But, although I do not know those two heads from autopsy, to judge from the above-quoted illustrations, the renderings of the eyes and of the hair of the head of *Divus Titus* in Naples (here **Fig. 53**) and of that of Flavia Domitilla *minor* in Copenhagen (here **Fig. 55**) show great similarities.

Perhaps there is also something else which could support the idea that the head of Flavia Domitilla *minor* in Copenhagen was copied after the cult-statue of *Diva Flavia Domitilla minor* in the *Templum Gentis Flaviae* assumed here. Whereas her portrait in the Museo Torlonia (here **Fig. 54**) shows her facial traits rendered rather unflattering and, therefore, possibly realistically, the portrait in Copenhagen (here **Fig. 55**) is clearly idealized, as Coraggio suggests:

**"L'accentuato naturalismo di questa effigie [here Fig. 54] potrebbe dipendere da un prototipo eseguito in vita, mentre la versione idealizzata, che negli esemplari a tutto tondo è in un caso (Copenhagen, Ny Carlsberg Glyptotek [here Fig. 55]) di dimensioni superiori al vero, ne costituirebbe la redazione postuma, celebrativa degli onori conferiti da Domiziano alla congiunta [my emphasis]"**.

#### **Domitian's sister *Diva Flavia Domitilla minor* was indeed buried in the *Templum Gentis Flaviae***

In the following, I repeat a passage from Rose Mary Sheldon's book (2023, in press), which was already quoted in more detail *supra*, in Chapter *Preamble*; in Section *II.*, because she suggests that: "The cult [of the Flavian *gens*] included most members of the Flavian *gens* including *Diva Domitilla* Vespasian's daughter". If true, this would, by implication, mean that Domitian's sister, *Diva Flavia Domitilla minor*, had also a cult-statue at the *Templum Gentis Flaviae*.

**"Rose Mary Sheldon (*Guarding the Caesars. Roman Internal Security under the Flavian Dynasty*, 2023, in press; Chapter 7; Section: "Imperial Cult") writes :**

**"... As Pontifex Maximus, he [*i.e.*, Domitian] had general oversight of the Roman state religion, and his attention to religion apparently surpassed the previous Flavians. He took his duties seriously and seems to have performed them conscientiously. [with n. 102] His interest in religion was far more than casual politics. The imperial cult was a means of underlying power for all emperors [with n. 103]. The imperial cult implied the divine right to rule ...**

**Scott believed that Domitian was responsible for the establishment of the Flavian cult throughout the Roman world, and that worship was kept going until the close of the second century in spite of the fact that Domitian suffered *damnatio memoriae*. [with n. 104] The Flavian *gens* had its own temple in Rome and its own cult with priests to observe worship. There is considerable epigraphic evidence for the activities of the priests of the Flavian cult. [with n. 105; my emphasis]"**.

In her **note 102**, Sheldon writes: "Murison (1999), 219; Scott (1975), 61; Rhodes (2014), 88-89".

In her **note 103**, she writes: "See Sheldon (2018), 41. Lendon (1997), 10 on the part the cult played in helping the emperor to rule. On the cult under the Flavians, see Fishwick (2009), 344-47. On the cult under Domitian, see Chabrečková (2017), *passim*; Fernandez Uriel (2016), 97-101".

In her **note 104**, she writes: "The cult included most members of the Flavian *gens* including *Diva Domitilla Vespasian's daughter*: *ILS 6692* and Julia: *ILS 6487* [my emphasis]"

In her **note 105**, she writes: "Epigraphical evidence from the empire: Scott (1936), 79-82. The very abundance of inscriptions causes problems with terminology. There were *sodales Flaviales*, *sodales Flaviales Titiales* and *seviri Flaviales*. It is not known whether these represented successive amalgamations of the college of priests as first Vespasian and then Titus were deified or whether they were different colleges all observing worship at the same time"'.  
"

When I asked Rose Mary Sheldon, whether the information about "*Divia Domitilla* Vespasian's daughter" in her **note 104** was her own finding, she was kind enough to answer me by E-mail on 26th April 2023, that this is not the case: she found this information in the publications, mentioned in her **note 103**, quoted above.

Reading the master thesis of Barbora Chabrečková (2017), which is fortunately published on the Internet, I found the answer to my question.

Discussing the *Templum Gentis Flaviae*, Chabrečková (2017, 40) writes: "**The temple became a tomb for possibly up to five members of the Flavian family, who were either buried there directly, or their ashes were moved to the site later. The structure was often associated with the concept of Flavian heaven by ancient authors and the five deified Flavian *divi*, namely Vespasian, Titus, Domitilla, Domitian's son, and finally Titus' daughter Julia, were considered its stars** (Scott 1975, 69-71). **The only not-deified member of the family, whose remains were deposited there, was Domitian himself** [my emphasis]."

In the following, Chabrečková mentions Suetonius's (*Dom.* 17) account, from which we learn that also Domitian was buried in the *Templum Gentis Flaviae*. This fact is discussed *supra*, in Chapter *Preamble*; Section *III.*; at point 5.) and *infra*, in Chapter *The major results of this book on Domitian*.

For Domitian's son, Titus Flavius Caesar?; cf. now also Simone Pastor ("Esercizi e trasmissione del potere: l'ascesa della *gens Flavia*, l'*imperium* di Domiziano e il principe *polokrátor*", 2023). According to Dietmar Kienast, Werner Eck and Matthäus Heil (2017, 112) after the death of Domitian's young son followed his "Consecratio als DIVUS CAESAR".

**In his most recent discussion of Flavia Domitilla *maior* and *minor*, Eugenio La Rocca (in: E. LA ROCCA and L. KOSMOPOULOS 2023, 131-132) writes:**

"Tito aveva già divinizzato, oltre che il padre, la sorella Flavia Domitilla, [page 132] morta intorno al 69, prima che Vespasiano fosse acclamato imperatore. A sua volta, Domiziano promosse la *consecratio* del fratello Tito, e in seguito del suo unico figlio maschio, morto in tenera età, prima della sua ascesa al trono, e di Giulia, la figlia di Tito, morta probabilmente l'89 [with n. 55]. **È possibile, malgrado non ci siano prove certe, che anche un'altra Flavia Domitilla, la moglie di Vespasiano e madre di Tito e di Domiziano, morta anch'ella intorno al 69, fosse stata divinizzata: resta però una certa confusione tra le due *Flaviae Domitillae*, madre e figlia** [my emphasis]."

In his **note 55**, La Rocca writes: "La Rocca 2009a, pp. 282-283".

Let's now return to our main subject.

See on the *Templum Gentis Flaviae* most recently, E.M. Moormann (2020, 274); Moormann (2021, 46 with n. 17); Moormann (2022, *passim*), quoted *verbatim* in detail *infra*, in volume 3-2, at *Appendix IV.d.4.b*); and Moormann (2023, 58-60 with ns. 16-21); Paolo Liverani (2021, 87-88 with n. 20; cf. *id.* 2023, 118-119 with n. 20 [the Italian version of his article of 2021]); Diane Atnally Conlin (2021, 158, Fig. 7, who is still of the (erroneous) opinion that Domitian built the *Templum Gentis Flaviae* "on the spot of his uncle's house in which Domitian had been born"). See also Nathalie de Haan and Eric M. Moormann (2021, 82); and below, at *The Contribution by Eric M. Moorman : Can We Reconstruct the Templum Gentis Flaviae?*

Cf. Daniela Candilio (1990); (1990-1991 [1994]); Candilio (1995); Candilio (1999); Candilio (2000-2001, 552, n. 32); Rita Paris (1994a); Paris (2009. For her reconstructions of two of the marble reliefs of the *Templum Gentis Flaviae*; cf. *infra*, at Chapter *V.1.i.3.a*), and here **Figs. 33; 34**). Paris (1994b, 26-33, esp. p. 28 with n. 11: "La documentazione iconografica") follows Mario Torelli (1987, 564-567, Fig. 2: "immagine del calco ricostruito nel Museo della Civiltà Romana"), in suggesting that the *Templum Gentis Flaviae* is represented on one of the

*sestertii*, issued by Domitian in AD 95/96 (cf. here **Fig. 30**), and on the "Rilievo Terme Vaticano" (cf. below, at Chapter *V.1.i.3.a*); *infra*, in volume 3-2, at *Appendix I.g.3.*); *Appendix IV.c.2.*) and here **Fig. 31**). Of the same opinion like Paris (1994b) concerning Torelli's (1987) above-mentioned hypothesis had at first been also Filippo Coarelli ("Gens Flavia, templum", in: *LTUR* II [1995] 368-369, with Figs. 11 [*corr.*: 12 = here **Fig. 30**]; 180-182 [here **Fig. 31**], quoted *verbatim* below, at *Note by the editor Chrystina Häuber to Mario Torelli's Contribution on the Templum Gentis Flaviae*. Cf. *LTUR* V (1999) 262 [with further references]). For Coarelli's current opinion (published 2012), concerning the *sestertius*, issued by Domitian (here **Fig. 30**); cf. *infra*, in volume 3-2, in *Appendix VI.*; at Sections *II.* and *XII.* To the publication on the *Templum Gentis Flaviae* by Eugenio La Rocca and Lorenzo Kosmopoulos (2023), I will come back below. Lorenzo Kosmopoulos (in: E. LA ROCCA and L. KOSMOPOULOS, 2023, 130-131, quoted *verbatim infra*) discusses also the coin here **Fig. 30**.

For the coin (here **Fig. 30**); cf. Rita Paris (1994b, 26 Fig. 14: "Sesterzio di Domiziano (95/96 d.C) con raffigurazione di edificio decastilo". For the "Rilievo Terme Vaticano" (here **Fig. 31**), which shows in Paris's opinion a procession in front of a 'tempio decastilo'; cf. Paris 1994b, 28, Fig. 16: "Il rilievo del Museo Vaticano e quello del Museo Nazionale ricongiunti in un calco del Museo della Civiltà Romana". Cf. Paris's Figs. 17-19 on p. 29, and Figs. 1-2 on p. 32.

**Stephanie Langer and Michael Pfanner (2018, 142-157, quoted *verbatim infra*, in volume 3-2, at *Appendix I.g.3.*)), who date the "Rilievo Terme Vaticano" (here **Fig. 31**) to the Claudian period, are instead of the convincing opinion that this relief fragment shows a *sacrifice* in front of this decastyle temple.**

**Cf. *infra*, in volume 3-2, at *Appendix I.g.3.*); I. S. Langer and M. Pfanner (2018) date the "Rilievo Terme Vaticano" to the Claudian period.**

Of the authors, whose essays are presented in the exhibition-catalogue *Domiziano Imperatore. Odia e amore* (2023), also Agnese Pergola discusses ("Il dono Hartwig", 2023, 140 with n. 17); she attributes those reliefs and architectural fragments to the *Templum Gentis Flaviae*. Pergola (2023, 141 with ns. 24-27, quoted *verbatim infra*, in Chapter *V.i.1.3.a*)) discusses, in addition to this, Mario Torelli's suggestion (1987, 564-568) to identify the *Templum Gentis Flaviae* on Domitian's coin (here **Fig. 30**) and on the "Rilievo Terme Vaticano" (here **Fig. 31**). She addresses the possible consequences of these hypotheses, but does not follow them.

Cf. Filippo Coarelli: "Gens Flavia, Templum", in: *LTUR* II (1995) 368-369 (with wrong identification with the *domus* of Domitian's paternal uncle, Flavius Sabinus, an opinion, which he would later correct; cf. *LTUR* V [1999] 262); Coarelli (1999a, 183); Coarelli (2009b, 93-94); Coarelli 2014 (194-207; pp. 204-207 are quoted *verbatim supra*, in Chapter *IV.1.1.a*)); Jean-Claude Grenier (1996, 357, quoted *verbatim supra*, in Chapter *IV.1.1.c*)); Grenier 1999 (225-234); Grenier (2009, 238, quoted *verbatim supra*, in Chapter *IV.1.1.a*)), Amanda Claridge (1998, 338; cf. pp. 211, 350, Fig. 174); Claridge 2010 (427; cf. pp. 237, 392, Fig. 180); Kim Hartswick (2004, 143-146); Giuseppina Pisani Sartorio (2006, 58, quoted *verbatim supra*, in Chapter *IV.1.1.a*)).

**Cf. Eugenio La Rocca (2009; cf. pp. 225-228, for the previous wrong location of the *Templum Gentis Flaviae* at the site of the *domus* of Flavius Sabinus; cf. p. 228, for an analysis of Domitian's highly innovative idea to combine for the first time a building dedicated to the imperial cult with the actual tombs of the venerated *Divi* within the same structure, and that within the *pomerium* [!]; cf. p. 230); and Barbara E. Borg (2019, quoted *verbatim infra*).**

**Especially interesting in the context discussed here are Borg's (2019) observations concerning Coarelli's and Grenier's hypothesis that the temple tomb within the *Templum Gentis Flaviae* had a round ground-plan. Contrary to Coarelli (2014, 194, esp. pp. 204-207) and Grenier (2009, 238, both quoted *verbatim supra*, in Chapter *IV.1.1.a*)), Borg (2019, 249) does *not* reconstruct this temple tomb with a round ground-plan, but assumes a rectangular plan, and because she compares Coarelli's reconstruction of the temple tomb within the *Templum Gentis Flaviae* with all extant similar structures - that were all inspired by the *Templum Gentis Flaviae* - her conclusions are very convincing.**

To Borg's discussion of Coarelli's reconstruction of the *Templum Gentis Flaviae*, I will come back below. La Rocca (2020b, 369 with n. 9), who himself does not discuss Borg (2019), is likewise of the opinion that the temple tomb proper within the *Templum Gentis Flaviae* did not have a round ground-plan. La Rocca's relevant findings, published in his articles (2020b; and 2023), are discussed in detail below. See also *infra*, at *A Study on Domitian's cult-statue of Iuppiter Optimus Maximus Capitolinus* (cf. here Fig. 10).

### **Borg (2019) herself does not discuss Grenier's idea concerning the Obeliscus Pamphilius**

Grenier had actually been first to suggest that the Obeliscus Pamphilius was commissioned for the *Templum Gentis Flaviae*. - So Coarelli (2014, 205 with n. 476, where he quotes J.-C. GRENIER 1999; 2009), but already Coarelli (1996, 108) had referred to Grenier (1996, 357), where the latter had published this idea for the first time.

**Whereas Borg (2019) studies especially the temple tomb within this building, I myself have come across Domitian's *Templum Gentis Flaviae* because of its porticos, since those too have likewise proved to be very influential for later similar projects.**

See Häuber (2014a, 165 n. 144); Häuber (2017, 159-164) for a discussion of Grenier's and Coarelli's hypotheses concerning the *Templum Gentis Flaviae*; cf. pp. 244-288, Chapter: "The Temple and Precinct of Matidia and the "Tempio di Siepe", the *Templum Pacis*, the *Templum Gentis Flaviae*, Hadrian's Library at Athens and Plato's Academy at Athens"; esp. pp. 287-288: "The Precinct of Matidia and its relation to the buildings discussed in this section". I have discussed these institutions in context of Hadrian's *Athenaeum* at Rome; cf. pp. 22, 23, 250, Fig. 5.9 [Hadrian's *adlocutio* relief at the Palazzo dei Conservatori], pp. 505, 515-517, 521, 523). For Hadrian's 'Library' at Athens; cf. Eberhard Thomas (2015). Also Marco Galli (2017, 92-100) has studied Hadrian's *Athenaeum* at Rome and compares (on pp. 104-106) Hadrian's 'Library' at Athens with the *Forum Pacis* at Rome. For the *Templum Pacis*; cf. also Pier Luigi Tucci (2017), and *infra*, in volume 3-2, at *Appendix IV.d.4.b*)).

For a comparison of the *Templum Pacis* with the Vespasianic phase of the *Claudianum* on the Mons Caelius; cf. now Patrizio Pensabene and Javier Domingo (2023).

**Eugenio La Rocca (2009, 224) has already mentioned the fact that Hadrian's 'Library' at Athens has great similarities with Hadrian's Temple of *Divus Traianus*, which the emperor built at Italica, where he himself (although this has now been doubted) and Trajan were born. Hadrian's 'Library' at Athens, in its turn, is not only based on the gymnasium of Plato's academy at Athens, but also on Vespasian's *Templum Pacis* (also called *Forum Pacis*) at Rome and on Domitian's *Templum Gentis Flaviae*.**

For Andrea Carandini's (2019, 20-21: § 18) assertion that Hadrian was not born in Italica, but in Rome; cf. *infra* in volume 3-2. at *A Study on the consequences of Domitian's assassination ...; Introduction*; at Section XI. *New research on Trajan and Hadrian*.

I have elsewhere stated: "E. La Rocca (2009, 224), in his discussion of the architectural remains of the *Templum Gentis Flaviae*, writes: '... **Da questa eclettica congerie di prototipi si sviluppa in età flavia, proprio con il *Templum Pacis*, una pianta con esedre di media grandezza, ma non tutte della medesima misura, comunque regolarmente cadenzate lungo il perimetro della corte porticata** [with n. 17]. **Questo nuovo ruolo delle esedre risulta perfezionato nell'edificio sottostante le terme di Diocleziano** [*i.e.*, the *Templum Gentis Flaviae*], con l'alternanza regolare tra esedre semicircolari ed esedre quadrangolari, anche se tra i due tipi di esedre le misure non coincidono. **Il nuovo ed elegantissimo modello, con qualche ulteriore aggiustamento, sarà adottato qualche decennio dopo in ambiente provinciale, sia nella Biblioteca di Adriano ad Atene** [with n. 18], **sia nel Traiano di Italica** [my emphasis]". In his ns. 17-18, La Rocca (2009, 231) provides references. Cf. Häuber 2017, 277.

Summarizing the relevant findings of the excavator of the *Templum Gentis Flaviae*, Daniela Candilio, La Rocca (2009, 224) writes: "Se collocate a distanza regolare, e ammettendo che su ogni lato ci fossero due esedre

semicircolari ed una quadrangolare al centro, si potrebbe stabilire un rapporto tra larghezza e lunghezza di 2:3, presunto, certo, ma convincente. **In tal caso la *quadriporticus*, i cui lati lunghi sarebbero stati paralleli alla *alta Semita*, avrebbe raggiunto la considerevole misura di 123 x 83 metri circa, complessivamente di poco inferiore alla piazza del *Templum Pacis* (110 x 105 metri).**

In quanto al nucleo cementizio in via Vittorio Emanuele Orlando [cf. his Figs. 1 (= here **Fig. 57**); 2], la sua misura di 47 metri circa da sola non è sufficiente per stabilirne né la reale grandezza né l'orientamento. **Qualora proporzionato al perimetro porticato, si sarebbe trattato in origine di un podio della consistente misura di 70 x 47 metri circa: ed è la proposta avanzata da Daniela Candilio. L'edificio soprastante, verosimilmente un tempio, sarebbe stato gigantesco ... Ma non necessariamente il tempio doveva essere pari di misura al podio ... La pianta che si può proporre in base agli scarsi resti, qualora si fosse trattato di un podio unico al centro della *quadriporticus*, sembra essere simile, nelle grandi linee, a quella del cd. [cosiddetto] Traiano di Italica [cf. his Fig. 3] nel quale, all'interno di un quadriportico simile (120 x 93 metri circa) con esedre sporgenti circolari (diametro esterno 12 metri; diametro interno 8,40 metri, pari a 4,20 metri di raggio) e quadrangolari, ma della medesima lunghezza, emerge su podio un grande tempio ottastilo (42 x 28 metri circa) che domina con la sua mole lo spazio circostante** riempito da file di statue su basi [with n. 9]. La misura dei due porticati sembra coincidere, ma sulla misura e la morfologia del tempio romano, in base a quanto detto, la discussione deve obbligatoriamente restare aperta [my emphasis]". - In his **note 9**, La Rocca provides references.

La Rocca (2009, 228-230, quoted *verbatim infra*, in volume 3-2, in *Appendix VI*; at Section *XII*.) discusses also the hypothesis, according to which Domitian's *sestertius* (here **Fig. 30**) represents the *Templum Gentis Flaviae*.

### The Temple of *Divus Traianus* at Italica in Spain

On 2nd July 2018, Oliva Rodríguez Gutiérrez gave a talk at the Archäologisches Institut der Ludwig-Maximilians-Universität (LMU) München, with the title: "Italica, die Stadt des Scipio Africanus, Trajan und Hadrian", that I was lucky enough to attend. Rodríguez Gutiérrez has excavated herself at Italica, and on 4th July 2018 she was so kind as to discuss with me in Munich the Temple of *Divus Traianus* at Italica, which she had shown in her talk. This temple was built by Hadrian, together with an entire new city quarter.

**This means that scholars, who wish to study the porticoes of the *Templum Gentis Flaviae* at Rome, of which only scarce archaeological remains have been found in excavations, can travel to Athens or to Italica, in order to compare those remains with its *Architekturkopien* there.**

Rodríguez Gutiérrez was also so kind as to provide me with further information on 20th August 2019 concerning her own work at Italica and concerning its *Traianeum*. For the *Traianeum* at Italica; cf. Pilar León Alonso (1988); and Oliva Rodríguez Gutiérrez, Jesús Rodríguez Medina, Francisco S. Pinto Puerto, and Roque Angulo Fornos (2016). For comparisons of Hadrian's *Traianeum* at Italica with Hadrian's 'Library' at Athens; cf. Aldo Corcella, Maria Chiara Monaco, and Elsa Nuzzo 2013, 121, 137; Maria Chiara Monaco, Aldo Corcella and Elsa Nuzzo (2014, 53-54). - Only after having finished writing this Chapter *IV.*, did I find the following publications on Italica. These scholars discuss the results of their recent research, *inter alia* concerning the *Traianeum*: Pilar León (2020), Luisa Alarcón and Francisco Montero-Fernández (2020), Carlos Márquez Moreno and Juan de Dios Borrego de la Paz (2020), Yolanda Peña Cervantes and Clara Tello Martín (2020), and Alejandro Jiménez Hernández and Immaculada Carasco Gómez (2020).

La Rocca (2009, 224) observes that the Temple of *Divus Traianus* at Italica "domina con la sua mole lo spazio circostante [my emphasis]". This is also due to the fact that this temple has been erected at the top of a hill. - We may, therefore, ask ourselves, provided the Temple of *Divus Traianus* at Italica copied the *Templum Gentis Flaviae* at all, whether this was an integral part of this *Architekturkopie*. I am saying this, because Domitian's temple tomb for his dynasty, which has been excavated at the Baths of Diocletian, stood on a higher level than the *quattroporticus* surrounding it.

This has been observed by Filippo Coarelli (cf. *id.* 2014, 204-205 with n. 474, quoted *verbatim supra*, in Chapter IV.1.1.a)), and again below. Now, if that were true, this could explain, why Domitian's *sestertius* (cf. here Fig. 30) - in case it represents the *Templum Gentis Flaviae* at all - gives the impression that this temple stands at an elevated site when compared to its surrounding precincts.

**Filippo Coarelli (2014) provides an explanation for the irritating fact that both, the *Templum Gentis Flaviae* and the Baths of Diocletian, are mentioned in the Constantinian Regionary Catalogues. This was already quoted above (cf. *supra*, in Chapter IV.1.1.a)), but because it has been neglected by a recent commentator, I repeat it here again:** Cf. Coarelli (2014, 204: "L'edificio così ricostruito [*i.e.*, the *Templum Gentis Flaviae*] ci restituisce un'immagine plausibile del *templum gentis Flaviae*: una struttura che riuniva in sé, per la prima volta, le caratteristiche e le funzioni di tipi edilizi in precedenza distinti: il sepolcro e il tempio dinastico.

Resta da chiarire il motivo per cui esso viene ancora citato nei Cataloghi Regionari di età costantiniana, quando ormai doveva essere scomparso per far luogo alle Terme di Diocleziano (Anch'esse menzionate nello stesso documento)".

Cf. Coarelli (2014, 204-205):

**"Va tenuto conto, a questo proposito, di un detta- [page 205] glio emerso dalle esplorazioni recenti [with n. 474], di cui non si è tenuto alcun conto: il fatto cioè che i resti dell'edificio spiccano a un livello più alto rispetto a quello delle successive terme. Questo dato ammette un'unica soluzione, che infatti è stata proposta, con prudenza, dai responsabili dello scavo: mentre la grande platea porticata venne certamente soppressa dall'edificio successivo, che ne prese il posto, la costruzione centrale, e cioè il nucleo essenziale del complesso, venne risparmiato, poiché veniva a cadere in un'area libera entro il recinto delle terme. L'ovvia conclusione è che il complesso domiziano sopravvisse anche in seguito, ciò che consente di spiegare la sua menzione, insieme alle terme, nei Cataloghi Regionari [my emphasis]"**.

For the fact that the *Templum Gentis Flaviae* and the Baths of Diocletian are both mentioned in the Constantinian Regionary Catalogues, see Domenico Polombi: "Fig. 84. *Regiones quattuordecim*. Planimetria generale", label: *Regio VI. Alta Semita* Continet ... 9. Gentem Flabiam. 10. Thermas Diocletianas", in: *LTUR IV* (1999) 518. For the precise date of the Constantinian Regionary Catalogues; cf. *infra*, in volume 3-2, in *Appendix VI.*; at Section VII.

The scholar, who does not address the just quoted explanation by Filippo Coarelli (2014, 204-205) concerning the fact that both the *Templum Gentis Flaviae* and the Baths of Diocletian are mentioned in the Constantinian Regionary Catalogues, is Paolo Liverani (2021, 87-88):

"The body of evidence we have examined up to this point constitutes the most important part of our documentation. Few other examples can be briefly considered, but they are less meaningful because of their fragmentation and lack of precise context. **In 1901, a series of sculptural fragments was found during the building of the northern portico of Piazza della Repubblica in Rome, on the site of the great exedra of the Baths of Diocletian.** They were stolen by the workers and arrived on the antiquarian market, where Paul Hartwig acquired most of the marbles, donating them to the National Museum of Rome (**Conlin, fig. 7**). Some other fragments ended up in the Kelsey Museum of the University of Michigan. All of them were assigned to the Domitianic period on stylistic grounds and attributed to the *Templum Gentis Flaviae*. Impressive structures - datable to the Domitianic period on the basis of brickstamps were found at various times under the areas occupied by the Planetarium, Via Parigi and Via Vittorio Emanuele Orlando, close to the findspot of the sculpture[s]. **The remains included a precinct and a podium that some scholars identified as the *Templum*.** [with n. 20] **The hypothesis is not without its problems because the Regionary catalogues – a list of monuments of Rome organized by the urban *regiones* (districts) and dating to the early fourth century CE – mention both the *Templum* and the Baths of Diocletian, but in this case it is difficult to imagine how the temple could have remained visible inside the area of the baths, which were**

**built much later.** Be that as it may, the sculptural fragments suggest that we should reconstruct an enclosure with a series of figures such as caryatids on the outside and **with two relief panels**, [page 88] **one depicting a sacrifice in front of a temple** [cf. here Fig. 34], **the other the Emperor Vespasian among soldiers and other figures** [cf. here Fig. 33; my emphasis]".

See now Liverani (2023, 118-119), the Italian version of this text.

In his **note 20**, Liverani writes: "Candilio 1990-91; Paris 1994 [*i.e.*, here R. PARIS 1994a]; La Rocca 2009; Coarelli 2014, 194-207. See Eric Moormann in this volume".

For "Conlin, fig. 7", mentioned by Liverani (2021, 87), quoted above; cf. Diane Atnally Conlin ("Master and God: Domitian's Art and Architecture in Rome", 2021, 157, Fig. 7).

The caption of Conlin's Fig. 7 reads: "Relief fragment from the *Templum Gentis Flaviae* representing a soldier. Rome, Museo Nazionale Romano, Palazzo Massimo alle Terme, inv. 310257 (courtesy of Ministero per i Beni e le Attività Culturali e per il Turismo - Museo Nazionale Romano)". - On this and four other fragments has been based the reconstruction drawing of the panel which represents, in my opinion, Vespasian's *adventus* into Rome of October AD 70; cf. here Fig. 33. For the two relief panels from the *Templum Gentis Flaviae*, mentioned by Liverani (2021, 88): "one depicting a sacrifice in front of a temple, the other the emperor Vespasian among soldiers and other figures"; cf. *infra*, at Chapter V.1.i.3.a) and here Figs. 34; 33).

Similarly as Liverani (2021, 87-88), Eugenio La Rocca (2020b, 369 with n. 9), although being aware of Coarelli's (2014, 204-205) above-quoted relevant hypothesis, does not believe that the temple tomb proper of the *Templum Gentis Flaviae* could have survived within the Baths of Diocletian, arguing that the late antique sources (*inter alia* the Constantinian Regionary Catalogues), which have been interpreted by Coarelli (*op. cit.*) in this way, do not explicitly call the building they refer to as '*templum*'. La Rocca's (2020b; and *id.* 2023) relevant findings are discussed in detail below.

**And Diane Atnally Conlin (2021, 158) even suggests that the *Templum Gentis Flaviae* may have been destroyed shortly after Domitian's death:**

**"The exact date of the destruction of the *Templum Gentis Flaviae* is unknown, but it seems likely the structure did not exist for long after the rise of Rome's next great imperial builder, Trajan [my emphasis]".**

But there are even more buildings that may somehow have been related to Domitian's *Templum Gentis Flaviae*. I cannot study those comparisons here in depth myself, but wish at least to mention them.

As was already quoted above (cf. *supra*, in Chapter IV.1.1.a)), Coarelli (2014, 204-207) has rightly remarked: "sarebbe difficile immaginare che la costruzione a Hispellum di un *templum Flaviae gentis* non abbia tenuto conto dell'omonimo modello domiziano [with n. 475, quoting: GASCOU 1967]". - Note that Hispellum (modern Spello) is a town located in Umbria in Italy.

For the *Templum Gentis Flaviae* at Spello; cf. now Eugenio La Rocca (2023, 124 with n. 26).

### **The Marble Forum at the *Colonia Augusta Emerita* (Mérida) in Spain**

Much better known than Hispellum (now Spello) in Italy is the so-called Marble Forum at the *Colonia Augusta Emerita* (Mérida) in Spain.

Cf. for example Walter Trillmich (1990; 1992; 1994; 1995; 1996; 1997; 2002-2003; 2004 [*non vidi*]; cf. J.L. DE LA BARRERA and W. TRILLMICH 1996); José María Álvarez Martínez and Trinidad Nogales Basarrate 1990; José Luis de la Barrera (2000); Trinidad Nogales Basarrate (2008); Rocío Ayerbe Vélez, Teresa Barrientos Vera

and Félix Palma García (eds. 2009); Vibeke Goldbeck (2015; 2017; 2020; 2021); Antonio Peña Jurado (2009; 2017); and Nicole Röring (2020).

The chronology of this building is debated. The marble decoration that was applied to an (earlier) building at Mérida, which is therefore now called 'Marble Forum', was according to Trillmich (2004) created in the Neronian period.

**Antonio Peña Jurado (2017, 206-208) has recently suggested that the Marble Forum is datable in the Flavian period instead, and that this building was dedicated to the imperial cult. It was, in his opinion, either a Temple for *Divus Vespasianus* or a *Templum Gentis Flaviae*, which is why I mention the Marble Forum at Mérida here.**

**Interesting in the context of this *Study* is the, at least to me so far unknown, fact that at this Marble Forum togate marble statues were excavated, which are missing their heads, and that one of them, which Peña Jurado (2017, 206-207 with ns. 56, 57) discusses, looks very much like the togate youth (figure 12) on Frieze B of the Cancellaria Reliefs (cf. here Fig. 2; Fig. 1 and 2 drawing; figure 12), in my opinion Domitian.**

**Because Peña Jurado (2017) refers in a footnote to Trillmich's (2004) dating of the Cancellaria Reliefs to the Neronian period, I repeat in the following, what was already said above (cf. *supra*, at n. 130, in Chapter I.1.):**

'Hugo Meyer [with n. 130] is so far the only scholar to have (in my opinion erroneously, cf. *supra*, at Chapter II.4.) suggested that also the head of the togate youth on Frieze B was recut in antiquity: in his opinion, this head was first a portrait of king Tiridates of Armenia [with n. 131], that was later recut into the still extant portrait of the young Domitian. According to Hugo Meyer, Tiridates was shown in the moment of receiving his diadem by the Emperor Nero, whose head was later reworked into a portrait of Vespasian [with n. 132]'.

Cf. my **note 130**: "For the assertion that the extant portrait of the young togate Domitian on Frieze B had been recut from the original portrait of Tiridates, cf. H. MEYER 2000, 134-138, Figs. 229; 251; 252; 256-259. This was refuted by M. PENTIRICCI 2009, 59-60 with ns. 417, 419. Cf. *supra*, at Chapters II.4.; and VI.1'.

**Hugo Meyer's dating of the (alleged original) togate youth on Frieze B (in my opinion Domitian) in the Neronian period, has been followed by W. TRILLMICH 2004, 334-335, quoted after A. PEÑA JURADO 2017, 206-207 with ns. 56, 57. A. PEÑA JURADO himself, following E. BAUMER 2007, dates the Cancellaria Reliefs to the Flavian period) [my emphasis]'.**

Cf. my **note 131**: "For Tiridates, cf. M.S. DROWER and B.M. LEVICK: "Tiridates (4) (*RE* 6), brother of Vologeses I of Parthia, who set him on the throne of Armenia (AD 54). He fled before the Romans and was temporarily displaced by Tigranes (4) V, but was reinstated by Vologeses. By a compromise with Cn. Domitius Corbulo, Tiridates agreed to journey to Rome and receive the crown of Armenia ceremonially from Nero (AD 66) ...", in: *OCD*<sup>3</sup> (1996) 1531. The authors quote Tac. *Ann.* 12ff.; Joseph. *BJ* 7.244-51. It is unfortunately unknown how old Tiridates was in AD 66".

Cf. my **note 132**: "H. MEYER 2000, 131-132, with n. 416, Figs. 243; 242".

Since I could not find Walter Trillmich's publication of 2004, I called him in Wien and discussed the matter with him in an E-mail correspondence. On 15th April 2020, I sent him a detailed summary of the results of this *Study*, in which I have followed those scholars, who date the Cancellaria Reliefs (cf. here **Figs. 1; 2**) to the Flavian period. The relevant hypotheses are explained in the following Chapters of this *Study* :

Cf. *supra*, at Chapter II.4 (cf. here **Fig. 1.1**), where I hope to have shown that Hugo Meyer's (2000, 131-132, Figs. 243; 242) hypothesis, according to which the emperor on Frieze A (**figure 6**): Domitian (now Nerva; cf.

here **Fig. 1; Figs. 1 and 2 drawing: figure 6**) has been reworked from a portrait of Nero, cannot possibly be true. I also summarized my Chapters *V.1.h.2.*; *V.1.i.3.*; *V.1.i.3.a.*), in which I hope to have demonstrated that the head of the emperor on Frieze B (**figure 14**) was from the very beginning Vespasian, as first suggested by Filippo Magi (1939, quoted *verbatim supra*, n. 112, in Chapter *I.1.*; cf. *id.* 1945; cf. here **Fig. 2; Figs. 1 and 2 drawing: figure 14**), not Nero, as likewise (erroneously) asserted by Hugo Meyer (2000, 131-132, with n. 416, Figs. 243; 242; cf. *supra*, n. 132, in Chapter *I.1.*), or for example Domitian, as (erroneously) asserted by Marianne Bergmann (1981, 23-24, Taf. 11; 12; 9, p. 25; cf. *supra*, n. 115, in Chapter *I.1.*; cf. also at Chapters *I.1.1.*; and *V.1.h.2.*)).

Finally, I have explained to Walter Trillmich our visualization 'in situ' of the Cancellaria Reliefs, as attached to the opposite and parallel walls in the bay of an arch (cf. the Chapters *I.2.1.b*); *I.3.2.*; *V.1.d*); *V.2.*, and here **Figs. 1 and 2 drawing; and Figs. 1 and 2 of the Cancellaria Reliefs, drawing, 'in situ'**). In this visualization, the Emperor Domitian (now Nerva) (**figure 6**) on Frieze A stands at almost the same position as, on the opposite and parallel wall, the togate youth (**figure 12**) on Frieze B. Provided **a**) our assumption is true that the Cancellaria Reliefs actually decorated the opposite, parallel walls in the bay of an arch, and **b**), provided our visualization is correct, these facts support the hypothesis suggested here that the togate youth on Frieze B has correctly been identified by Magi (1939, quoted *verbatim supra*, n. 112, in Chapter *I.1.*; cf. *id.* 1945) with the young Caesar Domitian, who, in his capacity as *praetor urbanus*, receives Vespasian in an *adventus*-ceremony at Rome that purportedly took place in October of AD 70.

As likewise already suggested by Magi (1945), but first by Heinrich Fuhrmann (1940, Sp. 471-472; *id.* 1941, Sp. 544-545), and by many later scholars (all quoted *verbatim supra*, in Chapter *IV.1.*), the gesture, made by Vespasian with his right hand towards his son Domitian, means the "legittimazione" of Domitian's (future) reign as emperor. So Giandomenico Spinola (cf. *supra*, at n. 455, in Chapter *III*. See also below, at *The Contribution by Giandomenico Spinola on the Cancellaria Reliefs*).

The truth is that Vespasian actually arrived at Rome in the first half of October of AD 70, coming back from the Great Jewish War. Our literary sources describe in great detail Vespasian's arrival at the *Urbs*, but not such an *adventus*-ceremony (cf. *infra*, at Chapter *V.1.i.3.*)). Vespasian came back to Rome at that stage for the first time since he was emperor, and is, therefore, crowned on Frieze B by *Victoria* (cf. here **Figs. 1 and 2 drawing: figure 16**) with a *corona civica* for two reasons: this ceremony means the investiture of Vespasian as the new emperor; cf. Gerhard Koeppel (1969, 193, quoted *verbatim supra*, at n. 200, in Chapter *I.1.1.*), at the same time Vespasian receives with the *corona civica* the highest possible decoration for a military victory, because, like only Augustus before him, so Pliny (*HN* 16,3, quoted *verbatim infra*, in Chapter *V.1.i.3.a.*), and here **Fig. 35**), Vespasian had succeeded to put an end to a civil war; cf. Rita Paris (1994b, 81-82, quoted *verbatim infra*, in Chapter *V.1.i.3.a.*)).

Walter Trillmich was kind enough to answer me by E-mail on 25th April 2020, and on 28th April 2020, he has allowed me to publish here the relevant passage of his E-mail.

See below, at *The Contribution by Walter Trillmich on the headless marble togati found in the so-called Marble Forum at Mérida in Spain, one of which looks like the togate youth on Frieze B of the Cancellaria Reliefs* (cf. here **Fig. 2; Figs. 1 and 2 drawing: figure 12**) - who represents, in my opinion, Domitian.

In his *Contribution*, Trillmich follows our visualization 'in situ' of the Cancellaria Reliefs, as attached to the opposite and parallel walls in the bay of an arch (cf. here **Figs. 1 and 2 of the Cancellaria Reliefs, drawing, 'in situ'**), and comes to the following conclusions. If indeed the Cancellaria Reliefs (cf. here **Figs. 1; 2**) should be "genuin flavisch" ('genuinely Flavian'), as Trillmich writes, two questions still remain: who at Augusta Emerita (Mérida), in the Flavian period, could have had an interest in commissioning this copy of the program of the Forum of Augustus at Rome? And how can we explain the similarities of the togate statues at Leptis Magna, Cerveteri and Baia, which Trillmich regards as securely dating to the Claudian period, with the togate statues at Mérida?

I myself have neither been to Italica or Mérida, nor do I know the togate statues at Leptis Magna, Cerveteri and Baia, which Trillmich has mentioned to me in those telephone conversations and in his *Contribution*. But I think it is clear from what I have learned through the correspondence with him that those sculptures - and of course also the buildings, for which they were commissioned - should all be studied *together*.

**Eric M. Moormann, whom I had also asked for advice, was kind enough to send me on 28th April 2020 his review of Vibeke Goldbeck's book (2015), that Trillmich mentions in his *Contribution*, and which provides a good summary of the problems connected with the subject discussed here:**

"Chapter C III on the provinces in the Spanish peninsula presents the most rewarding set of cases, since it contains **the stupendous case of Emerita Augusta, modern Mérida ... where sculptural elements of the décor of the Foro de Marmol' were recognized by Maria Floriani Squarciapino in the 1970s as copies of the figures from the Forum Augustum**. Goldbeck makes clear that there are some conspicuous differences between Rome and Mérida, partly due to the placement of the forum within the grid-shaped town (esp.[ecially] absence of absidal exedrae), partly on the basis of other factors, so that this complex is - like most others - an example of 'Umbildung' rather than copying. **A problem is the chronology of these interventions, for which the Julio-Claudian and Flavian era have been proposed. Goldbeck prefers a Claudian or Neronian date and points to the workmanship of artists who also worked at Baiae. Although I agree with her, I am not convinced by her arguments that a complete take over of an Augustan programme as well as precisely copying of elements of the Forum Augustum were not envisaged (p. 79): this cannot be used as a sound argument to reject a Flavian dating [my emphasis]**". Cf. p. 285: "The 'Auswertung' (part D) brings together the results of the many local explorations ... **The questions put in the introduction now return with possible answers: where (western part of the Roman empire), who (local elites, connected with Rome), what (never entire Forum Augustum, but motifs, mainly the Ammon and Medusa *protomi*), when (mainly third quarter of the 1<sup>st</sup> century AD), and why (relationship with local elites and the central power, not an order of the emperor) [my emphasis]**". - Cf. Moormann (2016, 284, 285).

On 30th April 2020 an E-mail by Hans Rupprecht Goette reached me, whom I had likewise asked for advice concerning the date of the togate statues from the Marble Forum at Mérida. He alerted me to the publications by Trillmich (1990) and Nogales Basarrate (2008), and answered my question by writing that also in his opinion the marble *togati* from the Marble Forum at Mérida are datable to the Flavian period.

### **The most recent research on the Marble Forum at Mérida**

When this volume was about to be sent to the press, I found the following publications that will, therefore, only be discussed in detail *infra*, in volume 3-2:

Nicole Röring ("Von einer Basilika (?) zu einem rezipierten Augustusforum. Das Marmorforum von Mérida", 2020). In Röring's opinion, two very different buildings had stood at this site: first an Augustan building (probably a Basilica), which was later replaced by the much larger 'Marmorforum'.

Röring (2020, 249-250) provides a summary of the sculpture decoration of the Marble Forum, which clearly copied that of the Forum of Augustus at Rome; she also mentions the hypotheses concerning the dating of the sculptural decoration of this Marble Forum to the Claudian and Flavian periods, respectively:

"Nicht nur die Dekoration der Attika mit alternierend angebrachten Clipei und Karyatiden [with n. 5] lässt sich auf das [page 250] stadtrömische Vorbild beziehen, sondern ebenso die Gestaltung der Portikus mit den Statuennischen in den Portikusrückwänden und den dort aufgestellten Skulpturen der Duces, belegt durch immerhin sechs Togastatuen, und der Könige von Alba Longa - zumindest eines Teils von ihnen - stellen ein deutliches Zitat des Augustusforums in Rom dar.

Walter Trillmich ist es gelungen, in der lange Zeit für eine Darstellung der jagenden Diana gehaltenen Skulptur im spanischen Nationalmuseum für Archäologie in Madrid einen jungen Mann in

phrygischer Tracht zu erkennen und ihn als Ascanius zu interpretieren [with n. 6]. Während der Grabung konnten zudem ein Hüfttorso [with n. 7] sowie ein Oberkörper eines alten bärtigen Mannes wiedergewonnen werden, in denen W. Trillmich den aus dem brennenden Troja fliehenden Aeneas mit seinem Vater Anchises auf den Schultern und Ascanius an seiner Hand sah [with n. 8]. Ein Sensationsfund war entdeckt: die mythologische Gruppe des Aeneas, weswegen eine starke Affinität zum Augustusforum nicht mehr zu leugnen war ...".

In her **note 5**, Röring writes: "J. L. de la Barrera bearbeitete die gesamte Marmorausstattung unter stilistischen Gesichtspunkten zur zeitlichen Einordnung und datiert diese in claudische Zeit, s.[iehe] de la Barrera 2000, während A. Peña bei seiner Bearbeitung der Architekturteile und Skulpturen für eine Datierung in die flavische Zeit plädiert, vgl. [vergleiche] Peña 2009, 525-621; Peña 2017, 205-207".

In her **note 6**, she writes: "Trillmich 1992, 35".

In her **note 7**, she writes: "Alvarez - Nogales 1990, 337. W. Trillmich bemerkte schon 1987, dass es sich bei dem Torso vielleicht um einen Rest der Aeneas-Gruppe handeln könnte, s.[iehe] Trillmich 1990, 313."

In her **note 8**, she writes: "Trillmich 1994, 83".

But contrary to what I had hoped, Röring (2020) does not provide new information concerning the so far excavated parts of the building itself, that would allow a precise dating of this later phase, when, for example, those headless marble *togati* were created that interest us here, which had belonged to its marble decoration. According to Röring (2020, 264), this 'transformation' of the previous Augustan building into the larger Marble Forum had started in the middle of the 1<sup>st</sup> century AD.

In addition to this, I have found three more recent publications by Vibeke Goldbeck on the subject ("Architekturkopien? Terminologische Überlegungen zur Rezeption von Bauwerken und ihrer Ausstattung bei den Römern. Untersucht am Beispiel des Forum Augustum und der Porticus ad Nationes", 2017). Goldbeck herself quotes also another of her earlier publications ("Die Porticus ad Nationes des Augustus", 2015a); Vibeke Goldbeck ("Die Rezeption der stadtrömischen Monumente des Augustus im Imperium Romanum", 2020); and Vibeke Goldbeck ('Monuments Abroad' - Zur Rezeption kaiserlicher Monumente im Imperium Romanum", 2021). The publications by Vibeke Goldbeck (2015; 2015a; 2017; 2020; 2021) have been discussed in detail by David Ojeda ("A Porticus ad Nationes in Italica", 2023). My thanks are due to Hans Rupprecht Goette for sending me this article; cf. *infra*, in volume 3-2, at Chapter *Introductory remarks and acknowledgements*.

For some remarks on all those above-mentioned new publications; cf. below, in Chapter *The major results of this book on Domitian*; below, at *The Contribution by Walter Trillmich on the headless marble togati found in the so-called Marble Forum at Mérida in Spain, one of which looks like the togate youth on Frieze B of the Cancellaria Reliefs*; and for a detailed discussion; cf. *infra*, in volume 3-2, at *Appendix IV.d.2.*

### Let's now return to Barbara E. Borg's new findings concerning Domitian's *Templum Gentis Flaviae*.

Borg (2019, 245) writes: "Archaeological remains of the complex [*i.e.*, the *Templum Gentis Flaviae*] are difficult to interpret ... New excavations in the area and underneath the western part of the Baths of Diocletian conducted in the 1980s and 1990s have brought to light parts of a **public building that consisted of a rectangular *opus caementicium* podium surrounded by a courtyard and portico with alternating rectangular and semi-circular *exedrae* of about 123 x 83 m**, built of travertine blocks and *opus latericium* (Figure 4.22) [with n. 196]. **Daniela Candilio has already proposed that the remains must belong to the Templum Gentis Flaviae. Their size, Domitianic date (confirmed by brick stamps), location, as well as a colossal, 1.5 m tall head of Titus and a smaller but still colossal head of Vespasian found in the vicinity** [with n. 197, providing references], **would surely be consistent with such a view** [my emphasis]".

In her **n. 196**, Borg quotes: "Esp.[ecially] *NSc* (1990-01), 165-83 (D. Candilio); *NSc* (2000-01) 443-53 (D. Candilio); La Rocca [*i.e.*, here La ROCCA 2009].

**Coarelli** (2014, 194-207, with Fig. 52 on p. 203: "*Templum gentis Flaviae*: ricostruzione dell'ambiente sotterraneo") **reconstructs the temple tomb within the *Templum Gentis Flaviae* with a round ground-plan.**

**Concerning Coarelli's relevant proposal, Borg (2019, 249-250) writes:**

"The proposal, intriguing as it may be, is riddled with difficulties. Not only is Coarelli's burial chamber strikingly different from the circular corridors of Augustus' mausoleum, it is not entirely clear whether Agrippa's Pantheon featured a roof or was open to the sky [with n. 206], and while it certainly had dynastic connotations and possibly associations of apotheosis, it was clearly not a straightforward temple to the imperial *divi* and *divae*. Moreover, like the late antique circular temple tombs, its overall plan, including the important front porch, requires elongated rather than square foundations. **What is more, not a single curvilinear element has so far been found on site, and even Coarelli's concrete foundations are rectilinear**, while those of the Pantheon *rotunda* as well as those of the late antique mausolea are circular. As some temple tombs and other large brick tombs make clear, semi-interred burial chambers often exist beneath the actual temple structure, and the niche excavated underneath the via Vittorio Emanuele Orlando (Fig. 4.22) could just as well belong to a rectangular interior space [with n. 207].

**So far, I cannot see any evidence for a round building. A rectangular podium temple surrounded by a portico would fit with the rectangular features discovered so far, and this would in any case be the most likely shape** [with n. 208] ... [page 250] Despite the uncertainties involved, there can be no doubt that the Flavian complex had many features in common with our temple tombs. Like the *Templum*, temple tombs are often located within a precinct, and they may have shared its podium temple design. At an ideological level, they were intended to honour the deceased members of an entire *gens* - and only this *gens* [with n. 211]. **Moreover, the *Templum* was erected over the house where Domitian was born (Suetonius, *Dom.* 1.1.9). While private temple tombs could not be erected within the *pomerium* [as is the case of the *Templum Gentis Flaviae*], they were often situated at the entrance to, or even very closely integrated into, villa buildings [with n. 212]. Functionally, it is important to note that the *Templum Gentis Flaviae* was the first temple for imperial cult that also served as a tomb, and the first imperial tomb that comprised cult for the *divi* and *divae* [with n. 213]. The erection of the first private temple tombs [also discussed by her] shortly after it [*i.e.*, the *Templum Gentis Flaviae*] was dedicated thus strongly suggests that they were inspired by the imperial model [my emphasis]".**

In her notes 206-208, 211-213, Borg provides references and further discussion.

In her note 208, Borg writes: "For a hypothetical reconstruction [of the *Templum Gentis Flaviae*], see Capanna 'Tempio della Gente Flavia' and 'Alta Semita' [*i.e.*, here M.C. CAPANNA 2008; 2012]), who does not, however, explain the shape of the preserved parts of the *caementicium* podium. Some have argued that the appearance of the *Templum* can be gleaned from a relief [cf. here Fig 31] and a coin [cf. here Fig. 30]. The two fragments of the relief show a procession in front of a decastyle temple. Its tympanum depicts Mars and Rhea Silvia as well as the she-wolf with the twins (Torelli, 'Culto imperiale' [*i.e.*, here M. TORELLI 1987], 564 fig. 2; Paris (ed.), *Dono Hartwig* [*i.e.*, here R. PARIS 1994a], 28-30 figs. 16-19, 32-3 figs. 1-2; Davies, *Death and the Emperor* [*i.e.*, here J.P.E. DAVIES 2000]; 157-8; Leithoff, *Vergangenheit* [*i.e.*, here J. LEITHOFF 2014], 190-2 with n. 826 fig. 15). Yet the relief is most likely Trajanic rather than Flavian, as the original portraits in the background and the draping of the togas demonstrate, and the alleged provenance from the Forum of Trajan would further support such a date (Goette, 'Disiecta membra' [*i.e.*, here H-R. GOETTE 1983]). The coin is a Domitianic *sestertius* of 95/96 showing a decastyle temple within a courtyard framed by aedicula niches, either within a surrounding wall or, perhaps more likely, above some terrace walls (Torelli, 'Culto imperiale' [*i.e.*, here M. TORELLI 1987], 566-7; Paris (ed.), *Dono Hartwig* [*i.e.*, here R. PARIS 1994a], 26-8 fig. 14; Gazda *et al.* (eds.), *Images of Empire* [*i.e.*, here E.K. GAZDA, A.E. HAECKL and R. PARIS 1996], 19; Leithoff, *Vergangenheit* [*i.e.*, here J. LEITHOFF 2014], 191 fig. 10). However, the identification largely rests on the observation that there were few if any other decastyle buildings at the time, a relatively weak argument to support such a wide-ranging interpretation, and other suggestions for identification have been made (contra

e.g. Coarelli, 'Flavi' [*i.e.*, here F. COARELLI 2009b], 94; La Rocca, 'Templum' [*i.e.*, here E. La ROCCA 2009], 228-30; Leithoff, *Vergangenheit* [*i.e.*, here J. LEITHOFF 2014], 191-2 fig. 10)".

**As we have just seen, also Borg (2019, 249 n. 208) discusses Domitian's coin (cf. here Fig. 30) and the "Rilievo Terme Vaticano" (cf. here Fig. 31), a fact that I had previously overlooked. Mario Torelli (1987) was of the opinion that both represent the *Templum Gentis Flaviae*.**

But whereas I myself follow Torelli's (1987) suggestion here, Borg (2019, 249 n. 208) rejects this hypothesis. Although all this will be discussed in detail below, let me anticipate here already a few facts: it is not (quite) true, what Borg (2019, 249 n. 208) writes, that "the identification largely rests on the observation that there were few if any other decastyle buildings at the time".

What Torelli (1987, 564567, Fig. 2 [= here Fig. 31]) suggested was, that the coin (here Fig. 30) and the relief (here Fig. 31), represent the *same* building; and because of the date 95/96 AD of Domitian's *sestertius* (here Fig. 30), Torelli came to the conclusion that the coin and the relief represent the *Templum Gentis Flaviae*.

Borg (2019, 249 n. 208) follows Hans Rupprecht Goette's (1983) dating of the "Rilievo Vaticano" (here Fig. 31, below) in the Trajanic period. Goette (1983, 245 with n. 27, p. 246), in his turn, had based his relevant hypothesis *inter alia* on the alleged findspot of the "Rilievo Vaticano" in the Forum of Trajan. This assumption was not true, as already stated by Torelli (1987, 504 n. 6, quoted *verbatim infra*, in volume 3-2, at Appendix I.g.3.)).

Goette (1983) does not discuss Domitian's coin (cf. here Fig. 30), whereas Coarelli (2009b, 94; see also F. COARELLI 2012, 574 with n. 432) and La Rocca (2009, 228-230), to whom Borg likewise refers, discuss Domitian's coin (here Fig. 30) in this context, which in their opinion does not show the *Templum Gentis Flaviae*. But Coarelli (2009b; 2012) and La Rocca (2009) do *not* consider the "Rilievo Terme Vaticano" (here Fig. 31) in their reasonings.

For a detailed discussion of Coarelli's (2012) and La Rocca's (2009) relevant opinions; cf. *infra*, in volume 3-2, in Appendix VI.; at Section XII.

**Borg (2019, 249 n. 208) does not consider the possible meaning of the representation in the tympanon of the depicted temple (cf. here Fig. 31, above). I myself follow Stephanie Langer and Michel Pfanner (2018, 142-157) in assuming that, what we witness on the relief Fig. 31, is not a procession, as previously believed (followed by Borg 2019, 249 n. 208), but rather a sacrifice. This means, as has also been stressed by Langer and Pfanner (2018, 154), that the emperor, performing this ritual in front of this shrine, is closely related to the myth represented in the tympanon of this temple: this pediment depicts the foundation myth of Rome, and precisely the birth of Romulus.**

**We must, therefore, ask ourselves: who *other* than the Flavians, and especially: *who other than Domitian*, could propagate themselves/ himself as the new founders or founder of Rome?**

**To this I will come back below, when we discuss Eugenio La Rocca's (2020b, 369, n. 9) observations concerning the temple tomb proper within the *Templum Gentis Flaviae*, as well as Claudio Parisi Presicce's (2000, 28) observations concerning the "Rilievo Terme Vaticano" (here Fig. 31).**

**To conclude this point.** I myself, therefore, suggest that it is tempting to believe that the "Rilievo Terme Vaticano" (here Fig. 31) originally represented Domitian (whose head was restored by Bertel Thorvaldsen [19.11.1770-24.3.1844] with a portrait of Trajan carved by himself), because it was (erroneously) believed at that stage that the relief had been found in the Forum of Trajan.

See for all that, Langer and Pfanner (2018, 144-145 with n. 20 and Abb. 51, documenting the restorations of the "Rilievo Vaticano", here **Fig. 31, below**), who report some interesting information.

The *Commissione Consultativa di Antichità e Belle Arti* of the Vatican had in 1816 decided that the Vatican Museums should only acquire artworks *without* restorations. The Vatican Museums acquired the relief (cf. here **Fig. 31, below**) in 1823, and in the *Registro Generale* is stated that it is *without* restorations. - Ironically, this relief is in reality heavily restored - by Thorvaldsen, who had himself created those restoration, and was at the time a member of the *Commissione Consultativa di Antichità e Belle Arti* (!).

What we see on this relief is, in my opinion, Domitian, who is sacrificing in front of his newly erected *Templum Gentis Flaviae*.

I also believe that this relief was meant to represent a very specific ceremony, namely Domitian's dedication of the *Templum Gentis Flaviae*, See below, as well as *infra*, in volume 3-2, in *Appendix I.g.3.*); at Section IV.

**For a detailed discussion of Domitian's sestertius (here Fig. 30) and the "Rilievo Terme Vaticano" (here Fig. 31); cf. also below, in Chapter V.1.i.3.a); infra, in volume 3-2, in Appendix I.g.3.); at Sections I. -V.**

Let's now return to the hypotheses, suggested by Grenier and Coarelli.

**I myself have elsewhere discussed the relevant hypotheses concerning the *Templum Gentis Flaviae*, suggested by Grenier (1996; 2009) and Coarelli (1996; 2009b; cf. HÄUBER 2017, 159-163); this can be summarized as follows.**

As we have seen above (cf. *supra*, at Chapter IV.1.1.a)), both Grenier and Coarelli are of the (in my opinion erroneous) opinion that neither the scenes on the *pyramidion* of Domitian's Obelisk, nor its hieroglyphic texts contain any references to Isis, which could explain its erection at the Iseum Campense. These texts stress instead in the authors' opinion the achievements of the Flavian dynasty - true is that these texts among others also stress the accomplishments of the Flavian dynasty - and this is why their conclusion to attribute this obelisk to the *Templum Gentis Flaviae* sounds from their point of view understandable.

In addition to Grenier's and Coarelli's (2009, 205) first wrong assumption - the alleged lack of references to Isis in the scenes on the *pyramidion* of Domitian's obelisk, as well as in its hieroglyphic texts, Grenier (2009, 238, quoted *verbatim supra*, at Chapter IV.1.1.a)), and Coarelli (2014, 194-207; the relevant passages from pp. 204-207 are quoted *verbatim supra*, at Chapter IV.1.1.a)) add the further (wrong) assumption of a round ground-plan for the temple tomb within the *Templum Gentis Flaviae*, which in their opinion further supports their attribution of Domitian's obelisk to the *Templum Gentis Flaviae*. And that because of the following reasons -

*a)* They argue with the assumption that Maxentius, by building the mausoleum for his son Romulus at his *Villa* on the Via Appia, had chosen as the model for this round mausoleum the alleged round temple tomb of the *Templum Gentis Flaviae*; and -

*b)* Because Maxentius definitely re-erected Domitian's obelisk on the *spina* of his *Circus* at the same *Villa*, Grenier and Coarelli came to the conclusion that Maxentius must also have removed this obelisk from the *Templum Gentis Flaviae*.

