbis Project as fragment 672abd [<https://formaurbis.stanford.edu/fragment.php?record=810>](here below) furthermore shows that

John Bodel: The Label Inscribed on Fragment 36b of the Severan Marble Plan

the drawing reproduced by PP omits the final letter of the word, which is separated from the preceding three letters by an even larger *vacat*.

Figure 2. Detail of *Cod. Vat. Lat. 3439*, from the Stanford Digital Forma Urbis Project

The spacing of the letters in the label “A E D E S” thus provides a close parallel for the irregular spacing of the letters in fragment 36b (which is not, therefore, *pace* PP, p. 221, “un unicum”) and confirmation that a single word written out in full might exhibit such irregular internal spacing. When one considers that individual words for buildings on the plan are almost always, if not always (invariably in places where the text is not broken), written out completely, the most plausible interpretation of the letters TEM PL on fragment 36b is that they represent the first five letters of the word *templum* written out in full, as they have traditionally been interpreted.

Regarding the usage and meaning of the terms *templum* and *aedes*, both, of course, are commonly applied to the standing temples where gods were venerated. *Templum*, strictly an area of sky or land verbally defined by an augur within which auspices could be taken, is essentially a definition of space or territory; the term came to refer to consecrated land set aside for public use and thence, by extension, to any sacred precinct. *Aedes*, by contrast, refers primarily to a dwelling place or habitation – a house, in other words; when used in reference to a place where gods are worshipped, *aedes* characterizes the location as an abode. Both terms, significantly, are applied to tombs. Where the two terms are used in distinction to each other, *templum* refers to an area,

whereas *aedes* points to a structure, and the former encompasses the latter. So, for example, Pliny the Elder (*Nat.* 36.32) describes the location of a famous statue of Hecate by Menestratus as “in the precinct of Diana at Ephesus behind the temple” (*Ephesi in templo Dianae post aedem*). More appositely, the charter of a funerary *collegium* of Aesculapius and Hygia established in 153 CE refers three times to a decree of the society passed “in the precinct of the Divi, in the temple of the divine Titus” (*in templo Divorum in aede divi Titi*) (CIL 6.10234), referring to one of the twin shrines to the deified emperors Vespasian and Titus that Domitian erected in the Campus Martius immediately to the southeast of the *Iseum Campense*, as indicated on slab 35 of the Forma Urbis [note 5]. Coarelli interprets the plan as showing a building framed by porticos along three sides with a row of trees forming the fourth side of a large rectangle (c. 194 x 77 m.) and remarks as noteworthy (*interessante*) the labeling of such a large porticoed building as a *templum*, comparing the *templum Pacis*. Here too, clearly, the term *templum* refers not to a structure but to a precinct, in this case one defined around its perimeter by porticos and a row of trees, and indeed the circumscribed area is referred to by Jerome (*Chron. a. Abr.* 2105) and Eutropius (7.23) as *porticus Divorum*.

To return to the inscription on fragment 36b, a faintly etched row of squares (still visible beneath the letters EM PL) running continuously beneath the text in a line parallel to that above the letters suggests that the inscription was carved in a single line within the narrow band defined by these borders, but how far the text extended beyond the break to the right can only be speculated, based on the length of the side of the building or area beneath and within which the text appears. Similarly, whether the word *templum*, if correctly restored, is to be understood as in distinction to *aedes* elsewhere in the plan, as precinct is to shrine, or whether both terms refer to buildings (“temples”), is unclear. In either case, the dedication and formal name, if to a member of the imperial family, must have been to a *divus/a*, whatever informal usage may have allowed [note 6]. On purely epigraphic grounds, then, the names of any of the three deified imperial women potentially included within the large Hadrianic-Antonine funerary complex developed over the middle years of the second century in the central Campus Martius might plausibly be restored after the text preserved in fragment 36b, and the decision as to which one is most likely to have appeared must be based on other considerations. Those considerations, too numerous and complex to enumerate here, point most clearly toward the solution proposed by Chrystina Häuber elsewhere in this volume (chapter I.2 “The wider topographical context. . .”): TEMPL[VM DIVAE SABINAE]. But our knowledge of the particular ideological focus and topographical detail of this funerary complex is far from certain, and TEMPL[VM DIVAE PLOTINAE] or even TEMPL[VM DIVAE MATIDIAE] would not be out of the question.

Brown University

John Bodel: The Label Inscribed on Fragment 36b of the Severan Marble Plan

## Notes

[1] Of the more than 1350 inflected forms of *templum*, variously abbreviated, recorded in the largest database of Latin inscriptions (Epigraphik-Datenbank Clauss/Slaby), the abbreviation *tem(plum)* is found only five times in four inscriptions, all from the eastern half of the Empire: *CIL* 3.3075 (Dalmatia); 3.3345 (Pannonia); 3.4800 (Noricum); and *AE* 1972, 657 (Galatia); cf. *EDCS* 387000175 (Hispania): *tem(pl)u(m)*.

[2] “Diva Plotina” is attested in dedications to priestesses of her cult (*sacerdos*: *CIL* 5.4485, 5.7617, *CIL* 11.407; *flaminica*: *CIL* 8.12454) and in the nomenclature of one of her freedmen (*AE* 1958, 184 [Ostia]). The empress is never identified as Plotina (alone) in inscriptions erected after her death.

[3] No spacing between words: fragments 1 AREARADICARIA; 3 SVMICH[ORAGI]; 31 AEDISIVNON, PORTICVSOCTAVIAEETFILIPPI, AEDISHERCVLISMVSARVM; 32 INTERDVOS. Line break between words: fragments 6 LVDVS / MAGN[VS]; 10 PORTICV[S] / LIVIAE; 39 THEATRVM / BALBI; etc. Line breaks within words: fragments 4 AQVE/DVCTI ; 22 MINER/BAE, 42 AN/TONINI.

[4] Note, e.g., fragment 25, where both words in the label HOR REA / LOL LIANA are divided in the middle in order to fit the text into the available spaces; or fragments 272 and 285, with vertical lettering.

[5] For the *templum* or *porticus Divorum*, see F. Coarelli, in *LTUR* II D-G, s.v. “Divorum”, 19-20. For the distinction *templum* / *aedes*, cf. also *CIL* 2.2395a (Aqua Flaviae, 3<sup>rd</sup> c.), a member of the senatorial order (*vir clarissimus*) dedicates a “shrine to the Divine Severi located in this precinct” (*Diis Seve[r]is in hoc templo lo[ca]t[i]s aedem*); *AE* 2014, 1152 (Numidia): “. . . a shrine and the district that lies at the edge of this precinct” (*aedem. . . item vicum qui subiacet huic templo*)

[6] The evidence for a supposed “Templum Matidiae” – a single 17<sup>th</sup> c. drawing by Alessandro Donato (1639) with the text improbably penned in minuscule script across the end of a section lead pipe (*CIL* 15.7248 = EDR180122 [[http://www.edr-edr.it/edr\\_programmi/view\\_img.php?id\\_nr=180122](http://www.edr-edr.it/edr_programmi/view_img.php?id_nr=180122)]) – is of dubious reliability, and other examples of temples to living figures are not to be found. Dedications to *Divae* of the Hadrianic and Antonine eras, on the other hand, are common: e.g., above, nt. 2 (*diva Plotina*); *AE* 1927, 31 (Volubilis), *AE* 1973, 515 (Alexandria Troas), *AE* 1988, 1038 (Perge) (*diva Matidia*); *CIL* 6.984, 6.40528, 8.17847 (Thamagudi) (*diva Sabina*). Priests and priestesses (*sacerdotes, flaminicae*) of the divine cult of all three are likewise attested.

*The first Contribution by Emanuele M. Ciampini: La regalità domiziana: una nota egittologica*

This *Contribution* belongs to the following *Chapter* :

**IV. Frieze B of the Cancelleria Reliefs (cf. here Fig. 2) and the Obeliscus Pamphilius/ Domitian's obelisk (cf. here Fig. 28).**

The following are quotes from Chapter *Introductory remarks and acknowledgments*:

“Also especially fruitful for this *Study* has been the fact that the organizers of the Iseum Campense Conference at Rome in May 2016, Miguel John Versluys, Kristine Bülow Clausen and Giuseppina Capriotti Vittozzi, invited me to attend ...

At the Iseum Campense Conference in May of 2016, I was also lucky enough to make the acquaintance of the Egyptologist Alessandro Roccati, whom I met again in Rome on 4th May 2018. On that occasion, Roccati presented me with the volume *L'Impero Ramesside* (1997). As I only realized much later, this volume turned out to be precisely what I needed for my research ...

Alessandro Roccati was also kind enough to introduce me to the Egyptologist Emanuele Marcello Ciampini, whom I first met in Rome on 11th May 2018 ... Ciampini has ... translated the hieroglyphic texts of all the obelisks in Rome into Italian (cf. *id.*, *Gli Obelischi iscritti di Roma*, 2004). With Alessandro Roccati and Ciampini I discussed the question, of whether or not Domitian had commissioned the Obeliscus Pamphilius/ Domitian's obelisk for the Iseum Campense, which is today mounted on top of Gianlorenzo Bernini's 'Fountain of the Four Rivers' in Piazza Navona at Rome (cf. here **Fig. 28**). Personally I am unable to read hieroglyphs, and Ciampini was kind enough to present me with his book.

I am glad to say that Ciampini has helped me find evidence in these hieroglyphic inscriptions which, in our opinion, proves that Domitian had indeed commissioned his obelisk for the Iseum Campense.

Cf. *supra*, at Chapter *What this Study is all about*; at Chapter *Preamble: Domitian's negative image*; at Sections *II.* and *III.*; at Chapters *IV.1.1.d*); *IV.1.1.f*) ...

The reason, why I had asked first Roccati and then Ciampini to help me studying the hieroglyphic texts of Domitian's obelisk in more detail, was the following. Whereas most earlier scholars took for granted that the Obeliscus Pamphilius had been commissioned by Domitian for the Iseum Campense, Jean-Claude Grenier (1996; *id.* 1999; *id.* 2009) and Filippo Coarelli (1996; *id.* 2009b; *id.* 2014) have attributed this obelisk to the *Templum Gentis Flaviae* instead, that Domitian built at the site of the *domus* of his father Vespasian on the Quirinal, where Domitian was born (Suet. *Dom.* 1; cf. *Dom.* 15) ...

On 7th March 2019, I met again with Emanuele Ciampini in Rome. I now informed him about my idea to compare in this *Study* the *political message*, visualized on Frieze B of the Cancelleria Reliefs (here **Fig. 2; Figs. 1 and 2 drawing**), with a section of the hieroglyphic inscriptions of Domitian's obelisk, in which, in my opinion, the same message is *expressis verbis* formulated: the *Autokrator* [emperor] *Caesar Domitianus Augustus* has received his reign from his father, *Divus Vespasianus*, and from his brother, *Divus Titus* - as I had just learned in his book (cf. E.M. CIAMPINI 2004, discussed in detail ... at Chapter *IV.1.*), and in Chapter *The major results of this book on Domitian*.

Ciampini was so kind as to tell me that this is a formula that defines the legitimation of the new king, which is known from several documents of the Ptolemaic period. I am especially grateful that he has taken the time to write on my request a short text, in which he summarizes his relevant observations, which he kindly explained to me on that occasion, and that he has generously allowed me to publish this note. His text shows that the meanings of those hieroglyphic texts are much more complex than I had been able to understand myself by reading his translation of them.

Cf. below, at *The first Contribution by Emanuele M. Ciampini...'*:

## *La regalità domiziana: una nota egittologica*

**Emanuele M. Ciampini**

Nello studio del complesso rapporto tra Roma e l'Egitto, il profilo di Domiziano offre numerosi spunti di riflessione: esponente dell'ultima 'dinastia' imperiale (intesa come sequenza di Imperatori legati tra loro da vincoli di parentela), favorì in modo significativo la diffusione di culti e di modelli egizi nell'Urbe. Di questo particolare rapporto ci possono dare testimonianza anche le fonti epigrafiche in lingua egizia, prodotte a Roma con l'intento di cementare questo rapporto esclusivo tra la famiglia imperiale e la cultura faraonica [n. 1]; la ragione di questo legame può trovarsi in un chiaro intento politico: legittimare la dinastia, e nel caso particolare Domiziano, attribuendogli una natura divina che gli deriva dall'essere discendente diretto degli dei.

La fonte più importante per questa celebrazione della divinità imperiale si ha nei testi dell'Obelisco Pamphyli, nei quali la cancelleria domiziana riesce a fondere aspetti ideologici e dogmatici della tradizione faraonica con quelli che meglio rispondono ai modelli imperiali. I temi che meglio possono esprimere questi concetti sono quelli riconducibili alla nascita divina e alla legittimazione della dinastia [n. 2]. Eretto nell'Iseo Campense [n. 3], il monumento venne rinvenuto in frammenti nella Villa di Massenzio sull'Appia Antica; nel 1648 venne ricomposto ed eretto, per volere di papa Innocenzo X, sulla sommità della Fontana dei Quattro Fiumi.

Tre passaggi nelle iscrizioni dell'obelisco sono di particolare interesse per la definizione 'faraonica' della legittimità dinastica e la natura divina del sovrano regnante / imperatore.

A – Lato nord (verso il Tevere) [n. 4]

«Egli ha innalzato questo obelisco in autentico granito per suo padre Ra-Harakhti perché l'umanità possa vedere il monumento che egli ha fatto, in modo che sia reso stabile il nome dei re dell'Alto e Basso Egitto che erano sul trono di Horo, e che sia sana la terra al tempo della dinastia il cui nome [n. 5] è Flavi».

B – Lato est (verso Corso Rinascimento) [n. 6]

«Egli riceve la regalità da suo padre Vespasiano il dio e dal fratello maggiore Tito il dio, mentre il suo (= di Tito) ba si muove verso la volta celeste [n. 7]».

C – Lato ovest (verso Santa Agnese in Agone) [n. 8]

«Le due Signore [n. 9] porgono il loro seno alla tua bocca, le due nutrici divine sono sulle sue fasce, mentre le Hathor suonano il tamburo intorno a lui: gli è stato concesso il grande ufficio (= regalità) che ha creato la Signora dei sudditi, mentre il suo ureo è sulla sua testa».

Diversi sono i temi presenti nei tre passaggi, tutti però accomunati da un fattore: la legittimazione del potere e la discendenza divina. Il primo passaggio (A) descrive la componente astratta del potere nella definizione più vicina all'ideologia imperiale: si tratta del «nome» della dinastia, identificato per mezzo di un vocabolo comune nella lingua egizia tarda (*k3*). Questo termine ha un peso notevole nell'ideologia faraonica, fiorendo, soprattutto durante il Nuovo Regno, nella dottrina del «ka vivente del re» (*k3-nsw 'nh*); in questa espressione, la critica ha voluto riconoscere il modo per identificare un aspetto astratto e divino della regalità, incarnato dal sovrano regnante: in

virtù di questa incarnazione, la sua persona acquisisce un'essenza divina, identificabile con la stessa regalità. Il tema ideologico viene reso iconograficamente per mezzo di una 'doppia figura' del re: la prima è la persona fisica, la seconda può essere interpretata come la rappresentazione del concetto astratto di re [n. 10]. Nel testo (A), questo nome dinastico viene applicato a ciò che la versione geroglifica definisce *ist*, lett.: «squadra», «equipaggio», ma il cui valore più calzante è qui «famiglia» [n. 11].

Una fraseologia simile a quella riscontrata nel testo (B) è ben conosciuta nelle titolature tolemaiche, come nel caso di Tolomeo III, che presenta una struttura coincidente con quella domiziana:

Tolomeo III [n. 12]	<i>ḥkn ntrw rmt hr.f</i>	<i>m</i>	<i>šsp.f nsyt m- ' it.f</i>
Tolomeo VIII [n. 13]			<i>šsp.n.f nsyt r' m- ' it.f</i>
Domiziano	<i>ḥkn ntrw rmt hr.f</i>	<i>m</i>	<i>šsp.f nsyt m- ' it.f</i>

La corrispondenza fraseologica è particolarmente stringente con Tolomeo III, in cui l'espressione: *šsp.f nsyt m- ' it.f* «egli riceve la regalità da suo padre», segue subito, con nesso di subordinazione *m*, il primo dei cinque nomi che costituiscono il protocollo ufficiale del re (il cd. Nome di Horo). La formulazione nel testo domiziano è però integrata da una puntuale precisazione 'storica': la presa di potere è infatti un processo di legittimazione che parte dal padre Vespasiano e dal fratello Tito, i cui nomi, integrati dall'epiteto *p(3) ntr*, «il dio», sono caratterizzati come quelli di antenati, origine del potere imperiale ed essi stessi fonte di legittimità [n. 14]. Il passaggio insiste quindi su una dinamica specifica della legittimità, definito dall'espressione *šsp nsyt*, traducibile con «ricevere il potere»; alla base di questa fraseologia è il contesto familiare, già ben chiaro nei precedenti tolemaici, e che nell'iscrizione domiziana diventa un punto cruciale della legittimità imperiale, intimamente legato al ruolo dei predecessori che conferiscono il potere in una ininterrotta linea dinastica.

L'ultimo passaggio (C) è il frutto più evidente della rilettura del modello faraonico nella prospettiva domiziana; qui troviamo una celebrazione della regalità secondo schemi antichi, in cui svolgono un ruolo centrale quelle dee che, a vario titolo, conferiscono la regalità per mezzo di segni concreti, come il latte; questo nutrimento divino, al centro di una riflessione dalle origini antiche, completa il processo di legittimazione, inserendo all'interno del meccanismo dinastico una componente che può essere definita mitologica, che dalla Nascita Divina del Nuovo Regno arriva ai mammisi di epoca greco-romana [n. 15]. Può qui essere interessante notare che le dee conferiscono a Domiziano, per mezzo del nutrimento, il potere nella forma di «grande ufficio» (*i3wt wrt*): questo concetto compare anche nel rituale di conferma del potere regale alla Festa del Nuovo Anno, durante il quale il re consuma una focaccia a forma di segno *i3wt* [n. 16]: segno concreto di una legittimazione che passa attraverso il consumo di elementi sacralizzanti e legittimanti.

Pur nella loro sintenticità, i tre passaggi qui analizzati permettono di riconoscere la ricezione attiva di elementi pertinenti all'ideologia faraonica da parte di Domiziano: si tratta di un processo che dà voce, in modo coerente e organico, al concetto di trasmissione dinastica del potere. Ciò che stupisce in queste iscrizioni, è il loro essere un prodotto 'egizio' che traduce, in una fraseologia di tradizione, quelli che sono gli elementi dell'ideologia domiziana. Dobbiamo ipotizzare pertanto la

Emanuele M. Ciampini: La regalità domiziana: una nota egittologica

presenza, a Roma, di un gruppo di specialisti di origine egiziana che hanno saputo interpretare e costruire quei modelli essenziali nell'ideologia del tempo; e questo aspetto è tanto più importante, se confrontiamo l'abilità dei compositori del testo nel realizzare una formulazione 'faraonicamente' ineccepibile, con l'ampio programma decorativo in santuari faraonici, promosso da Domiziano in Egitto; si può quindi postulare la particolare vivacità delle cerchie di specialisti della scrittura, che sanno produrre modelli efficaci, in grado di svilupparsi e affermarsi anche nei contesti egizi dell'Urbe.

*The second Contribution by Emanuele M. Ciampini, which refers to the Egyptian tale The Taking of Joppa*

This *Contribution* belongs to the following *Chapter* in volume 3-2 :

***Appendix I.d.1.a) The stratagem, told in The Taking of Joppa, a town, 'taken' by Djehuty, a general of Tuthmosis III (around 1450 BC), compared with the escape of some of the Flavians from the Capitol on 19th December AD 69. With some remarks on what The Taking of Joppa has to do with Thutmosis III's Lateran Obelisk (cf. here Fig. 101). With The second Contribution by Emanuele M. Ciampini.***

The following is a quote from *Appendix I.d.1.a)* in volume 3-2:

“*The Taking of Joppa* describes a similar stratagem as that applied by some of Flavius Sabinus's companions on 19th December AD 69. As we have seen above (cf. *supra*, at *Appendix I.d)*), Flavius Sabinus's companions were (among others) soldiers, who, ‘hidden between the baggage’, were smuggled out of the *Capitolium*/ the *area Capitolina* down in the city, that is to say, they were brought ‘outside a fortress’. In *The Taking of Joppa* are smuggled only soldiers, this time ‘hidden in baskets’, but not ‘out of a stronghold’, but instead ‘inside a stronghold’ (the city of Joppa). The text *The Taking of Joppa* is set in the time of Pharaoh Tuthmosis III (around 1450 BC) and was written 200 years later, at the time of Rameses II on the *verso* of Papyrus Harris 500’.

Ciampini's second *Contribution* belongs to the following Section of *Appendix I.d.1.a)*:

***David Peter Davies's (2003) translation and comments on The Taking of Joppa (Papyrus Harris 500).***

Since I did not understand either the abbreviation "l.p.h.", in Davies's (2003, 17-18) translation of the *Taking of Joppa*, which follows the name of the Pharaoh Tuthmosis III, or the term "*itwrr*", mentioned by Davies, which refers to one of the two different weapons, which the Egyptian soldiers pack in the remaining 300 baskets, I asked Emanuele Ciampini on 3rd June 2020 for advice. He answered me by E-mail on the same day and kindly allowed me to publish this here.

Emanuele M. Ciampini wrote me on 3rd June 2020:

Emanuele M. Ciampini

Cara Chrystina,

con ordine:

l.p.h. = "life, power, health" (abbreviazione per una formula augurale che segue spesso il nome del re).

*itwrr* = termine straniero, prob.[abilmente] di origine asiatica, trascritto in egiziano, e il cui significato può essere "bastone" (Knüppel).

A presto

Emanuele.

*The Contribution by Amanda Claridge: A note for Chrystina Häuber: Drawings of the interior order of the Aula Regia of the Palace of Domitian on the Palatine, once in the British School at Rome*

This *Contribution* belongs to the following *Chapter* :

**V.1.i.3.b) J. Pollini's discussion (2017b) of the allegedly 'lost' Nollekens Relief (cf. here Fig. 36), which he compares with the Cancelleria Reliefs (cf. here Figs. 1; 2) and Domitian's 'Domus Flavia'/ Domus Augustana. With The Contribution by Amanda Claridge.**

*A note for Chrystina Häuber: Drawings of the interior order of the Aula Regia of the Palace of Domitian on the Palatine, once in the British School at Rome*

In the British School in the early 1980s (during the directorship of David Whitehouse, so pre 1984) I remember noting a set of drawings in pencil, pen and black ink reconstructing in cross section the Aula Regia, Peristyle and Triclinium of the Flavian Palace on the Palatine. They were quite large (c. 50 x 70 cms?), mounted in narrow black frames, hung on the walls in the corridor and one of the bedrooms on the top floor of the east wing (that overlooking the tennis court). They were signed and dated by their author, Gordon Leith, 1913, an architect from South Africa (1885-1965) who had been a scholar of the British School. I also remember having another drawing from the same set on the wall to the left of the door in my office (ex-bedroom 26 of the same wing). It had the same black frame, and contained mainly survey drawings of individual architectural elements and mouldings, presumably those on which the reconstructions were based. At some stage in the 1980s or early 1990s some or all were donated to the archive of the Soprintendenza archeologica di Roma (Palatine). Four are reproduced in M. A. Tomei, *Scavi Francesi sul Palatino : le indagini di Pietro Rosa per Napoleone III (1861-1870)*, École française de Rome 1999, figs 225, 228, 229, and 230.

I think the drawing I had in my office in 1994 was still on the wall when I left the school in 1994, but the office has since been converted back into a bedroom and the drawing is no longer there. The Librarian, Valerie Scott kindly looked everywhere in the building in 2020 and could not find it; the archivist Alessandra Giovenco confirms she has no knowledge of it. Further research is needed, but it is very possible that my memory is at fault and it went with the others, now in the archives of the Parco Archeologico del Colosseo.

Amanda Claridge  
London 15 July 2021

Comment by the editor Chrystina Häuber:

For the drawings by Gordon Leith (1913), which have been published by Maria Antonietta Tomei (1999, Figs. 225; 228; 229; 230), as mentioned by Amanda Claridge in her *Contribution*; cf. here **Figs. 108-110**.

*The first Contribution by Angelo Geißen: Bemerkungen zur frühen Münzprägung Hadrians in Alexandria*

This *Contribution* belongs to the following *Chapter* in volume 3-2:

*Appendix IV.c.1.) Final remarks on Appendix IV.b) and Appendix IV.c): Hadrian's efforts to legitimize his reign at the beginning of his principate, as expressed in the Anaglypha Hadriani (Figs. 21; 22). Post Scriptum: Hadrian's situation in AD 117-118. With The first Contribution by Angelo Geißen: Bemerkungen zur frühen Münzprägung Hadrians in Alexandria.*

The following is a quote from *Appendix IV.c.1.)* in volume 3-2:

“**To conclude.** Since I could not myself judge the numismatic part of Marianne Bergmann's (1997) above-quoted arguments and results, I have now asked the numismatist Angelo Geißen for advice and to write me his comments. See *The first Contribution by Angelo Geißen* in this volume ...”:

## Bemerkungen zur frühen Münzprägung Hadrians in Alexandria

Angelo Geißen

Bedingt durch die bekannten Unklarheiten der Adoption Hadrians durch Trajan sowie beim Übergang der Macht an Hadrian herrscht zu Beginn der Münzprägung Hadrians (nicht nur) in Alexandria eine gewisse Unsicherheit in Bezug auf Porträt und Titulatur des neuen Herrschers. Zwar war er bereits am 11. August 117 (*dies imperii*) in Antiochia zum Kaiser erhoben worden, aber die Nachricht von seiner Thronbesteigung konnte Alexandria natürlich erst einige Tage später erreichen. Am 25. August 117, also nach 14 Tagen, war dann allerdings die Neuigkeit dem *Praefectus Aegypti* in Alexandria bekannt, wie wir aus dem bisher frühesten schriftlichen Zeugnis eines Papyrus aus Oxyrhynchos erfahren (*POxy 3781 Announcement of the Accession of Hadrian*). Die Titulatur des neuen Kaisers lautet hier (Z. 5-10): ΑΥΤΟΚΡΑΤΟΡΑ ΚΑΙΣΑΡΑ ΤΡΑΙΑΝΟΝ ΑΔΡΙΑΝΟΝ ΑΡΙΣΤ(ΟΝ) ΣΕΒΑΣΤΟΝ ΓΕΡΜΑΝΙΚΟΝ ΔΑΚΙΚΟΝ ΠΑΡΘΙΚΟΝ, kopiert also die letzte Titulatur Trajans mit dessen Ehren- und Siegernamen *Optimus Augustus Germanicus Dacicus Parthicus*, in die lediglich Hadrians Name eingefügt wird.

Münzen gibt es aus diesem 1. Jahre, das nur wenige Tage bis zum 28. August 117 dauerte, offenbar nicht. Die organisatorische bzw. technische Umstellung in der Münzstätte Alexandria erforderte mehr Zeit, zumal die Graveure neue Stempel mit Porträt und Titulatur Hadrians herstellen mußten. Lediglich der *Praefectus Aegypti* (bzw. auf seine Anweisung hin der Leiter der Münzstätte) kann dazu im Namen des neuen Herrschers den Auftrag erteilen. Dass sich unter Zeitdruck hier auch Fehler einschleichen können, kann kaum überraschen.

Ab dem 2. Jahr (LB = 117/118) ist dann eine Fülle an Tetradrachmen und Bronzemünzen erhalten. Wir betrachten hier lediglich die ersten Tetradrachmen des Jahres 117 ab dem 29. August, die sich wohl auf drei Prägephasen verteilen:

In der ersten Phase erscheinen zunächst als eine Art Not- oder Übergangsprägung sehr seltene Tetradrachmen mit einer Legende, die bereits der o.g. Papyrus *POxy 3781* überliefert und die noch am 11. September 117 in einem amtlichen Schreiben aus dem Archiv des Strategen Apollonios (*PAlexGiss 25*), der im Apollonopolites der Heptakomia amtierte, begegnet. Die Titulatur lautet: ΑΥΤ ΚΑΙ ΤΡΑΙ ΑΔΡΙΑΝΟC ΑΡΙ ΣΕΒ ΓΕΡ ΔΑΚ ΠΑΡ (**Abb. 1**). Der Name des neuen Kaisers ist bewußt ausgeschrieben, alle übrigen Bestandteile der Legende sind wegen des geringen Raumes auf den Stempeln abgekürzt wiedergeben.

Eine im zweiten Teil dieses Jahres darauf folgende, neue Legende korrigiert dies insofern, als Hadrian nun einfach ΑΥΤ ΚΑΙC ΤΡΑΙΑΝΟC ΑΔΡΙΑΝΟC genannt wird, allerdings jetzt merkwürdigerweise ohne den Titel ΣΕΒ anzuführen (**Abb. 2 und Abb. 3**). Hinzukommt als eine weitere Auffälligkeit die Schreibung des Adoptivnamens ΤΡΑΙΑΝΟC: neben dieser korrekten Form, wie sie auch in den Papyri verwendet wird, können als Varianten ΤΡΑΙΝΟC (**Abb. 4**) bzw. ΤΡΙΑΝΟC (keine Abb., vgl. 5002, 5007) (später auch ΤΡΑΝΟC) parallel erscheinen. Dies ist insofern erstaunlich, als die Stempelschneider in Alexandria während der 20jährigen Herrschaft Trajans keinerlei Schwierigkeiten hatten, dessen Namen korrekt zu schreiben. Der Fehler könnte mit Hast, Flüchtigkeit, Unkenntnis oder mangelnder Kontrolle zu diesem frühen Zeitpunkt innerhalb der Organisation der Münzstätte zusammenhängen. Tatsächlich erkennt man in **Abb. 3**,

dass hier die Legende korrigiert worden ist: TPAIANOC ist aus TPAINOC verbessert, indem das zweite A über das auf das Iota folgende N nachgeschnitten und dann die Schreibung des Namens korrekt beendet wurde. Eine umfassende Untersuchung der Vorderseitenstempel wäre hier geboten und könnte möglicherweise zu Hinweisen auf die innere Struktur dieser Emission und die Produktion in einzelnen Offizinen führen. Man kann fragen, ob man sich jetzt nicht dessen bewußt war oder den Verantwortlichen (noch) nicht mitgeteilt worden war, dass Hadrian den Namen Trajans als Adoptivnamen angenommen hatte. Es ist jedenfalls klar, dass diese Stücke ohne CEB ab dem 29. August im Verlauf der letzten Monate des Jahres 117 herausgegeben worden sind, und zwar im Anschluß an die seltenen Stücke der ersten Prägephase. Als Grund für das Fehlen des CEB kann man erwägen, ob nicht die Stempelschneider, die jetzt unter großem Druck arbeiteten, eine Direktive bekamen, die Partie der Ehren- und Siegertitel der letzten Legende Trajans zu tilgen, auf die Hadrian bekanntlich bald verzichtete. Es wären dann API CEB ΓΕΡ ΔΑΚ ΠΑΡ insgesamt weggelassen worden, wobei der eigentlich für den Kaiser unverzichtbare Bestandteil CEB irrtümlich ebenfalls mit erfaßt wurde.

Ob mit der schriftlich fixierten Nachricht von der Thronbesteigung Hadrians auch eine bildliche Darstellung (Imago/Plakette/Zeichnung) des neuen Herrschers an den *Praefectus Aegypti* resp. die jeweils verantwortlichen Beamten zeitgleich mitgeschickt worden ist, bleibt zunächst ungewiß.

Zu dem Porträt dieser Emission auf den Münzen ohne CEB kann ich kaum etwas beitragen, zumal auch hier kleinere Varianten zu bemerken sind. Der Locken-Kopf mit Lorbeerkranz nach rechts, drapiert links (Typ Δο nach P.L.Strack), ähnelt nicht immer Hadrian, auch scheint der Bart manchmal zu fehlen, was allerdings an der Erhaltung der jeweiligen Münze liegen könnte. Es erscheint mir aber verfehlt, etwa aus dem Fehlen des CEB in Kombination mit dem „jugendlichen“ Porträt auf eine Art Caesar-Bildnis schließen zu wollen. Hadrian selbst (oder seine Entourage) hätte dies allerdings bewußt als designierter, adoptierter Nachfolger Trajans anordnen müssen. Keinesfalls hätte dies etwa z.B. ein Mitarbeiter der Münzstätte ohne Auftrag ausführen können. So reizvoll die Vorstellung eines Caesarbildnisses Hadrians aus archäologischer Sicht zunächst erscheinen mag, so halte ich jedoch eine technisch/organisatorische Panne in der Münzstätte eher für plausibel, zumal der Fehler in der folgenden Prägephase behoben wird.

Im dritten Teil der Prägung - wohl gegen Ende 117/Anfang 118 - wird also die Legende mit dem unverzichtbaren CEB ergänzt, die Darstellungen der Vorderseiten werden nun variiert (Büste oder Kopf des Kaisers mit Lorbeerkranz), ein Stern kann hinzutreten. Der Stil der Porträts unterscheidet sich von den Stücken der vorigen Serie ohne CEB. Die Produktion der Münzstätte hat jetzt ihren Rhythmus gefunden. In der neuen Emission erscheinen dann u.a. die sehr seltenen Tetradrachmen mit den Porträts (Hadrians auf den Vorderseiten und) Trajans auf den Rückseiten : ΑΥΤ ΤΡΑΙΑΝ ΑΡΙ ΣΕ ΓΕΡΜ ΔΑΚΙΚ ΠΑ, L B. Kopf mit Lorbeerkranz nach rechts, Aegis, Stern (**Abb. 5**) = RPC III 5066) und Divus Traianus : ΘΕΟ(ς) ΤΡΑΙΑΝΟC CΕΒΑCΤΟC ΠΑΤ(ήρ) ΚΥ(ίου), L B. Kopf mit Lorbeerkranz nach rechts, Aegis, Stern (**Abb. 6** = RPC III 5067). Hier nun wird die Intention Hadrians deutlich greifbar, die enge Verbindung mit Trajan, der zum einen „mit unerhörter Kühnheit noch als Lebender vorgestellt wird“ (J. Vogt, p.96), und zum anderen seine Adoption durch den nunmehr als Divus Traianus Vorgestellten in der Öffentlichkeit zu betonen.