Note that the basis of point *b)* are the following assumptions.

Coarelli reminds us of the fact that it was Maximianus Herculeus, the father of Maxentius, who had started building the Baths of Diocletian at the site, where the *Templum Gentis Flaviae* was standing. And because both, the Baths of Diocletian and the *Templum Gentis Flaviae* are still mentioned in the Constantinian Regionary Catalogues, Coarelli (2014, 204-205, 207) convincingly concludes, that the *Templum Gentis Flaviae* survived within these baths. He, therefore, suggests that only the erection of this huge bath complex

'around' the temple tomb of the *Templum Gentis Flaviae* (in the course of which its pertaining porticos were destroyed) had enabled Maxentius to remove Domitian's obelisk to his own *Villa* - that in Coarelli's opinion had been standing within the building complex of the *Templum Gentis Flaviae*.

As already quoted before (cf. *supra*, at Chapter IV.1.), Moormann (2018, 171, in his **note 65**) comments on the hypothesis of Coarelli and Grenier to attribute Domitian's obelisk to the *Templum Gentis Flaviae*, as follows:

"... **Coarelli 2009** [*i.e.*, here F. COARELLI 2009b], 94; **J.-C. Grenier** ... [*i.e.*, here J.-C. GRENIER 2009] 234-39 and **Coarelli 2014**, 205-7: **they see it** [*i.e.*, Domitian's obelisk] **as an element from the Temple of the Gens Flavia, which might be likely on the basis of the inscription, but not as to its shape and signification** ... [my emphasis]". Cf. now Eric M. Moormann (2021, 46 with n. 18. He again rejects the just mentioned view of J.-C. GRENIER 2009, 234-238 and F. COARELLI 2014, 205-207, quoting for his own view also me: C. HÄUBER 2017, 158-164, but without listing this publication in the bibliography of the volume). See now Moormann (2023, 59-60, with n. 19; *i.e.*, the Italian translation of his essay of 2021), where he again quotes "Häuber 2017, pp. 158-164", but this time this publication appears in the bibliography of the volume (!).

I myself have argued elsewhere as follows; cf. Häuber (2017, 163):

if indeed Domitian's obelisk (cf. here **Fig. 28**) had been commissioned for the *Templum Gentis Flaviae*, why on earth did the emperor order this 'Egyptian' feature for this building complex, the complete architecture of which, comprising the iconographies of its sculpture and relief decoration (cf. *infra*, at Chapter V.1.i.3.a), and here **Figs. 33; 34**), is Roman in style and iconography, considering at the same time that the contents of the *pyramidion* and of the hieroglyphic inscriptions of Domitian's obelisk, especially its praise of the Flavian dynasty, could just as well have been expressed in a Latin inscription, which would be much more appropriate in such a context?

In addition to that, I wrote: "Although Grenier's [2009, 204-238] and Coarelli's [2014, 194-207] hypotheses just-mentioned [and here again summarized] are at first glance very impressive indeed, I would be much more convinced of their reconstructions, had Maxentius placed Domitian's obelisk right in front of the so-called Mausoleum of Romulus (*i.e.*, Maxentius' dynastic tomb) - as Augustus had done in the case of his *Mausoleum* ... The fact that Maxentius did something else opens the chance to wonder, whether the situation may be interpreted differently" (cf. C. HÄUBER 2017, 162).

**To conclude this point. Borg's (2019) new findings concerning the building type of the temple tomb within the *Templum Gentis Flaviae*, who was able to prove that it did not have a round ground-plan, adds to the critique of the suggestions made by Grenier and Coarelli to attribute Domitian's obelisk (cf. here **Fig. 28**) to the *Templum Gentis Flaviae*. Her findings thus support at the same time the hypothesis suggested here that Domitian commissioned the Pamphili Obelisk for the Iseum Campense instead.**

Considering the new findings by Borg (2019) and those mentioned above concerning the *Traianeum*, built by Hadrian at Italica, it is now worth while to reconsider the hypotheses concerning the *Templum Gentis Flaviae*, mentioned above. I am referring to Paris (1994b, 26-33, esp. p. 28 with n. 11: "La documentazione iconografica"), who followed in this respect Mario Torelli (1987, 564-567) in suggesting that the *Templum Gentis Flaviae* is represented on one of the *sestertii*, issued by Domitian in AD 95/96 (cf. here **Fig. 30**), and on the "Rilievo Terme Vaticano" (cf. here **Fig. 31**), of which the relief fragment at the Museo Nazionale Romano (here **Fig. 31, above**) shows an "edificio decastilo e frontone"; cf. Paris (1994b, 32, Fig. 1). - Because in both cases the building, identified by Torelli and Paris with Domitian's *Templum Gentis Flaviae*, has a *rectangular* ground-plan.

As I only realized after I had written this, Borg herself (2019, 249 n. 208, quoted *verbatim supra*) does not believe that Domitian's *sestertius* (here **Fig. 30**) and the "Rilievo Terme Vaticano" (here **Fig. 31**) represent the *Templum Gentis Flaviae* at all.

**But we should not forget that other scholars do not reconstruct the *Templum Gentis Flaviae* as a decastyle temple, but rather as an octastyle temple.**

**Cf. Eric M. Moormann (2018, 170 with n. 154) : "There are various reconstructions of the complex that consist of a decastyle or an octastyle temple surrounded by a porticus [with n. 54; my emphasis]".**

In his **note 54**, Moormann writes: "Capanna 2008 gives the various possibilities and pleas in favour of an octastyle temple". - To this discussion I will come back below, in Chapter *V.1.i.3.a*). As we have seen above, also Borg (2019, 249 n. 208) has mentioned Capanna's (2008; 2012) reconstruction of the *Templum Gentis Flaviae*.

To some of the subjects, discussed in this Chapter *IV*. are also dedicated other parts of this *Study*:

Further for the *Templum Gentis Flaviae*, Domitian's *sestertius* (cf. here **Fig. 30**) and the "Rilievo Terme Vaticano" (cf. here **Fig. 31**); cf. *infra*, at Chapter *V.1.i.3.a*) *The reconstruction by R. Paris (1994b) of two of the marble reliefs of the Templum Gentis Flaviae: 'Vespasian's adventus into Rome in October of AD 70' (cf. here Fig. 33), and 'Sacrifice in front of the Temple of Quirinus on the Quirinal' (cf. here Fig. 34). With some observations concerning Domitian's sestertius, issued in AD 95/96 (cf. here Fig. 30), the "Rilievo Terme Vaticano" (cf. here Fig. 31), and the aureus of Augustus, minted in 12 BC, showing the door of the (real) House of Augustus on the Palatine, decorated with the corona civica and laurel trees (cf. here Fig. 35); cf. infra, in volume 3-2, at Appendix I.g.3.) A sestertius, issued by Domitian in AD 95/96 (cf. here Fig. 30), and the Flavian date of the "Rilievo Terme Vaticano" (cf. here Fig. 31), both of which possibly represent Domitian's Templum Gentis Flaviae. With The first Contribution by Claudia Valeri; *infra*, in volume 3-2, at Appendix I.g.3.); at Section *V*. A marble fragment of a state relief (cf. here **Figs. 32.A-E**), found in the Forum Romanum and published by H.R. Goette (1983), who attributes it to the "Rilievo Terme Vaticano" (cf. here **Fig. 31**); *infra*, in volume 3-2, at Appendix I.g.4.) Domitian's sacellum of Iuppiter Conservator, his Temple of Iuppiter Custos, and his (fourth) Temple of Iuppiter Optimus Maximus Capitolinus (cf. here **Fig. 83**). With The first Contribution by Peter Herz; and *infra*, in volume 3-2, at: Appendix *IV.c.2.*) *The Ogulnian monument (a statue group representing the she-wolf suckling Romulus and Remus, standing underneath the sacred fig tree ficus Ruminalis), and the she-wolf suckling Romulus and Remus on a headless cuirassed statue of a Flavian emperor (Domitian?) in the Vatican Museums (cf. here Fig. 6, right) and on Hadrian's cuirassed statue from Hierapydna at Istanbul (cf. here Fig. 29). Exactly like the statue of the ficus Ruminalis on the Anaglypha Hadriani (cf. here **Figs. 21; 22**), the lupa and the twins on those cuirasses symbolize Rome's claim to eternal power and divine mission, and that it was the task of the Roman emperor to fulfill this obligation (cf. C. Parisi Presicce 2000, 28, 29). With a discussion of the meaning of the lupa and the twins on the "Rilievo Terme Vaticano" (cf. here **Fig. 31, above**), and with The second Contribution by Claudia Valeri.**

After they were written, I sent all the text passages of this *Study*, related to Domitian's *sestertius* (cf. here **Fig. 30**), to the "Rilievo Terme Vaticano" (cf. here **Fig. 31**), and to the *Templum Gentis Flaviae* to Mario Torelli, with whom Franz Xaver Schütz and I visited on 29th November 2019 at Perugia to discuss those matters with him. Mario Torelli wrote me by E-mail of 18th July 2020 his comments, which I may publish here with his kind consent. See below, at *The Contribution by Mario Torelli on the Templum Gentis Flaviae*.

#### ***Eugenio La Rocca's (2020b) new findings concerning the Templum Gentis Flaviae***

***At the very end of this Chapter, I will, in addition to this, comment on some more observations concerning the Templum Gentis Flaviae, made by Eugenio La Rocca and Lorenzo Kosmopoulos (2023)***

After having finished writing this Chapter *IV.1.1.h*) the new article by Eugenio La Rocca (2020b) on the subject reached me. As already mentioned above, La Rocca (2020b, 367-369 with ns. 8, 9) confirms his earlier findings concerning this colossal portrait of Titus (here **Fig. 53**) by providing detailed information about

where it was found and by attributing it to the *Templum Gentis Flaviae*, the location of which within the area of the Baths of Diocletian he maintains as well (cf. his Fig. 10 = here Fig. 57).

After discussing the available archival material, La Rocca marks the precise findspot of this head of Titus (here Fig. 53) on his plan Fig. 8 [= here Fig. 56], label: 2: it was found in 1873, on the pavement of the ancient road that followed the Baths of Diocletian on its north-western side (today: Via Pastrengo). In his note 9, La Rocca (2020b) rejects Filippo Coarelli's (2014) reconstruction of the temple tomb proper within the *Templum Gentis Flaviae*, which, according to Coarelli, had a round ground-plan. But note that La Rocca has overlooked the fact that Barbara E. Borg (2019) had already before him refuted Coarelli's 'round' reconstruction of the temple tomb of the *Templum Gentis Flaviae* (for a detailed discussion of Coarelli's and Borg's relevant hypotheses; cf. *supra*).

**Then, La Rocca (2020b, 369, n. 9) adds previously not considered information concerning the meaning of the term *templum*, and applies that to the *Templum Gentis Flaviae*, concluding that - as I should like to add: under 'normal' circumstances - the temple tomb proper of the *Templum Gentis Flaviae* could not possibly be regarded as a *templum*. The reason being, in La Rocca's opinion, that this building was not only a temple for the imperial cult, but served at the same time as a tomb for members of the *gens Flavia*, arguing that, by definition, tombs were not located within an inaugurated space and could, therefore, not be *templa*.**

Since I am not an expert in this field myself, I have asked John Bodet, Barbara E. Borg and Jörg Rüpke for advice. See below, at *The second Contribution by Jörg Rüpke: Tempel-Gräber*, which he sent me on 22nd October 2021.

Also Barbara E. Borg was kind enough to answer my relevant question, on 14th and 20th September 2021. But because Franz Xaver Schütz and I had published the title of this book on 7th September 2021 on our Webserver (in which all *Contributors* to this volume are mentioned), I could unfortunately not ask Borg any more for permission to publish her answer as a *Contribution* to this book, since I received her answer only after the 7th of September. But one thing is clear: when reading Borg's publication discussed here, she has addressed precisely the same complex of problems, which, independently of her, also La Rocca (2020b, 369, n. 9), has observed. See especially Borg (2019, 191-290, Chapter "4 Straddling Borderlines: Divine Connotations in Funerary Commemoration"), which I had not read in its entirety at that point, and that she was kind enough to send me now.

Barbara Borg was kind enough to write me by E-mail of 20th September 2021 that I may mention here our relevant correspondence.

In addition, La Rocca (2020b, 369, n. 9) doubts (*contra*: F. COARELLI 2014) that the *Templum Gentis Flaviae* could possibly have survived, once the Baths of Diocletian were erected, arguing with the considerable size of this monument, and the fact that neither the Constantinian Regionary Catalogues, nor the Chronographer of AD 354 call it *templum*: "Curiosum, Notitia e Cronografo del 354 citano esclusivamente *gentem Flaviam* (o *Flabiam*) senza il termine *templum*". La Rocca is, of course, aware of the fact that, according to Coarelli, not the surrounding porticoes of the *Templum Gentis Flaviae*, but only the temple tomb proper, which originally stood on a square within those porticoes, could actually have survived until late antiquity. According to Coarelli's (2014) hypothesis, the Baths of Diocletian, 'surrounding the temple tomb', were planned in such a way that the temple tomb turned out to stand in one of the very large courts of those baths.

**Fig. 56. Archaeological plan of the area of the Baths of Diocletian. Cf. C. Pietrangeli 1977, tav. 2 (drawing: C. Buzzetti and E. Gatti). From: E. La Rocca (2020b, Fig. 8): "1. Area dove era ubicato il *templum gentis Flaviae*; 2. Il luogo dove è stata rinvenuta la testa colossale di Tito [cf. here Fig. 53]; 3. Edificio in laterizio dove è stato rinvenuto il mosaico con tiaso marino e le tre Grazie; 4. Il luogo dove sono stati rinvenuti i rilievi Hartwig [for those; cf. *infra*, at Chapter V.1.i.3.a), and here Figs. 33; 34]"**

**Fig. 57. Archaeological plan of the Baths of Diocletian (detail). Cf. C. Pietrangeli 1977, tav. 3, with additions by E. La Rocca. From: E. La Rocca (2020b, Fig. 10: detail of his Fig. 9). The caption of his Fig. 10 reads: "Dettaglio della pianta a fig. 09. Con una linea rossa è segnalato il perimetro della recinzione del *templum gentis Flaviae* (da Pietrangeli 1977, tav. 3, con aggiunte dell'a.[utore])".**

La Rocca 2020b, 367-369 with ns. 8, 9) writes about the colossal portrait of Titus (cf. here **Fig. 53**):

"Dai pochi dati disponibili si evince che la testa [of Titus; cf. here **Fig. 53**] sia stata rinvenuta sul lastricato della strada che costeggiava il fianco nord-occidentale delle terme di Diocleziano (figg. 2, b; 8 [= here **Fig. 56**], n.[numero] 2), non lontano da un complesso monumentale in opera laterizia di buona qualità ... databile tra l'età di Traiano e quella dei primi imperatori Antonini ... La testa di Tito (figg. 4-7 [= here here **Fig. 53**]) che, per la sua colossalità, non è ragionevole che provenga da una sede lontana, come giustamente avevano rilevato già Rosa e Brizio [1873], doveva essere pertinente a una delle principali [page 369] statue di culto del *templum gentis Flaviae*, la cui ubicazione nell'area in seguito occupata dalle terme di Diocleziano (fig. 8 [= here **Fig. 56**], n.[numero] 1), e nelle cui vicinanze furono trovati i rilievi Hartwig (fig. 8, n.[numero] 4 [= here **Fig. 56**]), risulta ipotesi ben motivata. Più precisamente, il *templum* doveva essere nel luogo in cui a più riprese, nell'area adiacente alla chiesa di San Bernardo, ai lati di via Vittorio Emanuele Orlando, furono ritrovate le fondazioni di un edificio demolito proprio per far spazio alle terme [with n. 8] (fig. 9). Poco si può dire della sua struttura, sebbene a grandi linee si possa intuire quale fosse il perimetro della sua recinzione [with n. 9] (fig. 10 [= here **Fig. 57**])".

For the "rilievi Hartwig", mentioned above by La Rocca (2020b, 369), which scholars attribute to the *Templum Gentis Flaviae*; cf. *infra*, at Chapter V.1.i.3.a), and here **Figs. 33; 34**.

**In his note 8, La Rocca writes :**

"Candilio 1990-1991, pp. 165-183, spec.[ialmente] p. 175 ss. figg. 9-12; La Rocca 2009c [*i.e.*, here E. LA ROCCA 2009], pp. 224-225, 228-230, figg. 1-2; Coarelli 2014, pp. 197-200, figg. 48-49".

**In his note 9, La Rocca writes :**

"Che il tempio [*i.e.*, the temple tomb proper of the *Templum Gentis Flaviae*] fosse a pianta circolare (come hanno suggerito Jordan, Hülsen 1907, p. 426; Lugli 1938, p. 319; Scott 1936, p. 67; Ward-Perkins 1981, p. 77; e Coarelli 2014, pp. 200-204), è solo una suggestiva ipotesi priva, purtroppo, di un valido sostegno archeologico. Reputo invece poco verosimile che la struttura principale dell'edificio, sebbene priva della sua recinzione, fosse stata inglobata nelle terme. Continua a lasciarmi perplesso l'impatto causato all'interno delle terme da un monumento che, a giudicare dalle fonti superstiti, non era certamente di misura ridotta. Curiosum, Notitia e Cronografo del 354 citano esclusivamente *gentem Flaviam* (o *Flabiam*) senza il termine *templum*, che invece è adottato per altri *templa* della regio VI: il *templum Salutis et Serapis* e il *templum* dei Quirini (c'è una divergenza solo nella citazione del *templum Florae* che nel *Curiosum* è citato come *Floram*). Rimando ora a Cavallero 2019, pp. 199-220, su una maggiore precisazione del significato di *templum*, la cui incomprendibile da parte mia e di altri, secondo Coarelli, avrebbe prodotto una serie di equivoci a catena. Il problema è che, malgrado la sicurezza di Coarelli in merito, il vocabolo latino non è così limpido come lui vorrebbe. Varr., *l.l.*, 7, 8, lo definisce come «*locus augurii aut auspicii causa quibusdam conceptis verbis definitus*». In regola generale, gli edifici sacri, salvo rare eccezioni, erano costruiti su un suolo inaugurato, cioè libero da ogni servitù, da ogni diritto di possesso o di proprietà detenuto da entità demoniche o da altre divinità che non fossero quelle alle quali gli edifici stessi, innalzati nei limiti del *templum*, erano consacrati. C'è quindi da dubitare, per quanto si sappia, che l'area di un monumento funerario fosse inaugurata (Marquardt 1892, p. 176). Così, il *templum gentis Flaviae*, in quanto anche sepolcro dei Flavii, non risponde molto bene ai requisiti di un *templum*. Della singolarità del *templum gentis Flaviae*, tempio della *domus divina* e contemporaneamente sepolcro, si era reso conto Jean-Claude Richard (Richard 1966, pp. 133-135), che scorgeva nell'iniziativa di Domiziano un passo avanti nella strategia del culto imperiale, con il passaggio non solo verso la

dichiarazione della natura divina di tutti i membri della famiglia, per il solo fatto di essere sepolti a fianco dei parenti che avevano ricevuto l'onore della *consecratio*, ma anche verso l'amplificata funzione dell'edificio, che non è più solo un monumento funerario, ma luogo di culto degli imperatori Flavii divenuti divi e dei loro parenti divinizzati, come non era avvenuto con il mausoleo di Augusto, né sarebbe avvenuto con il mausoleo di Adriano. Ambedue queste strutture erano, infatti, esclusivamente luoghi di sepoltura, non luoghi del loro culto divino, che era altrove. Anche l'opinione di Richard, tuttavia, dovrà essere rettificata in base a una più approfondita analisi di un altro significato del termine *templum*, di cui abbiamo un'eloquente traccia in Virgilio. Didone aveva eretto nella neo-fondata Cartagine un *templum* nel quale erano deposte le ceneri del marito Sicheo (Verg., *Aen.*, IV, 457-458). Nel commento a questo verso, Nonio Marcello (VI, 92, p. 743 L.), annota: *templum et sepulcrum dici potest veterum auctoritate*. C'è quindi un significato del termine *templum*, adottato in base alla *auctoritas veterum*, che non coincide con quello vulgato di luogo inaugurato. Non diversamente, anche se con minore evidenza, nel suo commento al medesimo brano, Servio (*ad Aen.*, IV, 458), adopera sovente il termine *templum* come il più idoneo a identificare il monumento eretto da Didone al marito Sicheo. Non è un esempio isolato. Nella poesia a carattere funerario è frequente il riferimento alle dimore dell'Ade come *templa*. Nell'iscrizione romana di Bassa, morta a dieci anni (CIL, VI, 7898, 8-9), si dice: *... at saevos Pluto rapuit me ad infera templa*. E in quella del piccolo P. Aelius Pius, anch'essa romana (CIL, VI, 10794, 9): *... set non hic manis nec templa achirus(i)a visi(t)*. In un'iscrizione funeraria di Ostia (CIL, XIV, 480, ll. 7-8) il monumento funerario è detto *aedes* e *novissima templa* per i Mani e per le ceneri del defunto e dei suoi discendenti: *... hanc aedem posuit struxitque novissima templa manibus et cineris posteriisque meis*. Come si può vedere da questi pur limitati esempi, si deve essere prudenti prima di sostenere che la recente discussione sugli edifici del culto dinastico a Roma si sia arenata per un'incomprensione del reale significato del termine *templum*, che in età imperiale non ha una sola accezione".

**Let's now discuss La Rocca's statement (2020b, 369, n. 9): he regards Domitian's idea to combine in his *Templum Gentis Flaviae*, a temple, dedicated to the divinized members of his family, with the family tomb, as a concept that, 'under normal circumstances', would have been prohibited by Roman sacred law.**

In the meantime has appeared the article "Il *templum gentis Flaviae*" by Eugenio La Rocca and Lorenzo Kosmopoulos (2023), in which La Rocca (2023, 134-137) repeats the thoughts, first published in La Rocca 2020b, 367-369 with ns. 8, 9), that are discussed here. To the latter article; I will come back below.

**Amanda Claridge, with whom I discussed this subject in a telephone conversation on 7th September 2021, had an excellent idea which she kindly shared with me: such 'temple tombs' as the one within Domitian's *Templum Gentis Flaviae*, are by no means without precedent, since founders were usually honoured this way: 'and the Flavians were founders too', Amanda added.**

Amanda Claridge was kind enough to write me by E-mail of 25th September 2021 that I may mention here our relevant conversation.

**As an example for such a founder's tomb, Amanda Claridge mentioned to me a tomb in the Triangular Forum at Pompeii which has recently been identified as the tomb of the founder of the city - but which I myself do *not* know. 'That sounds like the tombs of the founders of Greek colonies', I replied. Amanda agreed, adding to this that Pompeii had anyway great similarities with those Greek colonies.**

The oldest part of Pompeii is located in the city's 'REGIO VII', immediately adjacent to which in the east was built the Triangular Forum, that belongs to 'REGIO VIII'. For plans that show Pompeii's development over time; cf. Joanne Berry (1998, 14-31, Figs. 11-21), with a summary of the city's history by Andrew Wallace-Hadrill, who mentions on p. 21: "the sanctuary, probably of Minerva and Hercules in the Triangular Forum". See for the Triangular Forum also Wilhelmina F. Jashemski (1993, 224), her cat. no. "460. VIII.vii.30 The Triangular Forum Figs. 255, 256". In this Triangular Forum stands the so-called Doric Temple mentioned by Wallace-Hadrill.

See for a plan of Pompeii in which its 'REGIONES' are marked, Jashemski (1993, 2, Fig. 1), labels: REG. VII; REG. VIII; FORO TRIANGOLARE (the location of the Doric Temple in the Triangular Forum is indicated: it is oriented towards the sea). The caption of Jashemski's Fig. 1 reads: "Plan 1 Pompeii. When Fiorelli became the director of the excavations in 1860 he divided Pompeii into nine regions, and assigned a number to each insula (or block) in each region, as well as to each entrance in each insula".

That a tomb in front of the Doric Temple in the Triangular Forum at Pompeii may be identified as that of the founder of the city is not only understandable because of its location within the oldest part of the city. In addition to this, the oldest architectural finds from the area prove that this oldest part of Pompeii's history is indeed closely connected with the contemporary Greek colonies, as Amanda Claridge had mentioned to me. Or should we even say: because of this tomb of a founder, the oldest part of Pompeii should be identified *as* a Greek colony? See for that, Nicholas Purcell ("Pompeii"; in: *OCD*<sup>3</sup> [1996] 1214): "The oldest architecture fragments from the Doric Temple ... belong to the Greek milieu around the Campanian *apoikiai* of the 6th cent.[ury] BC (see APOIKIA) ...".

The article '*apoikia*' in the same lexicon leads us then to what I said in my response to Amanda Claridge in our conversation. I myself had referred to the findings of my colleague Roald Docter (2013, 170-171), who, choosing the example of the Greek colony Megara Hyblaia, has described the entire process of founding a Greek colony in the period in question: with the founder Lamis, who after his death was honoured with a *heroon* at Megara Hyblaia. And, as I should like to add, we may assume that his *heroon* had been erected very closely to the tomb of the founder Lamis.

**The other observation of Amanda Claridge, according to which 'the Flavian emperors were founders too', is likewise true.**

I, therefore, anticipate a passage that was written for *infra*, in volume 3-2. in *Appendix VI.*; at Section II.):

'Erika Simon (1963, 727-728) dated the "Rilievo Terme Vaticano" (cf. here **Fig. 31**) to the Flavian period, recognized in the originally represented emperor Domitian (currently restored with a portrait of Trajan), and was of the opinion that this relief, exactly like Domitian's *sestertius* (cf. here **Fig. 30**), shows the '*Domus Tiberiana*' on the Palatine, as rebuilt by Domitian. **Simon therefore believed that the scene in the pediment of this temple (Fig. 31, above [in my opinion the *Templum Gentis Flaviae*!]) fitted very well Domitian's self-presentation, 'who felt [himself] to be the new founder of Rome'** [cf. also *infra*, at Chapter V.1.i.3.a; my emphasis)]'.

**For a discussion of the fact that Domitian propagated himself to be the new founder of Rome and, therefore, the new Romulus; cf. *supra*, in Chapter Preamble; Section III.; at point 4.). As mentioned above, in my conclusions concerning the "Rilievo Terme Vaticano" (cf. here **Fig. 31**), which I regard as a representation of the *Templum Gentis Flaviae*, I myself stress Domitian's identification with Rome's founder Romulus.**

If my hypotheses are true, Domitian commissioned this relief, in which he is shown sacrificing in front of his *Templum Gentis Flaviae*, in the tympanon of which, certainly not by chance, is represented Rome's foundation myth : the birth of Romulus. Since the contemporaries knew that Domitian was born in the *domus* of his father Vespasian, at the site of which now stood Domitian's *Templum Gentis Flaviae* (cf. Suet, *Dom.* 1; cf. *Dom.* 15), the tympanon relief of this temple referred directly to Domitian. In addition, I tentatively suggest that what we witness on this relief (here **Fig. 31**) is the dedicatory ceremony of the *Templum Gentis Flaviae*.

In the following, I anticipate a passage that was written for *infra*, volume 3-2, *Appendix I.g.3.*); at Section IV.:

'Provided *a*) that the Flavian date, suggested here for the "Rilievo Terme Vaticano" (cf. here **Fig. 31**) is true, and *b*) that this relief and Domitian's *sestertius* (here **Fig. 30**) represent the same building, Domitian's emulation of Romulus [discussed earlier in *Appendix I.g.3.*); at Section IV., in context with the tympanon of

the Temple of Quirinus, which is visible on one of the reliefs from the *Templum Gentis Flaviae*; cf. here **Fig. 34**] provides another strong argument in support of Torelli's hypothesis to see in both, the reverse of Domitian's *sestertius*, and the "Rilievo Terme Vaticano", representations of Domitian's *Templum Gentis Flaviae*.

As we have seen above, Stephanie Langer and Michael Pfanner (2018, 151 with Abb. 55) suggest two different reconstructions concerning the sacrifice, which is visible on the "Rilievo Terme Vaticano" (cf. here **Fig. 31, below**). If we follow Erika Simon (1963, 727, 728) and Langer and Pfanner (2018, 154 with Abb. 55: their reconstruction on the left hand side; cf. their Abb. 53), the emperor is to be identified with their figure 5 on the relief (now with restored head of Trajan), who sacrifices not with *capite velato*.

I also follow Langer and Pfanner (2018, 154) with their following statement : "Es scheint daher verlockend, die Thematik des Giebelfeldes [*i.e.*, of the "Rilievo Terme Vaticano"; cf. here **Fig. 31, above**] mit der Handlung des Opfernden [cf. here **Fig. 31, below**] direkt in Verbindung zu bringen". To this we may add Claudia Valeri's observation, her point 4.; cf. below, at *The first Contribution by Claudia Valeri on the "Rilievo Terme Vaticano"* (cf. here **Fig. 31**): "The real protagonist of the "Rilievo Terme Vaticano" is the represented temple [my emphasis]".

Provided, the hypotheses suggested here are true, *a*) that figure 5 (now with restored head of Trajan) on the "Rilievo Terme Vaticano" (cf. here **Fig. 31, below**) is the emperor, *b*) that he was shown in the act of sacrificing, *c*) that this emperor was originally Domitian, and *d*) that the represented temple is the *Templum Gentis Flaviae*, it is in my opinion *e*) in addition to this tempting to believe that the "Rilievo Terme Vaticano" showed Domitian in the act of dedicating that temple, in front of which he is shown as sacrificing: namely *the Templum Gentis Flaviae*'.

In order to illustrate the importance of 'Rome's foundation story' for the Flavian dynasty in general, and for Domitian in particular, I anticipate in the following a passage, written by Claudio Parisi Presicce (2000, 25-28), that is quoted *verbatim* in more detail *infra*, in volume 3-2, at *Appendix IV.c.2.*) :

'Claudio Parisi Presicce (2000, 25-30) analyses the iconography of the *lupa*, suckling Romulus and Remus, over time and in all *media*. He convincingly suggests that the Flavian emperors adopted this iconography, related as it was to Rome's destiny and to her eternity, in order to legitimize their reign, and discusses in this context the "Rilievo Terme Vaticano" (cf. here **Fig. 31**). He further identifies a torso of a cuirassed statue in the Vatican Museums (cf. here **Fig. 6, right**), which is decorated with this motive, as a possible portrait of Domitian, who, if true, was thus first to adopt this iconography for himself in a cuirassed statue :

"Dopo una lunga assenza dai conii monetali per tutta l'età giulio-claudia, con la sola ... [page 27] eccezione di alcuni sesterzi neroniani, **la lupa che allatta i gemelli ricompare sui rovesci degli aurei di Tito e dei denari coniatati a Roma da Domiziano, poco tempo prima della morte dell'imperatore Vespasiano avvenuta nel 79 d.C. (cat. n. 24 y)**. In esergo è raffigurata una barchetta, che richiama il cesto nel quale furono abbandonati i fanciulli. La piccola imbarcazione diventa il simbolo del salvataggio miracoloso, poichè è grazie a essa che Romolo e Remo giunsero sulla riva del Tevere. **La scena venne raffigurata su un rilievo marmoreo di provenienza ignota (cat. n. 9) pertinente a un fregio monumentale, solo in parte conservato, che in base alla modanatura può essere datato in età flavia e che, ipoteticamente, abbiamo attribuito alla decorazione architettonica del Tempio di Vespasiano e Tito** [he thus refers to the Temple of *Divus Vespasianus* ...], eretto a ridosso delle costruzioni del Tabularium [*i.e.*, the building here referred to as 'Tabularium'] verso il Foro Romano [page 28]. **Con la dinastia flavia saliva al potere una famiglia di origine italica, proveniente dalla Sabina, che riuscì a ripristinare il precedente sistema dinastico ereditario soltanto dopo una guerra civile che, tra il 68 e il 69 d.C., vide salire sul trono imperiale, in un clima di forti tensioni militari, prima Galba poi Otone e Vitellio. Il recupero della leggenda dei fondatori di Roma è in relazione con la volontà di legittimare, attraverso l'appropriazione dei simboli legati al destino di Roma e alla sua eternità, l'esercizio**

**del potere, non fondato al momento della nuova pacificazione sulla filiazione sanguigna, ma sul merito e sulla investitura divina**

**Se il tempio decastilo raffigurato nel rilievo diviso tra i Musei Vaticani e il Museo Nazionale Romano (cat. n. 3 [i.e., the "Rilievo Terme Vaticano"; cf. here Fig. 31]) va identificato, secondo la proposta di Mario Torelli, con il *Templum Gentis Flaviae*, avremmo la testimonianza di un vero e proprio programma di appropriazione da parte di Domiziano del ciclo figurativo relativo alla nascita di Roma. L'imperatore flavio [i.e., Domitian] o suo fratello Tito, stando alla recente datazione del torso loricato conservato ai Musei Vaticani (cat. n. 13 [cf. here Fig. 6, right ...), fu il primo a scegliere l'immagine della lupa con i gemelli come tema decorativo della propria corazza [my emphasis]"**.

Claudio Parisi Presicce's (200, 28) just-quoted observation that, provided the "Rilievo Terme Vaticano" (here Fig. 31) should indeed represent the *Templum Gentis Flaviae*, "avremmo la testimonianza di un vero e proprio programma di appropriazione da parte di Domiziano del ciclo figurativo relativo alla nascita di Roma", leads us to an observation by Clementina Panella.

**Panella (2009, 290-292) has actually suggested long ago that the Flavian emperors have propagated themselves 'as heirs of the founders of the *Urbs*', Romulus and Remus, and as heirs of the founder of the Principate, Augustus'.**

The following is a quote from *infra*, volume 3-2:

*Appendix VI.; Section XII. Let's now return to our discussion of the "Rilievo Terme Vaticano", which shows Mars and Rhea Silvia and the she-wolf, suckling Romulus and Remus, and thus 'Rome's foundation-story':*

**"Only after having written this down, did I realize the following. Clementina Panella (2009, 290-292) has found in her excavations at the north-east corner of the Palatine the Flavian shrine of the (old) Temple of *Divus Augustus*, built after the original Claudian shrine had been destroyed by fire. In her discussion of this find, Panella suggests something similar as I have done above [in my discussion of the relief here Fig. 31], but with much more confidence.**

The following first paragraph is a quote from *infra*, volume 3-2, *Appendix V.*; at Section *I.*, where this passage is quoted in more detail and discussed in its wider topographical context:

'... the (old) temple of the deified Augustus is also tentatively marked in our map: the small temple at the north-east-corner of the Palatine, excavated by Clementina Panella and her *équipe*, together with the two fountains called *Meta Sudans*.

Cf. here Fig. 73, labels: PALATIUM; META SUDANS [the smaller one is the *Meta* of the Augustan period; the larger one is the Flavian *Meta*]; CURIAE VETERES ?/ SACRARIUM, AEDES DIVI AUGUSTI ?; C; F. Note that Panella found two shrines (both facing east): the Claudian temple ("C"), after being completely destroyed by fire, was in the Flavian period replaced by shrine "F" (to the north of the latter); cf. Panella (2009, 290-291, figs. 4; 5).

**As our lettering on Fig. 73 indicates, it is debated, whether those two temples belonged to the *Curiae veteres*, or should rather be identified with the (old) temple of the deified Augustus'.**

**Panella (2009, 290-292), who in this article identifies the area around the two shrines, which she has excavated, with the *Curiae veteres* - as also Filippo Coarelli (2012, 108) - and the shrine(s) themselves with the (old) temple of the deified Augustus, writes about the motivation of the Flavian emperors, to restore this archaic sanctuary :**

"[page 292] ... I dati che abbiamo raccolto ci hanno portato a collegare tali memorie a Romolo (*Curiae veteres, pomerio*) e ad Augusto (*sacrarium e Meta Sudans*) ... In tale contesto una ricostruzione flavia si inquadra perfettamente nel programma edilizio attuato da questa dinastia, volto a chiudere la parentesi giulio-claudia e a presentare i nuovi imperatori in veste di eredi dei padri fondatori (della città [*i.e.*, Romulus and Remus] e dell'impero [*i.e.*, Augustus]) affidando il messaggio della continuità ai "segni" delle architetture [my emphasis]"

Whereas Domitian, as stated above, thus styled himself 'only' (like Romulus) as the new founder of Rome, and all three Flavian emperors as 'heirs of the founders of Rome, Romulus and Remus, and of the founder of the Principate, Augustus' (as C. PANELLA 2009, 292 writes), Vespasian, in addition to this, proclaimed himself as the founder of a new dynasty. To this we will now turn.

I, therefore, repeat also another passage that was written for a different part of this *Chapter* (cf. *supra*, in Chapter IV.1.1.g):

"Only after this Chapter was written so far, did I learn from Laurent Bricault and Richard Veymiers (2018, 141, with n. 87) that Vespasien issued coins with the legend: *Roma resurge(n)s* (cf. *infra*, in volume 3-2, at *Appendix II.a*) [my emphasis].

The following passage from Bricault and Veymiers (2018, 141, with ns. 85-88) is quoted in more detail *infra*, in volume 3-2, at *Appendix II.a*:

'This *sestertius* ([of Vespasian] cf. here **Fig. 113**) was issued "... probablement en mars ou avril 71 ... **Les trois émissions de bronzes, et notamment de sesterces, pour l'année 71 sont les plus importantes du principat** [*i.e.*, of Vespasian], tout au moins s'agissant de la variété des types de revers employés [with n. 86]. Si certains revers reprennent des types utilisés précédemment par Galba (*Libertas ; Ara Providentiae*), ou s'en inspirent (**La Roma resurge(n)s de Vespasien** répondant à la *Roma renasce(n)s* de Galba) [with n. 87], **d'autres intègrent des types totalement neufs** (*Roma septicolis* [= here **Fig. 112**] ; *Iseum Campense* [= here **Fig. 113**]). **Les thématiques mises en avant dans ce programme numismatique sont claires. Elles traverseront tout le principat. Il est question de victoire** (*Mars Victor ; Victoria Augusti ; Iudaea Capta*), **de paix rétablie et de liberté retrouvée en harmonie avec le Sénat** (*Pax Augusta ; Pax orbis terrarum ; Libertas restituta ; Fortuna redux ; Concordia Senatui ; SPQR adsertori libertatis publicae*), **d'une dynastie nouvelle** (*Titus et Domitianus Caesares ; Principes iuventutis*), **de la résurrection de Rome après l'épisode néronien et la guerre civile** (*Roma resurge(n)s*), **autant de messages annonciateurs d'un nouvel âge d'or** [with n. 88; my emphasis]"

I also anticipate another passage, likewise quoted in more detail *infra*, in volume 3-2, at *Appendix II.a*):

"[Alexander] Heinemann (2018, 237) mentions Vespasian's *sestertius* [cf. here **Fig. 112**], which shows the *Dea Roma* seated on the Seven Hills of Rome, accompanied by the *lupa* with Romulus and Remus and the Tiber:

"In ideologically appropriating the Tiber flood [of AD 69] as a divine admonishment to re-establish order, Vespasian could rely on a precedent both prominent and convenient. In 27 B.C., on the day after Augustus had taken the name we call him by, the Tiber had flooded the Campus Martius, and at the time seers had hastened to proclaim the incident a great and positive portent blessing the recent political events [with n. 108]. **Some confirmation that a similar appropriation actually took place after A.D. 69 may be gleaned from an issue of sestertii** coined shortly after Vespasian's arrival at Rome, bearing the unique image of Roma resting on the seven hills and flanked by the Tiber and the *lupa* with Romulus and Remus [with n. 109] ... In the mythical past, the rising waters had washed the city's founder onto the slopes of the Palatine; in A.D. 69 - so contemporaries could construe it - they had heralded the arrival of Vespasian, the founder of a new dynasty, who was to restore the city to its previous grandeur, rebuild the temple of Jupiter Optimus Maximus and extend the city's pomerium [my emphasis]"

See now also the subtitle of the volume accompanying the exhibition on Domitian at Leiden, edited by Aurora Raimondi Cominesi, Nathalie de Haan, Eric M. Moormann and Claire Stocks (2021): *God on Earth: Emperor Domitian. The re-invention of Rome at the end of the 1<sup>st</sup> century AD* (my emphasis).

See here Fig. 112. *Sestertius*, issued by Vespasian in AD 71, Rome. With the *Dea Roma* on the reverse, seated on Rome's 'seven hills', thus referring to the *Septimontium* festival, which Vespasian had revived. Cf. A. Fraschetti ("Montes", in: *LTUR* III (1996) 285, Fig. 186: "Sesterzio di Vespasiano del 71 d. C. *RIC* II, 69 N. 442"). From: The British Museum. Obverse: IMP CAESAR VESPASIANVS AVG P M T P P P COS III; reverse: S C ROMA; *RIC* 2.1, 108, p. 67: "Roma seated right on the seven hills; to left wolf and twins; to right, River Tiber". © The Trustees of the British Museum.

For further discussion of the coin here Fig. 112; cf. *infra*, in Chapter V.1.i.2.).

*Let's now turn to Eugenio La Rocca's and Lorenzo Kosmopoulos's (2023)  
observations concerning the Templum Gentis Flaviae*

*The erroneous assumption that Domitian had dedicated the temple in the Roman Forum to Divus Vespasianus and to Divus Titus*

Eugenio La Rocca (in: E. LA ROCCA and L. KOSMOPOULOS 2023, 122, 131, 135, 137) takes for granted that the temple, erected in the *Forum Romanum*, was dedicated to *Divus Vespasianus* and to *Divus Titus*. This is certainly not true. I am mentioning this here, because La Rocca builds on this (erroneous) assumption a far reaching hypothesis.

For a discussion of this old, but erroneous hypothesis; cf. below, at *A Study on the colossal portrait of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori at Rome (cf. here Fig. 11) ...*; at Part I. *The statue of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori (cf. here Fig. 11), the inscription (CIL VI 974 = 40524; cf. here Fig. 29.1), and the cult-statue of Divus Vespasianus in the Temple of Divus Vespasianus. With The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great). I anticipate in the following a passage from this Chapter:*

**'But there are [in the Temple of *Divus Vespasianus*], apart from the base of the cult-statue of Vespasian, no traces of a base for a portrait of Titus ... Some late antique sources assert that the temple was later also dedicated to Titus (an assumption that, in theory, could have been caused by the presence of a cult-statue of Titus in the *cella* of this temple). This is, according to Stefano De Angeli (LTUR V [1999] 124), not true:**

"Tramite l'*Itin. Eins.* (IX sec.[olo] d.C.) ci è nota per intero l'iscrizione (CIL VI 938 = ILS 255: DIVO VESPASIANO AVGVSTO SPQR . IMPP . CAESS . SEVERVS ET ANTONINVS PII FELIC AVGG RESTITVER), ora limitata alle sue sole otto lettere finali, che occupava la grande tavola epigrafica della trabeazione, realizzata in occasione del restauro severiano databile tra il 200 e l 205. La chiara ed esclusiva indicazione di Vespasiano mostra che il tempio fu dedicato fin dall'origine, e anche in seguito, solo a quest'ultimo e non fu mai dedicato, o ridedicato, anche al fratello Tito, come, sulla base d alcune fonti tarde e secondarie, che lo vindicano come *templum Vespasiani et Titi* (*Chronogr. a.* 354; *Cur. Reg. VIII:* 115 s. con n. 7 VZ I, non tuttavia la *Not.*, 174 VZ 1) si è spesso ipotizzato o sostenuto (De Angeli [*Templum Divi Vespasiani*, 1992], 160 s.)".

Of the same opinion is Coarelli (2009b, 77-77, with ns. 87-88), who argues with the observation that the extant statue base of the cult-statue of Vespasian could not possibly have accommodated two cult-images.

**For the Temple of *Divus Vespasianus***; cf. Stefano De Angeli (1992; cf. *id.*: "Vespasianus, Divus, Templum", in: *LTUR V* [1999] 124-125, Figs. 69-71; I, 64-65, 129; II, 152; IV, 84, 109) ...'.

**La Rocca (in: E. LA ROCCA and L. KOSMOPOULOS 2023, 122) mentions in the following passage the alleged fact that in the Temple of *Divus Vespasianus* in the Roman Forum was also worshipped *Divus Titus* :**

"In un altro epigramma [of the poet Martial] lo stesso Giove, dall'alto, vedendo i *Flavia templa*, ride confrontandoli con il suo ben più misero - anche se falso - sepolcro sul monte Ida a Creta (*mendacia busti Idaei*), e ironizza con gli altri dei sulla differenza tra i due *monumenta*, e quindi sulla maggiore importanza di essere il padre dell'imperatore [with n. 14]. Sebbene Turcan sia scettico nel riconoscere nell'edificio domiziano il *templum gentis Flaviae* per il collegamento di Giove al solo Vespasiano [with n. 15], al contrario il paragone con il *bustum Idaeum* parla in favore della congettura, visto che il *templum*, da quanto si desume da Svetonio, era adoperato anche come sepolcro della *gens Flavia*. Evidentemente, Vespasiano è menzionato da solo come il capostipite tra i *divi* della *gens*; **d'altronde il tempio affacciato sul foro Romano era dedicato a lui e al figlio Tito, che nell'epigramma non è menzionato** [my emphasis]".

In his **note 14**, La Rocca writes: "Mart. 9, 3, 12 (con qualche dubbio); 9, 34, 1-2, 7-8".

In his **note 15**, he writes: "Turcan 2000, pp. 19-20".

Next, La Rocca (in: E. LA ROCCA and L. KOSMOPOULOS, 2023, 131) asserts that Domitian dedicated the temple in the *Forum Romanum* to both his divinized father and brother, *Divus Vespasianus* and *Divus Titus* :

"Il *templum* (o, come lo chiama Stazio, *sacraria*) *gentis Flaviae* voluto da Domiziano è coerente con la sua visione politica. La sua famiglia non aveva una solida tradizione gentilizia, né aveva capostipiti divini come quella giulio-claudia. Per poter fondare una dinastia imperiale, Domiziano poteva contare sia sul suo costante riferimento a Giove, di cui si presentava come emissario in terra [with n. 53], sia, in primo luogo, sulla divinizzazione del padre e del fratello, ai quali dedicò un tempio unico nel Foro Romano e due piccoli templi affrontati nella *porticus Divorum* in Campo Marzio ... [with n. 54; my emphasis]".

In his **note 53**, La Rocca writes: "Fishwick 2009, pp. 344-347; Escámez De Vera 2016, pp. 5-6, 67-87. Per la monetazione, vd. [vedi] nota 18".

In his **note 54**, he writes: "Habicht 1972, p. 93".

See also Eugenio La Rocca (in: E. LA ROCCA and L. KOSMOPOULOS 2023, 135), where he again repeats the (erroneous) assertion that the temple in the *Forum Romanum* was dedicated to both divinized predecessors of Domitian: *Divus Vespasianus* and *Divus Titus* :

"E. Bickerman aveva pienamente ragione nell'osservare che il *templum gentis Flaviae*, in quanto santuario del culto gentilizio della *gens Flavia*, rientrasse meglio nell'ambito dei *sacra privata*, laddove il tempio di Vespasiano e Tito nel Foro Romano, o i templi degli *imperatores divi* rientravano nell'ambito dei *sacra publica* [with n. 87]. Ma due elementi ostano alla piena ricezione di questa ipotesi: a) la sua definizione di *templum*; b) la sua probabile collocazione all'interno del pomerio [my emphasis]".

In his **note 87**, La Rocca writes: "Bickerman 1972, p. 18".

Finally La Rocca (in: E. LA ROCCA and L. KOSMOPOULOS 2023, 137) writes :

"La presenza attiva dei *sodales Flaviales et Titiales*, documentati fino al 238 d.C., indica che il culto dei primi due imperatori flavii era ancora in vigore nella prima metà del III secolo, ma non necessariamente doveva avere come suo centro il *templum gentis Flaviae*, vista la presenza di un tempio dedicato ai *divi Vespasiano e Tito nel Foro Romano* [my emphasis]".

To La Rocca's (2023, 137) just quoted passage, I should like to add some comments:

What La Rocca (2023, 137) in the just-quoted sentence asserts, is not (quite) true, since we know that *Divus Titus* was not worshipped in the Temple of *Divus Vespasianus* in the Roman Forum.

La Rocca (*op.cit.*) is, of course, right in observing that 'the presence of the *sodales Flaviales et Titiales* is documented until AD 238'. The context, in which we should consider the extraordinary success of this specific imperial cult was Domitian's own precarious situation, and the measures which he took, as so many of his political decisions, turned out to be extremely successful.

As already said above, Rose Mary Sheldon has analysed Domitian's relevant decisions in great detail.

Cf. *supra*, in Chapter *Preamble*, at Section II. *Conclusions: Domitian's representations of his military successes and his claims to be of divine descent and to possess a divine nature*, where Sheldon's observations are quoted and discussed. I, therefore, repeat here one passage of her account *verbatim* :

**'Also Sheldon (2023, in press) addresses Domitian's relationship with the divine, by analysing his promotion of the imperial cult all over the Roman Empire. She suggests that Domitian needed this for his claim to imperial legitimacy. Domitian's promotion of the imperial cult explains at the same time his bad relationship with the Senat.**

Rose Mary Sheldon (*Guarding the Caesars. Roman Internal Security under the Flavian Dynasty*, 2023, in press; Chapter 7; Section: "Imperial Cult") writes:

**"Scott believed that Domitian was responsible for the establishment of the Flavian cult throughout the Roman world, and that worship was kept going until the close of the second century in spite of the fact that Domitian suffered *damnatio memoriae*. [with n. 104; my emphasis] The Flavian *gens* had its own temple in Rome and its own cult with priests to observe worship. There is considerable epigraphic evidence for the activities of the priests of the Flavian cult. [with n. 105]"**.

In her **note 104**, Sheldon writes: "The cult included most members of the Flavian *gens* including *Diva Domitilla* Vespasian's daughter: *ILS* 6692 and Julia: *ILS* 6487".

In her **note 105**, she writes: "Epigraphical evidence from the empire: Scott (1936), 79-82. The very abundance of inscriptions causes problems with terminology. There were *sodales Flaviales*, *sodales Flaviales Titiales* and *seviri Flaviales*. It is not known whether these represented successive amalgamations of the college of priests as first Vespasian and then Titus were deified or whether they were different colleges all observing worship at the same time".

***The Templum Gentis Flaviae is still mentioned in late antique sources; and considerations, why Domitian may have erected this building***

Next, La Rocca (in: LA ROCCA and L. KOSMOPOULO 2023, 123-124) analyses the late antique sources which prove that the *Templum Genis Flaviae* still existed at that time.

He suggests (on p. 124) that, still in the 4<sup>th</sup> century AD, near the site of the former *Templum Gentis Flaviae*, the cult of the *gens Flavia* may still have been performed, and adds to this a suggestion, when Domitian may have erected his *Templum Gentis Flaviae* :

**"Evidentemente, nel nevralgico momento, in cui Costantino introduceva il cristianesimo come religione di Stato, era ancora contemplata una sorte di celebrazione della famiglia imperiale che, sebbene fosse assai limitatamente conforme agli schemi della tradizione, consentiva tuttavia la nomina di *pontifices* a questo scopo. Entro questa cornice, la possibilità che a Roma, nel IV secolo, si conservasse ancora un luogo di culto, ancorché ridotto, della *gens Flavia* nelle vicinanze dell'antico *templum* non è affatto da respingere, anche se ci dovrebbe domandare cosa fosse avvenuto nei decenni anteriori alla presa del potere di Costantino, nel periodo in cui il culto dei primi imperatori risulta in buona parte archiviato [with n. 27]"**.

**To La Rocca's (2023, 124) just-quoted last sentence, I should like to add a comment :**

We shall see below that La Rocca (2023, 124) reminds us also of the fact that Constantine the Great has actually 'adopted himself' and his sons into the Flavian dynasty. Elsewhere (2023, 137), La Rocca states that it is so far unknown, when the *Templum Gentis Flaviae* has been destroyed. Adding to that information La

Rocca's (2023, 124) just-quoted remark: "ci dovrebbe domandare cosa fosse avvenuto nei decenni anteriori alla presa del potere di Costantino", I can only agree with La Rocca's (2023, 124) following statement:

**"Entro questa cornice, la possibilità che a Roma, nel IV secolo, si conservasse ancora un luogo di culto, ancorché ridotto, della gens Flavia nelle vicinanze dell'antico *templum* non è affatto da respingere".**

**But with one important difference: contrary to La Rocca (2023, 124), I believe that nothing speaks against the assumption that the cult of the gens Flavia was still performed at the *Templum Gentis Flaviae* itself.**

**This has also been suggested by Filippo Coarelli (2014, 204-205, quoted *verbatim supra*; and already in: *LTUR* II [1995] 368, quoted *verbatim infra*), whom I am following here; and, as we shall see below, likewise by Maria Cristina Capanna (2008, 178).**

To La Rocca's (2023, 124) further remark: "ci dovrebbe domandare cosa fosse avvenuto nei decenni anteriori alle prese del potere di Costantino", I will come back below.

**Earlier on the same page, La Rocca (in: E. LA ROCCA and L. KOSMOPOULOS 2023, 124) has explained how Constantine the Great had 'adopted himself' and his sons into the Flavian dynasty: "... perché Costantino e i suoi figli si erano creati una fittizia discendenza dagli imperatori flavii per il tramite di Claudio il Gotico [with n. 24; my emphasis]".**

We shall learn below that already Septimius Severus, for exactly the same reasons, had 'adopted himself' into the Antonine dynasty.

Cf. *infra*, in Chapter V.1.b) *The Cancellaria Reliefs under Nerva - as reconstructed by S. Langer and M. Pfanner (2018) and my own comments on their conclusions. With some remarks on the efforts of Septimius Severus to legitimize his reign.*

**In the case of Constantine, the period in question, namely La Rocca's (2023, 124) "decenni anteriori alle prese del potere di Costantino", has recently been studied in great detail by Oliver Schmitt :**

Cf. Schmitt (*Constantin der Große (275 337) Leben und Herrschaft*, 2007, 84-94: "Kapitel 3. Von Naissus nach Nikomedia: Constantins Familie, Jugend und beruflicher Werdegang"; cf. pp. 95-170: "Kapitel 4. Jeder gegen jeden: Der Zusammenbruch des diocletianischen Herrschaftssystems"; cf. pp. 171-213: "Kapitel 5. Es kann nur einen geben: Constantin, Licinius und der Kampf um die Alleinherrschaft").

For discussions of Oliver Schmitt's observations, and further for Constantine the Great: cf. below, at *A Study on the colossal portrait of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori at Rome (cf. here Fig. 11) ...*; at Part I. *The statue of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori (cf. here Fig. 11), the inscription (CIL VI 974 = 40524; cf. here Fig. 29.1), and the cult-statue of Divus Vespasianus in the Temple of Divus Vespasianus. With The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great); and at Part II. *Ancient Rome's new commercial river port, at La Marmorata. With discussions of the 'Porticus Aemilia' (in reality identifiable as Navalìa) and of the Horrea Aemiliana. With The sixth Contribution by Peter Herz : Rom. Strukturen der Versorgung; and with The second Contribution by Franz Xaver Schütz : Wie schwer war der ägyptische Obelisk, der heute auf der Piazza di S. Giovanni in Laterano in Rom steht?**

**And concerning "Claudio il Gotico", mentioned by La Rocca (2023, 124) in the just-quoted passage, I anticipate in the following a passage, written for another Chapter.**

See below, at *A Study on Domitian's cult-statue of Iuppiter Optimus Maximus Capitolinus (cf. here Fig. 10); at Part II. The Capitoline Triad in statuette format at Guidonia Montecelio (Roma), Museo Civico Archeologico 'Rodolfo Lanciani' (cf. here Fig. 13) and the colossal statue of Jupiter at the Hermitage (cf. here Fig. 10) :*

“As far as I know, a cult-statue of a temple was in antiquity *a*) only restored, when the original sculpture had been destroyed, and *b*) in the case of the *Templum Gentis Flaviae* we are not informed by our literary sources or any other evidence that one or all of its original cult-statue(s) had been replaced at a later stage. **What we do hear is that under Claudius Gothicus, who was Roman emperor in AD 268-270, the *Templum Gentis Flaviae* seems to have been restored. See Filippo Coarelli (“Gens Flavia, Templum”, in: *LTUR* II [1995] 368), who writes: “Sembra che un restauro [of the *Templum Gentis Flaviae*] si debba a Claudio il Gotico (*Hist. Aug. Claud.* 3.6; cfr. *trig. tyr.* 33.6: *extat etiam domus pulcherrima (Censorini), adiuncta Gentibus Flaviis, quae quondam Titi principis fuisse perhibentur*). Il tempio esisteva ancora nel IV sec.[olo], dal momeno che è citato dai Cataloghi Regionari (*Reg. VI*) ... [my emphasis]”**

**Also in my opinion, the literary sources, quoted by Coarelli (*op. cit.*) prove that the *Templum Gentis Flaviae* still existed at this late time.** For Claudius Gothicus; cf. John Frederic Dobson (“Claudius [RE 82] [II] Gothicus, Marcus Aurelius, emperor AD 268-70”, in: *OCD*<sup>3</sup> [1996] 340 [my emphasis])’.

**Immediately after the above-quoted passage, La Rocca (in: E. LA ROCCA and L. KOSMOPOULOS 2023, 124) suggests when the *Templum Gentis Flaviae* may have been completed :**

**“In quanto alla cronologia del monumento voluto da Domiziano, una datazione *ante quem* per il suo completamento è offerta proprio dalla morte dell'imperatore, il 18 settembre 96 d.C., perché le sue ceneri furono mescolate dalla sua nutrice Filide con quelle della nipote Giulia, la figlia di Tito, morta intorno all'89 d.C. Comunque, già al momento della redazione del IX libro degli *Epigrammi* di Marziale (completato verosimilmente tra la fine del 94 e i primi mesi del 95, ma con alcune composizioni scritte anche nel 93 d.C.) [with n. 28] e del V libro delle *Silvae* di Stazio [with n. 29], che tuttavia fu pubblicato postumo, qualche tempo dopo il 96, l'edificio doveva essere già costruito e in piena funzione. Si potrebbe immaginare che l'idea di un *templum* - o *sacraria* - dedicato alla sua *gens* sia venuto a mente a Domiziano dopo la morte di Giulia, e quindi che i lavori di costruzione fossero iniziati qualche tempo dopo l'89 [my emphasis]”.**

In his **note 24**, La Rocca writes: “Van Dam 2007, pp. 88-102, 115-118. Paschoud 2011, pp. 262, 283”.

In his **note 27**, he writes: “Vd. [vedi] *infra*, pp. 131-138”.

In his **note 28**, he writes: “Friedländer 1886, pp. 61-62; Gsell 1894, p. 114; Friedlander [*corr.*: Friedländer] 1910, pp. 100 ss.; Friedlander [*corr.*: Friedländer] 1921, pp. 290 ss.; Heraeus 1925, p. LXVIII; Sullivan 1991, pp. 42 ss.; Leberl 2004, p. 301”.

In his **note 29**, he writes: “Come ho detto, non credo che le poesie del IV libro abbiano riferimenti specifici al *templum gentis Flaviae*. Comunque il IV libro è stato pubblicato nell'estate del 95: Frère 1961<sup>2</sup>, p. XXI”.

**Let's now turn to Lorenzo Kosmopoulos's observations concerning the *Templum Gentis Flaviae*, one part of the first passage is also quoted *infra*, in volume 3-2, in *Appendix VI*; at Section *XII*. (cf. *id.*, in: E. LA ROCCA and L. KOSMOPOULOS 2023, 127) :**

**“Come ha recentemente osservato P. Sommella [2022], nell'ipotizzare la presenza di un simile ingombro all'interno del recinto delle terme, come si osserva piuttosto bene in una pianta generale in cui è stata inserita la proposta di ricostruzione del *templum gentis Flaviae* dovuta a Filippo Coarelli (fig. 2 [= here Fig. 56a]), non si sono neppure tenuti in considerazione i modi di allestimento dei ponteggi esterni, dello spostamento delle macchine costruttive e dei carri che trasportavano i materiali edilizi per erigere strutture con altezze di circa 35 metri, tanto più in quanto, con la presenza in situ del *templum*, sarebbero venuti a mancare gli spazi necessari per la circolazione dei mezzi di trasporto intorno al compatto nucleo centrale delle terme. La scelta di realizzare un complesso termale con un “ostacolo” così monumentale per la stessa fruibilità delle terme risulterebbe del tutto anomala, e comunque priva di qualunque confronto [with n. 39].**

**Il dibattito sul monumento coinvolge in particolare il suo aspetto originario. Ferma restando che i resti archeologici devono porsi come linee guida della ricerca, al momento la struttura in cementizio superstite del podio, rinvenuta solo parzialmente, non è utile a presupporre né una forma rettangolare, che resta comunque la più logica, né una forma circolare del monumento [with n. 40, with references and further discussion; my emphasis]". - See also Kosmopoulos's further discussion of this point (cf. *id.* 2023, 129).**

In his **note 39**, Kosmopoulos writes: "Non è sufficiente correlare la conservazione della struttura [*i.e.*, the *Templum Gentis Flaviae*] con la "rievocazione" della *gens Flavia* avvenuta in epoca tardoantica, **senza considerare che, in tal senso, avrebbe avuto più senso spostare la costruzione del complesso termale più a nord-est** [my emphasis]".

**To Kosmopoulos's (2023, 127) just-quoted passage, I should like to add some comments.**

Also after reading now myself the account by Paolo Sommella (2022), to which Lorenzo Kosmopoulos (*op.cit.*) has alerted me, I maintain my above-mentioned judgement: I believe that nothing speaks against the assumption that the cult of the *gens Flavia* was still performed until the 4<sup>th</sup> century at the *Templum Gentis Flaviae* itself. I follow with this assumption Filippo Coarelli ("Gens Flavia, Templum", in: *LTUR* II [1995] 368; and *id.* 2014, 204-205, both quoted *verbatim supra*).

Also to Kosmopoulos (2023, 127, n. 39) just-quoted footnote, I should like to add a comment.

**I have, therefore, added Kosmopoulos's plan (his Fig. 2 [= here Fig. 56a]) to my already existing Fig. 56. Cf. Fig. 56. Archaeological plan of the area of the Baths of Diocletian. Cf. C. Pietrangeli 1977, tav. 2 (drawing: C. Buzzetti and E. Gatti). From: E. La Rocca (2020b, Fig. 8): "1. Area dove era ubicato il *templum gentis Flaviae*; 2. Il luogo dove è stata rinvenuta la testa colossale di Tito [cf. here Fig. 53]; 3. Edificio in laterizio dove è stato rinvenuto il mosaico con tiaso marino e le tre Grazie; 4. Il luogo dove sono stati rinvenuti i rilievi Hartwig [for those; cf. *infra*, at Chapter V.1.i.3.a), and here Figs. 33; 34]".**

**Fig. 56a. The same archaeological plan, with additions by L. Kosmopoulos. Cf. Kosmopoulos (in: E. LA ROCCA and L. KOSMOPOULOS 2023, 126, Fig. 29). The caption reads: "L'area occupata dal *templum gentis Flaviae* (in rosso), secondo l'ipotesi ricostruttiva del podio di Filippo Coarelli, nell'ambito delle terme di Diocleziano. 2: luogo in cui è stata trovata la testa colossale di Tito [cf. here Fig. 53]; 3: ambiente absidato con il mosaico marino (elaborazione di L. Kosmopoulos su disegno di Carlo Buzzetti, e con aggiunte da Coarelli 2014a, fig. 52 e da La Rocca 2021, fig. 8)".**

Looking at the illustrations here Figs. 56; 56a, the ground-plan of the Baths of Diocletian, as we know it, could not possibly have been 'moved' from its current location 'more to the north-east', as Kosmopoulos (2023, 127, n. 39) nevertheless suggests: "che, in tal senso, avrebbe avuto più senso spostare la costruzione del complesso termale più a nord-est".

And that for the following reason: as Kosmopoulos's own plan (here **Fig. 56a**) indicates, 'moving the Baths of Diocletian to the north-east' would have resulted in the destruction of the "AGGER".

A '3D'-reconstruction of the entire area could certainly illustrate this point much better than the plans here **Figs. 56; 56a**. The *Agger* was not only huge and very high, it served also as an important recreation area for the People of Rome; cf. T.P. Wiseman ("A stroll on the rampart", 1998a); although it is so far unknown, whether or not that was still true in the time of Diocletian. See also Maddalena Andreussi ("Murus Servii Tullii"; Mura Republicane", in: *LTUR* III [1996] 319-324, Figs. I 67; 209-211).

In my opinion, Kosmopoulos (*op.cit.*) is right in basing his relevant reasoning on the tacit assumption that, of course, also Diocletian intended to build his 'third *Kaiserthermen*' on at least the same grandiose scale as the

two already existing 'Kaiserthermen': the Baths of Trajan (that had already been planned and begun by Domitian; cf. below, in Chapter *The major results of this book on Domitian*; and *infra*, in volume 3-2, at *Appendix IV.d.4.c*)), and the Baths of Caracalla.

Which means that Diocletian, in order to avoid the 'obstacle' of the *Templum Gentis Flaviae* 'within his Baths' did not even consider the obvious alternative : to erect much smaller baths at this site, to the east of the pre-existing *Templum Gentis Flaviae* (!).

***Architectural marbles, that possibly belonged to the Templum Gentis Flaviae, which have been integrated into the decoration of the Baths of Diocletian***

**Lorenzo Kosmopoulos** (in: E. LA ROCCA and L. KOSMOPOULOS 2023, 129, with "Fig. 5. Terme di Diocleziano, mensola decorata con la raffigurazione di un'aquila ...") **then turns to architectural marbles, which he tentatively attributes to the Templum Gentis Flaviae: "Un'altra considerazione deve essere riservata alle grandi mensole con aquile che stringono fulmini con gli artigli, impiegate nella natatio delle terme di Diocleziano [with n. 49] (fig. 5)".**

Because those architectural marbles have been integrated into the decoration of the *natatio* of the Baths of Diocletian, Kosmopoulos (2023, 130) concludes: **"il loro riutilizzo dimostrerebbe la distruzione del templum forse proprio in occasione della costruzione delle terme [with n. 50; my emphasis]"**.

In his **note 49**, Kosmopoulos writes: "Candilio 1993, pp. 39-41, figg. 19-21. Si segnalano a tal proposito come confronto le cornici con mensole decorate con aquile, reimpiegate nell'arco di Costantino e riferite stilisticamente all'età domiziana (Pensabene 1999, pp. 26-28, 40). **Inoltre, deve essere menzionata la presenza di sei blocchi di ulteriori cornici mensolate con aquile** che stringono fulmini con gli artigli, **conservate alle terme di Diocleziano (MNR I, 8, 1, pp. 88-92, n. II, 17 [B. Pettinau]) (qui fig. 6)**. Anche in questo caso le cornici mostrano motivi ornamentali e lavorazioni contestualizzabili in epoca tardo-flavia, come dimostrato dai fedeli confronti avanzati con il Foro di Nerva e il Foro di Cesare ricostruito in età traiana (Leon 1971, p. 126). **Il loro rinvenimento a Roma "presso Piazza Indipendenza" potrebbe suggerire una loro originaria collocazione proprio nel templum gentis Flaviae, prima di essere riutilizzati in un monumento tardo-antico (le limitrofe terme di Diocleziano?): Carandini, Carafa 2012, p. 460 [M. C. Capanna; my emphasis]"**.

In his **note 50**, he writes: "Il profilo rettilineo delle mensole [*i.e.*, their Figs. 5; 6], ritenuto non idoneo per l'inserimento in un edificio circolare (Tartaro 2017, p. 35), in realtà non è un elemento che può essere preso in considerazione, soprattutto per le rilavorazioni diocleziane attestata in seguito al riutilizzo dei frammenti (Magnani Cianetti 2014, p. 365)".

**Also La Rocca (in: E. La ROCCA and L. KOSMOPOULOS, 134) mentions those architectural marbles :**

"... mentre la sovrabbondante presenza di aquile [on the relief from the Tomb of the Haterii; cf. their Fig. 4] potrebbe riferirsi a una sorta di *ascensio ad astra*, secondo schemi ben presenti nelle rappresentazioni di apoteosi imperiali, **forse documentata anche nel templum gentis Flaviae, qualora si possano attribuire all'edificio le mensole con aquile riadoperate probabilmente nella natatio delle terme di Diocleziano e quelle rinvenute in piazza dell'Indipendenza** [with n. 75: "Vd. [vedi] nota 49 (figg. 5-6) [my emphasis]"

**As likewise quoted below (cf. *infra*, in volume 3-2, in *Appendix VI.*; at Section XII.), Lorenzo Kosmopoulos has most recently discussed the various interpretations of the building, visible on Domitian's *sestertius* (here Fig. 30). Finally, Kosmopoulos addresses the question, whether or not Domitian had commissioned his obelisk (here Fig. 28) for his *Templum Gentis Flaviae*.**

Cf. Kosmopoulos (in: E. LA ROCCA and L. KOSMOPOULOS 2023, 130-131): "E se resta ancora in sospeso l'interpretazione dell'immagine su un sestertio domiziano di cui sono conosciuti solo tre esemplari (fig. 7 [= here Fig. 30]), ma che, per la presenza di recinti chiusi, non risponde bene allo schema degli edifici templari entro porticati, solitamente raffigurati su monete con la corte aperta [with n. 51; page 131] l'ipotesi di Mario Torelli, poi ripresa da Rita Paris, non può essere esclusa *a priori* esclusivamente sulla base di una presunta ricostruzione circolare dell'edificio [my emphasis]."

Per quanto riguarda l'obelisco panfilio di piazza Navona, benché possa essere effettivamente suggerita una sua originaria collocazione nel *templum gentis Flaviae* [with n. 52], la sua nuova sistemazione lungo la spina del circo affiancato al mausoleo di Romolo, il figlio di Massenzio, lungo la via Appia, non è argomento che permetta di desumerne l'originario utilizzo domiziano. Malgrado la correlazione tra circo e mausoleo, l'obelisco nella sua nuova sede svolgeva ormai una funzione differente rispetto a quella, presumibile, davanti alla fronte del *templum*, se fosse stata emulata la soluzione adottata per i due obelischi collocati all'ingresso del mausoleo di Augusto [my emphasis]."

Also Eugenio La Rocca (in: E. LA ROCCA and L. KOSMOPOULOS 2023, 138; cf. *infra*) considers the possibility that Domitian's obelisk (here Fig. 28) could have belonged to the *Templum Gentis Flaviae*.

In his note 51, Kosmopoulos writes: "Torelli 1987, pp. 564-567; Paris 1988 [corr.: 1994b], pp. 26-31, fig. 14; Candilio 1990-1991, pp. 179-181; *contra*: Coarelli 2009b, pp. 85, 94; Coarelli 2012, p. 474. Da ultimo sulle varie interpretazioni della moneta vd. [vedi] Restaino 2021, p. 216, nota 117; Sommella 2022, pp. 261-262".

In his note 52, he writes: "Grenier 1999; Grenier 2009, p. 238".

**As we have just seen, Kosmopoulos (2023, 131) believes that Domitian's obelisk (here Fig. 28) may indeed originally have been erected at his *Templum Gentis Flaviae*. Together with the Egyptologist Emanuele M. Ciampini, I myself hope to have demonstrated in this *Study*, that Domitian had instead commissioned his obelisk for his newly restored Iseum Campense.**

Already in my earlier discussion of this subject (2017, 153-167, where, on pp. 160-163, I have in part argued exactly like L. KOSMOPOULOS 2023, 131; summarized *supra*, in Chapter IV.1.1.a); and in this Chapter IV.1.1.h)), I have come to the conclusion that Domitian had not commissioned his obelisk (here Fig. 28) for his *Templum Gentis Flaviae*, but instead for his Iseum Campense, which the emperor had restored after the sanctuary's destruction in the great fire of AD 80.

For discussions of the relevant research of the Egyptologist Emanuele M. Ciampini and myself; cf. *supra*, in this Chapter IV.1; IV.1.1; IV.1.1.a)-IV.1.1.d); and IV.1.1.h); and below, at *The first Contribution by Emanuele M. Ciampini: La regalità domiziana: una nota egittologica*.

**At the very end of his article, Eugenio La Rocca (in: E. LA ROCCA and L. KOSMOPOULOS 2023, 138), after having discussed the problems, which, in his opinion, are connected with the *Templum Gentis Flaviae*, comes to the following conclusions :**

"Sono alcune delle tante contraddizioni che interessano questo monumento indecifrabile [*i.e.*, the *Templum Gentis Flaviae*] ... Si può solo affermare, a conclusione, che le vicende del complesso domiziano non possano essere discusse se non restando nel campo delle ipotesi. È evidente che si è davanti a "un'aporia archeologica" - e il *templum gentis Flaviae* ne rappresenta forse uno dei casi più controversi -, in quanto non tutte le analisi e le proposte di ricostruzione finora suggerite conducono verso una soluzione definitiva, e tantomeno univoca [my emphasis]."

**Contrary to La Rocca's (2023, 138) just quoted opinion, I do not believe that the *Templum Gentis Flaviae* is a "monumento indecifrabile", nor that this is a case of "un'aporia archeologica".**

I rather believe that La Rocca's (2023, 138) final conclusion is the result of two wrong, as well as of one further assumption, that seems at first glance to be unfounded:

a) Already in his earlier article, La Rocca (2020b) had declared that he regards Domitian's idea to combine in his *Templum Gentis Flaviae* a temple, dedicated to the divinized members of his family, with the family tomb, as a concept that, 'under normal circumstances', would have been prohibited by Roman sacred law. Also La Rocca (2023, 135) explicitly asserts that the meaning of the term *templum* was "codificato"; and on p. 136, he mentions "il sistema religioso romano". - In reality, all this is not true;

b) The temple in the *Forum Romanum*, begun by the Emperor Titus and finished by the Emperor Domitian, was only dedicated to *Divus Vespasianus*, and not, in addition to this, to *Divus Titus*, as erroneously asserted by La Rocca;

c) The marble *mensole*, discussed by La Rocca and Kosmopoulos (2023, their Figs. 5; 6), with representations of an eagle, should be tested (but see below). I do not know those architectural marbles from autopsy.

These *mensole* were, according to La Rocca (2023, 134), probably integrated as *spolia* "nella *natatio* delle terme di Diocleziano", whereas other copies were "rinvenute in piazza dell'Indipendenza". In my opinion, only provided those *mensole* were carved in Pentelic marble, we should then consider the possibility that they may have belonged to the *Templum Gentis Flaviae*;

ad a): La Rocca repeats in his article of 2023 the same judgements concerning this subject as in his earlier article (of 2020b, 367-369, with ns. 8, 9), quoted *verbatim* and discussed above, in this Chapter IV.1.1.h).

When first reading La Rocca's (2020b) earlier article, I had asked the religious historian Jörg Rüpke for advice, who was kind enough as to answer my relevant questions on 22nd October 2021; he has also allowed me to publish here his E-mail as his second *Contribution* to this volume.

See below, at *The second Contribution by Jörg Rüpke: Tempel-Gräber*, who writes: "... **Ich selbst habe kürzlich in einem Aufsatz** (Jörg Rüpke, "Gifts, votives, and sacred things: Strategies, not entities", *Religion in the Roman Empire* 4.2, 2018, 207-236) **darauf aufmerksam gemacht, dass wir viele religiöse Begriffe missverstehen, wenn wir sie als abschließend definierte Termini eines kohärenten Sakralrechts interpretieren. Dieses existiert ebenso wenig wie Mommsens Staatsrecht** [my emphasis]".

Reading this passage from Rüpke's second *Contribution*, we can, therefore, deduce that La Rocca's (2023) problems with Domitian's concept of his *Templum Gentis Flaviae* are based on some erroneous assumptions.

According to La Rocca (2023, 136), Domitian's creation of his *Templum Gentis Flaviae* may in every respect be regarded as an "*unicum*". - As we shall see in a minute, also this is not (quite) true.

The *Templum Gentis Flaviae* stood at the site of the *domus* of Domitian's father Vespasian, where Domitian was born. This *domus* stood, of course, within the *pomerium* of Rome, because otherwise this property would not have been referred to as Vespasian's '*domus*'.

To explain Domitian's relevant choices, I repeat in the following the ideas of my late friend Amanda Claridge, which were in detail explained above, in this Chapter IV.1.1.h).

**Amanda Claridge, with whom I discussed this subject in a telephone conversation on 7th September 2021, had an excellent idea which she kindly shared with me: such 'temple tombs', as the one within Domitian's *Templum Gentis Flaviae*, are by no means without precedent, since founders were usually honoured this way: 'and the Flavians were founders too', Amanda added. Amanda Claridge was kind enough to write me by E-mail of 25th September 2021 that I may mention here our relevant conversation.**

The Flavians were not only founders, as Amanda had reminded me, we know also that both Vespasian and Domitian had been eager to propagate these facts themselves. All this has, therefore, been documented in detail above, in this Chapter IV.1.1.h).

As already said there: **Whereas Domitian, as stated above, thus styled himself 'only' (like Romulus) as the new founder of Rome, and all three Flavian emperors as 'heirs of the founders of Rome, Romulus and Remus, and as heirs of the founder of the Principate, Augustus' (as C. PANELLA 2009, 292 writes), Vespasian, in addition to this, proclaimed himself as the founder of a new dynasty.**

To create an 'heroon' of this kind at or next to the house and tomb (!) of such a founder (as Vespasian was), was indeed typical, as also mentioned to me by Amanda Claridge; cf. the examples, likewise mentioned above in this Chapter IV.1.1.h).

Admittedly, those *historical* examples belong to the remote past - possibly not by chance this choice of Domitian has similarities with his other decision, namely to compare himself with the *mythical* founder of Rome, Romulus.

Consequently, La Rocca's (2023, 136) statement, that Domitian's concept of his *Templum Gentis Flaviae* was an "*unicum*", is, in a certain sense even true: namely when we consider as comparisons *only* buildings, as La Rocca does, which were erected in Domitian's own time, the imperial period;

ad b): Because we know that *Divus Titus* was *not* worshipped together with *Divus Vespasianus* in the Temple of *Divus Vespasianus* in the *Forum Romanum*; and that the cult of the Flavians was kept going until (at least) the first half of the 3<sup>rd</sup> century AD, the old assumption that *Divus Titus* (and *Divus Vespasianus*) were worshipped in the *Templum Gentis Flaviae*, is sound.

**The second part of La Rocca's relevant hypothesis (2023, 137), in which he asserts that the cult of *Divus Vespasianus* and *Divus Titus* was not necessarily performed until AD 238 at the *Templum Gentis Flaviae*, can, therefore be refuted :**

"La presenza attiva dei *sodales Flaviales et Titiales*, documentati fino al 238 d.C., indica che il culto dei primi due imperatori flavii era ancora in vigore nella prima metà del III secolo, **ma non necessariamente doveva avere come suo centro il *templum gentis Flaviae*, vista la presenza di un tempio dedicato ai divi Vespasiano e Tito nel Foro Romano** [my emphasis]";

ad c): Lorenzo Kosmopoulos and Eugenio La Rocca (2023, 129-130, 134, their Figs. 5; 6, quoted *verbatim supra*) have added to the discussion on the *Templum Gentis Flaviae* these "cornici mensolate con aquile" (L. KOSMOPOULOS), some of which were possibly integrated as *spolia* (cf. their Fig. 5) into the decoration of the *natatio* of the Baths of Diocletian.

Kosmopoulos (2023, 129 n. 49) writes: "Inoltre, deve essere menzionata la presenza di sei blocchi di ulteriori cornici mensolate con aquile ... (qui fig. 6) ... **Il loro rinvenimento a Roma ``presso Piazza Indipendenza`` potrebbe suggerire una loro originaria collocazione proprio nel *templum gentis Flaviae*, prima di essere riutilizzati in un monumento tardo-antico (le limitrofe terme di Diocleziano?): Carandini, Carafa 2012, p. 460 [M. C. Capanna]; my emphasis**".

Note that neither La Rocca or Kosmopoulos in their joint essay (2023) discuss the article by Maria Cristina Capanna (2008), to which I will come back below.

**Pursuing this suggestion of Maria Cristina Capanna (2012, 460) further, Kosmopoulos and La Rocca (*op.cit.*) now argue that, provided, these architectural marbles had indeed been part of the *Templum Gentis Flaviae*, this would strongly support the (old) hypothesis, according to which the *Templum Gentis Flaviae* had been destroyed, when the Baths of Diocletian were being built. So for example Daniela Candilio (in: *LTUR* V [1999] 53).**

Note that Kosmopoulos and La Rocca suggest this, although the *Templum Gentis Flaviae* is still mentioned in the Constantinian Regionary Catalogues (!). - But see below.

Note also that the Baths of Diocletian were begun in AD 298 by Maximian, the father of Maxentius (and the father-in-law of Constantine the Great !), whereas the arrival of the Lateran Obelisk (here **Fig. 101**) in Rome in AD 357 provides a *terminus post quem* for the composition of the Constantinian Regionary Catalogues, in which this obelisk is mentioned (cf. *infra*, in volume 3-2, in *Appendix VI.*; at Section VII.).

For the date of the Baths of Diocletian, I repeat in the following a passage, written in Häuber (2017, 161) :

"Cf. R.P. Davis: "**Maximian (Marcus Aurelius Valerius Maximianus (RE 1) Born c.[irca] 250, the son of shopkeepers near Sirmium, he rose through the ranks of the army. An excellent general, he was called by his old comrade-in-arms Diocletian to assist him as his Caesar (21 July 285), with responsibility for Italy, Africa, Spain, Gaul, and Britain ... After fighting in Spain in autumn 296, Maximian crossed to Africa to deal with a revolt by the Quinquegentanei and other Mauretanian tribes; c.[irca] 299 he entered Rome in triumph, and there he began the building of the baths of Diocletian ...**", in: *OCD*<sup>3</sup> (1996) 940-941 [my emphasis]".

Daniela Candilio writes instead that, according to the "iscrizione dedicatoria" (*CIL* VI 1130 = 31242), Maximian had already started building the Baths of Diocletian in AD 298; cf. *LTUR* (V [1999] 53).

**Kosmopoulos writes about these achitectural marbles (2023, 130; their Figs. 5; 6): "il loro riutilizzo dimostrerebbe la distruzione del *templum* forse proprio in occasione della costruzione delle terme [my emphasis]"; and La Rocca (2023, 138) concludes: "La demolizione del corpo principale [*i.e.*, the temple tomb proper within the *Templum Gentis Flaviae*] potrebbe essere comprovata dalle mensole con aquile riadoperate nelle terme, la cui misura è consona a un imponente edificio templare (fig. 5) [my emphasis]".**

**But note that the so far known architectural fragments, that have convincingly been attributed to the *Templum Gentis Flaviae*, are all carved in Pentelic marble; cf. Rita Paris (1994b, 75, quoted *verbatim infra*).**

In my opinion, it would, therefore, have been advisable to ask the responsables of the Museo Nazionale Romano to test the marble of those architectural fragments, which La Rocca and Kosmopoulos have discussed in their article (of 2023; their Figs. 5; 6), before building on this idea such a far reaching hypothesis (but see below).

Cf. *infra*, at Chapter V.1.i.3.a) The reconstruction by R. Paris (1994b) of two of the marble reliefs of the *Templum Gentis Flaviae*: '*Vespasian's adventus into Rome in October of AD 70*' (cf. here **Fig. 33**), and '*Sacrifice in front of the Temple of Quirinus on the Quirinal*' (cf. here **Fig. 34**).

In the following, I, therefore, anticipate a passage from Chapter V.1.i.3.a):

**"Of the *Templum Gentis Flaviae* ... only some Domitianic structures have been found in excavations within the Baths of Diocletian on the Quirinal/ the Museo Nazionale Romano, few architectural fragments, as well as fragments of at least three reliefs, all carved in Pentelic marble ... The head of the colossal acrolithic cult-statue of *Divus Titus* (here **Fig. 53**) has likewise been identified; but so far the marble of this head has not been tested.**

Paris (1994b, 75) explains, why the fragments, which are now distributed in two different museums [*i.e.*, the Museo Nazionale Romano at Rome and the Kelsey Museum of Archaeology at Ann Arbor], belong together, and from which material they were carved : "... **i frammenti dovevano appartenere ad un complesso di committenza imperiale, come attestano il raffinatissimo livello di lavorazione e l'uso del pregiato marmo pentelico, impiegato, in età flavia, anche per l'Arco di Tito, per il restauro domiziano del Tempio di Giove Ottimo Massimo e per il Tempio del divo Vespasiano ... I frammenti non sono ricomponibili tra loro, ad eccezione del torso loricato di Ann Arbor con la testa di soldato di Roma [see the colour photograph on the cover of this catalogue, R. PARIS 1994a, in which both fragments are joined, and here **Fig. 33**; my emphasis]"**".

The architectural fragments from the *Templum Gentis Flaviae*, both those kept at Rome and at Ann Arbor, have been discussed by Rita Paris (1994b) and Elaine Gazda (1994) in the exhibition-catalogue 'Dono Hartwig', edited Rita Paris (1994a). **All those fragments were again on display in the exhibition 'Divus Vespasianus'; cf. the catalogue of this exhibition, edited by Filippo Coarelli (2009a).**

See in this catalogue Rita Paris (2009, 462-466, cat. nos. 52-59; p. 468, cat. nos. 62; 63), and Elaine Gazda (2009, 466, cat. no. 60; p. 467, cat. no. 61, and p. 469, cat. no. 64). **In all those 13 catalogue-entries the marble of those architectural fragments is defined as being carved in "marmo pentelico".**

In the recent exhibition *Domiziano Imperatore. Odio e amore* in Rome some of the fragments of the 'Dono Hartwig', kept at the Museo Nazionale Romano, have again been on display. Claudio Parisi Presicce, Massimiliano Munzi and Maria Paola Del Moro (2023, 12) mention in the pertaining catalogue that they had chosen for their exhibition the "opere 69-74" for the *Templum Gentis Flaviae*; cf. p. 153, *opera* 69: this is the colossal portrait of *Divus Titus* (cf. here **Fig. 53**); cf. p. 154, *opere* 70-74: these are the chosen fragments of the 'Dono Hartwig'.

**Note that in the caption of the illustration of those opere 70-74 from the *Templum Gentis Flaviae*, that were on display in this exhibition on Domitian, the marble of those architectural marbles is defined as "Marmo pentelico".**

Cf. *Cat. Domiziano Imperatore: odio e amore* (2023, 153:

"[Opere] 69-74. **Templum Gentis Flaviae**" ...;

cf. p. 154:

"[Opere] 70-74. **Dono Hartwig**

**Marmo pentelico**

Terminato nel 95 d.C. ca [circa].

Da Roma, Quirinale, piazza dell'Esedra (attuale piazza della Repubblica), terme di Diocleziano, esedra portico nord [cf. here **Fig. 56**]: 1901

Roma, Museo Nazionale Romano, Palazzo Massimo ... [my emphasis]".

**In order to give the reader the chance, to understand my above-made comments on Eugenio La Rocca's final conclusion (in: E. LA ROCCA and L. KOSMOPOULOS 2023, 138), I quote in the following the relevant passages from his account *verbatim*.**

**La Rocca (in: E. LA ROCCA and L. KOSMOPOULOS 2023, 134-135) writes about the term *templum* :**

**"Svetonio è il solo a definire il monumento domiziano [i.e., the *Templum Gentis Flaviae*] *templum*, mentre Stazio, che scriveva al momento della sua costruzione, lo designa come *sacraria*. Ambedue i termini sembrano, almeno in [page 135] apparenza, poco adatti per un edificio utilizzato anche come mausoleo funerario della *gens Flavia*, almeno secondo il sistema religioso romano. Il *templum* era un luogo pubblico, inaugurato a seguito di auspici, e consacrato dai pontefici [with n. 77; my emphasis]".**

In his **note 77**, La Rocca writes: "Così afferma, con precisione Gell., XIV, 7, 7: *in loco per augures constituto quod templum appellaretur*". Inoltre: Varro l.l. 7, 8 (*locus augurii aut auspicii causa quibusdam conceptis verbis definitus*"); Serv. Dan. *Aen.* 1, 446".

**La Rocca (in: E. LA ROCCA and L. KOSMOPOULOS 2023, 135) asserts that the meaning of the term *templum* was "codificato" in Roman sacred law : "E. Bickerman aveva pienamente ragione nell'osservare che il *templum gentis Flaviae*, in quanto santuario del culto gentilizio della *gens Flavia*, rientrasse meglio nell'ambito dei *sacra privata*, laddove il tempio di Vespasiano e Tito nel Foro Romano, o i templi degli**

*imperatores divi* rientravano nell'ambito dei *sacra publica* [with n. 87]. **Ma due elementi ostano alla piena ricezione di questa ipotesi: a) la sua definizione di *templum*; b) la sua probabile collocazione all'interno del pomerio.**

**Si deve però ricordare che, oltre a quello codificato [with n. 88], c'era un altro significato del termine *templum* ... [my emphasis]**".

In his **note 88**, La Rocca writes: "Sul tema era già intervenuto Castagnoli 1984, pp. 3-20. Da ultimo: Cavallero 2019, pp. 199-220; La Rocca 2020 [*i.e.*, here E. LA ROCCA 2020b, quoted *verbatim supra*, in this Chapter IV.1.1.h)], p. 369, nota 9".

La Rocca (in: E. LA ROCCA and L. KOSMOPOULOS 2023, 136) writes that Domitian's design of his *Templum Gentis Flaviae*, combined with the chosen site of this building within the *pomerium* of Rome, was an *unicum* that was not conform with "il sistema religioso romano":

"In somma, tutto farebbe pensare che la struttura costruita da Domiziano per la sua *gens* fosse un *unicum* non corrispondente a nessuno dei generi contemplati dal diritto pontificale, e privo di ulteriori confronti tra i monumenti pubblici a Roma stessa, perché il sistema religioso romano rifiutava, a livello ufficiale, una contaminazione tra i templi destinati ai *divi* e i mausolei che contenevano le loro spoglie mortali. Se l'edificio rientrava tra i *sacra privata*, avrebbe potuto essere qualcosa di simile a un mausoleo cui era aggiunto uno spazio per il culto dell'intera *gens*: forse come le tombe a tempio che, basate probabilmente sul modello del *templum gentis Flaviae*, avevano tuttavia carattere privato.

Ma qualunque fosse lo statuto del monumento, **l'altro vero problema resta la sua collocazione all'interno del pomerio, proprio in quanto svolgeva anche una funzione sepolcrale** [my emphasis]

La Rocca (in: E. LA ROCCA and L. KOSMOPOULOS 2023, 137) mentions some late antique literary sources which, commenting on the fact that Trajan was buried within the Column of Trajan, assert that Trajan was thus (allegedly) first to be buried "*intra Urbem*". La Rocca asks, whether this allows the conclusion that at the time in question the *Templum Gentis Flaviae* had already lost its original function :

"Se così fosse, l'insistenza di alcune fonti tarde nell'affermare che Traiano, le cui ceneri erano custodite nel basamento della colonna Traiana, fosse il primo a essere sepolto *intra Urbem* [with n. 96], appare poco motivata, se non erronea. Non sappiamo, purtroppo, quale fosse la fonte di Eutropio che, per primo, ha parlato della sepoltura di Traiano nella colonna, ma si può immaginare che, al momento in cui era stata diffusa questa informazione, il *templum gentis Flaviae* non svolgesse più le sue funzioni originarie; anzi, che le ceneri dei Flavii e le statue che conteneva fossero state già trasferite altrove [with n. 97].

**Quando però sia avvenuta la demolizione dell'edificio [*i.e.*, the *Templum Gentis Flaviae*] non può essere stabilito.** Nerva o uno dei suoi successori potrebbero essere intervenuti per ridimensionare la portata dirompente del progetto di Domiziano, che in effetti non è stato riproposto da nessun altro imperatore romano. L'edificio circolare posto alla sommità del mausoleo di Adriano, secondo la convincente proposta di Paolo Vitti [with n. 98], potrebbe aver svolto una funzione culturale, ma assai verosimilmente a carattere funerario, non per celebrare l'imperatore e la moglie in quanto *divi* - Adriano e Sabina avevano altrove il loro tempio -, oppure per celebrare la *gens Antonina* [my emphasis]

In his **note 96**, La Rocca writes: "Così Eutr., 8, 4, 2, ma l'informazione è ripetuta, senza alcuna variazione, in Hier. *chron. a. Abr.*, 2132; Prosp., *Chron. (H.G.H., A.A. IX, p. 421, 580)*, e con qualche modifica in *Chron. Gall. ad a. 511 (M.G.H., A.A. IX, p. 640, 349)*. Cassio Dione, invece, dice solo che le ceneri di Traiano furono deposte nella sua colonna: Cass. Dio 69, 2, 3 (così anche Ps. Aur. Vict. *epit. Caes. 13*; Cassiod. *Chron. ad a. 766*). Sull'argomento, vd. [vedi] le osservazioni di La Rocca 2021, p. 95".

In his **note 97**, he writes: "La Rocca 2009a, p. 289. Coarelli 2014a, pp. 204-205, respinge questa possibilità, riaffermando la presenza del *templum* all'interno delle terme, e appellandosi a una "incomprensione" del termine *templum* in età imperiale, da cui sarebbe sorto un equivoco sul quale si sarebbe arenata la discussione sugli edifici di culto dinastici".

In his **note 98**, he writes: "Vd. [vedi] nota 61".

**To La Rocca's above-quoted remark (in: E. LA ROCCA and L. KOSMOPOULOS 2023, 137): "... non per celebrare l'imperatore e la moglie in quanto *divi* - Adriano e Sabina avevano altrove il loro tempio", I should like to add a comment :**

Since La Rocca has already hinted at this in an earlier publication, he obviously refers in this passage again to the *Hadrianeum*.

Eugenio La Rocca (2014b, 140 with n. 72) writes: "... **the temple of the deified Hadrian (and, most likely), Sabina) is situated south of the Via Recta ...** [with n. 72; my emphasis]", quoted in Häuber (2017, 585).

In his **note 172**, La Rocca (2014b, 140) does not quote François Chausson (2001) for his just-quoted statement, but he lists Chausson's publication (2001) in his bibliography. When reading Chausson's (2001, 357) own account, it becomes clear that La Rocca's (2014b, 140) phrase may actually be regarded as a summary of Chausson's relevant statement (!).

**Also in this case, La Rocca (in: E. LA ROCCA and L. KOSMOPOULOS 2023, 137) does not provide a reference for his remark, that "... in quanto *divi* - Adriano e Sabina avevano altrove il loro tempio".**

I nevertheless allow myself to explain La Rocca's (2023, 137) statement as follows :

**Several scholars have recently suggested that the *Hadrianeum*, mentioned in the *Historia Augusta* (*Pius* 8,2) as one of the buildings of Antoninus Pius, was instead already erected by Hadrian, to worship his divinized wife *Diva Sabina* there. Others believe that Antoninus Pius did not dedicate the *Hadrianeum* already in AD 145, as recorded in the *Historia Augusta* (*Verus* 3), but only in AD 150-151, because of coins, Antoninus Pius had issued in that year, and on which the *Hadrianeum* is (allegedly) represented.**

Contrary to Mafalda Cipollone (1982; and *ead.* 1996), Alessandro Vella (2015), Maria Teresa D'Alessio (2017; 2019), Andrea Carandini (2019) and Maria Cristina Capanna (2019) regard the date of those coins, '150-151', as the correct date of the dedication of the *Hadrianeum*.

And apart from Vella (2015), who doubts that the temple of the Piazza di Pietra may be identified with the *Hadrianeum*, recorded by the *Historia Augusta*, these other authors believe that this is indeed the *Hadrianeum*. Also I myself believe that this is true (cf. here **Figs. 58-60; 66**).

**In addition to discussing those recent hypotheses in my own text, I have asked the numismatist Angelo Geißen for advice, who was kind enough to study for me the coins, issued by Antoninus Pius in 150-151 AD. Those *sestertii* are believed by some of the just-mentioned scholars to show the *Hadrianeum*.**

**And because some of those coins represent two cult-statues in the *cella* of the represented temple, this is taken by those scholars for the proof, that, in the *Hadrianeum*, *Diva Sabina* was worshipped together with *Divus Hadrianus*. But see below, at Angelo Geißen's second *Contribution* to this book on Domitian, in which those *sestertii*, issued by Antoninus Pius in AD 150-151, are also illustrated.**

**Maria Teresa D'Alessio (2014; 2017; 2019); Andrea Carandini (2019) and Maria Cristina Capanna (2019) believe that the *Hadrianeum*, that we know today, was already built by Hadrian. Analysing their hypotheses, I have come to the conclusion that, in reality, there are no proofs that the *Hadrianeum* was already built by Hadrian.**

Concerning the latter point, also Claudio Parisi Presicce and Massimo Baldi (2023, in press) are of the same opinion as I myself. I am suggesting this here, because from 5th January 2023 onwards, I have consulted on several occasions the following advertisement on the Website of the publisher 'L'ERMA' di Bretschneider, that concerns the book, written by Claudio Parisi Presicce and Massimo Baldi (2023, in press):

"Hadrianeum. Il progetto architettonico e le fasi costruttive.

**Il Tempio di Adriano si trovava nella zona sacra del Campus Martius, Il tempio, molto probabilmente, fu iniziato durante il principato di Adriano, per accogliere le spoglie della moglie Vibia Sabina morta nel 136, ma la vera e propria costruzione si deve al suo successore, Antonino Pio. Venne terminato intorno al 145. La versione più condivisa dagli studiosi è che venne eretto in onore dell'imperatore Adriano, divinizzato dopo la sua morte.**

I resti furono inglobati nell'edificio che fu costruito sulle sue rovine nel XVII secolo dall'architetto svizzero-italiano Carlo Fontana. L'edificio era in principio una dogana vaticana e, dal 1831, fu adibito a sede della Borsa Valori a Roma. Si stagliano nella piazza, ancora visibili, undici delle tredici colonne originarie del lato nord. Per molti secoli è stato erroneamente identificato come il Tempio di Nettuno.

**Il tempio era posto nella Regio IX. in Campo Marzio, in relazione con l'adiacente Tempio di Matidia, dedicato dall'imperatore alla suocera, Salonina Matidia. Quest'area fu intensamente edificata e abbellita proprio da questo imperatore e, successivamente riservata ai funerali imperiali [my emphasis]."**

**After studying those of the above-mentioned publications, that were so far available to me, I myself have likewise come to the conclusion that there is no evidence, which could prove that, at the *Hadrianeum*, *Diva Sabina* was worshipped together with *Divus Hadrianus*.**

Cf. *infra*, in volume 3-2, at *A Study on the consequences of Domitian's assassination ...*

*Or: The wider topographical context of the Arch of Hadrian alongside the Via Flaminia which led to the (later) Hadrianeum and to Hadrian's Temples of Diva Matidia (and of Diva Sabina?) ... With The fourth and the fifth Contribution by Peter Herz, with The first Contribution by Franz Xaver Schütz, with The Contribution by John Bodel, and with The second Contribution by Angelo Geißen;*

*Introduction; at Section XIV. Further new research: F. Chaussou's (2001) idea that the Hadrianeum was possibly dedicated to Divus Hadrianus and to Diva Sabina, and recent discussions of this hypothesis. With The second Contribution by Angelo Geißen : Zum 'Hadrianeum' auf Münzen des Antoninus Pius.*

**Apropos, *Hadrianeum*: I ask myself, whether we still have remains of the cult-statue of *Divus Hadrianus* from the *Hadrianeum*.**

See below, at:

*A Study on the colossal portrait of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori at Rome (cf. here Fig. 11) ...; at Part I. The statue of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori (cf. here Fig. 11), the inscription (CIL VI 974 = 40524; cf. here Fig. 29.1), and the cult-statue of Divus Vespasianus in the Temple of Divus Vespasianus. With The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great).*

The introduction to this Chapter reads: '**In the following will be discussed the colossal acrolithic statue of Hadrian (now Constantine the Great) at the Palazzo dei Conservatori (here Figs. 11; 11.1) ... So far we do not know, for which context this colossal portrait of Hadrian had been created, but it is tempting to ask, whether this could have been the cult-statue of *Divus Hadrianus* in the *Hadrianeum*, built by Antoninus Pius [my emphasis].'**

I am aware of the fact that the *Hadrianeum* is still mentioned in the Constantinian Regionary Catalogues; cf. Mafalda Cipollone (1996, 7). By nevertheless tentatively suggesting this, my idea has in one respect similarities with La Rocca's and Kosmopoulos's hypothesis (2023, 130, 138), according to which the *Templum Gentis Flaviae* could have been destroyed when the Baths of Diocletian were built, although both authors know perfectly well that also that building is still mentioned in the Constantinian Regionary Catalogues and

in another late antique source. In my opinion, in the case of my own hypothesis, only new evidence and/ or new ideas to interpret the known evidence, can help us to find out the truth concerning this matter.

Let's now return to our main subject.

**La Rocca (in: E. LA ROCCA and L. KOSMOPOULOS 2023, 138) refers again to the "mensole con aquile" (their Fig. 5), which have been integrated into the Baths of Diocletian.**

**Because La Rocca attributes these reliefs to the temple tomb proper within the *Templum Gentis Flaviae*, he suggests that their integration into the Baths of Diocletian could possibly prove the destruction of this temple tomb on the occasion, when those baths were being built. In addition to this, La Rocca considers also the possible meaning of Domitian's obelisk (here Fig. 28), provided that had belonged in the precinct of the *Templum Gentis Flaviae* :**

"La demolizione del corpo principale [*i.e.*, the temple tomb proper within the *Templum Gentis Flaviae*] potrebbe essere comprovata dalle mensole con aquile riadoperate nelle terme, la cui misura è consona a un imponente edificio templare (fig. 5). Se pertinente al recinto del *templum gentis Flaviae*, l'obelisco di piazza Navona documenta il seguente trasferimento di un altro suo essenziale elemento simbolico lontano dalla *regio VI*, nel circo di Massenzio, figlio, appunto, di Massimiano, il quale fece largo uso di materiali di spoglio da edifici crollati o fatiscenti, come nella sua basilica costruita nel taglio della Velia".

**After having finished writing this discussion of the joint essay by Eugenio la Rocca and Lorenzo Kosmopoulos (2023), I have fortunately read again the article by Maria Cristina Capanna ("Il Tempio della Gente Flavia sul Quirinale. Un tentativo di ricostruzione", 2008), which has been overlooked by La Rocca (2020b), and by La Rocca and Kosmopoulos (2023).**

I say 'fortunately', because Capanna (2008, 177) provides the information concerning those 'mensole con aquila', which is missing in the joint essay of Eugenio La Rocca and Lorenzo Kosmopoulos (2023). According to Capanna, these architectural marbles are likewise carved in "marmo (pentelico come i rilievi Hartwig [cf. here Figs. 33; 34])" (!) : "7.) Nella facciata della *natatio* delle Terme [*i.e.*, The Baths of Diocletian] sono utilizzate cornici e mensole che per tipo di marmo (pentelico come i rilievi Hartwig) soggetto [with n. 3] ed elementi decorativi possono essere ricollegate all'edificio sacro/sepolcro domiziano [*i.e.* the *Templum Gentis Flaviae*; with n. 4; my emphasis]".

In her **note 3**, Capanna writes: "Si tratta di mensole figurate con aquila che stringe il fulmine. Sull'aquila come simbolo di Vittoria, potere imperiale e divinizzazione si veda CANDILIO 1994 [*i.e.*, here D. CANDILIO 1990-1991 [1994]], p. 182, nota 36".

In her **note 4**, she writes: "CANDILIO 1990; EADEM 1994 [*i.e.*, here D. CANDILIO 1990-1991 [1994]]".

**And concerning the possible survival of the *Templum Gentis Flaviae* within the Baths of Diocletian, when those were being built, Capanna (2008, 178) believes that the temple tomb proper was preserved inside those baths :**

**"Il tempio rimase in vita anche con la costruzione delle Terme di Diocleziano, quando venne abolito solamente il portico (Fig. 4). Infatti il tempio continua a essere menzionato dalle fonti letterarie di IV. sec.[olo] d.C. [with n. 1; my emphasis]".**

In her **note 1**, Capanna writes: "*Notitia urbis Romae regionum XIII*, VALENTINI-ZUCCHETTI 1940, pp. 171-172; *Curiosum urbis Romae regionum XIII*, VALENTINI-ZUCCHETTI 1940, pp. 107-109; *Chronographus anno 354*, VALENTINI-ZUCCHETTI 1940, p. 275".

**Chapter V. Summary of the publications by S. Langer and M. Pfanner 2018, M. Wolf 2018, and K.S. Freyberger 2018, concerning the Cancellaria Reliefs and the architectural fragments found together with them, which appeared when that part of this Study was almost finished, which is dedicated to the Cancellaria Reliefs**

**V.1. Summary of the publication by S. Langer and M. Pfanner 2018 concerning the Cancellaria Reliefs, and comparisons of their conclusions with my own**

"Grundsätzlich stehen sich bei den Cancellariareliefs zwei Positionen gegenüber: auf der einen Seite Deutungsansätze, die auf diverse historische Ereignisse rekurrieren und auf der anderen Seite solche, die den symbolisch-allegorischen Charakter betonen. Meist jedoch werden diese beiden Aspekte miteinander vermischt oder nach Bedarf ausgeblendet ... Die genannten Parameter machen es [a] schier unmöglich, eine der vorhandenen Deutungen zu verifizieren (s. Abb. 13 und 14) oder [b] eine seriöse neue Deutung vorzulegen"

*Stephanie Langer and Michael Pfanner*

See Stephanie Langer and Michael Pfanner (2018, 73-74, chapter "2.9.5 Deutung und Interpretation der Reliefs"), quoted in more detail *infra*, in Chapter V.1.i.1.).

Personally, I do not subscribe to the assertions of Langer and Pfanner (2018, 74), that it is *a*) 'nearly impossible to verify the hypotheses', published by those scholars, to whom they refer - who are identical with those, discussed in this *Study* - nor am I convinced, that it is *b*) likewise 'nearly impossible to present [oneself] a serious new interpretation' [of the Cancellaria Reliefs], since I have tried to do both in this *Study*.

Six conclusions, at which Langer and Pfanner (2018) arrive in their publication, are identical with those suggested in this *Study* by myself:

- 1.) the Cancellaria Reliefs were in their opinion commissioned by Domitian (cf. pp. 59, 73, 84; see here *supra*, n. 75, at Chapter I.1.);
- 2.) the monument or building, to which they belonged, may have been a "Bogenarchitektur" (cf. p. 84; see here *supra*, at Chapters I.3.2.; II.3.1.-II.3.; cf. II.3.3.a);
- 3.) they interpret Frieze A as a *profectio* of Domitian from Rome (now Nerva; cf. pp. 76, 80, 82, 83, 84; see here *supra*, at Chapters I.1.; III.);
- 4.) and Frieze B as an *adventus* into Rome (cf. pp. 78, 80, 82, 83, 84; see here *supra*, at Chapters III.; IV.1.; V.1.h); V.1.i.3.)), although they also say (cf. p. 80) that the identifications of those friezes as a *profectio* and an *adventus* are not certain;
- 5.) they are of the opinion that the Domitianic monument or building, to which the Cancellaria Reliefs belonged, was destroyed, together with those panels, when these were taken off this structure (cf. p. 82; see here *supra*, at n. 292, cf. ns. 261, 297, in Chapter I.3.2.);
- 6.) finally they tentatively suggest that it could have been Nerva, who ordered the destruction of the Domitianic monument or building, which comprised the Cancellaria Reliefs (cf. p. 82; see here *supra*, at ns. 350, 352, in Chapter II.3.2.; compare Chapters II.3.3.; V.1.c); and V.1.i.3.)).

Concerning all other topics, discussed by Langer and Pfanner (2018), they have arrived at different interpretations than I myself in this *Study*.

These great differences between their hypotheses, compared with my own, are based on three facts: Langer and Pfanner (2018) are:

*a)* interested in different aspects of the overall subject than I myself. Pfanner alone had already previously an acknowledged expertise concerning all technical questions related to those panels, as known from his earlier publications (1981; 1983); in this publication, both scholars together are not so much interested in recent studies related to the stratigraphy and to the topography of the area, where the Cancellaria Reliefs were found; nor in the question, whether some details of the compositions of both friezes, or of other choices made by the artists, may be explained by the observance of Roman law; or by the observance of certain prescriptions of 'pagan' religions - whereas for me, concerning those four points, just the opposite is true;

*b)* Langer and Pfanner (2018, 59) follow, contrary to myself, Marianne Bergmann (1981), in assuming that the head of the togate youth on Frieze B is not a portrait, and that the extant head of the emperor on Frieze B, which shows a portrait of Vespasian, has been reworked, and that it was allegedly first a portrait of another emperor, 'most probably of Domitian' (cf. Langer and Pfanner 2018, 73), that was recut at the order of Nerva into a portrait of Vespasian;

*c)* Langer and Pfanner (2018, 83) assume, like Marianne Bergmann (1981) before them, that 'for Nerva no military activities of greater importance are recorded'.

Because of the differences, mentioned under points *a)* - *c)*, the following hypotheses, formulated by Langer and Pfanner (2018) and myself, are incompatible: those concerning the stratigraphy and topography of the area, where those panels were found; those concerning the history of the Cancellaria Reliefs under Nerva; those concerning the reconstruction of the length of Frieze B; and those concerning the emperor on Frieze B and the togate youth standing in front of him. The latter hypotheses lead, in their turn, to different conclusions, what the scene on Frieze B may represent.

Langer and Pfanner (2018) interpret altogether five figures differently than Filippo Magi (1945) had done. - I myself, on the contrary, identify all 34 figures of both Cancellaria Reliefs exactly as Magi had suggested it. - The only difference between the overall hypotheses concerning both friezes, suggested by Magi (1945) and myself is the fact that, contrary to him, I do not interpret Frieze A as an *adventus*, but rather as a *profectio* (cf. *supra*, at Chapter III.).

See for their numbering of the figures on Frieze A and B, Langer and Pfanner (2018), 19, "Abb. 2". Compare the caption of here **Figs. 1 and 2 drawing** (we have copied their numbering of those figures).

The five figures on the Cancellaria Reliefs, which Langer and Pfanner (2018) identify differently than is suggested here, are the following:

1.) They identify **figure 9** on Frieze A as "Roma/Virtus", who is here identified as the *Dea Roma* (cf. *supra*, at Chapter I.2.);

2.) on Frieze B, they identify **figure 11** as "Genius Senatus [?]" (although elsewhere in the text they refer to this figure as *Genius Senatus*), who is here identified as *Genius Senatus*;

3.) they identify on Frieze B **figure 12** as "Junger Mann in Toga", who is here identified as a portrait of the young Domitian;

4.) they identify on Frieze B **figure 13** as "Genius Populi Romani [?]" (although elsewhere in the text they refer to this figure as *Genius Populi Romani*), who is here identified as *Genius Populi Romani*;

5.) and they identify on Frieze B **figure 14** as "Vespasian", which in their opinion was originally a portrait of Domitian, who is here regarded as having been a portrait of Vespasian from the very beginning.

For my own discussions of **figures 11, 12, 13, and 14**; cf. *supra*, at Chapter I.1.

But before studying the interpretations that Langer and Pfanner (2018) suggest for those five figures in more detail, let me first mention some other of their conclusions, which differ from my own.

#### ***V.1.a) The stratigraphy of the site, where the Cancellaria Reliefs were excavated, the topography of the entire area, and the date of the dismantling of these panels***

The bibliography of Langer and Pfanner (2018, 21-27: "Literatur") is very impressive and comprises many more works than my own; I have greatly profited from it myself and have given them credit, whenever I have found a reference through them. - I too have titles in my bibliography, which they have overlooked though. - In theory, the bibliography of Langer and Pfanner concerning the Cancellaria Reliefs, taken together with my own (listed *supra*, at **ns. 4-74** in Chapter I.1.), covers (almost) all relevant publications, especially because it comprises also publications after 2018, when Langer and Pfanner's account was published.

Langer and Pfanner (2018) are predominantly interested in the technical side of the Cancellaria Reliefs and in the art- historical and historical discussions of them, also seen in the context of other Roman state reliefs; in this *Study*, I have in fact discussed at length two earlier publications by Pfanner (1981 and 1983) on those subjects. The attempts in recent publications to reconstruct the stratigraphy of the excavation, in the course of which those panels were found, on the other hand, nor those contributions, that aim at reconstructing the topography of the entire area, have not so much attracted their interest.

Among the works cited in the bibliography of Langer and Pfanner (2018, 27; cf. p. 18 n. 1) are the two volumes, edited by Christoph Luitpold Frommel and Massimo Pentiricci (2009), but Langer and Pfanner cite only pp. "55-62, fig. 28", which is § 8 of the publication by Pentiricci (2009): "L'officina marmoraria presso il sepolcro di Irzio e i rilievi della Cancellaria" (quoted among other passages by PENTIRICCI 2009 in part *verbatim supra*, in Chapter I.3.1.), as well as pp. 71-80, but Langer and Pfanner do not even discuss these small sections of Pentiricci's very important work in their own text.

In his contributions to those two volumes, Pentiricci (2009) covers all the subjects, discussed by Langer and Pfanner (2018) themselves (cf. below, at *Bibliography*). - Apart from the fact that those two volumes comprise *inter alia* also very detailed contributions by Andrea Carignani (2009) and Maddalena Cima (2009), dedicated to the ancient architectural fragments and sculptural finds, excavated underneath the Palazzo della Cancellaria and in the adjacent areas. In the volume, in which the article by Langer and Pfanner (2018) has been published, have likewise appeared a short contribution to those fragments by Markus Wolf, and a very short note related to them by Klaus Stefan Freyberger (cf. *infra*, Chapters V.2; and V.3.). Neither Langer and Pfanner, nor Wolf or Freyberger consider the sculptural finds from the area, which turn out to be decisive in the attempts to date the moment, until when the 'Second sculptor's workshop' was still active, where the Cancellaria Reliefs were found (cf. *supra*, at Chapters I.3.1.; I.3.2.; and *infra*, at Chapter V.1.a.1.).

Therefore, the discussion of Langer and Pfanner (2018, 20, quoted *verbatim* below) concerning the circumstances, under which the Cancellaria Reliefs were found, as well as concerning the topography of the area, and the dismantling of those reliefs, was written without considering the most recent attempt to

reconstruct the stratigraphy of the relevant site by Pentiricci (2009), nor by considering the recent publications by many other scholars, in which the topography of the entire area of this part of the *Campus Martius* has been analysed and reconstructed in great detail - and that diachronically (cf. *supra*, **ns. 45, 57, 61, 62, 64, 65, 66, 67, 72, 74**, in Chapter *I.1.*).

With few exceptions: of the publications just mentioned (cf. *supra*, **n. 57**, in Chapter *I.1.*), Langer and Pfanner (2018, 28) quote in their bibliography: "M. G. Cimino - M. Nota Santi (Hrsg.), *Corso Vittorio Emanuele II tra Urbanistica e Archeologia. Storia di uno Sventramento* (Neapel 1998) 104 Abb. oben, 158 f. 169 fig. 20.2". On p. 18 n. 1, they quote the contribution to this volume by Pentiricci (1998), and in their n. 8 another contribution to this volume by Sommella and Migliorati (1998) on the stratigraphy of the area, but not the most recent contributions on the subject, mentioned here, in which the publications that they themselves quote, together with a great amount of further new data, that have been found in the meantime, *inter alia* by conducting new excavations, have been discussed in their relevant contexts.

Among the works missing in the bibliography of Langer and Pfanner (2018) are for example the volumes edited by Fedora Filippi (2010) and Filippi (2015; for both, cf. *supra*, **n. 66**, in Chapter *I.1.*), and that, although the contribution by Wolf on the architectural fragments, found together with the Cancellaria Reliefs, which is published together with Langer and Pfanner (2018) in the same volume (*i.e.*, here M. WOLF 2018, cf. *infra*, Chapter *V.2.*), had first appeared in Filippi (2015; cf. M. WOLF 2015; *supra*, **n. 71**, in Chapter *I.1.*). Neither consider Langer and Pfanner (2018) in their discussion the excavations underneath the Museo Barracco, where ancient structures were found, that have been discussed together with the relevant finds of ancient structures underneath the Palazzo della Cancellaria and elsewhere in the *Campus Martius* (cf. *supra*, **n. 66**), in Chapter *I.1.*).

Langer and Pfanner (2018, 20, in their chapter **2.1**) write concerning the stratigraphy and the topography of the site, where the Cancellaria Reliefs were excavated:

"Der Fundlage zufolge waren die Cancellariareliefs gemeinsam mit anderen Architektur- und Relieffragmenten bei dem Grabmal des Aulus Hirtius abgestellt und die Arealfächen schließlich zugeschüttet worden. Dass es sich dabei um ein länger genutztes Materiallager einer in unmittelbarer Nähe liegenden Marmorwerkstatt gehandelt hat, ist eine unbewiesene Vermutung [with n. 5]. Auch der Zeitpunkt der Aufschüttung bleibt unbekannt. Nach Magi [with n. 6] könnte der Bodenhorizont über den Reliefplatten durch eine Niveauerhöhung des Marsfeldes unter Kaiser Hadrian bedingt sein, was aber weder stratigraphisch noch durch die Inschriften an der Umfassungsmauer eindeutig bestätigt wird [with n. 7]. Neuere Untersuchungen im südlichen Marsfeld ermöglichen ebenfalls keine Präzisierung [with n. 8].

Der Zeitpunkt der Plattendeportation wäre von großem Interesse, da man dann wüsste, wie lange sich die Reliefs am Bau befanden bzw. [beziehungsweise] wann der Bau selbst abgerissen wurde (s. Kap. **2.9.6**). Auch die Inschriften an der Umfassungsmauer bieten keinen Anhaltspunkt. Mit ihrer höchst unsicheren Datierung ins frühe 2. Jh. n. Chr. durch Degrassi besteht nur ein vager Terminus post quem [with n. 9]".

In their **note 5**, Langer and Pfanner (2018, 20) write: "Interpretation als Marmorlager vgl. u. a. [vergleiche unter anderem] Magi 1945, 134. Handelte es sich tatsächlich um das Depot einer Bildhauerwerkstatt, wäre das Grabmal zu diesem Zeitpunkt nicht mehr gepflegt worden".