*The second Contribution by Angelo Geißen : Zum 'Hadrianeum' auf Münzen des Antoninus Pius*

This *Contribution* belongs to the following *Chapter* in volume 3-2:

***A Study on the consequences of Domitian's assassination : ...  
Introduction, at Section XIV.***

The motivation to ask Angelo Geißen to write this second *Contribution* has been explained *supra*, in *Chapter Introductory remarks and acknowledgements* :

**“On the 13th of May 2022, Franz Xaver Schütz and I had the chance to meet with Filippo Coarelli in Rome. We discussed my reconstruction of Hadrian's Temple complex in the *Campus Martius* (cf. here Fig. 66), and Coarelli was kind enough to offer me to read the manuscript, in which all this is discussed: the *Introduction* of my text *A Study on the consequences of Domitian's assassination*.”**

Coarelli, after having read this *Introduction*, told me in a telephone conversation of 9th June 2022 that, in his opinion, the temple represented on fragment 36b of the Severan Marble Plan cannot possibly have been dedicated to *Diva Sabina*, as I myself propose (cf. here Fig. 66). The reason being the suggestion by François Chausson ("Temples des Diui et Diuae de la dynastie antonine", 2001) that *Diva Sabina* may have been worshipped in the Temple of *Divus Hadrianus*, the *Hadrianeum* (here Fig. 66).

If true, this hypothesis would preclude my assumption of a separate Temple of *Diva Sabina* in the area of the *Campus Martius* under scrutiny here. When writing my earlier *Study* on the subject, published in 2017, I had managed to overlook this publication by Chausson (2001). I have, therefore, now added to this *Introduction* the below-quoted Section XIV., in which I discuss Chausson's hypothesis (2001), as well as all similar more recent hypotheses.

In addition to this, I have asked the numismatist Angelo Geißen for advice, who was kind enough to study for me some coins, issued by Antoninus Pius in 150-151 AD; those coins are believed by some of the just-mentioned scholars to show the *Hadrianeum*. And because some of those coins represent *two cult-statues* in the *cella* of the represented temple, this is taken by those scholars for the proof, that, in the *Hadrianeum*, *Diva Sabina* was worshipped together with *Divus Hadrianus*. But it is not as easy as that. See below, at Angelo Geißen's second *Contribution* to this book on Domitian : *Zum 'Hadrianeum' auf Münzen des Antoninus Pius*.

**As a result of all this, I maintain my earlier tentative hypothesis (of 2017; cf. here Fig. 66) that the temple, represented on fragment 36b of the Severan Marble Plan was dedicated to 'Diva Sabina'.**

For a discussion; cf. *infra*, in volume 3-2, at: *A Study on the consequences of Domitian's assassination : Nerva is forced to adopt Trajan and Trajan creates Domitian's negative image to consolidate his own reign. With Hadrian's adoption manquée in late October or at the beginning of November of AD 97, his 20-year long road to his accession and his thanksgivings for it, his Temple complex in the Campus Martius.*

*Or: The wider topographical context of the Arch of Hadrian alongside the Via Flaminia which led to the (later) Hadrianeum and to Hadrian's Temples of Diva Matidia (and of Diva Sabina?) ... With The fourth and the fifth Contribution by Peter Herz, with The first Contribution by Franz Xaver Schütz, with The Contribution by John Bodet, and with The second Contribution by Angelo Geißen;*

*Introduction; at Section XIV. Further new research: F. Chausson's (2001) idea that the Hadrianeum was possibly dedicated to Divus Hadrianus and to Diva Sabina, and recent discussions of this hypothesis. With The second Contribution by Angelo Geißen : Zum 'Hadrianeum' auf Münzen des Antoninus Pius”.*

## Zum „Hadrianeum“ auf Münzen des Antoninus Pius

Angelo Geißen

Im Rahmen der Prägungen der römischen Münzstätte für Antoninus Pius fallen u.a. [unter anderem] Sesterzen ins Auge, die auf den Rückseiten einen Tempel mit acht korinthischen Säulen in Frontalansicht abbilden und durch die Angabe seiner 14. Tribunicia Potestas (TR POT XIII COS III SC) in die Zeit vom 10.12.150 bis zum 9.12.151 datiert sind. Es sind folgende Varianten dieses Typs erhalten:

1. oktastyle Tempelfront, an den Seiten je eine Palme, **ohne Kultbild** (Abb. 1)  
 RIC III, Antoninus, p. 135, 870 (“Octastyle temple with or without statues of Divus Augustus and Livia”, mit Hinweis auf Cohen 954, 955); vgl. BMCRE IV, p. 309, n.<sup>++</sup> : “C. 954 (Paris). Variant of rev., without the two statues, C. 955”); Strack 1057 (ohne Abb.), p. 282/3, in Modena (Galeria Estense 1928); Lacourt p. 161, Ra1.3, Pl. 21,1).
2. wie Nr. 1, in der Mitte zwischen den Säulen **zwei Sitzstatuen** (Abb. 2)  
 (RIC III Antoninus, p. 135, 870 (“Octastyle temple with or without statues of Divus Augustus and Livia”, mit Hinweis auf Cohen 954, 955); vgl. BMCRE IV, p. 309, n.<sup>++</sup> : “C. 954. Variant of rev., without the two statues, C. 955”); Strack 1056, Taf. XIII (Paris); Lacourt p. 161, Ra1.2).
3. wie Nr. 1, in der Mitte zwischen den Säulen **zwei Sitzstatuen**; darunter **PIETAS** (Abb. 3)  
 (RIC III, Antoninus, p. 135, 873 (“Octastyle temple, in which are seated figures of Divus Augustus and Livia, etc.” mit Hinweis auf “C. 618 (COS III on rev., in error”; BMCRE IV, 1869, Pl. 45, 17 (Sir William Ingram Gift 1925. Same *obv.* and *rev.* die as No. 1870. Cp. C. 618 (*rev.* COS III : a slip); 1870 (Münzhandlung Basel, 1938. Same *obv.* and *rev.* die as No. 1869”); Strack 1061, Taf. XIII (Berlin, Paris,Wien); Lacourt p. 162, Ra5.1).

Diese Stücke gehören zu einer Emission mit weiteren Rückseiten-Darstellungen, die durch eine neue, gemeinsame Avers-Legende miteinander verbunden sind, die sich nur in diesem und dem folgenden Jahre findet. Statt der seit 139 üblichen ANTONINVS AVG PIVS P P TR P XIII (COS III SC auf Rs.) lautet sie jetzt IMP CAES T AEL HADR ANTONINVS PIVS PP (vgl. Börner, 121 f.), ein bewusster Rückgriff auf die frühesten Emissionen nach dem 10. Juli 138 mit dem Bezug auf Hadrian. Die Münzstätte rückt also jetzt offenbar ein besonderes innenpolitisches Programm des Kaisers verstärkt ins Blickfeld der öffentlichen Aufmerksamkeit. Es fällt auf, dass in diesem Jahr 151 keine Prägungen für Marcus Caesar in Umlauf gebracht werden (Börner 126f.).

Wie bereits im 19. Jahrhundert von Eckhel vorgeschlagen (p. 22: *Templum octo columnarum, in quo duae figurae sedentes cum hastis...Verisimile, binis his signis exhiberi parentes Hadrianum, et Sabinam, templumque eorum honori impulsu Pietatis erectum. Et refert Capitolinus inter opera ejus publica templum quoque Hadriani honori patris dicatum*), wird auch noch in der jüngeren Forschung vermutet, dass es sich bei dem hier besprochenen Münztyp um das in der HA Pius 8,2 erwähnte Hadrianeum handeln könnte, dessen Bau sicher erst nach der Konsekration Hadrians begonnen wurde. Es sei daran erinnert, dass Abbildungen von Bauten auf Münzen zunächst als Chiffre dienen, die in wenigen Varianten differenziert werden kann, ohne allerdings jeweils ein

Angelo Geißen, Zum „Hadrianeum“ auf Münzen des Antoninus Pius

„photographisches“ Abbild *en detail* wiederzugeben (vgl. Ritter 2017). Die Darstellungen des Tempels der Diva Faustina maior, die eine hexastyle Front in verschiedenen Typ-Varianten zeigen, seien hier *exempli gratia* vorgestellt (Abb. 4 = Michels 395, Bildtafeln Abb 44).

Man kann vielleicht überlegen, ob die Stempel der drei Varianten des Typs „oktastylter Tempel“ unter Zeitdruck entworfen worden sind (und/oder auf mehrere Offizinen der Münzstätte zu verteilen). Gewisse Abweichungen im Detail wären die Folge gewesen. Nachdem Antoninus Pius beschlossen hatte, einen monumentalen Tempel zu Ehren des Divus Hadrianus errichten zu lassen und dies auch der Öffentlichkeit mitzuteilen, könnten der/die Stempelschneider zunächst einen „Entwurf“ ohne Spezifikation erstellt haben (Variante Nr. 1, Typ „Tempel“ (ohne Kultbild(er)), in einem zweiten Schritt erfolgte die Ergänzung durch „Kultbild(er)“, um drittens mit PIETAS präzise auf den Anlass der Errichtung des Tempels zu verweisen, wobei eine deutliche Benennung z.B. als *TEMPLVM DIVI HADR* jedoch fehlt. Dieser Münztyp hätte dann als mögliches Vorbild für den im Jahre 159 geprägten, identischen Typ „Tempel“ für Divus Augustus dienen können, der dann allerdings mit der nun verwendeten Legende *TEMPLVM DIVI AVG REST* zweifelsfrei spezifiziert wurde. Aber dies bleibt Spekulation.

Von den beiden Münzen mit den in der Mitte des Tempels zwischen den Säulen befindlichen Sitzstatuen wird von einigen Forschern jedoch lediglich das Exemplar mit der Beischrift PIETAS ausführlicher diskutiert. Zunächst hatte Strack die ältere Identifizierung des dargestellten Tempels wegen der Ähnlichkeit mit dem des Divus Augustus auch aus chronologischen Gründen abgelehnt, denn dieses Bauwerk erscheint erst acht Jahre später mit entsprechender Legende *TEMPLVM DIV(I) AVG REST* (vgl. Blake 69; Küthmann/Overbeck 23 Nr. 34; Michels Abb. 45; Lacourt Pl. 19, 10-14 (zwei Varianten: Abb. 5)). Strack schlug stattdessen vor, hier ein *templum Divi Hadriani et Divae Sabinae* zu sehen (p. 144, Anm. 437 mit der älteren Literatur). Dieser Interpretation sind dann auch Mattingly (BMCRE IV, p. lxxxix : „must be the temple of Divus Hadrianus and Diva Sabina“) und spätere Autoren gefolgt. Offenbar dienten die beiden Sitzstatuen/Kultbilder hier stillschweigend auf den ersten Blick als plausibler Beleg für den Kult des Divus Hadrianus **und** der Diva Sabina in eben diesem Tempel, zumal in Verbindung mit dem PIETAS-Thema. Dieses ist im Rahmen der Sonderemission mit der auf Hadrian bezogenen Avers-Legende als deutlich sichtbares, herausragendes Beispiel für die *pietas* des Kaisers in einem breit gefächerten politischen Programm im Jahre 151 gerade in jüngerer Zeit behandelt worden (Strack 25, 145; Börner 121f., 125-127; Michels 49 mit Anm. 281, 54; bereits seit Augustus findet man PIETAS besonders auf Prägungen für die konsekrierten Mitglieder des kaiserlichen Hauses, dann oft mit dem Zusatz *AVG/AVGVST* (vgl. Schulten)).

Es gibt allerdings – trotz der beiden Sitzstatuen auf den Münzen - keine zusätzlichen eindeutigen Belege dafür, dass neben dem divinisierten Hadrian auch die konsekrierte Sabina in diesem monumentalen Gebäude mitverehrt worden wäre. Dies bleibt daher eine noch offene Frage.

Zum Datum der Inauguration des Tempels finden sich keine Angaben in der Vita des Antoninus Pius (HA Pius 8,2). Auch das bisher in der Diskussion angeführte Zeugnis der Vita des Lucius Verus (HA Ver. 3,1ff., Annahme der *toga virilis*) für das Jahr 145 entfällt, da sprachliche und historische Probleme dem entgegenstehen. Die jüngere Forschung ist an diesem Punkt zurückhaltender. So schreibt Michels z.B. „dass Annahme der *toga virilis* und Einweihung des Tempels zwei voneinander getrennte Ereignisse waren, die hier als Ergebnis einer unachtsamen

Verkürzung zusammengefügt wurden. Diese berechtigten Einwände haben sich überraschenderweise in der Forschung nicht durchgesetzt“. Mit Strack sei anzunehmen, dass die Münze mit PIETAS aus dem Jahre 151 „der Fertigstellung des vielleicht Hadrian und Sabina geweihten Tempels gedachte“. Es „wäre das Hadrianeum in aller Stille und vermutlich nach langer Bauzeit eingeweiht worden, nachdem sich die Wut auf Hadrian gelegt hätte“ (Michels 57f.; vgl. Börner 127f.; zum Streit um Hadrians Divinisierung: Michels 48-54)).

Einen stichhaltigen Beweis dafür, dass es sich bei dem auf den Sesterzen abgebildeten Tempel mit oktastyler Front um das in der HA Pius 8,2 genannte Hadrianeum handelt, gibt es jedoch trotz aller feinsinnigen Überlegungen nicht: es fehlt in der Legende der Rückseite eine entsprechende Formulierung wie z.B. *TEMPLVM DIVI HADR AVG*.

*The first Contribution by Laura Gigli concerning Pietro Canonica's statue of the mule Scudela*

This *Contribution* belongs to the following *Chapter* in volume 3-2 :

*Appendix I.d.1.) Statue of the mule Scudela, Pietro Canonica's 'Monumento all'Umile Eroe' (1937), (monument of a modest hero'; cf. here Fig. 41), on display in front of the 'Museo Pietro Canonica a Villa Borghese' in Rome. With The first Contribution by Laura Gigli.*

The following is a quote from *Appendix I.d.1.)* in volume 3-2 :

''Bianca Maria Santese (2017b, 48) writes [about Pietro Canonica's statue of the mule Scudela]:

"All'esterno dell'edificio [*i.e.*, the Museo Pietro Canonica; cf. here **Fig. 41**] infine, è il monumento agli Alpini, composto di due sculture che Canonica volle donare al Comune di Roma: il mulo Scudela, l'*Umile Eroe*, collocato al centro del piazzale nel 1940, cui fu affiancato nel 1957 l'Alpino, sul cui basamento è stata inciso il motto in dialetto valdostano *CUSTA LON CA CUSTA, VIVA L'AUSTA* (Fig. 14 [= here **Fig. 42**])"

Cf. here **Fig. 42**: the inscription on the base of the "Alpino" adds to this motto: "1915-1918"...

The dedicatory inscription, on the base of the mule Scudela, reads: "P. CANONICA / OMAGGIO / AGLI / ALPINI / 1937". It was written by Canonica on this base, when the original plaster, after which this bronze was cast, was still soft (cf. here **Fig. 41**) ...

Laura Gigli, whom I had asked to help us with the inscription of the "Monumento agli Alpini", which repeats their motto in "dialetto valdostano": "*CUSTA LON CA CUSTA, VIVA L'AUSTA*", responded me by E-mail on 4th September 2019, and has kindly allowed me to publish this here'':

Laura Gigli

"Cara Chrystina,

ti allego una piccola ricerca da internet. Comunque Scudela è il nome del mulo degli alpini e l'espressione è il motto della brigata Aosta e vuole dire vada come vada, evviva l'Aosta ...

Un saluto a te e a Franz,

Laura".

Note by the editor Chrystina Häuber:

The following is another quote from *Appendix I.d.1.*) in volume 3-2:

“Laura Gigli's documentation of her research in the Internet, to which she refers in her E-mail, but that I do not publish here, shows that Pietro Canonica's ‘Monumento agli Alpini’ refers to the unit called “brigata Aosta”, in which the mule Scudela, who is historical, had served in World War I. He had been decorated for his bravery, which is why Pietro Canonica, who ‘portrayed’ Scudela, could call him a ‘hero’. It was impossible to find out, whether the mule's name ‘Scudela’ has any specific meaning ...

When I first saw Scudela, I had the impression Pietro Canonica wanted to express that this mule is not only tired, but also very sad, but I had no idea why.

After Laura Gigli had sent us the documentation of the life of the real mule Scudela, I understood, how sensitively the artist had responded to his commissions, to create ‘Monumenti ai Caduti’ of World War I, into some of which he incorporated his ‘portrait’ of Scudela. What I thus realized was that Canonica has deliberately portrayed the historical mule Scudela in so far as he shows him in the version of his sculpture here **Fig. 41** *without* his Alpino, to whom he had belonged. Only the *berretto* of his master, decorated with a feather and an *Edelweiß* flower (in Italian: *Stella alpina*), hanging at Scudela's saddle on his left side, reminds the beholder that, on the represented day, his Alpino had been killed in battle and that the real Scudela had returned on his own to his unit without his Alpino.

Precisely the latter remark I had found highly improbable, when I first read Laura Gigli's documentation about the real Scudela, which is why I did not really understand Canonica's conception of his first ‘Monumento ai Caduti’, for which he had portrayed the historical Scudela. Considering now, what I have later learned about mules from Filippo Coarelli, who has himself observed these animals in totally different contexts, as he told us on 26th September 2019 [in Rome], this information is certainly trustworthy. When Coarelli directed his excavations at *Falacrinae* (Cittareale, Rieti), the place where the Emperor Vespasian was born, he had regularly seen a group of twenty mules, who, without being accompanied by any human being, went every morning in the mountains, walking like geese one after the other in a long row. In the evenings they used to come back, marching in the same fashion, and again without a human guide, but all of them carrying now wood on their backs. On 27th November 2019, when Franz Xaver Schütz and I met again with Coarelli in Rome, he kindly allowed me to mention this here. For the location of *Falacrinae*; cf. Filippo Coarelli (*et al.* 2011; *id.* 2012).

Cf. Dietmar Kienast, Werner Eck and Matthäus Heil (2017, 101): “Vespasian ([reigned] 1. Juli 69-23. Juni 79) Geb.[oren] 17. Nov.[ember] 9 in *Falacrinae* bei Reate in Sabinum (FPhiloc. Suet., Vesp. 2,1). Sohn des Flavius Sabinus (PIR<sup>2</sup> F 351 und der Vespasia Polla (PIR<sup>2</sup> V 438).

*Name:* T. FLAVIUS VESPASIANUS”’.

*The second Contribution by Laura Gigli: Il potere dell'immagine*

This *Contribution* belongs to the following *Chapter* :

*The visualization of the results of this book on Domitian on our maps*

After I had sent Laura Gigli a link to this Chapter of my book on Domitian, published on our Webserver, she wrote me on 27th December 2022 the following E-Mail that I may publish here with her kind consent:

Cara Chrystina,

La prima riflessione che mi si affaccia alla mente è quanta strada si debba fare per interpretare un monumento (in questo caso il Fregio B della Cancelleria). Il che significa anche dire che la forza dell'immagine è superiore a quella della parola, perché l'immagine fissa un concetto con rigore inoppugnabile di dettaglio, mentre la parola (anche quella scritta) è soggetta a interpretazione.

In fondo in fondo quando si passa nell'analisi di un manufatto dall'iconografia all'iconologia, inclusiva della *reductio ad unum* di un gran numero di discipline, si spalanca il mondo dell'idea sottesa alla forma che si è voluto rappresentare e che si dipana anche attraverso la lettura degli avvenimenti coevi, che portano a individuarne il significato, spesso con non piccola difficoltà.

È una novità, per chi come me ha ben poca dimestichezza con la cronaca sottesa alla storia di questo periodo, apprendere che la formalizzazione dei grandiosi programmi politici e culturali dell'impero passa "anche" attraverso la sublimazione di vicende assai meno eroiche ad esempio, dei grandi scontri in battaglia contro nemici agguerriti, come può essere un'imboscata, la necessità di un travestimento, uno sterminio familiare, una fuga di soppiatto. È la cronaca della dimensione tutta terrena, che sta dietro ai grandi eventi che sembrano avere come protagonisti dei super eroi, e ci accorgiamo che sono sempre e solo uomini, certo grandi, intelligenti, dotati di grosso acume: i vincitori in sostanza che lasciano nell'oblio tutto il costo necessario per il raggiungimento del loro traguardo e si affidano alla forza irresistibile dell'immagine in grado di "solennizzare" ovvero "celebrare" il loro messaggio politico che è al tempo stesso un auspicio: in questo caso la "legittimazione" (per usare l'espressione di Giandomenico Spinola, fatta propria da Chrystina Häuber) ovvero l'investitura da parte di Vespasiano del figlio Domiziano ...

Ho sempre inteso l'etimo della parola immagine come derivato dal verbo *mactare*, col significato di imprimere di fissare nella materia, quale che sia, l'idea che si vuole rappresentare. e proprio stamane, prima di inviarti questa notarella sono andata a spigolare sul mio manuale delle giovani (o quasi) marmotte, che controllo sempre, il Forcellini, il significato del verbo; poi ho anche trovato un riferimento di cui ti dò gli estremi (tu ne conoscerai di sicuro altri e più importanti), che traduce la parola in maniera fantastica per la bisogna:

<https://mondodomani.org> > articoli > claudio-tugnoli-27, <https://mondodomani.org> > articoli > claudio-tugnoli-27...

Il *Lexicon totius latinitatis* propone un quadro più analitico della semantica di *mactare*, distinguendo tra senso proprio e derivato sia in *re profana* che in *re sacra*. *Mactare* proverrebbe da un inusitato *mag*, *magere*, derivato da un etimo *mag* che ritroviamo anche in *magis* e *magnus*. In *re profana*, *mactare* significa in senso proprio *augere*, in senso derivato è usato ironicamente per indicare un evento tragico da cui si ricava un danno, come quando si dice in italiano che qualcuno è stato «visitato da una disgrazia». In *re sacra*, in senso proprio *mactare* ha come significato principale «*deos vel deorum felicitatem augere, atque adeo deos honorare, honorem diis adhibere*»; in secondo luogo significa *solennizzare, celebrare*....

Il potere dell'immagine ...

Un caro saluto

Laura

Notes by the editor Chrystina Häuber:

In her second *Contribution*, Laura Gigli quotes:

Egidio Forcellini, *Totius latinitatis Lexicon consilio et cura Jacobi Facciolati* I-IV (Patavii: Typis Seminarii, 1771).

In the following, I repeat a passage written for the Chapter *Introductory remarks and acknowledgements*:

“In the autumn of 2022, I have realized that I would be unable to publish my entire book on Domitian on our Webserver by the end of this year. I have, therefore, prepared two more Previews for this book on Domitian for our Webserver, published there in December of 2022. Namely the Chapters "What this *Study* is all about", and the closely related Chapter "The visualization of the results of this book on Domitian on our maps".

In order to explain the delay of the publication of this book, I have written E-mails to those scholars, who had been so generous as to write *Contributions* for this book and to other colleagues and friends, providing them with links to those two texts.

In her reply to my E-mail Laura Gigli has discussed a remark in my text "The visualization of the results of this book on Domitian on our maps", in which I follow a hypothesis of Giandomenico Spinola, which he had kindly told me on 24th September 2018, and which is quoted ... in Chapter III., and published *infra*, in *The Contribution by Giandomenico Spinola ...* Like myself, Spinola (*op.cit.*) is convinced that Frieze B of the Cancellaria Reliefs showed from the beginning the Emperor Vespasian and his younger son Domitian (*i.e.*, the togate youth standing in front of Vespasian; cf. here **Figs. 1 and 2 drawing, figures: 14** [Vespasian] and **12** [Domitian]). Spinola suggests that Vespasian's gesture to lay his lifted right hand on Domitian's left shoulder means the "legittimazione" of Domitian's (future) reign as emperor (in reality, Vespasian's hand does not touch Domitian's shoulder, but from a distance it looks like this). For a detailed discussion; cf. *supra*, at Chapter *The major results of this book on Domitian*.

Laura wrote me her comments on this hypothesis in an E-mail of 27th December 2022; and because I find her comments very interesting, she has kindly allowed me to publish her note here as:

***The second Contribution by Laura Gigli to this book, which she has given the title: "Il potere dell'immagine"***.

*The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great).*

This *Contribution* belongs to the following *Chapter* :

*A Study on the colossal portrait of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori at Rome (cf. here Fig. 11). With The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great).*

The following is a quote from *A Study on the colossal portrait of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori at Rome (cf. here Fig. 11)* :

“Assuming that already the artists, who created the portrait of Constantine (cf. here **Fig. 11**), could have cut away the neck of the original portrait in the way as it is preserved (because they had observed that, by cutting away the neck, this could provide them with further possibilities to rework the facial traits of the head), I developed the following scenario, which I sent on 5th May 2020 as my second E-mail to Hans Rupprecht Goette ...

Hans Rupprecht Goette answered me by E-mail on 5th May 2020, expressing his agreement with Cécile Evers (1991) and with my own ideas that the head of Constantine the Great (cf. here **Fig. 11**) was originally a portrait of Hadrian, adding some of his own observations which support this idea. On 6th May he has summarized this on my request in the following E-mail, that he has kindly allowed me to publish here”:

Hans Rupprecht Goette: on the reworking of the portrait of Hadrian (now Constantine the Great; cf. here Fig. 11)

Liebe Chrystina,

... Durch die Existenz des Bartes beim Hadrian-Bildnis hatte man bei der Wiederverwendung im Bereich der Wangen und auch vor den Ohren eine Schicht Material zur Verfügung, die bei vorsichtiger Abarbeitung zum bartlosen Gesicht Konstantins 'normale' Proportionen erlaubte. Zusätzlich ergab sich in Relation zur sekundären Gesichtsoberfläche der positive Effekt von ausreichend Marmor im Nasenbereich, wodurch die sekundäre Nase also relativ weit vorspringt. Außerdem ermöglichte es der Bart des Primärportraits, daß das Gesicht nicht so tief abgearbeitet werden mußte, so daß die vordere Gesichtshälfte bis zu den Ohren nicht zu flach wurde - wie es sonst bei umgearbeiteten Portraits oft der Fall ist ...

Viele Grüße,

Hans.

*The first Contribution by Peter Herz on the inscription (CIL VI 2059.11), which reports on a meeting of the Arvel brethren on 7th December 80 at the Temple of Ops in Capitolio, among them Titus and Domitian: Titus vows to restore and dedicate what would become Domitian's (fourth) Temple of Iuppiter Optimus Maximus Capitolinus*

This *Contribution* belongs to the following *Chapter* in volume 3-2 :

*Appendix I.g.4.) Domitian's sacellum of Iuppiter Conservator, his Temple of Iuppiter Custos, and his (fourth) Temple of Iuppiter Optimus Maximus Capitolinus (cf. here Fig. 83). With The first Contribution by Peter Herz.*

The following is a quote from *Appendix I.g.4.)* in volume 3-2 :

``Jaako Aronen (1996, 363), in his discussion of `Ops Consiva, Aedes', the Temple of Ops *in Capitolio*, mentions an inscription, which documents for 7th December AD 80 a ceremony that took place there: Titus's vows to restore and dedicate what would become Domitian's fourth Temple of Iuppiter Optimus Maximus ...

My thanks are due to Peter Herz, for discussing this inscription with me in a telephone conversation on 18th July 2019, and for writing me his comments in an E-mail on 23rd July 2019, which he has kindly allowed me to publish here``:

Peter Herz, on the incscription (CIL VI 2059.11)

Liebe Frau Häuber,

ich habe den Text zunächst an der Edition von John Scheid überprüft (CFA 48 Zeile 11-13). Der Text ist korrekt, auffällig ist allerdings das Datum (7. Dezember [80]), da dies ein nicht besonders wichtiger Tag ist. Zumindest ist es kein mir bekannter Feiertag, d. h. [das heißt] man kam *extra ordinem* zusammen. Um Gelübde abzulegen für die Wiederherstellung und Weihung des Capitols durch den Imperator Titus Caesar Vespasianus Augustus (*ad vota nuncupanda ad restitutionem et dedicationem Capitoli ab imp. T. Caesare Vespasiano Aug(usto)*), Da die vota noch nicht eingelöst wurden, war die Weihe noch nicht vollzogen worden, stand aber offensichtlich kurz bevor. Möglicherweise (das ist eine etwas verrückte Idee) wollte Titus seinen Geburtstag dafür nehmen (30. Dezember) ...

Das wären die Dinge, die mir von Bad Ems aus dazu einfallen.

Mit freundlichen Grüßen

Peter Herz.

Note by the editor Chrystina Häuber:

with "CFA", Peter Herz refers to:

John Scheid, avec la collaboration de Paolo Tassini 1998, *Recherches archéologiques à la Magliana Commentarii Fratrum Arvalium qui supersunt Les copies épigraphiques des Protocoles annuels de la confrérie arvale (21 Av-304 Ap J.-C.)* (École Française de Rome Soprintendenza Archeologica di Roma; Roma Antica 4), Paris: de Boccard 1998.

*The second Contribution by Peter Herz : Anmerkungen zu Staius Marrax*

This *Contribution* belongs to the following *Chapter* in volume 3-2 :

**Appendix IV.d.2.e) Did Domitian intentionally represent the Piroustaie in his Forum/ Forum Nervae/ Forum Transitorium? With The second Contribution by Peter Herz.**

The following is a quote from *Appendix I.d.2.e.)* in volume 3-2 :

“After this Chapter was written up to this point, I had between 7th and 19th October 2020 the chance to discuss with Peter Herz on the telephone and in E-mail conversations the controversy concerning the dating of the *primus pilus* of *Legio XIII Gemina*, T. Staius P. F. Serg. Marrax, who is known from an inscription at Aquileia. As we have seen above, according to Carl Patsch (1899), Staius Marrax had been decorated by Domitian for his services in the emperor's Dacian War(s). More recent scholars have either not dated this inscription at all, or have rather suggested that Staius Marrax served in the Augustan period.

Rose Mary Sheldon, with whom I discussed the matter before, had alerted me to a review by Hans Krummrey of Marco Buonocore (2002), in which the author mentions the inscription of a "*primus pilus* T. Staius P. f. Serg(ia) Marrax (*ILS* 2638) aus augusteischer Zeit"; cf. Krummrey (2003, 103), without providing a reference for this date. - By checking "*ILS* 2638 [= Dessau 2638]", I found that Dessau himself had not dated this inscription. As we shall see in *The second Contribution by Peter Herz* in this volume, the Augustan dating for this man has been suggested by Brian Dobson (*Die Primipilares*, 1978).

Krummrey (2003) states that Buonocore (2002) unfortunately does not decide, whether the "Ädil T. Staius P. f. Marr(---) aus der Inschrift *CIL* I<sup>2</sup> 1797 aus Secinaro [in Italy] etwa mit dem *primus pilus* T. Staius P. f. Serg(ia) Marrax (*ILS* 2638) aus augusteischer Zeit zu identifizieren ist".

Cf. Hans Krummrey (2003, 103): "Mißlich für die Beurteilung ist dabei, daß er [Buonocore] nur wenige Belege für solche *aediles* nennen kann und daß er sich in dem Nachtrag (45) nicht sicher ist, ob der Ädil T. Staius P. f. Marr(---) aus der Inschrift *CIL* I<sup>2</sup> 1797 aus Secinaro etwa mit dem *primus pilus* T. Staius P. f. Serg(ia) Marrax (*ILS* 2638) aus augusteischer Zeit zu identifizieren ist. B.[uonocore] datiert *CIL* I<sup>2</sup> 1797 offenbar in dieselbe Zeit wie den Beleg für *mag(istri) pag(i)* aus Secinaro (*CIL* I<sup>2</sup> 3255). Man sollte dabei wohl nicht übersehen, daß die drei *mag(istri) pag(i)* dieser Inschrift im Gegensatz zu den drei *aed(iles)* der Inschrift *CIL* I<sup>2</sup> 1797 keine Cognomina tragen. Dies könnte darauf hin deuten, daß die Inschrift der *aed(iles)* jünger ist als die Inschrift der *mag(istri) pag(i)*, was gut zu der Gleichsetzung des Ädilen T. Staius mit dem *primus pilus* T. Staius passen würde".

Since, contrary to Hans Krummrey (2003, 103), Carl Patsch (1899, 269) had dated the Staius Marrax, discussed here, in the Domitianic period, I asked Peter Herz vor advice.

On 19th October 2020, Herz was kind enough to send me his second *Contribution* to this volume ("Anmerkungen zu Staius Marrax"), which I publish here with his kind consent: Herz suggests that more arguments speak for the later date.

Therefore, Staius Marrax may actually have served in the *Legio XIII Gemina* at the end of the 1st century AD, that is to say: under Domitian, as suggested by Patsch (1899)“.