Their latter remark is, of course, true and the consequences of it not exactly edifying, considering the fact that this was the state funeral of the *consul* Aulus Hirtius, who had only died in 43 BC (cf. *supra*, **ns. 9, 66**, in Chapter *I.1.*, and **ns. 325, 326**, in Chapter *II.1.e*). But since there was nothing comparable to our current 'Superintendencies', let alone concepts like 'Cultural Heritage' in ancient Rome, it could even happen that the tomb of a great historical figure such as L. Cornelius Sulla in the central *Campus Martius* ended in oblivion, the remains of which were only much later and only by chance re-discovered and restored - by none less than the Emperor Caracalla ! (cf. C. HÄUBER 2017, 479, 583 n. 306).

In their **note 7**, Langer and Pfanner (2018, 20) write: "Es fehlt in jedem Fall eine eindeutige Datierungsgrundlage: vgl. [vergleiche] Bergmann 1981, 25 Anm. 28, Pfanner 1981, 517".

In their **notes 6-9**, Langer and Pfanner (2018, 20) provide references, but they have completely neglected those recent works (cf. *supra*, **ns. 45, 57, 61, 62, 64, 65, 66, 67, 72, 74**, at Chapter I.1.), in which the questions, posed by them in the above quoted passage, have been discussed in great detail (cf. also *supra*, at Chapters I.3.1; and I.3.2.).

That Langer and Pfanner (2018, 20 with n. 5) doubt that the Cancellaria Reliefs were found in the deposit of a sculptor's workshop, is from their point of view understandable. - Since they have not consulted the relevant publications, they do not discuss a marble relief, aptly called "rilievo di prova" by Tonio Hölscher - a 'test relief', because it comprises two measuring points (cf. HÖLSCHER 2009a, 58, with Fig. 23, n. 49; quoted *verbatim supra*, at **n. 289**, cf. at **ns. 290-292**, at Chapter I.3.2.), whose article Langer and Pfanner (2018, 27) themselves quote in their bibliography. This relief was excavated underneath the Palazzo della Cancellaria, was also studied by Frommel (1991; cf. *supra*, **n. 45**, in Chapter I.1.), Pentiricci (2009; cf. *supra*, **n. 61**, in Chapter I.1., and at Chapter I.3.1.), Cima (2009; cf. *supra*, **n. 63**, in Chapter I.1., and **n. 286**, in Chapter I.3.2.). Although Langer and Pfanner 2018, 18 n. 1, quote Cima's contribution in this note, they do not discuss it in their text), and Thuri Lorenz (2009; cf. *supra*, **n. 65**, in Chapter I.1.), and proves beyond any doubt that Magi, who was first to suggest this, was right with his judgement, that the Cancellaria Reliefs were found in a deposit of an *immediately adjacent* sculptor's workshop. So also Carignani and Spinola (cf. *supra*, **ns. 64, 76**, in Chapter I.1., and **n. 287**, in Chapter I.3.2.), who like Pentiricci (2009; cf. *supra*, at Chapter I.3.1.), report on many more unfinished sculptures and architectural fragments, found at the 'First sculptor's workshop' and at the 'Second sculptor's workshop' underneath the Palazzo della Cancellaria. Pentiricci (2009, 62 n. 441) mentions in this context, in addition to this, a large excavated area that was covered with chips of marble- and travertine working: "Altre tracce relative all'attività della bottega possono essere considerate alcuni strati di scaglie di marmo e travertino". The relevant passage is quoted in more detail *verbatim supra*, at Chapter I.3.1.

Langer and Pfanner (2018, 59) write: "Offensichtlich unter Domitian entstanden [*i.e.*, the Cancellaria Reliefs], scheinen sie nach dessen Ermordung 96 n. Chr. von seinem Nachfolger Nerva für die eigene Selbstdarstellung beansprucht worden zu sein. Später - der Zeitpunkt bleibt unbekannt - sind sie beim Abbruch des Bauwerkes, an dem sie angebracht waren, stark beschädigt worden. Die vollständig erhaltenen Platten wurden ebenso wie die zerstörten Platten am Grab des Aulus Hirtius im südlichen Teil des Marsfeldes abgestellt und wohl im 2. Jh. n. Chr. mit Erde bedeckt".

Langer and Pfanner (2018, 81) write: "Gerne wüsste man, wie lange dieser >Cancellaria-Bau< stand und wann die Platten abgenommen und am Hirtiusgrab abgestellt wurden. Die Fundumstände am Palazzo della Cancellaria liefern dafür keine Anhaltspunkte [with n. 149]".

Cf. their **note 149**: "Ob der Abriss des Gebäudes bereits unter Nerva, unter Trajan oder noch später erfolgte, muss dahingestellt bleiben. Da dieses Gebiet in hadrianischer Zeit intensiv bebaut wurde, könnte es sein, dass die Platten spätestens zu dieser Zeit dort abgelegt wurden, womit wir einen *terminus ante quem* hätten. Da die Datierung der Bodenschichten über dem Hirtiusgrab nach wie vor unsicher ist, kann die Deponierung allerdings auch später sein. Vgl. auch Kap. 2.1" (cf. the relevant passage from their p. 20 in their "Kap. 2.1", quoted *verbatim supra*).

Langer and Pfanner (2018, 81-82) continue immediately after that:

"Auch die perfekt erhaltene Marmoroberfläche, die keine Verwitterungsspuren aufweist, kann nicht als Indiz für eine kurze Anbringungsdauer dienen, falls die Reliefs im Innenraum oder geschützt angebracht waren [page 82]. Wann die Platten vom Bau abgenommen worden sind, wissen wir nicht [with n. 150]. Die Umarbeitung zum Nervakopf war auf jeden Fall unbefriedigend [for that, cf. also their p. 59], denn man sah

nach wie vor die Domitianslocken und vor allem die unschöne Kante zwischen Nervagesicht und Domitiansfrisur (s. Abb. 20c). **Vielleicht ordnete deshalb schon Nerva selbst an, die Platten abzunehmen, was mit dem Abbruch des gesamten Monuments einherging. Das legt der bautechnische Befund nahe, der näher erläutert werden muss** (s. Abb. 29).

Die Reliefs waren einst mit Hilfe von Wolfslöchern [*i.e.*, lewis holes] versetzt worden (s. Abb. 29b, f und g). Diese Methode hat den Vorteil, dass man die Werkstücke direkt absetzen kann und die Gurte, die ansonsten den Stein umschlingen, nicht mühsam mit Hilfe von Hebeln und unter der Gefahr von Kantenbeschädigungen entfernen muss (s. Abb. 29). Beim Ausbau der Cancellariaplatten benutzten die Bauleute nun die vorhandenen Wolfslöcher, denn dadurch ersparten sie sich die Mühe, die Platten hochzuhebeln, von der Wand zu rücken und mühsam mit Gurten zu umfassen. Sie riskierten freilich, dass die Reliefs bei dieser wohlfeilen und kommoden Bergungsmethode zu Bruch gingen, da ihr Querschnitt nach der erfolgten Relieferung am Bau geschwächt war (s. Abb. 29b). Tatsächlich weisen nicht wenige der Platten just an den Hebelöchern die befürchteten Risse und Brüche auf (s. Pfeilmarkierung auf Abb. 29c und d).

Das geschilderte Vorgehen beim Abbau führt zu weitreichenden Folgerungen. Mit den Reliefs wurde nicht besonders sorgsam umgegangen - das zeigt auch das brutale Ausspitzen und Aufbrechen der Dübel- und Klammerlöcher. Ihren Bruch nahmen die Steinmetzen aus arbeitsökonomischen Gründen in Kauf. **Eine Zweitverwendung der Reliefs war folglich nicht vorgesehen.** Die Rückseiten waren höchstens noch als Verkleidungs- oder Bodenplatten geeignet [with n. 151]. Aus dem erschlossenen Arbeitsablauf beim Rückbau der Reliefs ergibt sich eine durchaus interessante Konsequenz. **Um die Klammer- und Dübellöcher frei zu legen und die Cancellariareliefs mit dem Wolf abzuheben, d. h. um an die Ober- und Nebenseiten der Reliefs zu gelangen, muss vorher der komplette Oberbau des Monuments samt seitlich anschließenden Blöcken rückgebaut worden sein. Das bedeutet nichts anderes als den Abbruch der gesamten Wand und somit wohl auch des Gebäudes!**

Die technischen Beobachtungen zu den Reliefs erlauben inhaltliche Rückschlüsse auf die Art des Monuments. Da die Reliefs zuerst am Bau verblieben, muss es sich um ein Denkmal oder Gebäude gehandelt haben, das nicht alleinig und speziell auf Domitian gemünzt war, sondern bei dem mit Hilfe von Umarbeitungen, Umgestaltungen o. ä. [oder ähnlich] der Bezug zu Domitian eliminiert werden konnte [with n. 152; my emphasis]. In their **notes 150-152**, Langer and Pfanner (2018) provide references and further discussion.

Cf. their **note 151**: "Dies lässt vermuten, dass die Platten nicht weit durch die Stadt an ihren Ablageort beim Hirtiusgrab transportiert worden sind. Folglich könnte es sich um ein Gebäude auf dem südlichen Marsfeld handeln, zumal dort Domitian eine intensive Bautätigkeit entfaltet hatte. Zur Lokalisierung des ehemaligen >Cancellaria-Baus< s. hier die Beiträge von Wolf und Freyberger im Annex". Cf. *infra*, Chapters V.2.; and V.3.

Langer and Pfanner (2018, 84) write:

"Die Art des Monuments: Die Friese dienten als Verkleidung eines Ziegel-oder Natursteinbaus. Ob als Pendants oder zu einem größeren Zyklus gehörig, ist unbekannt. Da das Monument nach der *damnatio memoriae* Domitians vorerst stehen blieb und nur die Kaiserköpfe umgearbeitet wurden, handelte es sich kaum um ein Bauwerk, das ausschließlich auf Domitian gemünzt war. Mitaufgefundene Architekturteile sind flavisch und könnten als Teil einer Bogenarchitektur zu einem auf dem südlichen Marsfeld gelegenen Cancellaria-Monument gehört haben ...".

Langer and Pfanner (2018) write elsewhere on p. 84:

"Geschichte der Friese und des Monuments: **Irgendwann später wurden die Reliefplatten lieblos abgenommen. Sie gingen dabei zu Bruch und waren, abgestellt am Grabmal des Aulus Hirtius, nicht für eine Wiederverwendung vorgesehen. Im selben Zug brach man, wie der technische Befund an den Platten belegt, das gesamte Monument ab** [my emphasis]."

**V.1.a.1.) My own comments on the passages, quoted from Langer and Pfanner (2018) in Chapter V.1.a), and the 'First sculptor's workshop' and the 'Second sculptor's workshop' underneath the Palazzo della Cancelleria**

The conclusions, at which Langer and Pfanner (2018) have arrived concerning those three subjects in the above quoted passages - concerning the stratigraphy and topography of the site, where the Cancelleria Reliefs were excavated, and concerning the date of the dismantling of these panels (cf. *supra*, at Chapter V.1.a)) - differ greatly from my own. These points will be discussed in the following.

See also the different scenarios concerning the subject 'the Cancelleria Reliefs under Nerva', that have been developed by Langer and Pfanner (2018; cf. *infra*, at Chapter V.1.b)) and by myself (cf. *infra*, at Chapter V.1.c)).

Since 23th March 1981 (cf. C. HÄUBER 2014a, pp. XVII, 2, 13-14; and *supra*, at Chapter *Dedication*), I have been trying to understand the meaning of ancient sculptures, found at Rome, by studying the relevant old excavation reports, and have also myself directed excavations to better understand such complex enterprises - as a matter of fact, that kind of research is clearly my own main interest. The basis for that was my interest in art, which is why I have studied first art and especially sculpture; another subject that interests me are ancient 'pagan' religions, which is why I have also studied theology.

To get a better idea about the Cancelleria Reliefs, I have, therefore, read the recent publications related to the topography of the entire area, comprising that underneath the adjacent Museo Barracco (cf. *supra*, at Chapters I.1.-II.4.), which is important for the following reason: there ancient structures have been excavated that belonged to ancient buildings, remains of which have also been unearthed underneath the Palazzo della Cancelleria (cf. *supra*, n. 66 in Chapter I.1.).

For the following, see the maps here **Figs. 58; 59**, labels: CAMPUS MARTIUS; EURIPUS; Palazzo della Cancelleria; SEPULCRUM: AULUS HIRTIUS; Cancelleria Reliefs; Palazzo Le Roy/ Farnesina ai Baullari/ Muso Barracco.

Among those ancient structures is the *Euripus*, a very wide open canal, bordered by two parallel walls, which is running for circa 800 documented metres from west to east through the entire *Campus Martius*, and on top of which both Renaissance Palazzi were built, that are now known as the Palazzo della Cancelleria and the Museo Barracco. Fedora Filippi (2010, 59-63, Figs. 33; 34, quoted verbatim *supra*, n. 293, in Chapter I.3.2.). See for a good summary of those excavations, Maria Teresa D'Alessio (2017, 505: 2.6.4, p. 506 with n. 248, p. 515: 2.8.2., p. 520; cf. *supra*, n. 72, in Chapter I.1., quoted verbatim *supra*, n. 326, in Chapter II.1.e).

Fedora Filippi (*op.cit.*) has studied the excavations of those sections of the *Euripus* that are located within the areas of the Palazzo della Cancelleria and of the Museo Barracco. At one stage in antiquity precisely that part of the *Euripus* had to be rebuilt at a higher level, a procedure, undertaken together with the second levelling of the terrain of this area of the *Campus Martius*, which is datable to the second century AD. Since the Cancelleria Reliefs occurred in the deposit of the 'Second sculptor's workshop', immediately to the *north* of this part of the *Euripus*, that is to say, within the area that, together with this section of the 'original' *Euripus* was covered at that stage, those recent findings are decisive for a understanding of the stratigraphy of the findspot of those panels. Besides, in the early Flavian period, the terrain in this area had already been levelled for the first time: but only that area which was located immediately to the *south* of the *Euripus* (cf. *infra*).

Concerning the stratigraphy and the topography of the area, I follow therefore those aforementioned recent scholars: the area of the deposit of the 'Second sculptor's workshop', where the Cancelleria Reliefs were excavated, was either covered, as Magi had suggested, by circa AD 120 at the latest (cf. MAGI 1945, 140; cf. *supra*, at n. 141, in Chapter I.1., quoted verbatim in n. 255, in Chapter I.3.1.), followed by Pentirici (2009, 162 with n. 97, p. 205 with n. 31, quoted verbatim *supra*, in Chapter I.3.1.), or by circa AD 150 at the latest. Pentiricci (2009) bases his conclusion ('by circa AD 120') on his new findings concerning the stratigraphy of the area, and on the analyses of all related architectural and archaeological finds; in his opinion the latest

find that may be attributed to the 'Second sculptor's workshop', is the above-mentioned "rilievo di prova", which Pentiricci dates to the Hadrianic period (cf. *supra*, in Chapter I.3.1; and at n. 292, in Chapter I.3.2.).

Carignani and Spinola (2009; cf. *supra*, n. 76, in Chapter I.1., and n. 287, in Chapter I.3.2.), who arrive at the later date for the covering of the 'Second sculptor's workshop' (i.e., 'by circa AD 150'), have studied the architectural and sculptural fragments, excavated underneath the Palazzo della Cancellaria that are kept at the Musei Vaticani. They discuss *inter alia* an unfinished female head (another proof that this was the area of a sculptor's workshop; note that the authors mention many more of such proofs; cf. *supra*, n. 76, in Chapter I.1., and n. 287, in Chapter I.3.2., their cat. no. 2), found underneath the Palazzo della Cancellaria. Carignani and Spinola (2009) themselves do not explicitly attribute this (now lost) head to the here existing 'Second sculptor's workshop'. This 'Second sculptor's workshop' was located *to the north* of the *Euripus*, and within the area of this enterprise also the Cancellaria Reliefs were excavated.

The sculptor's workshop in question had a long history. Its original location had been close by, immediately to the *south* of the *Euripus*, but still within the area of the Palazzo della Cancellaria. In order to more easily distinguish it from the site, where the Cancellaria Reliefs were excavated (i.e., the here-so-called 'Second sculptor's workshop'), I call its original location the 'First sculptor's workshop'. The first location of this enterprise has been found in the course of the excavations underneath the Palazzo della Cancellaria (for the following, cf. Pentiricci 2009, quoted *verbatim supra*, in Chapter I.3.1.). When the area immediately to the south of the *Euripus* had been covered in the course of the first levelling of the terrain in the early Flavian period, this 'First sculptor's workshop' had been moved to the area immediately to the *north* of the *Euripus*, to become the 'Second sculptor's workshop', the site of which, immediately to the east of the tomb of Aulus Hirtius, was still within the area of the Palazzo della Cancellaria, as described by Pentiricci (2009).

The location of this 'Second sculptor's workshop' is labelled on Pentiricci's accompanying plan (cf. M. PENTIRICCI 2009, 139 "Fig. 33. Periodo 3 - Planimetria generale dei ritrovamenti (dis.[egno] G. Schingo)"). On this plan are marked the tomb of Aulus Hirtius and the *Euripus*, with the two parallel walls to the south of it, both structures are not labelled. To the north of the *Euripus* and to the east of the tomb of Hirtius, we find the labelling: officina marmoraria; cf. p. 138ff.: "L'officina marmoraria". In this chapter, Pentiricci (2009) mentions that in the relevant excavation, unfinished architectural fragments and chips of working travertine and marble had been found. To these finds, Pentiricci (2009, 62 n. 441), refers also in his Chapter "§ 8 L'officina marmoraria". The relevant passage is quoted *verbatim supra*, in Chapter I.3.1. The "officina marmoraria" is also marked on the plan that accompanies the text of Pentiricci (2009, 151, Fig. 60).

For the *Euripus* and the two parallel walls to the south of it, cf. Magi (1945) 38, reproduced in Langer and Pfanner (2018, 21, Abb. 3b, labels: SEPOLCRO DI AULO IRZIO; EURIPO; MURO CON CORNICI DI MARMO; MURO IN BLOCCHI DI TUFO).

There, at the 'Second sculptor's workshop', the Cancellaria Reliefs were excavated, because that enterprise disappeared in the course of the second levelling of the terrain, which covered the area of the 'original' *Euripus* itself - immediately to be substituted by a section of the new *Euripus*, built at the relevant higher level - as well as the area immediately to the north of the 'original' *Euripus* (cf. F. FILIPPI 2010, 59-63; cf. *supra*, n. 293, in Chapter I.3.2.).

Because of those new findings, we can be sure that either about AD 120 or else about AD 150 at the latest, the area of the tomb of Aulus Hirtius, comprising the Cancellaria Reliefs, that "were found leaning against the walls of the republican Tomb of Aulus Hirtius" (cf. Diana E.E. KLEINER 1992, 191), had disappeared in the course of the second levelling of the terrain, ordered by Hadrian, or else slightly later.

That Hadrian levelled large areas of the *Campus Martius*, was of course also previously known. Most famous have become two details of this enterprise, the scope of which was to prevent damages caused by the frequently occurring Tiber floods, 1.) the find of a *cippus* of Hadrian's *pomerium* between Via del Campo

Marzio and Via della Torretta in 1930. Circa 3 m underneath this *cippus* was excavated at exactly the same site a *cippus* of Vespasian's *pomerium* (CIL VI, 31538 a-c) - both *cippi* having the same number - which means that Hadrian had raised the entire terrain in question by circa 3 m; 2.) to protect the *Ara Pacis Augustae*, a wall had been erected around it in the second century; from the top of this wall, people could still view the friezes which decorate its perimeter wall. Besides, Edmund Buchner had found in his excavation, conducted in the Via di Campo Marzio in the summer of 1979, *twelve* superimposed levels of the ancient road underneath the modern one (!).

For the find of a *cippus* of Hadrian's *pomerium* right on top of a *cippus* of Vespasian's *pomerium* in Via del Campo Marzio/ Via della Torretta (cf. *supra*, n. 199 in Chapter I.1.1.; and C. HÄUBER 2017, 351 n. 136 [with the recent discussion of these finds]; cf. p. 357 n. 155 [with the discussion by Mario Torelli of the wall, built around the *Ara Pacis Augustae*; cf. p. 398. Cf. M. TORELLI: "Pax Augusta, Ara", in: *LTUR* IV [1999] 70-74, esp. p. 74. For the twelve superimposed levels of the ancient street, excavated by himself underneath the Via del Campo Marzio, and mentioned by E. BUCHNER 2000; quoted *verbatim* in: C. HÄUBER 2017, 430]; for the site of this excavation, cf. E. BUCHNER 1982, 58, Abb. 1, the site on the Via del Campo Marzio is marked: I [= E. BUCHNER 1980, 356, Abb. 1]. Cf. HÄUBER 2017, 353-361 [for the Tiber floods, documented in antiquity and in the post-antique period, that had covered the area of the *Campus Martius*]).

Let's now return to our main subject.

Also other scholars, as for example Langer and Pfanner (2018, 20, quoted *verbatim* above) believe that the date of this (second) levelling of the terrain could help us to understand, how long the Cancelleria Reliefs or the monument or building comprising them, could possibly have existed, before those panels were dismantled, or else before the entire structure comprising those panels was destroyed, and consequently those panels and some remaining architectural fragments of the same structure were brought to the tomb of Aulus Hirtius - a location, which Langer and Pfanner (2018, 20) themselves do not identify as the deposit of a sculptor's workshop though, as we have seen above.

Personally, I believe that already Nerva had ordered the destruction of the monument or building to which the Cancelleria Reliefs belonged (cf. *supra*, at Chapters II.3.2.; and II.3.3., and *infra*, at Chapter V.1.c)); as we have just seen above, also Langer and Pfanner (2018, 82) tentatively suggest the same.

If that should be true, this would mean that those slabs had been stored at this deposit of the 'Second sculptor's workshop' since quite some time before the entire material kept there disappeared, in the course of covering also the area of the 'original' *Euripus* itself with a layer of earth, as well as the area immediately to the north of this 'original' phase of the *Euripus*.

If true, this would prove at the same time, that the owner of the Cancelleria Reliefs had not found any other use for the Cancelleria Reliefs in the meantime.

Not by chance, as I believe. Given the dates ca. AD 120 or AD 150 at the latest for the second levelling of the terrain in question, and considering at the same time that Antoninus Pius did not build very much at Rome (cf. *supra*, at n. 363 in Chapter II.3.3.a), only Nerva, Trajan and Hadrian could (in theory) have had the chance to re-use those panels, none of whom, in my opinion - and that for very different reasons - could have had an interest in doing so. In my relevant reasonings, I have argued with the contents, visualized by those friezes, as well as with the represented ages of the emperor and the togate youth on Frieze B (in the case of Nerva; cf. *supra*, at ns. 351, 352, in Chapter II.3.2.), as well as with the fact that the emperor and the togate youth on Frieze B have not been represented according to a hierarchy of scale (in the cases of Trajan and Hadrian; cf. *infra*).

**Since I myself follow those scholars, who identify the togate youth on Frieze B with Domitian, and thus with a member of the Imperial family, the scale, at which this young man has been represented, does not provide any problem, in case the hypothesis should be true, according to which the togate youth is indeed a portrait of Domitian. - On the contrary, in that case, his scale would rather corroborate this idea.**

Concerning this point, Langer and Pfanner (2018, 78) write about the togate youth on Frieze B:

**"In der römischen Repräsentationskunst begegnet der Kaiser für gewöhnlich nur besonderen Personen auf solcher Augenhöhe. Dazu gehören Götter, Personifikationen, Mitglieder der kaiserlichen Familie oder fremdländische Potentaten" (to this I will come back below, at Chapter V.1.h.1.)).**

We would have a problem with the scale of the togate youth on Frieze B, provided those scholars, comprising Langer and Pfanner (2018) themselves are right (cf. *infra*, at Chapters V.1.h); and V.1.h.1.)), who believe, that this young man is *not* a member of the Imperial family, but rather an allegorical representation, a 'normal' Roman citizen, an *eques*, or a magistrate. Which, if true, would mean that also later emperors could have thought of re-using Frieze B for the illustration of a historical event, in which the togate youth would again be a man, who is *not* a member of the Imperial family. But because on the state reliefs, commissioned by Trajan and Hadrian (cf. *supra*, at ns. 359-362, in Chapter II.3.3.) comparable men, the emperor and for example *Dea Roma* (cf. here Fig. 91) are *all* represented according to a hierarchy of scale, Frieze B, provided its interpretation by those scholars should be true, could *not* possibly have been re-used again by those emperors (but see below). - Apart from the fact that both Cancellaria Reliefs had anyway been heavily damaged in the course of dismantling them from the monument or building, to which they had belonged, or else in the course of destroying the entire structure, comprising those panels - and especially so Frieze B (cf. *supra*, at Chapters II.2.; II.3.; II.3.2.; II.3.3.). - So now also Langer and Pfanner (2018, 82, 84; both passages are quoted *verbatim supra*, in Chapter V.1.a).

Only after this Chapter was written, have I been alerted to the reconstruction by Rita Paris (1994b) of the marble relief of Domitian's *Templum Gentis Flaviae*, which represents 'Vespasian's *adventus* into Rome in October of AD 70' (cf. *infra*, in Chapter V.1.i.3.a) and here Fig. 33). Contrary to what I have just said above, this relief proves that already Domitian had ordered state reliefs, on which the represented figures are designed according to a hierarchy of scale. Both the *Templum Gentis Flaviae* and the Cancellaria Reliefs are datable to the end of Domitian's reign. - If all that should be true, the extraordinary scale of the togate youth on Frieze B (cf. here Fig. 2, when compared with that of Vespasian, standing in front of him) is another means of indicating that this young man can be nobody else than Vespasian's younger son, Caesar Domitian.

*V.1.b) The Cancellaria Reliefs under Nerva - as reconstructed by S. Langer and M. Pfanner (2018) and my own comments on their conclusions. With some remarks on the efforts of Septimius Severus to legitimize his reign*

Connected with these two aforementioned topics - the stratigraphy and topography of the area in question (cf. *supra*, in Chapter V.1.a)) - is another one, that of trying to understand, how the Cancellaria Reliefs have been used after Domitian's assassination (he died on 18th September AD 96; cf. *supra*, n. 304, in Chapter II.1.a).

Langer and Pfanner (2018, 73) write: "Die Umarbeitung des Domitian scheint eine Interpretation zusätzlich zu verkomplizieren. Für die Entscheidung Nervas, sich nur in Fries A darstellen zu lassen, in Fries B aber Vespasian einzusetzen, gibt es verschiedene Erklärungsversuche. Entweder ist in Fries B eine Szene dargestellt, die Nerva nicht für sich in Anspruch nehmen konnte oder wollte, oder Nerva bezog sich bewusst auf Vespasian, wobei das Eine das Andere nicht ausschließt [with n. 91, providing references and further discussion]".

Cf. Langer and Pfanner (2018, 83): "Für die Kaiserbildnisse auf den Cancellariareliefs bedeutet dies: Die Umarbeitung der beiden Kaiserköpfe [*i.e.*, of Domitian: on Frieze A and allegedly also on Frieze B] im Rahmen der *damnatio memoriae* zerstörte nicht die kollektive Erinnerung an den 'schlechten' Kaiser, sondern

hielt sie geradezu aufrecht, denn jeder Zeitgenosse wusste, dass hier ja früher Domitian dargestellt war [with n. 159]". - To both assumptions, here made by Langer and Pfanner, I will come back below.

Immediately after that, Langer and Pfanner (2018, 83) continue: "Das Besondere an den Cancellariareliefs ist vielmehr, dass sich darüber hinaus nichts an den Figuren und Handlungen änderte und die Reliefs sogar an ihrem angestammten Ort verblieben".

Cf. their **note 159**, in which Langer and Pfanner (2018, 83) make an important observation concerning the Cancellaria Reliefs: "**Diese Form der Umarbeitung in einem narrativen Kontext ist nur bei den Cancellariareliefs erhalten. In den übrigen bekannten Fällen der monumentalen Staatsreliefs wird der Kaiser komplett entfernt und sein Name eradiert: vgl. Geta am Bogen des Septimius Severus und Commodus auf einem Relief im Konservatorenpalast. Vgl. zuletzt F. Krüpe, Die Damnati memoriae. Über die Vernichtung von Erinnerung. Eine Fallstudie zu Publius Septimius Geta (198-211 n. Chr.) (Gutenberg 2011) [my emphasis]**".

In addition to this, Langer and Pfanner (2018, 82, 84, both passages quoted *verbatim supra*, in Chapter *V.1.a*)) suggest that, after Domitian's death the monument or building, to which the Cancellaria Reliefs belonged, was not immediately destroyed, since this structure had presumably served a more general purpose than predominantly celebrating Domitian.

This idea had already been voiced by Marianne Bergmann (1981, 25 with n. 28, quoted *verbatim supra*, at **n. 252**, in Chapter *I.3.*), followed by Hölscher (2009a, 54-56, quoted *verbatim supra*, at **n. 253**, in Chapter *I.3.*).

What the possible motivation concerns, that may have led Nerva (for him, cf. *supra*, **n. 322**, in Chapter *II.1.e*.) to order the recutting of the face of Domitian on Frieze A of the Cancellaria Reliefs into a representation of his own, Langer and Pfanner (2018, 83) stress the shortness of Nerva's reign, and state that for him no military activities of greater importance are recorded:

"Die extrem kurze Regierungszeit Nervas lässt einen daran zweifeln, dass auf Relief A ein konkretes historisches Ereignis gemeint ist, zumal die Umarbeitungen gleich nach dem Sturz Domitians ausgeführt oder wenigstens geplant worden sein müssen. **Der hochbetagte Nerva regierte knapp 13,5 Monate (18.9.96-27.1.98 n. Chr.) und war zum Schluss seines Lebens krank [with n. 160, providing references]. Für ihn sind keine militärischen Aktionen von größerer Tragweite überliefert [my emphasis]**".

Of the latter opinion had already been Marianne Bergmann (1981, 31; quoted *verbatim supra*, **n. 338**, in Chapter *II.3.*).

As a consequence of this (in my opinion erroneous assumption, cf. *infra*, at Chapter *V.1.c*)), Langer and Pfanner (2018, 83) therefore develop the idea that such state reliefs did not serve predominantly the function of celebrating the historic actions of the emperor, who commissioned the work, but - because they believe that Nerva did not have anything of the kind to celebrate - that such state reliefs glorified instead predominantly certain virtues of emperors, in the specific case of Frieze A of the Cancellaria Reliefs *virtus* and *victoria*, 'that were among the primary virtues of the *princeps*' (so Langer and Pfanner (2018, 83), which results in their further assumption that such reliefs could easily be re-used by other emperors.

Langer and Pfanner (2018, 83) write: "Ist auf Relief A tatsächlich eine *profectio*, also ein Aufbruch, gemeint, könnte dieser immerhin von Nerva geplant gewesen sein. Die hier dargestellten *virtus* und *victoria* gehörten zu den Primärtugenden des Prinzeips und passten somit immer zum neuen Kaiser. Bei der viel diskutierten Frage zum historischen Background der monumentalen römischen Staatsreliefs könnte das Cancellariare Relief A als Kronzeuge dafür herhalten, dass die ideologische Botschaft und der allegorisch-symbolische Gehalt wichtiger gewesen sind als die konkrete historische Handlung".

Langer and Pfanner (2018, 62; cf. pp. 73, 83, 84) cannot explain, why Nerva had allegedly chosen to order the reworking of the (alleged) original portrait of the Emperor Domitian on Frieze B into a portrait of his "Vorvorgänger, Kaiser Vespasian [pre-predecessor Vespasian']".

Langer and Pfanner (2018, 62) write: "Für den Großteil der hier aufgezeigten Probleme gibt es mit dem heute zur Verfügung stehenden methodischen Instrumentarium der Klassischen Archäologie keine zufriedenstellende Lösung. Dabei ist für die Reliefs ein entscheidender Punkt mehr oder weniger in den Hintergrund geraten: nämlich die Tatsache der Umarbeitung als solcher und das erstaunliche Phänomen, dass Nerva sich auf seinen Vorvorgänger, Kaiser Vespasian, bezieht".

Cf. Langer and Pfanner (2018, 83-84): "**Warum Nerva auf Relief B den Domitian zu einem Vespasian, einem seiner Vorvorgänger (reg.[iert] 69-79 n. Chr.), und nicht zu seinem eigenen Porträt umgearbeitet hat, wissen wir nicht.** Vielleicht was das Geschehen (*adventus?*) beim besten Willen nicht mit Nervas Vita kompatibel oder Nerva wollte unbedingt einen Vespasian. **Wie dem auch sei - Tatsache ist, dass Vespasian, der Stammvater der flavischen Dynastie, dargestellt ist, und dass ihn Nerva groß in Szene setzte. Dieser eindeutige Rückbezug auf die flavische Dynastie, der bisher in der Forschung unterging, ist vielleicht der historisch interessanteste Aspekt der Cancellariareliefs** [with n. 161; my emphasis].

Der dynastische Gedanke ist bei allen antiken Potentaten und Herrscherhäusern von entscheidender Bedeutung [with n. 162]. Mit echter oder vermeintlicher Genealogie, die gar bis auf die Götter zurückgeht, legitimieren sie ihren Herrschaftsanspruch. Die julisch-claudischen Kaiser, die Flavier (*templum gentis Flaviae!*), die Adoptivkaiser Trajan, Hadrian und die Antoninen, die Severer usw. propagieren alle ihre Familiendynastie. Nerva kam unvermittelt an die Macht und konnte keine dynastische Legitimation vorweisen. Er musste vor allem eine Herrschaftskontinuität gewährleisten, zumal es zu Beginn seiner Regierungszeit gewisse Schwierigkeiten gab, u. a. [unter anderem] mit den Prätorianern, denen er sich mutig entgegengestellt haben soll [with n. 163].

**Die durchaus überraschende Darstellung des Vespasian, eines längst verstorbenen Kaisers, auf Fries B ließe sich also dahingehend erklären, dass Nerva bewusst an die flavische Dynastie anknüpft. Domitian setzte die gute Herrschaftstradition seines Vaters Vespasian und seines Bruders Titus nicht fort und wurde folgerichtig eliminiert. Bildlich wird dies durch die Umarbeitung mehr als sinnfällig, indem Nerva auf Fries A den Platz von Domitian einnimmt und damit zum >ideellen Sohn< des Vespasian wird. Er korrigiert die Fehlentwicklung Domitians und garantiert für die Fortsetzung der guten flavischen Tradition** [with n. 164]. Eine Le-[page 84] gitimation und Kontinuität der Herrschaft kann man kaum besser und prägnanter zum Ausdruck bringen! Die Cancellariareliefs sind das einzige historische Zeugnis, das diesen Gedanken Nervas manifestiert [with n. 165; my emphasis].

In der Regierungszeit des Nerva dürfte jedem klar gewesen sein, dass auf den Reliefs ursprünglich Domitian dargestellt gewesen ist. Die Umarbeitung beider Friese benutzte Nerva geschickt zur Herrschaftsstabilisierung. **Den Bildinhalten wurde dabei ein spezifisch dynastischer Gedanke hinzugefügt, in dessen Mittelpunkt der >Rollentausch< von Domitian und Nerva innerhalb der flavischen Dynastie stand. Dies gelang einzig und allein durch die Umarbeitung zweier Köpfe, welche die Erinnerung an Domitian und sein Ende latent wachhielten und zugleich Nervas Qualitäten besonders hervorhoben** [my emphasis]. In their notes 161-165, Langer and Pfanner (2018) provide further discussion and references.

**Since I do not agree with Langer and Pfanner (2018, 84) concerning three remarks in their last paragraph, quoted above, I do not subscribe to their here summarized entire scenario :**

1.) I do not follow Langer and Pfanner (2018, 84; cf. their p. 83, for another similar passage, quoted *verbatim supra*), in assuming that 'during Nerva's reign all beholders of the Cancellaria Reliefs should have known that originally Domitian had been represented on those panels'.

I rather believe that those reliefs have never been visible to the public, simply because they had still been unfinished, when Domitian died. I have therefore suggested that the structure in question, to which the Cancellaria Reliefs belonged, was still a building site, and that therefore those friezes, possibly the horizontal

panels in the bay of an arch (cf. *supra*, at Chapter I.3.), were not visible from outside the fence, that surrounded this building site (cf. *supra*, at n. 342, in Chapter II.3.1.a).

Also Giandomenico Spinola (see below, at *The Contribution by Giandomenico Spinola on the Cancellaria Reliefs*) writes that the building, to which the Cancellaria Reliefs belonged, was not finished in Domitian's lifetime.

Besides, the reworking of the Cancellaria Reliefs, commissioned by Nerva, had not even gotten so far, as to complete his own portrait on Frieze A. In my opinion, Nerva's portrait on Frieze A has not been finished, because even before that could be accomplished, Nerva himself had ordered the destruction of the Domitianic structure containing the Cancellaria Reliefs (cf. *supra*, at Chapters II.3.2.; II.3.3.; II.3.3.a), and *infra*, at Chapter V.1.c)).

**That it may have been Nerva, who had ordered the destruction of the monument or building, that contained the Cancellaria Reliefs, has also tentatively been suggested by Langer and Pfanner themselves (cf. *id.* 2018, 82, quoted *verbatim supra*, in Chapter V.1.a). If true, the public has indeed never seen the Cancellaria Reliefs.**

2.) Neither do I follow the assertion of Langer and Pfanner (2018, 83-84; cf. their pp. 62, 73 and 83, for other similar passages, quoted *verbatim supra*), according to which 'two heads' were reworked on the Cancellaria Reliefs (*i.e.*, the head of Domitian on Frieze A into Nerva, and the alleged original head of Domitian on Frieze B into the extant portrait of Vespasian (cf. *infra*, at Chapter V.1.h.2.)).

3.) Nor do I follow the assertion of Langer and Pfanner (2018, 83-84), according to which Nerva, by reworking the Cancellaria Reliefs, 'added a specific dynastic thought' to them. - The reason being that I, contrary to Langer and Pfanner (*op.cit.*), do not believe that the extant head of the emperor on Frieze B (*i.e.*, of Vespasian; cf. here **Figs. 1 and 2 drawing: figure 14**) is the result of the recutting of an allegedly original portrait of Domitian into the head of the founder of the Flavian dynasty, that had been ordered by Nerva (cf. *infra*, at Chapter V.1.h.2.)).

On 7th March 2020, I had the chance to discuss with Eugenio La Rocca in Rome the just mentioned assertion of Langer and Pfanner (2018, 83-84), according to which Nerva, by reworking the Cancellaria Reliefs, 'added a specific dynastic thought' to them by (allegedly) ordering the reworking of the (alleged) original head of Domitian on Frieze B into the extant portrait of Vespasian (cf. here **Fig. 2; Fig. 1 and 2 drawing: figure 14**). La Rocca agreed with me that this assumption is not convincing.

*In the following, I allow myself a digression on Septimius Severus'  
'self-adoption' into the Antonine dynasty*

Although, because Langer and Pfanner (2018, 83-84) themselves believe that the portrait of Vespasian on Frieze B is the result of Nerva's commission to recut the alleged original portrait of Domitian, I find it very well understandable - when seen from their perspective - why the authors suggest that Nerva 'added a specific dynastic thought' to the Cancellaria Reliefs. It is enough to remember the example of Septimius Severus (emperor AD 193-211), to which we will now turn.

**Exactly because of his lack of legitimation, Septimius Severus, in AD 195, "proclaimed himself son of the deified Marcus [Aurelius] and brother of the deified Commodus, both of which he needed as legitimation for his reign. In 195, he consequently began to use the title *pius* on coins".**

Achim Lichtenberger (2011) has aptly described the whole procedure as Septimius Severus' "Selbstadoption" ('self-adoption') into the Antonine family. Certainly not exactly an easy task, 'since Severus had first to "force through" [so Itta Gradel 2004] the deification of Commodus'.

All quotes are from Häuber (2014a, 707 with ns. 131-135; cf. I. GRADEL: "Heroization, Apotheosis", in: *ThesCRA II* (2004) 191, 198; A. LICHTENBERGER 2011, 48, 64, 97, 322, 386).

In addition to this, Severus modeled his own portraits on those of his 'father', *Divus Marcus Aurelius*, and also on those of his 'brother', *Divus Commodus*. Severus modeled another one of his portrait-types on Serapis, because Serapis was "il vero e proprio dio di legittimazione dei Severi" (so Alfred Grimm 1997), and even ordered creations of images of gods, the faces of which were similar to his *own* portrait.

**In short, Severus used for this 'self-advertisement campaign' the usual combination of appropriately applied astrology (of which he was a great expert himself), coins, the public dedications of large sculpture groups all over the Roman Empire (that contained portraits of his family), and religion.**

**Severus likewise dedicated portrait groups of his *domus divina*, including *Divus Commodus*, thus using "the power and persistent influence of images that act as a stabilizing force for governments" - so Herwig Maehler 2003 (referring with this statement to Octavian/ Augustus, who initially had the same problem of legitimization as Septimius Severus).**

See Herwig Maehler (2003, 215, quoted *verbatim* in: C. HÄUBER 2014a, 695 with n. 2; cf. pp. 726-727 with ns. 56, 58 [for Severus' portraits modeled on those of Marcus Aurelius and on those of Commodus]; cf. p. 722 [for Severus' 'Serapis portrait-type']; cf. p. 682 with n. 105 [for A. GRIMM 1997, 132]; cf. p. 688 with n. 172 [for images of Sol resembling the portrait of Severus]; cf. p. 720 with n. 288 [for Severus, being an expert on astrology]; cf. pp. 678-679, 682, 687-688 [for Severus' dedications of large statue groups, comprising portraits of himself and of his family ]; cf. p. 227 with n. 261 [for Severus' dedications of statue groups of his *domus divina*]).

For Septimius Severus 'self-acclaimed ancestry'; cf. also Susann S. Lusnia (2004, 517, 526, 533, 538-541, quoted *verbatim* in: C. HÄUBER 2014a, 688, note 167); below, at *The fourth Contribution by Peter Herz* in this volume ("Wann wurde Trajan von Nerva adoptiert?"); *supra*, at Chapter V.1.b); and *infra*, at *A Study on the colossal portrait of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori at Rome (cf. here Fig. 11)*. With The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great); at Part II. *Ancient Rome's new commercial river port, at La Marmorata. With discussions of the 'Porticus Aemilia' (in reality identifiable as Navalvia) and the Horrea Aemilia*. With The sixth Contribution by Peter Herz : Rom. Strukturen der Versorgung; and with The second Contribution by Franz Xaver Schütz : Wie schwer war der ägyptische Obelisk, der heute auf der Piazza di S. Giovanni in Laterano in Rom steht?

**But contrary to Nerva, Severus' relevant aims are undeniable. By applying all 'public relation tricks' and 'mass media', known in antiquity, he had cleverly orchestrated the above-mentioned extraordinary wide range of activities, that were supposed to support his invented claims. - It is those activities that are very well documented by our visual and literary sources.**

Besides, Langer and Pfanner (2018, 84) themselves write in the above-quoted passage, that:

"Die Cancellarieliefs sind das einzige historische Zeugnis, das diesen Gedanken Nervas manifestiert" ('the Cancellaria Reliefs are the only historical evidence that manifests this thought of Nerva').

Provided, Nerva had indeed in mind to 'adopt himself into the Flavian dynasty', as Langer and Pfanner suggest, he could have done all sorts of things to make people believe that such alleged family bonds actually existed: but the complete lack of any kind of relevant 'evidence' speaks against this idea.

Let's now return to our main subject.

Langer and Pfanner (2018) write elsewhere on p. 84:

**"Deutung: Die Darstellungen sind singulär und nicht abschließend geklärt. Fries A thematisiert vermutlich den Auszug (*profectio*) aus Rom mit Betonung des militärischen Aspekts und der kaiserlichen Tugenden *virtus* und *victoria*, Fries B die Ankunft (*adventus*) in Rom und die Begegnung mit den wichtigsten stadtrömischen Repräsentanten unter Heraushebung des zivilen Aspekts inklusive der *virtutes pietas* und *concordia* [my emphasis]"**.

For their latter observation, that Frieze B represents the: "*virtutes pietas* und *concordia*", Langer and Pfanner (2018, 84) do not themselves provide a reference. I agree with their statement, but for reasons, to which they themselves object. These two virtues are mentioned by Pfeiffer (2009, 62), in his discussion of Frieze B of the Cancelleria Reliefs, whom Langer and Pfanner (2018, 27) themselves quote in their bibliography, but do not discuss in this context. - But, Pfeiffer (*op.cit.*), in my opinion rightly, comes to this conclusion, because he follows Magi (1939; 1945) in assuming that Frieze B showed from the very beginning Vespasian, who with the gesture of his right hand gives the togate youth Domitian the legitimation to reign as emperor (for a discussion; cf. *infra*, at Chapter VI.3).

Pfeiffer (2009, 62) writes:

**"Neben die von Domitian besonders geschätzten Gottheiten Jupiter und Minerva trat der Kult der eigenen Vorfahren, der dem Kaiser vor allem aus legitimatorischen Gründen wichtig war. Er bemühte sich, seiner eigenen Dynastie Frömmigkeit (*pietas*) zu erweisen und sie auf diese Weise mit dem julisch-claudischen Kaiserhaus gleichzusetzen. Bildlich vor Augen führen uns die *pietas*-Politik gegenüber dem Vater die beiden in der archäologischen Forschung bezüglich ihrer Interpretation mehr als umstrittenen sogenannten Cancelleria-Reliefs (vgl. zuletzt Henderson 2003). Sie sind nach ihrem Fundort im Garten des Palazzo della Cancelleria Apostolica benannt. **Eines der beiden Reliefs [i.e., Frieze B; cf. here Fig. 2; Figs. 1 and 2 drawing] zeigt auf jeden Fall Domitian mit Vespasian. Vater und Sohn werden von Minerva, Rom und den Genien von Senat und Volk Roms begleitet. Auf diese Weise ist nicht nur die Legitimation der Herrschaft des Domitian durch seinen Vater verkündet, sondern auch der *consensus universorum*, die Zustimmung zu seiner Herrschaft durch die Götter und die Untertanen [my emphasis]**". - This passage was already quoted above (cf. *supra*, at Chapter II.3.1.c)).**

Langer and Pfanner (2018) write elsewhere on p. 84: "Okkupation durch Nerva und der dynastische Gedanke: Nach der Ermordung Domitians ließ Nerva die Kaiserköpfe umarbeiten. Die Reliefszenen gelten jetzt für Vespasian bzw. Nerva. Reale Ereignisse seiner kurzen Regierungszeit von nur 13,5 Monaten können sich kaum in der Darstellung niedergeschlagen haben. **Die Einbindung Vespasians bezeugt den Wunsch Nervas nach politischer Kontinuität und die Anbindung an die flavische Dynastie. Den >schlechten Sohn< Domitian ersetzt in Realität und Bild der >gute Sohn< Nerva [my emphasis]"**.

In their final statement, Langer and Pfanner (2018, 84-85) write:

Die Cancelleriareliefs sind ein Paradigma für die Bildsprache des sog. historischen Reliefs und für das Wesen der *damnatio memoriae* und des Prinzipats.

Nur hier wird der Kaiser im Kontext eines vielfigurigen Reliefs umgearbeitet. Dabei genügt die Transformation des Kaiserkopfes. Alles andere bleibt gleich. Der neue Kaiser vollbringt dieselben Handlungen wie sein Vorgänger und lässt sich von denselben Personen und Göttern flankieren. Er macht es jetzt freilich richtig! Sein Handeln sowie die Institution des Kaisertums werden als solche nie in Frage gestellt. **Im Bild tritt die Historie gegenüber den allgemein gültigen Aussagen zu den Kaisertugenden zurück, denn die Reliefbilder gelten genauso für den neuen *princeps***. Die Umarbeitung tilgt nicht das Andenken des gestürzten Herrschers, sondern ist vielmehr eine immanente bzw. permanente Erinnerung und Warnung, was einem >schlechten< Kaiser passieren kann und wird [my emphasis]"

Their just quoted sentence (cf. Langer and Pfanner 2018, 84-85):

"Im Bild tritt die Historie gegenüber den allgemein gültigen Aussagen zu den Kaisertugenden zurück", appears similarly in an already earlier quoted passage (cf. Langer and Pfanner 2018, 83):

"... Bei der viel diskutierten Frage zum historischen Background der monumentalen römischen Staatsreliefs könnte das Cancellariare Relief A als Kronzeuge dafür herhalten, dass die ideologische Botschaft und der allegorisch-symbolische Gehalt wichtiger gewesen sind als die konkrete historische Handlung [my emphasis]".

Langer and Pfanner (2018, 84-85; cf. p. 83), in the just quoted sentence from their final passage (which I have slightly changed in my following English translation, by using some words from their similar passage on p. 83), thus express their opinion, that:

'in the image the concrete historical action has less importance than the generally valid statements concerning the imperial virtues, because the relief images are equally valid for the new *princeps*' - meaning with 'the new princeps' the Emperor Nerva.

What Frieze A concerns, I can follow the conclusion of Langer and Pfanner (2018, 84-85), because of the following reasons. Nerva ordered his artists to re-use Frieze A for his own purpose - obviously, without any problems (one of the reasons for that has already been observed by Pentiricci 2009, 57; quoted *verbatim supra*, n. 133, at Chapter I.1.).

And that, although Nerva himself definitely did *not* have Minerva as his personal patron goddess - whereas Domitian did (cf. *supra*, at n. 240, in Chapter I.2.). This means, although it had been one of Domitian's very 'personal' choices, to have Minerva placed by the artists at this very privileged position immediately in front of him on Frieze A (cf. *supra*, at n. 239, in Chapter I.2.), Nerva, having 'usurped' Domitian's own place on Frieze A, obviously did not mind of being now himself 'paired' with this specific goddess as his personal companion.

This fact therefore seems to prove the conclusion, at which Langer and Pfanner (2018, 84-85) have arrived, namely that it is not so much the 'real personal relationship' of Domitian with Minerva, what counts on Frieze A, but rather 'abstract' concepts of imperial virtues, such as *pietas* (as I would suggest in Domitian's case, in relation to the gods, represented *inter alia*, but foremost by his personal patron goddess Minerva), and - *consequently* - *victoria*, since Minerva is one of his divine *comites* (together with Mars; cf. *supra*, n. 227, in Chapter I.2.), who will guide him to his victory. Apart from the fact that there is also *Dea Roma*, likewise shown 'next to Domitian', but on his 'other' side, who represents, in my opinion, together with the *Genius Senatus* and the *Genius Populi Romani*, Domitian's (now Nerva's) faithful and solid 'home base' at Rome (cf. *supra*, at n. 234, in Chapter I.2.). - Or *virtus* and *victoria*, as Langer and Pfanner (2018, 83) themselves suggest, as being the principal imperial virtues, visualized on Frieze A.

That Domitian had ordered his artists to lay stress on his *pietas* in Frieze A, I have already suggested above (cf. *supra*, in Chapter I.2.1.a), and *infra*, at Chapter V.1.i.3.b), Section III.), because Domitian is holding a *rotulus* in his left hand, an observation which I allow myself to repeat here again:

'I believe that this *rotulus* contains Domitian's *vota*, that he will fulfill, provided the gods, to whom he has prayed - presumably Jupiter - should grant him the desired victory in the war to which he is leaving. Not by chance, Domitian has ordered his artists to represent Vespasian on Frieze B as being accompanied by a man in his entourage who carries likewise a *rotulus* (cf. here **Figs. 1 and 2 drawing: figure 17**). The *rotulus*, carried for Vespasian on Frieze B certainly contains Vespasian's relevant *vota*, which he, since Jupiter has already granted him the desired victories, will now certainly fulfill in due course. Thus, by representing those *rotuli*, Domitian has ordered his artists to lay great stress on propagating that Vespasian and he himself show *pietas* towards the gods.

I have obviously followed with these suggestions Erika Simon, whose entry on the Cancellaria Reliefs I had consulted several times, looking for something else.

When I went back to it, I found more material; cf. Simon (1963, 9), who wrote about **figure 17** on frieze B):

"Den Zug beschließt eine Gestalt in doppelt geschürzter Tunika, wohl ein Kultdiener. Die Schriftrolle in seiner Linken enthält vielleicht ein Verzeichnis der gelobten Opfer, die der Feldherr bei seiner Rückkehr einzulösen hatte. Denn hier handelt es sich um eine Rückkehr (reditus), eine feierliche Ankunft (adventus) des Kaisers in Rom". And on the *rotulus*, held by Domitian (now Nerva) on frieze A, Simon (1963, 10) wrote: "Die Rolle in seiner [*i.e.*, Domitian's, now Nerva's] beringten Linken weist wohl wie bei der Gestalt in B auf Opfer hin, die pro reditu gelobt worden waren".

Although, as already mentioned, I do not agree with Langer and Pfanner (2018, 45-46; cf. p. 83), who refer to the amazon-like figure on frieze A as "Roma/Virtus" (for that interpretation of this figure, cf. *supra*, n. 221, in Chapter I.2.), but identify her rather with *Dea Roma* (cf. *supra*, at Chapter I.2.).

Therefore, it is in my opinion not the alleged "Roma/Virtus" of Langer and Pfanner (2018, 45-46), who is the decisive *personal companion* of Domitian (now Nerva) on Frieze A, but Minerva. - Consequently, in my opinion, not '*virtus* and *victoria*' are literally represented on Frieze A, as asserted by Langer and Pfanner (2018, 83: "Die hier dargestellten *virtus* und *victoria*"), since, contrary to their own assumption, the allegorical representations *Virtus* and *Victoria* are not *both* present on Frieze A. I, therefore, rather maintain my own suggestion, made above, that Frieze A visualizes the most important aspect of the one *virtus*, expected on principle from a Roman emperor : his '*invincibility*' (cf. *supra*, at n. 282, in Chapter I.3.2: C. HÄUBER 2017, 22, 520-521). - See also John Pollini (2017b, 124, quoted *verbatim infra*, in volume 3-2, at *Appendix IV.c.1.*)).

Because of this, I have written above: "*consequently - victoria*", because in this complex construction of a Roman emperor's *virtus*, only his *virtus* -

in the case of Domitian on Frieze A, his *pietas* in regard to the gods, expressed on Frieze A especially by Domitian's relation to Minerva, his personal patron goddess, who is therefore characterized by means of the composition as being '*closest*' to him -

can help him to successfully strive for and finally attain *victoria*, or '*invincibility*' - but not without decisive and ultimate divine interference !

Because *victoria* could only be granted by the gods. - As already mentioned above: '*At Jupiter's orders and under his guidance the Romans fought their wars, and to him they consequently attributed their military victories*' (cf. *supra*, at n. 431, in Chapter III.).

But of course also the god Mars on Frieze A has a strong relation to the *virtus* of the represented Emperor Domitian (now Nerva), as Henderson (2003, 251) observes: "... but the massive god of war pledges that *manliness (uirtus)* brings Roman success".

Or in other words: on Frieze A, a *profectio*, Minerva, Mars and *Victoria* '*promise*' Domitian (now Nerva) *victoria*, whereas an *adventus*, for example that of Vespasian (here **Fig. 2**), according to this -

quasi-theological, as one might call it -

way of thinking, may be regarded as the visual '*proof*' that the emperor in question has already demonstrated his *invincibility*, and thus his *virtus*. An emperor, represented in such *adventus*-scenes, could therefore be characterized as being closely connected with the supreme god.

As already quoted before (cf. *supra*, n. 361, in Chapter II.3.3.) John Pollini interprets such an *adventus*-scene as follows:

"In sculptural panels in the attic, or uppermost part of this arch [of Trajan at Beneventum], Jupiter in the company of other important state gods extends his thunderbolt (fig. II.39b) to Trajan, his viceregent on earth (fig. II.39c - a gesture of divine approbation to rule and to conquer on behalf of the Roman People" (cf. J. POLLINI 2012, 105, with Figs. II.39b-c [cf. here Fig. 46]).

I have elsewhere regretted the following fact:

"Roman 'pagan' religion was not codified, nor was the complex rôle of the Roman emperor", and find that it is tempting to regard the above-mentioned construction of the emperor's *virtus*, in its distinct reciprocity with the gods, as part of the 'theology of the rôle of the Roman emperor', especially, when we consider that some scholars have already coined the term: ">theology< of the imperial cult" (cf. for both quotes, C. HÄUBER 2014a, 728, 720 with n. 284, providing references).

As I have only realized after this Chapter was written, already Tonio Hölscher (2009b, 59-60, quoted in more detail *supra*, in Chapter IV.1.1.) writes about Alexander the Great: "**Die Theologie der Herrschaft** hatte die Identität von Gott und Herrscher zur Grundlage" (my emphasis).

Coming back to the overall content of Frieze A, as suggested by Langer and Pfanner (2018, 83), this panel definitely comprises a political message, which may indeed be expressed by quoting the *different virtues*, expected from an emperor, as the authors themselves suggest, or rather by quoting the *different aspects* of his one *virtus*, as I believe (cf. *supra*, at n. 282, in Chapter I.3.2.).

And these general, abstract messages could have been adopted by any emperor, so for example also by Nerva, of course, as Langer and Pfanner (2018, 84-85) rightly observe. I therefore certainly agree with Langer and Pfanner (2018, 84-85), that such state reliefs propagated 'imperial virtues' (cf. *supra*, at n. 282, in Chapter I.3.2.).

Apart from that, I have pursued a totally different train of thought in this *Study* than Langer and Pfanner (2018, 84-85), by trying to find the *individual* motivations of each of those emperors, which could explain their decisions concerning the messages of their state reliefs, and in my opinion, those choices refer without exception to events in their own *vita*, be they real or invented.

As also observed by Langer and Pfanner (2018, 73, 83-84) in two above-quoted passages, from which emerge that in their opinion Nerva, at one stage, had probably in mind to re-use Frieze B for the representation of an event in his own *vita*.

Cf. *supra*, at Chapter II.3.1. (referring back to Chapters II.1.c); and II.3.2., summarized in Chapter II.3.3.a)), where I have discussed exactly the same thought.

Contrary to that, the last passage of Langer and Pfanner (2018, 84-85) shows that the authors are of the opinion that, when analysing such examples of state art, the 'personal historical actions' of the relevant Roman emperors, who commissioned those works, appear to be less important than the main message of such reliefs: 'that the emperor is virtuous'.

Personally I therefore do not subscribe to the interpretation of state reliefs, and in particular of the Cancellaria Reliefs, as suggested by Langer and Pfanner (2018, 84-85). Because, when compared with their own conclusion, which I have translated above, I rather believe that quite the *opposite* is true, namely the following: 'in Roman state art, such as the Cancellaria Reliefs, the individual concrete historical action of the represented emperor has - in my opinion - *more* importance than the generally valid statements concerning the imperial virtues, that are likewise implicitly represented on such reliefs'.

Only after I having finished writing this Chapter, have I been alerted by Franz Xaver Schütz to Volker Michael Strocka's publication of 1972, whom Langer and Pfanner (2018) do not discuss. Strocka's introductory remarks on state reliefs ('historische Reliefs') express in much more detail, what I have tried to express with my above-formulated sentence.