On 19th October 2020, Peter Herz sent me by E-mail the following text:

## Anmerkungen zu Staius Marrax

Peter Herz

Liebe Frau Häuber,

jetzt einmal in schriftlicher Form, was wir heute morgen am Telephon besprochen haben. Die Inschrift aus Aquileia (*ILS* 2638) sagt leider nichts, warum er dort diese Inschrift errichtet hat. Wir wissen noch nicht einmal, um welchen Typ an Inschrift es sich gehandelt haben könnte. Da aber Aquileia ein Nachschubhafen für die Legionen an der mittleren Donau war, kann man vermuten, dass Marrax als *primus pilus* der *legio XIII Gemina* irgendwelche dienstlichen Beziehungen zu Aquileia hatte. Die *XIII Gemina* war zunächst auf dem Balkan und kam dann nach der Niederlage des Varus als Ersatz nach Obergermanien, von wo aus sie 45/46 nach Poetovio (heute Ptuj in Slowenien) verlegt wurde, um dann ab etwa 90 zur Stammlegion von Vindobona zu werden. Die Nomenklatur T. Staius Marrax ist bis auf das cognomen Marrax völlig unauffällig. Staius ist ein Allerweltsname, der sich an vielen Orten nachweisen lässt. Dies bedeutet, dass die Möglichkeit, dass unser Marrax in irgendeiner Verbindung mit den Statii von Salona stand, durchaus möglich ist. Immerhin stellten die Statii dort einen *II-vir*, der wegen der Priesterschaft für den *divus Vespasianus* ab 80 n. Chr. datiert werden kann. Ein *primus pilus* mit einer Sold, der ihm ohne weiteres den *census* eines *eques Romanus* verschaffen konnte, würde gut zu den anderen Belegen aus Salona passen. Die beiden Cluster von Statii in Risinium und Butua sprechen nicht dagegen. 1. wir haben keine Kenntnis, wie weit sich das Territorium von Salona ausgedehnt hat, also ob diese Orte von Salona abhängig waren (möglicherweise adtribuiert). 2. Man müsste erst einmal die einzelnen Inschriften aus diesen Orten genau prüfen, was sie im Detail hergeben können. Je nach Ausdehnung des Territoriums von Salona ist durchaus denkbar, dass die Statii aus den beiden kleineren Orten diese als ihre Heimatorte betrachteten, obwohl sie rechtlich gesehen zur Bürgerschaft von Salona gehörten und daher dort auch Ämter übernehmen konnten. Dobson, *Primipilares* [1978] 17 mit Anm. 53 datiert ihn ohne Angabe von Gründen in die Zeit von Augustus bis Caligula und gibt ihm als seine *origo* Superaequum in Italien. Begründung: selbe *tribus*, also Sergia, und eine Inschrift aus diesem Ort *ILS* 5773 = *CIL* IX 3312, wo einer von drei lokalen *aediles*, die für den Bau einer Wasserleitung verantwortlich waren, den Namen T. Staius P. f. Marr(?) trägt. Für die Datierung dieser 2. Inschrift gibt es keinerlei Ansatz. Wenn man also alle Argumente berücksichtigt, dann sprechen m. E. mehr Argumente für eine spätere Datierung der Inschrift aus Aquileia, also vielleicht ans Ende des 1. Jh.

Das wäre meine Meinung, zumindest was ich ohne Prüfung der Inschriften aus den kleinen Orten sagen kann (habe *CIL* III leider nicht im Regel stehen).

Mit den besten Grüßen aus Bad Ems

Peter Herz

Comment by the editor Chrystina Häuber:

For the locations of the cities Aquileia, Salona and Risinium, mentioned in connection with Staius Marrax by Peter Herz and by Carl Patsch (1899); cf. below, at *The first Contribution by Franz Xaver Schütz : Zur kartographischen Visualisierung historischer Landschaftselemente zwischen Rhein und Schwarzem Meer von Augustus bis Hadrian* (cf. here **Fig. 77**).

*The third Contribution by Peter Herz: Der Übergang von Trajan auf Hadrian und das erste Regierungsjahr Hadrians*

This *Contribution* belongs to the following *Chapter* in volume 3-2 :

*Appendix IV.b) Similarly as some of the hypotheses, already published by M. Hammond (1953), M. Fuchs (2019) suggests that the therefore here-so-called Anaglypha Hadriani (cf. here Figs. 21; 22) celebrate Hadrian's achievements, and that Hadrian's burning of debt records in AD 118 occurred at two sites: the burning of the debt records of the fiscus in the Forum Traiani (represented on the Chatsworth Relief), and the burning of the debt records of the Aerarium publicum populi Romani in the Forum Romanum (represented on one of the Anaglypha Hadriani; cf. here Fig. 21). With a discussion of the suovetaurilia that appear on both Anaglypha Hadriani (cf. here Figs. 21.A; 22.A), and with The third Contribution by Peter Herz.*

## Der Übergang von Trajan auf Hadrian und das erste Regierungsjahr Hadrians

Peter Herz

Für die verschiedenen Schritte, die Hadrian während der Regierungszeit Trajans näher an die Macht brachten, liefert die *Historia Augusta* die folgenden Informationen. Da ist zunächst *Hadr. 3.7* mit der Nachricht: *„quare adamante gemma quam Traianus a Nerva acceperat donatus ad spem successionis erectus est“*. Da dies im Zusammenhang mit seinen Leistungen als *legatus* der *legio I Minervia* im 2. dakischen Krieg gesagt wird, können wir dies in den Zeitraum 106 datieren.

Die nächste Nachricht ist *Hadr. 4.1*: *„usus Plotinae quoque favore, cuius studio etiam legatus expeditionis Parthicae tempore destinatus est“*. Dies könnte eine Stabsstelle im Gefolge des Kaisers ohne klar definiertes Aufgabengebiet gewesen sein, wenn man es nicht ausschließlich auf seine Ernennung zum *legatus Augusti pro praetore Syriae* beziehen möchte, was mir doch unwahrscheinlich scheint. Damit er aber im Jahre 117 sofort diese für die Ereignisse im Osten zentrale Stelle übernehmen konnte, was durch die Krankheit Trajans anzunehmen ist, muss sich Hadrian in der unmittelbaren Umgebung des Kaisers vor dessen Aufbruch nach Rom aufgehalten haben.

Diese ständige Nähe zu Trajan wird indirekt auch durch *Hadr. 3.10* (*a Sura comperit adoptandum se a Traiano esse*) und 3.11 (*et defuncto quidem Sura Traiani ei familiaritas crevit, causa praecipue orationum quas pro imperatore dictaverat*) bestätigt. Da 3.10 diese Information mit dem Suffektkonsulat Hadrians verbindet (also bereits 108), bedeutet dies, dass sich Hadrian die nächsten Jahre praktisch permanent in der unmittelbaren Umgebung des Kaisers aufgehalten haben muss. Zumindest sind keine offiziellen Aufgaben bekannt, die ihn für längere Zeit aus dem Zentrum der Macht entfernt hätten. Obwohl das Datum für den Tod des Licinius Sura zwischen 110 und 113 schwankt, können wir wohl davon ausgehen, dass sich Hadrian ab 110 wohl kaum weit von Trajan entfernt hat.

Für den weiteren zeitlichen Ablauf wichtig ist *Hadr. 4.6*: *„quintum iduum Augustarum diem legatus Syriae litteras adoptionis accepit: quando et natalem adoptionis celebrari iussit. Tertium iduum earundem quando et natalem imperii statuit celebrandum, excessus ei Traiani nuntiatus est“*. Diese Nachricht führte dann zur imperatorischen Akklamation durch die vor Ort anwesenden Truppen.

Anschließend verhielt sich Hadrian sehr korrekt, da er *per epistulam* die Entwicklung (Tod des Kaisers und seine eigene *acclamatio*) dem Senat meldete und um die offizielle Divinisierung seines Vorgängers bat (*Hadr. 6.1*). Nicht ausdrücklich gesagt, aber zu erschließen ist die mit diesem Schreiben verbundene Bitte Hadrians an den Senat, durch den Erlass einer *lex imperii* (vergleiche die *lex imperii Vespasiani*) die entsprechenden kaiserlichen Kompetenzen zu erhalten. Dies änderte zwar nichts an den aktuellen Machtverhältnissen, aber der Senat war ausgesprochen empfindlich, wenn es um die Beachtung seiner Rechte ging. Dies musste Kaiser Macrinus 217 erfahren, der als erster ehemaliger *eques Romanus* den Thron bestieg und den Fehler begangen hatte, sich in seinem 1. Schreiben an den Senat bereits mit den Titeln zu titulieren, die ihm der Senat erst noch verleihen musste. Vergleiche Dio 79.16.2.

Für die politische Aussage, die mit manchen Ringen (vgl. [vergleiche] den Gemmenring, der von Nerva über Trajan zu Hadrian wanderte) verbunden sein konnte, ist eine Nachricht bei Plinius wertvoll, die sich wohl auf die Gruppe der *amici Augusti* bezieht.

Plin. *n.h.* 33.41: *“Während der Regierung des Claudius bestand noch ein anderes ausgezeichnetes Vorrecht für diejenigen, denen der freie Zugang das Recht verschafft hatte, nämlich das Bild des Kaisers aus Gold am Ring zu tragen“* (*fuit et alia Claudii principatu differentia insolens iis, quibus admissiones liberae ius dedissent*

*imaginem principis ex auro in anulo gerendi ...*). Vergleiche auch Ios. AJ 19.185 mit einem Ring des Senators Sentius, der eine Gemme mit dem Bild Caligulas besaß. Man muss nur die beiden Nachrichten miteinander kombinieren, also ein goldener Ring mit einem Gemmenbild des Kaisers, der seinem Träger eine bevorzugte Behandlung sicherte. Für den historischen Hintergrund vgl. H.U. Instinsky, Die Siegel des Kaisers Augustus. Ein Kapitel zur Geschichte und Symbolik des antiken Herrschersiegels, Baden-Baden 1962.

Die Sitte, die *amici Augusti* optisch so hervorzuheben, könnte am ehesten aus der Tradition der hellenistischen Königshöfe stammen.

Hadrian erreichte die Nachricht vom Tode Trajans (und seiner Adoption auf dem Sterbebett) wahrscheinlich am 11. August 117 in Antiochia. Seine wohl erste Personalentscheidung war die Ablösung von Lusius Quietus von der Position des *legatus Augusti Iudaeae*. Quietus scheint sich dann zusammen mit seinen maurischen Stammeskriegern in Richtung Mauretanien begeben zu haben (Ausgangspunkt für den jetzt folgenden Überblick ist A.R. Birley, Hadrian. The restless emperor, London, New York 1997, 77 ff.).

Die nächste Personalentscheidung betraf Ägypten, wo der bisherige *praefectus* Rutilius Lupus bereits Ende August 117 durch Q. Rammius Martialis, den bisherigen *praefectus vigilum*, ersetzt wurde. Diese schnelle Personalentscheidung könnte eventuell bedeuten, dass sich Rammius Martialis zusammen mit Teilen der *vigiles* in der Nähe des neuen Kaisers befand.

Kurze Zeit danach wurde Marcius Turbo, der bisher in seiner Eigenschaft als *praefectus classis praetoriae Misensis* gegen die noch nicht endgültig unterworfenen jüdischen Aufständischen in Ägypten eingesetzt gewesen war, dort abgezogen und mit der Masse seiner Truppen nach Mauretanien gesandt, wo zwischenzeitlich die Stammeskrieger des Quietus rebelliert hatten.

Die wichtigsten Entscheidungen betrafen aber die Situation an der unteren Donau und in Syrien. Als Ersatz für Quadratus Bassus, den verstorbenen (möglicherweise sogar im Kampf gegen die rebellierenden Stämme gefallenen) Statthalter von Dakien wurde Avidius Nigrinus, bisher *proconsul* von Achaia, entsandt. Syrien wurde von Catilius Severus, der bisher als Statthalter von Armenien, das jetzt von den Römern geräumt wurde, amtiert hatte, übernommen. Er hatte unter anderem die unangenehme Aufgabe, die Rückführung der römischen Truppen in Richtung Westen zu organisieren.

Es ist schwer abzuschätzen, wie hoch die Personalverluste der im Osten eingesetzten Truppen in diesen Jahren wirklich gewesen sind. Soweit die militärische Infrastruktur noch funktionsfähig war, das heißt solange nicht die regelmäßigen Bestandsmeldungen oder Mannschaftslisten (*matricula*) und so weiter völlig verloren gegangen waren, dürfte das römische Oberkommando einen durchaus zutreffenden Überblick zur Entwicklung des Mannschaftsbestandes gehabt haben. Diese Quellengattung ist allerdings für uns, wenn man einmal von Hunt's Pridianum absieht, verloren gegangen. R.O. Fink, Roman Military Records on Papyrus, Ann Arbor 1971, Nr. 69.

Wenn man allerdings bedenkt, dass die meisten Einheiten durchschnittlich fünf Jahre im Dauereinsatz gewesen waren und dies unter schwierigsten klimatischen Bedingungen, die vor allem den Soldaten aus den westlichen Reichsteilen schwer zugesetzt haben dürften, dann dürften die Abgänge sehr hoch gewesen sein. Hinzu kam, dass die Kämpfe, die ab dem Jahre 116 im aufständischen Mesopotamien (Edessa, Nisibis, Hatra) ausgefochten werden mussten, wahrscheinlich sehr verlustreich gewesen sind (zum Beispiel Verlust eines Heeres unter Appius Maximus Santra nach Fronto, *Principia* 17 und Dio 68.30.1 f.). K. Strobel, Kaiser Traian. Eine Epoche der Weltgeschichte, 2. Aufl. Regensburg 2019, 453 schätzt, dass allein bei den Kämpfen in der 1. Hälfte des Jahres 116 rund 30000 römische Soldaten verloren gingen.

Peter Herz , Der Übergang von Trajan auf Hadrian und das erste Regierungsjahr Hadrians

Neben den blutigen Verlusten, die bei den eigentlichen Kampfhandlungen eintraten, dürften auch die schwierigen geographischen und klimatischen Rahmenbedingungen, unter denen dieser Feldzug stattfand, ihren Tribut eingefordert haben. Hier können wir durchaus mit Analogien zu anderen und besser dokumentierten Epochen arbeiten. Bis ins 19. Jh. sind die Verluste einer eingesetzten Truppe durch Krankheiten (typische Heeresfolgeseuchen wie Ruhr, Cholera, Malaria und so weiter) stets höher gewesen als die Verluste durch die eigentlichen Kampfhandlungen. Da ein großer Teil der römischen Truppen aus den westlichen Provinzen mit einem gemäßigeren Klima stammte, müssen wir hier mit einem substantiellen Abgang an Soldaten rechnen, der durch solche Faktoren verursacht wurde. Selbst die römische Militärmedizin, die sicherlich ein beachtliches Qualitätsniveau besaß, dürfte hier nicht viel bewirkt haben.

Ein nur schwer zu kalkulierender Verlust an Personal dürfte auch mit dem schweren Erdbeben von 115 verbunden gewesen sein. Das Erdbeben zerstörte die Stadt Antiochia, wo sich Trajan gerade zu diesem Zeitpunkt aufgehalten hatte (Dio 68.24-25), wobei der Kaiser selbst nur mit knapper Not aus einem zerstörten Gebäude entkommen konnte. Eck hat zu Recht darauf hingewiesen, dass wahrscheinlich die *praetoriani*, die den Kaiser begleitet hatten, bei dieser Gelegenheit schwere Verluste erlitten haben dürften, die man durch den Transfer von Soldaten aus anderen Truppenteilen ausgleichen musste. Dabei musste man sogar vorübergehend von dem ansonsten strikten Grundsatz abweichen, dass für die Garde nur römische Bürger aus Italien und aus ausgewählten *coloniae* rekrutiert werden sollten, und griff auch auf Soldaten zurück, deren Bürgerrecht nicht zweifelsfrei war. Das in dieser Situation wohl entscheidende Motiv war, dass es sich bei ihnen um bereits erfahrene Soldaten und nicht um unerfahrene Rekruten handelte. W. Eck, Soldaten aus den Donauprovinzen in der Prätorianergarde. Zum Erdbeben in Syrien aus dem Jahr 115 und zum Edikt Hadrians aus dem Jahr 119, *ZPE* 206, 2018, 199-201.

Bei demselben Ereignis dürften auch die Gardekavalleristen des Herrschers, die *equites singulares Augusti*, die sich wahrscheinlich ebenfalls in der unmittelbaren Nähe des Kaisers aufhielten, schwere Verluste erlitten haben, die man ebenfalls durch den Transfer von bereits ausgebildeten Soldaten aus anderen Truppenteilen eiligst zu kompensieren versuchte. Dies ist von P. Weiss gut herausgearbeitet worden. P. Weiss, Hadrians Rückkehr nach dem Partherkrieg. Das früheste Militärdiplom für die *equites singulares Augusti* und die Entlassungsweihung in Rom vom Jahr 118, *Chiron* 47, 2017, 21-34.

Während wir uns bei den möglichen Verlusten dieser beiden ausgewählten Einheiten noch auf relativ sicherem Gelände bewegen, sieht es bei den übrigen Einheiten (*legiones, auxilia*) wesentlich schlechter aus. Wir können in den meisten Fällen lediglich über die Auswertung der Militärdiplome nachweisen, dass eine bestimmte Einheit an diesem Feldzug beteiligt war. Da dies aber nichts zu der eigentlichen Einsatzgeschichte der Truppe aussagt, also wo und unter welchen Umständen die Truppe zum Einsatz gekommen ist, kann man lediglich Schätzungen zu den wahrscheinlich dabei erlittenen Verlusten abgeben. Gerade bei den *auxilia*, die ja in der Regel in Kohorten- beziehungsweise Alenstärke operierten, also rund 500 Mann pro Einheit, kann man durchaus von der Möglichkeit ausgehen, dass im Verlauf der Kämpfe einzelne Einheiten komplett verloren gegangen sind und später nicht mehr aufgestellt wurden.

Unter diesen Rahmenbedingungen kann man also durchaus vermuten, dass im besten Fall nur jeder zweite Soldat, der zum ursprünglichen Bestand des gegen die Parther aufmarschierten Heeres gezählt hatte, diese fünf Jahre unbeschadet überlebt hat. Man hatte zwar versucht, durch eine kontinuierliche Nachführung von Rekruten aus anderen Reichsteilen den Mannschaftsbestand zumindest numerisch auf dem früheren Niveau zu halten, doch muss unsicher bleiben, wie sich dies auf die Kampfkraft ausgewirkt hat.

Man könnte also durchaus sagen, dass Trajan bei seinem Unternehmen hoch gepokert hatte, indem er substantielle Teile der westlichen Heere für den Ostfeldzug abgezogen hatte und dies auch noch für einen längeren Zeitraum. Die negativen Folgen dieser letztendlich verfehlten und hochriskanten Politik zeigten

sich bei den Unruhen an der mittleren und unteren Donau, die im Jahre 117 ausbrachen und Hadrian dann zu einem schnellen Handeln zwangen. Die dortigen Provinzheere waren durch die Abstellung von großen Teilen ihres Normalbestandes empfindlich in ihrer Kampfkraft beeinträchtigt worden.

Einen guten Überblick zu den wahrscheinlich im Partherkrieg eingesetzten Einheiten bietet Strobel, Traian 436 ff.

In welchem Umfang die berühmte römische Öffentlichkeit in der Lage gewesen ist, aus der Distanz die militärische Situation im Osten wirklich realistisch einzuschätzen, ist schwer zu sagen. Man war einige Jahre lang von Trajan mit einer Siegesmeldung nach der anderen gefüttert worden, wodurch die Nachricht von der endgültigen Einstellung der Kampfhandlungen und der Aufgabe der neuen Provinzen umso überraschender gewesen sein dürfte. Außerdem dürften die Hauptstadt und Italien zu den Teilen des Reiches gezählt haben, die am wenigsten unter den direkten Folgen der gescheiterten Orientpolitik Trajans zu leiden hatten. Die Masse der eingesetzten Soldaten stammte aus den Provinzen und nicht aus Italien, die Lasten des Aufmarschs und der Versorgung wurden von den Bewohnern der Provinzen und nicht den Einwohnern Italiens geschultert. Umgekehrt dürften aber die positiven wirtschaftlichen Impulse, die seinerzeit durch die dakische Beute ausgelöst worden waren, vor allem die Stadt Rom (trajanisches Bauprogramm in Rom) und Italien (Neuanlage des *portus Traiani* und so weiter) begünstigt haben.

Unter wirtschaftlichen beziehungsweise finanziellen Aspekten dürfte der Feldzug gegen die Parther im besten Fall ein Null-Summen-Spiel gewesen sein. Die möglicherweise angedachten Gewinne aus der geplanten Kontrolle des Orienthandels, der bisher vor allem über die kleinen und weitgehend autonomen Handelsstaaten (Hatra, Edessa, Charakene und so weiter) zwischen den Großreichen abgewickelt wurde, konnte von den Römern nicht realisiert werden, da sich diese Staaten heftig gegen die Römer wehrten. Vergleiche die vergebliche Belagerung von Hatra durch Trajan. Diese Staaten dürften sehr aufmerksam registriert haben, wie das vorher weitgehend autonome Reich der Nabatäer von Trajan zur Provinz gemacht wurde (106), was eine direkte römische Kontrolle über die Handelswege über das Rote Meer und Aqaba mit sich gebracht hatte, um abschätzen zu können, was ihnen von den Römern drohte. Es ist schon bezeichnend, wenn man sich den sehr knappen Bericht Frontos (*Princ.* 17) betrachtet, unter welchen Umständen Maximus Santra wahrscheinlich ums Leben kam:

*Appius Santra vero, cum praesens Traianus Euphrati et Tigridis portoriae quorum et camelorum tribularet, retro + ad Balcia Tauri ab Arbace + caesus est.*

„Appius Santra aber, als er in Gegenwart Trajans an Euphrat und Tigris die Abgaben für Pferde und Kamele erhob, wurde seinerseits (bei dem Ort) Balcia am Taurus von Arbaces getötet.“

Der in dieser korrupten Stelle genannte ‚Arbace‘ ist wohl nach D. Potter (*The mysterious Arbaces, AJPh* 100, 1979, 541-542) mit König Abgar VII von Edessa zu identifizieren. Durch ‚portorium‘ = ‚Torabgabe, Hafenzoll‘ im Zusammenspiel mit den Namen der beiden Flüsse scheint sich anzudeuten, dass die Römer Abgaben auf die Karawanen erheben wollten, die sich entlang der beiden Flüsse nach Norden bewegten.

Eine gewisse Vorstellung, was die Römer hier alles besteuern konnten, liefern der Tarif von Koptos aus der Zeit Domitians (*OGIS* 674 = *IGRR* I 1183) und das Steuergesetz von Palmyra aus der Zeit Hadrians (J.F. Matthews, *The Tax Law of Palmyra. Evidence for Economic History in a City of the Roman East, JRS* 74, 1994, 157-180). Dabei ist natürlich zu beachten, dass beim Überschreiten einer Außengrenze von den Römern eine 25 %-Abgabe auf den Warenwert erhoben wurde. Vergleiche die Beiträge in P. Kritzinger, F. Schleicher, T. Stickler (Hrsg.), *Studien zum römischen Zollwesen*, Duisburg 2015. Besonders zu beachten: P. Kritzinger, *Das römische Zollsystem bis in das 3. Jh. n. Chr., an angegebenem Ort* 11-55. Unter diesen Prämissen ist die heftige Reaktion der einheimischen Bevölkerung gegen Trajan durchaus nachvollziehbar.

Peter Herz, Der Übergang von Trajan auf Hadrian und das erste Regierungsjahr Hadrians

U. Hartmann, Die Ziele der Orientpolitik Trajans, in: R. Rollinger *et al.* (Hrsg.), Interkulturalität in der Alten Welt. Vorderasien, Hellas, Ägypten und die vielfältigen Ebenen des Kontakts, Wiesbaden 2010, 591-633.

Die offizielle Rückkehr Hadrians zu den Verhältnissen vor Trajan führte dann zu einer relativ schnellen Beruhigung der Lage in diesem Teil der antiken Welt, womit das politische Abenteuer Trajans beendet wurde.

Hadrian verließ Anfang Oktober Syrien und begab sich auf den Weg nach Westen (alte Heerstraße, auf der auch die Masse der römischen Truppen zurückmarschierte). Am 13. Oktober war er in Mopsukrene nördlich von Tarsos, um dann von dort nach Ankyra zu reisen, wo er sich einige Zeit aufhielt. Für die möglichen Begleitumstände seines Aufenthaltes in Ankyra vergleiche etwa St. Mitchell, D. French, The Greek and Latin Inscriptions of Ankara (Ankyra). Vol. I. From Augustus to the end of the third century AD, München 2012 (*Vestigia* 62), Nr. 74 ff. für C. Iulius Severus, einen Nachkommen der alten galatischen Könige, der von Hadrian nachdrücklich gefördert wurde.

Am 11. November war Hadrian in Iuliopolis (Provinz *Bithynia et Pontus*). Von dort aus schickte er einen Dankesbrief an die *neoi* von Pergamon, die ihm zu seinem Regierungsantritt gratuliert hatten (*IvPerganom* 274 = *IGRR* IV 349 = *Syll.*<sup>3</sup> 831). Während seiner Reise nach Westen wurde die vakante Stelle in Niedermösien von Pompeius Falco übernommen, während sein Freund Platorius Nepos die für den Rückmarsch über Land wichtige Provinz Thrakien übernahm. Die Situation an der Donau war so brisant, dass man angeblich vorübergehend sogar daran dachte, Teile von der steinernen Donaubrücke von Drobeta zu entfernen, um sie für die Gegner unbenutzbar zu machen.

Welche Völkerschaften an der unteren und mittleren Donau an den Unruhen beteiligt waren, kann man in etwa abschätzen, wenn man das römische Territorium vor und nach dem Aufstand vergleicht. Unter Hadrian beschränkte sich die Provinz *Moesia inferior* wieder wie in der Zeit vor den dakischen Kriegen auf das rechte Donauufer, das heißt die aufständischen Völker dürften in der Walachei und der Dobrudscha gelebt haben (Roxolanen). Da aber die Römer anschließend auch das Alföld zwischen der Donau und den Karpathen räumten, dürften wohl auch die Jazygen an den Unruhen beteiligt gewesen sein.

Ob auch die sogenannten freien Daker, die von Trajan aus ihren ehemaligen Wohnsitzen in Richtung Moldavien vertrieben worden waren, an diesen Unruhen beteiligt waren, ist schwer zu sagen. Angeblich soll Hadrian in dieser Situation sogar vorübergehend an eine Aufgabe des römischen Dakiens gedacht haben. Er gab diesen Gedanken aber wieder auf, da dies nicht nur den Verzicht auf die reichen Goldbergwerke in Dakien mit sich gebracht hätte, was wahrscheinlich angesichts der Kassenlage nur schwer erträglich gewesen wäre, sondern auch die Rückführung von größeren Gruppen an römischen Neusiedlern bedeutet hätte, die sich in den vergangenen Jahren dort angesiedelt hatten.

Hadrian dürfte sich nur kurz in seinem Winterquartier (Nikomedea ?) aufgehalten haben, wo er auch seinen 2. Konsulat übernahm. Den größten Teil des Winters und auch des Frühjahrs 118 verbrachte er an der unteren Donau, wo er mit den Roxolanen zu einem Abkommen kam, in dessen Folge die Römer unter anderem Oltenien und Muntenien aufgaben, während der König der Roxolanen offensichtlich zum Klientelkönig der Römer wurde. Man kehrte also zur alten Praxis zurück, problematische Gebiete nicht selbst zu verwalten, sondern diese Aufgabe an verbündete Fürsten zu übertragen. Der Führer der Roxolanen wurde bei dieser Gelegenheit von Hadrian zum römischen Bürger gemacht.

Vgl. dazu die Inschrift *CIL* V 32 = *ILS* 852 aus Pola (*P. Aelio Rasparagano / regi Roxolanorum / v(ivus) v(ivo) fecit*), wo er und seine Familie später im Exil lebten.

Eine Schlüsselposition bei der sogenannten Verschwörung der 4 Consulares scheint Avidius Nigrinus gespielt zu haben, der im Sommer 117 von Hadrian sogar als Ersatz für den verstorbenen Quadratus Bassus eingesetzt worden war, jetzt aber getötet wurde.

Anthony Birley, der sich ausführlich mit dieser ominösen Episode beschäftigt hat, bringt eine interessante Variante ein, die auf der *Historia Augusta* aufbaut (A.R. Birley, *Hadrian. The restless emperor*, London, New York 1997, 87 f.).

SHA *Hadr.* 7.1: *Nigrini insidias, quas ille sacrificanti Hadriano conscio sibi Lusio et aliis paraverat, dum etiam successorem Hadrianus sibi met destinasset, evasit.*

„Den Nachstellungen des Nigrinus, die jener für Hadrian bei einem Opfer geplant hatte, wobei Lusius (Quietus) und andere eingeweiht waren, entging er, obwohl Hadrian diesen als seinen eigenen Nachfolger vorgesehen hatte.“

Birley schlägt vor, diese Notiz vor allem mit Bezug auf den in diesem Kontext erwähnten Lusius Quietus wie folgt zu verstehen, „weil Hadrian auch für ihn (also Nigrinus) einen Nachfolger vorgesehen hatte.“

Offensichtlich hatte Nigrinus den Kaiser heftig kritisiert, weil Hadrian große Teile der trajanischen Eroberungen aufgegeben hatte oder dies zumindest zum Zeitpunkt seiner Ablösung plante. Nigrinus wurde wegen dieser wahrscheinlich offen ausgesprochenen Kritik an der Politik Hadrians seines Amtes entsetzt und kehrte in seine Heimat nach Faventia (Faenza) zurück. Er wurde in Dakien durch Marcius Turbo ersetzt, der dazu von Mauretanien an die Donau zurückkehrte. Ob Nigrinus zusätzlich verärgert war, weil er jetzt als römischer Senator in seiner Position durch einen *eques* ersetzt wurde, lässt sich schwer sagen.

Ob eine solche persönliche Demütigung als Motiv ausreichend ist, eine ernsthafte *coniuratio* gegen den Kaiser zu beginnen, muss ebenfalls völlig spekulativ bleiben. Die *Historia Augusta* berichtet dazu die folgende Version, wobei sich das ‚*quare*‘ = ‚deswegen‘ auf den angeblich geplanten Anschlag auf Hadrian bezieht.

SHA *Hadr.* 7.2: *quare Palma Terracinis, Celsus Baiis, Nigrinus Faventinae, Lusius in itinere senatus iubente, invito Hadriano, ut ipse in vita sua dicit, occisi sunt.*

„Deswegen wurde Palma in Tarracina, Celsus in Baiae, Nigrinus in Faventia, Lusius auf dem Weg (wohin ist unbekannt) auf Anordnung des Senates und gegen den Willen Hadrians, wie er selbst in seiner Autobiographie sagt, getötet.“

Offiziell verantwortlich für diese ‚Hinrichtungen‘ war der damalige *praefectus praetorio* Attianus, ein Vertrauter des Kaisers. Attianus ging anschließend in den Ruhestand, da er aber anschließend von Hadrian mit den *ornamenta consularia* ausgezeichnet wurde und damit zu einem Mitglied des Senates in der höchsten Rangstufe wurde, kam dies einer stillschweigenden Bestätigung seiner Entscheidung durch den Kaiser nahe. Die Affaire selbst ist dubios, denn ob die fehlende Begeisterung für eine politische Entscheidung eines Kaisers gleich zu einer ernsthaften Verschwörung führen muss, ist höchst problematisch. Ob der Senat wirklich seine Zustimmung zur Hinrichtung gegeben hat (*senatus iubente*), erscheint ebenfalls höchst unwahrscheinlich. Wesentlich wahrscheinlicher ist die Version, dass der Senat einfach vor vollendete Tatsachen gestellt wurde und daher diese Tötungen nur noch bestätigen konnte. Wenn es danach im Senat noch eine ernsthafte Opposition gegen die Entscheidungen Hadrians gegeben haben sollte, dann war diese Opposition durch diese Ereignisse nachdrücklich gewarnt worden, wie der Kaiser handeln konnte, wenn er sich in die Enge gedrängt fühlte.

Peter Herz, Der Übergang von Trajan auf Hadrian und das erste Regierungsjahr Hadrians

Hadrian kam über Norditalien nach Rom, wo am 9. Juli (CFA 68 II 22-25) deswegen die Arvalbrüder ein Opfer darbrachten. In die daran anschließende Zeit fällt dann eine große Schuldenstreichung, von der unter anderen Cassius Dio und die *Historia Augusta* berichten.

Dio 69.8.1<sup>2</sup>:

ἐλθὼν γὰρ ἐς τὴν Ρώμην ἀφῆκε τὰ ἀφειλόμενα τῷ τε βασιλικῷ καὶ τῷ δημοσίῳ τῷ τῶν Ῥωμαίων, ἡκαίδεκατῆ ὀρίσας χρόνον ἀφ' οὗ τε καὶ μέχρις οὗ τηρηθήσεσθαι τοῦτ' ἔμελλεν.

„Als er nach Rom [kam], strich er die Schulden (man könnte auch sagen, die noch ausstehenden Zahlungen), die der kaiserlichen Kasse (*fiscus Augusti*) und der öffentlichen Kasse der Römer (*aerarium populi Romani*) geschuldet wurden. Dabei legte er einen Zeitraum von 15 Jahren von Anfang bis Ende fest, auf den diese Streichung angewendet werden sollte.“

Die *Historia Augusta Hadr.* 7.6 liefert allerdings die interessante Variante, dass diese Streichung sich nur auf die Rückstände erstreckt habe, die dem *fiscus Augusti* geschuldet wurden:

*Ad colligendam autem gratiam nihil praetermittens infinitam pecuniam, quae fisco debeatur, privatis debitoribus in urbe atque Italia, in provinciis vero etiam ex reliqui[i]s ingentes summas remisit syngrafis in foro divi Traiani, quo magis securitas omnibus roboraretur, incensis*

„Um sich eine freundliche Akzeptanz (*gratia*) zu verschaffen, ließ er nichts aus. So erließ er eine ungeheure Geldsumme, die dem *fiscus* geschuldet wurde, den privaten Schuldnern in der Stadt Rom und in Italien. Aber auch in den Provinzen erließ er ungeheure Summen aus den Rückständen. Dabei wurden die Schuldurkunden, um die Sicherheit für alle noch mehr zu bestärken, auf dem Forum des *divus Traianus* verbrannt.“

Da die Hadrians-Vita in der *Historia Augusta* als recht zuverlässig gilt, ist diese Abweichung schon beachtenswert. Wenn man sich daher auf das Zeugnis der *Historia Augusta* stützen möchte, dann ging es hier in erster Linie um Zahlungsverpflichtungen, die dem *fiscus Augusti* geschuldet wurden. Wenn man sich die Struktur des kaiserlichen Vermögens ansieht, dann dürfte es sich hier in erster Linie um noch ausstehende Zahlungen aus der Verpachtung von kaiserlichen Ländereien in Italien und in den Provinzen gehandelt haben. Diese Ländereien konnten aber nicht von jedem armen Bauern gepachtet werden, denn, um vor einem Vertragsabschluss die notwendige Sicherheit für die künftigen Zahlungen zu liefern (die Pachtdauer ist üblicherweise auf ein *lustrum* = 5 Jahre festgelegt), musste man dazu bereits eine ausreichende Menge an eigenem Land nachweisen können, das man jetzt als Sicherheit verpfänden konnte.