Strocka's (1972, 147) writes:

**"Wer die sogenannten « historischen Reliefs » römischer Staatsdenkmäler nur als monumentale Wiedergaben historischer Ereignisse zu deuten versucht, gerät bald in Schwierigkeiten ... Es sollte ihn stören, dass auf dem Cancellariare Relief A [cf. here Fig. 1] bloss der Kopf der Hauptperson verändert werden musste, um die Platten für den Nachfolger Domitians [*i.e.*, Nerva] verwendbar zu machen ...**

**Wenn in Staatsreliefs bestimmte Szenen, etwa Opfer, immer wieder ganz ähnlich vorkommen, scheint es nicht um das einmalige Ereignis zu gehen, sondern um das wiederholte. Solcher Allgemeinheit widersprechen die Genauigkeit in Einzelheiten und die Bestimmbarkeit von Hauptpersonen und verschiedenen Rängen nur scheinbar. Man hat den Eindruck einer sorgfältigen Inszenierung, die das Allgemeine und das Konkrete auf eine besondere Art miteinander verbinden möchte. Folgende Hypothesen drängen sich dazu auf :**

**Die Einzelheiten in einem Monumentalrelief offiziellen Inhalts haben - dem Protokoll eines Staatsaktes vergleichbar - genaue Bedeutung. Wie dort die Zeremonie, erstrebt die Darstellungsform Wirkung nicht bloss um ihrer selbst willen, sondern in der Absicht, den politischen, oft zugleich religiösen Gehalt des realen Vorgangs verbindlich und möglichst einprägsam darzustellen. Dabei bedient sie sich der in der politischen Bildpropaganda - besonders auf Münzen - geläufigen, genau bezeichneten Formeln, die eindeutig und leicht erkennbar sein sollen ... Wenn Idealfiguren oder selbst Götter in der realen Szene auftreten, legen sie die Interpretation erst recht fest. Die allegorische Figur als verkörperte Bedeutung verhindert gerade, die ganze Darstellung nur realistisch zu verstehen ... [my emphasis]"**

Now, I agree completely with Strocka (1972, 147), what his observation concerning Frieze A is concerned.

But Frieze B of the Cancellaria Relief (here **Fig. 2**) is a completely different matter. Because here all the details of the panel that scholars have found so difficult to explain, reflect, in my opinion, the specific situation of Vespasian, when he arrived at Rome in the first half of October in AD 70 (his wearing of civilian garb, the fact that he is not accompanied by his soldiers, and that *Victoria* is crowning him with the *corona civica*). To the effect that none of his successors could possibly have 'usurped' this Frieze to illustrate his own achievements - as Nerva had managed to do without any problems in the case of Frieze A of the Cancellaria Reliefs. For a detailed discussion of these characteristics of Frieze B; cf. *infra*, at Chapters *V.i.1.3.*); and at *The major results of this book on Domitian*.

Contrary to Strocka (1972, 147) I am in the context discussed here personally not interested in the wide range of different perspectives under which such state reliefs could be read, but am only interested in one of these, also addressed by Strocka, namely the question, which historical events are possibly represented on state reliefs, such as the Cancellaria Reliefs. And after what was said above, I am, contrary to Langer and Pfanner (2018, convinced that it must be possible to find out, which precise events the emperors, who commissioned such state reliefs, had wanted their artists to visualize with each of them. Also Strocka (1972, 147) expresses the opinion that the intention was to illustrate specific events during their reigns, but he stresses at the same time very convincingly that this was certainly *not* the only motivation to create such reliefs.

**Contrary to Langer and Pfanner (2018, 84; cf. *infra*, at Chapter *V.1.i.1.*): "Deutung: Die Darstellungen sind singulär und nicht abschließend geklärt ...")**, I believe that it is also possible in the case of the Cancellaria Reliefs to find out, which events they were commissioned to illustrate.

That a Roman emperor presented himself on principle as being virtuous (in state art and elsewhere) is another matter, that tacitly assumed presupposition was - in theory - the *conditio sine qua non* for his position, which, at least at that time, was not questioned, as Langer and Pfanner (2018, 84-85) rightly observe.

The simple fact that the Egyptians, Greeks and Romans, apart from creating such state reliefs, developed the medium 'iconographic portrait' - that, at least in Egypt and Rome, appeared also in state art - proves in my opinion beyond any doubt that sovereigns of (Western) antiquity, such as Roman emperors, wanted to be *personally* remembered through their state art, which they commissioned, and precisely through the 'concrete individual historical actions', that were after all 'documented' by such works. This was, in my opinion - contrary to what Langer and Pfanner (2018, 84-85) suggest - the *raison d'être* of such state art.

The title of Augustus' relevant autobiographical text was certainly not by chance '*res gestae*'. Augustus did not even specify in the title of his book that the subject of his text were, of course, *his own* achievements.

Another indication for the correctness of my assertion is, in my opinion, the fact, stressed by Langer and Pfanner (2018, 78-79; quoted *verbatim infra*, at Chapter V.1.i.1.) themselves, that for example on the always multifigured Roman state reliefs, (almost) all other humans, allegorical representations, and even the gods, are shown as looking *in the direction* of the emperors (cf. here Figs. 1; 2; figs. 1 and 2 drawing).

As already said before, the above-quoted final conclusion, at which Langer and Pfanner (2018, 84-85; cf. p. 83) arrive concerning Roman state art in general, and the Cancellaria Reliefs in particular, which I have slightly changed in my following English translation, by using some words from their similar passage on p. 83), thus express their opinion, that:

'in the image the concrete historical action has less importance than the generally valid statements concerning the imperial virtues, because the relief images are equally valid for the new princeps' - meaning with 'the new princeps' the Emperor Nerva who had ordered to rework Frieze A of the Cancellaria Reliefs in order to show one of his own achievements.

This statement by Langer and Pfanner does not sound, as if it makes much sense to pursue such studies any further - especially the question, which importance on such state reliefs the representations of 'the individual historical actions' of those emperors may have had. But I wonder, whether the conclusions of Langer and Pfanner (2018, 84-85) could have been formulated in this respect more 'positively', had the authors themselves been able to suggest, *what exactly* the Cancellaria Reliefs visualize.

#### *The interpretation of the Cancellaria Reliefs by Joachim Raeder (2010)*

When the manuscript of this volume was about to be sent to the press, I finally read the text, which Joachim Raeder (2010, 141) has written about the Cancellaria Reliefs, whose interpretations of both panels could not be more different than my own, above-summarized conclusions:

"Auf beiden ursprünglich jeweils über 6 Meter langen und 2.06 Meter hohen Reliefbändern ist die Figur des Kaisers durch seine individuelle Physiognomie als *einzig* historisch handelnde Person hervorgehoben - in den zeremoniell repräsentativen Vorgang einer *profectio* (Aufbruch zu einer [kriegerischen] Unternehmung außerhalb Roms) und eines *adventus* (feierliche Rückkehr und Einzug des Kaisers in Rom) gestellt. Der Herrscher ist von Göttern und göttlichen Personifikationen, die die götternahe Stellung des Princeps, die überzeitliche Ordnung des Staatswesens oder abstrakt - ideelle Leitvorstellungen zum Ausdruck bringen, begleitet und umgeben; ihm sind Lictoren, Praetorianer und Vestalinnen zur Seite gestellt, die die magistratische, militärische und pontifikale Amtsgewalt des Kaisers verkörpern. Jeglicher

ereignisgeschichtlicher Bezug ist in der Darstellung unterdrückt, um den Kaiser als Repräsentanten eines Herrscherideals und als Garanten für das Glück und das Wohlergehen des Imperiums in seiner Sieghaftigkeit und Allgegenwart ausgestattet mit *virtus* und *auctoritas* zeigen zu können. Die Allgemeingültigkeit dieses 'Herrscherlobes' ermöglichte nach der *damnatio memoriae* des Domitian die Umarbeitung des Kaiserporträts in beiden Friesteilen, ohne Bedeutungsverlust konnte das Bildnis des Domitian in das des Nerva (Fries A) (Abb. 229c) bzw.[beziehungsweise] das des Vespasian (Fries B) (Abb. 229d) verändert werden".

See for Raeder's (2010) discussion of the Cancellaria Reliefs also *supra*, in Chapter I.1.1.; and *infra*, in Chapter V.1.h.2.), where I reject his above-quoted hypothesis; and in Chapter *The major results of this book on Domitian*.

### To conclude this point.

As we have heard above, already Volker Michael Strocka's (1972, 147) had made the following important observation:

"Wer die sogenannten « historischen Reliefs » römischer Staatsdenkmäler nur als monumentale Wiedergaben historischer Ereignisse zu deuten versucht, gerät bald in Schwierigkeiten ... Es sollte ihn stören, dass auf dem Cancellarielief A [cf. here Fig. 1] bloss der Kopf der Hauptperson verändert werden musste, um die Platten für den Nachfolger Domitians [*i.e.*, Nerva] verwendbar zu machen ...".

But as far as I know, it was first Joachim Raeder (2010, 141), who has defined the wider context of Strocka's observation, by suggesting:

a), that the Cancellaria Reliefs do not praise specific historic events in Domitian's reign, but b) rather imperial virtues; and that those panels could c), therefore, easily be re-used by Nerva.

A comparison of Joachim Raeder's (2010, 141) just-quoted conclusions with the conclusions, at which Langer and Pfanner have arrived, that have been discussed in great detail above (cf. *id.* 2018, 83, 84-85, Section: "2.9.6. Die Geschichte der Cancellarieliefs"; and Section "2.10. Zusammenfassung"), shows the following.

Concerning the just-mentioned points a), b) and c), that Raeder (2010, 141) was first to formulate this way, Langer and Pfanner (2018, 83-85) have come to exactly the same conclusions as Raeder (2010, 141) before them. Langer and Pfanner (2018, 83-85) quote on p. 27 Raeder's account in their bibliography, but do not quote Raeder for these observations, neither in their text, nor in their footnotes.

### V.1.c) The Cancellaria Reliefs under Nerva - as reconstructed by myself in this Study

Concerning the point discussed here, I myself have followed Erika Simon (1985, 554-555, quoted *verbatim supra*, at n. 352, in Chapter II.3.2.), whose article Langer and Pfanner (2018, 25) likewise quote in their bibliography. Contrary to Langer and Pfanner (2018, 83, quoted *verbatim supra*, at Chapter V.1.b)), who stress the shortness of Nerva's reign, and state that for him no military activities of greater importance are recorded, Simon (*op.cit.*) had instead suggested that Nerva's decision to commission the reworking of Frieze A in order to celebrate his own achievements, was based on one - at least for him - important historical fact.

The following is a short summary of my Chapter II.3.2., and of the text at n. 363 in Chapter II.3.3.a).

Under Nerva, in October of AD 97, the governor of Pannonia had been victorious in a campaign against the *Suebi*, a war which according to the Roman way of thinking was won by the reigning emperor himself, as

Simon (1985, 554-555) not only convincingly suggests, but which is proven by the fact that the governor of Pannonia had sent Nerva, as a token of his victory, a crown of laurel leaves, which Nerva, in a solemn ceremony, dedicated in late October or at the beginning of November AD 97 to Iuppiter Optimus Maximus Capitolinus in his temple on the Capitoline.

Simon herself (1985, 554-555) had still suggested the wrong date for the above-mentioned ceremony: '27th October AD 97', which is superseded now. See below, at *The fourth Contribution by Peter Herz : Wann wurde Trajan von Nerva adoptiert?*

**This victory in the *bellum Suebicum* earned Nerva the title *Germanicus*, and as a consequence of this, his official titulature was changed accordingly by adding 'imperator II' to it (for that title, cf. *supra*, n. 351, in Chapter II.3.2.).**

Arthur Stein (1900; cf. *supra*, n. 343, in Chapter II.3.1.a)), after discussing Nerva's adoption of Trajan, wrote that 'because at the same time Nerva received the news concerning a victory won in Pannonia over the *Suebi*, he adopted the victorname *Germanicus*, which also Trajan received', and elsewhere, 'After he [Nerva] had received in 97 the honorary title *Germanicus* and had been hailed as Imperator ... his full name and title at the end of his reign was *Imp. Nerva Caes. Aug., Germanicus, pontifex maximus, tribuniciae potestatis II, imp. II, cos. IV, pater patriae*, cf. *CIL V 4314*'.

Erika Simon (1985, 554-555, quoted *verbatim supra*, at n. 352, in Chapter II.3.2.), who quoted for this information Pliny's *panegyricus* of Trajan, described to following meaningful events:

'As I have already explained before, Frieze A [of the Cancellaria Reliefs] shows a ritual that has repeatedly been conducted by emperors since Augustus (*res gestae* 4): the dedication of laurel as sign of a victoriously ended campaign to Iuppiter Capitolinus. This ceremony is not only recorded for Nero and Domitian [with n. 58], but also for Nerva after the *bellum Suebicum*, which the governor of Pannonia had victoriously ended [with n. 59]: on 27th October 97, the same day, on which Nerva adopted Trajan, *in absentia* of the latter, in a solemn ceremony on the Capitol, he [Nerva] laid the laurel, sent from Pannonia, on the lap of [the cult-statue of] Iuppiter Capitolinus. This action, as Pliny reports in his *panegyricus* [of Trajan], was regarded as a good omen for the adoption of Trajan, that was executed on the same day'.

Thus, according to Simon's (1985, 554-555), as we now know, (erroneous) assertion, Trajan was adopted on 27th October AD 97 by Nerva, as his son, co-Emperor and successor (cf. *supra*, n. 322, in Chapter II.1.e), and n. 350, in Chapter II.3.2.). Trajan, who received the title Caesar as a consequence of his adoption (cf. *supra*, n. 323, in Chapter II.1.e)) was not present at this ceremony on the Capitol; he was the governor of Upper Germany at that stage. Shortly afterwards, in November of AD 97, the Senate bestowed on both Nerva and Trajan the title *Germanicus* for this victory over the *Suebi* (cf. *supra*, n. 344, in Chapter II.3.1.a)). - In my opinion, Trajan received the title *Germanicus* as a result of his adoption by Nerva.

Because I myself, contrary to Marianne Bergmann (1981, 31; quoted *verbatim supra*, n. 338, in Chapter II.3.1.a)) and Langer and Pfanner (2018, 83) - thus following Simon (1985, 554-555) - suggest that Nerva's idea to have himself represented in a *profectio* (*i.e.*, on Frieze A of the Cancellaria Reliefs; cf. here **Figs. 1 and 2 drawing: figure 6**), was at least in so far based on fact that Nerva had officially won a war, I have therefore developed the following scenario.

But note that Simon (1985, 554-555) was of the opinion that Frieze A of the Cancellaria Reliefs shows the *adventus* of Nerva after his victory in the *bellum Suebicum*, and that Nerva is shown as going to the Temple of Iuppiter Optimus Maximus on the Capitoline to dedicate his laurel wreath to him, which *Victoria*, on the far left of the frieze, is carrying for Nerva. Contrary to Simon, I believe instead that Frieze A shows Nerva's *profectio* to the *bellum Suebicum*.

First of all I have, of course, asked myself, whether or not it is conceivable that this Domitianic monument or building could have survived Domitian's assassination and following *damnatio memoriae*, because by October 97, when Nerva may have learned about his victory in the *bellum Suebicum*, had already past 13 months since Domitian's death. But considering the facts that the Domitianic building, to which the Cancellaria Reliefs belonged, was definitely not yet finished, as proven by these panels, which had been carved *in situ* (cf. *supra*, in Chapter II.1.a)), and considering at the same time that the Domitianic Arch on the Palatine / the Arch of *Divus Vespasianus* ? (cf. here Figs. 8.1; 58; 73) and the *Equus Domitiani* on the Roman Forum that, contrary to what one might expect, were by no means completely destroyed after Domitian's *damnatio memoriae*, I think that also this 'Cancellaria building', could have survived until October AD 97.

The reason for my assumptions are:

a) that this was still a building site with a fence around it, and

b) that I tentatively suggest that the Cancellaria Reliefs should be identified as the two horizontal panels in a (triumphal) arch (cf. *supra*, at Chapter I.3.; and *infra*, at Chapter *The major results of this book on Domitian*), which, because *in situ*, and invisible because of the fence around the building site, may therefore have survived, although I suggest that the togate youth on Frieze B represents the young Domitian (cf. *infra*, at Chapter V.1.h.1.)).

We ignore, when exactly in October 97 Nerva received the news of his victory in Pannonia, we only know the approximate date for the two important ceremonies on the Capitoline mentioned above that were the immediate consequence of this: late October or the beginning of November AD 97. Arthur Stein (1900; cf. *supra*, at n. 343, in Chapter II.3.1.a)) who had discussed these events, wrote that the arrival of the news of Nerva's victory in the *bellum Suebicum* and Trajan's adoption occurred 'at the same time', that this victory earned Nerva the honorary title *Germanicus*, and 'that also Trajan received this title' - a way of formulating this latter fact, which already seems to imply that Trajan received the title *Germanicus* later than Nerva. John Brian Campbell (1996; cf. *supra*, at n. 342, in Chapter II.3.1.a); cf. n. 322, in Chapter II.1.e)) is more outspoken: "His [*i.e.*, Nerva's] own title *Germanicus*, granted for a minor victory over the Germans in Bohemia [*corr.*: Pannonia], was conferred to Trajan".

I, therefore, assume that the time span between those two dates - the arrival of the news that Nerva had won a victory over the *Suebi*, and the actual date of those two ceremonies on the Capitol was very short, and have come to the following conclusions.

**In my opinion, Nerva could only have started to have the monument, containing the two Cancellaria Reliefs, re-modeled into a building that celebrated his own achievements. - If true, this assumption could explain, why the reworking of Nerva's portrait on Frieze A was left unfinished (cf. *supra*, at ns. 92, 136, in Chapter I.1.). We know that at the end of AD 97, Nerva's political situation was precarious, and that only his clever idea to adopt Trajan had saved him (cf. *supra*, n. 322, in Chapter II.1.e), and at ns. 350; 351, in Chapter II.3.2.).**

**Because of Nerva's adoption of Trajan as his son, co-Emperor and successor (which occurred between late October and the beginning of November AD 97), the overall situation had obviously changed dramatically. It seems, therefore, to have been a logical consequence that the Senate in November of AD 97 declared officially not only Nerva as the victorious commander of the *bellum Suebicum*, but contemporaneously bestowing the title *Germanicus* on Nerva and Trajan for this same victory.**

I have, therefore, suggested above (in Chapter II.3.2.; cf. Chapters II.3.3.; II.3.3.a)), that Nerva, as soon as he had adopted Trajan, had ordered to interrupt the 're-working' of the Domitianic building that contained the Cancellaria Reliefs into one that celebrated his own achievements, perhaps in order to wait until Trajan returned to Rome, to discuss with him the matter in person. But we know also that Nerva died only three

months after he had adopted Trajan, and that 'father and son', Nerva and Trajan, never saw each other again, since Trajan only returned to Rome in AD 99.

**But, as already said above (cf. *supra*, at n. 363, in Chapter II.3.3.a), there is even more to consider.**

Frieze B could not even have been used by Nerva as an *adventus* of himself, should he actually at first have had in mind to re-use this Domitianic structure, possibly a triumphal arch, as one that celebrated his own victory in the *bellum Suebicum* - and only *his* victory.

The reason being that Vespasian on Frieze B is clad as a civilian, is crowned by *Victoria* not with a laurel wreath, but with an oak wreath, and because he is not accompanied by his army. - As we will learn below from Rita Paris (1994b, 81-82, quoted *verbatim infra*, in Chapter V.1.i.3.a) and here **Fig. 33**), the 'worst' insurmountable fact, why Nerva could not possibly use Frieze B for himself, turns out to be the *corona civica*, with which *Victoria* is crowning this homecoming emperor - Vespasian (cf. here **Fig. 1 and 2 drawing, figures 14** [Vespasian]; **16** [*Victoria*]). Because by choosing precisely that crown, Vespasian was honoured for having ended a *civil* war.

**Therefore Frieze B was perfectly tailored to Vespasian's real situation at the represented moment in AD 70 (cf. *infra*, in Chapters V.1.i.3.); and V.1.i.3.a)), whereas none of his successors could possibly have re-used this panel for one of his own 'normal' military *adventus* into Rome, because the iconography, depicting "an emperor, who comes back from an 'ordinary' victorious campaign" differs considerably from that.**

I have also suggested that Nerva, as a result of his adoption of Trajan as his son, co-Emperor and successor (between late October and the beginning of November AD 97), or at the latest, as a result of the decision of the Roman Senate to grant the title *Germanicus* to himself (Nerva) and to Trajan for this *bellum Suebicum*, may have realized the following problem. The re-worked Frieze A of the Cancellaria Reliefs, celebrating the *profectio* to this (finally victorious) war, should, of course, show the two co-Emperors and officially declared 'co-victors' of that war leaving *together* for this campaign - not only Nerva. And because the Cancellaria Reliefs are much too thin to allow a second emperor to be integrated into Frieze A, it may have been Nerva himself, who ordered the destruction of this Domitianic building which contained the Cancellaria Reliefs.

As we have already seen above, Langer and Pfanner (2018, 82, 84) also suggest that it may have been Nerva, who ordered the destruction of the Domitianic monument or building that contained the Cancellaria Reliefs, but because of very different reasons.

Now, if it is true that Nerva had ordered the reworking of the face of Domitian on Frieze A into a portrait of himself as soon as he, Nerva, had received the news to have won the *bellum Suebicum*, this would have made a lot of sense, because Domitian had fought - successfully - against the same Germanic people. It has even been suggested that the original version of Frieze A had represented Domitian's *profectio* to precisely that war (cf. *supra*, **ns. 345, 346**, in Chapter II.3.1.a)).

If indeed Nerva had at first in mind, to convert this originally Domitianic monument or building, to which the Cancellaria Reliefs belonged, into one, that celebrated his own martial prowess, this fact could be regarded as the decisive argument in support of the here formulated hypothesis, according to which the structure in question may be identified as one of Domitian's lost (triumphal) arches. That arch, provided the inscription *PP FECIT* (CIL VI, 40543) belonged to the same arch, Domitian had obviously built himself (cf. *supra*, **n. 81** and at **n. 82** in Chapter I.1., and in Chapters II.3.1.; and V.3.).

With this idea, to attribute the Cancellaria Reliefs to one of Domitian's (lost) arches, I follow Pentiricci (2009; cf. *supra*, **n. 263**, in Chapter I.3.2., and *infra*, in Chapter *The major results of this book on Domitian* cf. here **Figs. 1**

**and 2 of the Cancellaria Reliefs, drawing, 'in situ'**. Cf. also *supra*, at Chapter I.3.; at n. 363 in Chapter II.3.3.a); and below, at Chapter V.1.d).

*V.1.d) The reconstruction, in my opinion erroneous, of the length of Frieze B by S. Langer and M. Pfanner (2018) (cf. here Figs. 1 and 2 drawing) and the correct reconstruction of the length of Frieze B by F. Magi, whom I am following here (cf. here Figs. 1; 2; Figs. 1 and 2 drawing; and Figs. 1 and 2 of the Cancellaria Reliefs, drawing, 'in situ'). With a discussion of how many Vestal Virgins we might expect to appear at public ceremonies, such as the one shown on this panel, and with The first Contribution by Jörg Rüpke*

As a result of their relevant research, Langer and Pfanner (2018) suggest a different reconstruction of Frieze B than Filippo Magi (1945).

Our **Figs. 1; 2** show the photographs of the Musei Vaticani, that in their turn show the Cancellaria Reliefs as reconstructed by Filippo Magi (1945); and our **Figs. 1 and 2 drawing**, and our **Figs. 1 and 2 of the Cancellaria Reliefs, drawing, 'in situ'** are based on the reconstruction drawings of the Cancellaria Reliefs by Filippo Magi (1945) in the same publication, in which Frieze B is assumed to have been circa 6,06 m long.

Langer and Pfanner (2018) reconstruct the length of Frieze B as being much longer. They argue with the technical properties of slabs B1 and B2 of Frieze B, as well as with the way that one figure is represented on those slabs, and therefore postulate another slab to be inserted in between slabs B1 and B2. Their technical arguments sounded at first glance convincing to me, and I am happy to admit that this kind of research, in which already Pfanner (1981; 1983) alone was a noted authority, and now also Langer and Pfanner (2018) seemed at first glance to be great experts, is something that interests them obviously much more than me.

For the following, cf. here **Figs. 1 and 2 drawing**, on which the slabs of both Friezes and the represented figures are numbered exactly as on Langer and Pfanner (2018, 19, Abb. 2).

Langer and Pfanner (2018, 73) write: "Außerdem fehlt an beiden Friesen jeweils mindestens eine Platte: die linke Abschlussplatte A1 [cf. here **Fig. 1**] und der Bereich zwischen den erhaltenen Platten B1 und B2 [cf. here **Fig. 2**], deren Darstellung nicht oder nur ansatzweise rekonstruiert werden kann. Zwischen B1 und B2 waren eventuell eine weitere Vestalin und noch andere Figuren dargestellt".

Cf. Langer and Pfanner (2018, 76): "In der linken Friesenhälfte [of Frieze B] bewegt sich eine Gruppe von fünf Vestalinnen (**Figur 3-7**) nach rechts, die dem Betrachter teilweise den Rücken zuwenden [with n. 115, with references]. Da zwischen den Platten B1 und B2 eine weitere Platte von unbekannter Ausdehnung fehlt, waren ursprünglich wohl alle sechs Vertreterinnen dieser Priesterschaft und eventuell weitere Figuren dargestellt [with n. 116, with further discussion, referring *inter alia* back to their chapter 2.6.]. Begleitet werden sie vom Lictor curiatus (**Figur 1**) der den Vestalinnen für ihre Auftritte in der Öffentlichkeit beigegeben war [with n. 117, with references]. Er trägt als Insignie zwei gebogene Langstöcke in der Linken und einen kurzen Stab in der Rechten [my emphasis]".

Cf. Langer and Pfanner (2018, 29, in their chapter 2.6.):

"Relief A ist nicht vollständig erhalten ... Vom angeblich vollständig erhaltenen Relief B auf die Breite des Reliefs A zu schließen, ist höchst spekulativ, zumal die Breite von B unsicher ist (Abb. 2 [compare here **Figs. 1 and 2 drawing**] und 5b) ...

Relief B weist größere Fehlbereiche auf. Auch ist es nicht, wie bisher angenommen, in seiner gesamten Breite erhalten, da zwischen B1 und B2 mindestens eine Platte fehlen muss. Folgende Argumente sprechen dafür (s. Abb. 7a und 7b):

**Die Rekonstruktion von Magi ist falsch. Gewand und Fuß der Vestalin Figur 5 müssten sich laut Magi unten auf Platte B2 fortsetzen, was sie jedoch nicht tun. Es sind nur 5 Vestalinnen vorhanden, obwohl 6 zu erwarten wären. Es gibt zugegebenermaßen Darstellungen mit 5 und weniger Vestalinnen** [with n. 18, providing references], was bei der additiven und aufzählenden Aufreihung der Cancellariareliefs eher befremdlich wirkt, wie andere Forscher mit Recht bemerkten [with n. 19, with further discussion].

**Einen eindeutigen Hinweis liefern die Stoßfugen von B1 und B2. Bei B1 verläuft die Fuge schräg, bei B2 senkrecht. Die beiden Platten stoßen also nicht aneinander, außer man nimmt an, dass die Stossfuge innerhalb ihres Verlaufs abknickte, wofür es keinen Hinweis gibt.** Vielmehr verlaufen in einem solchen Fall beide Stoßfugen schräg und somit parallel wie beim Stoß der Platten B2 und B3. Relief B war also insgesamt länger. **Wie viele Meter oder Platten zu ergänzen sind, lässt sich nicht feststellen, auch nicht, welche weiteren Personen neben der zu erwartenden 6. Vestalin standen** [with n. 20, with further discussion]. Da die erhaltenen B-Platten alle ungefähr gleich lang sind, könnte man eine fehlende Platte von ca. 1,50-1,60 m Breite annehmen [my emphasis]".

At first I did not understand the latter remark by Langer and Pfanner (2018, 29), concerning the joints of the slabs B1 and B2 of Frieze B, to which they refer in the just quoted passage (cf. their Abb. 7a on p. 30) - that I repeat here, therefore, again:

**"Einen eindeutigen Hinweis liefern die Stoßfugen von B1 und B2. Bei B1 verläuft die Fuge schräg, bei B2 senkrecht. Die beiden Platten stoßen also nicht aneinander, außer man nimmt an, dass die Stossfuge innerhalb ihres Verlaufs abknickte, wofür es keinen Hinweis gibt** [my emphasis]".

I have, therefore, asked Giandomenico Spinola and Claudia Valeri for another appointment in front of Frieze B of the Cancellaria Reliefs. On 9th May 2019, I fortunately had the chance to discuss this problem together with both of them in front of the original panels.

What Langer and Pfanner (2018, 29; cf. p. 30, their Abb. 7a) intend to say, is illustrated on their Abb. 7a: the joint on the right hand side of slab B1 is not cut perpendicularly to the bottom edge of slab B1, whereas the joint on the left hand side of slab B2 is cut perpendicularly to the bottom edge of slab B2, which is why Langer and Pfanner - understandably from their point of view - conclude that those two slabs cannot have abutted. They therefore postulate another slab that should be inserted in between the slabs B1 and B2 (cf. Langer and Pfanner 2018, 31, Abb. 7b).

But Langer and Pfanner do not consider in their reasoning that *a*) of the joint on the left hand side of slab B2 only a very small section is still preserved (cf. here **Figs. 1 and 2 drawing**, the arrow marked "c" points at it), nor have the authors *b*) understood, why the right hand side joint of slab B1 is cut in this peculiar, not perpendicular, way.

Before discussing this specific argument in more detail, let me alert you to the fact that Langer and Pfanner (2018, 29) in the above quoted passage, mention three observations, which have led them to postulate an additional slab between the slabs B1 and B2 on Frieze B:

- 1.) the difference of the joints of slabs B1 and B2;
- 2.) the representation of the Vestal Virgin **figure 5** on the slab B1 and (allegedly also on slab B2); and -
- 3.) the assumption that Frieze B should represent all six, instead of only the 5 Vestal Virgins that are visible on the slabs B1 and B2.

Giandomenico Spinola, who on 9th May 2019 layed down on the ground, in order to look at the relevant slabs of Frieze B also from underneath and behind, and by lighting them with a lamp, made the most crucial

observation concerning my relevant question. After him, I myself and Claudia Valeri have also looked at those slabs from underneath and behind.

The joint on the right hand side at the bottom of slab B1 is cut in an obtuse angle to the surface of the relief, contrary to the joint on the left hand side at the bottom of the adjacent slab B2, and for example the joint on the lefthand side of slab A2, which are both cut in right angle to the surface of the reliefs in question (cf. here **Figs. 1 and 2 drawing**: B1 -arrow "a" points at the joint at the bottom of the slab; B2 - arrow "c" points at the joint at the bottom of the slab; A2 -the arrow points at the joint at the bottom of the slab).

This obtuse joint (marked "a") at the bottom of slab B1 accommodated a repair, which is now lost, as Spinola has convincingly suggested to me; a fact that was previously unknown. The joint on the right hand side of slab B1, that is to be found above this former repair - where this joint is cutting (almost) perpendicularly through the mantle of the Vestal Virgin **figure 5** on frieze B (see here **Figs. 1 and 2 drawing**: arrow "b" points at the middle of this joint) - is likewise carved in right angle to the surface of the relief.

From this latter observation follows, what the ideal properties of both slabs B1 and B2 should have been like: had it been possible to carve the joint on the right hand side of slab B1, marked "b" on **Figs. 1 and 2 drawing**, all the way down to the bottom of slab B1, this joint would definitely have abutted the joint on the left hand side of slab B2, which on **Figs. 1 and 2 drawing** is marked "c", because both joints would have been cut in right angle to the surface of the reliefs in question. - But only, provided the joint on the right hand side of slab B1 would have been cut perpendicularly to the bottom edge of this slab, of course. This was unfortunately not done, as we have seen, possibly because the marble of slab B1 was faulty. But because we know that the reliefs, decorating the slabs of Frieze B had actually been carved *in situ* at their relevant monument, as Pfanner himself has found out (cf. *supra*, at Chapter *II.1.a*), one thing is clear: the slab, which abutted the joint on the right hand side of slab B1 *had definitely been* adjusted accordingly.

Langer and Pfanner (2018, 52-53) themselves write that the marble of slab B1, into which this Vestal Virgin **figure 5** has been carved, is also at other points faulty, which is why our assumption of an ancient repair in slab B1 sounds all the more convincing. Langer and Pfanner have overlooked our just described large repair (marked "a"), although they themselves have observed two small ancient repairs on slab B1. - To those repairs I will come back below.

Langer and Pfanner (2018, 52-53) write about **figure 5** on slab B1: "**Figur 5: Vestalin** (Taf. 10, 1; Abb. 7a) Erhaltungszustand: Hals und Kopf fehlen komplett ... Die weibliche Figur ist in Rückansicht dargestellt und wendet den Kopf nach rechts ... Die von Magi rekonstruierte Armhaltung - angewinkelt und vor den Körper geführt - kann aus dem Faltenverlauf am Rücken nicht abgeleitet werden (s. Abb. 2 [= compare **Figs. 1 and 2 drawing**]). Es ist nicht auszuschließen, dass der rechte Arm erhoben war ... Bildhauerische Fehler/Ungenauigkeiten: Plattenfuge verläuft ungünstig und schneidet die Schulter knapp ab. - Materialfehler (s. Abb. 17). Marmor ähnlich brüchig wie bei **Figur 1** und **3** ... Figur ragt ca. 1,5 cm über die Vorderkante der Reliefrahmung hinaus. - Zur fehlenden Anschlussplatte s.[iehe] Abb. 7a".

Langer and Pfanner's assertion (2018, 53): "Die von Magi rekonstruierte Armhaltung - angewinkelt und vor den Körper geführt - kann aus dem Faltenverlauf am Rücken nicht abgeleitet werden (s.[iehe] Abb. 2 [cf. here **Figs. 1 and 2 drawing**]). Es ist nicht auszuschließen, dass der rechte Arm erhoben war", - is not true, since neither the folds of the *tunica*, nor those of the mantle the Vestal Virgin **figure 5** is wearing, contradict Magi's reconstruction drawing of this figure. Therefore we can conclude that the Vestal Virgin **figure 5** copies almost exactly the Vestal Virgin **figure 3**, only that the former is seen from the back, and the latter from the front. The only difference being that **figure 3** looks to her left, whereas **figure 5** looks to her right, because both look in the direction of the Emperor Vespasian. Also the Vestal Virgins **figures 4, 6** and **7** repeated the same model, to the effect that all 5 Vestal Virgins have the same proportions - which is highly improbable, given the fact that the youngest priestesses were only between five and ten years old. - To this I will come back below.

In this respect, the Vestal Virgins - all six of them ! - have been 'realistically' represented on the altar proper of the *Ara Pacis Augustae*, whom Eugenio La Rocca (1983, 52) has described as follows:

"La processione sull'altare

... Meglio conservato è il fregio piccolo al livello della mensa sacrificale. Sulla guancia settentrionale interna si riconoscono facilmente le vestali a capo coperto, in ordine decrescente di età [the smallest first Vestal Virgin, at the head of the procession, right behind the *apparitores*, has the proportions of a small girl, the tallest sixth Vestal Virgin those of a mature woman], con due *apparitores* - funzionari addetti all'accompagnamento - e da un *lictor vestalium*". Cf. the caption of the accompanying illustration: "Altare. Guancia settentrionale - decorazione interna". - For this relief; cf. also Diana E.E. Kleiner (1992, 90, Fig. 72).

Langer and Pfanner (2018, 70, in their Chapter: "2.9.3 Planung, Entwurf, Ausführung der Reliefs - Bildhauertechnik und Unfertigkeiten") write about the above-mentioned small repairs on slab B1 of Frieze B of the Cancellaria Reliefs:

"Die Materialfehler in der Platte B1 reparierten die Handwerker mit gekonnten Anstückungen (Vierungen), Dübeln, Kittungen und Überarbeitungen (s. Abb. 17)".

Cf. Langer and Pfanner (2018, 68), caption of their: "Abb. 17. Relief B: Technische und Bildhauerische Auffälligkeiten ... Zeichnung und Rekonstruktion nach F. Magi ... a+b) antike Anstückungen c) vermutlich älterer Riss d) Falten nachgearbeitet". The letters "a" and "b" are marked on **figure 1** on slab B1 of Frieze B, the *lictor curiatus* of the Vestal Virgins (cf. Langer and Pfanner 2018, 50: "**Figure 1: Apparitor/Lictor curiatus** [?] [my emphasis]"; cf. here **Figs. 1 and 2 drawing: figure 1**), the letter "c" is marked on the Vestal Virgin **figure 5** on slab B1, and the letter "d" is marked on the Vestal Virgins **figures 3 and 5** on slab B1.

Now, since the artists decided to add the above-mentioned repair to slab B1 (marked "a" on here **Figs. 1 and 2 drawing**), this must have been done in the course of fixing the still undecorated slabs on the monument in question (cf. *supra*, at Chapter II.1.a)). Unfortunately of slab B2 almost the entire joint on the left hand side of this slab is missing - apart from the very small section of this joint (marked "c" on **Figs. 1 and 2 drawing**).

I have discussed the above quoted hypothesis of Langer and Pfanner with Giandomenico Spinola and Claudia Valeri on 9th May 2019 in front of the relevant slabs: on the basis of our own observations in front of the original panel just described, we have come to the conclusion that, in our opinion, it is perfectly possible that the artists - although the joint on the right hand side of slab B1 (marked "b" on **Figs. 1 and 2 drawing**) is not cut perpendicularly to the lower edge of slab B1 - could have prepared the lefthand side joint of slab B2 (the small section of which is marked "c" on **Figs. 1 and 2 drawing**) in such a way that both joints abutted.

**Thanks to our observations, made by studying the original panels B1 and B2, we were thus able to refute Langer and Pfanner's above-mentioned 1.) argument, which they have adduced to support their hypothesis that between the slabs B1 and B2 of Frieze B of the Cancellaria Reliefs should be inserted an additional slab.**

As we have seen above, Langer and Pfanner (2018, 29) mention also another observation, which, together with the just discussed argument concerning the different joints on slabs B1 and B2, as well as with a third argument (*i.e.*, the assumption that Frieze B should represent all six, instead of only the 5 Vestal Virgins that are visible on the slabs B1 and B2), has caused their conclusion that between slabs B1 and B2 of Frieze B should be inserted an additional slab. They write: "**Die Rekonstruktion von Magi ist falsch. Gewand und Fuß der Vestalin Figure 5 müssten sich laut Magi unten auf Platte B2 fortsetzen, was sie jedoch nicht tun** [my emphasis]". ('Magi's reconstruction is wrong. The garment and foot of the Vestal Virgin **Figure 5** [on frieze B] should continue, according to Magi, at the bottom on slab B 2, but that is not the case').

Since it did not occur to me to doubt this - very important - point of Langer and Pfanner's argument, I had at first come to the following conclusion: it is, therefore, in my opinion in theory conceivable that the artists simply forgot to carve the relevant details of the Vestal Virgin **figure 5** on slab B2 of Frieze B, since Langer and Pfanner (2018) themselves have mentioned many similar mistakes on both panels of the Cancellaria Reliefs. - To those mistakes I will come back below.

Then I realized that the relevant assertion of Langer and Pfanner (2018, 29) is wrong: by comparing the actual state of the relevant detail of Frieze B, which is illustrated on their Abb. 7a (cf. here **Fig. 2**), and which they compare on this illustration with the relevant detail of Magi's reconstruction drawing of Frieze B (cf. MAGI 1945, "Tav. Agg. D 2. Interpretazione del fregio B"; cf. here **Figs. 1 and 2 drawing**), it becomes clear that at the bottom of slab B2 appears the tip of the right foot of the Vestal Virgin **figure 6**, *who faces the beholder*: she is shown as wearing shoes, exactly like the Vestal Virgin **figure 3** on slab B1 and the Vestal Virgin **figure 7** on slab B2 - note that all three of them are facing the beholder. Whereas of the Vestal Virgin **figure 5** - as asserted by Langer and Pfanner (2018, 29) - we cannot even expect to see any of her feet at the bottom of slab B2, because this figure, as they themselves write (cf. Langer and Pfanner 2018, 52-53, quoted *verbatim supra*), turns her back to the beholder (!).

Then I checked, whether the above quoted assertion by Langer and Pfanner's (2018, 29) is true: "Die Rekonstruktion von Magi ist falsch. Gewand und Fuß der Vestalin **Figure 5** müssten sich laut Magi unten auf Platte B2 fortsetzen, was sie jedoch nicht tun [my emphasis]". ('Magi's reconstruction is wrong. The garment and foot of the Vestal Virgin **Figure 5** [on Frieze B] should continue, according to Magi, at the bottom on slab B 2, but that is not the case').

**This assertion of Langer and Pfanner (2018, 29) is not true: Magi does not say that 'the garment and foot of the Vestal Virgin figure 5 continues at the bottom on slab B 2'. He indeed mentions a garment and a foot at the bottom of slab B2, but he does not say that they belong to the Vestal Virgin figure 5: they are rather the only remains of the Vestal Virgin figure 6 (cf. here Fig. 1 and 2 drawing: figure 6, the small remains of the garment and the right foot of this Vestal Virgin are immediately adjacent to the arrow marked "c").**

**In the following, I quote Magi's description of the 5 Vestal Virgins on Frieze B.**

Magi (1945, 27: "Descrizione del fregio B") describes the Vestal Virgin **figure 3** (cf. here **Fig. 2** and **Fig. 1 and 2 drawing: figure 3**), who is almost completely preserved. He describes her attire and her specific head-dress, comprising her shoes: "... piedi, che appaiono calzati con morbidi calzari con bassa suola (senza rovescio per quanto se ne vede)".

Cf. Magi (1945, 28), where he describes the Vestal Virgins **figures 4, 5, 6** and **7** on Frieze B:

"A questa Vestale [*i.e.*, **figure 4**] ne segue un'altra, vista di dorso [*i.e.*, **figure 5**], con gli occhielli della fascia [*i.e.*, one part of the specific head-dress of these priestesses] sulla spalla sinistra, sopra il mantello, il quale lascia scoperta qui pure la spalla destra. Il braccio sinistro appare piegato, la gamba sinistra un poco arretrata sporge tra le numerose pieghe della tunica. Con ogni probabilità la testa di questa Vestale, che manca, era rappresentata di profilo a destra, come lo era per quanto risulta dal colle che resta, la testa della Vestale raffigurata nel fondo tra le due ora descritte [*i.e.*, **figure 4**], col corpo di fronte come la prima [*i.e.*, **figure 3**]. Lungo il collo, anche qui, i due occhielli della fascia. In basso si vede parte della sua tunica [*i.e.*, of **figure 4**] fra quelle delle altre due [*i.e.*, **figure 3** and **figure 5**].

**La grave lacuna della lastra B2 lascia, di una quarta Vestale [*i.e.*, **figure 6**] situata sul fondo, un tenue avanzo in basso, la parte inferiore della tunica e il piede destro [my emphasis]; una quinta sacerdotessa [*i.e.*, **figure 7**] chiude il gruppo a destra, conservata (e non completamente) dalle anche in giù. Essa ripete la posizione della prima e con la quarta [*i.e.*, **figures 3** and **figure 6**], essa pure col corpo di prospetto, doveva rivolgere a destra, come le altre, il volto e lo sguardo".**

After having sent them in the meantime my updated manuscript, that comprised now all relevant additions, Giandomenico Spinola and Claudia Valeri were so kind, as to make on 19th September 2019 for the last time an appointment with me in front of the Cancellaria Reliefs, in order to discuss again our results obtained. On that occasion, Giandomenico Spinola accompanied me to these panels. We discussed the peculiarities of both panels observed at our previous meetings, and he was so kind as to photograph all these details for me; those photographs are kept in my archive. On that occasion, Spinola was able to further confirm Magi's observation concerning the right foot of the Vestal Virgin **figure 6** on frieze B by realizing that her large toe is visibly indicated under the soft leather of her shoe. This proves Magi right (1945, 27-28, quoted *verbatim supra*) that what we see of this figure is her right foot and that this Vestal Virgin faced the beholder (cf. **Figs. 1 and 2 drawing: figure 6** on slab B2).

Let's now summarize, what was said above concerning Langer and Pfanner's point 2.).

**Langer and Pfanner (2018, 29, quoted *verbatim supra*) have misunderstood two things:**

a) Langer and Pfanner (erroneously) assert that according to Magi on slab B2 continues the garment and the foot of the Vestal Virgin **figure 5**, who is depicted on slab B1, but that this is in their opinion not true (cf. **Figs. 1 and 2 drawing: figure 5** on slab B1). As we have seen above, Magi (1945, 27-28) does *not* say anything like that. Besides, an assumption of the kind would be impossible, because the foot, which is visible on slab B2, belongs to a Vestal Virgin, who *faces* the beholder, whereas the Vestal Virgin **figure 5** is seen *from behind*;

b) Langer and Pfanner do not understand Magi's (1945, 28) description of the Vestal Virgin **figure 6** (cf. **Figs. 1 and 2 drawing: figure 6** on slab B2): Magi describes in fact a foot and a garment of a Vestal Virgin on slab B2, but he does not attribute them to the Vestal Virgin **figure 5** on slab B1, as Langer and Pfanner erroneously assert, but, correctly, to the Vestal Virgin **figure 6** on slab B2.

**As we have seen above, this (erroneous) observation concerning the Vestal Virgin figure 5 (and concerning the Vestal Virgin figure 6) is the 2.) reasons, why Langer and Pfanner (2018) postulate an additional slab between slabs B1 and B2. But because it is based on a misunderstanding of Magi's text, combined with wrong observations at the Vestal Virgins figures 5 and 6 themselves, also their second argument can be refuted.**

As already mentioned above: `Langer and Pfanner (2018, 70, in their Chapter: "2.9.3 Planung, Entwurf, Ausführung der Reliefs - Bildhauertechnik und Unfertigkeiten") have documented some faulty areas on the slab B1 of Frieze B. Cf. p. 68, their "Abb. 17. Relief B: Technische und Bildhauerische Auffälligkeiten ... Zeichnung und Rekonstruktion nach F. Magi ... a+b) antike Anstückungen c) vermutlich älterer Riss d) Falten nachgearbeitet". The ... letter "c" is marked on the Vestal Virgin **figure 5** on slab B1, and the letter "d" is marked on the Vestal Virgins **figures 3 and 5** on slab B1.

When looking again at this faulty slab B1 together with Giandomenico Spinola on 19th September 2019, Spinola pointed at the faults marked "c" and "d" on the Vestal **Virgin figure 5**, which have been documented by Langer and Pfanner on their Fig. 17. Those faults or oriented perpendicularly to the lower edge of the slab, which is why Spinola pointed out to me that they must have been the reason why it had become necessary to add the repair, which is marked with the lettering "a" on **Figs. 1 and 2 drawing**.

**To conclude: Langer and Pfanner (2018, 29-31; cf. their Abb. 7a; 7b) have adduced three arguments in support of their hypothesis, according to which an additional slab should be inserted between slabs B1 and B2 of Frieze B: 1.) concerning the different joints on the slabs B1 and B2; 2.) concerning the representation of the Vestal Virgin figure 5 on slab B1 and (allegedly) on slab B2; and 3.) concerning the assumption that all 6 Vestal Virgins should be represented on Frieze B, instead of only 5.**

Because of our own observations in front of the original, and after the first two arguments of Langer and Pfanner have been discussed and refuted above, I anticipate here that also Langer and Pfanner's third argument - according to which all six Vestal Virgins should be represented on Frieze B - is not true, since we know from ancient literary sources and representations that at such public ceremonies not necessarily all 6 priestesses participated. To this I will come back below.

**The above-quoted hypothesis of Langer and Pfanner (2018, 29-31; cf. their Abb. 7a; 7b) can therefore be refuted.**

This means that consequently Magi's reconstruction of the length of Frieze B proves to be correct (cf. here **Fig. 2; Figs 1 and 2 drawing**), and this fact proves in its turn that also our visualization of both friezes (cf. here **Figs. 1 and 2 of the Cancellaria Reliefs, drawing, 'in situ'**), when attached as horizontal panels to opposite walls in the bay of an arch, is based on correct assumptions (cf. *supra*, at Chapter I.3.2.).

**Let's now turn to the above-mentioned mistakes that have been observed on both panels of the Cancellaria Reliefs.**

The figures represented on both panels of the Cancellaria Reliefs contain many mistakes of all kinds, as Langer and Pfanner (1918, *passim*) themselves have meticulously documented for all 34 figures represented, and for all the technical details of both friezes (for those, cf. their chapters 2.6 and 2.7; cf. *supra*, n. 134, in Chapter I.1.), which they have studied and documented with many illustrations. Langer and Pfanner (2018, Chapter: "2.8. Beschreibung der Reliefs", pp. 42-59), in their descriptions of the 34 figures on both friezes, have even a rubric: "Bildhauerische Fehler/Ungenauigkeiten". See also their chapter 2.9.3 on pp. 65-71 (for a quotation, cf. *infra*), as well as the relevant observations, made by Langer and Pfanner (2018), that are quoted *verbatim supra*, at Chapter I.2.1.c), and *infra*, at Chapter V.1.e).

In the following, I will mention some mistakes, made by the artists who sculpted Frieze B, that have been discussed by Langer and Pfanner themselves.

Langer and Pfanner (2018, pp. 51-52, Frieze B: "**Figur 2: Dea Roma** [my emphasis]") have observed that the *Dea Roma* on frieze B does not have a left arm (cf. *infra*, at Chapter V.1.e)).

Cf. Langer and Pfanner (2018, 55, Frieze B): "**Figur 11: Genius Senatus** [?] ... Die Beine sind im Verhältnis zum Oberkörper überlängelt und unproportioniert, die Füße dagegen zu klein und insgesamt zu weit nach rechts gerückt (s. Abb. 10, vgl. auch Kap. 2.9.3 und 9.5) [my emphasis]".

Cf. Langer and Pfanner (2018, 56-57, Frieze B): "**Figur 13: Genius Populi Romani** [?] ... Die männliche Figur im Hintergrund ist nach rechts ausgerichtet und steht mit dem linken Bein auf einem schemelartigen Gebilde ... Das rechte Bein, das auf der Standfläche des Reliefs stehen müsste, ist nicht sichtbar [my emphasis]".

Cf. Langer and Pfanner (2018, 58-59, Frieze B): "**Figur 17: Rotulus-Träger** (Taf. 12,2; Taf. 42,5; Taf. 44; Abb. 12)

Erhaltungszustand: Kopf und Hals fehlen ... Beschreibung: Der frontal stehende Mann ist nach links ausgerichtet. Die angespannte Sehne seines Halses belegt die ursprüngliche Kopfwendung zu seiner Rechten. Das linke Bein fungiert als Standbein, das rechte ist leicht angewinkelt nach links ausgestellt. Der linke Arm ist vor dem Oberkörper angewinkelt, in der Hand hält er eine Schriftrolle (*rotulus*). Der Oberkörper und die Hüfte sind überbreit. An den Füßen trägt er die einfachen *calcei*.

Die Gewandung ist in der römischen Kunstgeschichte singulär und auch literarisch nicht belegt: Sofort ins Auge sticht das in der Mitte vorhangartig geteilte Gewand unterhalb der Gürtung. Denkt man sich dieses weg, so trüge der Mann die übliche gegürtete *tunica* mit halblangen Ärmeln, wie wir sie von

unzähligen Darstellungen her kennen. Das geteilte Gewandstück kann nicht der untere Teil der *tunica* sein, da diese oberhalb der Gürtung dann ebenfalls geschlitzt sein müsste und das darunter liegende Gewand übrig bliebe. Für das Phänomen gibt es keine andere Erklärung als folgende: Es handelt sich entweder um einen gravierenden Planungs- oder Ausführungsfehler oder um eine nachträgliche Abänderung. Der Bildhauer kombinierte offensichtlich zwei verschiedene Kleidungsstücke, nämlich eine *tunica* und einen mittig geschlitzten Mantel und >kreierte< somit ein neues Kleidungsstück ...".

Langer and Pfanner (2018, 66, Chapter 2.9.3), comment on the vexed problem of the 'wrong shoes' (cf. *supra*, at Chapter I.1.), that concerns some of the figures that appear on both friezes, as follows: "Fehler finden sich oft bei den Schuhen (A: **Figuren 2, 3, 7, 8, 12, 15, 16, 17**; B: **Figuren 8?, 12, 14, 15, 17**; s.[iehe] dazu jeweils im Kapitel 2.8 unter "Technisches"): Sei es, dass sie vergessen und nachträglich eingeritzt wurden, oder dass es Verwechslungen mit der anschließenden Figur gab ... [my emphasis]". - To this I will come back below (cf. *infra*, at Chapter V.1.h.1.); and in Chapter *The major results of this book on Domitian*).

Another mistake I have found on Frieze A related to the discussion (cf. *supra*, n. 453, in Chapter III.), is whether or not the *Genius Senatus* and the *Genius Populi Romani* bid farewell to Domitian (now Nerva). To be precise: at least the *Genius Senatus* on Frieze A bids farewell with his lifted right hand; the right arm of the *Genius Populi Romani* (**figure 13**) is lifted like that of the *Genius Senatus*, but the artists have forgotten to represent his right hand, as they have with so many other details on both friezes. - This missing right hand of the *Genius Populi Romani* on Frieze A has even been overlooked by Langer and Pfanner (2018, 48) (!).

As already mentioned above, the observations of Langer and Pfanner (2018) concerning the technical properties of the slabs B1 and B2, which is why they postulate an additional slab in between B1 and B2, sounded at first glance convincing to me. - Although not being, as already mentioned, an expert in this specific field myself.

Before my third visit of the originals on 9th May 2019, I had therefore come to the following conclusion:

Nevertheless there is perhaps an important reason that might speak against the reconstruction of Frieze B, as suggested by Langer and Pfanner (2018, 73, 76, 29), who add an additional slab between the existing ones B1 and B2 (see their Fig. 7b on p. 31), with which they suggest to fill their newly created 'gap' within the represented scene, and where, in their opinion, the 'so far missing sixth Vestal Virgin', plus possibly further figures, were represented.

Being, on principle, greatly interested in 'pagan' religions, although not specifically an expert in the 'college of the Vestal Virgins', I find the following remark by Ranuccio Bianchi Bandinelli (1946-48, 259, that was already quoted *supra*, at Chapter IV.1.), very convincing:

**"Anche sul soggetto del rilievo B l'accordo è quasi completo: l'unico *adventus* di Vespasiano da imperatore è quello del 70 ... Sappiamo che, storicamente, l'incontro fra Vespasiano e Domiziano avvenne a Benevento; mentre il rilievo trasporta l'avvenimento a Roma, come è mostrato dalla presenza delle cinque Vestali (la sesta non poteva esserci, perché il culto non poteva essere abbandonato) ... [my emphasis]".**

Asking Jörg Rüpke for advice, he was kind enough to write me on 4th April 2019 the following answer by E-mail, which he has also kindly allowed me to publish here.

See below, at *The first Contribution by Jörg Rüpke on the question, how many Vestal Virgins we might expect to appear at public ceremonies, such as the one shown on Frieze B of the Cancellaria Reliefs*; cf. here **Fig. 2**.

For the *Virgines Vestales*, cf. also Angelika König and Ingemar König (1991, 120-123); cf. p. 123: "Im Tempel [*i.e.*, of Vesta] gab es kein Standbild der Vesta, er war der Aufbewahrungsort des Palladiums, eines

weiblichen Idols mit Speer und Schild, das Aeneas aus Troja mitgebracht haben soll, sowie der *mola salsa*, des Blutes des >>Oktoberrosses<<, der Asche der verbrannten Kälber und des Bohnenstrohs. Das heilige Feuer, das jedes Jahr am 1. März neu entfacht werden mußte [with n. 228], brannte offenbar außerhalb des Tempels, da es von außen gut sichtbar war [with n. 229] und der Innenraum mit nur 5 m Durchmesser für ein großes loderndes Feuer wohl zu eng war".

In their **note 228**, König and König quote: "Ovid, *Fasti* III 143ff."; in the **note 229**, they quote: "Dionysios Hal., *Antiquitates*, II 66,2".

**After this Chapter was written up to this point, I had on 9th May 2019 another meeting with Giandomenico Spinola and Claudia Valeri in front of the original panel (cf. *supra*; our first meeting in front of the reliefs was on 24th September 2018, the second on 8th March 2019). As a result of this third meeting, we were able to disprove the new reconstruction of Frieze B by Langer and Pfanner (2018, 29-31, Abb. 7a; 7b), who have postulated an additional slab for Frieze B between the slabs B1 and B2.**

This fact has also consequences for the answer to the question, how many Vestal Virgins may have been represented on Frieze B:

a) As already mentioned above, at the same time could be observed that Magi's reconstruction of the length of Frieze B (cf. here **Fig. 2**) proves to be correct;

b) The latter fact is the basis of the tentative visualization of the Cancellaria Reliefs as two opposite horizontal panels in the bay of an arch, as suggested by Franz Xaver Schütz and myself. Our reconstruction (cf. here **Figs. 1 and 2 of the Cancellaria Reliefs, drawing, 'in situ'**) is a visualization of the relevant idea, which was suggested by Massimo Pentiricci (2009; cf. *supra*, at Chapter I.3.), that thus seems to be further supported;

c) Provided our reconstruction of both friezes 'in situ' should turn out to be regarded as true, it would follow that only five Vestal Virgins were represented on frieze B, as suggested in Magi's reconstruction (cf. F. MAGI, 1945, Tav. I; cf. *supra*, in Chapter I.1., and visible on here **Fig. 2; and Figs. 1 and 2 drawing**).

**To conclude, Langer and Pfanner (2018, 29 with ns. 18, 19, quoted *verbatim supra*) mention themselves the fact that there are representations of the Vestal Virgins which comprise less than all six priestesses.**

**And Jörg Rüpke has written me on 4th April 2019 in an E-mail (quoted in its entirety below, at *The first Contribution by Jörg Rüpke on the question, how many Vestal Virgins we might expect to appear at public ceremonies, such as the one shown on Frieze B of the Cancellaria Reliefs*):**

**"Kurzum, denkbar ist die Pflicht, dass eine stets Feuerwache hatte ... " ('In short, it is conceivable that eine [*i.e.*, one Vestal Virgin] had always to stay behind [when the other priestesses left the sanctuary] to watch the fire [in the Temple of Vesta] ...').**

**From all this follows that also the 3.) argument, adduced by Pfanner and Langer, according to which the Cancellaria Reliefs should have represented all six Vestal Virgins instead of the still extant five, is not true. Therefore their hypothesis, according to which an additional slab should be inserted between B1 and B2, can be refuted.**

**Let's look now at our reconstruction in more detail (cf. here **Figs. 1 and 2 of the Cancellaria Reliefs, drawing, 'in situ'**).**

According to this visualization, which shows Frieze A and B *'in situ'*, as attached to parallel, opposite walls in the passageway of an arch, Domitian (now Nerva) on Frieze A (**Figs. 1 and 2 drawing: figure 6**) and the togate youth on frieze B (**Figs. 1 and 2 drawing, figure 12**), are placed at almost the same positions within their relevant friezes, in addition to this, they are the protagonists of those two processions that move, opposite each other, and *'together with, and in the same direction as the beholder, who passes under a [presumed] bay of this arch'*. Because of those two facts, these two protagonists may be regarded as the most important figures on both panels.