Zum Verwaltungssystem des kaiserlichen Privatbesitzes vgl. D.P. Kehoe, *The Economics of Agriculture on Roman Imperial Estates in North Africa*, Göttingen 1988, 64-70. D. Flach, *Inschriftenuntersuchungen zum römischen Kolonat in Nordafrika*, *Chiron* 8, 1978, 470-477. T. Hauken, *Petition and Response. An Epigraphic Study to Petitions to Roman Emperors, 181-249*, Bergen 1998, 2-28 zu *CIL VIII 10570* = Freis, *Historische Inschriften* Nr. 110.

P. Orstedt, *Roman Imperial Economy and Romanization. A Study in Roman Imperial Administration and the Public Lease System from the First to the Third Century A.D.*, Kopenhagen 1985.

In welchem Umfang auch die Pächter von Steinbrüchen, Tongruben oder Salzpflanzen oder die Lizenznehmer von kaiserlichen Monopolen (Purpur, Papyrus und so weiter) aus dem kaiserlichen Besitz von dieser Schuldenstreichung profitierten, kann ich nicht sagen, aber ich denke, dass es in erster Linie um

für den Ackerbau geeignetes Land ging. Dieses dürfte sicherlich den Löwenanteil an Pachteinahmen für die kaiserliche Kasse geliefert haben.

Die Schuldenstreichung betrifft also in erster Linie die wohlhabenden Investoren. In welchem Umfang sogar die Angehörigen des *ordo senatorius* davon profitieren konnten, ist nach meinem aktuellen Wissensstand noch nicht durchdacht worden. Da aber Trajan seinerzeit verfügt hatte, dass die Senatoren ein Drittel ihres Vermögens in Italien investieren mussten, wäre dies eine bedenkenswerte Sache.

In den Provinzen denke ich vor allem an die Provinzen *Cyprus*, *Cyrenaica* und *Aegyptus*, die durch die jüdischen Aufstände schwer getroffen worden waren. Abgesehen von den großen Verlusten an Menschen, die hier zu beklagen waren, dürfte es kaum möglich gewesen sein, in diesen Jahren bei den dort verpachteten Gütern größere Pachteinahmen zu erzielen, weil wahrscheinlich viele von ihnen aus Mangel an Personal einfach nicht bewirtschaftet werden konnten.

Hadrian hätte zwar auf einer vollständigen Begleichung der Schulden bestehen können, doch dies hätte wahrscheinlich viele Schuldner, weil sie nicht die notwendigen Bargeldmengen besaßen, zu Notverkäufen ihres eigenen Landes gezwungen oder sie sogar in die Insolvenz getrieben.

Einiges an Material bietet M. Pucci Ben Zeev, *Diaspora Judaism in Turmoil 116/117 CE. Ancient sources and modern insights*, Leuven, Dudley/MA 2005.

Angesichts der angespannten innenpolitischen Situation (dubiose Tötung der 4 *consulares*, Aufgabe der trajanischen Neueroberungen im Osten und teilweise an der Donau) war es für Hadrian daher wesentlich wichtiger, für sich eine freundliche Grundstimmung bei den wohlhabenden und daher auch innenpolitisch unverzichtbaren Gruppen innerhalb des Reiches aufzubauen (Stichwort *gratia*). Ein Kaiser konnte auf die Dauer keine Politik betreiben, wenn er dabei nicht auf die zumindest stillschweigende Kooperation der führenden *ordines* innerhalb des Staates vertrauen konnte.

Dass ihm viele unter den Senatoren den Tod der vier *consulares* niemals wirklich verziehen haben, zeigt sich spätestens nach Hadrians Tod im Jahre 138, als sein Nachfolger Antoninus Pius größte Mühe hatte, im Senat die offizielle Divinisierung Hadrians durchzusetzen.

Notes by the editor Chrystina Häuber:

## Wann wurde Trajan von Nerva adoptiert?

Peter Herz

In der älteren Literatur kursiert immer noch die Meinung, dass die Adoption Trajans durch seinen Vorgänger Cocceius Nerva am 27. Oktober 97 vollzogen worden sei. Hier kommen offensichtlich mehrere Missverständnisse zusammen.

Zunächst sollten die zeitlichen Umstände des Jahres 97 etwas mehr berücksichtigt werden. Nerva begab sich auf das Kapitol, um dort vor dem Kultbild des Iuppiter Optimus Maximus Capitolinus ein Dankopfer darzubringen, weil ihm gerade Siegesnachrichten vom Statthalter von Pannonien übermittelt worden waren. Nerva nutzte die Möglichkeit, die sich ihm jetzt eröffnet hatte, dazu, um vor dem entsprechenden Publikum feierlich seine Adoption Trajans öffentlich zu verkünden und damit praktisch irreversibel zu machen. Unter Publikum verstehe ich hier in erster Linie die gerade amtierenden consules und wahrscheinlich einen Teil der in Rom anwesenden Senatoren, da man sicherlich wegen dieser Siegesnachricht eine *laetitia publica* angeordnet hat.

Da die *Epitome de Caesaribus* 12.9 sagt, *cum quo tribus vixit menses*, hat man diese Angabe wortwörtlich genommen, um von dem Datum des *dies imperii* Trajans, was man lange Zeit am 27. Januar 98 vermutet hat, exakt drei Monate abzuziehen, um so auf den 27. Oktober 97 für Trajans Adoption zu gelangen. So noch R. Hanslik, *RE Suppl.* X, 1965, 1042. Erstens ist es alles andere als sicher, dass es exakt drei Monate gewesen sein müssen, es kann also ebenso bedeuten, Zeitraum von etwa drei Monaten, und zweitens hat man vergessen, dass wir seit 1940 das Feriale Duranum haben. In dem findet sich das Datum 28. Januar für den Beginn der Alleinherrschaft Trajans. Dieser Tag ist durch eine ganze Reihe von Inschriften als Feiertag bekannt und wurde später von Septimius Severus genutzt, um am 28. Januar 198, also genau nach einhundert Jahren, sowohl die offizielle Einnahme der parthischen Hauptstadt Ktesiphon zu feiern als auch seinen Sohn Caracalla zum Mitherrscher (Augustus) zu ernennen.

Wir wissen zwar durch das Zeugnis der Suda, dass der Tag der Adoption Trajans später in der Tat als Fest gefeiert wurde, wir kennen aber deswegen noch lange nicht das exakte Datum. Wir können bestenfalls einen angenäherten Termin Ende Oktober 97 bzw. [beziehungsweise] Anfang November 97 vermuten, wobei uns auch noch der Umstand etwas in die Quere kommt, dass der *dies natalis* Nervas auf den 8. November fällt. Rein theoretisch könnte Nerva Trajan auch durchaus an seinem eigenen Geburtstag adoptiert haben, ohne dadurch die Aussage ‚*tres menses*‘ der *Epitome* zu sehr zu verletzen.

Im Nachdruck von P. A. Lepper, *Trajan's Parthian War*, London 1948 durch Ares Publishers, Chicago 1993 gibt es einen Anhang von J.G. De Voto mit den Fragmenten von Arrians *Parthika*, die z. B. [zum Beispiel] durch die Suda überliefert wurden. Interessant ist dabei Fragment 35 (abgedruckt auf S. 238 des Nachdrucks):

Suda s.v. εἰσεποιήθη. ἐνιαύσιος ἦν ἡμέραῃ Τραιανὸς ἐπὶ διαδοχῆτις Ῥωμαίων ἀρχῆς ὑπὸ τοῦ πατρὸς Νερούα εἰσεποιήθη.

Suda Stichwort ‚adoptiert werden‘. Jedes Jahr wurde der Tag, an dem Trajan durch seinen Vater für die Nachfolge in der Herrschaft über die Römer adoptiert wurde, gefeiert.

Es waren sicherlich keine Feierlichkeiten, die durch größere Spiele u. ä. [und ähnliches] zelebriert wurden, sondern es dürfte sich eher um die Darbringung von Opfern durch die gerade amtierenden Magistrate gehandelt haben. Als Platz für diese Feierlichkeiten könnte ich mir in Rom das Kapitol vorstellen, wo eine *ara* vor dem Tempel des Iuppiter Optimus Maximus die wahrscheinlichste Lokalität wäre.

An wen sich diese Opfer gerichtet haben könnten, bleibt unbekannt. Man könnte, das ist allerdings höchst spekulativ, an den Divus Nerva als Empfänger denken. Für die entsprechende Weiheformel könnte man an eine Formulierung etwa der Art ‚weil er mit dieser Handlung (dieser Adoption) die *continuitas* des Imperium Romanum gesichert hatte‘ denken.

Ich habe mich dabei etwas von der Argumentation des Augustus inspirieren lassen, der die Adoption von Tiberius und Agrippa Postumus mit dem Wohlergehen des römischen Staates begründet hatte. Seinen greifbaren Niederschlag hatte dieses Ereignis wohl mit dem Bau der *ara Providentiae Augustae* gefunden, an der später für den 26. Juni Opfer nachgewiesen werden können.

Wie lange dieses Fest zumindest in Rom gefeiert wurde, kann ich nicht sagen. Da aber Arrian, auf den sich die Suda beruft, offensichtlich von einem noch relevanten Fest ausgeht, könnte man unter Berücksichtigung seiner Lebenszeit vermuten, dass die Adoption Trajans mindestens noch bis in die Regierungszeit des Antoninus Pius gefeiert wurde. Zumindest in den ellenlangen Aufzählungen der Vorfahren, die wir in einigen kaiserlichen Inschriften finden können, wird Nerva selbst unter den Severern immer noch erwähnt.

Notes by the editor Chrystina Häuber:

The `26th June [AD 4]' was the date of the adoption of Tiberius by Augustus; cf. Mario Torelli ("Providentia, Ara", in: *LTUR* IV [1999] 165-166), who also describes the rituals performed there and their meaning, to which Peter Herz alludes in his text: "*la providentia imperiale per la continuitas imperii*".

The building inscription of the Septizonium/Septizodium, built by Septimius Severus at the south-east corner of the Palatine (cf. here **Figs. 58; 73**), provides an example for his self-acclaimed ancestry comprising Nerva, as hinted at by Peter Herz in his text. Cf. Susann S. Lusnia (2004, 517, 526, 533, 538-541 [on *CIL* VI 1032 = 31229]), quoted *verbatim* in: Häuber (2014a, 688, note 167).

## Der Ritt Hadrians nach Mogontiacum

Peter Herz

Als sich der spätere Kaiser Hadrian im November des Jahres 97 auf seine Reise von Moesia *inferior* nach Mogontiacum machte, um die Glückwünsche seines Heeres an den gerade von Nerva adoptierten Traian zu überbringen, war er gerade als senatorischer *tribunus militum* bei der *legio V Macedonica* in dieser Provinz eingesetzt.

Als solcher besaß er wahrscheinlich nicht nur ein wesentlich besseres Quartier als die übrigen ritterlichen *tribuni militum*, sondern er konnte auch auf die Dienste einer größeren Personengruppe zurückgreifen. Neben seinem persönlichen Gefolge, das aus einigen Sklaven und Freigelassenen seiner eigenen Familie bestand, die ihn in die Provinz begleitet hatten, um dort für seinen Haushalt zu sorgen, hatte er auch den Zugriff auf die Dienste einiger Soldaten, die ihm wegen seiner Dienststellung zustanden. So dürfte er sein eigenes kleines *officium* mit einigen Schreibern und *beneficarii* besessen haben, das von einem *cornicularius* geleitet wurde [mit Anm. 1]. Von diesem *officium* wurde u. a. [unter anderem] seine dienstliche Korrespondenz erledigt [mit Anm. 2]. Für seine private Korrespondenz besaß er wahrscheinlich einen *libertus*, der als sein Sekretär fungierte.

Als er sich jetzt auf den Weg nach Mogontiacum machte, tat er dies natürlich nicht auf Grund seiner eigenen Initiative, dies wäre ein grobes Dienstvergehen gewesen, sondern im Namen seines Provinzstatthalters, der ihn dafür delegiert hatte. Daher konnte er auf Grund seines Marschbefehls auch das *diploma* nutzen, welches ihm die kostenfreie Nutzung des *cursus publicus* erlaubte. Damit konnten er und seine Begleiter nicht nur die Übernachtungsmöglichkeiten in den *mansiones* nutzen, sondern auch in regelmäßigen Abständen ihre erschöpften Pferde gegen frische Tiere austauschen. Hadrian hätte natürlich auch einen Reisewagen des *cursus publicus* nutzen können, doch bei der Dringlichkeit seiner Mission hat er es sicherlich vorgezogen, Pferde zu benutzen.

Bei der Frage nach der Zahl seiner Begleiter kann man nur spekulieren. Vermutlich hat er die Zahl möglichst klein gehalten, um schneller voranzukommen. Es dürften also höchstens ein oder zwei persönliche Bedienstete gewesen sein, die auch physisch geeignet sein mussten, einen solch langen Ritt durchzuhalten. Hinzu kamen wahrscheinlich noch einige Reiter seiner Stammeinheit (*equites legionis*) oder auch aus dem Gefolge des Statthalters, in diesem Fall wären es *equites singulares* gewesen. Die Anzahl und die Namen seiner Begleiter mussten auf seinem Marschbefehl genannt werden, zumindest soweit sie Angehörige des Militärs waren, damit sie unterwegs ebenfalls ihren Anspruch auf die Stellung von neuen Reitpferden an den Wechselstationen [*mutationes*] und auf Unterkunft und Verpflegung bei den *mansiones* erheben konnten.

Während der spätere Kaiser Tiberius im Jahr 9 v. Chr. bei seinem berühmten Ritt zur *castra scelerata* und zu seinem im Sterben liegenden Bruder Drusus wahrscheinlich noch nicht auf die ausgebaute Infrastruktur des *cursus publicus* zurückgreifen konnte, dürfte das System zur Zeit Hadrians voll ausgebaut gewesen sein. Dies bedeutet, dass Hadrian die gesamte Strecke von rund 1800 km wahrscheinlich innerhalb von rund 20 Tagen zurücklegen konnte, obwohl das Wetter im November nicht gerade günstig war. Er hat dazu wahrscheinlich die römische Militärstraße benutzt, die sich entlang der Donau bis nach Raetien erstreckte. Von dort konnte er dann leicht zur Militärstraße entlang des Rheins überwechseln, auf der er dann Mogontiacum erreichte.

Während die privaten Bediensteten Hadrians wahrscheinlich zusammen mit ihm in Mogontiacum blieben, kehrten seine militärischen Begleiter wieder zu ihrer Stammeinheit in Niedermösien zurück. Die

entsprechenden Marschbefehle und Berechtigungsscheine wurden ihnen vor ihrem Aufbruch in Mainz wahrscheinlich vom dortigen *legatus legionis* bzw. [beziehungsweise] seinem *officium* ausgestellt.

Hadrian selbst musste nicht zu seiner bisherigen Einheit zurückkehren, sondern er konnte in Mogontiacum bleiben, denn mit der Verkündigung der Adoption seines Verwandten Traian durch den aktuellen *princeps* Nerva dürften auch einige andere rechtsetzende Akte verbunden gewesen sein, die die staatsrechtliche Position des künftigen Kaisers betrafen. Man kann vermuten, obwohl dies im Gegensatz zur Adoption nicht ausdrücklich in den Quellen angesprochen wird, dass Traian unmittelbar nach der offiziellen Verkündigung seiner Adoption auch die rechtlichen Kompetenzen eines *princeps* erhielt, also die *tribunicia potestas* und das *imperium proconsulare maius*, wodurch er vom bisherigen Status eines *legatus Augusti pro praetore provinciae Germaniae superioris* aufstieg. Damit konnte Traian für seinen Verwandten Hadrian anordnen, dass dieser seinen bisherigen Posten in Moesia *inferior* aufgeben solle, um auf eine neue Position in Germania *superior* zu wechseln.

Hadrian dürfte in dieser Zeit sicherlich nicht der einzige Bote gewesen sein, der sich mit den Glückwünschen seines Provinzheeres bzw. seiner Provinz auf den Weg nach Mogontiacum gemacht hatte, um dem neuen starken Mann zu gratulieren und sich bei dieser Gelegenheit in ein positives Licht zu rücken. Wir können im Gegenteil vermuten, dass jeder Statthalter einer Provinz in vergleichbarer Form reagieren musste, wobei wahrscheinlich nicht jeder von ihnen so glücklich war, einen Verwandten des künftigen Kaisers unter seinen Untergebenen zu haben, den er in dieser Situation als Boten verwenden konnte. Sicherlich machte sich auch eine persönliche Gesandtschaft des Senates auf den Weg nach Mogontiacum, um die Glückwünsche des Hohen Hauses zu übermitteln.

Daneben dürften auch andere Gesandtschaften eingetrudelt sein, die z. B. [zum Beispiel] Gemeinden repräsentierten, die in einem Patronatsverhältnis zur Familie Traians standen. Hier wäre an erster Stelle an die Heimatgemeinde Italica in der Baetica zu denken.

Es ist auch denkbar, dass der Landtag der *Tres Galliae* in Lugdunum auf diese politische Entwicklung reagierte und daher einen oder mehrere Repräsentanten nach Mainz entsandte. Die Provinz Germania *superior* war zwar seit Domitian von Gallien getrennt, aber wir wissen, dass Vertreter des gallischen Landtages mehrmals im Jahr in Mainz anwesend sein mussten, um an den Gedenkfeierlichkeiten für Drusus I und seinen Sohn Germanicus teilzunehmen.

Anm. 1: Dies kann man durch eine Inschrift aus Lambaesis (CIL VIII, 2596 = ILS 2381 erschließen, aus der die entsprechende Aufteilung bei der *legio III Augusta* deutlich wird.

Anm. 2: Dies geht ebenfalls aus der Inschrift von Lambaesis hervor, da dort ein eigener ‚Führer des Dienstagebuches‘ (*commentariensis*) für den *tribunus* genannt wird.

### *Nachtrag*

Die durchschnittliche Tagesstrecke, die Hadrian während seines Rittes zurücklegen konnte, hängt von einer Reihe von Faktoren ab. Während der Einfluss des Wetters nicht evaluiert werden kann, weil wir dazu keine Informationen haben, sind andere Faktoren bekannt. Wir können z. B. davon ausgehen, dass Hadrian sich auf ausgebauten Straßen fortbewegen konnte, die zusätzlich durch das System des *cursus publicus* mit regelmäßigen Wechselstationen (*mutationes*) und Übernachtungsmöglichkeiten (*mansiones*) erschlossen waren. Da Hadrian im offiziellen Auftrag unterwegs war, konnte er natürlich dieses System im vollen Umfang nutzen, was wohl in erster Linie den regelmäßigen Austausch der Pferde betraf.

Peter Herz, Der Ritt Hadrians nach Mogontiacum

Die entsprechenden Nachrichten für sicher dokumentierte Reisegeschwindigkeiten und zurückgelegte Tagesstrecken finden sich bei A. Kolb, *Transport und Nachrichtentransfer im römischen Reich*, Berlin 2001, 308 ff.

Eine m. E. entscheidende Frage können wir allerdings nicht endgültig beantworten. Ging es Hadrian bei diesem Ritt nach Mogontiacum lediglich um die Übermittlung einer Routinenachricht, bei der es keinen besonderen Zeitdruck gab, oder verfolgte Hadrian insgeheim die Absicht, möglichst schnell bei dem neuen Alleinherrscher zu erscheinen, um sich so in ein besonders gutes Licht zu rücken. Unter dem Gesichtspunkt der künftigen Vergabe von interessanten Stellen in der Nähe des Kaisers wäre dies ein nicht unwichtiger Punkt. Daher tendiere ich zu der Meinung, dass Hadrian eine durchaus höhere Tagesleistung wie üblich angestrebt hat. Natürlich nicht die Geschwindigkeit, die ein Kurier eingeschlagen hätte, der einen Grenzdurchbruch melden musste, aber sich nicht so langsam wie ein Bote, der Routinemeldungen wie die jährlichen Stärkemeldungen des Provinzheeres oder den ordnungsgemäßen Vollzug der *nuncupatio votorum* übermittelte.

Note by the editor Chrystina Häuber:

Concerning the following statement by Peter Herz in his fifth *Contribution*:

"Man kann vermuten, obwohl dies im Gegensatz zur Adoption nicht ausdrücklich in den Quellen angesprochen wird, dass Traian unmittelbar nach der offiziellen Verkündigung seiner Adoption auch die rechtlichen Kompetenzen eines *princeps* erhielt, also die *tribunicia potestas* ...",

- I should like to add a comment.

Cf. Dietmar Kienast, Werner Eck und Matthäus Heil, *Römische Kaisertabelle* (2017, 116):

"Trajan ([reigned] 28. Jan.[uar] 98 - 7. Aug.[ust] 117) ...

Wichtige Einzeldaten:

Ende Okt.[ober] 97

Adoption durch Nerva und Erhebung zum Caesar: IMP. CAESAR NERVA  
TRAIANUS.

28. (?) Okt.[ober] 97

**Übernahme der tribunicia potestas [my emphasis]**".

*The sixth Contribution by Peter Herz : Rom. Strukturen der Versorgung*

This *Contribution* belongs to the following *Chapter*:

*A Study on the colossal portrait of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori at Rome (cf. here Fig. 11). With The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great);*  
*at Part II. Ancient Rome's new commercial river port, at La Marmorata. With discussions of the 'Porticus Aemilia' (in realty identifiable as Navalvia) and of the Horrea Aemiliana. With The sixth Contribution by Peter Herz: Rom. Strukturen der Versorgung; and with The second Contribution by Franz Xaver Schütz : Wie schwer war der ägyptische Obelisk, der heute auf der Piazza di S. Giovanni in Laterano in Rom steht?*

## Rom. Strukturen der Versorgung

Peter Herz

Die Stadt Rom repräsentierte bereits in der späten Republik ohne Zweifel die größte städtische Siedlung im gesamten Mittelmeergebiet. Wenn man dabei die Problematik einer angemessenen Versorgung selbst nur mit den Grundnahrungsmitteln (Getreide, Olivenöl, Wein und mit einer reduzierten Bedeutung Fleisch und Fisch) anspricht, dann kann man wahrscheinlich für Rom von einer Population von deutlich mehr als 1 Million Menschen ausgehen, die es zu versorgen galt.

Um allen möglichen Missdeutungen zu begegnen, sind einige Klarstellungen notwendig. Wenn es um die Versorgung mit den Grundnahrungsmitteln geht, dann muss man natürlich nicht nur die eigentliche Stadt Rom berücksichtigen, sondern man muss von einem breiten Ring mit einer verdichteten Besiedlung ausgehen, also kleinere Siedlungen, Villen usw., der sich um das eigentliche städtische Zentrum gelegt hatte, aber wahrscheinlich in der Hauptsache über Rom und seine Märkte versorgt wurde. Es ist gerechtfertigt, auch die dort lebende Bevölkerung zu berücksichtigen, da wir etwa im Fall der Senatoren davon ausgehen können, dass sie regelmäßig (samt ihrer jeweiligen Entourage) zwischen ihrem Domizil in der Innenstadt von Rom und ihren verschiedenen Villen im Umland (*villae suburbanae*) hin- und herpendelten [mit Anm. 1]. Bereits aus den Zeiten der frühen Republik sind genügend Berichte vorhanden, die die Anfälligkeit der Stadt Rom bei einer ausreichenden Versorgung mit Getreide aus dem Umland von Rom belegen. Man konnte diesem Defizit bereits damals nur wirkungsvoll begegnen, indem man auf die Getreideproduktion anderer Regionen zurückgriff.

Damit kommen wir zur Achillesferse Roms im eigentlichen Sinne, die mangelhafte Anbindung der Stadt an die überregionalen Verkehrs- und Transportsysteme. Das vielgerühmte Straßensystem des Imperium Romanum war sicher geeignet, um schnell Nachrichten zu transportieren oder Truppen marschieren zu lassen, aber es war kaum darauf ausgelegt, schnell und vor allem kostengünstig über längere Strecken Massengüter wie etwa Getreide zu transportieren [mit Anm. 2]. Dies hat sich erst seit dem Beginn des 19. Jh. grundlegend verändert, als durch die Eisenbahn völlig neue Transportmöglichkeiten eröffnet wurden. Bis zu diesem Zeitpunkt waren die von Maultieren und Ochsen gezogenen Wagen das einzige Transportmittel [mit Anm. 3].

Im Fall von Rom bedeutet dies, dass man weitgehend auf den Wasserweg verwiesen wurde, wenn man die Stadt wirklich mit Massengütern versorgen wollte. Dies bedeutete im Fall von Rom, dass man auf die Transportmöglichkeiten des Tiber vertrauen musste. Der Tiber war allerdings keine besonders leistungsfähige Wasserstraße. Abgesehen von den saisonal stark schwankenden Wasserständen des Flusses gab es am Oberlauf des Flusses keine besonders leistungsstarken Gebiete, die größere Überschüsse für die Versorgung Roms hätten produzieren können. Man musste also die notwendigen Mengen an Grundnahrungsmitteln 1. über den Seeweg und den Hafen von Ostia importieren und dann 2. diese Waren dann auch noch auf einem notorisch unzuverlässigen Fluss und gegen die Strömung bis zum Verbrauchsort in Rom transportieren.

Wenn man an dieser Stelle die Versorgungssituation für die anderen Metropolen der römischen Kaiserzeit wie Alexandria, Karthago oder Antiochia vergleicht, so fallen die für Rom charakteristischen Nachteile besonders deutlich ins Auge. Alexandria und Karthago waren Großstädte mit leistungsfähigen Häfen, die deutlich leichter zu managen waren als Ostia, dessen Hafenanlagen außerdem durch die Sedimente des Tiber nach und nach unbrauchbar gemacht wurden. Zusätzlich konnten diese beiden Metropolen auch noch auf die landwirtschaftliche Produktion eines reichen Hinterlands zurückgreifen. Während Alexandria durch

Peter Herz, Rom. Strukturen der Versorgung

einen Stichkanal mit dem Nil verbunden war und damit auch die Ressourcen ganz Ägyptens für sich nutzen konnte, lag Karthago am Ausgang des reichen Bagradastals, das gut 100 km weit ins heute tunesische Binnenland hineinreichte und dessen Produktion jederzeit für die Versorgung Karthagos verwertet werden konnte.

Lediglich die syrische Metropole Antiochia fällt hier etwas aus dem Rahmen, da ihr Seehafen, Seleukia in Pierien, in einiger Entfernung von der eigentlichen Stadt lag. Sie konnte diesen Nachteil allerdings leichter als Rom kompensieren, da Antiochia den Zugriff auf die natürlichen Ressourcen des gesamten Orontestales hatte.

Rom konnte die offensichtlichen strukturellen Nachteile bei seiner Versorgung nur kompensieren, weil es über Jahrhunderte einen politischen Sonderstatus besaß, der ihm in Versorgungsfragen die absolute Priorität einräumte. In der praktischen Konsequenz bedeutete dies, dass über lange Zeit viele Ressourcen aus dem gesamten Imperium Romanum aufgewendet wurden, nur um Rom zu versorgen.

Die in den Quellen sicherlich am besten dokumentierte Art der Versorgung betrifft die Versorgung Roms mit kostenlosem bzw. stark subventioniertem Getreide. Das Getreide wurde entweder in der Form von Sachsteuern bereitgestellt bzw. es stammte als Pachtgetreide aus den Einkünften der staatlichen Domänen. Kostenlos wurde Getreide bei der allmonatlichen *frumentatio* an einen ausgewählten Teil der stadtrömischen Bevölkerung abgegeben. Daneben steht ein ebenso großer Betrag an Getreide, der an die Betreiber der Großbäckereien in Rom abgegeben wurde, damit diese billiges Brot produzieren konnten. Die Masse dieses Getreides wurde auf dem Seeweg aus außeritalischen Produktionsgebieten angeliefert und musste daher den Transportweg über den Tiber nehmen.

Dank der sehr regen Erforschung der Transportamphoren sind wir relativ gut über die Herkunft von zwei weiteren Grundnahrungsmitteln (Olivenöl, Wein) informiert. Die Masse des in Rom verbrauchten Olivenöls stammte aus den Produktionsgebieten in der Baetica und in Nordafrika, während sich bei der Belieferung mit Wein ein etwas abweichendes Bild bietet, da wir auch in der hohen Kaiserzeit von einer immer noch sehr regen italischen Weinproduktion ausgehen müssen. Wenn dieser Wein allerdings außerhalb Latiums produziert wurde, dann dürfte man auch im Fall des italischen Weins den Seetransport über Ostia gewählt haben. Diesen Weg dürfte man auch bei der Belieferung von außeritalischen Weinen (Spanien, Nordafrika, Griechenland und griechische Inseln) regelmäßig gewählt haben.

Da wir in Rom von einer sehr regen Bauindustrie ausgehen müssen, erhebt sich auch die Frage, woher die dafür notwendigen Baumaterialien gekommen sind. Dabei müssen wir wohl von einem gespaltenen Markt ausgehen.

Ziegel, einfache Bausteine und die für die Herstellung von Mörtel notwendigen Materialien konnte man in ausreichenden Mengen im Großraum von Rom produzieren. Bauholz für die Verschalungen, den Bau von Gerüsten oder den Innenausbau von Gebäuden konnte man aus den damals noch bewaldeten Regionen am Oberlauf des Tiber beschaffen. Die Frage, ob die dortigen Kapazitäten allerdings ausgereicht haben könnten, um den enormen Bedarf Roms auf die Dauer abzudecken, lässt sich momentan noch nicht beantworten, da bisher selbst die einfachsten Überlegungen zum Holzbedarf Roms fehlen. Hochwertiges Holz oder Holz, das die üblichen Dimensionen überschritt (z. B. große Dachbalken), wurde nachweislich (Plinius, *Naturalis Historia*) über große Entfernungen aus den Wäldern der südlichen Alpen und daher auf dem Seeweg angeliefert.

Hochwertiges Baumaterial, zu dem hier vor allem alle Sorten von Marmor zählten, musste hingegen zu allen Zeiten nach Rom importiert werden. Neben dem weißen Marmor von Luna (heute Carrara) ist durch die entsprechenden Funde die Verwendung von afrikanischem Marmor aus Simmithus und diversen

Marmorsorten aus Griechenland, Kleinasien und Ägypten nachgewiesen. Dieser Marmor wurde dabei in unterschiedlichen Formen angeliefert: in Blockform, die sich z. B. für Inkrustationen weiterverarbeiten ließ, als monolithische Säulen, aber auch als bereits in der Rohform zugerichtete Sarkophage. Da die meisten der heute bekannten größeren Vorkommen an Marmor unter der direkten Kontrolle der kaiserlichen Verwaltung standen, brachte ihre Ausbeutung einen bedeutenden Zufluss für die kaiserlichen Kassen.

Ein wichtiger, aber bisher eher im Schatten der Forschung verharrender Teil der Versorgung Roms, betrifft die Frage der Energieversorgung, was konkret Holz bzw. Holzkohle bedeutet. Neben dem Einsatz in der verschiedenen Werkstätten Roms, wo wir vom Einsatz von Holzkohle ausgehen können, ist dabei vor allem die Frage von Brennholz zu berücksichtigen. Während die Beheizung der einzelnen privaten Unterkünfte im Gegensatz zur modernen Situation eher von zweitrangiger Bedeutung gewesen sein dürfte, da die Mietverträge offensichtlich ausdrücklich die Beheizung durch offene Holzkohlenbecken untersagten, stellt die Beschaffung des für die Thermen, aber auch die vielen kleineren Bäder benötigten Heizmaterials ein großes Problem dar.

Wir werden hier mit zwei unterschiedlichen Problemen konfrontiert. 1. Während die Forschung lange Zeit fest davon ausging, dass man zur Beheizung der Thermen trockenes Stammholz verwendete, hat sich durch die Forschungen von Johannes Lehar, einem Heizungsspezialisten, inzwischen die Meinung verfestigt, dass man aus technischen Gründen in einem Dauerbetrieb Holzkohle verwenden musste, da sonst die Heizungsanlagen durch Rauchgase usw. binnen kurzer Zeit unbrauchbar werden würden. Die Verwendung von Holzkohle hat sicherlich das Gewicht der Energieträger, die man nach Rom transportieren musste, reduziert, konnte aber bisher noch nicht die Frage beantworten, woher Brennholz bzw. Holzkohle überhaupt angeliefert wurden.

Damit kommen wir zu Problemkreis 2. der regionalen Herkunft der Energieträger. Einen gewissen Teil konnten sicherlich die damals noch bewaldeten Regionen am Oberlauf des Tibers bereitstellen, wobei die literarischen Quellen leider erst in der Spätantike in der Lage sind, hier genauere Auskunft zu geben. Hier zeichnen sich für Rom offensichtliche Versorgungsprobleme ab, die teilweise durch die zwangsweise Belieferung der Hauptstadt mit Brennholz gelöst werden sollten. Die Tatsache, dass allerdings Getreideschiffe aus Nordafrika dazu verpflichtet wurden, als Teil ihrer Fracht auch noch Brennholz für Rom an Bord zu nehmen, unterstreicht, dass hier ein offensichtlich schweres Versorgungsproblem existierte, das die Versorgung der Hauptstadt deutlich belastete.

Eine wichtige Warengruppe, die zwar archäologisch nur schwer nachweisbar ist, aber trotzdem dank der literarischen Quellen vergleichsweise gut dokumentiert ist, wird durch die Importe an wilden Tieren repräsentiert, die in den *venationes* ‚verbraucht‘ wurden. Da nur wenige dieser Tiere wie etwa die Bären oder die Wildschweine in Italien selbst beschafft werden konnten, hatte sich ein weitgespanntes Handels- und Beschaffungsnetzwerk entwickelt, das nachweislich sogar über die Grenzen des Imperium Romanum hinausgriff. Diese Tiere wurden wahrscheinlich ebenso wie viele der Pferde, die für die Pferderennen in Rom benötigt wurden, zunächst auf dem Seeweg über die Häfen von Ostia und später Portus importiert und dann in der nächsten Phase auf dem Fluss nach Rom geschafft.

Damit kommen wir zu dem eigentlichen Problem in der Versorgung Roms: der Anfälligkeit des Transportweges über den Tiber. Wir müssen wahrscheinlich von einer Situation ausgehen, dass viele hundert Schiffe permanent eingesetzt werden mussten, um die benötigten Waren in die Hauptstadt zu transportieren. Man dürfte dabei viele Schiffe gegen den Strom gerudert haben, aber bei größeren Schiffen ist wohl davon auszugehen, dass diese Schiffe getreidelt wurden, wobei sowohl Zugtiere als auch die reine Menschenkraft zum Einsatz kam.

Peter Herz, Rom. Strukturen der Versorgung

Die zufällig bei Tacitus (*Ann.* 15.18.2) überlieferte Nachricht, dass bei einer der dabei notwendigen Übernachtungsstellen 200 Schiffe bei einem Feuer vernichtet wurden, gibt einen kleinen Einblick in die wahrscheinlichen Dimensionen des Transportes, kann aber nicht eine umfassende Untersuchung ersetzen. Wenn man das Personal berücksichtigt, das wahrscheinlich beim Umschlag in den Häfen von Ostia und Portus beschäftigt war, dann dürfte man mit einer Zahl von deutlich über 10000 Menschen, die in diesem Bereich der Wirtschaft beschäftigt waren, nicht falsch liegen.

In seiner **Anm. 1**, schreibt Herz: "Wie weit man den Ring der *villae suburbanae* ausdehnen kann, etwa bis Praeneste oder Tibur (Villa Hadriana), ist schwer zu bestimmen. Man sollte vielleicht einen Radius von 25 bis 30 Meilen um das Stadtzentrum als Berechnungsgrundlage nehmen".

In seiner **Anm. 2**, schreibt er: "Es reicht völlig aus, die unterschiedlichen Kosten für den Warentransport auf dem Land oder über See zu vergleichen".

In seiner **Anm. 3**, schreibt er: "Der Einsatz von Pferden als Zugtier lohnte sich erst nach der Einführung des Kummets".

*The first Contribution by Eugenio La Rocca on the question, whether Domitian, who filled in the valley on the Mons Oppius, could already have planned to erect those large public baths there which should become the Baths of Trajan*

This *Contribution* belongs to the following *Chapter* in volume 3-2 :

**Appendix IV.d.4.c) Domitian's building projects at Rome: Conclusions arrived at in Appendix IV.d. With The first Contribution by Eugenio La Rocca.**

*As a result of this Chapter it seems to be clear that Domitian, who destroyed the sella between the Quirinal and the Arx, in order to erect his huge forum there (the later 'Forum of Trajan'), had used this excavated material to fill in a valley on the Mons Oppius. This finding invited the further assumption that already Domitian had planned to erect at this site great public baths, the now so-called 'Baths of Trajan'. The confirmation that Domitian had actually started building those baths, reached me only afterwards.*

The following are quotes from *Appendix IV.d.4.c)* in volume 3-2 :

``Domitian had an enormous wealth of architectural visions for Rome, which he actually managed to realize - *a tutti costi*. Let's for a moment consider only those two above-mentioned 'pharaonic projects', the 'Colosseum city' and the redevelopment of the vast area that comprised the *Campus Martius* and the Capitoline Hill, both of which had been destroyed by the fire of AD 80. The latter project was supposed to comprise also the area of the *sella* between the *Arx* and the Quirinal, where, after its destruction, Domitian would build his new *Forum* - which became the *Forum* of Trajan.

Only after this *Chapter* was written up to this point, did I realize that both of Domitian's here-so-called 'pharaonic' building projects were actually very closely related; the areas and buildings of these projects are marked on the maps here **Figs. 58; 59; 72; 73**. When discussing those two projects with Franz Xaver Schütz on 11th July 2020, he asked me: and what did Domitian decide to do with all the earth the workmen would excavate between the *Arx* and the Quirinal in the course of destroying the former *sella* between those two hills in order to create the area needed for his new *Forum*?

At this point I remembered that Franz Xaver Schütz and I, many years ago, when discussing the matter with geographers at the Universität Tübingen, had come to the conclusion that this material was used to fill a former valley on the *Mons Oppius*, and that this operation was the prerequisite to build the Baths of Trajan. We know also that the huge office building, called 'Mercati di Traiano', was definitely begun by Domitian. And because this structure could only be erected after, at least in this area, the former *sella* between Quirinal and *Arx* was destroyed, already Domitian must have ordered to fill this former valley on the *Mons Oppius* with the material excavated at the *sella*. This former valley on the *Mons Oppius* had previously belonged to Nero's *Domus Aurea*. Because of this fact it is tempting to believe that it had already been Domitian's idea to erect public baths at this site - another great enterprise undertaken for the benefit of the People of Rome.

Or, to be more precise, by erecting large public baths on the *Mons Oppius*, Domitian could have proven his *virtus liberalitas* ...

For the valley on the *Mons Oppius*, which was filled by Domitian with the material excavated at the *sella* between the *Arx* and the Quirinal in order to create the huge area, where - the Baths of Trajan would be erected (cf. *infra*, in volume 3-2, in *Appendix I.a)*; at Section IX. *The hypothesis to identify the praefectura urbis of the Flavian period with the Vespasianic 'edificio della >Città Dipinta<', found underneath the Baths of Trajan; and in Appendix I.a)*; at Section X. *My reconstruction of R. Volpe's (2000) new valley, in which the Vespasianic building with the >Città Dipinta< once stood, and in which my old Vicus Iovis Fagutalis ran) ...*

As discussed in detail above, in this former valley on the *Mons Oppius*, which Domitian had already decided to fill in, had stood for example the famous 'edificio della >Città Dipinta<', which was found underneath the Baths of Trajan.

Eugenio La Rocca has now published his research on an immediately adjacent building in the same valley, which was likewise excavated underneath the Baths of Trajan (cf. *id.: Mosaici parietali nel Musaeum del Colle Oppio*, 2020a). La Rocca (2020a) convincingly identifies this structure as a pavilion belonging to Nero's *Domus Aurea* and is able to demonstrate by his analysis of its wall decoration with mosaics that this structure comprised a *Musaeum*.

Discussing with La Rocca my idea suggested here that it may already have been Domitian's idea to erect large Baths on the *Mons Oppius* at precisely the same site, where Trajan should actually build his Baths, La Rocca answered me by E-mail on 3rd August 2020 that he agrees with me that this is indeed possible. La Rocca has confirmed by E-mail of 4th August 2020 that I may publish his note here with his kind consent':

On 2nd August 2020, I wrote Eugenio La Rocca the following E-mail:

"Caro Eugenio,

...

Adesso ho sviluppato nell'ultimo capitolo del libro su Domiziano (che tu non hai ancora) la mia vecchia idea: perché già Domiziano ha costruito i "Mercati di Traiano", penso che non solo Traiano abbia riempito la valle sull'Oppio col materiale scavato dalla *sella* tra Quirinale ed *Arx* - ma già Domiziano. - Appunto anche perché questo era l'area della *Domus Aurea* ...

Adding to this Email later on 2nd August 2020 the following *Post Scriptum*:

"Caro Eugenio,

e se Domiziano ha già riempito "la valle di Rita Volpe" sul Colle Oppio, dobbiamo anche domandarci PERCHÉ - per lì costruire grande Terme?

Con questa domanda ho finito mio testo. Se ti interessa, ti mando questo capitolo.

Ciao,

Chrystina"

*The first Contribution by Eugenio La Rocca*

*on the question, whether Domitian, who filled in the valley on  
the Mons Oppius, could already have planned to erect those  
large public baths there which should become the Baths of Trajan*

On 3rd August 2020, Eugenio La Rocca was kind enough to answer my above-quoted Emails of 2nd August 2020 with the following Email:

"È più che probabile! Per quanto sappiamo, Traiano ha ripreso, e completato, il gigantesco programma monumentale predisposto da Domiziano. E se anche Domiziano non avesse ancora iniziato a costruire le terme, che potevano essere state pensate secondo un progetto differente, non significa che Traiano non si fosse trovato, come avvenuto nel suo foro, di fronte all'avvio di un importante intervento edilizio rimasto però allo stato embrionale.

Un caro saluto

Eugenio".

*The second Contribution by Eugenio La Rocca : Una nota sul labirinto del Palatino*

This *Contribution* belongs to the the following *Chapter* :

**Preamble : Domitian's negative image; Section III.: My own thoughts about Domitian. With The second Contribution by Eugenio La Rocca : Una nota sul labirinto del Palatino; at point 4.) Domitian identified himself with Romulus and Theseus, exactly as Augustus before him.**

The following is a quote from this Chapter:

“Domitian built his Palace on the Palatine, not by chance called ‘*Domus Augustana*’, at the site of the (real) House of Augustus (which stood at the presumed site of Faustulus's hut, where Romulus had grown up), and where already Nero had built his *Domus Aurea* for the same reasons as Augustus. In addition to this, Domitian (like Nero) had actually rebuilt Rome after a great fire (in AD 64 and 80, respectively), which is why Domitian *felt*, in addition to this, like Romulus. For discussions of those subjects; cf. *infra*, in volume 3-2, at *Appendix VI*. ...

Domitian's relevant propaganda has also been addressed by Licia Luschi in her article ("Un gruppo di Teseo con il Minotauro dell'*Albanum Domitiani*. Origine e dispersione delle antichità Barberini", 2015).

Luschi (2015) discusses the fact that Domitian had at his Villa, called *Albanum*, two sculpture groups, the originals of which had been dedicated on the Acropolis at Athens : Myron's group of Athena and Marsyas and a sculpture group of Theseus and the Minotaur. Luschi (2015, 13 n. 115), therefore, follows an (unpublished) idea of Paolo Liverani, according to which, by copying those famous artworks, and putting them on display at his *Albanum*, ‘these two sculpture groups could have created together "il modello dell'Acropoli ateniese"’.

Luschi suggests, in addition to this, that Domitian had also another copy of this group of Theseus and the Minotaur on the Palatine, where these sculptures decorated the labyrinth fountain of the ‘Peristyle’ of his ‘*Domus Flavia*’ / *Domus Augustana*. Because of all this, Luschi (2015, 197 ...), suggests that Domitian ‘re-used well known symbols of the Augustan period: the Athenian acropolis, its patron goddess Athena and Theseus, and identified himself with the mythical king of Athens, Theseus’.

For Domitian's Palace on the Palatine ‘*Domus Flavia*’ / *Domus Augustana* with this labyrinth fountain; cf. here **Figs. 8.2; 58; 8.1**, labels: PALATINE; "DOMUS FLAVIA"; "PERISTYLE", and **Figs. 108-110** ... and *supra*, at Chapter *The major results of his book on Domitian*) ...

In my discussion of Domitian's *Villa*, called *Albanum* (cf. *infra*, in volume 3-2, at *Appendix IV.d.4.b*)), I have followed Luschi's (2015) hypothesis concerning this labyrinth fountain in Domitian's Palace on the Palatine. Before following such a hypothesis, we should, of course, on principle first of all investigate, whether this labyrinth fountain had already existed at Domitian's time (!).

This I had so far not done, as I must confess, taking for granted that this is the case, because Luschi (2015, 8 writes [this, follows the relevant quotation] .... But because this labyrinth is heavily restored, I am very glad that Alexander Heinemann has asked me in an E-mail of 26th January 2023, whether I could provide him with publications, in which it has been demonstrated that this labyrinth is actually *ancient*.

I answered Heinemann that this labyrinth is obviously indeed Domitianic, as Natascha Sojc's recent plan of Domitian's Palace shows, in which she has also marked the ‘Peristyle’ with its labyrinth fountain; cf. Sojc ("Archaeological Evidence from Domitian's Palatine", 2021, 132, Fig. 2). The caption of her Fig. 2 reads:

"Overview of the nucleus of Domitian's palace with names given to individual wings and rooms by archaeological research for better orientation, but with no correspondence to ancient terminology. Rome, Palatine (A. Reeder after instructions by the author), label: 4 (= "Peristyle with fountain")."

When discussing this problem with Franz Xaver Schütz, he, on his own account, searched for a discussion of the matter in the Internet and found an article by Staffan Lundén ("The Palatine Labyrinth. Was it built in the 1st or 20th Century?", 2004), who believes instead that this labyrinth was 'invented' by its excavator Giacomo Boni.

Lundén quotes in his article *inter alia* "La Rocca 1994". Fortunately I had the chance to discuss Lundén's article (2004) with Alexander Heinemann and with Eugenio La Rocca. La Rocca told me that he neither edited the relevant volume, quoted by Lundén (2004), nor that he contributed an essay to it. He was, in addition to this, kind enough to send me the article by Alessandra Capodiferro in this publication of 1994, which Lundén (2004, 1 n. 2) refers to as "ed. La Rocca 1994". Capodiferro (1994, 73) mentions the labyrinth fountain.

La Rocca also answered my relevant questions, first in several telephone conversations, then by E-mail on 18th February 2023, providing evidence which proves beyond any doubt that this labyrinth (cf. here **Fig. 8.2**), which Boni had excavated and later restored, is indeed ancient. With La Rocca's kind consent, I may publish here his E-mail as his second *Contribution* to this volume':

*The second Contribution by Eugenio La Rocca :*

*Una nota sul labirinto del Palatino*

Cara Chrystina,

il libro del 1994 è "Archeologia in posa", un catalogo di cui non sono stato né curatore, né autore. Non sono io, perciò, che ho dato le informazioni di cui parla nel suo articolo Staffan Lundén. Ciò detto, mi sembra del tutto inverosimile che Giacomo Boni si sia inventato il labirinto. Lo afferma anche Alfonso Bartoli, il suo successore sul Palatino, in una sua relazione di scavo nella vicina Domus Augustana, pubblicata in "Notizie degli Scavi". Ti ho trasmesso per e-mail le immagini della copertina e della parte del testo in cui Bartoli parla della scoperta: "Al piano di questa egli (scil. Boni) scoprì l'impluvium con il labirinto". È chiaro che Bartoli non abbia alcun dubbio sull'originalità del labirinto, malgrado esso sia stato praticamente quasi del tutto ricostruito. L'iper critica come quella di Lundén può essere molto pericolosa perché, con questo meccanismo, si mettono in dubbio tutti gli interventi di restauro compiuti nella prima metà del XX secolo.

Un abbraccio  
Eugenio

On 21st February 2023, La Rocca wrote me in another mail the relevant reference:

...

La citazione è:

A. Bartoli, "Scavi del Palatino (Domus Augustana), Relazione prima", in *NSc* 1929, pp. 3-29. Il riferimento al labirinto è a p. 5 (da cui ho tratto l'immagine che ti ho trasmesso).

...

And on 22nd February 2023, La Rocca wrote me:

Cara Chrystina,

ti ho trasmesso per We Transfer le pagine del volume "Archeologia in posa" dedicate alla Domus Flavia. Ora capisco perché non mi ricordavo affatto di aver scritto un testo nel volume: è che effettivamente non l'ho scritto! Il volume, curato da Marina Piranomonte e Alessandra Capodiferro, è della Soprintendenza Archeologica di Roma (Adriano La Regina), e la scheda della Domus Flavia è di Alessandra Capodiferro. Francamente non so come ci sia stato un equivoco così grande sul mio nome, che non compare affatto in tutto il libro.

Ho segnalato in giallo il punto in cui Alessandra Capodiferro ribadisce l'esistenza di un labirinto ottagonale al centro del peristilio.

...

Un abbraccio  
Eugenio

Comments by the editor Chrystina Häuber:

Staffan Lundén (2004, 1 with n. 2) writes:

"The labyrinth is located in a peristyle (peristyle F) that was excavated in 1912-14 by the archaeologist Giacomo Boni. [with n. 2]".

In his **note 2**, Lundén writes: "For the appearance of the peristyle before the excavation, see the photograph in: A. Bartoli, *Il Palatino*, (Monumenti d'Italia 5), Roma 1911, 19, also reproduced in: *Archeologia in posa. Cento anni di fotografie*, ed. E. La Rocca, Roma 1994, 94, pl. 94".

Cf. Alessandra Capodiferro (1994, 94, Fig. 94). The caption of this photograph reads: "Veduta dell'angolo sud-occidentale della *domus Flavia* prima degli scavi di Boni degli anni 1912-14".

*The Contribution by Eric M. Moormann : Can We Reconstruct the Templum Gentis Flaviae?*

This *Contribution* belongs to the following *Chapter* :

**IV.1.1.h) The new findings by B. E. Borg (2019) concerning the Templum Gentis Flaviae support the hypothesis suggested here that Domitian's obelisk (cf. here Fig. 28) was commissioned for the Iseum Campense. With some observations concerning the Temple of Divus Traianus at Italica, and concerning the Marble Forum at the Colonia Augusta Emerita (Mérida) in Spain. With The Contributions by Eric M. Moormann, Mario Torelli, and Walter Trillmich, and with The second Contribution by Jörg Rüpke.**

## Can We Reconstruct the Templum Gentis Flaviae?

Eric M. Moormann

As Chrystina Häuber has demonstrated, the discussion about the location and architectural shape of the sanctuary Domitian dedicated to his divinized father and brother – which should become a dynastic monument, including the memory of himself and other members of the Flavian family – is complex. The concept of a concrete memory for a divinized predecessor had a certain tradition: the Temple of the divus Julius in the Forum Romanum and the gigantic temple for the divus Claudius on the Caelius were points of reference in the Roman cityscape. The latter complex – started by Agrippina in 54 and completed by Vespasian in the 70s – included a traditional podium temple and a large garden surrounded by porticoes. Probably Domitian had a similar concept in mind, to be erected in the area of his house of birth, *ad malum punicum*, on the Quirinal, next to the Temple for Quirinus. Since no archaeological vestiges from the 90s on the Quirinal can be attributed to this massive monument, the discussion on its actual location remains for the major part a conundrum. However, remains of substantial architectural structures found under the Planetario in Via S. Romita, not far from Piazza della Repubblica (originally part of the Baths of Diocletian, known under this sobriquet thanks to one of its modern uses) on which the reader finds all novelties in Häuber's work. Moreover, the Hartwig reliefs and a colossal head of Titus were found in the same area, so that we may locate the monument in the whereabouts of the crossroads of Via XX Settembre and Via delle Quattro Fontane and Largo Santa Susanna, while it extended to Via San Vitale.

One of the major questions concerns the shape of the complex. Here I would not follow Coarelli's proposal of a round funerary monument *à la* Mausoleum of Augustus, but rather assume a traditional shape, such as that of the temple of the divus Claudius. This is a octo- or decastyle temple standing on a podium and surrounded by porticoes. Maria Cristina Capanna's research still offers the clearest solution, that of an octastyle temple, which has been followed by fine observations made by Barbara Borg and Chrystina Häuber, to mention the most recent contributions only. The way in which the urns of the sovereigns were systemized cannot be reconstructed at all. Yet, even if we can say much more than some twenty years ago (see Filippo Coarelli's brief lemma on the temple in *LTUR II* (1995) 368-39 as the starting point), I think that caution needs to be made in order not to overestimate the data. The discussion on the number of columns of the temple's façade for instance (cf. Capanna) remains futile as long as no precise measures of either columns or podium have come to light.

Note by the editor Chrystina Häuber:

Eric M. Moormann refers in his text to the following publications: to Häuber (*i.e.*, this volume), and with 'the Hartwig reliefs', to Rita Paris (1994a; *ead.* 1994b), with 'a colossal head of Titus' (c. here **Fig. 53**) to Eugenio La Rocca (2009; 2020b), further to Coarelli (2009b; *id.* 2014), with the 'octostyle temple', to Maria Cristina Capanna (2008), with the decastyle temple', to Mario Torelli (1987), and to Barbara Borg (2019). For those references; cf. the *Bibliography* in this volume.

*The first Contribution by Jörg Rüpke on the question, how many Vestal Virgins we might expect to appear at public ceremonies, such as the one shown on Frieze B of the Cancelleria Reliefs*

This *Contribution* belongs to the following *Chapter* :

**V.1.d) The reconstruction, in my opinion erroneous, of the length of Frieze B of the Cancelleria Reliefs by S. Langer and M. Pfanner (2018) (cf. here Figs. 1 and 2 drawing) and the correct reconstruction of the length of Frieze B by F. Magi (1945), whom I am following here (cf. here Figs. 1; 2; Figs. 1 and 2 drawing; and Figs. 1 and 2 of the Cancelleria Reliefs, drawing, 'in situ'). With a discussion of how many Vestal Virgins we might expect to appear at public ceremonies, such as the one shown on this panel (cf. here Fig. 2), and with The first Contribution by Jörg Rüpke.**

The following is a quote from Chapter V.1.d) :

“Nevertheless there is perhaps an important reason that might speak against the reconstruction of Frieze B, as suggested by Langer and Pfanner (2018, 73, 76, 29), who add an additional slab between the existing ones B1 and B2 (see their Fig. 7b on p. 31), with which they suggest to fill their newly created ‘gap’ within the represented scene, and where, in their opinion, the ‘so far missing sixth Vestal Virgin’, plus possibly further figures, were represented.

Being on principle greatly interested in ‘pagan’ religions, although not specifically an expert in the ‘college of the Vestal Virgins’, I find the following remark by Ranuccio Bianchi Bandinelli (1946-48, 259, that was already quoted *supra*, at Chapter IV.1.), very convincing:

**"Anche sul soggetto del rilievo B l'accordo è quasi completo: l'unico *adventus* di Vespasiano da imperatore è quello del 70 ... Sappiamo che, storicamente, l'incontro fra Vespasiano e Domiziano avvenne a Benevento; mentre il rilievo trasporta l'avvenimento a Roma, come è mostrato dalla presenza delle cinque Vestali (la sesta non poteva esserci, perché il culto non poteva essere abbandonato) ... [my emphasis]"**

Asking Jörg Rüpke for advice, he was kind enough to write me on 4th April 2019 the following answer by E-mail, which he has also kindly allowed me to publish here’:

*The first Contribution by Jörg Rüpke :*

*on the question, how many Vestal Virgins  
we might expect to appear at public ceremonies,  
such as the one shown on Frieze B of the Cancellaria Reliefs (cf. here Fig. 2)*

Liebe Frau Häuber,

... VV [*Virgines Vestales*]: Belegt ist das nicht. Aber vielleicht haben sich die männlichen Autoren nie über das unvollständige Erscheinen Gedanken gemacht. Andererseits kann man die Glut in einem Ofen - wir müssen ja wohl nicht an ein offenes Lagerfeuer denken! - auch weniger arbeitsintensiv sicherstellen, ohne Nachtschichten und Verzicht auf gemeinsamen "Kirchgang", will mir scheinen. Spielen nicht vielleicht kompositorische Gründe eine wichtigere Rolle als das dokumentarische Interesse? Manche Priesterschaften führten Protokoll über die bei Ritualen anwesenden, so schon lange das *Collegium pontificale*, zu dem ja auch die VV [*Virgines Vestales*] gehörten. Das heißt aber auch, dass Namenslisten geführt wurden, sozusagen Individualisierung betrieben wurde. Rüpke, *Fasti Sacerdotum*, 2005, 1, 123, Anm. 2: [Alfred] KLOSE (1910:42, Anm. 5) schloß aus der Anwesenheit von vier Vestalinnen beim Bankett, "daß die beiden anderen – also Fonteia und Fabia – den Herd hüten mußten". Die These ist also älter.

Im Falle des Amtsantrittsessens im Jahre 70 v. Chr. ist übrigens die jüngste der Vestalinnen anwesend. Das führt zu Folgefragen: Wie wurden unangenehme Pflichten geregelt, wenn nicht über das Senioritätsprinzip?

Vgl. Rüpke, FS [*Fasti Sacerdotum*] Nr. 490: Aemilia (1)<sup>3</sup> 210er–nach 178 v. Chr. Fem. Patric. Um 205<sup>4</sup> zur Vestalis gemacht, versah sie dieses Amt noch 178 als Vestalis *maxima*: In diesem Jahr soll sie das aus Nachlässigkeit einer jüngeren erloschene Feuer wunderbarerweise wieder entzündet haben. *Die captio* der ältesten Tochter des aussichtsreichen Lepidus, die damit für Verschwägerungen nicht mehr zur Verfügung stand, könnte einen Schlag des neuen *Pontifex maximus*, Licinius Crassus (Nr. 2234) dargestellt haben.

=====

<sup>3</sup>) Tochter des späteren *Pontifex maximus* M. Aemilius M.f. M.n. Lepidus (2) (Nr. 507). Identifizierung und Datierung folgen der ingeniosen Hypothese von MÜNZER; die Eintragung in den Listenteil erfolgt kursiv, da ein direkter Beleg fehlt.

<sup>4</sup>) MÜNZERS Annahme, daß Aemilia im Jahr 206 Nachfolgerin einer wegen Nachlässigkeit – sie ließ das Feuer ausgehen (Liv. 28,11,6f.) – bestraften Vestalin geworden sei (1920:176), ist abzulehnen, da ein Ausschluß der Delinquentin nicht angenommen werden muß. Wenn man die Nachricht des Dionys von Halikarnass über ein erneutes Erlöschen des Feuers auf die Überlieferung des Vorfalls von 178 bezieht, dann führte die mitgelieferte Information über eine fast dreißigjährige Tätigkeit der *Vestalis maxima* in einen ähnlichen Zeitraum.

Kurzum, denkbar ist die Pflicht, dass eine stets Feuerwache hatte, aber zu fragen ist, ob dafür das Relief ein starker Beleg ist.

Herzliche Grüße

Ihr

Jörg Rüpke.

Note by the editor Chrystina Häuber.

I have elsewhere explained the term "*captio*", mentioned by Jörg Rüpke in his above-quoted first *Contribution*:

"[At slide] 12.) Dia - Peter Connolly, Rekonstruktion: Atrium Vestae, Vestatempel [with n. 10], die Vestalischen Jungfrauen, deren Aufgabe es war, das heilige Herdfeuer der Göttin Vesta im Vestatempel zu bewahren, und unter deren Obhut die bedeutendsten, das Bestehen des römischen Staates garantierenden Heiligtümer gestellt war, ist ein gutes Beispiel für den religiösen Traditionalismus der Römer. In Fall des Vestakultes glaubte man, dass Romulus oder König Numa ihn aus der Stadt Alba Longa eingeführt habe. Die Vestalischen Jungfrauen waren sechs Mädchen aus Adelsfamilien, die im Alter von 5 Jahren vom Pontifex Maximus, der ihnen vorstand, "gegriffen" wurden [the procedure of the election of a five year old girl into this college of the Vestal Virgins was called *captio*]; sie waren zu einem 30jährigen Dienst verpflichtet. Die Leiterin dieser Priesterschaft hieß Vestalis Maxima. Die Vestalinnen mussten zölibatär leben und ihr Dienst für den Staat wurde als eminent wichtig angesehen. Die moderne Forschung erklärt sich das Vorhandensein der Vestalischen Jungfrauen ursprünglich damit, dass man für bestimmte Kulthandlungen Mädchenopfer benötigt habe (!). Cf. Häuber (2009b, 7, with n. 10, quoting: "P. CONNOLLY - H. DODGE 1998, 173").

*The second Contribution by Jörg Rüpke: Tempel-Gräber*

This *Contribution* belongs to the following *Chapter* :

**IV.1.1.h) The new findings by B. E. Borg (2019) concerning the Templum Gentis Flaviae support the hypothesis suggested here that Domitian's obelisk (cf. here Fig. 28) was commissioned for the Iseum Campense. With some observations concerning the Temple of Divus Traianus at Italica, and concerning the Marble Forum at the Colonia Augusta Emerita (Mérida) in Spain. With The Contributions by Eric M. Moormann, Mario Torelli, and Walter Trillmich, and with The second Contribution by Jörg Rüpke.**

*The second Contribution by Jörg Rüpke :*

*Tempel-Gräber*

Eugenio La Rocca (2020b, 369, Fußnote 9) liefert schon wichtige Hinweise auf einen weiteren Sprachgebrauch. Ich selbst habe kürzlich in einem Aufsatz (Jörg Rüpke, "Gifts, votives, and sacred things: Strategies, not entities", *Religion in the Roman Empire* 4.2, 2018, 207-236) darauf aufmerksam gemacht, dass wir viele religiöse Begriffe missverstehen, wenn wir sie als abschließend definierte Termini eines kohärenten Sakralrechts interpretieren. Dieses existiert ebenso wenig wie Mommsens Staatsrecht. Es handelt sich teils um strategische Behauptung, teils um (antiquarische, man könnte auch sagen: theologische) Systematisierungsversuche. Templum wird aber nur selten in solch strategischer Schärfe (etwa für Senatsversammlungsorte) verwendet.

Zudem: Die Grenze zwischen Ahnen und Göttern ist ja in Rom ständig umstritten. Die *liberatio* eines sakralen Raumes will natürlich eine Eindeutigkeit der Besitzüberschreibung (*consecratio*) herstellen, indem sie alle älteren Ansprüche ausräumt, aber schnell können dann doch wieder zusätzliche Götter (und ggf. [gegebenenfalls] auch Gräber) einziehen. Die Differenzierungsarbeit, die John Scheid für die julisch-claudische Epoche aufgezeigt hat ("Die Parentalien für die verstorbenen Caesaren als Modell für den römischen Totenkult", *Klio* 75, 1993, 188-201), und die sich etwa im Zeremoniell kaiserlicher Bestattung UND Konsekration zeigt, ist eben nur eine Position gewesen.

Note by the editor Chrystina Häuber:

## Zur kartographischen Visualisierung historischer Landschaftselemente zwischen Rhein und Schwarzem Meer von Augustus bis Hadrian

Franz Xaver Schütz

### Motivation

Wie weit ist es eigentlich vom Schwarzen Meer bis nach Mainz. Von wo aus ist Hadrian mit seinen Gefährten aufgebrochen und wo war das überhaupt? Wo liegt Kalkriese? Diese und weitere Fragen waren der Ausgangspunkt für diesen Beitrag im Buch von Chrystina Häuber.

Im Text von Chrystina Häuber werden verschiedene antike Orts- und Landschaftsbezeichnungen genannt. Eine Frage war, welche Entfernung Hadrian zurückgelegt hat, als er aus MOESIA INFERIOR nach MOGONTIACUM (heute Mainz) geritten ist. Der Vorschlag, dass Hadrian Pferde als Reisemittel benutzt hat, stammt von Peter Herz, vgl. seinen Beitrag "The fifth Contribution by Peter Herz: *Der Ritt Hadrians nach Mogontiacum*". Chrystina Häuber spricht dabei von einem "Parforceritt", vgl. ihr Kapitel "Chapter VI.1. My 2. Conclusion: *In this context it is interesting to analyse the process by which Hadrian finally became emperor; at Trajan's adoption by Nerva and Hadrian's Parforceritt from Moesia Inferior to Mogontiacum to congratulate Trajan on his adoption.*"

Derartige Streckenmessungen lassen sich heute vergleichsweise einfach mit geographischen Informationssystemen (GIS) durchführen, falls entsprechende georeferenzierte, also mit realen Koordinaten versehene Karten, beziehungsweise Geodaten vorliegen. So entstand die Idee eine digitale, georeferenzierte Karte zu erstellen und darin Entfernungen zu messen. Zudem war dann eine Frage, ob es möglich ist, mit frei verfügbarer Software und frei verfügbaren Geodaten die im Titel genannte Visualisierung herzustellen. Das Ergebnis ist in den folgenden Ausführungen dokumentiert. Chrystina Häuber sei für viele kritische und wertvolle Hinweise insbesondere zu Inhalt und Layoutgestaltung der kartographischen Visualisierung gedankt!

HAKE, GRÜNREICH und MENG (2002, S. 33) halten fest, dass der "kartographischen Visualisierung (Präsentation) eine Schlüsselfunktion" zukommt. Sie beziehen dies im "Hinblick auf den Erkenntnis- und Entscheidungsprozess der GIS-Anwender" und zitierten "Spiess (in Mayer 1990)", "dass sinnvoll und interessant gestaltete Karten im Gegensatz zu standardisierten, langweiligen graphischen Darstellungen die Betrachter zum Denken anregen. Dieses ist aber Bedingung für Erkenntnis (Rosak 1986)." Falls die hier gezeigte kartographische Visualisierung diejenigen, die sie betrachten zum Denken anregt, z.B. um sich den Ritt des Hadrian von OESCUS nach MOGONTIACUM besser vorstellen zu können, ist meine Motivation erfüllt.

### Begrifflichkeiten und Methode

Unter der kartographischen Visualisierung wird nach HAKE, GRÜNREICH, MENG (2002, S. 33) die Präsentation (vgl. oben) von Geodaten in Form einer Karte verstanden, die primär auf einem Bildschirm erfolgt, jedoch auch als Papierkarte gedruckt werden kann. Zu deren Erstellung wird in der Regel ein geographisches Informationssystem (GIS) verwendet, in diesem Fall die frei und kostenlos verfügbare Software QGIS 3.16.

Franz Xaver Schütz, Zur kartographischen Visualisierung historischer Landschaftselemente...

Als historische Landschaftselemente werden hier Bestandteile der Landschaft, wie Festland, Flüsse und Meere der Naturlandschaft verstanden, aber auch Elemente der Kulturlandschaft, wie z.B. Städte (vgl. Eintrag "Landschaftselement" in WAG 1993, S. 347).