Next, we should investigate, whether or not this new information can help us to better understand the meaning of those panels. At first glance, the following seems to be clear: provided *a*) the Cancellaria Reliefs had actually been the horizontal panels in the bay of an arch, and *b*) the almost precisely opposite positions of Domitian (now Nerva) on Frieze A and of the togate youth on Frieze B were actually intended by the artists, who created those panels, we can deduce the following:

1.) The length of Frieze B, despite the assertion to the contrary by Langer and Pfanner (2018, 29, 31 Abb. 7b), has been correctly identified by Magi (1945, Tav. I, cf. *supra*, in Chapter *I.1.*), which is why our **Fig. 2**, a photograph of Magi's reconstruction, shows the correct length of Frieze B. And when that should be true, it follows that also our reconstruction is correct (cf. here **Figs. 1 and 2 of the Cancellaria Reliefs, drawing, 'in situ'**), which is based on Magi's (1945) own reconstruction drawings of the Cancellaria Reliefs.

2.) Our reconstruction (here **Figs. 1 and 2 of the Cancellaria Reliefs, drawing, 'in situ'**) shows something else: the missing part of Frieze A appears to have been much smaller than hitherto believed (see for example the reconstruction drawing of frieze B by E. SIMON 1960, 139-145 with Fig. 4; cf. *supra*, n. 427, in Chapter *III.*; and the reconstruction by S. LANGER and M. PFANNER 2018, 31 Abb. 7b, p. 73, quoted *verbatim supra*). According to our own reconstruction, there is only space enough to complete the lictor and the figure of *Victoria* (i.e., in the nomenclature of S. LANGER and M. PFANNER 2018, 19, "Abb. 2": "**Figur 1**"; and "**Figur 2**" (cf. here **Figs. 1 and 2 drawing: figure 1** and **figure 2**). By looking at the other far end of Frieze A, at its right end side, here too Langer and Pfanner's "**Figur 17**" has been *'squeezed'* into a very small space - the same may have been true for the lictor (**figure 1**) and the *Victoria* (**figure 2**) on Frieze A.

Cf. S. Langer and M. Pfanner (2018, 42, Frieze A): "**Figur 1: Lictor** ... Erhaltungszustand: Erhalten sind Teile des Gewandes, das linke Bein und ein Teil der *fasces*, Bereich der *fasces* über dem Beil ist ausgebrochen ... Beschreibung: Die Reste gehören zu einem nach links ausschreitenden Lictor, der mit *tunica*, *sagum* und *calcei* bekleidet ist. Über der linken Schulter trägt er die mit Lorbeer bekrönten *fasces*, in die das Beil eingesteckt ist ... [my emphasis]". Cf. p. 42: "**Figur 2** [on Frieze A]: **Victoria** ... Erhaltungszustand: Erhalten sind die linke Schulter, ein Teil der Gewanddrapierung und der linke Flügel. Beschreibung: Die Reste gehören zu einer nach links fliegenden Victoria, deren linker Arm am Körper angelegt und von einem Gewand, wohl einer *tunica* [?], bedeckt ist (s. auch die Rekonstruktion von Magi, hier Abb. 2 [cf. here **Figs. 1 and 2 drawing**; my emphasis])". Cf. p. 50: "**Figur 17** [on Frieze A] ... **Stehender Mann**, der nach links ausgerichtet ist. Der Oberkörper ist in Dreiviertelansicht angegeben, der Kopf und die Beine im Halbprofil. Er ist mit *paenula*, *focale* und *tunica* bekleidet ... An den Füßen trägt er die *caligae* ... An der rechten Schulter lehnt *das pilum*, dessen kugelförmiges Gewicht und pyramidenförmige Zwingen summarisch im Flachrelief angelegt sind ... [my emphasis]".

3.) If all that should be true, there seem to be some *'rules'* that characterize the Cancellaria Reliefs. There were 17 figures all told on both friezes (cf. here **Figs. 1 and 2 drawing**), as first suggested by Bianchi Bandinelli (1946-48, 259; cf. *supra*, n. 88, in Chapter *I.1.*); the emperors on both friezes have four lictors each (on Frieze A: **figures 1; 3; 7; 8**, on Frieze B: **figures 8; 9; 10; 15**); to both emperors belongs a *rotulus*. Domitian (now Nerva) on Frieze A carries it himself in his left hand, whereas for Vespasian a *rotulus* is carried by a man of his entourage (**figure 17** on Frieze B). Both *rotuli* contain the *vota* of these emperors, made by them to the gods, praying them to be granted a victory in the war, to which Domitian on Frieze A is shown as leaving, whereas in Vespasian's case on Frieze B this victory has already been granted - according to Simon

(1963, 9, 10) these were the *vota* taken by the commander of an army *pro reditu* (cf. *supra*, in Chapters I.2.1.a); V.1.b); and *infra*, in Chapter V.1.i.3.b); at Section III.); the *Dea Roma* appears on both friezes (on Frieze A: **figure 9**; on Frieze B: **figure 2**; cf. *infra*, in Chapter V.1.i.2.). This is also true for the *Genius Senatus* (on Frieze A: **figure 11**; on Frieze B: **figure 11**), as well as for the *Genius Populi Romani* (on Frieze: A: **figure 13**; on Frieze B: **figure 13**; for all those details, cf. *supra*, in Chapter V.1.; and *infra*, in Chapter V.1.i.3.)); and the main figures of both friezes (Frieze A: **figure 6**; Frieze B: **figure 12**) stood almost opposite each other - provided, the Cancellaria Reliefs were in fact the horizontal panels on opposite walls in the bay of an arch (cf. here **Figs. 1 and 2, Cancellaria Reliefs, drawing, 'in situ'**).

These two main figures on Frieze A and B head the processions that on both panels 'move forward together with the beholder who passes under the bay of this arch', where the Cancellaria Reliefs were presumably attached. In addition, both protagonists are shown as standing at the *pomerium* of Rome. But whereas the Emperor Domitian (now Nerva) on Frieze A (**figure 6**) is shown as standing immediately outside the *pomerium*, and will soon separate from the *Dea Roma* (**figure 9**), who is standing immediately inside the *pomerium*, the togate youth on Frieze B (**figure 12**) is represented as standing immediately inside the *pomerium* and as receiving, at the *pomerium*, the Emperor Vespasian (**figure 14**), who is standing immediately outside the *pomerium* (!). - What sounds like a mere tongue-twister or as a joke, turns out to be the results of complex legal and religious prescriptions, which, at the represented moment, were valid for the individuals involved, and that have all been faithfully observed by the artists, who designed both Cancellaria Reliefs (cf. *infra*, in Chapter V.1.i.3.)).

**And because many scholars have described Domitian as an emperor, who took legal and religious prescriptions very seriously (cf. *supra*, in Chapter Preamble; Section III.; at point 5.)), the Cancellaria Reliefs can, in my opinion, illustrate this peculiarity of his character in perfect fashion.**

But there is still another interesting parallel between the compositions of Frieze A and B, since both can be regarded as examples of 'perfect timing' in ceremonies, in which many individuals are involved (cf. *supra*, in Chapter I.2.1.).

On Frieze A, the Emperor Domitian (now Nerva), together with the *Genius Senatus* and the *Genius Populi Romani*, had, shortly before, obviously been waiting for someone for quite some time already. All of a sudden the last member of Domitian's party has arrived, the *Dea Roma*, who hastened to join her waiting partners, and, as soon as she arrived, had touched Domitian at his left elbow. As a result, Domitian, by lifting his right arm and hand, now starts the *profectio*-ceremony, and at this sign, Minerva and Mars, his divine *comites*, who precede him to this war, 'storm away' to the theatre of Domitian's campaign. Next Domitian himself will follow them, together with his large train of soldiers, who march behind him. On Frieze B is shown a similar kind of perfect timing. The togate youth, together with his long procession of all conceivable representatives of the City of Rome, has arrived at the *pomerium* of Rome at exactly the same time as Vespasian, who, from the opposite direction, has come there together with his entourage. -

**At this very moment appears *Victoria* to crown Vespasian with the *corona civica*, a ritual that symbolizes the investiture of the new Emperor Vespasian (cf. *supra*, in Chapter III.; and *infra*, in Chapters V.1.i.3.); and VI.3.); and in Chapter *The major results of this book on Domitian*).**

**In addition to this, this iconographic detail shows, as Rita Paris (1994b, 81-82, quoted *verbatim infra*, in Chapter V.1.i.3.a)) has observed, that Vespasian is decorated with the highest ranking decoration for military victories that was only granted Augustus and Vespasian because both, by means of their victories, had been able to put an end to civil wars.**

Both processions, headed by these two main figures on Frieze A and B, must therefore visualize important *gestae* of these two protagonists.

As has been developed in more detail above (cf. *supra*, in Chapter V.1.b)), it is at least in my opinion obvious, that such scenes, as those represented on the Cancellaria Reliefs, must be the *raison d'être* of state art, because it was after all precisely through such works, that the 'concrete individual historical actions' (an expression, borrowed from Langer and Pfanner (2018, 83, 84-85; cf. *supra*, in Chapter V.1.b), quoted again below), performed by the protagonists, who commissioned these works, were 'documented' for public viewing.

Concerning this point, I am thus of a very different opinion than Langer and Pfanner (*op.cit.*) themselves. In the following I repeat, what was already quoted and written above (cf. *supra*, in Chapter V.1.b)).

Cf. Langer and Pfanner (2018, 84-85): "Im Bild tritt die Historie gegenüber den allgemein gültigen Aussagen zu den Kaisertugenden zurück [my emphasis]". So also similarly in another passage; cf. Langer and Pfanner (2018, 83): "Bei der viel diskutierten Frage zum historischen Background der monumentalen römischen Staatsreliefs könnte das Cancellariare Relief A als Kronzeuge dafür herhalten, dass die ideologische Botschaft und der allegorisch-symbolische Gehalt wichtiger gewesen sind als die konkrete historische Handlung [my emphasis]".

'Langer and Pfanner (2018, 84-85; cf. p. 83), in the just quoted sentence from their final passage (which I have slightly changed in my following English translation, by using some words from their similar passage on p. 83), thus express their opinion, that:

'in the image the concrete historical action has less importance than the generally valid statements concerning the imperial virtues, because the relief images are equally valid for the new *princeps*' - meaning with 'the new princeps' the Emperor Nerva'.

Being of the opinion that the emperor on Frieze B was from the very beginning Vespasian, I have, contrary to all previous scholars, tried to find out, whether or not there are iconographic details on Frieze B that might prove beyond any doubt that Vespasian is in fact the person, with whom the peculiar iconography of this frieze may be explained, and I believe to have found such proofs (cf. above, and *infra*, in Chapters V.1.i.3.); V.1.i.3.a); and VI.3.).

Now, if we believe for a moment that my hypothesis is true, that Frieze B showed from the very beginning Vespasian, and considering the (currently almost) undisputed fact that the Cancellaria Reliefs were commissioned by Domitian, it seems in my opinion also reasonable to follow Magi in identifying the togate youth, standing in front of Vespasian, with Domitian (cf. *supra*, n. 112, in Chapter I.1.). - I myself (cf. *supra*, at n. 117, in Chapter I.1.) have already earlier followed Magi's identification of the togate youth with Domitian - for different reasons - but perhaps my new arguments in favour of the identification of Vespasian on Frieze B as the original portrait of the represented emperor, can help other scholars to accept this idea, who so far did not identify the togate youth with Domitian.

I therefore suggest that both panels of the Cancellaria Relief, when *in situ* on opposite walls in the bay of this - presumed - arch, showed the beholder, among many other things (cf. *infra*, in Chapter VI.3.), that Domitian is the ideal sovereign, whose actions are perfect, both *domi* and *militiae*. Frieze B presents the *gestae* of the young Caesar Domitian, performing his duty - *domi* - as *praetor urbanus*, by heading a long procession of representatives of the City of Rome, who receive in an *adventus*-ceremony the new Emperor Vespasian at the *pomerium* of Rome, where, contemporaneously, Vespasian has arrived with his entourage. Frieze A presents the *gestae* of Domitian, now himself emperor, who has just transgressed the *pomerium* of Rome, performing his duty as emperor - *militiae* - since after the *profectio*-ceremony, that we witness on Frieze A, he will be leaving, together with his entire army, for a military campaign (for that hypothesis, cf. *supra*, at ns. 248, 249, in Chapter I.2.1.b).

By writing: 'considering the (currently almost) undisputed fact that the Cancellaria Reliefs were commissioned by Domitian', I am referring to my E-mail discussion with Walter Trillmich in March of 2020

concerning the headless togate statues, found at the Marble Forum at Mérida in Spain, the dating of which is controversial (cf. *supra*, in Chapter IV.1.1.h); and below, at *The Contribution by Walter Trillmich* in this volume). One of these togate statues has striking similarities with the togate youth (**figure 12**, in my opinion Domitian) on Frieze B of the Cancellaria Reliefs.

**V.1.e) The hypothesis of S. Langer and M. Pfanner (2018) concerning the alleged 'footstool' on Frieze B, on which the Genius Populi Romani sets his left foot**

In the following are listed some figures on both Cancellaria Reliefs, discussed by Langer and Pfanner (2018; cf. their p. 19, "Abb. 2" [cf. here **Figs. 1 and 2 drawing.**]), to which I will come back below, and who are also mentioned elsewhere in this *Study*:

cf. Langer and Pfanner (2018, 44-45), Frieze A: "**Figur 6: Nerva, früher Domitian**"; for a discussion of the pose of the emperor and of the gesture of his right hand, cf. p. 60 with n. 56;  
cf. pp. 45-46, Frieze A: "**Figur 9: Roma/Virtus**"; p. 46: "Die Göttin macht trotz ihrer eindeutig weiblichen Formen einen virilen Eindruck. Den unterstreichen der prononcierte Adamsapfel ..." ('Adam's apple');

cf. p. 47, Frieze A: "**Figur 11: Genius Senatus ... Der Kopf der Büste auf dem Zepter ist abgeschlagen, der untere Teil des Zepters stark bestoßen** (s. Abb. 9) ... An den auffallend kleinen Füßen sitzen die doppelt geschnürten *calcei senatorii* ... Seit der grundlegenden Publikation von F. Magi hat das Knotenzepter mit der aufsitzenden Büste immer wieder besonderes Interess auf sich gezogen (s.[iehe] auch hier Kap. 2.9.5). Das Zepter dekorieren regelmäßig verteilte Ast-Augen. Ein Metallschuh schützt die untere Spitze. Oben endet das Zepter in einem halbrunden Knauf oder einer Weltkugel [?]. Das Gesicht der Männerbüste, bekleidet mit *tunica* und *toga* - ist vermeintlich vollständig zerstört. Jedoch sind Teile der rechten Gesichtshälfte, des Ohres und der Haare erhalten (s. Abb. 9). Die Haarsträhnen sind über dem Ohr nach vorne gestrichen, die Wange ist glatt und es gibt keine Löckchen vor dem Ohr. Die Beschädigung lässt auf gezielte Abschlüge und anschließende Überarbeitung schließen. An der Gewandfalte rechts über dem Köpfchen sieht man eine flache quadratische Erhebung"; cf. pp. 75-76 (in chapter 2.5.9): "Besonderes Augenmerk zog seit Magis Publikation des Knotenzepter des Genius Senatus auf sich, das mit einer Porträtbüste bekrönt ist (s. Abb. 9) [with n. 106, providing references]. Es geht dabei immer um die Frage, ob es sich um Iupiter oder den Kaiser handelt. **Das Köpfchen ist absichtlich zerstört worden, wie die glatten, und teilweise überarbeiteten Schlagflächen, die sich in dieser Art nirgendwo sonst an den Cancellariareliefs finden, nahe legen. Erhalten ist der Ansatz einer bartlosen Wange, so dass es nicht Iupiter sein kann, der zudem keine *tunica* und *toga* tragen würde. Es muss also Domitian dargestellt sein [with n. 107, providing references: but this interpretation is not generally accepted]. Dazu passen die über den Ohren nach vorn gestrichenen Haarsträhnen und die fehlenden Löckchen vor dem Ohr. Das Büstenköpfchen wurde nach der *damnatio memoriae* Domitians offenbar bewusst und brutal abgeschlagen.** Für die flache quadratische Erhebung, die der Togafalte rechts über dem Köpfchen anliegt (s.[iehe] Taf. 8,2 und 48,1), gibt es keine einleuchtende Erklärung. Entweder handelt es sich um eine unfertige Partie, wogegen aber eher die sorgfältige Bearbeitung spricht, oder der Mann trug einen Kopfschmuck - welcher Art auch immer. Dann könnte es sich um einen penibel abgearbeiteten Stützsteg handeln, der die These der bewussten Zerstörung und anschließenden Überarbeitung untermauern würde. Feilich säße der Steg ziemlich weit außerhalb der Kopfmitte [my emphasis]".

**For the sceptre, held by the Genius Senatus of Frieze A of the Cancellaria Reliefs; cf. also Anne Wolfsfeld (2014, 201-202), whom Langer and Pfanner (2018, 75-76 with ns. 106, 107) themselves do not discuss.**

Anne Wolfsfeld (2014, 201-202) writes about the sceptre, held by the *Genius Senatus* on Frieze A of the Cancellaria Reliefs:

"Nach fehlenden glyptischen Zeugnissen unter Nero, Vespasian und Titus haben **sich sicher zwei mit Domitian zu identifizierende, rundplastisch gearbeitete Panzerbüstchen erhalten. Das eine ist nach der spätantiken Umarbeitung erneut an der Hinterkopffrisur zu erkennen (Abb. 9)**, [with n. 103] **das andere weist trotz der summarischen und groben Ausarbeitung die frisurtechnischen und physiognomischen Merkmale Domitians auf.** [with n. 104] **Allerdings handelte es sich hier nicht um Kameen höfischer Funktion. Eine Verwendung [page 202] der beiden Büstchen als Zepterbekrönung scheint am plausibelsten; ein solches Zepter mit Büstenbekrönung ist beispielsweise an 'Cancellaria-Relief A' in der Hand des Genius Senatus nachgewiesen.** [with n. 105] **Aufgrund des wertvollen Materials und der prominenten Platzierung auf einem mitgeführten Zepter musste es sich demnach um Loyalitätsbezeugungen gegenüber dem Princeps handeln, die Teil magistratischer Insignien waren [my emphasis]**".

In her **note 103**, Wolfsfeld writes: "Paris, Cabinet des Médailles, Nr. 248 (Bekrönung des *bâton cantoral* der Sainte-Chapelle). Vollenweider u.[nd] Avisseau-Broustet (2003) 203f. Nr. 260 Taf. 134f.; Dahmen (2001) 169 Nr. 85 Taf. 85; zur Umarbeitung s.[iehe] Varner (2004) 125. 268 Nr. 5.31; Bergmann u.[nd] Zanker (1981) 409f. Nr. 48 Abb. 6a-b".

In her **note 104**, she writes: "Paris, Cabinet des Médailles, Inv. B 11318. Vollenweider u.[nd] Avisseau-Broustet (2003) 133 Nr. 156 Taf. 93; Meißner (1998) 119f. Nr. VIII.3; Megow (1987) 220f. Nr. A 109 Taf. 37,2; s.[iehe] ein weiteres, wohl als Domitian zu identifizierendes, aber fragmentarisches Panzerbüstchen aus Chalzedon in Florenz, Museo degli Argenti, Inv. 454. Galletti (2006) 199 Kat. A 26".

In her **note 105**, she writes: "Zu 'Cancellaria-Relief A' s.[iehe] beispielsweise Magi (1945) Taf. 3; zur Frage der Funktion s.[iehe] Panella (2011 [*i.e.*, here C. PANELLA 2011b]) 255; Bergmann u.[nd] Zanker (1981) 410; Meißner (1991) 120; Megow (1987) 220f."

Let's now continue with our main subject, the list of some figures on both Cancellaria Reliefs, discussed by Langer and Pfanner (2018).

Cf. Langer and M. Pfanner (2018, 51-52), Frieze B: "**Figur 2: Dea Roma** ... Der zugehörige linke Arm fehlt"; cf. p. 52, Frieze B: "**Figur 3: Vestalin** (Taf. 10,1; Taf. 34; Taf. 50,3) [the figure is almost completely preserved]"; cf. p. 52, Frieze B: "**Figur 4: Vestalin** (Taf. 10,1) Erhaltungszustand: Der Kopf fehlt komplett ... Anschluss der unteren Chitonfalten im Verhältnis zu Figur 3 und 5 etwas verunklärt ...";

cf. pp. 52-53, Frieze B: "**Figur 5: Vestalin** (Taf. 10, 1; Abb. 7a) Erhaltungszustand: Hals und Kopf fehlen komplett ... Die weibliche Figur ist in Rückansicht dargestellt und wendet den Kopf nach rechts ... [p. 53] Die von Magi rekonstruierte Armhaltung - angewinkelt und vor den Körper geführt - kann aus dem Faltenverlauf am Rücken nicht abgeleitet werden (s. Abb. 2 [= here **Figs. 1 and 2 drawing**]). Es ist nicht auszuschließen, dass der rechte Arm erhoben war ... Bildhauerische Fehler/Ungenauigkeiten: Plattenfuge verläuft ungünstig und schneidet die Schulter knapp ab. - Materialfehler (s. Abb. 17). Marmor ähnlich brüchig wie bei **Figur 1** und **3** ... Figur ragt ca. 1,5 cm über die Vorderkante der Reliefräumung hinaus. - Zur fehlenden Anschlussplatte s.[iehe] Abb. 7a";

cf. p. 53, Frieze B: "**Figur 6: Vestalin** (Taf. 10,2; Taf. 35; Abb. 7a) Erhaltungszustand: Die Figur ist nahezu vollständig verloren. Erhalten ist nur noch ein kleiner Rest des unteren Gewandbereiches und ein Fuß [*i.e.*, her right foot]. Dieser ist von der Plattengrenze angeschnitten und beschlagen ...

Beschreibung: Die weibliche Figur - ziemlich sicher eine weitere Vestalin - ist frontal dargestellt und trägt den langen Chiton sowie Schuhe aus weichem Leder. Sie schloss entgegen der Rekonstruktion Magis nicht direkt an **Figur 5** an (vgl. Kap. 2.6 und Abb. 7a [quoted *verbatim* and discussed *supra*, in Chapter V.1.d]) ... Bildhauerische Fehler/Ungenauigkeiten: Der Fugenverlauf ist sehr ungünstig, er schneidet den rechten Fuß knapp ab";

cf. p. 53, Frieze B: "**Figur 7: Vestalin** (Taf. 10,2; Taf. 35; Taf. 36,3) Erhaltungszustand: Es fehlen der Oberkörper und große Teile der Hüfte ... Beim Bruch am Übergang zur **Figur 8** blieb ein Grat stehen, der sich über die senkrechten Falten des *sagum* [of the lictor **figure 8**] legt. Folglich befand sich hier eine plastische Erhebung, die am ehesten zum ausgestreckten Arm der Vestalin ergänzt werden kann. Magis

Rekonstruktion mit gesenktem linken Arm ist deshalb kaum richtig (s. Abb. 2 [cf. here **Figs. 1 and 2 drawing**]);

cf. p. 55, Frieze B: "**Figur 11: Genius Senatus** [?] ... Die Beine sind im Verhältnis zum Oberkörper überlängelt und unproportioniert, die Füße dagegen zu klein und insgesamt zu weit nach rechts gerückt (s. Abb. 10, vgl. auch Kap. 2.9.3 und 9.5) ... an den Füßen trägt er die einfachen *calcei*";

cf. pp. 55-56, Frieze B: "**Figur 12: Junger Mann in Toga** ... Der jugendliche Mann mit Idealgesicht dominiert die Szene und ist deutlich größer als die anderen Figuren im Vordergrund und nahezu gleichgroß wie der Kaiser ... An den Füßen trägt er die einfachen *calcei*" cf. p. 65 with n. 66, Fig. 15 (for a discussion of this judgement of their figure 12, in my opinion a portrait of Domitian; cf. *infra*, at Chapter V.1.h.1.);

cf. pp. 56-57, Frieze B: "**Figur 13: Genius Populi Romani** [?] ... Die männliche Figur im Hintergrund ist nach rechts ausgerichtet und steht mit dem linken Bein auf einem schemelartigen Gebilde ... Das rechte Bein, das auf der Standfläche des Reliefs stehen müsste, ist nicht sichtbar "; cf. pp. 73, 84;

cf. p. 57, Frieze B: "**Figur 14: Vespasian** ... Den rechten Arm hebt er bis in Höhe der Schulter von Figur 12, ohne diese zu berühren ... Ob die Hand etwas hielt oder welchen Gestus sie vollzog, ist nicht eruierbar ... An den Füßen trägt er die *calcei senatorii* ... Der Kopf ist nur in der Halspartie original, Gesicht und Haar sind sicher umgearbeitet. Dies beweist vor allem der neu eingearbeitete Kehlkopf, der die frühere Halsfalte abschneidet (vgl. Abb. 22-24 und Kap. 2.9.4); cf. pp. 72-74, with Figs. 22-24 (for a discussion of this judgement of their figure 14, in my opinion from the beginning a portrait of Vespasian; cf. *infra*, at Chapter V.1.h.2.);

cf. p. 58, Frieze B: "**Figur 16: Victoria** ... Die Figur ist nahezu vollständig verloren, lediglich das rechte Bein, ein Teil des linken Fußes, ein Rest des linken Oberarmes samt Gewand sowie der vordere Teil des Eichenkranzes sind erhalten [my emphasis]".

As already mentioned, I myself identify the amazon-like figure on Frieze A, their "**Figur 9: Roma/Virtus** [my emphasis]", contrary to Langer and Pfanner (2018, 45-46), with the *Dea Roma* instead (cf. *supra*, at Chapter I.2.). As for their above quoted statement that, in their opinion, this figure makes a "viril" ('male') impression, 'which is stressed by its pronounced 'Adam's apple', I have studied this detail on 8th March 2019 in front of the original relief, together with Giandomenico Spinola and Claudia Valeri. The figure does not have an 'Adam's apple' ("Adamsapfel", in Italian: 'pomo d'Adamo'). Claudia Valeri convincingly suggested on that occasion the following to me: the artist had obviously in mind to create "Venusring" at the figure's neck, a distinct 'female' feature that was supposed to underscore the beauty of the represented female, but did not exactly succeed in doing so convincingly. - To 'Adam's apples' I will come back below (cf. *infra*, at Chapter V.1.h.2.)).

Contrary to myself, Langer and Pfanner (2018, 56, 62, 65, 69, 73, 77, 84) do not suggest an identification of this alleged "Schemel" or "Hocker" ('footstool') on Frieze B, also referred to as "Postament" ('pedestal') by them, and consequently do not suggest an explanation for its meaning. The reason for that being that they interpret the existence of this feature as a "Fehler" ('mistake'), as a "Füllstück" ('an object in order to fill a gap'), or as a "Notlösung" (an 'expedient').

Interestingly, this alleged "Notlösung" in their opinion (cf. their pp. 64-65) is a result of the decision of the artists to arrange the figures on Frieze B in two registers that are not standing on the same ground-line, as the figures on Frieze A do, but to lift the register of the figures in the background so-to-say to a higher ground-line than those in the foreground.

Langer and Pfanner (2018, 62) write: "Die Tatsache, dass die beiden Genien im Hintergrund von **Figur 12** in einigen Details von den Genien des Senates und Volkes in Fries A abweichen, hat zu weiteren Irritationen geführt. Besonders problematisch erscheint das Objekt, auf das der jüngere Genius seinen Fuß stellt. Es wird als Altar, Grenzstein bzw. Cippus, Schemel, Grundstein, Architektursurrogat u. ä. [und ähnlich] interpretiert. Dementsprechend variieren die Deutungen von Fries B und zeugen von erstaunlicher Kombinationsfähigkeit, Spitzfindigkeit und Phantasie, ohne zu einem Konsens zu führen (vgl. [vergleiche] die Aufstellung Abb. 14) [my emphasis]".

Cf. Langer and Pfanner (2018, 64-65, Chapter 2.9.2: "Stilistisches, Künstlerisches und Komposition"):

"Der grundsätzlich andere Reliefaufbau ist für den Gesamteindruck entscheidender als die eher marginalen stilistischen und künstlerischen Unterschiede. Bei A stehen die Figuren eng zusammen und sind bis zu drei Reihen in die Tiefe gestuft [with n. 64, with further discussion]. Bei B stehen die Personen weiter auseinander, die Hintergrundfiguren werden in die Höhe gestaffelt.

Bei A wird Tiefenräumlichkeit durch Überschneidung der Figuren und mit Hoch- und Flachrelief erreicht. Der Raum über den Köpfen bleibt leer, lediglich die *fasces* und Speere sowie die schwebende Victoria nutzen den Luftraum. Bei Fries B rücken die Hintergrundfiguren nach oben und besetzen die obere Relieffläche. Die Wahl dieses Kompositionsprinzips ist nicht glücklich, denn es stellt dem >entwerfenden Meister<, den es wahrscheinlich in dieser Form gar nicht gab (s. Kap. 2.9.3), vor nahezu unlösbare Probleme. Die erhöht auf einem Thron sitzende Roma erhält ein weiteres undefinierbares Podest; der Unterkörper des Genius Senatus (**Figur 11**) wird grotesk überlängt, der Genius Populi Romani (**Figur 13**) steht unvermittelt auf einem >Hocker< und wirkt wie verkrüppelt [my emphasis]".

Cf. Langer and Pfanner (2018, 69, Chapter 2.9.3, the context are mistakes made by the artists on both Cancellaria Reliefs):

"Ominöser und folgenschwerer ist der Fall bei der viel diskutierten Dreiergruppe des Genius Senatus, Populi Romani und des jungen Togatus (**Figuren 11-13**) auf Relief B, die dem Kaiser gegenübertreten. Es gibt auffallend viele kleinere Fehler im Bereich der Schultern, der Füße, des Haarbandes, des Speeres und Backenbartes. Gravierender ist die missglückte Ausführung der beiden Genien im Hintergrund (zu den Fehlern s. Abb. 10-11 und 17). Ihre Platzierung und Proportionierung kann nicht das Ergebnis einer sorgfältigen Planung, geschweige eines ausgearbeiteten Modells sein. Als Erklärung bleibt, dass sie ohne passende Vorlage >spontan< oder nachträglich eingefügt wurden. In diesem Fall ist auch eine Umarbeitung oder Planänderung nicht ganz auszuschließen, wofür vor allem der merkwürdig abgearbeitete Gewandzipfel des Genius Populi Romani sprechen könnte (s.[iehe] Taf. 40,7). Jedenfalls sollte der >Fußschemel< inhaltlich nicht überbewertet werden, denn es könnte sich bei ihm lediglich um ein Füllstück handeln, damit nämlich der Fuß des Genius nicht in der Luft schwebt [mit Anm. 71, with further discussion, referring to their Chapter 2.9.5; my emphasis]".

Cf. Langer and Pfanner (2018, 73, Chapter 2.9.5): "Hinzu kommt, dass sich einzelne Figuren oder Antiquaria jeglicher Deutung entziehen ... Ebenso gibt es für den >Schemel< unter dem Fuß des Genius Populi Romani auf Fries B keine sichere Bestimmung".

Cf. Langer and Pfanner (2018, 77): "Bei den bisherigen Deutungsversuchen für den jungen Genius (**Figur 13**) spielte das Postament, auf das er seinen Fuß setzt, eine besondere Rolle und wurde abwechselnd als Altar, Grenzstein, Cippus, Grundstein, Architektursurrogat oder Statuenbasis bezeichnet. Dementsprechend finden sich Benennungen als Genius Populi Romani, Honos, Terminus oder als Statue (vgl. Abb. 14). Möglicherweise wird die Bedeutung des Postamentes überschätzt, denn das auf einen Fels oder einen Gegenstand aufgesetzte Bein ist ein gängiges Statuenmotiv, ohne dass sich mit diesem immer eine spezielle Bedeutung verbinden ließe [with n. 126, providing a reference].

Es gibt freilich eine noch banalere Erklärung. Bei dem Postament handelt es sich schlicht um ein Füllelement, da ansonsten das Bein des Genius Populi Romani grotesk überlängt gewesen wäre (s. Abb. 11 und Kap. 2.9.3)".

Cf. Langer and Pfanner (2018, 84): "Bei der Reliefierung am Bau führten mangelnde Planung und Koordination zu zahlreichen Fehlern. Rätselhafte Details, wie z. B. der "Schemel" beim Genius Populi Romani des Frieses B sind eher eine technische Notlösung denn von inhaltlicher Bedeutung".

**V.1.f) My own hypothesis concerning the alleged 'footstool' of S. Langer and M. Pfanner (2018) on Frieze B, on which the Genius Populi Romani sets his left foot - it is a cippus of the pomerium-line of Rome**

Following earlier scholars, Langer and Pfanner's alleged "Schemel" or "Postament" on Frieze B is here instead interpreted as a *cippus* of the *pomerium*-line of Rome, the sacred boundary of the city (cf. *supra*, at **ns. 400, 416**, in Chapter III., and **n. 468**, in Chapter VI.). Since Langer and Pfanner (2018, 80) likewise (at least tentatively) interpret the scene visible on Frieze B as an *adventus*, and likewise state that on this panel two groups of people and personifications are meeting that come from opposite directions, one of them comprising the official representatives of the City of Rome, the other an emperor, it follows already that those two parties most probably meet at the *pomerium* of the City of Rome - because those features of the composition of Frieze B are the most important characteristics of an *adventus*.

Besides, the figures that were chosen for Frieze B, in combination with the entire composition of this panel, definitely prove the assumption that we are witnessing an *adventus*. This is clear because of the following details, which Langer and Pfanner (2018) themselves describe: the authors likewise identify the person, who is coming from the right, as an emperor, who is crowned by *Victoria*. They likewise identify the amazon-like figure on the left as *Dea Roma*, they identify the five Vestal Virgins on the left as such, and the two representations of Genii on the left as *Genius Senatus* and *Genius Populi Romani*. Langer and Pfanner (2018) also explain that the latter figures move from left to right in order to meet this emperor. They do not discuss the fact that all these 'representatives of the City of Rome', who move from left to right, are usually confined to the City of Rome, and they do not discuss, why the party, who comes from the left, stands still at this point, nor why the emperor stands still at this point, and why he is shown as wearing a *tunica* and *toga*, although he is crowned by *Victoria*. The artists of this panel could not possibly convey all these details, but they are known, and are of the greatest importance to our understanding of the represented scene (to all this I will come back in detail *infra*, at Chapter V.1.i.3.)).

To understand such scenes, we need to know the following: up to the *pomerium*-line, the sacred boundary of Rome (and not beyond), the mythical 'representatives' of the City of Rome were allowed to move: *Dea Roma*, as well as the *Genius Senatus* and the *Genius Populi Romani*. This is also true of the human Vestal Virgins, who likewise belonged to the representatives of Rome, as well as their lictor (leaving aside for a moment the togate youth, who is heading this entire procession) - all of whom appear on Frieze B on the left, and all these figures come from *inside* the city up to the *pomerium*. Also the magistrate *praetor urbanus* was confined to the City of Rome, his competence likewise did not reach beyond the *pomerium* (personally I identify the togate youth on Frieze B with the *praetor urbanus*. To this I will come back below; cf. *infra*, at V.1.h.1.).

Up to the *pomerium*-line (and not beyond), but coming from *outside* the city, was for example allowed to move a magistrate with *imperium*, who had left Rome for a military campaign and was now coming back as a victorious general. The same was true for an emperor, who had left Rome for a military campaign and was coming home after his victory in this war. This victorious magistrate with *imperium* or the victorious emperor would usually *not* enter the city and thus transgress the *pomerium*-line at the moment of his *adventus* at (but not yet into !) Rome, since a victorious general had the obligation to wait until the Senate would grant him a triumph. - Only on the day of his triumphal procession, this magistrate or emperor would then be allowed, together with his army, to transgress the *pomerium*-line (cf. *supra*, at **n. 247**, in Chapter I.2.1.a), at **ns. 248; 249**, in Chapter I.2.1.b), and at **n. 250**, in Chapter I.2.1.c)). To the specific example of Vespasian on Frieze B, I will come back below (cf. *infra*, at Chapter V.1.i.3.)).

As a consequence of this well known Roman law, Koepfel (1969, 188; cf. *supra*, **n. 361**, in Chapter II.3.3) had suggested to interpret the scene pictured on the right hand side panel in the attic ('city side') of Trajan's Arch at Beneventum (her **Fig. 46**) as follows: it shows one of Trajan's *adventus* at Rome (after a victorious campaign; for Trajan, cf. *supra*, **n. 323**, in Chapter II.1.e)). Two togate men are receiving Trajan (who is likewise clad in a *toga*), who, according to Koepfel, may be identified with the two *consules*, who have come

to tell Trajan that the Senate has already granted him to celebrate a triumph; Koepfel believed that Trajan is shown on this panel as standing just outside the *pomerium* of Rome.

I, therefore, maintain my earlier judgement that all the above-mentioned details, represented on Frieze B of the Cancellaria Reliefs, may be explained with the assumption, that those two groups are meeting at the *pomerium* of Rome. And that the strange object, on which the *Genius Populi Romani* sets his foot, is therefore a *cippus* that marks the *pomerium*-line (for those *cippi*; cf. *supra*, n. 199, in Chapter I.1.1.).

**V.1.g) The gestures that the two emperors on both friezes (cf. here Figs. 1; 2; Figs. 1 and 2 drawing) perform with their right hands**

As we have seen above, in Chapter V.1.e), Langer and Pfanner (2018) do not suggest, what the gestures that the emperors on both friezes perform with their right hands, may mean. For Domitian's gesture, cf. Langer and Pfanner (2018, 44-45, 60 with n. 56), for Vespasian's gesture, cf. Langer and Pfanner (2018, 57-58, 78).

**Concerning Domitian (now Nerva) on Frieze A (here Figs. 1 and 2 drawing: figure 6), Langer and Pfanner (2018, 60) write:**

"Vielfältig bleiben die Interpretationsansätze bezüglich des Handgestus und der Körperhaltung des Kaisers [on Frieze A: Domitian, now Nerva], dessen wie eingefrorene Haltung als krasser Gegensatz zu den eilenden Göttern ringsum empfunden worden ist. Die Interpretation als Zögern, Verweigerung, vornehme Zurückhaltung, ängstliches oder theologisch zu begründendes Zurückschrecken oder schlicht künstlerisches Unvermögen des ausführenden Bildhauers hat die Deutung der Gesamtszene ebenso nachhaltig beeinflußt wie die Rekonstruktion des linken Plattenabschlusses [with n. 56, providing references]".

Cf. Langer and Pfanner (2018, 74-75): "Fries A ... Im Gegensatz dazu steht der Kaiser (**Figur 6**) anscheinend ruhig da. In der Forschung unbestritten ist, dass er *tunica*, *paludamentum* und die einfachen *calcei* als Reisekleidung trägt und in der linken Hand eine Schriftrolle (*rotulus*) hält, ohne dass man deren genaue Bedeutung wüsste [with n. 100]. Der rechte Arm ist ausgestreckt, die Handfläche geöffnet. Der Gestus wird gedeutet als Gruß- oder Adorationsgestus (E. Simon), oder als Machtgestus (G. M. Koepfel) [with n. 101]. Die Haltung des Kaisers mit ausgestrecktem Arm und leicht seitlich gestelltem Bein mutet merkwürdig [with n. 102] an und gab zu vielerlei Spekulationen Anlaß: Es handle sich um das Resultat eines künstlerischen Unvermögens des Bildhauers; die Haltung zeige ein Zögern des Kaisers, das sich aus einer religiösen Scheu, ängstlichen Zurückweichung oder einer formellen Ablehnung der Macht begründet; Domitian breche ungern zu einer militärischen Unternehmung auf und gebe einer diplomatischen Lösung des Konfliktes den Vorzug [with n. 103].

In der Tat ist die ruhige Haltung des Kaisers inmitten der eilenden Götter auffällig. Wahrscheinlich gäbe es dazu aber gar keine alternative Darstellungsweise, denn der Kaiser >eilt und rennt< grundsätzlich nicht, wie die gesamte bildliche Überlieferung belegt. Freilich deuten Beinstellung und Armhaltung eine Vorwärtsbewegung an, die aber der kaiserlichen *dignitas* angemessen ist [with n. 104]". In their **notes 100-104**, Langer and Pfanner (74-75) provide references and further discussion.

**Concerning the (alleged) Domitian on Frieze B, in reality Vespasian (here Figs. 1 and 2 drawing: figure 14), Langer and Pfanner (2018, 78) write :**

"Aus der Szene selbst lassen sich kaum Hinweise auf die Identität des Mannes [*i.e.*, of the togate youth, their **figure 12**] ablesen. Begleitet von zwei Genien tritt er dem Kaiser gegenüber, dessen Handhaltung den Eindruck eines freundlich vertrauten, vielleicht auch ehrenden Umgangs erweckt. Die Bedeutung der Geste bleibt unklar: Möglicherweise handelt es sich um einen Gruß- oder einen Übergabe- oder eine besondere

Form des Macht-Gestus [with n. 131, providing references and examples, how this gesture has been interpreted]".

For my own interpretation of the gesture, which Domitian (now Nerva), is making on Frieze A, I follow Koeppel (1969), who suggested that Domitian (now Nerva) performed the gesture *ingens dextra*.

For a disussion; cf. *supra*, in Chapter *Preamble*; Section *III.*, at point 2.); *supra*, at n. 222, in Chapter *I.2.*, at ns. 246; 247, in Chapter *I.2.1.a*), and at n. 383, in Chapter *III.*).

For the interpretation of the gesture, which Vespasian is making with his right hand, I follow those scholars, beginning with Heinrich Fuhrmann (1940, Sp. 471-472; *id.* 1941, Sp. 544-545, both quoted *verbatim supra*, in Chapter *IV.1.*), and Filippo Magi (1945, 111, quoted *verbatim supra*, at n. 463, in Chapter *IV.1.*), who have suggested that Vespasian thus declares Domitian as his successor as emperor (cf. also *infra*, in Chapter *VI.3.*), as well as Giandomenico Spinola, who, on 24th September 2018, when we were discussing the Cancellaria Reliefs standing in front of those panels, has explained to me that Vespasian thus expresses Domitian's "legittimazione" as (future) emperor. Spinola was kind enough to write me this in an E-mail of 15th October 2018, that I may publish here with his kind consent (cf. *supra*, at n. 420, in Chapter *III.*; and below, at *The Contribution by Giandomenico Spinola on the Cancellaria Reliefs*).

***V.1.h) The hypotheses of S. Langer and M. Pfanner (2018) and myself concerning the togate youth on Frieze B (cf. here Fig. 2; in my opinion Domitian), and the allegedly recut portrait of Vespasian on Frieze B (cf. here Fig. 2; in my opinion from the beginning Vespasian)***

The overall judgement concerning the represented scene on Frieze B of the Cancellaria Reliefs, at which Langer and Pfanner (2018) arrive, may thus be added to the interpretations of this panel, that have been summarized above, in Chapters *I.1.*; and *I.1.1.*

Langer and Pfanner (2018, 62) comment the relevant hypotheses, of which seven have been summarized in Chapter *I.1.1.*, as follows:

"Während sich die Forschungsgemeinde bei Fries A auf die zwei großen Interpretationslinien *profectio* und *adventus* festgelegt hat, wirft Fries B deutlich mehr Probleme auf. **Dabei hat die Erkenntnis, dass das Porträt des Vespasian wahrscheinlich Resultat einer Umarbeitung ist, nicht zu einer konsensfähigen Lösung, sondern zu wilden Spekulationen geführt.**

Vor den Arbeiten von McCann und Bergmann zu Beginn der 1970er Jahre bestand eine weitgehende Einigkeit darüber, dass hier Domitian (**Figur 12**) auf Vespasian (**Figur 14**) trifft und dem Vater im Beisein der wichtigsten Personifikationen seinen Herrschaftsanspruch abringt [with n. 58, with further discussion.]. Diese Deutung wurde in leichten Variationen u.a. von Magi, J.M.C. Toynbee, J. Béranger, H. Fuhrmann, E. Simon, E. Keller und B. Andreae vorgetragen und schien so schlüssig, dass sie noch bis in die 1990er Jahre - unter Ausblendung der Umarbeitung - vertreten wird [with n. 59; my emphasis]". - Part of this passage has already been quoted *supra*, n. 281, in Chapter *I.3.2.*

In their **note 59**, Langer and Pfanner write: "Magi ... [*i.e.*, here F. MAGI 1939] 205f.; Toynbee 1957, 4; J. Béranger ... [*i.e.*, here J. BÉRANGER 1964] 81; Fuhrmann ... [*i.e.*, here H. FUHRMANN 1940]) Sp. 472; H. Fuhrmann, AA 1941, 545; Simon ... [*i.e.*, here E. SIMON 1960]) 151-154; E. Simon ... [*i.e.*, here E. SIMON 1963] 8 f.; Keller 1967, 211-215; B. Andreae, *Römische Kunst* (Freiburg i. Breisgau 1973<sup>3</sup>) 193. Weitere Autoren, welche die Deutung von Magi favorisieren: W. Kuhoff ... [*i.e.*, here W. KUHOFF 1993] 77f. Anm. 103; LIMC V (1990) 500 Nr. 21. 502 s. v. Honos (C. Lochin); N. H. Ramage ... [*i.e.*, here N.H. RAMAGE and A. RAMAGE 1996] 144".

As mentioned before (cf. *supra*, in Chapter IV.1): although Langer and Pfanner (2018, 26) quote Rita Paris (1994b, 80-83, Figs. 6; 7a-c, quoted *verbatim infra*, in Chapter V.1.i.3.a)) and on p. 27 Stefan Pfeiffer (2009, 62) in their bibliography, in their just quoted list of scholars, who follow Magi's interpretation of Frieze B, the relevant accounts of both scholars are missing.

As discussed above, Anne Marguerite McCann (1972; cf. *supra*, ns. 111, 114, in Chapter I.1., and at n. 371, in Chapter II.4.) was first to suggest that the head of Vespasian on Frieze B had been recut from the portrait of another emperor (in her opinion, from a portrait of Trajan). Beginning with Marianne Bergmann (1981; cf. *supra*, n. 115, in Chapter I.1.), who was first to suggest that the extant portrait of Vespasian was allegedly recut from an original portrait of Domitian, there were already earlier seven scholars, who had followed Bergmann's hypothesis.

As mentioned before, those seven scholars, discussed in Chapter I.1.1., who followed Bergmann's relevant assertion, are my personal choice, in reality many more have followed her relevant idea.

Bergmann (1981) had assumed that five figures, represented on both Cancellaria Reliefs, should be interpreted differently than suggested by Magi. Those are not exactly the same five figures, which Langer and Pfanner (2018) interpret differently as I do here, and that have been mentioned above (cf. *supra*, in Chapter V.1), but three of them are the same as already suggested by Bergmann (1981): the figures of Langer and Pfanner (2018): "Roma/Virtus" on Frieze A, as well as: "Junger Mann in Toga", and: "Vespasian" (allegedly reworked from 'most probably a portrait of Domitian') on Frieze B.

Interestingly all seven scholars (cf. *supra*, n. 128, in Chapters I.1.; see also Chapter I.1.1.), who had already earlier followed Bergmann's hypothesis, only followed her in the assumption concerning the alleged recut portrait of 'Domitian'/Vespasian, whereas the other four figures, which Bergmann interpreted differently than Magi, are interpreted differently by all those seven scholars. The same is true for Langer and Pfanner (2018).

For a discussion; cf. *supra*, in Chapter V.1). Langer and Pfanner (2018) follow Bergmann (1981) in so far, as out of the five figures, which Bergmann interprets differently than Magi (1945), Langer and Pfanner interpret likewise three differently than Magi, but they do not follow Bergmann's interpretations of all those three figures, but likewise only in the case of 'Domitian'/Vespasian on Frieze B.

Compared with those other seven followers of Bergmann's judgement (cf. *supra*, at Chapter I.1.1.), the hypothesis of Langer and Pfanner (2018) has most similarities with the proposals, published by Koepfel (1984) and Pentiricci (2009); but note that Langer and Pfanner (2018, 27) themselves, although listing the monumental publication by Christoph Luitpold Frommel and Massimo Pentiricci (2009) in their bibliography, do not discuss Pentiricci's relevant hypothesis at all. Exactly like Bergmann (1981) herself, neither Koepfel (1984), nor Pentiricci (2009) could explain the function of 'this young man in a toga' (cf. here **Figs. 1 and 2 drawing: figure 12**, in my opinion Domitian) on Frieze B, and as a consequence of this, they could neither explain, exactly like Bergmann herself, what Frieze B might represent.

**From his earlier discussion of Frieze B (i.e., here Koepfel 1969; cf. *supra*, at n. 200, in Chapter I.1.1., and at n. 416, in Chapter III.), Koepfel (1984) maintained his suggestion that Frieze B represents an *adventus*, although, as we shall see in a minute - under 'normal' circumstances - precisely that proves to be impossible (cf. *infra*, at Chapter V.1.h.1)).**

**This is also what Langer and Pfanner (2018, 80) suggest: Frieze B shows in their opinion an *adventus*, although they say that this assumptions is not certain.**

**Cf. Langer and Pfanner (2018, 80): "Sieht man Relief A und Relief B als Pendants, so würden sie sich bei der Deutung als *profectio* und *adventus* und der Betonung der militärischen und zivilen Aspekte perfekt ergänzen. Da wir aber den ursprünglichen Baukontext und die Anzahl der Reliefs nicht kennen, bleibt diese verlockende und immer wieder favorisierte Version hypothetisch [my emphasis]".**

**V.1.h.1.) The passages of Langer and Pfanner (2018), in which they discuss the togate youth on Frieze B (in my opinion Domitian; cf. here Figs. 1 and 2 drawing: figure 12)**

Langer and Pfanner (2018, 62, 65, 73, 78) state at the same time that it is, in their opinion, impossible to identify their **figure 12**, "**Junger Mann in Toga** [my emphasis]", the togate youth on Frieze B, whom I, following Magi, like other scholars, and exactly like Giandomenico Spinola and Claudia Valeri, identify as a portrait of the young Domitian.

Cf. *supra*, at *Introductory remarks and acknowledgements*; in Chapter I.1; at n. 455, in Chapter III.; below, at Chapter *The major results of this book on Domitian*; and at *The Contribution by Giandomenico Spinola on the Cancellaria Reliefs*.

Some of the passages, quoted in the following, have already been quoted before.

Langer and Pfanner (2018, 62) write: "**Nach McCann [1972] und Bergmann [1981] war man mit dem grundlegenden Problem konfrontiert, dass Domitian bzw. Vespasian auf einen jungen Mann (Figur 12) treffen, der ihnen gleichberechtigt gegenübertritt und für den sich bisher keine plausible Benennung findet. Unklar ist, ob es sich um eine Personifikation, einen Genius oder eine historische Persönlichkeit handelt. Erst jüngst legte G. Petruccioli eine der beliebten historischen Kombinationen vor, denen ein gewisser Charme nicht abzusprechen ist. Er vermutet in dem Jüngling einen designierten Nachfolger Domitians namens T. Flavius Vespasianus (vgl. die Aufstellung Abb. 14). Ähnlich hatte bereits 1982 H. W. Ritter in Figur 12 den Lucius Iulius Vestinus, einen Günstling Vespasians aus dem Ritterstand, vermutet [my emphasis]**".

Langer and Pfanner (2018, 62) apply in the above quoted passage the German term "Jüngling" to the togate youth on Frieze B, a word, that has been used in relevant German scholarship since the 19<sup>th</sup> century to describe ancient young men. Personally, I side with Johanna Fabricius (2000, 39 with n. 1; cf. C. HÄUBER 2014a, 766 n. 210), who has demonstrated the following: the term is not only anachronistic, but has in fact a very different meaning. Therefore its usage in ancient contexts, such as the one discussed here, is not appropriate.

Cf. Langer and Pfanner (2018, 64): "Bei der Beurteilung des Stils [of the Cancellaria Reliefs] darf man den künstlerischen Stellenwert der sog.[enannten] entwerfenden Meister nicht überbewerten. Der rationalisierte römische Produktionsbetrieb mit den individuellen Vorgehen der Bildhauer und Steinmetzen sowie deren rigorose Spezialisierung schufen eigene Gesetzmäßigkeiten.

Das zeigt augenfällig das nahezu identische Aussehen nebeneinander liegender Köpfe, die von ein- und demselben Steinbildhauer gemacht worden sein müssen ... [after describing this at some heads on Frieze A, they discuss this phenomenon also for Frieze B].

Dasselbe Phänomen der geklonten Kopfreihen findet sich auf Fries B. Unabhängig von Geschlecht und Status oder von ihrer göttlichen bzw. [beziehungsweise] menschlichen Natur sind die Köpfe der **Figuren 1, 2 und 3** wie aus einem Guss; auch die Köpfe des Liktors (**Figur 10**) und des jugendlichen Togatus (**Figur 12**) könnten ähnlicher kaum sein (s. Taf. 50 ) [with n. 63"]. Cf. their **note 63**: "Die Tatsache, dass beide Köpfe so offensichtlich von der Hand eines Künstlers stammen und ihnen jeder individuelle Zug gleichsam fehlt, spricht auch gegen die Deutung des jungen Togatus als historische Persönlichkeit. Siehe dazu näher Kap. 2.9.3 [my emphasis]".

Cf. Langer and Pfanner (2018, 65, Chapter 2.9.3: "Planung, Entwurf, Ausführung der Reliefs - Bildhauertechnik und Unfertigkeiten"):

"Der umstrittene und mit Kaiser Vespasian korrespondierende Mann (**Figur 12**) auf Relief B hat denselben Kopftypus wie der Lektor (**Figur 10**) neben ihm (s. Taf. 50,4,5). Es handelt sich bei ihm also weder um ein Porträt noch um eine besonders zu charakterisierende typische Person, denn sonst hätte man seine Gesichtszüge und Haargestaltung nicht dem ausführenden Steinbildhauer überlassen, der ihm das

Standardgesicht eines Liktors gab [with n. 66, with further discussion]. Folglich ist am ehesten ein anonymer Beamter oder Amtsdienner gemeint oder eine - ansonsten kaum oder nicht genormte - Personifikation, die keiner typischen Gesichtsscharakterisierung bedarf (zur Deutung s. hier Kap. 2.9.5) [my emphasis]".

Cf. Langer and Pfanner (2018, 73): "Hinzu kommt, dass sich einzelne Figuren oder Antiquaria jeglicher Deutung entziehen. Man denke an den jungen Togatus (**Figur 12**) vor Vespasian, bei dem bisher nicht klar ist, ob es sich um eine historische Person oder um eine Personifikation handelt [my emphasis]".

Cf. Langer and Pfanner (2018, 78:Chapter 2.9.5): "**Der junge Mann (Figur 12)** ist die mit Abstand rätselhafteste Figur des gesamten Reliefs [i.e., of Frieze B]. Nahezu so groß wie der Kaiser fehlen ihm Attribute, die auf seine Identität oder Funktion hinweisen. Er trägt *tunica, toga* und die einfachen *calcei*. Bei den dichten, s-förmigen Locken über der Stirn handelt es sich um die in neronisch-flavischer Zeit beliebte Modefrisur *coma in gradu formata*. **Versuche, im Gesicht individuelle Merkmale zu finden (z. B. Magi, Ritter, Petruccioli, s. Aufstellung Abb. 14), sind verlockend, zumal jugendliche Porträts meist nur gering ausgeprägte individuelle Züge aufweisen und die auffällige Größe der Figur dafür sprechen könnte.**

Vergleicht man das Gesicht jedoch mit denen von Soldaten, Liktoeren und Ministranten auf den Cancellariereiefs und vielen anderen Staatsreliefs, wird schnell eines deutlich: Der Mann hat ein typisches Ideal- bzw. >Allerweltsgesicht< mit stilisiertem Wangen- und Kinnbart und geschönten Zügen ohne individuelle Merkmale [with n. 129]. Die Ähnlichkeit zu Figur 10 ist eklatant, eine Argumentation mit den Figurengrößen an den Cancellariereiefs unmöglich. Nicht zu vergessen ist der Fakt der Umarbeitung. Würde es sich um eine historische Persönlichkeit handeln, wäre es nicht ohne Weiteres möglich gewesen, Figur 14 in einen Vespasian umzuwandeln. Der jugendliche Mann muss eine Person darstellen, der man sowohl Domitian als auch Vespasian gegenüberstellen konnte, ohne Fehl- und Missdeutungen bei den zeitgenössischen Rezipienten zu provozieren.

Folglich ist keine konkrete historische Persönlichkeit gemeint, sondern die Personifikation eines Standes-, einer Alters- oder einer Berufsgruppe. Die Benennung als Nerva, Domitian [mit Anm. 130] oder als Lucius Vestinus bzw. der designierte Thronnachfolger T. Flavius Vespasianus ist aus den bekannten porträttypologischen Gründen methodisch ausgeschlossen (s. Abb. 14). Vor allem letzterer hätte mit dem Porträt Domitians ebenfalls umgearbeitet werden müssen.

Aus der Szene selbst lassen sich kaum Hinweise auf die Identität des Mannes ablesen. Begleitet von zwei Genien tritt er dem Kaiser gegenüber, dessen Handhaltung den Eindruck eines freundlich vertrauten, vielleicht auch ehrenden Umgangs erweckt. Die Bedeutung der Geste bleibt unklar: Möglicherweise handelt es sich um einen Gruß- oder einen Übergabe- oder eine besondere Form des Macht-Gestus [with n. 131]. In der römischen Repräsentationskunst begegnet der Kaiser für gewöhnlich nur besonderen Personen auf solcher Augenhöhe. Dazu gehören Götter, Personifikationen, Mitglieder der kaiserlichen Familie oder fremdländische Potentaten.

Für diese Figur wird die Benennung als Magistrat, als *praefectus urbi* [with n. 132], als *eques*, als Genius des *ordo equester* [with n. 133], als Juventus [with n. 134], d. h. [das heißt] als die Personifikation der römischen Jugend, als *Sodalis Titialis* und selbst als *civis Romanus* [with n. 135] diskutiert. Aufgrund der Singularität von Figur und Szene lässt sich keiner der Vorschläge beweisen [my emphasis]".

In their notes 129-135, Langer and Pfanner provide references.

Seven of the hypotheses concerning the identification of the togate youth (here **Figs. 1 and 2 drawing: figure 12**), just mentioned by Langer and Pfanner (2018, 78) have also been discussed above (plus the hypothesis of M. BERGMANN 1981), in my Chapters *I.1.*; and *I.1.1.*, and will again be discussed below. Contrary to Langer and Pfanner, who state, that 'those hypotheses cannot be proven', I have arrived at a different conclusion. Five out of the eight hypotheses, which I have analysed, have already been refuted by other scholars, one of those five hypotheses I have refuted myself. We shall see below, that even six out of those eight hypotheses have been refuted by other scholars, and that I myself have now come to the conclusion that also the remaining two hypotheses should be refuted. - To that I will come back below and *infra*, in Chapter *V.1.h.2.*).

Immediately after that, Langer and Pfanner (2018, 78) continue: "Für den Vertreter des Ritterstandes könnte sprechen, dass er [*i.e.*, the togate youth **figure 12**] in Begleitung des Genius Populi Romani und des Genius Senatus auftritt. Der Kaiser würde also den Repräsentanten des römischen Volkes begegnen, wobei er den Ritterstand - aus welchen Gründen auch immer - hervorhobe [with n. 136, providing further discussion and references]. Es handelt sich um eine unbelegte Hypothese, denn wir kennen keine Ikonographie einer Personifikation des römischen Ritterstandes [my emphasis]".