Als Datengrundlage diente ein Datensatz mit bearbeiteten SRTM (Shuttle Radar Topography Mission) Geodaten (vgl. JARVIS, REUTER, NELSON, GUEVARA, 2008). Dieser wurde in QGIS geladen und mit entsprechenden Einstellungen im Farbverlauf von grün (Tiefland) bis rot (Hochgebirge) dargestellt. Die Farben sind entsprechenden Höhenwerten in den bearbeiteten SRTM-Daten zugeordnet. Sie reichen von -85 bis 4684 Metern. Für die Flüsse wurde ein modifizierter Geodatensatz der "Catchment Characterisation and Modelling (CCM) Database 2.1" der European Commission, Joint Research Centre, Institute for Environment and Sustainability verwendet. Beide Datensätze sind frei verfügbar. Die antiken Ortsnamen wurden vorrangig im Lexikon der Alten Welt (LAW) und im Kleinen Pauly (KIP) recherchiert. Falls die Orte aktuell noch existieren wurden deren Koordinaten in amtlichen Informationssystemen und in Open Street Map (OSM) ermittelt. Falls die Orte heute nicht mehr existieren, wurden die Koordinaten entsprechender archäologischer Relikte verwendet. Zu den Geodaten vgl. auch die Ausführungen im Detail unten.

Die Geodaten zeigen also die aktuelle physische Struktur der Erde. Insbesondere bei den Flüssen müssen wir bedenken, dass sich deren Verläufe innerhalb der entsprechenden Flußtäler, z.B. durch Begradigung und Kanalisierung in den letzten 2000 Jahren verändert haben.

## **Kartographische Visualisierung**

### **Wasser und Land**

Wasser- und Landflächen werden mittels der SRTM-Geodaten visualisiert. Die SRTM Geodaten besitzen eine x,y und z-Koordinate. Die z-Koordinate stellt in der Regel die gemessene Landhöhe an einem bestimmten Punkt dar und wird in das Bildpixel übertragen.

Da SRTM-Geodaten die dritte Dimension in Form der z-Koordinate enthalten, könnten wir mit dem Overlay eines aktuellen Satellitenbildes den Ritt von Hadrian und seinen Gefährten sogar virtuell auf Basis des aktuellen Landschaftsreliefs nachvollziehen. Würden wir für das Overlay Daten aus der Jahreszeit November verwendet, wären beispielsweise Eis und Schnee zu erkennen - jedoch nur unter den aktuellen klimatischen Verhältnissen.

### **Flüsse und Meere**

Mit dem oben genannten CCM-Geodatensatz wurden im Folgenden genannte Flüsse visualisiert. Die Konturen der Meeresküsten sind den SRTM-Geodaten entnommen.

**AMISIA**, Ems (SONTHEIMER 1979).

**ISTROS**. Die Griechen kannten nach SPOERRI nur den Unterlauf der heutigen Donau. "Der obere und mittlere Lauf wird bereits früh den kelt. Namen *Danuovius* getragen haben, der erst um die Mitte des 1.Jh.v.Chr. auf den gesamten Fluß übertragen wurde; daneben bestand aber auch der Name I. bis zum E. der Ant. fort." "Am Donaulimes waren 2 Kriegsflottillen stationiert: *classis Moesica* und *Pannonica*" (SPOERRI 1979).

**MARE ADRIATICUM** s.v. "**Mare Adriaticum**". Der Name wurde nach ANDREAE von der etruskischen Stadt Atria im Podelta abgeleitet und in der römischen Kaiserzeit auf den ganzen adriatischen Meeresarm ausgedehnt (ANDREAE 1965).

**MARE GERMANICUM** s.v. "**M. Germanicum**". Die "Nordsee (Plin.nat.4,103)" (BERGER-HAAS 1965).

**MARE SUEBICUM** s.v. "**M. Suebicum**". Die "Ostsee (Tac.Germ.45). In der literarischen Überlieferung ist nur einmal die Anwesenheit eines Römers am M.sueb., eines auf dem Landwege dorthin gelangten, unbekanntem Ritters, bezeugt, der für Nero Bernstein einzukaufen hatte (Plin.nat.37,45)" (BERGER-HAAS 1965).

**PONTOS EUXEINOS**. Heute Schwarzes Meer (DANOFF 1979).

**VISURGIS**, Weser (CÜPPERS 1979).

### Orte

Nachfolgende Orte wurden mit Koordinaten aus amtlichen Informationssystemen und Open Street Map (OSM) visualisiert.

**Aquileia** wurde als latinische Kolonie 181 v.Chr. gegründet. "Seit 90 v.Chr. *municipium*" (RADKE 1979).

**Aquincum** "war Legionslager und Stadt zur Römerzeit am rechten Donauufer, jetzt: Budapest" ... "Residenz des Stadthalters von Pann.inf." (SZILÁGYI 1979)

**Byzantion** "(später Constantinopolis, h. Istanbul), griech. Stadt, die in der s.ö. Ecke Thrakiens auf dem Thrak. bosporos entstanden ist. B. wurde von Megara etwa im J. 660 v. Chr. gegründet." (DANOFF 1979).

**Carnuntum** "Röm. Militärlager an der Donau" (FITZ 1979).

**CCAA** s.v. "**Colonia Agrippinensis** (C. Claudia Ara Agrippinensium)". Heute Köln am Rhein. Das "oppidum Ubiorum" wurde "50 n. Chr. von Kaiser Claudius zur Colonia erhoben", da Agrippina, seine Frau 15/16 n. Chr. dort geboren wurde. Der Standort war Lager der "Leg I und der Leg. XX Valeria victrix, die später nach Bonn und Neuss verlegt wurden". Dort befand sich auch die "classis Germanica pia fidelis mit festem Kastell auf der >>Alteburg<< Köln-Bayental, und als solche" war CCAA "wichtiges Verwaltungszentrum und Sitz des kaiserlichen Statthalters von Germania inferior." (CÜPPERS 1979). Zur CCAA vgl. auch ECK 2019: "La creazione della Colonia Claudia Ara Agrippinensium". Zur Entwicklung des Informationssystems "Digitaler Archäologischer Schichtenatlas Köln" vgl. HÄUBER, SCHÜTZ, SPIEGEL 1999.

**Mogontiacum**, heute Mainz, war die Provinzhauptstadt von Germania superior (CÜPPERS 1979).

**Oescus**, "h. Gigen in NW.-Bulgarien". "Wichtige röm. Stadt ö. der Mündung des gleichnamigen Flusses (h. Iskar) in die Donau" (DANOFF 1979).

**Risinium** (Risan) "an der Adria in der Bucht von Kotor (Cattaro)" (ALFÖLDY 1979).

**Salona**, Augustus hat die "*urbs nova* um 33 v.Chr." gegründet und "zum Rang einer *colonia* erhoben" (FITZ 1979).

Franz Xaver Schütz, Zur kartographischen Visualisierung historischer Landschaftselemente...

**Singidunum** "Stadt an der Mündung der Save in die Donau (h. Beograd, Belgrad)" (SZILÁGYI 1979).

**Sirmium** "Stadt am Einfluß des Bacuntius in die Save (h. Sremska Mitrovica) ... "später Residenzstadt Illyricums und Bischofssitz" (SZILÁGYI 1979).

**Tomis** heute "Constantza". "Verbannungsort" Ovids (DANOFF 1979).

**Vindobona**, heute Gebiet von Wien (NEUMANN 1979).

## Ergebnisse

Neben der in Abb. 1 (= Fig. 77 in Band 3-2) gezeigten Visualisierung als Ergebnis dieser Arbeit wurden in QGIS verschiedene Messungen durchgeführt. Danach ist für die zurückgelegte Entfernung von OESCUS nach MOGONTIACUM ein Wert von 1800 Kilometer realistisch und nach Messungen mit abweichenden Routen als Obergrenze - also als maximal zurückgelegte Entfernung - zu sehen, falls keine größeren Umwege durchgeführt wurden.

Nach SYME war die *Legio V Macedonica* in Oescus in Moesia inferior stationiert, vgl.: "Hadrian was born on January 26, 76. The first military tribunate, in II Adiutrix may be assigned to the year 95, the second, 'extremis iam Domitiani temporibus' (Hadr. 2.3), to 96: V Macedonica was the legion, stationed at Oescus in Moesia Inferior." (SYME 1968, S. 101). "Hadrian's second military tribunate lasted for more than twelve months. He was still with V Macedonica in Moesia Inferior in the autumn of 97" (SYME 1968, S. 102). Die Annahme, dass Hadrian mit seinen Gefährten von Oescus aus aufbrach, ist also nach Meinung des Autors durchaus berechtigt.

Die mögliche Reisezeit betreffend, nennt KOLB (2000, S. 308-332) in ihrem Kapitel "V. Geschwindigkeiten" Reisezeiten zu Fuß und mit unterschiedlichen Transportmitteln. Das "Tempo pro Tag" gibt sie im "m.p." und umgerechnet in km an, vgl. Fußnote 1 auf Seite 310 in KOLB (2000): "Abgekürzt für römische Meilen steht *m(ilia) p(assuum)*. Gerechnet werden: 1 m.p. = 1,47 km". SCHÜTZ (2008, S. 61) gibt in seiner Tabelle 4 "Synopsis römischer Maße" nach "PRYCE et al. 1996, S. 943" 1 Roman mile mit "1.480 m" an. Gerundet entsprechen die Werte aus der Literatur also ca. 1,5 km. In Tabelle 4 auf Seite 315 nennt KOLB (2000) für Reisezeiten mit gewechselten Pferden mit "Zielort" Germanien für das Jahr 9 v.Chr. und für das 6. Jh. "200 m.p.=294 km" pro Tag, was sicherlich nur bei besten Rahmenbedingungen erreicht wurde.

## Anhang und Literatur

### Einstellungen QGIS Projekt

Als Referenzsystem wurde "EPSG:4326 - WGS 84 - Geographisch" in QGIS eingestellt.

### Datenquellen

#### Erdoberfläche

SRTM (Shuttle Radar Topography Mission) Geodaten

Jarvis A., H.I. Reuter, A. Nelson, E. Guevara, 2008, Hole-filled seamless SRTM data V4, International Centre for Tropical Agriculture (CIAT), available from <https://srtm.csi.cgiar.org>.

Datei: cut\_n30e000.tif mit 2.595.961.987 Bytes (ca. 2,5 GB) vom 14.9.2008.

Flüsse

<https://www.naturalearthdata.com/downloads/10m-physical-vectors/10m-rivers-lake-centerlines/> (26.5.2023)

"Rivers primarily derive from World Data Bank 2. Double line rivers in WDB2 were digitized to create single line drainages. All rivers received manual smoothing and position adjustments to fit shaded relief generated from SRTM Plus elevation data, which is more recent and (presumably) more accurate."..."Supplemental Data – Europe. Data primarily derives from Catchment Characterisation and Modelling (CCM) Database 2.1 by the European Commission, Joint Research Centre, Institute for Environment and Sustainability. For information about this product and the source data, see <http://ccm.jrc.ec.europa.eu>. The modified CCM rivers and lakes offered here are intended for small-scale cartographic use. Only a portion of CCM data is used, representing major rivers and lakes (classes 4 and 5 in the MAINDRAIN attributes column). Generalization and smoothing were applied to these selected data—the CCM vectors contain 9 percent of the data points found in the original source data."

Benutzte Version: 5.0.0, Dateiname: ne\_10m\_rivers\_lake\_centerlines.shp , 4208092 Bytes vom 7.12.2021.

Die Mündungen von Elbe und Weser wurden von Hand vom Autor digitalisiert und der Bosphorus auf Grundlage der SRTM-Daten nachdigitalisiert.

Abbildung

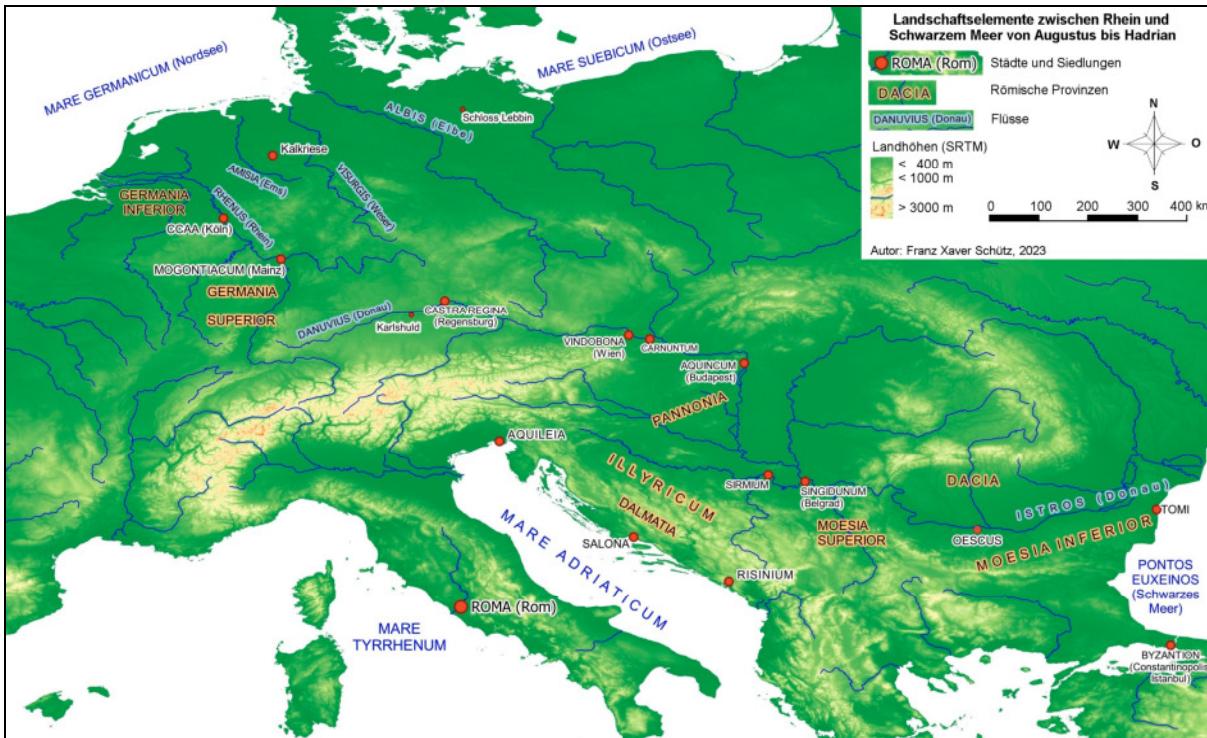

Abb. 1 = Fig. 77 in Band 3-2: Kartographische Visualisierung. Landschaftselemente zwischen Rhein und Schwarzem Meer von Augustus bis Hadrian.

*The second Contribution by Franz Xaver Schütz : Wie schwer war der ägyptische Obelisk, der heute auf der Piazza di S. Giovanni in Laterano in Rom steht?*

This *Contribution* belongs to the following *Chapter* :

*A Study on the colossal portrait of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori at Rome (cf. here Fig. 11). With The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great).*

With discussions of the following subjects: the inscription *CIL VI 974 = 40524* (cf. here Fig. 29.1), belonging to a statue of Hadrian; the question, where in Rome large blocks of Parian marble like those of the acrolithic statue of Hadrian (now Constantine the Great; cf. here Fig. 11) could have been available: at *La Marmorata* in the quartiere Testaccio; the *'Porticus Aemilia'* outside *Porta Trigemina'* (erroneously located there, the building in question is in reality identifiable as *Navalia*); and the *Horrea Aemiliana*;

*Part II. Ancient Rome's new commercial river port, at La Marmorata. With discussions of the 'Porticus Aemilia' (in reality identifiable as Navalia) and of the Horrea Aemiliana.*

*With The sixth Contribution by Peter Herz : Rom. Strukturen der Versorgung; and with The second Contribution by Franz Xaver Schütz : Wie schwer war der ägyptische Obelisk, der heute auf der Piazza di S. Giovanni in Laterano in Rom steht?;*

*Section IV. The Statio Marmorum and the 'sculpture industry' at La Marmorata, its Tiber ships for the transportation of fresh marble blocks and of finished products, Domitian's Tiber ship delivering a block of marble (Figs. 105; 106), Domitian's 'pharaonic' building projects at Rome, and the question, whether the Navalia at La Marmorata had anything to do with all this. With some remarks on the heaviest object, ever transported on the Tiber in antiquity: the Lateran Obelisk (Fig. 101);*

*at In the following, I allow myself a digression on the weight of the Lateran Obelisk (here Fig. 101). When brought to Rome in AD 357, it was, according to several authors, 148 palmi high, whereas today it is only 144 palmi high. According to Franz Xaver Schütz, the Lateran Obelisk was thus originally circa 33,08 m high and weighed circa 529 tons; whereas today it is still 32,18 m high and weighs circa 509 tons.*

## Wie schwer war der ägyptische Obelisk, der heute auf der Piazza di S. Giovanni in Laterano in Rom steht?

**Franz Xaver Schütz**

### **Motivation**

Wie schwer ist eigentlich der ägyptische Obelisk, der heute auf der Piazza di S. Giovanni in Rom steht? Da es in der Literatur abweichende Angaben gibt, habe ich hier den Versuch unternommen, das Gewicht möglichst genau abzuschätzen. Im Text von Chrystina Häuber wird auf diesen Obelisk insbesondere in diesem Kapitel eingegangen: "*A Study on the colossal portrait of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori at Rome (cf. here Fig. 11) ...; Part II. Ancient Rome's new commercial river port, at La Marmorata*"; at "*Section IV. The Statio Marmorum and the 'sculpture industry' at La Marmorata ... With some remarks on the heaviest object, ever transported on the Tiber in antiquity: the Lateran Obelisk (Fig. 101)*".

Methodisch ist dieser Beitrag primär aus Sicht der Geowissenschaften und Metrologie geschrieben und versucht damit eine Brücke zwischen Natur- und Geisteswissenschaften zu schlagen.

### **Längenmaße, Material, Volumen und Gewicht**

#### **Längenmaße**

Durch die gleichzeitige Angaben von Metern und Palmi bei CIPRIANI 1823 ergibt sich, dass 1 Palmo 0,2235 Meter (m) entspricht. Weitere Maßeinheiten werden als Längenmaße in der hier zitierten Literatur zum ägyptischen Obelisk auf der Piazza di S. Giovanni in Laterano in Rom nicht genannt. Dieser Wert entspricht dem in der Literatur genannten Wert für 1 Palmo bis auf die vierte Nachkommastelle. KIDSON nennt den "*the palmo romano (0.223422)*" (KIDSON 1990, S. 91). SCHÜTZ (2010, S. 476) nennt den "*palmo romano di architettura*" mit 0,2234 m unter Verweis auf "A.P. Frutaz, Hrsg., *Le piante di Roma, I-III, Roma 1962, hier: Bd. I, S. 30-31*".

#### **Material, Volumen und Gewicht**

Als Volumeneinheit werden "*palmi cubi*" und Kubikmeter (m<sup>3</sup>) genannt. 1 Palmo cubo = 0,2235 m \* 0,2235 m \* 0,2235 m = 0,011164327875 m<sup>3</sup>.

Als Einheiten für das Gewicht des ägyptischen Obelisk werden "*Libra*" und Tonnen genannt. In der Literatur zur historischen Metrologie findet sich bei Witthöft folgende Angabe: "*12 Unzen = 1 libra = 340,200 g*" (WITTHÖFT 2002, S. 478). CESANO, SEGRE (1934) nennen 339,07 g ("*LIBBRA (λίτρα, libra)*"... "*Ancona, Macerata, Foligno e Roma (prov.), gr. 339,07*").

In sämtlicher Literatur wird davon ausgegangen, dass es sich bei dem Gestein, aus dem der ägyptische Obelisk besteht, um "*granito rosso*" (z.B. CORSI 1845, S. 296) handelt, also "*Rosengranit (aus Assuan)*" (vgl. Exkurs 1 von Carola Vogel in HABACHI 2000, S. 103).

KLEMM, KLEMM 1993 schreiben auf Seite 325 in ihrem Kapitel "7.4 Die Rosengranitvarietäten": "*Der Aswaner Rosengranit ist ein unverwechselbar charakteristisches Gestein, das exklusiv aus dem oben beschriebenen Gebiet stammt. Jeder, der dieses Gestein einigermaßen aufmerksam, sei es im Gelände oder an Artefakten, studiert hat, wird es ohne Schwierigkeiten immer wieder erkennen, da fast keine Verwechslungsmöglichkeiten mit anderen Granitvarietäten weltweit bestehen*". Nach KLEMM, KLEMM könnte aktuell mit modernen Methoden eine Zuordnungsgenauigkeit von +/- 100 m für Gesteinsproben

Franz Xaver Schütz, Wie schwer war der ägyptische Obelisk, der heute auf der Piazza di S. Giovanni in Laterano in Rom steht?

erreicht werden (vgl. Zitat: "Kombiniert man indessen anhand des vorliegenden Analysematerials systematisch sämtliche chemischen Elemente einer zuzuordnenden Analyse eines Artefaktes mit den Vergleichsanalysen von Aswan, so läßt sich in aller Regel eine präzise lokale Zuordnung im Gebiet von Aswan durchführen. Die zu erreichende Zuordnungsgenauigkeit dürfte mit einem Fehler von  $\pm 100$  m behaftet sein."

RASHWAN und DARWISH haben Analysen von Aswaner Rosengranit ("Red Aswan Granite") aus dem von KLEMM, KLEMM genannten Abbaugelände durchgeführt und beziehen sich auf verschiedene Publikationen von KLEMM, KLEMM. Sie geben als Mittelwert für Proben des "Red Aswan Granite" eine Dichte von  $2541 \text{ kg/m}^3$  an: "the density was set to be  $2541 \text{ kg/m}^3$ " (RASHWAN, DARWISH 2018, S. 14). Diese Dichte wird häufig auch als spezifisches Gewicht bezeichnet. Sie haben 8 Proben analysiert, der kleinste Dichtewert lag bei  $2517,64 \text{ kg/m}^3$ , der größte bei  $2580,39$ . Allgemein wird für Granit eine Dichte von 2500 bis 2700 angegeben, vgl. Tabelle Gesteinsdichten unter <http://www.cms.fu-berlin.de/geo/fb/e-learning/petrograph/tabellen/gesteinsdichte.html> (online: 07/2023). Dort wird eine Dichte von 2500 bis 2700 genannt (" $2,5$  bis  $2,7 \text{ g/cm}^3$ "). Als Datenquelle wird angegeben: "Schön, J.H. (1996) Physical properties of rocks - fundamentals and principles of Petrophysics, in: Handbook of Geophysical Exploration, Seismic Exploration, Vol. 18. Helbig, K. & Treitel, S. (eds.)". Je dunkler der Granit, desto höher ist in der Regel die Dichte.

WIRSCHING nimmt für die Dichte des Rosengranits " $\sigma = 2,68$  rd.  $2,7 \text{ g/cm}^3$ " an (WIRSCHING 2013, S. 130), nennt jedoch keine Quelle zur Herkunft dieses Wertes.

## Zusammenstellungen, Analysen und Berechnungen

### Angaben zu den Maßen in der Literatur in chronologischer Reihenfolge

#### MERCATI 1589

"Si vedeva rotto in tre pezzi, il primo de quali è lungo sessantacinque palmi et mezzo: il secondo quaranta tre et mezzo : il terzo insieme con la punta, trentanoue : di maniera che tutto l'Obelisco era lungo cento quaranta otto palmi" (MERCATI 1589, S. 379). Falls wir die drei Teilangaben von MERCATI addieren, ergeben sich die von ihm genannten 148 palmi für die Länge des Obeliskens bei der Auffindung ( $65,5 + 43,5 + 39 = 148$ ). Der Obelisk wurde dann vor der Wiederaufstellung um 4 Palmi "gekürzt", womit der aufgestellte Obelisk eine Länge von 144 Palmi besitzt ("Leuati dunque questi quattro palmi ... l'Obelisco è lungo cento quarantaquattro palmi in circa", MERCATI 1589, S. 384).

Bezüglich des Gewichtes schreibt MERCATI: "Le quali misure essendo ridotte da alcuni à palmi cubi, ritrouano che tutto l'Obelisco contiene palmi cubi, quindici mila cento ventinove, che fanno il peso d'un milione , et trecento uno mila, et nouanta quattro libre." (MERCATI, S. 384), nennt also ein Gewicht von 1.301.094 libre.

#### ZOEGA 1797

Auf Seite 627 schreibt ZOEGA: "Quae omnia adiecta ad ipsum obeliscum, longum palmos centum quadraginta quatuor", also 144 Palmi.

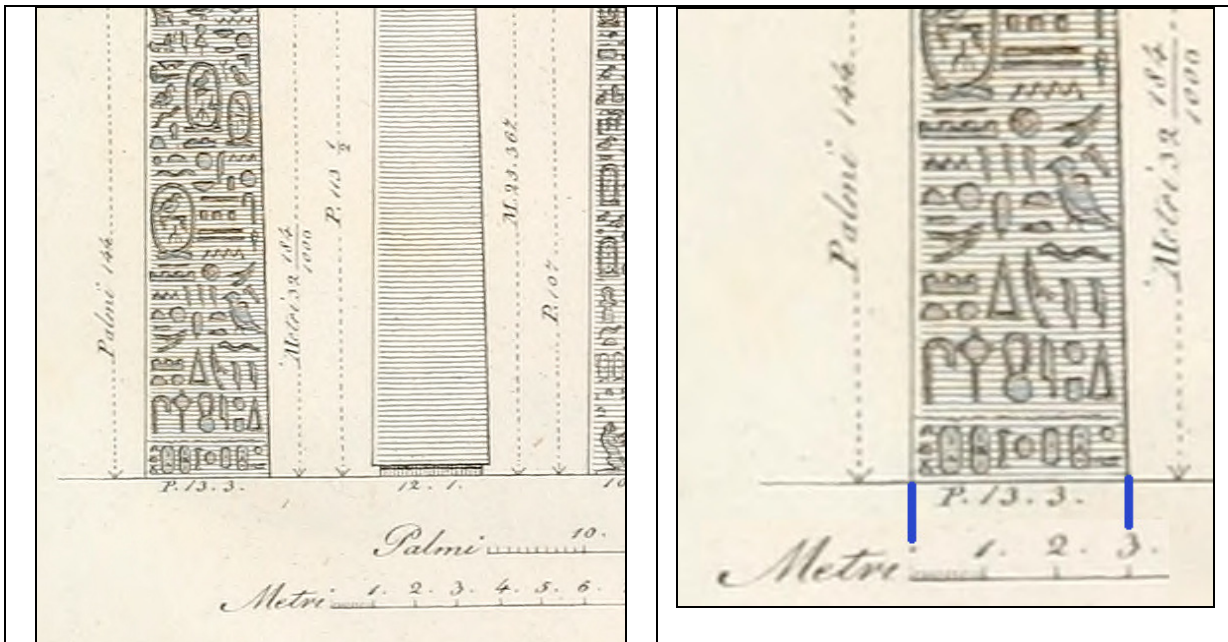

Franz Xaver Schütz, Wie schwer war der ägyptische Obelisk, der heute auf der Piazza di S. Giovanni in Laterano in Rom steht?

CIPRIANI 1823

Auf den Zeichnungen von CIPRIANI 1823 sind sowohl "Palmi", als auch "Metri" angegeben (vgl. hier Abb. 1). Teilen wir das von ihm angegebene metrische Maß für die Länge des Obeliskens von 32,184 m durch die von ihm angegebenen 144 Palmi, erhalten wir einen Wert von 0,2235 Meter für einen Palmo (32,184 Meter / 144 Palmi). Für die ursprüngliche Länge des Obeliskens von 148 Palmi ergibt sich ein Wert von 33,078 Meter (148 Palmi \* 0,2235 Meter = 33,078 Meter)

Die Grundfläche des Obeliskens ist nach der Zeichnung von CIPRIANI quadratisch und besitzt eine Seitenlänge von 2,97 m, am Beginn des Pyramidions 2,23 m. Das Pyramidion hat eine Höhe von 3,30 m.

Auf Seite 16 schreibt CIPRIANI: "Il fusto ch'è di tre pezzi, e che per la sua irregolarità nella base cagionata dalle varie rotture fu scorciato palmi quattro, è rimasto attualmente lungo palmi 144".

**Abb. 1:** Links: Metrischer Maßstab unter der Zeichnung der Obeliskens von CIPRIANI 1823.  
Rechts: Montage des metrischen Maßstabs unter die Angabe "P. 13. 3."

Abb. 1 zeigt, dass der metrische Maßstab von CIPRIANI sehr genau gezeichnet ist. Rechnen wir seine Angabe von "P. 13.3." in Meter um, so ergeben sich  $13,3 * 0,2235 = 2,97$  m. Montieren wir seinen metrischen Maßstab unter die Angabe der Palmi, so können wir diese ca. 3 "Metri" dort auch ablesen (vgl. Abb. 1 rechts).

CORSI 1845

CORSI schreibt auf Seite 296: "Piazza di S. Giovanni. Un obelisco di granito rosso tagliato da Ramise , trasportato in Roma dall' Imperator Costanzo, e posto nel Circo massimo. E alto palmi 148. contiene 15383 palmi cubi, e pesa libbre 1,322,938".

MARUCCHI 1898

Auf Seite 8 schreibt MARUCCHI: "Esso è anche il piu alto misurando circa 32 metri".

Franz Xaver Schütz, Wie schwer war der ägyptische Obelisk, der heute auf der Piazza di S. Giovanni in Laterano in Rom steht?

### HABACHI 2000

Bei HABACHI finden sich folgende Angaben: "Der siebente und letzte der von Thutmosis III. in Karnak errichteten Obelisk, ein Einzelstück, ist mit 36 m der größte Obelisk überhaupt, der uns erhalten geblieben ist." (HABACHI 2000, S. 49). "Bei einem Gewicht von 455 t beträgt seine heutige Höhe noch immer 32,18 m, obwohl im 16. Jh., bei seiner Wiederaufstellung, ein Stück abgeschlagen worden war." (HABACHI 2000, S. 67). "Maße: H. 34m, Gew. 460 t Material: Rosengranit(aus Assuan)" (Exkurs 1 von Carola Vogel in HABACHI 2000, S. 103).

### CIAMPINI 2004

CIAMPINI nennt 32,18 m als Höhe ("Altezza: m 32,18; il monumento è mancante della parte inferiore", als Material gibt er "granito rosa" an (S. 57).

### WIRSCHING 2013

WIRSCHING gibt für den Obelisk eine Höhe von "32,15 m" und ein Gewicht von "500 t" an (WIRSCHING 2013, S. 76). Auf Seite 77 bildet er Zeichnungen von "G. B. Cipriani 1823" mit folgender Bildunterschrift ab: "Bild 47 Die vier größten Obelisk nach ihrer Zweit-Aufstellung in Rom Zeichnungen von G. B. Cipriani 1823 (D'Onofrio, 83) genau auf 1/4 palmo (1 palmo = 0,223 m)". Er nimmt für Granit ein spezifisches Gewicht von 2,68 an: "Angenommen wird die Dichte des Rosengranits zu  $\sigma = 2,68 \text{ rd. } 2,7 \text{ g/cm}^3$ " (WIRSCHING 2013, S. 130).

### PENSABENE, DOMINGO 2017

Offensichtlich in Mißverständnis von MAISCHBERGER 1997 schreiben PENSABENE und DOMINGO: "un obelisco alto 32 m e di 350 tonnellate,<sup>195</sup> destinato al Circo Massimo (ora a San Giovanni in Laterano)" (PENSABENE, DOMINGO 2017, S. 580). In ihrer Anmerkung 195 verweisen die Autoren auf "MAISCHBERGER 1997, pp. 28-29" und "LIVERANI 2012, pp. 471-487". MAISCHBERGER nennt zwar die Zahl von 32 m für die Höhe, jedoch kein Gewicht (MAISCHBERGER 1997, S. 29).

### **Eigene Umrechnungen und Berechnungen**

Falls wir für 1 libra 0,33907 kg annehmen (vgl. oben), ergibt sich für die Angabe von MERCATI 1589 bei 144 Palmi Länge ein Gewicht von  $1.301.094 \text{ libre} * 0,33907 \text{ kg} = \text{ca. } 441161 \text{ kg} = \text{ca. } 441 \text{ t}$ . Das bei MERCATI 1589 genannte Volumen von 15129 palmi cubi ergibt  $15129 * 0,011164327875 \text{ m}^3 = 168,9 \text{ m}^3$ . Dieses Volumen multipliziert mit dem spezifischen Gewicht von Rosengranit aus Aswan ergibt  $168,9 \text{ m}^3 * 2541 \text{ kg/m}^3 = 429174,9 \text{ kg} = \text{ca. } 429 \text{ t}$ .

CORSI 1845 nennt bei 148 Palmi 1.322.938 libbre, die mit 0,33907 kg multipliziert 448568 kg ergeben, also **ca. 449 t**. Seine Angabe von 15383 palmi cubi ergibt umgerechnet  $171,74 \text{ m}^3$  an Volumen. Dieses multipliziert mit dem spezifischen Gewicht ergibt  $171,74 \text{ m}^3 * 2541 \text{ kg/m}^3 = 436391 \text{ kg} = \text{ca. } 436 \text{ t}$ .

### **Volumen- und Gewichtsberechnung**

Die Volumen- und Gewichtsberechnung erfolgt hier für die angenommene Länge des Obelisk von 148 Palmi = 33,078 m, also die ursprüngliche Länge ohne die "Kürzung" von 4 palmi. Das Pyramidion ist nach den Zeichnungen von CIPRIANI 1823 3,3 m hoch. Also misst der Pyramidenstumpf des Obelisk noch

Franz Xaver Schütz, Wie schwer war der ägyptische Obelisk, der heute auf der Piazza di S. Giovanni in Laterano in Rom steht?

29,778 m. Die hier verwendeten Seitenlängen von 2,97 m und 2,23 m stammen von CIPRIANI (vgl. oben). Eine Messung der Seitenlänge der Grundfläche des Obeliskens aus einem aktuellen Luftbild (Maxar Technologies, 2023) ergab ca. 2,93 m. Die Angaben von CIPRIANI scheinen also plausibel zu sein.

$$\begin{aligned} \text{Volumen Pyramidenstumpf} &= h/3 * (a^2 + a*b + b^2) \\ &= 29,778/3 * (2,97*2,97 + 2,97*2,23 + 2,23*2,23) = \\ &9,926 * 20,4169 = \text{ca. } 202,66 \text{ m}^3 / * 2541 \text{ kg/m}^3 = \text{ca. } 514959 \text{ kg} \end{aligned}$$

$$\text{Volumen } 1/3 \text{ G}^*h \text{ Pyramidion: } 1/3 * (2,23*2,23 * 3,3) = \text{ca. } 5,47 \text{ m}^3 / * 2541 \text{ kg/m}^3 = \text{ca. } 13899 \text{ kg}$$

Gesamtvolumen: ca. 208 m<sup>3</sup>  
 Gesamtgewicht: ca. 528858 kg = **ca. 529 t** (bei einer Höhe von 148 Palmi = 33,078 m)

4 Palmi der Grundfläche ergeben ein Volumen von 2,97m \* 2,97m \* 4\*0,2235m = 7,88 m<sup>3</sup>.  
 7,88 m<sup>3</sup> \* 2541 kg/m<sup>3</sup> = ca. 20023 kg = ca. 20 t. Das aktuelle Gewicht dürfte bei einer Länge von 144 Palmi also bei ca. 509 t liegen.

**Ergebnisse**

In Tabelle 1 sind die Ergebnisse der Literaturrecherche und meiner eigenen Berechnungen vergleichend zusammengefasst.

Autor/Autorin	Höhe	Gewicht	Volumen
MERCATI 1589	144 palmi (148 palmi bei der Auffindung)	1.301.094 libre * 0,33907 = 441161 kg = ca. 441 t	15129 palmi cubi = ca. 168,9 m <sup>3</sup>
ZOEGA 1797	144 palmi	keine Angabe	keine Angabe
CIPRIANI 1823	144 /148 palmi 32,184 / 33,078 m	keine Angabe	keine Angabe
CORSI 1845	148 palmi	1.322.938 libbre *0,33907 = 448568 kg = ca. 449 t	15383 palmi cubi = ca. 171,74 m <sup>3</sup>
MARUCCHI 1898	ca. 32 m	keine Angabe	keine Angabe
HABACHI 2000	32,18 m	455 t	keine Angabe
VOGEL 2000 in HABACHI	34 m	460 t	keine Angabe
CIAMPINI 2004	32,18 m	keine Angabe	keine Angabe
WIRSCHING 2013	32,15 m	500 t (Dichte 2,68 rd. 2,7 g/cm <sup>3</sup> )	keine Angabe
PENSABENE, DOMINGO 2017	32 m	350 tonnellate	keine Angabe
SCHÜTZ 2023	ca. 144 /148 palmi ca. 32,184 /33,078 m	ca. 529 t (Dichte 2,541 g/cm <sup>3</sup> , Höhe 33,078 m )	ca. 208 m <sup>3</sup>

**Tab. 1:** Synopse von Maßangaben aus der Literatur und eigenen Berechnungen.

Franz Xaver Schütz, Wie schwer war der ägyptische Obelisk, der heute auf der Piazza di S. Giovanni in Laterano in Rom steht?

**Um das aktuelle Gewicht genau zu bestimmen, müsste die Dichte von Proben des Lateransobelisken bestimmt werden und der Obelisk für eine Volumenberechnung mit Methoden der Geodäsie und Photogrammetrie exakt vermessen werden.**

Mein Dank gilt Rafed El-Sayed für den Hinweis zur Literatur zum "Rosengranit", Peter Herz für Literaturhinweise, der Bayerischen Staatsbibliothek für die Bereitstellung von Literatur und Chrystina Häuber für vielfältige Hilfe und Unterstützung.

***The first Contribution by R.R.R. Smith on the iconography of the representation of the Piroustae at "Le Colonnacce" in Domitian's Forum/ Forum Nervae/ Forum Transitorium (cf. here Fig. 49)***

This *Contribution* belongs to the following *Chapter* in volume 3-2:

***Appendix IV.d.2.a) Who invented this iconography of defeated and pacified 'nations' and what does it mean? With The first Contribution by R.R.R. Smith.***

The following is a quote from *Appendix IV.d.2.a)* in volume 3-2:

"But let me first of all alert you to the account of Pierre Gros (2009, 106-107), who discusses the chronology of Domitian's *Forum/ Forum Nervae/ Forum Transitorium*, as well as the above-mentioned colonnades, and who likewise mentions the findings of Hans Wiegartz (1996):

"Le ricerche recenti hanno messo in evidenza tre fasi diverse di un cantiere che, cominciato nell'84, durò più di un decennio (La Rocca 1998b [*i.e.*, here E. LA ROCCA 1998], pp. 1-12) ...

**Sui lati lunghi, la soluzione adottata fu quella di uno pseudo-portico costituito da colonne vicine al muro di delimitazione, al quale esse erano unite da elementi della trabeazione ritmicamente aggettanti, che coronavano pilastri, inseriti nel muro stesso ... L'insieme era posto sotto la protezione di Minerva ... D'altra parte, questa esaltazione dei valori della vita privata non pregiudicava la diffusione di un messaggio più tradizionale e di più legato alla sfera politica, come provano le immagini, femminili anch'esse, un esemplare delle quali è conservato sull'attico della trabeazione del muro di fondo, tra due colonne ancora *in situ*; identificata con un'immagine di Minerva, essa è stata assimilata per un po' di tempo, seguendo un'ipotesi di Wiegartz (1996, pp. 171-179), a rappresentazioni etniche, sulla base di un confronto con la personificazione del popolo delle *Perustae* del Sébastéion di Afrodisia in Caria. Ma un esame più attento ha dimostrato che [page 107] gli attributi della figura romana non potevano rinviare ad altro se non alla dea stessa. In compenso, vari ritrovamenti effettuati durante gli scavi del 2000 attestano l'esistenza di una serie di allegorie di *nationes*, che sembrano aver occupato la stessa posizione, ma sull'attico della trabeazione in aggetto sopra le colonne, dove si rivela la presenza di otto fori di aggancio, che sarebbero serviti al fissaggio di questi pannelli in altorilievo. Il programma iconografico veniva così rafforzato: in tal modo, a trovarsi sotto la protezione di Minerva, è tutto l'impero, pacificato e unificato, e la dea recuperava così le sue funzioni essenzialmente maschili di dea guerriera, mentre la serie di popoli sottomessi scandiva ritmicamente gli intercolumni (Del Moro 2007b [*i.e.*, here M.P. DEL MORO 2007], pp. 178-187) [my emphasis]" ...**

Cf. **Fig. 73**, labels: Via Alessandrina; Via dei Fori Imperiali; FORUM AUGUSTI; FORUM NERVAE; ARGILETUM; SUBURA; TEMPLUM PACIS.

As also discussed in detail by Gros (2009, 106) himself, we know that the goddess Minerva, nothing less than Domitian's patron goddess, had her own Temple in Domitian's *Forum/ Forum Nervae/ Forum Transitorium*, where her cult-image was venerated. Personally, I therefore do not believe that we should expect an additional representation of Minerva (apart from her appearance in the narrative frieze, which shows an episode of her myth, mentioned ... by Gros) in the attic storey of this Forum, together with 41 other female figures, who are *not* goddesses, let alone at the rather marginal position, which is occupied by "*Le Colonnacce*". The latter are located on the south-eastern long side of the Forum, immediately to the north of the junction of Via Alessandrina and Via dei Fori Imperiali, that is to say: not in the centre of that long side of the *Forum*, nor at any other prominent position. This is clear when we look at a diachronic map, into which the ground-plan of Domitian's *Forum* and the current street plan are both integrated (cf. here **Fig. 73**).

See also the plan, published by Amanda Claridge (1998, 146, "Fig. 60. Imperial Forums", index no. 13: "'Le Colonnacce'"; cf. *ead.* 2010, 160, Fig. 60, index no. 16: "'Le Colonnacce' (Forum of Nerva)").

Apart from the fact that the iconography of this female figure supports Hans Wiegartz's hypothesis of identifying this alleged 'Athena/ Minerva' as a representation of a 'nation' (*i.e.*, of the *Piroustae*) instead. Admittedly, the iconography of 'Athena/ Minerva' and of this female are similar, but contrary to the goddess, the representation of the *Piroustae* is endowed with an iconographic detail, the goddess does not have: she is wearing an 'Amazonian belt, as noticed by H. Wiegartz"; cf. R.R.R. Smith (2013, 119). - To the iconography of the representation of the *Piroustae* and to the account by Gros (2009, 106-107), I will come back below (cf. *infra*, at *Appendix IV.d.2.b*); *Appendix IV.d.2.d*); and *Appendix IV.d.2.f*)).

Having reached this point of my research, I asked on 28th June 2020 R.R.R. Smith for advice. He was kind enough to answer me immediately that, in his opinion, the female figure of "*Le Colonnacce*" in Domitian's *Forum/ Forum Nervae/ Forum Transitorium* (cf. here **Fig. 49**) shows some iconographic features (previously for the most part overlooked by me) that preclude her identification with 'Athena/ Minerva' and suggest instead her identification as a representation of a "*natio devicta*". With Bert Smith's kind consent I may publish his E-mail here''.

R.R.R. Smith wrote me by E-mail on 28th June 2020:

*The first Contribution by R.R.R. Smith*

*on the iconography of the representation of the Piroustae at  
"Le Colonnacce" in Domitian's Forum/ Forum Nervae/ Forum Transitorium*

Dear Chrystina,

I think the figure does not have enough of the crucial identifying attributes necessary to recognise Minerva in it. Most importantly it has no aegis. Also, the unusual belt and the long cloak fastened on the right shoulder are I think both unattested for Minerva. They would better suit a *natio devicta*.

Also while Minerva or a senior divinity might seem a possible reading of the figure in its current splendid isolation, it becomes more difficult when further figures of this kind are imagined in the missing attic along the rest of the complex.

At the same time, I am unsure whether the use of this figure type for the Piroustae in Aphrodisias in the Julio-Claudian period means that the figure in Flavian Rome must also be the Piroustae. I think I would be cautious about that. One might argue for example that such models circulated and were available for re-use with modulated identities in different settings. If the Piroustae were already a conquered nation under Augustus, one might wonder what would be the interest in showing them again in a new set of *nationes devictae* in the Flavian period?

All best,

Bert".

Note by the editor Chrystina Häuber:

I have answered Bert Smith by E-mail of 28th June 2020:

"Dear Bert,

... the argument, which you have written me today - against the assumption to recognize the *Piroustaë* in the representation at "*Le Colonnacce*" in Domitian's *Forum* - I have found already in your book of 2013 [p. 119], and have discussed it in my below quoted text. See on pp. ... what follows here written in "blue", and on pp. ... is a summary of the obtained results. By studying the history of the *Piroustaë* and Domitian's [military] campaigns, I have arrived at the conclusion that Domitian had reasons to represent the *Piroustaë* in his *Forum* ...

Buon divertimento,

Chrystina".

The passages of my text, to which I refer in this E-mail, are to be found *infra*, in volume 3-2, at *Appendix IV.d.2.c) Conclusions reached so far concerning the question, posed above: Who invented this iconography of defeated and pacified 'nations' and what does it mean?; at Appendix IV.d.2.e) Did Domitian intentionally represent the Piroustaë in his Forum/ Forum Nervae/ Forum Transitorium? With The second Contribution by Peter Herz; and at Appendix IV.d.2.f) Domitian's choice to represent the Piroustaë in his Forum/ Forum Nervae/ Forum Transitorium and the date of the Cancellaria Reliefs.*

See also above, at *The second Contribution by Peter Herz: Anmerkungen zu Statius Marrax.*

*The second Contribution by R.R.R. Smith: Note on the function of the 'Atrium House' at Aphrodisias (cf. here Fig. 52)*

The following second *Contribution* by R.R.R. Smith in this volume is the result of an E-mail correspondence with him in October 2020 concerning the portrait of a Greek intellectual, who appears in the background of the portrait of Mario Torelli (cf. here **Abb. 1**). This subject is mentioned in the following passages of the Chapters *Dedication* and *Introductory remarks and acknowledgements*.

The following passage is quoted from the Chapter: *Dedication*:

“**Abb. 1. Mario Torelli, teaching us members of the 'Corsi estivi di Lingua e Cultura Italiana dell'Università del Sacro Cuore di Milano' in the summer of 1979. The photo shows Torelli in the Museo Archeologico Nazionale at Naples in front of the marble bust of Pindar (cf. here Fig. 51), which he explains to us. Photo: Courtesy R.M. Sheldon**”.

The following passage is quoted from the Chapter: *Introductory remarks and acknowledgements* :

“Since I wished to illustrate here a photograph, showing Mario Torelli, teaching us members of the 'Corsi estivi di Lingua e Cultura Italiana dell'Università del Sacro Cuore di Milano' in the summer of 1979, I asked Rose Mary Sheldon, who had taken it, to give me the permission to publish it, which she has generously granted (cf. *supra*, at *Dedication*, and here **Abb. 1**).

This photo shows Torelli in the Museo Archeologico Nazionale at Naples in front of the marble bust of a Greek intellectual (cf. here **Fig. 51**), explaining it to us. Since I vaguely remembered that R.R.R. Smith had been able to identify this man, I asked Bert now for advice. He was kind enough to write me on 18th October 2020 that it is Pindar !

This portrait-type, representing a Greek, Bert was able to identify by its inscription in Greek (‘ΠΙΝΔΑΡΟΣ’; cf. here **Fig. 51**), incised on the bottom contour of a marble shield portrait of this man, found at Aphrodisias, together with many other such *clipeus* portraits. These portraits of intellectuals, who are identified by their inscriptions, had decorated the absidal building (called 'Atrium House' by R.R.R. Smith in his second *Contribution* to this volume) next to the *Sebasteion* (cf. here **Fig. 52**), which may (possibly) be identified as a philosophical school.

For this 'Atrium House' at Aphrodisias (here **Fig. 52**); cf. R.R.R. Smith (1990, 132-135, Pls. IV-XVI; for this building, cf. pp. 128-130, 153-155). After having read R.R.R. Smith's article (1990), I asked him more questions on 24th October 2020. On 25th October, Bert was kind enough to answer my questions concerning the possible function of this building and recent work on it. With his kind consent, I publish his answers here”:

**Fig. 51. The Greek lyric poet Pindar, identified by the inscription in Greek (‘ΠΙΝΔΑΡΟΣ’), incised on the bottom contour of this shield portrait, marble. Found at Aphrodisias, together with many other such *clipeus* portraits, close to the absidal building (cf. here Fig. 52), called 'Atrium House' by R.R.R. Smith in his second *Contribution* to this volume. From: R.R.R. Smith (JRS 1990, Pl. 6).**

**Fig. 52. Ground-plan of the absidal building at Aphrodisias, called 'Atrium House' by R.R.R. Smith in his second *Contribution* to this volume. It is located adjacent to the *Sebasteion*. From: R.R.R. Smith (JRS 1990, Pl. 4).**

*The second Contribution by R.R.R. Smith :*

*Note on the function of the 'Atrium House' at Aphrodisias*

The building is a large town house, with a more private part to the north and a grand apsidal garden peristyle court adjoining the Sebasteion to the south. The two parts are connected by a narrow corridor. In late antiquity, philosophers often taught in their houses, so there is nothing in architectural terms to distinguish a grand late antique house from a 'philosophical school'. I don't know if this was a house owned by a philosopher but at some point, perhaps in the first half or the fifth century, it was owned by somebody who had it seems quite advanced Neo-Platonic interests (Pythagoras, Apollonius [of Tyana, surely], even the divinely inspired Pindar!), and if you want to imagine what such a house looked like - where the Neo-Platonic faithful would gather with their master - whether or Asklepiodotos or someone else, this mansion gives a good idea.

For a recent study or the archaeology or the complex, see I. Lockey, 2016. 'The Atrium House: the archaeology of a late-antique residence' in R.R.R. Smith *et al.* (eds.), *Aphrodisias Papers 5: Excavation and Research at Aphrodisias, 2006-2012*, Portsmouth, RI: *Journal of Roman Archaeology Supplement* 103, 243-254.

Note by the editor Chrystina Häuber:

For Asklepiodotos, mentioned by Bert Smith in his second *Contribution*; cf. R.R.R. Smith (1990, 153-155, Section: "IV Aphrodisias and the School of Asklepiodotos").

*The Contribution by Giandomenico Spinola on the Cancellaria Reliefs*

This *Contribution* belongs to the following *Chapter*:

**IV.1. A letter by Giandomenico Spinola concerning the Cancellaria Reliefs (cf. here Figs. 1; 2) and the Obeliscus Pamphilius/ Domitian's obelisk (cf. here Fig. 28).**

The following is a quote from Chapter IV.1.:

“Giandomenico Spinola, whom I had asked to summarize for me what we had discussed on September 24th, 2018, while standing in front of the Cancellaria Reliefs, was so kind as to write me the following by E-mail on October 15th, 2018”.

The following is a quote from Chapter V.1.g) *The gestures that the two emperors on both friezes (cf. here Figs. 1; 2; Figs. 1 and 2 drawing) perform with their right hands* :

“For the interpretation of the gesture, which Vespasian [on Frieze B of the Cancellaria Reliefs] is making with his right hand, I follow those scholars, beginning with Heinrich Fuhrmann (1940, Sp. 471-472; *id.* 1941, Sp. 544-545, both quoted *verbatim supra*, in Chapter IV.1.), and Filippo Magi (1945, 111, quoted *verbatim supra*, at n. 463, in Chapter IV.1.), who have suggested that Vespasian thus declares Domitian as his successor as emperor (cf. also *supra*, in Chapter VI.3.), as well as Giandomenico Spinola, who, on 24th September 2018, when we were discussing the Cancellaria Reliefs standing in front of those panels, has explained to me that Vespasian thus expresses Domitian's "legittimazione" as (future) emperor. Spinola was kind enough to write me this in an E-mail of 15th October 2018, that I may publish here with his kind consent (cf. *supra*, at n. 420, in Chapter III.; and below, at *The Contribution by Giandomenico Spinola*)”:

*The Contribution by Giandomenico Spinola :  
on the Cancellaria Reliefs (cf. here Figs. 1; 2)*

Cara Chrystina,

non pensavo di averti detto particolari novità sui due rilievi della Cancellaria, ma mi fa piacere che quanto ci siamo detti non sia stata una conversazione poi così banale!

Riguardo al fatto che essi siano stati rifiniti (e dipinti) in opera, questo è un dato tecnico quasi ovvio - soprattutto se Pfanner [*i.e.*, here M. PFANNER 1981] lo ha a suo tempo dimostrato - ma certo avrà avuto delle prove forti nell'affermare che sia stato interamente scolpito in opera, perché questa procedura è molto insolita e scomoda ...

Il fatto che la rilavorazione di Domiziano in Nerva sia avvenuto in una bottega deriva proprio dal luogo di rinvenimento delle lastre - insieme a quelle del rilievo c.d. [cosiddetti] dei Vicomagistri - che probabilmente era il magazzino di un lapicida insediatosi nella tomba ormai smantellata di Aulo Irzio, in un quartiere che - come sappiamo da vari altri ritrovamenti - prevedeva altre botteghe di lapicidi. Questo dato non è una prova: le lastre potevano essere lì accatastate in attesa di un'altra destinazione (se tarda, anche una calcara), ma la superficie di quelle domizianee (al contrario di quelle dei Vicomagistri) sembra molto fresca e aver avuto pochissima vita all'aperto. Da qui l'idea di un monumento domiziano poi non terminato per la sua morte e poi "dannato", in attesa di una riconversione con Nerva mai avvenuta.

Dalle foto inoltrate via wettransfer [here not illustrated] potrai notare altri dettagli. La testa di Vespasiano non mi sembra assolutamente frutto di una rilavorazione: ha le stesse dimensioni e caratteristiche di quella di fronte, solitamente attribuita a Domiziano giovane. Tutti i ritratti dei due rilievi (Vespasiano, Domiziano giovane e Nerva/Domiziano) hanno un fondo con tracce di lavorazione a parte, come si fossero stati eseguiti da uno "specialista", che ha cercato di fargli emergere il più possibile dal fondo del rilievo. La testa di Nerva è poco meno alta del ritratto su cui viene realizzata, ma le dimensioni sono inferiori soprattutto nella larghezza, dovendo rilavorare proprio i lineamenti facciali. La testa del littore [*i.e.*, **figure 10** on Frieze B] alle spalle del Domiziano giovane (vedi foto) manca della rifinitura finale della barbula, ma probabilmente invece di pensare ad un "non finito" è più logico credere che questo dettaglio fosse meglio realizzato in pittura.

Tornando su quanto ci siamo detti a voce, credo che non si possa dubitare che i due rilievi raffigurino Profectio e Adventus; in quest'ultimo sarebbe ribadita anche la legittimazione di Domiziano da parte di Vespasiano (non a caso manca Tito!). Credo anche che stilisticamente non si possa mettere in dubbio la cronologia tardo domiziana: il chiaroscuro è realizzato con solchi profondi su di un elegante modellato naturalistico e, soprattutto, l'uso di forellini isolati (visibili in più parti) è un tipico marchio di fabbrica delle botteghe attive negli ultimi anni di Domiziano, fino a tutto il regno di Traiano.

Ovviamente quanto detto - se ti convince - puoi trasferirlo nel tuo testo ...

Giandomenico.

Note by the editor Chrystina Häuber:

For the numbering of the 34 figures, represented on the Cancellaria Reliefs; cf. here **Figs. 1; 2; Figs. 1 and 2 drawing.**

### ***The Contribution by Mario Torelli on the Templum Gentis Flaviae***

This *Contribution* belongs to *infra*, volume 3.2, *Appendix VI.*; Section *XII.*; and especially to the following *Chapter* :

***IV.1.1.h) The new findings by B.E. Borg (2019) concerning the Templum Gentis Flaviae support the hypothesis suggested here that Domitian's obelisk (cf. here Fig. 28) was commissioned for the Iseum Campense. With some observations concerning the Temple of Divus Traianus at Italica, and concerning the Marble Forum at the Colonia Augusta Emerita (Mérida) in Spain. With The Contributions by Eric M. Moormann, Mario Torelli, and Walter Trillmich, and with The second Contribution by Jörg Rüpke.***

The following passages are *verbatim* quotes from *infra*, volume 3-2:

**at Appendix VI.; Section XII. Let's now return to our discussion of the "Rilievo Terme Vaticano", which shows Mars and Rhea Silvia and the she-wolf, suckling Romulus, and thus 'Rome's foundation-story':**

“Concerning the *Templum Gentis Flaviae*, I follow, contrary to Coarelli (2012, 474, note 433; cf. *id.* 2014, 194, esp. pp. 204-207) and Grenier (2009, 238, both quoted *verbatim supra*, in Chapter *IV.1.1.a*)), Barbara Borg instead (cf. *ead.* 2019, 249, quoted *verbatim supra*, in Chapter *IV.1.1.h*)), who has, in my opinion, demonstrated that the temple-tomb proper was not built on a circular ground-plan, as asserted by Coarelli ...

I have, therefore, summarized this controversy here, since because of this previously unknown fact (*i.e.*, B. BORG's 2019 observation that the *Templum Genis Flaviae* did not have a round ground-plan), Torelli (1987) may in theory well be right in suggesting that Domitian's *sestertius* (cf. here **Fig. 30**) represents the *Templum Gentis Flaviae*. Especially because also Coarelli (2012, 474, n. 433) does not consider the fact that Torelli has discussed Domitian's *sestertius* in context with the "Rilievo Terme Vaticano" (cf. here **Fig. 31**), which in Torelli's opinion likewise shows the *Templum Gentis Flaviae*.

For further discussion of this subject; cf. *supra*, at Chapter *V.1.i.3.a*); and *infra*, in volume 3-2, at *Appendix I.g.3.*); and at *Appendix IV.c.2.*)’.

The following passages are *verbatim* quotes from above, Chapter:

***IV.1.1.h) The new findings by B. E. Borg (2019) concerning the Templum Gentis Flaviae support the hypothesis suggested here that Domitian's obelisk (cf. here Fig. 28) was commissioned for the Iseum Campense. With some observations concerning the Temple of Divus Traianus at Italica, and concerning the Marble Forum at the Colonia Augusta Emerita (Mérida) in Spain. With The Contributions by Eric M. Moormann, Mario Torelli, and Walter Trillmich, and with The second Contribution by Jörg Rüpke.***

“Coarelli (2014, 194-207, with Fig. 52 on p. 203: "*Templum gentis Flaviae: ricostruzione dell'ambiente sotterraneo*") **reconstructs the temple tomb within the *Templum Gentis Flaviae* with a round ground-plan.**

**Concerning Coarelli's relevant proposal, Borg (2019, 249-250) writes:**

"The proposal, intriguing as it may be, is riddled with difficulties. Not only is Coarelli's burial chamber strikingly different from the circular corridors of Augustus' mausoleum, it is not entirely clear whether Agrippa's Pantheon featured a roof or was open to the sky [with n. 206], and while it certainly had dynastic connotations and possibly associations of apotheosis, it was clearly not a straightforward temple to the imperial *divi* and *divae*. Moreover, like the late antique circular temple tombs, its overall plan, including the important front porch, requires elongated rather than square foundations. **What is more, not a single**

**curvilinear element has so far been found on site, and even Coarelli's concrete foundations are rectilinear,** while those of the Pantheon *rotunda* as well as those of the late antique mausolea are circular. As some temple tombs and other large brick tombs make clear, semi-interred burial chambers often exist beneath the actual temple structure, and the niche excavated underneath the via Vittorio Emanuele Orlando (Fig. 4.22) could just as well belong to a rectangular interior space [with n. 207].

**So far, I cannot see any evidence for a round building. A rectangular podium temple surrounded by a portico would fit with the rectangular features discovered so far, and this would in any case be the most likely shape** [with n. 208; my emphasis] ...

After they were written, I sent on 12th May 2020 all the text passages of this *Study*, related to Domitian's *sestertius* (cf. here **Fig. 30**), to the "Rilievo Terme Vaticano" (cf. here **Fig. 31**), and to the *Templum Gentis Flaviae* (cf. here **Figs. 33; 34**) to Mario Torelli, with whom Franz Xaver Schütz and I visited on 29th November 2019 at Perugia to discuss those matters with him. On 18th July 2020, after having discussed the matter with him on the telephone, I wrote Mario Torelli an E-mail with the subject: "Ti prego di darmi il permesso di menzionarti nella dedica per Rose Mary", adding in the attachments the *Dedication* of this book and the same text passages of my manuscript again, that I had sent him already on the occasion of his birthday on May 12th, comprising the title of the book, carrying the date of that day.

Mario Torelli was kind enough as to write me by E-mail of 18th July 2020 his comments, which he has kindly allowed me to publish here as his *Contribution*'':

*The Contribution by Mario Torelli*  
*on the Templum Gentis Flaviae*

Mia cara,

... Riprendo il mio ragionamento, in cui volevo segnalarti la mia scheda sui rilievi della Cancelleria, pubblicata nel Manuale di Bianchi Bandinelli e mio (\*Arte etrusca, Arte Romana\*, UTET, Torino 1976), dove sono esposti molti dei tuoi argomenti. Sono molto commosso per il continuo ricordo della mia persona, a partire dall'enfasi data alla mia data di nascita. Naturalmente mi fa molto piacere che in un lavoro dedicato a Rose Mary ti sia ricordata l'occasione napoletana della nostra conoscenza; quindi entusiastica approvazione della mia menzione in questo contesto.

Una cosa volevo aggiungere al tuo testo: l'idea di Coarelli (ma già in Lugli) del tempio della *gens Flavia* a pianta circolare nasce da una notizia credo seicentesca di un "tempio ovato": la disciplina (già in Vitruvio) che i templi rotondi sono riservati a Venere ed Ercole è sufficiente a smentire questa ipotesi. Ma le cose sarebbero molte e lo spazio di una mail non consente discussioni scientifiche.

Grazie, cara amica, e a presto,

Mario

Comment by the editor Chrystina Häuber:

Mario Torelli passed away on 15th September 2020. Not being able to anticipate this great loss, I hope at least the thoughts from his vast scholarly oeuvre that have been discussed in this volume will add to the memory of all of those people who appreciate his work, and especially of those who had the great privilege of knowing him personally.

Note by the editor Chrystina Häuber to Mario Torelli's *Contribution*:

On 18th July 2020, after receiving his reply, I called Mario Torelli again and told him that I should like to publish some passages from his above-quoted E-mail as his *Contribution* to this volume. In addition, I mentioned to him that the publication by Bianchi Bandinelli and himself (1976), which he mentions in this note, was already on my to-do-list that I intended to check as soon as the libraries would reopen again after the Corona pandemic.

This I have actually done. For discussions of the hypotheses concerning the Cancellaria Reliefs of Ranuccio Bianchi Bandinelli and Mario Torelli (1976, *ARTE ROMANA*, scheda n. 105):

cf. *supra*, n. 32, in Chapter I.1.; n. 208, in Chapter I.1.1.; one passage is quoted *supra*, in Chapter IV.1.; cf. Chapter V.1.i.3.b); at Section IV.); and at n. 475, in Chapter VI.3.

On 19th July 2020, Torelli kindly granted me by E-mail the permission to publish his E-mail here.

My following note was written immediately after this. See now also *supra*, in Chapter V.1.i.3.a), where these first ideas concerning those subjects have now been complemented by the relevant findings of those authors, who have contributed essays to the exhibition-catalogue, edited by Claudio Parisi Presicce, Massimiliano Munzi and Maria Paola Del Moro (*Domiziano Imperatore. Odio e amore*, 2023).

With his remark: "una notizia credo seicentesca di un `tempio ovato`", Mario Torelli refers in his above-quoted *Contribution* to Flaminio Vacca (*mem.* 38): "Mi ricordo presso ... strada (Pia) [*i.e.*, the Strada di Porta Pia, today: Via del Quirinale; cf. here Fig. 59] verso s. Vitale vi fu trovato un tempietto con colonne di bigio africano, di venti palmi l'una (m. 4, 46); non sovvenendomi se detto tempio fosse di pianta rotonda ovvero ovata", quoted after: Rodolfo Lanciani (III 1990, 209; cf. *id.* III, 194).

For the fact that Flaminio Vacca's (*mem.* 38): "... strada (Pia)" may be identified with the current Via del Quirinale; cf. the Rome map by Giambattista Falda (1676), label: STRADA DI PORTA PIA. Cf. Francesco Ehrle (1931).

I have found Lanciani's above-mentioned account in the article by Maria Cristina Capanna (2008, 175 with n. 2), and thank Eric M. Moormann for providing me with this article. Capanna describes how Lanciani had combined information, provided by Pirro Ligorio and Flaminio Vacca. She discusses two different locations that have been suggested for the *Templum Gentis Flaviae*; cf. her map Fig. 1 ("Le ipotesi A e B sul Quirinale"), the hypothesis mentioned here is Capanna's hypothesis A.

Cf. Capanna (2008, 175): "*Ipotesi A*. Area tra le attuali via del Quirinale, via delle Quattro Fontane, via di S. Vitale, Via Genova. L'ipotesi, avanzata da R. Lanciani, si basa su notizie fornite da Pirro Ligorio e Flaminio Vacca. Il primo [*i.e.*, Pirro Ligorio] riferisce che nella vigna del Cardinale Sadoletto - localizzabile lungo la via del Quirinale, tra le chiese di S. Andrea e di S. Carlo [alle Quattro Fontane] al centro della <<Casa Flavia>> era il <<Tempio di Minerva Flavia>> (questa attribuzione era dovuta al rinvenimento nella zona di una statua di Minerva con scudo), tondo, periptero con pronao esastilo, **il secondo** [*i.e.*, Vacca, *mem.* 38] **descrive l'edificio come un `tempietto` ionico, rotondo (o ovale)**, con colonne di bigio africano alte 4.46 m (Fig. 1.4) [with n. 2, quoting R. LANCIANI III 1990, 209; *id.*, *FUR*]" (my emphasis).

Cf. *FUR*, foglio 16, labels: COLLIS QUIRINALIS; ALTA SEMITA [today: Via del Quirinale]; Via Quattro Fontane; VIGNA DEL CARD[inale] SADOLETO; TEMPLVM GENTIS FLAV.[iae]; Vacca *m.[emoria]* 37.38; DOMVS FLAVORUM; AD MALVM PVNICVM.

Lanciani believed that all the above-mentioned information referred to the *Templum Gentis Flaviae*. This has rightly been refuted by Capanna (2008, 175). The reason being that we know from Martial (3.34.1-2, 7-8) "che si trattava di un edificio di ampie dimensioni"; cf. Capanna (2008, 173 with ns. 5-6), which is why the 'tempietto', mentioned by Vacca, certainly did not qualify as a candidate for this temple. - For Vacca's *memorie*, written in 1594; cf. Häuber (2014a, 419. For Pirro Ligorio, cf. pp. 268-269, 401-414).

After this text was written so far, I realized that, contrary to what Torelli asserts is his above-quoted *Contribution*, Filippo Coarelli had, on the contrary, already rejected Lanciani's identification of the finds at the Vigna of Cardinal Sadoletto, recorded by Vacca (*mem.* 38), with the *Templum Gentis Flaviae*.

Cf. Coarelli ("Gens Flavia, Templum", in: *LTUR* II [1995] 368-369).