**Since Langer and Pfanner (2018, 80, quoted *verbatim supra*, in Chapter V.1.h)) suggest that Frieze B shows an *adventus*, their interpretation, albeit suggested tentatively - because they cannot define the function of the togate youth (figure 12) - turns out to be impossible, although they themselves have not realized the inherent problem.**

The reasons for that are rather complex.

The appropriate magistrates to welcome an emperor into Rome in a solemn *adventus*-ceremony, were in theory, as far as we can judge from other state reliefs, which have been interpreted accordingly, the *consules* (cf. *supra*, n. 361, in Chapter II.3.3.), the *praefectus urbi* (cf. *supra*, at ns. 172, 182-189, in Chapter I.1., at ns. 355; 357-360, in Chapter II.3.3., and at ns. 388, 417, in Chapter III.) or the *praetor urbanus* (cf. *supra*, at ns. 172, 181, 185, in Chapter I.1., at n. 202, in Chapter I.1.1., and at n. 456, in Chapter III.) See for the examples '*consules*' and '*praefectus urbi*' two reliefs at the Arch of Trajan at Beneventum; cf. *supra*, in Chapter II.3.3., and here **Fig. 46**), all of these magistrates were members of the Roman Senate, who should definitely be represented as wearing the *calcei senatorii*.

This togate youth (cf. here **Fig. 2**; **Fig. 1 and 2 drawing**; **figure 12**) on Frieze B does *not* wear those boots, as we have seen above (cf. *supra*, n. 172, in Chapter I.1; the problem involved is discussed in detail in Chapter I.1.), and as Langer and Pfanner (2018, 55-56) themselves state (cf. *supra* and *infra*). We can rule out that this figure of a togate youth could possibly represent the *praefectus urbi*, since we know that the man, who held that office "was always a senator ... usually a senior ex-consul", as stated by Theodore John Cadoux and R.S.O. Tomlin (cf. *supra*, at n. 183, in Chapter I.1.), who was therefore definitely much older than this youth.

Again considering his age, the togate youth cannot be a *consul* either, because according to the *lex Villia annalis* (passed in 180 BC) those had to be 43 years old; cf. Ekkehard Meinhardt (1963, 215; C. HÄUBER 1998b, 683, n. 45). The just mentioned Republican "age limits" for all offices, *inter alia* that of the *consules*, "were often disregarded as imperial relatives and protégés were signalled by the bestowal upon them of the consulship"; cf. Peter Sidney Derow (1996, 384). But one of the above-mentioned reliefs, the right panel in the attic of the Arch of Trajan at Beneventum ('city side'; cf. here **Fig. 46**) represents adult men, not youths like **figure 12** on Frieze B (*i.e.*, in my opinion a portrait of Domitian who, at the historical moment in October 70, which Frieze B purportedly represents, was eighteen years old). According to Gerhard Koepfel (1969, 188), his Fig. 15, this relief at the Arch of Trajan at Beneventum, which he compared with the togate youth and Vespasian on Frieze B of the Cancellaria Reliefs (cf. here **Fig. 2**; **Figs. 1 and 2 drawing**; **figure 12** [togate youth, in my opinion Domitian]; **14** [Vespasian]) shows the two *consules*, who have come to the *pomerium* of Rome to tell Trajan (who, as a victorious general, stands of course outside the *pomerium*) that the Senate has granted him the celebration of a triumph (cf. *supra*, at n. 361, in Chapter II.3.3.; cf. Chapter II.3.3.a)).

With his above-quoted remark that the traditional age limit for the consulship was disregarded in the Imperial period, Derow was certainly right, as also the age shows, at which Titus (at 30?) and Domitian (at 19) first became *consul*.

Vespasian (born 17th November 9 AD) became "cos. I suff." from 1st November-31st December 51 AD (at the age of 42); cf. Dietmar Kienast, Werner Eck and Matthäus Heil (2017, 101, 102); his son Titus (born 30th December 39 AD?) became "cos. I" on 1st January (until the end of June) 70 AD (at the age of 30?); cf. Kienast, Eck and Heil (2017, 105); his son Domitian (born 24th October 51 AD) became "cos. suff." for the first time in March-June AD 71 (at the age of 19); cf. Kienast, Eck and Heil (2017, 109, 110).

I will discuss below a *praefectus urbi* (Domitian's paternal uncle Flavius Sabinus) who provides a good example for the usual age of such magistrates; cf. *infra*, in volume 3-2, at *Appendix I.a*).

**This means, provided we maintain, like Langer and Pfanner (2018) suggest, that Frieze B shows an *adventus*, that the togate youth must be the current *praetor urbanus* - but this assumption proves to be impossible, because the togate youth is wearing the 'wrong shoes' for that kind of office.**

**If, on the other hand, we decide for a moment to deny the importance of the iconographic detail of his alleged 'wrong' shoes in this context, we are then forced to abandon much of the scholarship that was produced since Andreas Rumpf (1955-56) and Marianne Bergmann (1981) (for a detailed discussion, cf. *supra*, in Chapter I.1.) - a heretic idea that we perhaps better abandon immediately.**

**Although even Marianne Bergmann (1981, 31) herself had questioned her own hypothesis concerning the senatorial shoes at the very end of her relevant reasoning (cf. *supra*, at n. 193, in Chapter I.1.) (!).**

Also Langer and Pfanner 2018 (76-77 with ns. 121-123), have discussed the problem of the 'wrong shoes', the *Genius Senatus* on Frieze B is wearing, a problem, to which I have dedicated above Chapter I.1. Langer and Pfanner 2018 (76-77 with ns. 121-123) have come to the same conclusion as myself that this may simply be a mistake (discussed *supra*, at ns. 144, 156, in Chapter I.1., quoting in their n. 123 the relevant findings of Birgit Bergmann [2010a] and of Ulla Kreilinger [1996]; quoted *verbatim supra*, at n. 193, in Chapter I.1.).

Langer and Pfanner (2018, 66, in their Chapter 2.9.3), comment on this vexed 'shoe problem' as follows: "Fehler finden sich oft bei den Schuhen (A: **Figuren 2, 3, 7, 8, 12, 15, 16, 17**; B: **Figuren 8?, 12, 14, 15, 17**; s.[iehe] dazu jeweils im Kapitel 2.8 unter "Technisches"): Sei es, dass sie vergessen und nachträglich eingeritzt wurden, oder dass es Verwechslungen mit der anschließenden Figur gab ... Der Befund könnte mit den prinzipiellen Unfertigkeiten im Fußbereich zusammen hängen und damit, dass die Schuhspezialisten zum Schluss in Zeitnot gerieten und deswegen ungenau arbeiteten. **Die fehlenden *calcei senatorii* des *Genius Senatus* auf Relief B sind also vielleicht nur eine Unachtsamkeit** [my emphasis]".

In the case of the togate youth, Langer and Pfanner (2018, 66, their "Figur 12") do not explicitly say, which kind of "Fehler" ('mistake') in their opinion the artists have made in regard to *his* shoes, nor do they discuss elsewhere any possible consequences that his wearing of those 'simple *calcei*' may have for our reasoning, whom he might represent. But if we follow their just quoted argument that the choice of the 'wrong' shoes for the *Genius Senatus* may be regarded as an error, this should in theory also be true in the case of the shoes, the togate youth is wearing.

Be all that as it may!

Personally, I have followed above in this respect a suggestion made by Toynbee (1957, 7-8, quoted *verbatim supra*, n. 176; cf. n. 186, in Chapter I.1.): only when we assume that the *praetor urbanus*, represented on Frieze B, is to be identified with the man, who held this office in AD 70 (*i.e.*, Domitian, who was since 1st January 70 *praetor urbanus consulari potestate*; cf. *supra*, n. 189, in Chapter I.1.), do we have a chance to explain, why the togate youth on Frieze B - deliberately - has been represented as *not* wearing the senatorial boots, but instead the simple *calcei*, that were usually worn by *equites*. Because of the following reasons: Domitian held also since 21st December 69 the title *Princeps iuventutis*, which meant nothing less than being officially declared to be 'the heir presumptive to the Empire' (cf. *supra*, n. 462, at Chapter III.). For the young men so honoured, their close connection with the *equites* was typical. Consequently, for the men holding this title, the wearing of those shoes was appropriate (cf. *supra*, ns. 205, 206, in Chapter I.1.1.), and *infra*, in Chapter VI.3.).

**And, as already likewise said above - only, provided the togate youth on Frieze B may be identified as the man, who held the office *praetor urbanus* at the represented historical moment - may we conclude that the scene represents an *adventus*.**

The reasons for that being that the other two magistrates, who could in theory likewise have received an emperor in an *adventus*-scene, cannot possibly be identified with the togate youth; *a*) because the youth is too young to be the *praefectus urbi* (cf. *supra*, at n. 183, in Chapter I.1.), nor can he be *b*) a *consul*, because (apart from his much too young age) on such reliefs the two *consules* are usually represented together (cf. *supra*, at ns. 360; 361, in Chapter II.3.3., and here Fig. 46).

Now, since Langer and Pfanner (2018) assume that this togate youth on Frieze B of the Cancelleria Reliefs originally stood in front of the Emperor Domitian (whose portrait, in their opinion, has been recut into that of Vespasian), the assumption to recognize in the togate youth *likewise* Domitian, who would thus stand in front of their 'Domitian', the emperor, is of course impossible.

**Or in other words: as already stated at the very beginning of this summary** (cf. *supra*, in Chapter V.1.; cf. Chapter V.1.h)), **the main difference between the interpretation of Frieze B, as suggested by Langer and Pfanner (2018) and my own is, whether we believe that Vespasian's portrait is the result of re-cutting the original head of Domitian (as they do), or rather that Vespasian's head on Frieze B is the original portrait (as I do).** - This leads us to the portrait of Vespasian.

As already said before, personally I do not agree with Marianne Bergmann and those seven scholars (discussed *supra*, in Chapter I.1.1.), who had so far followed her hypothesis, according to which the head of Vespasian has been reworked from another, allegedly pre-existing portrait of Domitian. These altogether eight hypotheses, that were published in the course of 28 years (1981-2009), are, in my opinion, not convincing, because of the following reasons. I repeat in the following, what was already written above:

**In the cases of three of these hypotheses, the authors were themselves unable to say, what the scene on Frieze B may represent, and in the cases of the other five hypotheses, those have been refuted by other scholars.**

**By studying those eight hypotheses, I had overlooked that not only five out of those eight hypotheses have been refuted by other scholars, but even six, namely also the hypothesis, published by Marianne Bergmann (1981) herself (!). The latter fact has been observed by Langer and Pfanner (2018, 60 with n. 52).**

The scholars, who have refuted either McCann's hypothesis (1972) that the head of Vespasian has been re-cut from the portrait of another emperor (in McCann's opinion: Trajan), or Bergmann's hypothesis (1981), that the head of Vespasian has been reworked from the portrait of Domitian, are: Gauer (1973, 350), Darwall-Smith (1996, 172), and Varner (2004, 119f. n. 62).

On 19th September 2019, I discussed again with Giandomenico Spinola the findings summarized here concerning the togate youth (in our opinion the young Domitian), in front of the original Frieze B of the Cancelleria Reliefs. Spinola was so kind as to take photographs of the relevant details of this panel for me, which are kept in my archive.

**V.1.h.2.) The passages of Langer and Pfanner (2018), in which they discuss the emperor on Frieze B (in my opinion from the beginning Vespasian; cf. here Figs. 1 and 2 drawing: figure 14), who, in their opinion, was first Domitian, whose portrait was later recut into that of Vespasian**

Langer and Pfanner (2018, 57-58), describing Frieze B, write: "**Figur 14: Vespasian** ... Der Kopf ist nur in der Halspartie original, Gesicht und Haar sind sicher umgearbeitet. Dies beweist vor allem der neu eingearbeitete Kehlkopf, der die frühere Halsfalte abschneidet (vgl. [vergleiche] Abb. 22-24 und **Kap. 2.9.4** [my emphasis]"; cf. pp. 72-74, with Abb. 22-24.

Langer and Pfanner (2018, 60) write:

"Mit der Frage der Datierung untrennbar verbunden bleibt der zweite Forschungsschwerpunkt, die Umarbeitung der Kaiserporträts. Bereits bei Auffindung der Reliefs erkannte Magi, dass auf Fries A das Porträt des Domitian in das des Nerva umgearbeitet worden war [with n. 46: quoting F. MAGI 1945, 60-69]. Das Kaiserportrait auf Fries B hingegen beurteilte er als originalen Vespasian, der auf seinen ihm gegenüber tretenden Sohn Domitian trifft".

Cf. their **note 47**: "**Die fehlende logische Stichhaltigkeit fiel Magi offenbar nicht auf, denn es muss als unwahrscheinlich betrachtet werden, dass Domitian auf Fries A umgearbeitet worden ist, auf Fries B hingegen nicht** [my emphasis]".

From their point of view, what Langer and Pfanner (2018, 60 n. 47) write in this footnote is understandable, since they tacitly assume that Nerva's artists had enough time to rework also the - in my opinion two portraits - of Frieze B. But contrary to Langer and Pfanner (cf. *supra*, in Chapter V.1.b)), who erroneously believe that Nerva himself did not pursue any important military activities at all, I myself suggest something else (for the following, cf. *supra*, in Chapter V.1.c)).

According to my hypothesis, Nerva had only ordered the re-working of the Cancellaria Reliefs, as soon as he had won his *bellum Suebicum* - we know that news concerning this victory reached Nerva in October of AD 97. Therefore, Nerva's artists had, in my opinion, not even started to rework the portraits of Frieze B, when he himself gave orders to interrupt those works. I believe Nerva did this either as a result of the fact that he had adopted Trajan as his son, co-Emperor and successor (between the end of October and the beginning of November of AD 97), or else at the latest in November of AD 97, as a result of the fact that at that time the Senate bestowed the victor name *Germanicus* on both Nerva and Trajan for the same victory in this *bellum Suebicum*. I also suggest that because of one of these reasons, or else of both, Nerva finally ordered himself the destruction of the monument that contained the Cancellaria Reliefs.

For a detailed discussion of this point, cf. *supra*, in Chapter V.1.c); and below, in Chapter *The major results of this book on Domitian*).

Elsewhere on the same page, Langer and Pfanner (2018, 60), after mentioning the relevant hypothesis of McCann (1972), write:

"**M. Bergmann erkannte die naheliegende Lösung, nämlich die Umarbeitung des Vespasian aus einem Domitian ...** [with n. 51, quoting M. BERGMANN 1981, 19-32]. **Allerdings muss konstatiert werden, dass es bisher keinen eindeutigen Beweis für die Kaiserumarbeitung auf Relief B gab, weswegen diese nicht ganz zu Unrecht immer wieder angezweifelt wurde** [with n. 52; quoted in more detail *supra*, n. 115, in Chapter I.1; my emphasis]".

Cf. Langer and Pfanner (2018, 72):

"**Auf Abb. 21 und 22 ist der Befund des Porträts [of Vespasian on Frieze B] dokumentiert. Dass der Kopf sicher umgearbeitet wurde, beweist die durch die Eintiefung des neuen Kehlkopfes abgeschnittene Halsfalte des Vorgängers (s. Abb. 23a), ferner der Knickpunkt am Hals mit Unterbrechung der Halsschlagader (s. Abb. 23b-c). Der untere Teil des Halses sowie die Brustpartie gehören damit wohl zum Vorgänger (s. Abb. 22, Nr. 7), ebenso die Bossenlinie vor dem Gesicht (s. Abb. 22, Nr. 6). Das Ohr dürfte insgesamt leicht überarbeitet worden sein, so dass auch der Übergang zur Wange nicht so unorganisch wirkt wie beim Nerva (s. Abb. 22, Nr. 3): Der breite Rand am Reliefgrund (Nr. 2) und der abgeschlagene Gewandsaum (Nr. 8) stammen von eben dieser Umarbeitung, ebenso wie die merkwürdige Abarbeitung auf der Kalotte (Nr. 10) (s. Abb. 22, Nr. 2, 8, 10). Insgesamt ist dem Bildhauer die Umarbeitung perfekt gelungen** [my emphasis]".

Cf. Langer and Pfanner (2018, 73):

"Die Identität des Vorgängerporträts lässt sich aufgrund des Befundes nicht lüften ... **Seit dem Aufsatz von M. Bergmann von 1981 hat sich die Deutung als Domitian weitgehend durchgesetzt** [with n. 89. quoting: "McCann 1972, 249-276; Bergmann 1981, 19-32"]. **Dafür spricht nicht nur die ähnliche Machart wie bei Relief A, sondern auch die Tatsache der Umarbeitung an sich. Da Relief A und B aufgrund von Stil, Technik, Material, Maßen und Fundkontext eindeutig zusammengehören, ist es nach wie vor am wahrscheinlichsten, dass Domitian auf beiden Reliefs abgebildet war. Die Cancellariareliefs sind folglich unter Domitian entstanden** [my emphasis]". - To this I will come back below.

Cf. Langer and Pfanner (2018, 74, "Fig. 23 Relief B, **Figur 14 (Vespasian): Am Hals blieben Reste des Vorgängers (Domitian?) stehen (Gipsabguss)** [my emphasis]).

Langer and Pfanner's Fig. 23 contains the letterings "a," "b", and "c". The relevant captions read: "a) Halsfalte vom ursprünglichen Portrait, durch die Einarbeitung des Kehlkopfes unterbrochen, b) 'Knickpunkt' am Hals: unten ursprünglicher Hals, oben zurück gearbeiteter Hals (gestrichelt ursprünglicher Verlauf), c) Halsschlagader des ursprünglichen Portraits wird durch die Überarbeitung unterbrochen [my emphasis]".

Langer and Pfanner (2018) thus themselves suggest that the head of Vespasian proves to be reworked because of a different reason than those assumed by McCann (1972) and Marianne Bergmann (1981). Similarly as in the above-mentioned discussion (cf. *supra*, in Chapter V.1.e)) of their "**Figur 9: Roma/Virtus** [my emphasis]" on Frieze A (cf. Langer and Pfanner 2018, pp. 45-46), which allegedly has an "Adamsapfel", and therefore makes in their opinion a 'male' impression, in the case of Vespasian they concentrate on his "Kehlkopf" as well as his 'larynx', or 'Adam's apple' (called in Italian: 'pomo di Adamo'). As we have seen above (cf. *supra*, in Chapter V.1.e)), Langer and Pfanner's figure of "Roma/Virtus" (here interpreted as the *De Roma* instead; cf. *supra*, in Chapter I.2.), despite their assertion to the contrary, does *not* have an 'Adam's apple'.

The terms larynx ('Kehlkopf') and Adam's apple ('Adamsapfel') are synonyms: one part of the larynx ('Kehlkopf') of men can protrude, a phenomenon which is called Adam's apple ('Adamsapfel') - this is what the authors of the below quoted German lexicon entries write about both subjects.

Cf. *Die Zeit Das Lexikon in 20 Bänden*, vol. 01 A-Bar (Hamburg 2005) 65, s.v. "Adamsapfel, hervortretender Teil des Schildknorpels am Kehlkopf, beim Mann stärker ausgebildet". Cf. vol. 07 (Hamburg 2005) 527 s.v. "Kehlkopf (Larynx), beim Menschen und den lungenatmenden Wirbeltieren der Luftröhre vorgelagertes Organ zur Stimmbildung. Das Knorpelgerüst besteht aus Kehildeckel-, Schild-, Ring- und zwei Stell- (Gießbecken-)Knorpeln [with drawing, in which these details are labelled]. Der Schildknorpel kann bei Männern als >>Adamsapfel<< vorspringen".

The "**Halsfalte vom ursprünglichen Portrait** [my emphasis]" ('a wrinkle in the neck of the previous portrait'), which Langer and Pfanner (2018, 72, 74) mention also in their caption of their Fig. 23 under "a)", runs on their Fig. 23 parallel to Vespasian's right Sternocleidomastoid muscle (in German: 'Kopfnicker'). As we have seen above, Langer and Pfanner (2018, 57) assert that the larynx, that in their opinion was newly created for the portrait of Vespasian, has 'cut threw' this wrinkle, which (*i.e.*, this wrinkle), in their opinion, must consequently be the remains of the alleged earlier portrait, the existence of which they therefore postulate (among other reasons, cf. their points "b)" and "c)", mentioned in the caption of their Fig. 23).

Apart from the fact that I could not verify any of their relevant assertions in front of the original Frieze B (cf. *infra*), I find it also on principle much easier to assume, that this larynx was from the very beginning there, where we see it now, since there is no alternative space, where we could assume *another* larynx. - Besides:

Langer and Pfanner (*op.cit.*) do not discuss the question, where the larynx of the - in their opinion alleged earlier portrait of the original emperor - may have been located. Since there is obviously no trace of such an 'original', earlier larynx - assuming at the same time that also that alleged original emperor must likewise have been endowed with a visible larynx, namely an Adam's apple - it is, in my opinion, much easier to conclude that 'Vespasian's larynx' that we see now, is the larynx of the 'original' portrait of the emperor. Provided this assumption should be true, it follows, of course, that Vespasian is that original emperor.

In front of the original, I have observed on 24th September 2018 that Vespasian's left Sternocleidomastoid muscle (*Musculus sternocleidomastoideus*, in German: 'Kopfnicker'), is slightly protruding, caused by the fact that Vespasian turns his head to his right in order to look at the togate youth (in my opinion Domitian), who is standing to his right (*i.e.*, in reality in front of, or opposite of Vespasian); what is visible at this point is actually Vespasian's left carotid artery (*arteria carotis*, in German: 'Halsschlagader'), to which also Langer and Pfanner (2018, 72, 74, and in the caption of their Fig. 23, at "c") refer, which the artist has represented as crossing diagonally, from top left to bottom right, over Vespasian's left Sternocleidomastoid muscle.

Cf. J. BARCSAY (1973, 238): "8. Kopfnicker (Tafel XCVIII, A) (*Musculus sternocleidomastoideus*)".

The date of this book shows, when and why I bought it: I have studied sculpture from 1969-1972 with the sculptor Kurt Sandweg at the Kunstseminar of the Universität Duisburg, and passed the 1. State Exam in Art there in November of 1972.

After reading the account by Langer and Pfanner (2018), I met again on 8th March 2019 with Giandomenico Spinola and Claudia Valeri in front of the original Cancellaria Reliefs, in order to investigate *inter alia* the figure of Vespasian.

We looked especially at Vespasian's head, face, neck, his larynx ('Kehlkopf') and at both his Sternocleidomastoid muscles ('Kopfnicker'), as well as at his left carotid artery (his 'linke Halsschlagader'), and, by looking at the original, could not find that Langer and Pfanner's above-quoted (as we shall see below: alleged) observations could convince us of their assertion that the portrait of Vespasian - that Spinola, Valeri and I take for the original head of the emperor on Frieze B - has been reworked. The areas of the traces "a)", "b)" and "c)", discussed by Langer and Pfanner (2018, 77, at their fig. 23) - as not otherwise expectable - look *different* at the original than on the author's Fig. 23 that reproduces a plaster cast.

**In agreement with Spinola and Valeri, I maintain therefore my earlier opinion that the head of the emperor of Frieze B was from the very beginning the still extant portrait of Vespasian.**

**In addition to this, I am wondering, similarly as in the case of the research conducted by Hugo Meyer (2000; cf. *supra*, in Chapter II.4.), who had based his hypothesis concerning the togate youth on Frieze B of the Cancellaria Reliefs on observations at a plaster cast of this head alone, why such far reaching hypotheses, as the one formulated by Langer and Pfanner (2018, 74, Fig. 23), that was just discussed, were documented by these authors with photographs showing a plaster cast; cf. the caption of their Fig. 23).**

**Apart from the fact that neither Hugo Meyer, nor Langer and Pfanner have mentioned the dates, when all these hypotheses have been carefully verified by studying these ideas in front of the original reliefs.**

On 9th May 2019, I fortunately had another time the chance to discuss the Cancellaria Reliefs with Giandomenico Spinola and Claudia Valeri in the Vatican Museums. This visit became necessary, because I wanted to verify again the assertions by Langer and Pfanner (2018) in front of the original reliefs, and wished to discuss them with those colleagues - now that I had in the meantime studied the complete account by Langer and Pfanner (2018) in depth.

**One of the details I intended to study again in front of Frieze B was the neck of the emperor on Frieze B. As we have seen above, Langer and Pfanner (2018, 57-58, 72-74) have come to the conclusion that the extant head of Vespasian must be reworked because they assert that Vespasian's larynx cuts through a wrinkle at the represented men's neck, an alleged fact, which, in their opinion, proves that this wrinkle belongs to a presumed earlier portrait, and that Vespasian's larynx, and consequently his entire portrait, must have been sculpted at a second moment. But Langer and Pfanner base this conclusion on a wrong observation: in front of the original is clearly visible - with and without the aid of a lamp - that the wrinkle in question was instead cut *after* the larynx was sculpted.**

Thus the only proof that Langer and Pfanner could adduce to prove their hypothesis, according to which the extant portrait of Vespasian is allegedly the result of a reworking process, turns out to be *not* existing. Instead of proving their hypothesis, the just described actual situation proves instead beyond any doubt that the extant portrait of Vespasian is the original head of the emperor on Frieze B. I have observed this myself and Giandomenico Spinola and Claudia Valeri are of the same opinion.

Consequently, also concerning the head of Vespasian on Frieze B, Magi's observations (1939; 1945) were correct, who was already of the opinion that the emperor on Frieze B was from the beginning Vespasian.

**To conclude. The ninth hypothesis, which may be added to the eight hypotheses, studied above (*supra*, in Chapter I.1.1.), that published by Langer and Pfanner (2018), is based, as we have just seen, exactly like the other eight, on the same wrong assumption, which was first suggested by Bergmann - that the head of Vespasian on Frieze B was recut from a portrait of Domitian.**

But, as we have just seen, Langer and Pfanner (2018) follow at the same time the critiques of McCann's and Bergmann's relevant hypotheses, formulated by Gauer (1973), Darwall-Smith (1996) and Varner (2004).

This is why Langer and Pfanner (2018, 74, Fig. 23) themselves suggest that the reworking of the emperor's head on Frieze B is provable because of certain traces at Vespasian's neck, which they have observed at a plaster cast of Frieze B of the Cancelleria Reliefs, and that may be interpreted as remains of an earlier portrait ('most probably of Domitian'; cf. LANGER and PFANNER 2018, 73), which, in their opinion, had been recut into that of Vespasian. As we have seen above, the latter assertions are not true.

Therefore I agree with those scholars, who have already refuted six out of the altogether eight hypotheses summarized above (cf. *supra*, in Chapter I.1.1.), and because the other two hypotheses, discussed in Chapter I.1.1., are likewise based on Bergmann's wrong assumption (1981), according to which the portrait of Vespasian was recut from an alleged original portrait of Domitian, I myself refute also those other two hypotheses. These two hypotheses are those published by Gerhard Koepfel (1984, 7, 31-33) and Massimo Pentiricci 2009, 57-58, with ns. 409-414. For both; cf. *supra*, n. 128, in Chapters I.1.; cf. also at Chapter I.1.1.).

**Finally I find also the ninth hypothesis discussed here, relating to the same subject, that published by Langer and Pfanner (2018), not convincing, which is likewise based on Marianne Bergmann's (1981) wrong assumption that the portrait of Vespasian was recut from another portrait, 'most probably of Domitian', as Langer and Pfanner write. To this I should like to add now that I likewise do not find the tenth hypothesis convincing, which relates to the same subject, that suggested by Joachim Raeder (2010, 141, discussed *supra*, in Chapters I.1.1.; V.1.b), because also Raeder follows Bergmann's wrong assumption that the extant portrait of Vespasian was recut from the (alleged) original portrait of Domitian.**

Provided, the assumption of Filippo Magi (1939; *id.* 1945; cf. *supra*, n. 112, in Chapter I.1.), of many subsequent scholars, and now of Spinola, Claudia Valeri and myself should be true that the head of Vespasian on Frieze B has *not* been reworked, but has already been sculpted at the order of Domitian in the first carving phase of this panel, it is also reasonable to conclude that Domitian had decided to let himself portray as the togate youth, standing in front of Vespasian.

As we have seen above, also Langer and Pfanner (2018, 73) themselves write:

**"Da Relief A und B aufgrund von Stil, Technik, Material, Maßen und Fundkontext eindeutig zusammengehören, ist es nach wie vor am wahrscheinlichsten, dass Domitian auf beiden Reliefs abgebildet war [my emphasis]". - Although they themselves believe, of course, that it is the figure of the emperor on Frieze B (i.e., in reality Vespasian), who should 'originally' have represented Domitian.**

If my hypothesis should be true, we, therefore, see on Frieze B the young Caesar Domitian, in his capacity as *praetor urbanus*, the artists possibly allude at the same time at his title *Princeps iuventutis* by the 'wrong', simple *calcei* he is wearing (considering that, as *praetor urbanus* being a member of the Senate, he should wear the *calcei senatorii*), and that despite of the fact that many of the scholars, who have been discussed in this *Study*, deny that his face is a portrait at all.

For more arguments that, in my opinion, support my relevant hypotheses, see the Chapters V.1.i.3.); V.1.i.3.a); and VI.3.

On 19th September 2019, I discussed again with Giandomenico Spinola the findings summarized here concerning the emperor on Frieze B (in our opinion from the beginning Vespasian), in front of the original Frieze B of the Cancellaria Reliefs. Giandomenico Spinola was so kind as to take photographs of the relevant details of this panel for me, which are kept in my archive.

**In my opinion, the solution to the whole problem discussed here has been provided long ago by Rita Paris (1994b) thanks to her correct interpretation of an iconographic detail that has so far not been considered in this context: the *corona civica*, with which *Victoria* is shown as crowning the emperor on frieze B (cf. here Figs. 1 and 2 drawing: figures 14 [Vespasian]; 16 [Victoria]).**

In the following, I anticipate, what I wrote for Chapter V.1.i.3.):

**'Only after this Chapter was written, did I read the reference by Barbara Borg (2019, 245 with n. 194, quoted *verbatim infra*, in Chapter V.1.i.3.a)) to the reconstruction of one of the three marble reliefs from the *Templum Gentis Flaviae* by Rita Paris (1994b) and arch. Gloria Marconi (1994).**

**Exactly as Frieze B of the Cancellaria Reliefs (cf. here Fig. 2), this relief (cf. here Fig. 33, reconstruction drawing by Marconi), shows Vespasian's *adventus* into Rome in October of AD 70. Of this relief, Vespasian's head is preserved, whom *Victoria* has already crowned with the *corona civica*, and Paris (1994b, 81-82, quoted *verbatim infra*, in Chapter V.1.i.3.a) is able to explain convincingly, why Vespasian is shown as having been honoured with precisely *that* wreath: a decoration with the *corona civica* was the highest ranking decoration for a military victory, only granted Augustus and Vespasian, because thanks to their military campaigns they had been able to put an end to *civil wars*.'**

If true, this observation by Rita Paris (1994b) can prove beyond any doubt that the head of the emperor on Frieze B was from the beginning a portrait of Vespasian.

**V.1.i) The hypotheses of S. Langer and M. Pfanner (2018) and myself concerning the design, manufacture, and meaning of both friezes of the Cancellaria Reliefs, the structure, to which they may have belonged, and the reason, why this structure was destroyed**

**V.1.i.1.) The hypotheses of S. Langer and M. Pfanner (2018) concerning the design, manufacture, and meaning of both friezes of the Cancellaria Reliefs, the monument or building to which they may have belonged, and the reason, why this structure was destroyed**

Some of the passages by Langer and Pfanner (2018), quoted in the following, have already been discussed above.

Cf. Langer and Pfanner (2018, 31, Chapter: "2.7 Bautechnischer Befund"):

"Die Ausarbeitung der Reliefs fand am Bau statt, denn man traf auf die Wolfslöcher 3 der Platte A2 und 1 der Platte B1 (s. Abb. 29) [cf. here **Figs. 1 and 2 drawing**]; cf. p. 40: "Ebenso wie bei den Reliefs erfolgte die Ausführung der Rahmen und Kymatien am Bau, wie u. a. [unter anderem] die knapp angeschnittenen unteren Dübellöcher zeigen (s. Dübel 4 und 5 bei Platte B1).

Zusammenfassung: laut dem technischen und architektonischen Befund lässt sich für die Cancellaria-Platten folgendes Schicksal rekonstruieren:

Obwohl die Platten des Frieses A und B gewisse Unterschiede zeigen, sind sie in ihrer Machart und Herstellungsgeschichte so ähnlich, dass die Zusammengehörigkeit zum selben Bauwerk außer Frage steht"; cf. p. 41 (after meticulously describing all these technical details): "... Gänzlich misslungen ist das untere Kyma, das ebenso wie die seitlichen und oberen Rahmen jeder Maßgenauigkeit und Steinmetzkunst spottet (s. Abb. 8c und 8e-g). Diese eklatanten Ausführungsmängel und Unsauberkeiten sind auf das unsystematische Verdübelungssystem, auf fehlende Planung und eine mangelnde Bauüberwachung zurückzuführen, wie es ähnlich bei den Reliefs selbst zu beobachten ist (s.[siehe] Kap. 2.9.3)";

**Langer and Pfanner (2018, 59) write:**

**"2.9 Auswertung: Mit den Reliefs vom Palazzo Cancellaria in Rom liegen zwei Highlights der Römischen Kunst vor, die sich seit ihrer Auffindung 1937 und 1939 immer wieder der wissenschaftlichen Annäherung entziehen [with n. 39, providing references; my emphasis]."**

Cf. Langer and Pfanner (2018, 69, Chapter: "2.9.3 Planung, Entwurf, Ausführung der Reliefs - Bildhauertechnik und Unfertigkeiten"; "Technik, Unfertigkeiten und Organisation"):

"Die Reliefs weisen allerorten unterschiedliche Bearbeitungsstadien auf. **Endgültig vollendet mit geglätteten Gesichtern wie bei der Minerva (Figur 5) des Relief[s] A (s.[siehe] Taf. 21,1.2) und fein geschliffener Hintergrundfläche wie bei der Victoria (Figur 16) des Reliefs B (s.[siehe] Taf. 42,1 und Abb. 17) sind sie nirgends.** Der Befund spricht für das gleichzeitige und eher unsystematische Vorgehen von vielen Leuten und Spezialisten überall an den Friesen ..."; cf. p. 70: "Neben den unübersehbaren Unfertigkeiten sind viele Partien perfekt und detailliert ausgearbeitet ... **Die Webstruktur des Gewandes der Vestalin (Nr. 5) [on frieze B] ist fein angedeutet (s.[siehe] Taf. 3,1). Die Helme von Mars (Figur 4) und Minerva (Figur 5) auf Relief A und der Dea Roma (Figur 2) auf Relief B (s.[siehe] Taf. 20,1-2; Taf. 21,1-2; Taf. 33,1-2) sind wahre Prachtstücke ...[my emphasis]**"; cf. elsewhere on p. 70: "Die Diskrepanz der bildhauerischen Technik bei den Reliefs ist unübersehbar. **Einerseits werden Details mit größtem Aufwand akribisch ausgearbeitet, andererseits gibt es zahlreiche Unfertigkeiten und Fehler. Als wahrscheinlichste Erklärung bietet sich ein abruptes oder überhastetes Abbrechen der Arbeiten an, das einhergeht mit dem Einsatz parallel arbeitender Arbeitsgruppen und Spezialisten sowie einer prinzipiell schlechten Bauüberwachung und Koordination. Der technische Baubefund führte übrigens zu ganz ähnlichen Schlussfolgerungen (s. Kap. 2.7) [my emphasis]**".

Cf. Langer and Pfanner (2018, 73-74, Chapter: "2.9.5 Deutung und Interpretation der Reliefs"):

"Grundsätzlich stehen sich bei den Cancellariareliefs zwei Positionen gegenüber: auf der einen Seite Deutungsansätze, die auf diverse historische Ereignisse rekurrieren und auf der anderen Seite solche, die den symbolisch-allegorischen Charakter betonen. Meist jedoch werden diese beiden Aspekte miteinander vermischt oder nach Bedarf ausgeblendet. Einig sind sich die meisten Forscher hingegen, dass es sich bei den Reliefs um Pendants handeln muss, worauf eine Vielzahl der Deutungen beruht [with n. 93: "Zuletzt - beidemal überzeugend und in sich schlüssig ... (quoting: T. HÖLSCHER 2009a and D. BOSCHUNG 2012)"; for a discussion of T. HÖLSCHER 2009a, cf. *supra*, at Chapter III.]

Die genannten Parameter machen es [a] schier unmöglich, eine der vorhandenen Deutungen zu verifizieren (s. Abb. 13 und 14) oder [b] eine seriöse neue Deutung vorzulegen [my emphasis]."

As already mentioned before (cf. *supra*, at Chapter V.1.), I do not subscribe to the latter assertions of Langer and Pfanner (2018, 74), that it is a) 'nearly impossible to verify the hypotheses', published by those scholars, to whom they refer - who are identical with those, discussed in this *Study* - nor am I convinced, that it is b) likewise 'nearly impossible to present [oneself] a serious new interpretation' [of the Cancellaria Reliefs], since I have tried to do both in this *Study*.

Immediately after that, Langer and Pfanner (2018, 74) continue: "Im Folgenden wird deshalb lediglich versucht, auf Grundlage des Befundes Sicheres hervorzuheben, Abwegiges auszuschließen und Wahrscheinliches zu untermauern. Interessante neue Aspekte wie die politischen Intentionen Nervas und die Relevanz des Baukontextes werden im Kapitel 9.6 behandelt".

Cf. Langer and Pfanner (2018, 76): "Die Deutung als Aufbruch Domitians in den Krieg bzw. als *profectio* steht und fällt mit dem fehlenden linken Relieftteil. Sollte sich hier, wie schon verschiedentlich vorgeschlagen, ein Tempel, eine entgegenkommende Figurengruppe oder eine wartende Gottheit befinden, dann wäre die Möglichkeit für zahlreiche weitere Interpretationen gegeben (s. Abb. 13). Die Aneignung des Reliefs durch Nerva und die damit verbundene Umarbeitung bringt neue Aspekte, die in Kapitel 2.9.6 behandelt werden".

Cf. Langer and Pfanner (2018, 78-79): "Zusammenfassung: Auf Relief B trifft der Kaiser auf eine Gruppe von Personen, die bis auf Figur 12 [*i.e.*, the togate youth, here interpreted as Domitian] mehr oder weniger eindeutig benennbar sind, nämlich Dea Roma, die Vestalinnen, ein Lictor curiatus, der Genius Senatus und der Genius Populi Romani. Fünf bis sechs Liktoren bzw. Amtsdienere begleiten ihn und die Victoria bekränzt ihn. Die Begegnung der zwei Gruppen spricht für eine *adventus*-Szene (s. Abb. 27). Wie bei Relief A schauen alle erhaltenen Figuren, ausgenommen eines einzelnen Mannes (Lictor Nr. 9) auf den Kaiser. Er wird ebenso von Personifikationen gerahmt, wobei die Dea Roma, obwohl an den linken Bildrand gerückt, in einem deutlichen Bezug zu ihm steht (s. Abb. 27 und 28). Komposition, Bewegungs- und Blickrichtungen der Figuren beziehen sich - ein typisches Element des römischen Staatsreliefs! - ausschließlich auf den Kaiser.

**Die Tatsache, dass die Identität des jungen Mannes (Figur 12) vor dem Kaiser nicht gelüftet werden kann, macht jede Deutung der Szene unsicher (s. Abb. 14). Augenfällig ist der zivile Charakter der Szene. Der Kaiser ist mit der *toga* bekleidet, es fehlen Soldaten und bezeichnende militärische Elemente. Die Bekrönung mit einem Eichenlaubkranz durch Victoria ist nicht zwingend und exklusiv als militärische Auszeichnung zu verstehen [with n. 138] [my emphasis]."**

Cf. their **note 38**: "Bergmann a. O. Anm. 123 [*i.e.*, here B. BERGMANN 2010a] 146f. [my emphasis]."

Cf. Langer and Pfanner (2018, 80):

**"Sieht man Relief A und Relief B als Pendants, so würden sie sich bei der Deutung als *profectio* und *adventus* und der Betonung der militärischen und zivilen Aspekte perfekt ergänzen. Da wir aber den ursprünglichen Baukontext und die Anzahl der Reliefs nicht kennen, bleibt diese verlockende und immer wieder favorisierte Version hypothetisch [my emphasis]."**

Cf. Langer and Pfanner (2018, 80-81, Chapter 2.9.6): "Der ursprüngliche Baukontext lässt sich annähernd fassen (s. Abb. 30). Die relativ dünnen Marmorplatten dienten als Verkleidung, während der Kern des Baues aus Ziegeln oder weniger wertvollen Steinen wie Travertin, Tuff o. ä. [oder ähnlichem] bestand. Die Anschlussblöcke müssen ebenfalls aus massivem Stein, vermutlich Marmor, gewesen sein. Darauf weisen die typischen Dübel- und Klammerlöcher an den Ober-, Unter- und Nebenseiten hin. Die Reliefs standen mit ihrer Profilierung einige Zentimeter gegenüber der Wandfläche vor. Sie waren wahrscheinlich so hoch

angebracht, dass man die unsauber ausgeführte obere Profilkante nicht sehen konnte (Abb. 30c und Taf. 18,2.3).

Die Art des Baus kann trotz zahlreicher Vorschläge nicht bestimmt werden. Alle die in diesem Zusammenhang genannten Bauten Domitians sind spekulativ [with n. 142].

**Die bei den Ausgrabungen am Hirtiusgrab zusammen mit den Cancellarieliefs gefundenen Architekturteile und Inschriftenfragmente dürften domitianisch sein und könnten vom selben Bauwerk stammen (vgl. [vergleiche] Beitrag und Rekonstruktionsvorschlag Wolf und Freyberger, hier im Annex [cf. here *infra*, at Chapters V.2.; and V.3.]), aber auch dies ist hypothetisch. Die dünnen Reliefplatten sprechen nicht unbedingt für die Anbringung an einem Triumphbogen, denn beim Titus- und Trajansbogen wurden nur massive Steinblöcke verwendet [with n. 143, providing a reference; my emphasis].**

The latter remark repeats an opinion, already voiced by Pfanner (1983, 51). This has been rejected by Pentiricci (2009, 61-62, quoted *verbatim supra*, n. 264), whose important work on the Cancellaria Reliefs neither Langer and Pfanner (2018), nor Wolf (2018), or Freyberger (2018) have discussed.

In their **note 142**, Langer and Pfanner (2018, 81) write: "Zur Lokalisierung des Monumentes vgl. u. a. [vergleiche unter anderem] folgende Vorschläge: als Triumphbogen durch Fuhrmann ... [*i.e.*, here FUHRMANN 1940] Sp. 468-476; Pallottino a. O. (Anm. 40 ["M. Pallottino, Roma 19, 1941, 370f."]) 370f.; Toynbee ... [*i.e.*, here J.M.C. TOYNBEE, *JRS* 36, 1946] 188 f. [*corr.*: 179-180]; F. Magi, *BCom* [*i.e.*, *BullCom*] 67, 1939, 205f.; als *Porta Triumphalis* durch R. Bianchi Bandinelli - M. Torelli, *L'Arte dell'Antichità Classica* II (Turin 1976) Nr. 105; als *Templum/Porticus Divorum* durch Last ... [*i.e.*, here H. LAST 1948]) 14; Darwall-Smith 1996, 159. 176f.; Rumpf 1955/56, 117; als *Domus Aurea* durch Herzog 2001, 147; als *Villa Publica* durch Baumer 2007, 104 f.; als Hercules-Tempel an der *Via Appia* durch Simon ... [*i.e.*, here E. SIMON 1960]) 156".

Cf. Langer and Pfanner (2018, 84):

**"2.10. Zusammenfassung: Bei den Cancellarieliefs handelt es sich um ein vieldiskutiertes Hauptmonument der römischen Staatskunst, das 1937-39 unter dem Palazzo della Cancelleria in Rom entdeckt und durch Filippo Magi im Jahre 1945 publiziert wurde. Auf Relief A begleiten den Kaiser diverse Götter, Personifikationen, Liktoren und Soldaten, auf Relief B ist er umgeben von Vestalinnen, Göttern, Personifikationen und Liktoren [my emphasis]."**

Langer and Pfanner (2018, 82) write:

**"Die Cancellarieliefs und die Politik Nervas: Die Deutung der Reliefs für die domitianische Zeit bleibt ungeklärt, auch wenn für Relief A eine *profectio* und der militärische Aspekt und für Relief B ein *adventus* und der zivile Charakter am plausibelsten sind [my emphasis]."**

Cf. Langer and Pfanner (2018, 84):

**"Deutung: Die Darstellungen sind singulär und nicht abschließend geklärt. Fries A thematisiert vermutlich den Auszug (*profectio*) aus Rom mit Betonung des militärischen Aspekts und der kaiserlichen *virtus* und *victoria*, Fries B die Ankunft (*adventus*) in Rom und die Begegnung mit den wichtigsten stadtrömischen Repräsentanten unter Heraushebung des zivilen Aspekts inklusive der *virtutes pietas* und *concordia* [my emphasis]."**

As already said above (cf. *supra*, at Chapter V.1.b)), for their latter observation, that Frieze B represents the "*virtutes pietas* und *concordia*", Langer and Pfanner (2018, 84) do not themselves provide a reference.

I agree with their statement, but for reasons, to which they themselves object. These two virtues are mentioned by Pfeiffer (2009, 62, quoted *verbatim supra*, in Chapter V.1.b)), in his discussion of Frieze B of the Cancellaria Reliefs, whom Langer and Pfanner (2018, 27) themselves quote in their bibliography, but do not discuss in this context. - But, Pfeiffer (*op.cit.*), in my opinion rightly, comes to this conclusion, because he follows Magi (1939; 1945) in assuming that Frieze B showed from the very beginning Vespasian, who with the gesture of his right hand gives the togate youth Domitian the legitimization to reign as Emperor.

Concerning the destruction of the Cancellaria Reliefs, Langer and Pfanner (2018, 81) write:

"Gerne wüsste man, wie lange dieser >Cancellaria-Bau< stand und wann die Platten abgenommen und am Hirtiusgrab abgestellt wurden. Die Fundumstände am Palazzo della Cancellaria liefern dafür keine Anhaltspunkte [with n. 149]". Cf. their **note 149**: "Ob der Abriss des Gebäudes bereits unter Nerva, unter Trajan oder noch später erfolgte, muss dahingestellt bleiben. Da dieses Gebiet in hadrianischer Zeit intensiv bebaut wurde, könnte es sein, dass die Platten spätestens zu dieser Zeit dort abgelegt wurden, womit wir einen *terminus ante quem* hätten. Da die Datierung der Bodenschichten über dem Hirtiusgrab nach wie vor unsicher ist, kann die Deponierung allerdings auch später sein. Vgl. auch Kap. 2.1.". - For a discussion of the relevant passages of their Chapter 2.1, cf. *supra*, in Chapter V.1.a).

Cf. Langer and Pfanner (2018, 82):

"Wann die Platten vom Bau abgenommen worden sind, wissen wir nicht [with n. 150]. Die Umarbeitung zum Nervakopf war auf jeden Fall unbefriedigend, denn man sah nach wie vor die Domitianslocken und vor allem die unschöne Kante zwischen Nervagesicht und Domitiansfrisur (s.[iehe] Abb. 20c). **Vielleicht ordnete deshalb schon Nerva selbst an, die Platten abzunehmen, was mit dem Abbruch des gesamten Monuments einherging. Das legt der bautechnische Befund nahe, der näher erläutert werden muss** (s. Abb. 29; my emphasis)".

Cf. their **note 150**: "Dagegen Simon, in: Helbig<sup>4</sup> I (1963 [*i.e.*, here E. SIMON 1963]) 9: Die Reliefs seien nach der *damnatio memoriae* [of Domitian] abgenommen worden, da das gesamte Gebäude zerstört worden sei [my mphasis]".

Cf. Erika Simon (1963, 9): "Die Übereinstimmung beider Friese [*i.e.*, of the Cancellaria Reliefs, here **Figs. 1; 2**] in Marmor, Stil und Maßen sowie ihre einheitliche Rahmung machen es sicher, daß sie als Gegenstücke an demselben Bauwerk saßen. Dieses ist uns unbekannt, doch dürfte es eine persönliche Stiftung des Domitian gewesen sein, die wie er selbst der *damnatio memoriae* verfiel. Die Reliefs wurden abgenommen und aufbewahrt und unter Nerva ein zweites Mal verwendet".

This passage was already quoted above (cf. *supra*, n. 257, in Chapter I.3.2.).

Concerning the design of both friezes, Langer and Pfanner (2018, 64-65, Chapter 2.9.2: "Stilistisches, Künstlerisches und Komposition") write:

"Der grundsätzlich andere Reliefaufbau ist für den Gesamteindruck entscheidender als die eher marginalen stilistischen und künstlerischen Unterschiede. Bei A stehen die Figuren eng zusammen und sind bis zu drei Reihen in die Tiefe gestuft [with n. 64, with further discussion]. Bei B stehen die Personen weiter auseinander, die Hintergrundfiguren werden in die Höhe gestaffelt.

Bei A wird Tiefenräumlichkeit durch Überschneidung der Figuren und mit Hoch- und Flachrelief erreicht. Der Raum über den Köpfen bleibt leer, lediglich die *fasces* und Speere sowie die schwebende Victoria nutzen den Luftraum. Bei Fries B rücken die Hintergrundfiguren nach oben und besetzen die obere Relieffläche.

Die Wahl dieses Kompositionsprinzips ist nicht glücklich, denn es stellt dem >entwerfenden Meister<, den es wahrscheinlich in dieser Form gar nicht gab (s. Kap. 2.9.3), vor nahezu unlösbare Probleme. Die erhöht auf einem Thron sitzende Roma erhält ein weiteres undefinierbares Podest; der Unterkörper des Genius Senatus (**Figur 11**) wird grotesk überlängt, der Genius Populi Romani (**Figur 13**) steht unvermittelt auf einem >Hocker< und wirkt wie verkrüppelt [my emphasis]".

*V.1.i.2.) My own hypothesis concerning the statue-type (?) of the Dea Roma on Frieze B of the Cancellaria Reliefs (cf. here Fig. 2): it is reminiscent of Vespasian's coins commemorating his revival of the archaic festival of the Septimontium (cf. here Fig. 112)*

Many scholars, who tried to explain, why the Vestal Virgins occupy such a prominent place, as well as so much space on Frieze B of the Cancellaria Reliefs, have discussed the fact that Domitian was very much interested in the cult of these priestesses (cf. *supra*, ns. 267, 272, in Chapter I.3.2.).

It has also been observed that the iconographies of the *Dea Roma* on Frieze A and B differ from each other (cf. *supra*, n. 181, in Chapter I.1.). Langer and Pfanner (2018, pp. 51-52, Frieze B: "Figur 2: Dea Roma") have, in addition to this, observed that the *Dea Roma* on Frieze B does not have a left arm, as she should, of course.

Stefan Pfeiffer (2018, 189, Chapter: "The themes of Domitian's self-presentation"), writes concerning Domitian's relation to the Vestal Virgins:

**"3. Domitian's attempt to improve Roman morality, the *correctio morum*, which he fostered by taking *contra mores* the censorship for lifetime, became almost equally important as *virtus militaris* [with n. 95]. As *pontifex maximus*, he took harsh measures against obscene Vestal virgins [with n. 96; my emphasis].**

4. Domitian tried to establish a symbolic relation to Augustus, as evident from his *correctio morum* and the saecular games he held [with n. 97]". In his notes, Pfeiffer provides references. This point was already quoted and discussed above (cf. *supra*, in Chapter II.3.1.c)).

For Domitian's *correctio morum*, mentioned above by Stefan Pfeiffer (2018, 189); cf. also Eve D'Ambra (1993), and Zarah Newby (2016, 67-68, quoted already *verbatim supra*, in Chapter II.3.1.c), and in more detail *infra*, in volume 3-2, at Appendix IV.d.2.a)).

**Most of these facts concerning the representation of the *Dea Roma* on Frieze B, and especially the just quoted observation by Langer and Pfanner (2018, 65), that the *Dea Roma* on Frieze B, strangely enough, is positioned at an elevated position in regard to the figures, depicted on this frieze in the foreground, can, in my opinion, be explained by the assumption that the artists, who designed Frieze B, wished to remind the beholder of an iconography of the *Dea Roma* that at Rome and elsewhere was closely connected with the festival of the *Septimontium*, and thus with Vespasian and Domitian.**

This (statue?-)type of the *Dea Roma* appears for example on a *sestertius*, struck under Vespasian in AD 71 (cf. here **Fig. 112**). It shows the *Dea Roma* seated, as if on a throne, and seen in her right profile, armed with a helmet and holding a sceptre, in a pose and iconography very similar to her representation on Frieze B, but not elevated by means of a pedestal, on which her throne is set, as on Frieze B, but instead on top of, and leaning against 'the seven hills of Rome'.

**Fig. 112. Sestertius, issued by Vespasian in AD 71, Rome. With the *Dea Roma* on the reverse, seated on Rome's 'seven hills', thus referring to the *Septimontium* festival, which Vespasian had revived. Cf. A. Fraschetti ("Montes", in: *LTUR* III (1996) 285, Fig. 186: "Sesterzio di Vespasiano del 71 d. C. *RIC* II, 69 N. 442"). From: The British Museum. Obverse: IMP CAESAR VESPASIANVS AVG P M T P P P COS III; reverse: S C ROMA; *RIC* 2.1, 108, p. 67: "Roma seated right on the seven hills; to left wolf and twins; to right, River Tiber". © The Trustees of the British Museum.**

Online at: <[https://www.britishmuseum.org/collection/object/C\\_1872-0709-477](https://www.britishmuseum.org/collection/object/C_1872-0709-477)> [last visit: 7-V-2023].

Again, as in Vespasian's *sestertius* with the representation of his Temple of Isis at The Iseum Campense in Rome (here **Fig. 113**), Vespasian on his *sestertius* here **Fig. 112**, by means of his *aegis*, is equated with Jupiter, and that in a very peculiar iconography. Vespasian is wearing Jupiter's *aegis* similarly as Minerva does on Frieze A of the Cancellaria Reliefs (cf. here **Fig. 1; Figs. 1 and 2 drawing; figure 5**), but without attaching it to a garment or a cuirass, it rather seems, as if the *aegis* were part of his own body. For a discussion of this iconographies and of the coin here **Figs. 112 and 113**; cf. *infra*, in volume 3-2, at *Appendix II.a*).

For the coin here **Fig. 112**; cf. also Laurent Bricault and Richard Veymiers (2018, 141, 143), and Alexander Heinemann (2018, 237, with n. 109, offering different interpretations of the meaning of its reverse that should, of course, likewise be considered), both quoted and discussed *infra*, in volume 3-2, at *Appendix II.a*).

Vespasian, as was typical of him, had revived the archaic festival of the *Septimontium*, celebrated on 11th December, which was later especially lavishly endowed by Domitian (Suet., *Dom.* 4.5). On the Esquiline was found in 1509 near the "Sette Sale" a marble altar 'of archaic shape', dedicated to Jupiter. The area in question belonged to the *Mons Oppius*, and, in my opinion, to the *lucus Fagutalis* (cf. *infra*), where Iuppiter Fagutalis was venerated. The inscription (*CIL* VI, 369) says that the Emperor Vespasian dedicated this altar 'on behalf of the pontifical college', and the formula implies that Vespasian as *pontifex maximus* himself acted in the dedication ceremony. It is tempting to envisage Vespasian's dedication of this altar in connection with his newly revived festival of the *Septimontium*. When considering the fact that the Vestal Virgins belonged to the *pontifical college* (cf. below, at *The first Contribution by Jörg Rüpke*), which means that Vespasian had acted in the dedication ceremony in the *lucus Fagutalis inter alia* on behalf of the Vestal Virgins, and considering at the same time the peculiar arrangement on Frieze B, where the *Dea Roma*, sitting so-to-say on the 'seven hills of Rome' being surrounded by the Vestal Virgins (cf. here **Figs. 1 and 2 drawing: figures 2 [Dea Roma]; 3; 4; 5; 6; 7 [Vestal Virgins]**), it is tempting to believe that Domitian and his artists, with their design of these features of Frieze B had intended to remind the beholder of some important religious ceremonies at the festival of the *Septimontium*, at which Vespasian and the Vestal Virgins had acted together.

The term '*Septimontium*' did not derive from *septem* and *montes*, as has been thought, but from *saepti* and *montes* (thus meaning 'hills, enclosed by walls'), because it probably celebrated the historical event of the *synoikismos* of several previously independent archaic settlements within the area of what is nowadays Rome - each protected by their individual walls - to become the City of Rome.

**Later the festival '*Septimontium*' was understood as celebrating the 'seven hills of Rome', so also at Vespasian's time, when a statue of the *Dea Roma* was dedicated at the city of Corinth, as we learn from Filippo Coarelli (1999a, 268). We know from other sources that in the Roman Provinces, the cult of the *Dea Roma* was closely connected with the imperial cult. - To this I will come back below.**

In the dedicatory inscription of this statue of the *Dea Roma* at Corinth, the 'seven hills of Rome' are listed. - We ignore, whether this statue of the *Septimontium-Dea Roma*, that was dedicated at Corinth, and probably also elsewhere in the Roman Empire, followed the specific (statue-)type, that appears also on Vespasian's *sestertius* of AD 71 (here **Fig. 112**). If so, the assumption that the representation of the *Dea Roma* on Frieze B (here **Figs. 1 and 2 drawing: figure 2**) is influenced by this iconography of the goddess, could explain, why some scholars believe that what we see on that panel is not the goddess 'herself', but rather a statue representing her (cf. *supra*, n. 422, in Chapter III.).

As mentioned before, I follow Magi (cf. *supra*, n. 162, in Chapter I.1.), in assuming that the amazon-like figures on Frieze A and B should both be identified as the *Dea Roma* (for discussions, cf. *supra*, at Chapters I.1.; and I.2.). I hope to have already proven in Chapter I.2. that the amazon-like figure on Frieze A (cf. here **Figs. 1 and 2 drawing: figure 9**) may indeed be identified with the *Dea Roma*. If my hypothesis should be true that the representation of the amazon-like figure on Frieze B is modeled after the iconography of the *Dea Roma* that appears also on Vespasian's *sestertius* here **Fig. 112** - which in its turn is related to the *Septimontium* festival - that would prove that this figure on Frieze B represents the *Dea Roma* as well. Langer and Pfanner (2018, 51, on frieze B, "**Figur 2: Dea Roma**"), in my opinion correctly identify this figure as the *Dea Roma*, whereas on p. 76 they write: "Im Hintergrund thront die mit Speer und Helm gerüstete Roma/Virtus (**Figur 2** [on Frieze B]) und blickt auf das Geschehen in der rechten Frieshälte [my emphasis]".