After (erroneously) locating the *Templum Gentis Flaviae* at the site of the *domus* of Domitian's paternal uncle Flavius Sabinus, for which he suggests a location, Coarelli ("Gens Flavia, Templum", in: *LTUR* II [1995] 368-369) concludes: "In base a questi dati va respinta la tradizionale localizzazione a NE [nord-est] della chiesa di S. Andrea al Quirinale (Lanciani, *FUR*, tav. 16) e l'identificazione con un 'tempietto ionico con colonne di marmo Africano di venti palmi l'una, non mi ricordo bene se era di pianta tonda ovvero ovata'" (Vacca, *Mem.* 38). L'edificio doveva infatti trovarsi assai più a NE [nord-est], non lungi alle Terme di Diocleziano, da dove provengono (a N [nord] dell'asedra delle Terme e quindi in prossimità di Via Firenze) anche alcuni frammenti di rilievi di età domiziana (i cosiddetti 'rilievi Hartwig') che appartengono quasi certamente a un arco di ingresso del *templum* ... [page 369] ... **L'aspetto del tempio è forse riconoscibile in una moneta della fine del regno di Domiziano** (*BMCEmp* II, 406 n. \*, tav. 81,3; Haberey, *BjB* 160 (1960), 292, tav. 42.1 [referring to his "Fig. 11", *corr.*: 12 = here **Fig. 30**]) **e in un rilievo diviso tra il Museo Lateranense e il Museo delle Terme** (A. Ambrogi, *Mus. Naz. Rom.* I.8 (1985), 104 s. [referring to his Figs. 180-181 = here **Fig. 31**]) [my emphasis].

The caption of Coarelli's Fig. 12 (= here **Fig. 30**) reads: "*Domus Augustana, Augustiana*. Sesterzio di Domiziano del 95-96 d.C. *BMCEmp* II, 406 n. \* (da R. Paris, in *Dono Hartwig* [*i.e.*, here R. PARIS 1994b], 26, fig. 14)". - This figure 12 belongs to the *lemma* of Luca Sasso D'Elia ("*Domus Augustana, Augustiana*", in: *LTUR* II [1995] 40-45, who refers to this coin on p. 43, and follows the hypothesis that this coin represents Domitian's *Domus Augustana*. For discussions; cf. *infra*, in volume 3-2, in *Appendix VI.*; at Sections II. and XII.

The caption of Coarelli's Fig. 180 (= here **Fig. 31**) reads: "*Gens Flavia, templum*. Rilievo con rappresentazione di edificio decastilo e frontone. MNR [Museo Nazionale Romano] (da R. Paris, in *Dono Hartwig* [*i.e.*, here R. PARIS 1994b], 32, fig. 1 [= here **Fig. 31**]).

The caption of Coarelli's Fig. 181 reads: "*Gens Flavia, templum*. Rilievo con processione. Città del Vaticano, Museo Gregoriano Profano (da R. Paris, in *Dono Hartwig* [*i.e.*, here R. PARIS 1994b] , 32, fig. 2 [= here **Fig. 31**]).

**Fig. 56. Archaeological plan of the area of the Baths of Diocletian. Cf. C. Pietrangeli 1977, tav. 2 (drawing: C. Buzzetti and E. Gatti). From: E. La Rocca (2020b, Fig. 8): "1. Area dove era ubicato il *templum gentis Flaviae*; 2. Il luogo dove è stata rinvenuta la testa colossale di Tito [cf. here Fig. 53]; 3. Edificio in laterizio dove è stato rinvenuto il mosaico con tiaso marino e le tre Grazie; 4. Il luogo dove sono stati rinvenuti i rilievi Hartwig [for those; cf. *supra*, at Chapter V.1.i.3.a), and here Figs. 33; 34]".**

**Fig. 57. Archaeological plan of the Baths of Diocletian (detail). Cf. C. Pietrangeli 1977, tav. 3, with additions by E. La Rocca. From: E. La Rocca (2020b, Fig. 10: detail of his Fig. 9). The caption of his Fig. 10 reads: "Dettaglio della pianta a fig. 09. Con una linea rossa è segnalato il perimetro della recinzione del *templum gentis Flaviae* (da Pietrangeli 1977, tav. 3, con aggiunte dell'a.[utore])".**

In this *lemma* "Gens Flavia, Templum" in the *LTUR* II (1995, 368-369), Filippo Coarelli had still (erroneously) assumed the *Templum Gentis Flaviae* at the site of the *domus* of Domitian's paternal uncle, Flavius Sabinus, an opinion, which he would later correct; cf. Coarelli (1999a, 183), assuming the *Templum Gentis Flaviae* now at the site of Vespasian's *domus*, and both at the site of the (later) Baths of Diocletian. See also Coarelli (2009b, 93-94); Coarelli 2014 (194-207; pp. 204-207, quoted *verbatim supra*, in Chapter IV.1.1.a)); cf. Chapter IV.1.1.h). See also *LTUR* V (1999) 262. But Coarelli had also followed in this *lemma* Torelli (1987) in suggesting that the *Templum Gentis Flaviae* is possibly represented on Domitian's *sestertius* of 95/96 (cf. here **Fig. 30**) and on the "Rilievo Terme Vaticano" (cf. here **Fig. 31**). With those two assumptions he had followed Torelli (1987) (discussed *infra*, in volume 3-2, in *Appendix VI.*; at Sections II.; XII:), also with his third suggestion to attribute the Rilievi Hartwig (for those; cf. *supra*, at Chapter V.1.i.3.a), and here **Figs. 33; 34**) to an arch, (taken back by F. COARELLI 2009b, 94, with n. 312, thus now following R. Paris (1994b).

Concerning the date of the *Templum Gentis Flaviae*, Coarelli (2009b, 94) writes: "**La menzione che ne se trova in Stazio e in Marziale costituisce comunque un sicuro terminus ante quem non di 94 di C.** [with n. 311; my emphasis].

Una testimonianza importante per la sua localizzazione è nota da tempo: si tratta del luogo di ritrovamento dei cosiddetti rilievi Hartwig, di cui è stata dimostrata la pertinenza alla tomba-sacrario dei Flavi [with n. 312], che furono scoperti nel 1901, costruendo gli edifici che chiudono l'emiciclo settentrionale di Piazza della Repubblica".

In his **note 311**, Coarelli writes: "Stat. *Silv.* IV.3.18-19: *qui genti patriae futura semper / sancit limina Flaviumque caelum*; 4.2.59 sg. [segunte] (data di pubblicazione del IV libro: il 95): V.1.240 sg. [segunte]: *illius, aeternae modo qui sacra genti / condidit inque alio posuit sua sidera caelo* (il V libro venne pubblicato intorno al 96). In Marziale, il tempio è ricordato in IX.1.18 e in IX.3.12 (il IX libro venne pubblicato nell'estate del 94). Tuttavia è possibile che i lavori fossero sufficientemente avanzati già nell'89, se Giulia [Tit] vi fu sepolta subito dopo la morte, avvenuta quell'anno".

In his **note 312**, he writes: "Da ultimo, Paris 1994 [*i.e.*, here R. PARIS 1994b]".

For a detailed discussion of the locations of the *Domus* of Flavius Sabinus and of the *Templum Gentis Flaviae*; cf. Coarelli (2014, 71, 255-256, 263, 271-274, 277, 280-281), summarized *supra*, in Chapter V.1.i.3.a). Coarelli (2014, 247-256 with ns. 29, 30) bases his now corrected location of the *domus* of Flavius Sabinus *inter alia* on his research of the true location of the Vigna Sadoletto.

Cf. here **Figs. 58; 59**, labels: COLLIS QUIRINALIS; Servian city Wall; S. Susanna; Caserma dei Corazzieri; site of DOMUS; ALTA SEMITA / Via del Quirinale / Via XX Settembre; Via Firenze; site of DOMUS : T. FLAVIUS SABINUS / DOMUS : NUMMII; Piazza S. Bernardo; Via Torino; VICUS LONGUS; Baths of DIOCLETIAN; site of DOMUS : VESPASIAN / TEMPLUM GENTIS FLAVIAE;

Only after having finished writing this *Note by the editor*, did I - finally - realize that Eugenio La Rocca (2009, 225-228) has already discussed the just summarized complicated topographical subject in great detail.

In one of his most recent discussions of the subject, Eugenio La Rocca (2020b, 369 n. 9) writes:

"**Che il tempio** [*i.e.*, the temple-tomb proper of the *Templum Gentis Flaviae*] **fosse a pianta circolare** (come hanno suggerito Jordan, Hülsen 1907, p. 426; Lugli 1938, p. 319; Scott 1936, p. 67; Ward-Perkins 1981, p. 77; e Coarelli 2014, pp. 200-204), **è solo una suggestiva ipotesi priva, purtroppo, di un valido sostegno archeologico** [my emphasis]".

For the most recent discussion of the *Templum Gentis Flaviae* by Eugenio La Rocca and Lorenzo Kosmopoulos (2023); cf. *supra*, in Chapter IV.1.1.h).

*The Contribution by Walter Trillmich on the headless marble togati found in the so-called Marble Forum at Mérida in Spain, one of which looks like the togate youth on Frieze B of the Cancellaria Reliefs*

This *Contribution* belongs to the following *Chapter* :

**IV.1.1.h) The new findings by B.E. Borg (2019) concerning the Templum Gentis Flaviae support the hypothesis suggested here that Domitian's obelisk (cf. here Fig. 28) was commissioned for the Iseum Campense. With some observations concerning the Temple of Divus Traianus at Italica, and concerning the Marble Forum at the Colonia Augusta Emerita (Mérida) in Spain. With The Contributions by Eric M. Moormann, Mario Torelli, and Walter Trillmich, and with The second Contribution by Jörg Rüpke; at The Marble Forum at the Colonia Augusta Emerita (Mérida) in Spain**

The following is a quote from Chapter *IV.1.1.h*):

“Interesting in the context of this *Study* is the, at least to me so far unknown fact, that at this Marble Forum [in Mérida in Spain] togate marble statues were excavated, which are missing their heads, and that one of them, which Peña Jurado (2017, 206-207 with ns. 56, 57) discusses, looks very much like the togate youth (figure 12) on Frieze B of the Cancellaria Reliefs (cf. here **Fig. 2; Fig. 1 and 2 drawing: figure 12**), in my opinion Domitian.

**Because Peña Jurado (2017) refers in a footnote to Trillmich's (2004) dating of the Cancellaria Reliefs to the Neronian period, I repeat in the following, what was already said above (cf. *supra*, at n. 130, in Chapter *I.1.*) ...**

Since I could not find Walter Trillmich's publication of 2004, I called him in Wien and discussed the matter with him in an E-mail correspondence. On 15th April 2020, I sent him a detailed summary of the results of this *Study*, in which I have followed those scholars, who date the Cancellaria Reliefs (cf. here **Figs. 1; 2**) to the Flavian period. The relevant hypotheses are explained in the following Chapters of this *Study* ...”

Walter Trillmich was kind enough to answer me by E-mail on 25th April 2020, and on 28th April 2020, he has allowed me to publish here the relevant passage of his E-mail’’:

*The Contribution by Walter Trillmich :*

*on the headless marble togati found in the so-called Marble Forum  
at Mérida in Spain, one of which looks like the togate  
youth on Frieze B of the Cancelleria Reliefs*

Liebe Frau Häuber,

... In Einem haben Sie gewiss recht: der Anordnung von Fries A und B einander gegenüber auf zwei Seiten eines (Bogen ?) - Durchganges. Eine Frage bleibt mir offen für den Fall, dass die Reliefs genuin flavisch sein sollten: wer hat in Augusta Emerita in flavischer Zeit ein Interesse an einer Wiederholung des Programms vom Forum Augustum? Und wie erklärt man die enorme stilistische Ähnlichkeit unserer dortigen Togati mit den (doch wohl claudischen) Skulpturen von Leptis Magna, Cerveteri und Baia? Vielleicht müssen wir unsere Vorstellungen von ``Zeitstil`` überarbeiten und beträchtlich dehnen? ...

Mit herzlichen Grüßen,

Ihr

Walter Trillmich.

Notes by the editor Chrystina Häuber:

In his above-quoted *Contribution*, Walter Trillmich writes: "In Einem haben Sie gewiss recht: der Anordnung von Fries A und B einander gegenüber auf zwei Seiten eines (Bogen ?) - Durchganges".

Trillmich thus follows the visualization, made by Franz Xaver Schütz and myself of the Cancellaria Reliefs as two panels that were mounted on two parallel, opposite walls in the passageway of one of Domitian's many arches at Rome. For discussions of this visualization; cf. the caption of here **Figs. 1 and 2 of the Cancellaria Reliefs, drawing, 'in situ'**; and *supra*, in Chapter *The major results of this book on Domitian*.

I answered Walter Trillmich on the same day by E-mail that (although not being familiar with the situation at Mérida), I imagine that both Vespasian and Domitian, because of their distinct Augustus-imitatio (cf. *supra*, in Chapter II.3.1.c); and *infra*, in volume 3-2, at *Appendix VI.*), could (in theory) perfectly well have had the idea to commission the Marble Forum at Mérida. - But see Eric M. Moormann's review of Vibeke Goldbeck's book (2015); cf. Moormann (2016, 285): a commission of the Marble Forum at Mérida by an emperor seems to be ruled out. Walter Trillmich replied to that on 27th April 2020, that there is hope to clarify the actual date of the building's marble decoration fairly soon, since Nicole Röring is in the course of studying its architecture, and has already arrived at many surprising results, which are so far unpublished.

In addition, he alerted me to the publication of this building by Vibeke Goldbeck (*Fora Augusta. Das Augustusforum und seine Rezeption im Westen des Imperium Romanum*, 2015, 60-80). On 28th April 2020, Walter Trillmich has generously allowed me to mention also this here.

#### *Post scriptum*

On 9th July 2023, I had the chance to talk again on the telephone to Walter Trillmich in Wien. He was kind enough to tell me that the research by Nicole Röring on the Marble Forum at Mérida, that he had mentioned to me in his E- mail of 27th April 2020, has so far not been published.

In the following, I repeat, what was written in more detail for *supra*, Chapter IV.1.1.h):

“When this volume was about to be sent to the press, I found the following publications that will, therefore, only be discussed in detail *infra*, in volume 3-2:

Nicole Röring ("Von einer Basilika (?) zu einem rezipierten Augustusforum. Das Marmorforum von Mérida", 2020). In Röring's opinion, two very different buildings had stood at this site: first an Augustan building (probably a Basilica), which was later replaced by the much larger 'Marmorforum'. Röring (2020, 249, n. 5) mentions the two well known hypotheses concerning the dating of the sculptural decoration of this 'Marmorforum': to the Claudian and to the Flavian periods. But contrary to what I had hoped, Röring does not provide new information concerning the so far excavated parts of the building itself, that would allow a precise dating of this later phase, when, for example, those headless marble *togati* were created, which had belonged to its marble decoration. According to Röring (2020, 264), this 'transformation' of the previous Augustan building into the larger Marble Forum had started in the middle of the 1st century AD.

In addition to this, I have found three more recent publications by Vibeke Goldbeck on the subject ("Architekturkopien? Terminologische Überlegungen zur Rezeption von Bauwerken und ihrer Ausstattung bei den Römern. Untersucht am Beispiel des Forum Augustum und der Porticus ad Nationes", 2017). Goldbeck herself quotes also another of her earlier publications ("Die Porticus ad Nationes des Augustus", 2015a); Vibeke Goldbeck ("Die Rezeption der stadtrömischen Monumente des Augustus im Imperium Romanum", 2020); and Vibeke Goldbeck ('Monuments Abroad' - Zur Rezeption kaiserlicher Monumente im Imperium Romanum", 2021)“.

For some remarks on all those publications; cf. *supra*, in Chapter IV.1.1.h); at *The Marble Forum at the Colonia Augusta Emerita (Mérida) in Spain*; in Chapter *The major results of this book on Domitian*; and for a detailed discussion; cf. *infra*, in volume 3-2, at *Appendix IV.d.2.*)

*The first Contribution by Claudia Valeri on the "Rilievo Terme Vaticano" (cf. here Fig. 31)*

This Contribution belongs to the following Chapter in volume 3-2:

*Appendix I.g.3.) A sestertius, issued by Domitian in AD 95/96 (cf. here Fig. 30), and the Flavian date of the "Rilievo Terme Vaticano" (cf. here Fig. 31), both of which possibly represent Domitian's Templum Gentis Flaviae. With The first Contribution by Claudia Valeri.*

*Appendix I.g.3.); IV. The observations made by Claudia Valeri and myself while studying together the "Rilievo Terme Vaticano". With The first Contribution by Claudia Valeri.*

The following is a quote from *Appendix I.g.3.)* in volume 3-2 :

``On 28th November 2019, I was able to study the "Rilievo Terme Vaticani" together with Claudia Valeri standing in front of the original fragment in the Museo Gregoriano Profano, using a lamp. Both of us agree with Torelli (1987) that the relief is datable in the Flavian period. Valeri was also kind enough to alert me to four facts that I had not as yet realized myself at that stage, and that she has kindly allowed me by E-mail (of 1st May 2020) to mention here``:

*The first Contribution by Claudia Valeri :  
on the "Rilievo Terme Vaticano" (cf. here Fig. 31)*

- 1.) the proportions of the "Rilievi Valle Medici", and those of the "Rilievo Terme Vaticano" (cf. here **Fig. 31**) are completely different, the former being very small, when compared with the latter;
- 2.) these truly extraordinary, or rather unique proportions of the "Rilievo Terme Vaticano", a fact also stressed by Langer and Pfanner (2018, 153) in one of the above-quoted epigraphs of this Chapter [*Appendix I.g.3.*)], are, according to Claudia Valeri, another strong argument to attribute the "Rilievo Terme Vaticano" to Domitian;
- 3.) Contrary to Langer and Pfanner's idea (*id.* 2018, 154, quoted *verbatim supra*, in *Appendix I.g.3.*); at *Section I.*), who suggest that the relief of the pediment, representing 'Rome's foundation story' (cf. here **Fig. 31**) could hint at Rome's founder hero's apotheosis, 'der zum Quirinus wurde', Claudia Valeri rightly observes that not Romulus' apotheosis is depicted in this pediment (here **Fig. 31**), but rather his childhood;
- 4.) According to Claudia Valeri, the real protagonist of the "Rilievo Terme Vaticano" is the represented *temple*.

Comments by the editor Chrystina Häuber:

To Claudia Valeri's point 1.) I should like to add information that she was kind enough to give me: Unlike myself, she was able to study the "Della Valle Medici Reliefs" at the garden façade of the Villa Medici *in situ*, when those were accessible by means of a scaffolding.

In addition to this, Claudia Valeri wrote me on 1st May 2020 by E-mail:

"... In merito ai rilievi Della Valle-Medici, sono convinta che la loro datazione preceda quella del nostro rilievo [*i.e.*, here **Fig. 31**]. Inoltre, ho ricontrollato la pubblicazione di Cagianò de Azevedo (Le antichità di Villa Medici, Roma 1951) e le loro dimensioni sono decisamente più ridotte. Il rilievo con il tempio ottastilo è alto m. 1,55 e largo m. 1,22 (p. 37, n. 3); il rilievo con il tempio esastilo è alto m. 1,55 e largo m. 1,05 (p. 40, n. 11)". - This she has kindly allowed me by E-mail of 4th May 2020 to mention here as well.

For illustrations of the two above-mentioned reliefs Della Valle Medici; cf. also Rita Paris (1994b, 78, Figs. 4 a-b).

*The second Contribution by Claudia Valeri on the two headless cuirassed statues of Flavian emperors at the Museo Chiaramonti (inv. nos. 1250; 1254; cf. here Fig. 6, left and right)*

This *Contribution* belongs to the following *Chapter* in volume 3-2:

*Appendix IV.c.2.) The Ogulnian monument (a statue group representing the she-wolf suckling Romulus and Remus, standing underneath the sacred fig tree ficus Ruminalis), and she-wolf suckling Romulus and Remus on a headless cuirassed statue of a Flavian emperor (Domitian?) in the Vatican Museums (cf. here Fig. 6, right) and on Hadrian's cuirassed statue from Hierapydna at Istanbul (cf. here Fig. 29). Exactly like the statue of the ficus Ruminalis on the Anaglypha Hadriani (cf. here Figs. 21; 22), the lupa and the twins on those cuirasses symbolize Rome's claim to eternal power and divine mission, and that it was the task of the Roman emperor to fulfill this obligation (cf. C. Parisi Presicce 2000, 28, 29). With a discussion of the meaning of the lupa and the twins on the "Rilievo Terme Vaticano" (cf. here Fig. 31), and with The second Contribution by Claudia Valeri.*

The following is a quote from *Appendix VI.c.2.)* in volume 3-2 :

“Since that Monday of 9th March 2020, when Claudia Valeri and I had intended to study together the two headless cuirassed statues of Flavian emperors at the Museo Chiaramonti together (cf. here **Fig. 6, left and right**), we have been discussing those two sculptures by telephone- and E-mail conversations, exchanging ideas, whenever some new findings came up. In an E-mail of 18th December 2020, Claudia Valeri was kind enough to answer my questions: at that stage I was especially curious about her dating of those *torsi* to the Domitianic period (which she had written to me by E-mail of 14th February 2020), and whether or not the findspot of those sculptures at the Baths of Caracalla could contradict such a dating. Cf. *supra*, in volume 3-1, at *The second Contribution by Claudia Valeri*.

In the following, I translate what Claudia Valeri wrote to me on 18th December 2020 :

1.) the cuirassed *torsi* (inv. nos. 1250, 1254 [cf. here **Fig. 6, left and right**]) have already been dated to the Domitianic period by Andrae 1995, pls. 226-227; Parisi Presicce takes up this dating and suggests that this is a pair of Flavian emperors (Vespasian or Titus + Domitian). The late Antonine dating appears in Vermeule and was repeated by Liverani, also Amelung speaks of statues of late antique date. I have looked at those two sculptures, also together with Giandomenico [Spinola], and am of the opinion that their dating to the Domitianic period is the most likely one.

2) the certain provenance [of those two *torsi*; cf. here **Fig. 6, left and right**] from the Baths of Caracalla does not create a problem, it is widely known that the very rich sculpture decoration of the Antonine Baths was planned to comprise sculptures, including very important ones, that were much older, to begin with the Toro Farnese, but the list [of such older statues] is very long’.

Note that Valeri in her above-quoted point 1.) refers to Parisi Presicce's account (2000, 39, cat. no. 13, quoted *verbatim supra*, in *Appendix IV.c.2.)*= here **Fig. 6, right**), as well as to the references, provided by Parisi Presicce at this catalogic-entry, which were already quoted above in their entirety:

"Amelung, *Vat. Kat.*, I, p. 670, n. 543, tav. 71; C. Vermeule, *Hellenistic and Roman Cuirassed Statues*, in *Berytus*, XIII, 1959, p. 67, n. 281 ... P. Liverani, *Museo Chiaramonti* (Guide Cataloghi dei Musei Vaticani, 1), Roma 1989, p. 20, n. V.5 ... AA.VV., [B. ANDRAE] *Bildkatalog der Skulpturen des Vatikanischen Museum I. Museo Chiaramonti*, Berlin 1995, p. 24, tavv. 226, 228, 230, 313 ...”’.

Claudia Valeri wrote me on 18th December 2020 the above-translated E-mail and kindly gave me on 22nd January 2021 permission to publish it here:

*The second Contribution by Claudia Valeri :*

*on the two headless cuirassed statues of Flavian emperors  
at the Museo Chiaramonti  
(inv. nos. 1250; 1254; cf. here Fig. 6, left and right)*

Carissima Chrystina,

cerco di rispondere ai quesiti premettendo che puoi servirtene per la tua pubblicazione, come già scritto per quanto concerne le rilievi della Cancelleria e sul rilievo Terme-Vaticano, in precedenti e-mail, in particolare una mia del 4 maggio 2020.

1) La datazione domiziana dei torsi loricati (invv. 1250, 1254) è espressa già in Andreae 1995, tavv. 226-227; Parisi Presicce la riprende ipotizzando una coppia di imperatori flavii (Domiziano + Vespasiano o Tito). La datazione tardo antonina compare in Vermeule e viene ripresa da Liverani, anche Amelung parla di statue della tarda età imperiale. Ho riguardato le sculture, anche con Giandomenico [Spinola], e ritengo sia più verosimile la datazione domiziana.

2) La provenienza certa dalle Terme di Caracalla non è un problema, è ampiamente noto che il ricchissimo arredo delle Terme Antoniniane prevedeva sculture, anche di grande impegno, ben più antiche, a partire dal Toro Farnese, ma l'elenco è ben nutrito! ...

Spero di aver soddisfatto le tue curiosità ...

Claudia.

*Post scriptum* by the editor Chrystina Häuber:

On 16th May 2022, Claudia Valeri and I were finally fortunate enough to study these two torsii together, to which she was kind enough as to accompany me on that day. Cf. *supra*, in Chapter *Introductory remarks and acknowledgements*; and for a detailed discussion, *infra*, in volume 3-2, at *Appendix IV.c.2.*

*The first Contribution by T.P. Wiseman on the identification of the L. Scribonius Libo, who was the dedicant of the puteal Scribonianus (or Libonis)*

This *Contribution* belongs to the following *Chapter* in volume 3-2:

*Appendix IV.c) The meaning of the statue group 'Marsyas and fig tree', which appears twice on the Anaglypha Hadriani (Figs. 21; 22), and of the Ogulnian monument (a statue group representing the she-wolf suckling Romulus and Remus, standing underneath the sacred fig tree ficus Ruminialis in the Comitium). With The first Contribution by T.P. Wiseman*

The following is a quote from *Appendix IV.c)* in volume 3-2 :

“Cf. Torelli (1982, 101-102), where he explains, why the *puteal Scribonianus* (or *Libonis*) had been erected under the open sky; the structure was built by the *praetor peregrinus* L. Scribonius Libo in 204 BC [with n. 97]:

"Nobody has observed that the dedicant of the *puteal* was a *praetor peregrinus* and that this *puteal* was placed close to the *tabernae argentariae*, existing there from before 310 B.C. [with n. 98], and that, accordingly, the *puteal* was connected with *Janus medius* and with *faeneratores* [with n. 99], a profession certainly at the beginning practised by foreigners [with n. 100]. Porphyrius even credits Libo with having placed there *tribunal et subsellia* [with n. 101]. This furthermore explains the connection between this *tribunal*, the *basilica Aemilia* [he refers to the Basilica Paulli] with its *horologium sub tecto*, and the building of the *tribunal Aurelium* in this area after the Sullan reconstruction of the *Curia*".

In his **notes 97-98, 100-101**, Torelli provides references and further discussion.

In his **note 99**, he writes: "Passages in Welin 1953, loc.cit. However the scholion to Cic. *pro Sest.* 8.18 (*Schol. Bob.* p. 128 Stangl) refers to the other *puteal Atti Navi in Comitio*. We know (Fest. 333 L., s.v. *Scribonianum*) that Libo created the *puteal* there *ob sacella attacta*; which these *sacella* were we don't know ...".

Cf. Münzer, s.v. "Scribonius Libo; 16) L. Scribonius Libo war 538 = 216 [BC] Volkstribun ... 550 = 204 wurde er Praetor peregrinus ... das kann zugunsten der Vermutung angeführt werden, daß der damalige Praetor der Scribonianus Libo war ... der bei dieser Gelegenheit ein Blitzgrab auf dem Forum herstellen ließ, dessen Einfassung als Puteal Scribonianum oder Puteal Libonis bekannt ist ... es wird öfter, auch als Puteal schlechthin, erwähnt, weil neben ihm das Tribunal des Praetors stand ...", in: *RE II A 1-2* (1921) Sp. 880. - But, as we have seen above, it is debated, when this man actually lived: as was already quoted above: "According to Coarelli (2019a, 315) L. Scribonius Libo was: "tribuno della plebe del 149 [BC]"".

Since I could not judge this subject myself, I asked T.P. Wiseman for advice. On 23rd May 2020, he was kind enough to write me a discussion of this problem":

*The first Contribution by T.P. Wiseman :*

*on the identification of the L. Scribonius Libo,  
who was the dedicant of the puteal Scribonianus (or Libonis)*

Dear Chrystina,

... according to Porphyrio's commentary on Horace *Epistles* 1.19.8, ``the *puteal Libonis* was the seat of the *praetor*, near the Arch of Fabius, because the tribunal and benches were first placed there by Libo''. So we're looking for a Libo who was *praetor*; Muenzer found one in 204 BC (Livy 29.13.2), but there was another one in 192 BC (Livy 35.10.11, 35.21.1) who is equally possible. Filippo's [*i.e.*, Filippo Coarelli's] Libo of 149 BC was a tribune, not a *praetor*; but F.[ilippo] is committed to the belief that the *praetor's* tribunal was still in the Comitium in 161 BC (see [F. COARELLI] *Il foro Romano* II [1985] pp. 158-9 and 166-7, on Macrobius *Saturnalia* 3.16.15-16), so our Libo would have to be later than that. But I don't think the argument works: Macrobius was probably referring to the seat of the *praetor urbanus*, whereas the Libo of 204 and the Libo of 192 were both *praetor peregrinus*. Either of those two dates looks OK to me.

Hope that's some help!

All best,

Peter.

*The second Contribution by T.P. Wiseman on the questions which ancient author explicitly records that Domitian had restored the Templum (novum) Divi Augusti, and that he had dedicated this temple in AD 89 or 90*

This *Contribution* belongs to the following *Chapter* in volume 3-2 :

*Appendix V. Explanations concerning the ancient toponyms of the Palatine and its immediate surroundings, between the Velabrum and the Caelian, as marked on my map Fig. 73;*

*Appendix V.; Section I. The (new) temple of the deified Augustus, the Velabrum, the bibliotheca Domus Tiberianae, the Athenaeum, Livia's sacrum dedicated to Divus Augustus (his 'old' temple), and the Curiae veteres on the map Fig. 73. With The second Contribution by T.P. Wiseman.*

The following is a quote from a *Chapter* in volume 3-2:

*Appendix IV.d.4.b) Domitian's building project comprising the Campus Martius, the Capitoline Hill and the sella between Arx and Quirinal. With detailed discussion of the Templum Pacis, and some remarks on Domitian's Villa, called Albanum :*

“Domitian restored the *Templum (novum) Divi Augusti* after that had been destroyed by the fire of AD 80, and dedicated it in AD 89 or 90; cf. Stefano Tortorella (1992, 99 with n. 114), quoting for that: "Suet *Dom.* 20". Tortorella himself does not quote Torelli for that information. Cf. Mario Torelli ("Augustus, Divus, Templum (novum); Aedes", in: *LTUR* I [1993] 145-146, Figs. 78; 79; cf. p. 146: "Dobbiamo a Domiziano la ricostruzione totale (cfr. Suet. *Dom.* 20) e la dedica 89 o 90) del complesso"). Whereas the location of this temple (immediately to the south-west of the *Basilica Iulia*), as suggested by Torelli, is the one maintained here as well [cf. here **Fig. 73**], Suetonius (*Dom.* 20) does not provide the information Torelli asserts. Although I myself have been unable to find the correct literary source ... this is also suggested by other scholars, who based their conclusions on different literary sources, that Domitian actually restored the *Templum (novum) Divi Augusti*. Cf. Samuel Platner and Thomas Ashby (1929, 62-65 s.v. Augustus, Divus, Templum); Lawrence Richardson Jr. (1992, 45-46 s.v. Augustus, Divus, Templum).

Cf. *supra*, in volume 3-1, at Chapter II.3.1.c) ...; and *infra*, in *Appendix V.*; at Section I.)”.

Asking on 10th January 2021 T.P. Wiseman for advice in this matter, he was kind enough to answer me on the same day by E-mail:

*The second Contribution by T.P. Wiseman :*

*on the questions which ancient author explicitly records that Domitian  
had restored the Templum (novum) Divi Augusti,  
and that he had dedicated this temple in AD 89 or 90*

Dear Chrystina,

...

All I know about this is that Martial refers to the new temple, with Minerva attached (or nearby), at 4.53.1-2, normally dated to AD 88, and that military diplomas from about 90 were set up *in muro post templum diui Augusti ad Mineruam*. I hope that's the evidence you're looking for!

Love from us both,

Peter

Note by the editor Chrystina Häuber:

To this E-mail, I answered Peter Wiseman on 11th January 2021:

"Dear Peter,

thank you very much indeed! The quotation from Martial that you write me is precisely what is also to be found in Platner and Ashby (1929, 62 *s.v.* Augustus, Divus, Templum). But Martial does NOT say EXPLICITLY that Domitian restored the temple. Platner and Ashby write: "It was destroyed by fire at some time before 79 A.D. (Plin. loc.cit. [NH xii 94])", but that passage refers obviously to the *sacrarium Divi Augusti* on the Palatine, at the north-east corner of the Palatine, excavated by Clementina Panella [discussed *infra*, in volume 3-2, in *Appendix V.*; at Section I.]. Mario Torelli (*LTUR* I, 1993, 145-146 *s.v.* Augustus, Divus, Templum (novum), Aedes), who rightly observed that these two sanctuaries dedicated to Augustus were and still are constantly confused, was of the opinion that the *Templum novum Divi Augusti* had been destroyed between the fires of 69 and 80 that devastated the *Capitolium*. That the *Templum (novum) Divi Augusti* WAS restored is clear from the fact that it is mentioned in "testi giuridici come i *diplomata militaria* a partire di 90 d. C. (*CIL* XVI 36-156, p. 196 s.) o in testi derivati da fonti ufficiali [quoting literary sources for that]", as Torelli writes on p. 145. Perhaps this had led him [*i.e.*, Mario Torelli] to the conclusion that Domitian had restored this temple (as Platner and Ashby and Richardson Jr. had done before him).

Unfortunately we can't ask Mario Torelli HIMSELF any more.

Love from us both,

Chrystina".

For the coins, issued by Antoninus Pius in AD 159, which prove that definitely *this* emperor had restored the *Templum (novum) Divi Augusti*; see now above, at *The second Contribution by Angelo Geißen : Zum 'Hadrianeum' auf Münzen des Antoninus Pius*.