**In their just quoted passage, Langer and Pfanner (2018, 76) thus observe, as already other scholars in the past, that the artists of Frieze B (cf. here Figs. 1 and 2 drawing, figures 2 [*Dea Roma*]; 14 [Vespasian]) have stressed by means of the composition, that the *Dea Roma* on Frieze B and the emperor (in my opinion from the beginning Vespasian) are characterized as having a very strong relationship with each other.**

Provided this assumption should be true, the 'larger left half' of Frieze B, which, in my opinion, is dedicated to the City of Rome (cf. *supra* at n. 249, in Chapter I.2.1.b), shows already, as if in a vision, the future blessings of Vespasian's reign, so to say his 'Regierungsprogramm' (the 'program of his future government') - a reign that in a certain sense only starts at this very moment, since Frieze B visualizes *inter alia* the investiture of the new Emperor Vespasian (to this hypothesis I will come back below, at Chapter V.1.i.3.).

If so, this 'sermon in stone' (so George Maxim Anosov Hanfmann 1975 in a different context; cf. *supra*, n. 207, in Chapter I.1.1.), as we might likewise call Frieze B, tells us, that Vespasian's reign will be characterized by the restoration and the duly observation of the important cults of the City of Rome, as well as by the revival of old festivals, such as the archaic *Septimontium*. The cults, supported by Vespasian, comprised that of the *Dea Roma*, who at that time was also venerated in the Roman provinces, for example at Corinth - and we may wonder, whether the cult-image of the *Dea Roma* there was represented according to the same statue-type that is possibly also represented on Frieze B.

The revival of the *Septimontium*, that Vespasian had himself commemorated with his coin issued in AD 71 (cf. here **Fig. 112**), showed definitely the *Dea Roma* in an iconography which resembles her image on **Frieze B**.

Alternatively, because Domitian commissioned the Cancellaria Reliefs long after Vespasian's death, he may have ordered his artists to describe in this 'sermon in stone' - Frieze B of the Cancellaria Reliefs - the just mentioned blessings of the reigns of the two Flavian emperors, who had preceded him. As we have seen above, precisely that is formulated *expressis verbis* in the hieroglyphic texts of Domitian's obelisk

Cf. here **Fig. 28**; cf. *supra*, at Chapter IV.1. See also below, at *The first Contribution by Emanuele M. Ciampini : La regalità domiziana: una nota egittologica*).

As I have written elsewhere: "In one of the inscriptions on his Obelisk, written in hieroglyphs, Domitian formulates his hope that his contemporaries as well as posterity will always remember the achievements of his family, the Flavian dynasty, especially their benefactions for the Roman People"; cf. Häuber (2017, 21; cf. pp. 165-169); cf. *supra*, at n. 466, in Chapter IV.1.

Emanuele Ciampini writes in this *Study* (cf. below, at *The first Contribution by Emanuele M. Ciampini : La regalità domiziana: una nota egittologica*) that the contents of these hieroglyphic texts on Domitian's obelisk have been composed in close collaboration with Domitian. Ciampini suggests that these texts prove the presence of Egyptian specialists at Rome, who were not only able to write hieroglyphic texts in the same impeccable quality as in pharaonic times in Egypt, but who, at the same time, aptly created that amalgam of

self-presentation, which is typical of Domitian. This self-presentation is manifest both in Domitian's many building projects in Egypt, as well as in his Egyptian projects at Rome, and, as Ciampini observes; in the relating hieroglyphic texts, Domitian and his Egyptian consultants combined thoughts, based on Egyptian theology, with those of the Roman principate.

For the archaic festival of the *Septimontium*, celebrated on 11th December 'on the seven hills of Rome', that was revived by Vespasian and celebrated with special expenditure by Domitian, cf. F. Coarelli (1999a, 268):

"... nel frattempo la festa [*i.e.*, the *Septimontium*] era diventata pubblica, forse a partire dell'età flavia. Infatti, sotto domiziano sono ricordate celebrazioni particolari del S.[*Septimontium*] (Suet. *Dom.* 4.5); inoltre, in una moneta di Vespasiano del 71 d.C. (*RIC*, II, 69 N. 442) appare la rappresentazione di Roma seduta sui sette colli (il cui nome è, analogamente, iscritto sul basamento di una statua di Corinto, rappresentante l'*urbs* divinizzata; v.[edi] *LTUR* III, 287)".

Cf. Augusto Frascetti ("Montes", in: *LTUR* III, 1996, 285 [for the "grandissima celebrazione del *Septimontium* a opera di Domiziano"]; cf. p. 287 and his Fig. 186 [for the coin, struck by Vespasian in AD 71: Fig. "186. *Montes*. Sesterzio di Vespasiano del 71 d. C. *RIC* II, 69 N. 442 ... [cf. here **Fig. 112**]).

For the *Septimontium*; cf. Lawrence Richardson Jr. (1992, 349 *s.v.* *Septimontium* [1]; cf. pp. 349-350 *s.v.* *Septimontium* [2] [Fig. 75]; and C. HÄUBER 2014a, 120 with n. 670 [with references], cf. pp. 135, 167, 234, 363, 365, 388 [for one of the archaic sanctuaries, the *lucus Iovis Fagutalis*, located on the eastern part of the *Mons Oppius*, in the area of the "Sette Sale", that lay on the procession route of the festival of the *Septimontium*. The *lucus Fagutalis* was a sacred grove, where a single beech tree, sacred to *Iuppiter Fagutalis*, was worshipped; cf. C. HÄUBER 2014a, 366-367. Cf. *infra*, in volume 3-2, at *Appendix 1.a*); Sections V. and XI.); cf. p. 181 with n. 295, 366 with ns. 107-110, p. 367 with n. 115 [for the 'altar of archaic form', dedicated to Iuppiter (*CIL* VI, 369), found in 1509 near the "Sette Sale", presumably within the *lucus Iovis Fagutalis*, dedicated by the Emperor Vespasian on behalf of the pontifical college. The formula of the inscription implies that Vespasian himself as *pontifex maximus* acted in the ceremony, and it is tempting to envisage his dedication in connection with the festival of the *Septimontium*].

For the cult of the *Dea Roma*; cf. C. HÄUBER 2005, 26-27 [for the famous dedications of the Republican period on the *Capitolium* by cities and sovereigns of Asia Minor to *Dea Roma*, Iuppiter Optimus Maximus and the *Populus Romanus*]; cf. C. HÄUBER 2017, 341 n. 94 [for a discussion of the close connection of the cult of *Dea Roma* and Augustus in Asia Minor]). Some of these monuments, exclusively dedicated to the *Populus Romanus*, were found on the Quirinal, and Coarelli (2014, 107-112, esp. pp. 110ff., Figs. 30-32) convincingly suggests that the findspot of these inscriptions, Palazzo Barberini, may therefore be identified as the site of the Temple of Quirinus.

For a discussion of the locations, suggested for the Temple of Quirinus; cf. Coarelli (2014, 83-112, Chapter: "III Culti"; Section: "1. Quirinus"; cf. *id.*: "Quirinus: Aedes", in: *LTUR* IV [1999] 185-187, esp. p. 186, Fig. 74 = here **Fig. 34**. For the Temple of Quirinus; cf. also *infra*, in Chapter *V.1.i.3.a*) and here **Fig. 34**).

Coarelli (2014, 295 with n. 173) convincingly rejects the location of the Temple of Quirinus at a site within the gardens of the Palazzo del Quirinale, as suggested by Andrea Carandini (2007; cf. F. COARELLI 2014, 87-93, with Figs. 16; 17: Carandini's map of the area and his reconstructed ground-plan of the Temple of Quirinus). See also the map of the area by Maria Cristina Capanna (2012, 454), in which the Temple of Quirinus is likewise assumed at this site. Coarelli (2014, 300 with Fig. 107 and ns. 180, 181) refutes also this hypothesis.

As Coarelli is able to show, at the latter site, within the gardens of the Palazzo del Quirinale, stood instead the *domus* of C. Fulvius Plautianus, which is proven by *fstulae aquariae*; cf. Coarelli (2014, 92-93 with ns. 41-46, p. 295 with ns. 174-176, p. 298; cf. pp. 294-311; *Carta Archeologica di Roma* II [1964] 232-234, II H 140, s)), and probably already the *domus* of T. Pomponius Atticus, which stood 'on the Quirinal, between the Temples of Salus and Quirinus'; cf. Coarelli (2014, 271; and *infra*, in volume 3-2, at *Appendix IV.c*)). For Coarelli's own reconstructed ground-plan of the Temple of Quirinus (in the area of Palazzo Barberini), cf.

Coarelli (2014, 98, Fig. 21). For the location of the *domus* of C. Fulvius Plautianus at the site here indicated; cf. also the map published by Carlo Pietrangeli (1977; cf. C. COARELLI 2014, 16-17), label: DOMVS FVLVII PLAVTIANI.

Cf. here **Figs. 58; 59**, labels: QUIRINAL; Servian city Wall; PORTA SALUTARIS; COLLIS SALUTARIS; Palazzo del Quirinale; Site of AEDES: SALUS; ALTA SEMITA; Via del Quirinale; DOMUS: T. POMPONIUS ATTICUS ?/ C. FULVIUS PLAUTIANUS; PORTA QUIRINALIS; COLLIS QUIRINALIS; Palazzo Barberini; Site of AEDES: QUIRINUS.

For the above-mentioned Jupiter altar (*CIL* VI, 369), found in 1509 near the "Sette Sale" (in my opinion within the *lucus Iovis Fagutalis*), and, "di forma arcaica", as Filippo Coarelli was so kind as to tell me on December 1st, 2010 (cf. C. HÄUBER 2014a, 366 n. 109), see Serafino Ricci (1891, 198): "due pezzi di marmo, nell'uno era scolpita una fiamma con questa parola, *Jovi*, nell'altra il titolo [*CIL*, VI, 369] (in parte antica) IOVI (in parte postica) IMP. CAESAR.VESPASIANUS. AVG. PER COLLEGIVM PONTEFICVM FECIT".

Coarelli (2009b, 69) writes: "L'attenzione [di Vespasiano] riservata alla religione tradizionale, anche nei suoi aspetti più arcaici, è confermata da altri documenti, come la dedica di un altare da parte di Vespasiano, coadiuvato dal collegio dei pontefici [with n. 29: "*CIL* VI, 369".] a uno *Iuppiter*, che per il luogo di ritrovamento (l'Esquilino, in prossimità delle Terme di Traiano) dovrebbe identificarsi con l'antichissimo *Iuppiter Fagutalis*". Cf. Coarelli (2009a, 510), at cat. no. "114 Iscrizione relativa al restauro della *vinea publica* (*CIL* VI, 933, AD 75; F. COARELLI)", found on the *Via Ardeatina* outside the *Porta Ardeatina* in the Aurelian Walls, where he mentions the inscription *CIL* VI, 369, again (cf. C. HÄUBER 2014a, 367, n. 115).

This Jupiter altar (*CIL* VI, 369), "di forma arcaica", has unfortunately not been discussed by Fabio Giorgio Cavallero (2018).

Coarelli (2019a, 334-338, Chapter: "VII La *Praefectura Urbis*"; Section: "2. *Velia, Carinae, Fagutal*") summarizes the recent discussion concerning the *Fagutal*. Following Á. Fridh (1987), Coarelli (2019a, 335 with n. 145) observes that '*Fagutal*' was not a name of a hill - as most recent scholars have taken for granted, myself included - but that it was only the name of the *lucus Fagutalis*. As before (cf. F. COARELLI 2001), Coarelli (2019a, 337), locates the *lucus Fagutalis* "con tutta probabilità in un area prossima alle Sette Sale" - it was according to Varro (*Ling.* 5,50) the first *sacrarium* of the Esquiline, which the *Argei* visited on their procession.

Cf. our updated map here **Fig. 71**, labels: ESQUILINE; MONS OPPIUS; LUCUS FAGUTALIS; "Sette Sale". To this I will come back below (cf. *infra*, in volume 3-2, at *Appendix I.a*); at Sections V. and XI.).

**Apropos, the above-mentioned fact that, 'in the Roman Provinces, the cult of the *Dea Roma* was closely connected with the imperial cult'.**

**After this Chapter was written so far, Rose Mary Sheldon was kind enough to send me Chapter 7 of her book on Domitian (2023, in press), in which she discusses Domitian's promotion of the imperial cult (comprising the cults of *Divus Vespasianus* and *Divus Titus*) all over the Roman Empire, which, in the provinces, was closely connected with the cult of the *Dea Roma*.**

Considering the fact that, in my opinion, Frieze B of the Cancelleria Reliefs, when regarded in retrospect, shows the investiture of Domitian as (future) emperor by his father, *Divus Vespasianus*, I find it also tempting to explain the representation of the *Dea Roma* on Frieze B with Domitian's activities to promote the cults of *Divus Vespasianus* and *Divus Titus*. To support this hypothesis, I repeat in the following a passage from Sheldon's book that was already quoted in more detail *supra* (comprising the footnotes), in Chapter *Preamble*; Section III., at point 3.):

Rose Mary Sheldon (*Guarding the Caesars. Roman Internal Security under the Flavian Dynasty*, 2023, in press; Chapter 7; Section: "Imperial Cult") writes:

**"Part of the Senate's disdain for the Flavians concerned their lack of heralded ancestry. Vespasian could not change his lineage or rewrite his family history ...**

**Domitian now had two deified emperors in his family tree and could compensate for his family's lack of nobility by promoting their achievements and honoring them with religious piety ... Domitian used the imperial cult to lay claim to imperial legitimacy, despite the disregard of many in the Senate. [with n. 95] ...**

**Domitian did not institute a new role for the imperial cult. He simply connected it to his own imperial fortune. He used it and emphasized it in ways that reflected his own unique position as an emperor who was the son of an emperor and a brother of an emperor seeking the legitimacy denied him by the old vanguard within the Senate ...**

The imperial cult was a means of underlying power for all emperors [with n. 103]. **The imperial cult implied the divine right to rule ...**

Scott believed that Domitian was responsible for the establishment of the Flavian cult throughout the Roman world, and that worship was kept going until the close of the second century in spite of the fact that Domitian suffered *damnatio memoriae*. [with n. 104] ...

**mbbbbDomitian's attention to the Flavian family most certainly included the intention of raising his own status as emperor ...**

This was a masterstroke. By using the imperial cult as a means to secure a recognized legitimacy, Domitian was able to place the Senate in a dilemma. Since the cult was attached in practice to the local religions throughout the empire and to the goddess Roma herself, at least in theory, the Senate could not disregard it [my emphasis]". - In her notes, Sheldon provides references and further discussion.

V.1.i.3.) *My own hypotheses concerning the design, manufacture, and meaning of both friezes of the Cancellaria Reliefs, the structure to which they may have belonged, and the reason, why this structure was destroyed*

*After this Chapter was written, I realized that the findings summarized here are complemented by observations, made by R. Paris (1994b) and J. Pollini (2017b). The hypotheses, published by these scholars are, therefore, presented in the followed Chapters V.1.i.3.a) and V.1.i.3.b)*

*“Neben die von Domitian besonders geschätzten Gottheiten Jupiter und Minerva trat der Kult der eigenen Vorfahren, der dem Kaiser vor allem aus legitimatorischen Gründen wichtig war. Er bemühte sich, seiner eigenen Dynastie Frömmigkeit (pietas) zu erweisen und sie auf diese Weise mit dem julisch-claudischen Kaiserhaus gleichzusetzen. Bildlich vor Augen führen uns die pietas-Politik gegenüber dem Vater die beiden in der archäologischen Forschung bezüglich ihrer Interpretation mehr als umstrittenen sogenannten Cancellaria-Reliefs (vgl. zuletzt Henderson 2003). Sie sind nach ihrem Fundort im Garten des Palazzo della Cancellaria Apostolica benannt. Eines der beiden Reliefs zeigt auf jeden Fall Domitian mit Vespasian. Vater und Sohn werden von Minerva, Rom und den Genien von Senat und Volk Roms begleitet. Auf diese Weise ist nicht nur die Legitimation der Herrschaft des Domitian durch seinen Vater verkündet, sondern auch der consensus universorum, die Zustimmung zu seiner Herrschaft durch die Götter und die Untertanen”.*

Stefan Pfeiffer (2009, 62).

Only after I had thought to have finished writing this *Study*, did I find this passage in Stefan Pfeiffer's book on the Flavian emperors (2009, 62, quoted in more detail *supra*, in Chapters II.3.1.b); and II.3.1.c)), who, concerning Frieze B of the Cancellaria Reliefs, has come to almost the same conclusions as I myself.

For the following summary of my own hypotheses, see also *supra*, at n. 363, in Chapter II.3.3.a), and *infra*, at Chapter VI.3.

**I myself interpret the two Cancellaria Reliefs, as indicated in the captions of here Figs. 1 and 2. Frieze A showed, in my opinion, in its Domitianic carving phase the *profectio* of Domitian to one of his victorious military campaigns (in my opinion that of AD 89; cf. *supra*, n. 232, in Chapter I.2.; and *infra*, in volume 3-2, at Appendix IV.d.2.f). Frieze B showed from the very beginning what we still see today: the *adventus* of Vespasian at Rome in the first half of October AD 70, his decoration with the *corona civica* for having ended the civil war, and his investiture as the new Roman emperor; at the same time this panel visualized the legitimation of Domitian's reign (cf. *supra*, in Chapters IV.1.; and V.1.h.1.). See for this interpretation Giandomenico Spinola (personal communication; cf. *supra*, at Chapter III; see also below, at *The Contribution by Giandomenico Spinola on the Cancellaria Reliefs*), whom I am following here. See also below, at *The first Contribution by Emanuele M. Ciampini : La regalità domiziana: una nota egittologica*), both discussed *infra*, in Chapter *The major results of this book on Domitian*.**

**I believe that Nerva, as a consequence of his victory in the *bellum Suebicum* in October of AD 97 had decided because of this fact to order the reworking of those panels into representations of his own achievements; that Nerva possibly himself ordered the interruption of those works shortly after he had adopted Trajan (*i.e.*, in late October or beginning of November 97 AD), and that he, for the same reason, possibly later ordered the destruction of the monument or building that contained those panels (cf. *supra*, in Chapter V.1.c)). According to this scenario, Nerva had, therefore, only the time to start the reworking of Frieze A: this panel was, in my opinion, supposed to visualize Nerva's *profectio* to his *bellum Suebicum* (cf. *supra*, in Chapters II.3.1.a); II.3.2.; V.1.b); V.1.c).**

In addition to this, I further tentatively suggest that Domitian had commissioned the Cancellaria Reliefs for one of his (triumphal) arches at Rome, 'which were of very great number' (so Dio Cassius 68,1,1; cf. *supra*, n. 83, in Chapter I.1.), and precisely either for the *Arcus Divi Vespasiani* ? on the Palatine, or rather for the Arch of Domitian on the Palatine, assumed by Filippo Coarelli (2009b; *id.* 2012) at the main entrance of his *Domus Augustana* (for both; cf. *infra*, at Chapters *The major results of this book on Domitian*; and at *The visualization of the results of this book on Domitian on our maps*; and here Fig. 58), where these reliefs had been the horizontal panels in one of its passageways (cf. *supra*, in Chapters I.3.; and V.1.d), and here Figs. 1 and 2 of the Cancellaria Reliefs, drawing, 'in situ'). I also believe that this presumed fact could have been the very cause, why Nerva had decided to 'usurp' the scene, shown on Frieze A, for the glorification of his own victory in the *bellum Suebicum*. I suggest this also because Nerva resided now himself in Domitian's Palace on the Palatine, the 'Domus Flavia' / *Domus Augustana*.

That Frieze A shows Domitian's (now Nerva's) *profectio* is in my opinion certain because of the following reasons.

Contrary to Langer and Pfanner (2018, 76), quoted already above: "Die Deutung als Aufbruch Domitians in den Krieg bzw. als *profectio* steht und fällt mit dem fehlenden linken Relieftteil", I do not believe that 'we could only be sure that Frieze A of the Cancellaria Reliefs shows indeed a *profectio*, provided we knew what was represented on the missing part of the panel's far left', as they state (cf. here Fig. 1; Figs. 1 and 2 drawing, and *supra*, in Chapter V.1.d)).

When we see on Frieze A a Roman emperor (who is recognizable as such by the four lictors, who accompany him, two of them precede him) - Domitian (now Nerva) - who, in addition to his lictors, is also preceded by the Roman war-god Mars, and Domitian's personal patron goddess Minerva, who, like Mars, is rushing forward, but turns her head around to Domitian in a gesture that clearly urges him to follow her; an emperor, who is at the same time accompanied by 'the Senate and the Roman People', who bid farewell (cf. *supra*, at n. 453, in Chapter III.), and not only by those, but also by *Dea Roma* herself, who 'pushes' him forward; and most importantly, an emperor, who is followed by his armed soldiers - I believe that these iconographic details should suffice, to identify the represented scene as this emperor's *profectio* from Rome.

My own interpretation is, of course, greatly influenced by the fact that I identify the amazon-like figure on Frieze A, who 'pushes' Domitian forward, as the *Dea Roma* (cf. *supra*, in Chapters I.2.; I.2.1.), whereas Langer and Pfanner (2018, 45-46) interpret this figure (in my opinion erroneously) as "Roma/Virtus" instead. Because this figure is *Dea Roma*, she is obliged to stay within the confines of Rome, whose city goddess she is.

Cf. *supra*, at n. 245, in Chapter I.2.1., at n. 247, in Chapter I.2.1.a), at ns. 248; 249, in Chapter I.2.1.b), and at n. 250, in Chapter I.2.1.c).

What we witness here is, therefore - quite 'literally' visualized by Domitian's artists, who created Frieze A - 'Domitian's (now Nerva's) departure from Rome'. If that is true, which I think it is, the only iconographic details we further need to know is, how Domitian himself is dressed: he is wearing the 'simple *calcei*', the typical footgear of soldiers, and the *paludamentum*, the mantle that denotes the commanding general of an army, which is likewise shown on Frieze A - his armed soldiers are following Domitian (now Nerva). Among those men is Domitian's *armiger*, who carries Domitian's arms for him. The fact that Domitian takes his arms with him on his way to a military campaign, thus indicates that the emperor is prepared to personally fight together with his soldiers (so D. BOSCHUNG 2012, 44, quoted *verbatim supra*, at n. 250, in Chapter I.2.1.c)).

Decisive in this context are observations made by Paolo Liverani (2014, 26 with n. 72 and his Fig. 26), who is thus, in my opinion, able to prove beyond any doubt that Frieze A shows indeed a *profectio*. Langer and Pfanner (2018) themselves have not discussed the publication by Liverani (2014).

The following passage is a quote from my own text (cf. *supra*, at Chapter III.):

‘That the emperor (*i.e.*, Domitian, now Nerva) on Frieze A is definitely shown in a *profectio*-, and *not* in an *adventus*-scene, has in the meantime been proven by Paolo Liverani. Liverani has realized and documented with a colour photograph that the *lictor*, walking right in front of him, was clad in a red *sagum* (cf. **Figs. 1 and 2 drawing: figure 3**), which automatically means that the emperor was actually clad in the *paludamentum* - because that was coloured purple. In addition to this, Liverani with the following observations makes it clear that ‘wearing the *paludamentum*’ does not only mean that the emperor is shown in his ‘travelling costume’, as this detail has been interpreted by Kleiner and Hölscher (cf. *supra* [at ns. 443, 445, in Chapter III.]), but rather that wearing the *paludamentum* means *a*) that the scene represented takes place outside the *pomerium* of Rome, and *b*) that this garment is the “segno della potestà militare” (P. LIVERANI; cf. *infra*) of the represented protagonist.

To this I should like to add that the soldiers, following Domitian (now Nerva) on Frieze A, are armed, as we have seen above (cf. *supra*, n. 381, in Chapter III.) and the detailed discussion *supra*, in Chapter I.2.1.)’.

Liverani (2014, 26 with n. 72 and Fig. 26; cf. *supra*, at n. 448, in Chapter III.) writes:

"In altri contesti dobbiamo considerare che anche clienti e *apparitores* erano tenuti a uniformare il tipo e il colore delle loro vesti con quelle indossate dal patrono o dal magistrato che accompagnavano. Per esempio sappiamo che il littore di un magistrato dotato di *imperium* indossava fuori dal pomerio il *sagum*, un mantello corto, di colore rosso in quanto faceva riferimento al *paludamentum* purpureo del magistrato da cui dependeva, *segno appunto della potestà militare* [my italics]. Questo fatto è testimoniato dalle fonti scritte [with n. 72, providing references], ma si può facilmente riscontrare anche sul littore che precede Domiziano [now Nerva] nel rilievo di *profectio* [*i.e.*, Frieze A] della Cancelleria (fig. 26 [cf. here **Figs. 1 and 2 drawing: figure 3**]). Un simile elemento apporta ulteriori utili elementi alla discussione, sempre vivace, sulla interpretazione dei rilievi, riconfermando una volta ancora la collocazione della scena al di fuori del pomerio".

As already stated above in relation to Frieze B (cf. *supra*, in Chapter III.), the following is certainly true for both friezes:

**Besides, precisely the missing of characteristic architectural features, in the case of Frieze B for example a city gate - for the *pomerium*-line, which at the time coincided with the Servian city Wall (cf. *supra*, n. 199, in Chapter I.1.1.), makes interpreting the Cancelleria Reliefs so hard, but perhaps the simple fact that the slabs used for those panels are so thin, can explain the relevant decisions of the artists involved.**

**I am nevertheless convinced, contrary to Langer and Pfanner (2018, 80, 82, 84, quoted *verbatim supra*, in Chapter V.1.a), that what the artists have actually represented on Frieze B is sufficient to identify the represented scene as an *adventus*.**

**The following scenario is, of course, dependent of my assumption that the emperor on Frieze B was from the very beginning Vespasian.**

**In my opinion, the artists - in lack of ‘telling’ architectural backdrops on Frieze B - have, exactly as on Frieze A, also on Frieze B relied on the assumption that the beholders are able to recognize the represented protagonists; their attires, as well as that of the represented gods, allegorical representations, and accompanying humans, comprising their equipments; and that the beholders know exactly the spatial limitations, prescribed either by law and/ or religion, that are typical of all the figures shown.**

The artists have thus defined on both friezes, by means of the choices of appropriate gods, personifications and humans, as well a by certain choices of their compositions, *where* precisely these scenes take place. In the case of Frieze A the decisive elements, apart from recognizing that the main protagonist, as defined by his

lictors, is an emperor, are *a*) his facial traits, which identified this emperor as Domitian, and *b*) his attire, which told the beholder: Domitian is represented here as standing 'outside the *pomerium*', the sacred boundary of Rome, or within the area *militiae*. This definition of the represented locale on Frieze A is in a certain sense repeated, but at the same time more precisely defined by the specific positioning of the *Dea Roma* on this relief - right next to the emperor, but on that side of the panel, where also the *Genius Senatus* and the *Genius Populi Romani* are standing: because *Dea Roma*, according to sacred law, and/ or according to the construction of this city-goddess, exactly like the *Genius Senatus* and the *Genius Populi Romani* standing next to her, on such representations is usually confined to stay 'inside the *pomerium* of her city'.

This means: where Domitian (now Nerva) on Frieze A is supposed to be, is not 'somewhere' outside the *pomerium* of Rome, but because the artists have placed the *Dea Roma* immediately beside him, the emperor obviously stands 'just outside the *pomerium*' (cf. here **Figs. 1 and 2 drawing, figure: 6** [Domitian]; **9** [*Dea Roma*]).

As we have already heard above, also Marion Meyer (2006, 134), who likewise interprets the scene on Frieze A of the Cancellaria Reliefs as a *profectio*, has suggested the same interpretation of this specific detail: "Der Kaiser erscheint hier nicht im Panzer [as on the relief of the "Parthermonument" at Vienna, which she is discussing in this article; cf. *supra*, in Chapter I.2.1.b)], aber bereits im Paludamentum, also nach Ablegen der Toga an der Pomeriumsgrenze [with n. 86]. Virtus [here interpreted as *Dea Roma* instead] unterstützt ihn, im wörtlichen Sinne, und die kriegerischen Gottheiten Minerva und Mars geleiten ihn. Victoria fliegt ihm voraus [with n. 87]". In her notes, Meyer provides references.

**This strict application of sacred and/ or civil law, in my opinion, was also the decisive factor for the design of Frieze B. Trying to read, so to say, the represented scene on a 'secular' level alone, the feeling remains, that those two processions, which move from opposite directions towards an intended meeting point - the meeting clearly being the main purpose of the whole procedure - do not only come to a halt to allow the two main protagonists to greet each other.**

**There is certainly more that can be said about the locale represented on Frieze B.**

The point, where these two parties are *meeting* on Frieze B, regarded from the perspective of sacred law, is exactly the same, where, on Frieze A, Domitian (now Nerva) and *Dea Roma* are shown as (soon) *separating* from each other: the *pomerium* of Rome.

For the problem to assume on Frieze A the *pomerium*-line between Domitian (now Nerva) and the *Dea Roma*, see the discussion *supra*, at n. 250, in Chapter I.2.1.c): because of the presence of the armed soldiers at the right hand end of frieze A, we should under normal circumstances assume that the entire scene represented on Frieze A is located *outside* the *pomerium*. Although I am fully aware of this problem, I have come to the conclusion in Chapter I.2.1.c) that Domitian (now Nerva) and the *Dea Roma* on Frieze A are represented as *separating* from each other at Rome's *pomerium*.

Let's now turn to Frieze B of the Cancellaria Reliefs (cf. here **Fig. 2**). As we have already heard above (cf. *supra*, at n. 411, in Chapter III.), we know from literary sources that Domitian, in the autumn of AD 70, had first met his father Vespasian at Beneventum - after four years of separation (to this I will come back below). Nevertheless Frieze B of the Cancellaria Reliefs stages this first meeting of father and son at Rome, and we shall discuss in the following Domitian's reasons for this decision.

That in the case of Frieze B the two protagonists are *meeting* at the *pomerium* on the other hand, is shown in my opinion, precisely as on Frieze A, by certain iconographic details of the represented emperor, here Vespasian, and by the figures immediately next to him. One of these figures is *Victoria*, the others are the togate youth, the *Genius Populi Romani*, and the lictor (cf. **Figs. 1 and 2 drawing: figure 15**), who is following behind Vespasian. Vespasian, exactly as Domitian on frieze A, is denoted as the emperor by the four lictors,

who are accompanying him, three of them precede him, the fourth follows behind him. Vespasian's lictors (here **Figs. 1 and 2 drawing: figures 8, 9, 10, 15**) are discussed *supra*, in Chapter I.2.1.c).

At first glance, we could think the following. The fact that *Victoria* appears on Frieze B at all and crowns Vespasian with a wreath, means that the artists thus refer to the Great Jewish War, which, if true, would automatically lead to the assumption that Vespasian's here depicted arrival (at Rome, as we shall see in a minute) could only be that of the first half of October AD 70, since *Victoria* could only have crowned him *after* those victories. - Provided we would witness here a 'normal' military *adventus*, in which a victorious general is received at Rome, whom *Victoria* should crown with a laurel wreath. But here, things are obviously different from the usual *adventus*-procedure, as we shall see in the following.

To understand Frieze B, we need to know that Vespasian's relevant victories had been the reason, why first the troops stationed at Alexandria had hailed him - on 1st July AD 69 - as the new emperor, whereas "he obtained his recognition as emperor from the Senate" as Rose Mary Sheldon writes (2007, 141, quoted in more detail *supra*, n. 412; cf. at n. 455, both in Chapter III.). Nota bene, at that stage, Vespasian was still at Alexandria. See also *supra*, in Chapter Preamble; Section III., at point 1.), where has been discussed that Vitellius died on the 20th December AD 69, and that Vespasian can only have obtained his recognition by the Senate on 22nd December.

But, as has rightly been observed, Vespasian on Frieze B is *not* accompanied by his soldiers, with whom he has fought those victorious campaigns (to this I will come back below). This seems at first glance very odd, especially when we consider the sheer size of the army that Nero had entrusted to Vespasian in AD 67 in order to start a new campaign in a conflict, that was to become known as the 'Great Jewish Revolt' or War (AD 66-73). I repeat in the following, what Rose Mary Sheldon (cf. *supra*, n. 404, in Chapter III.) writes about the enormous size and the various components of Vespasian's army.

Sheldon (2007, 139) writes about the beginning of Vespasian's campaign: "The Jewish military victory over the Twelfth Legion gave new hope to the extremist cause in Jerusalem ... When news of the defeat reached Nero, he did not choose a negotiated settlement with the rebels. The emperor appointed a veteran commander, Vespasian, to prepare a new campaign. In 67 CE, Vespasian was dispatched with sixty thousand men; he was joined by his son Titus, who marched a legion from Alexandria [with n. 60]".

In her **note 60**, Sheldon writes: "The army of Vespasian consisted of three distinct legions: the Fifth, the Tenth and the Fifteenth. There were also twenty-three auxiliary cohorts, six *alae* of cavalry and the auxiliary troops of King Agrippa, King Antiochus of Commagene, Soemus of Emesa and Malchus of Arabia (Josephus, *BJ* 3.64-9; *Vita* 26-30)".

Interestingly, when Vespasian had come back to Rome in October of AD 70 for the first time as emperor - an event which Frieze B, in my opinion, purports to 'document' - the Great Jewish War was by no means already finished (it should last until AD 73; cf. *supra*, ns. 404, 412, in Chapter III.). - As we shall see below, this historical fact explains, why Frieze B is such an unusual *adventus*.

Although I am pretty aware of the fact that *Victoria* is crowning Vespasian with the 'wrong' wreath, since this wreath of oak leaves denotes Vespasian not as a victor, but as the reigning emperor (cf. *supra*, at n. 386, in Chapter III.), and has been interpreted as symbolizing Vespasian's investiture as the new emperor (cf. *supra*, n. 454, in Chapter III., quoted *verbatim* again below), the fact that *Victoria* appears here at all is in my opinion decisive.

**So, in a certain sense, *Victoria* on both friezes is the main figure - at least she sets the tone.**

As already quoted in more detail above, Stefan Pfeiffer (2018, 189; quoted *verbatim supra*, in Chapter I.2.1.a), and again in Chapter I.3.2.), who has analysed the themes of Domitian's self-presentation, has come to a conclusion that supports the just formulated observation:

"1. It was a key issue for Domitian to show his *virtus militaris* and his victoriousness [with n. 85, providing a reference]".

This fact, 'that *Victoria* sets the tone on both friezes of the Cancellaria reliefs', is, by the way, the reason, why I follow here Massimo Pentiricci's above quoted suggestion that the 'martial theme' of both Cancellaria Reliefs is enough to postulate that they were the horizontal panels in the bay of one of Domitian's many lost (triumphal) arches: "È, a ben vedere, lo stesso tema dei rilievi [*i.e.*, the Cancellaria Reliefs], la virtù militare del principe, a rendere poi del tutto plausibile l'ipotesi <<arco>> quale monumento di appartenenza" (cf. *supra*, n. 283, in Chapter I.3.2.).

Pentiricci is right, because on both friezes of the Cancellaria Reliefs the lictors are sufficient to denote the emperors as such. Or, in other words, if the intention had actually been to show on Frieze B the subject: 'Vespasian arrives at Rome in a mere civilian *adventus*', as has been suggested by Toynbee (1957, 4-5 with n. 1 on p. 5, quoted *verbatim supra*, in Chapter I.1.1., and by Langer and Pfanner (2018, 79, quoted *verbatim infra*), there would have been no need to represent *Victoria* in the act of crowning Vespasian.

Marion Meyer (2006, 133-134), in her discussion of the two allegorical personifications that appear in her opinion on frieze A, *Victoria* and *Virtus* (*i.e.*, the figure, that is here interpreted as *Dea Roma*; cf. here **Figs. 1 and 2 drawing: figure 9**), writes:

"Über das Verhältnis der beiden Personifikationen zum Kaiser läßt sich folgendes sagen ... Weder *Victoria* noch *Virtus* ist unerläßlich [with n. 73, providing references]. **Victoria wird allerdings häufig dargestellt. Sie ist der Grund für den Triumph, und das wird im Bild gezeigt ...** [my emphasis]".

The almost completely destroyed *Victoria* on Frieze B, and the wreath, she is holding above Vespasian's head, together with the entire procession of the representatives of the City of Rome, headed by the togate youth, who has come to receive Vespasian, therefore define the locale, where this scene takes place, as Rome, and provides us at the same time with a precise date: Currently it is assumed that Vespasian arrived at Rome, coming back there from Alexandria and from his victories in the Great Jewish Revolt, 'in the first half of October 70 AD' (cf. *supra*, n. 195, in Chapter I.1.1.).

When we assume that Frieze B documents (in part) the real historic events, we must assume the following. The position, where the Emperor Vespasian is shown as standing on Frieze B, for legal reasons, must be an area outside the *pomerium*, and therefore outside the City of Rome. This assumption is corroborated by an iconographic detail, that was already mentioned above (cf. *supra*, in Chapter III.):

Elisabeth Keller (1967, 211; cf. *supra*, n. 415, in Chapter III.) wrote in this context, referring to Frieze B of the Cancellaria Reliefs: "Vespasian hat schon beim Betreten Italiens die Toga angelegt, hat in Benevent seinen Sohn begrüßt und ist nun in Rom selbst angekommen. Noch befindet er sich außerhalb des Pomeriums, wie die Beile an den Fasces der Liktoren zeigen". This is corroborated by Langer and Pfanner (2018, 57-58, Abb. 12, quoted *verbatim supra*, n. 250, in Chapter I.2.1.c); cf. here **Figs. 1 and 2 drawing: figure 15**, the lictor, who is following behind Vespasian).

Vespasian on Frieze B is thus deliberately shown as still standing *outside* the City of Rome, that is to say, within the area *militiae*. Vespasian's *imperium* (exactly as that of any magistrate *cum imperio*) that he had received in AD 67 from Nero with the command to conduct this war, would have ended precisely at the sacred boundary of Rome (cf. *supra*, at n. 456, in Chapter III.).

But following Nero's death, the following had happened, as Rose Mary Sheldon (2007, 141) writes:

"The death of this emperor [Nero, in AD 68] meant that Vespasian's commission as general had expired, and accordingly he discontinued his military activities [conducted by himself in the Great Jewish War since AD 67, a revolt, which should last until AD 73]. He obtained his recognition as emperor from the Senate and the troops in the West in December 69, and he entered Rome in ... [early October of] 70 CE. He left his son Titus to finish the Jewish campaign". Cf. *supra*, n. 412., in Chapter III.

As a result of Vespasian's recognition as emperor by the Senate [on 22nd] December 69, *imperium* had been voted to him, this time by the Senate, but, that had only happened at a second moment. Because on 1st July AD 69 at Alexandria (cf. *supra*, n. 455, in Chapter III.) the soldiers stationed there had already hailed Vespasian as the new emperor. Therefore it were first these soldiers, who had conferred *imperium* on Vespasian. Dario Mantovani (2009, 26-27) explains this whole complex procedure in detail (the context are the notes taken by the *Fratres Arvales*):

"I diari della loro attività annuale [of the Arval brethren], in parte conservati su epigrafi, descrivono i sacrifici offerti dagli Arvali in occasione di determinati atti connessi all'investitura dei nuovi imperatori oppure li commemorano negli anniversari ... Riducendole all'essenziale, emergono due momenti cruciali nell'*iter* di investitura: la seduta in cui il Senato saluta con l'appellativo *imperator* il nuovo princeps; poi, i *comitia ob tribuniciam potestatem*, ossia un'assemblea popolare riunita per votare una legge che attribuiva al nuovo principe la potestà tribunizia (condizione che gli donava la inviolabilità tipica del tribuno e il potere di porre il veto agli atti di tutti i magistrati).

È quest'ultima la notizia cruciale ...

Più incerto è se la *lex regia* votata nei *comitia ob tribuniciam potestatem* contenesse anche il conferimento del potere militare, l'*imperium* in senso tecnico. Secondo una teoria formulata del grande storico tedesco Theodor Mommsen, l'*imperium* veniva conferito al princeps non per legge, ma in forza dell'acclamazione dei soldati (confermata dal Senato), che lo salutavano *imperator*".

That Vespasian saw these events as described above, is clear from the fact that he chose as his *dies imperii* not 21st [or 22nd] December AD 69, but instead 1st July AD 69 (cf. D. KIENAST, W. ECK and M. HEIL 2017, 101, quoted *verbatim supra*, n. 171, in Chapter I.1.). And Guy Edward Farquhar Chilver and Barbara M. Levick (1996, 1590; quoted in more detail *supra*, n. 171, in Chapter I.1.). write: " ... The senate immediately conferred all the usual powers on Vespasian, though he dated his tribunician years from 1 July, negating the acts of senate and people and treating his legions as an electoral college ...".

But like a magistrate *cum imperio*, who was coming back from a victorious military campaign, Vespasian (in theory ! - see below) had to stay outside the *pomerium* (cf. *supra*, n. 199, in Chapter I.1.1.) until the Senate would grant such a victorious general a triumph, as it also did in the case of Vespasian for his victories in the Great Jewish Revolt (cf. *supra*, n. 198, in Chapter I.1.1., and at n. 458, in Chapter III.). The reason being, that, when a magistrate *cum imperio* transgressed the *pomerium*, he automatically lost his *imperium*, that is to say, his command over his troops. - And without his *imperium*, he could, of course, not lead his troops in the triumphal procession he desired.

**Laurent Bricault and Richard Veymiers (2018, 140) have explained this procedure in the case of Titus, Vespasian's elder son, together with whom - and additionally with Domitian - Vespasian would organize a common triumph in June of AD 71, in which they celebrated their victories in the Great Jewish Revolt (the context is the night before the triumphal procession, which Vespasian and Titus, together with their entire victorious army, spent on the *Campus Martius*, in the vicinity of the *Iseum Campense*, after Titus and the entire army had just returned back to Rome after this war):**

"Passer la nuit sur le Champ de Mars convenait en outre particulièrement bien à Titus, qui fraîchement revenue à Rome, devait, conformément à la tradition républicaine demeurer à l'extérieur du *pomerium* avant son triomphe, sous peine de perdre son *imperium* [with n. 73]".

In their **note 73**, Bricault and Veymiers write: "*Un usage toutefois non respecté par Vespasien, qui, depuis son retour à Rome en octobre 70, avait déjà franchi la limite du pomerium à plusieurs reprises ...*" (my italics). We will see below, when discussing Flavius Josephus's account (BJ 7,4,1), that Bricault and Veymiers are right.

On the other hand, the formulation by Bricault and Veymiers (*op. cit.*): "Vespasien ... avait déjà franchi la limite du *pomerium* à plusieurs reprises", means, of course, at the same time that, during this period between October of AD 70 and June 71, Vespasian, in their opinion, had stayed most of the time 'outside the *pomerium*'. If so, this means that Vespasian cannot possibly have put up residence in the imperial Palaces on the Palatine. We know by chance that Vespasian preferred living in the *Horti Sallustiani* to residing on the Palatine. It has been suggested that emperors preferred the *Horti Sallustiani* to their other residences at Rome because of their vicinity of the barracks of the Praetorian guards, but in the case of Vespasian, who stayed at those *Horti* throughout his entire reign, the reason may well have been that he had moved there already in October of AD 70, *because they were located outside the pomerium*.

For the preference of the emperors of the *Horti Sallustiani*, because those were near the *Castra Praetoria*, cf. Henry Broise and Vincent Jolivet (1996, 68): "Plutarco (*Luc.* 39.2) li [*i.e.*, the *horti Luculliani*] considerò i più bei giardini imperiali, ma gli imperatori preferirono sempre ad essi i prossimi *horti Sallustiani*, più vicini ai *castra Praetoria*".- I thank Vincent Jolivet for writing me this reference. For Vespasian's preference of the *Horti Sallustiani*, cf. Häuber (2009, 312).

As I only see now, Rodolfo Lanciani had offered a different explanation for Vespasian's predilection for the *Horti Sallustiani*. In his 'Notes from Rome' to *The Athenaeum* of "August 9th, 1902 Vol. 3902, 197-8", he wrote:

"Well known is the partiality of the Emperor Vespasian for the gardens of Sallust, the casino of which he inhabited for a number of years, while the damages caused to the imperial State residence on the Palatine by Nero's fire [*i.e.*, AD 64] were being repaired". Cf. Anthony L. Cubberley (1988, 365-368, the quote is from p. 367). But we know also that Vespasian actually built palatial structures on the Palatine; cf. Irene Iacopi and Giovanna Tedone (2009), and most recently, Ulrike Wulf-Rheidt (2020, published posthumously).

Let's now return to our main subject.

As mentioned several times in this *Study* before, there are some problems though: the emperor on Frieze B is characterized with iconographic details that seem to preclude that the thus characterized man can possibly be meant as someone, who, coming back from a victorious military campaign, is shown in an appropriate (military) *adventus*-ceremony.

Heinrich Fuhrmann (1941, Sp. 544; quoted already *verbatim* in more detail *supra*, in Chapter IV.1.) had been of the opinion that this panel cannot be identified as Vespasian's *adventus* into Rome in AD 70:

Referring to the publication of Magi (1939), he wrote: "Wohl nicht haltbar ist die Beziehung des einen Reliefs [*i.e.*, Frieze B] auf die Ankunft des Vespasian im Jahr 70 und dessen Empfang durch Domitian und damit die Deutung als *adventus*. Das verbietet die Ökonomie der Darstellung. Denn sie macht nicht Vespasian, sondern sinnfällig greifbar den jungen Domitian zum Mittelpunkt der Handlung und der Darstellung. Auch ist Vespasian nicht in der für die *adventus* üblichen militärischen Tracht des *imperator*, sondern in der Toga dargestellt ...".

Also Hölscher (2009a, 57) writes in a passage that was already quoted above (cf. *supra*, in Chapter I.2.1.c):

"Anche qui [*i.e.*, on Frieze B] è quindi rappresentato un *adventus*, per cui i littori hanno scuri nei *fasces*, ma stavolta l'arrivo è di altra natura rispetto al fregio A: l'imperatore non torna da una campagna militare e non viene seguito da soldati, mentre Vittoria lo incorona non con lo corona del vincitore, ma con la corona *civica*".

And, as we have already heard above, Langer and Pfanner (2018, 79) write in their:

"Zusammenfassung: ... Die Tatsache, dass die Identität des jungen Mannes (**Figur 12** [cf. here **Figs. 1 and 2 drawing**: in my opinion Domitian]) vor dem Kaiser nicht gelüftet werden kann, macht jede Deutung der Szene unsicher (s. Abb. 14). Augenfällig ist der zivile Charakter der Szene. Der Kaiser ist mit der *toga* bekleidet, es fehlen Soldaten und bezeichnende militärische Elemente. Die Bekränzung mit einem Eichenlaubkranz durch Victoria ist nicht zwingend und exklusiv als militärische Auszeichnung zu verstehen [with n. 138; my emphasis]". Cf. their n. 38: "Bergmann a. O. Anm. 123 [*i.e.*, here B. BERGMANN 2010a] 146f."

**The arguments against the assumption, that Frieze B shows a (military) *adventus*, are therefore three:**

- a) the emperor is not wearing military garb, but instead *tunica* and *toga*;**
- b) he is not accompanied by his soldiers;**
- c) *Victoria* crowns him with the 'wrong' wreath, since a victor should be crowned with a laurel wreath instead.**

To illustrate point c), I repeat here again a passage of my own text in Chapter III.:

'Hölscher [2009a, 56-57; cf. *supra*, n. 385, in Chapter III.] observes that *Victoria* does not crown the emperor [on Frieze B] with a *corona triumphalis* (*i.e.*, a laurel wreath), but with a *corona civica* (made of oak leaves); the far left border of this wreath, with clear indication that it is made of oak leaves, is visible immediately behind Vespasian's head. Hölscher therefore does not believe that the represented emperor (in his opinion originally Domitian, whose head has been recut into that of Vespasian) can possibly be meant as coming back to Rome after a victorious military campaign. As I have remarked elsewhere [2009b, 170; *supra*, n. 386, in Chapter III.], the *corona civica*, with which *Victoria* is crowning Vespasian, identifies this figure on Frieze B as the reigning emperor'.

**These iconographic features of Frieze B, that seem at first glance to be mistakes, in my opinion, are instead meaningful details that have all been represented intentionally.**

Because I follow Spinola (cf. *supra*, in Chapter III. See also below, at *The Contribution by Giandomenico Spinola on the Cancellaria Reliefs*), in assuming that the emperor represented on Frieze B was from the very beginning Vespasian, who is arriving at Rome, only one such occasion is conceivable: that of the first half of October AD 70, as had already been suggested by Magi (1939; cf. *supra*, ns. 112, 192, in Chapter I.1., at n. 194, in Chapter I.1.1.; as well as by F. MAGI 1945).

Provided, we assume for a minute that Vespasian *is* the originally intended emperor of Frieze B, we will realize, that in his case, and only in his case, we happen to know, that points **a)** and **b)** - namely, that at the represented moment he is clad as a civilian, and that he is not accompanied by his soldiers - are historical facts, whereas **c)** - the crowning with an oak wreath - denotes Vespasian as the new emperor, which is likewise a historical fact.

Of course, contemporaries would have known that Vespasian in October of AD 70, when he indeed arrived for the first time at Rome since he was emperor, had come back from a victorious campaign. - So, in a certain sense, the scene, represented on Frieze B, was both: the visualization of the investiture of Vespasian as the new emperor at this very moment, *and* Vespasian's *adventus* into Rome after victorious campaigns - which in his specific case were the very reason, why he had become emperor in the first place.

**Only after this Chapter was written, did I read the reference by Barbara Borg (2019, 245 with n. 194, quoted *verbatim infra*, in Chapter V.1.i.3.a)) to the reconstruction of one of the three marble reliefs from the *Templum Gentis Flaviae* by Rita Paris (1994b) and arch. Gloria Marconi (1994).**

**Exactly as Frieze B of the Cancellaria Reliefs (cf. here Fig. 2), this relief (cf. here Fig. 33, reconstruction drawing by Marconi), shows Vespasian's *adventus* into Rome in October of AD 70. Of this relief, Vespasian's head is preserved, whom *Victoria* has already crowned with the *corona civica*, and Paris (1994b, 81-82, quoted *verbatim infra*, in Chapter V.1.i.3.a) is able to explain convincingly, why Vespasian is shown as having been honoured with precisely *that* wreath: a decoration with the *corona civica* was the highest ranking decoration for a military victory, only granted Augustus and Vespasian, because thanks to their military campaigns they had been able to put an end to *civil wars* (!).**

From Paris (1994b, 82), I have also learned that my assumption *b*) is perhaps not (quite) true: Vespasian had actually arrived at Rom in October of AD 70, together with parts of his army (so R. PARIS 1994b, 82 n. 33, quoting Tac., *Hist.* 4,51,2. - Although, when checking this reference, I found that Tacitus doesn't say anything like that).

Paris (1994b, 82) suggests that this (presumed) fact has also been represented on the relief of Vespasian's *adventus* of AD 70, which once belonged to the *Templum Gentis Flaviae* (cf. here Fig. 33) and shows a soldier accompanying Vespasian. And, as I only realize now, this may also be hinted at by Dio Cassius (65,10,1), in his account of Vespasian's *adventus* into Rome:

"On reaching Rome he [*i.e.*, Vespasian] bestowed gifts upon both soldiers and the populace [my emphasis]" (translation: Earnest Cary 1917).

We do not know whether these soldiers were those stationed at Rome, who, together with almost the entire populace, had come to welcome Vespasian (as we will learn below from Flavius Josephus *BJ* 7,4,1), or rather members of Vespasian's army, who had come back together with the emperor from Judaea and Egypt (although Dio Cassius does not mention any soldiers as accompanying Vespasian before, as we shall see below, where this passage, describing Vespasian's journey home is quoted in more detail). The soldiers at the time stationed at Rome were for example those of the *cohortes urbanae*, who were under the command of the *praefectus urbi* (cf. *infra*, in volume 3-2, at *Appendix I.a*). In December of AD 69 those under the command of Vespasian's brother, the *praefectus urbi* Flavius Sabinus, had declared for Vespasian. On the occasion of his *adventus* into Rome in October 70, Vespasian will also have met the soldiers of M. Antonius Primus and of Mucianus, all of whom had supported his cause since AD 69 (cf. *infra*, in volume 3-2, at *Appendix I.c*); and *Appendix I.d*)).

**If, on the other hand, the soldiers, on whom Vespasian bestowed gifts when arriving at Rome, were, in addition to this, members of his own army, who had accompanied him on his way back to Rome, this would open the question, why on Frieze B of the Cancellaria Reliefs they do *not* appear.**

Concerning the represented scene on Frieze B we know the following:

according to Dio Cassius 65,10, Vespasian, as soon as he had landed in Italy at Brundisium (Brindisi) in AD 70, had changed from military into civilian garb - this is at least how Toynbee (1957, 4-5 with n. 1 on p. 5; cf. *supra*, at n. 201, in Chapter I.1.1.) and Keller (1967; cf. *supra*, n. 415, in Chapter III., quoted again above), in my opinion convincingly, have interpreted this passage; Dio Cassius tells us also that Vespasian went from Brindisi to Rome.

**This means, by the way, that Vespasian has come down the *Via Appia*, and that, therefore, Frieze B is set at the *Porta Capena* in the Servian city Wall (cf. here Fig. 58) - without picturing this gate.**

As is well known, at the represented time, the *pomerium* still ran parallel with the Servian city Wall. We must consider this important fact when assuming that Frieze B of the Cancelleria Reliefs (here **Fig. 2**) stages Vespasian's *adventus* ceremony at the city gate *Porta Capena*. For a discussion of this point; cf. *infra*, in Chapter *The major results of this book on Domitian*.

That Vespasian is shown on Frieze B as wearing a *tunica* and a *toga* at the represented moment, is therefore historical, as well as the fact that he came to Rome in the first half of October AD 70; even the most bewildering feature of Frieze B is true: we also know that Vespasian came back to Rome *without* his army (but see now above and *infra*, at Chapter *V.1.i.3.a*)).

We have already seen above, why: Titus, at the end of AD 69, had been given the "Oberbefehl" ('supreme command'; cf. *supra*, n. 413, in Chapter *III*.) of Vespasian's army in the Great Jewish Revolt, obviously as a consequence of the fact that Vespasian had obtained [on 22nd] December AD his recognition as emperor by the Senate (discussed above). Vespasian himself then decided to leave Alexandria for Rome, and from Flavius Josephus we learn, that Titus, together with this victorious army, would return to Rome only in AD 71 (cf. *supra*, n. 201, in Chapter *I.1.1.*). As we shall see below, all that is also described or at least hinted at by Dio Cassius.

The only iconographic detail of Frieze B, which is *not* true, is the following: we do not hear that Vespasian had made his first appearance at Rome as the new emperor by means of such a formal *adventus*-ceremony, as it appears on Frieze B of the Cancelleria Reliefs. The 'invention' of this kind of *adventus* of Vespasian was, therefore, obviously an idea that we must attribute to Domitian; and we shall see below that only he could have had an interest in the complex iconography, that was chosen for this panel.

We must, of course, ask ourselves, whether or not Vespasian, when he arrived at Rome at that moment in October of 70, had entered the city at all, since he was at that stage negotiating with the Senate about a triumph for his suppression of the Great Jewish Revolt, which the Senate actually granted and that was celebrated in June of AD 71 (cf. *supra*, ns. 198, 199, in Chapter *I.1.1.*, and at 458), in Chapter *III*.). But how on earth could *this* information, namely that Vespasian did *not* enter the City of Rome at this very moment, be expressed on Frieze B, without representing a city gate? - If that is, what the artists, who designed Frieze B, had wanted to visualize at all?

Here I allow myself to anticipate something: in my opinion, the composition of Frieze B seems to indicate that Vespasian did *not* transgress the *pomerium* at that specific moment, since he is shown as standing stationary, or in other words: the composition chosen by the artists does not give a hint at Vespasian's possible intention to go any further (in reality, as was already said above, and as we shall also see below, Vespasian on that day *had* actually entered the City of Rome). Before discussing that point in more detail, let's listen to the literary sources, that report on Vespasian's journey from Alexandria to Rome, where Vespasian arrived, as we know now, 'in the first half of October AD 70' (cf. *supra*, n. 195, at Chapter *I.1.1.*).

**Dio Cassius (65,9-10, in the translation of Earnest Cary 1917) writes about Vespasian's journey from Alexandria to Rome in AD 70:**

"[9,1] He [Vespasian] sent a despatch to Rome rescinding the disfranchisement of those who had been condemned by Nero and succeeding rulers for acts of *maiestas* as they were called. This order applied to the living and to the dead alike ... [9,2a] He soon restored order in Egypt and sent thence a large supply of grain to Rome. He had left his son Titus at Jerusalem to storm the place, and was waiting for its capture in order that he might return to Rome with him. But as time dragged on and the siege continued, he left Titus in Palestine and took passage himself on a merchantman; in this manner he sailed as far as Lycia, and from there he proceeded by land and partly by sea to Brundisium.

[9,3] Vespasian had later come to Rome, after meeting Mucianus and other prominent men at Brundisium and Domitian at Beneventum ... [then follows Dio's description of Domitian's (alleged) bad behaviour prior

to and after this meeting of father and son at Beneventum] Vespasian now proceeded to humble this son's [*i.e.*, Domitian's] pride, but greeted all the rest, not as an emperor, but as a private citizen; for he was mindful of his own past fortune.

[10,1] On reaching Rome he bestowed gifts upon both soldiers and the populace".

**Flavius Josephus (*BJ* 7,2; 7,4,1, in the translation of H. St. Tackerey 1928) writes about Vespasian's departure from Alexandria and his reception in Italy and at Rome in October of AD 70 the following:**

"[7,2,1] Now at the time when Titus Caesar was assiduously besieging Jerusalem, Vespasian, embarking on a merchant-vessel, crossed from Alexandria to Rhodes. From there he sailed on triremes; and touching at all towns on his route, being everywhere received with ovations, he passed over from Ionia to Greece, and thence from Corcyra to the Iapygian promontory, whence he pursued his journey by land".

Cf. *BJ* 7,4,1: "Meanwhile, Titus Caesar, having received news of the eagerness with which all the Italian cities had greeted his father's approach, and that Rome in particular had given him an enthusiastic and splendid reception experienced heart-felt joy and satisfaction at this most agreeable relief from anxiety on this behalf. For even while Vespasian was still far off, all the Italians were paying respect to him in their hearts as if he were already come, mistaking, in their keen desire, their expectation of him for his actual arrival, and exhibiting an affection for him free of constraint. For to the Senate, mindful of the calamities undergone in the changes of their rulers, nothing was more desirable than to gain once more an emperor adorned with the gravity of years and finest fame for military achievements, whose exaltation they were assured would make only for the welfare of his subjects. The people, too, exhausted by civil disorders, were still more eager for his coming, expecting now at last to obtain permanent release from their miseries, and confident that security and prosperity would again be theirs. But above all the army had their eyes on him; for they knew best the magnitude of the wars that he had won, and, having had proof of the inexperience and cowardice of the other emperors, longed to be rid of such deep disgrace and prayed that they might be granted him who alone would both bring them salvation and add lustre to their arms. Amidst such feelings of universal goodwill, those of higher rank, impatient of awaiting him, hastened to a great distance from Rome to be the first to greet him. Nor indeed, could any of the rest endure the delay of meeting, but all poured forth in such crowds - for to all it seemed simpler and easier to go than to remain - that the very city then for the first time experienced with satisfaction a paucity of inhabitants; for those who went outnumbered those who remained. But when he was reported to be approaching and those who had gone ahead were telling of the affability of his reception of each party, the whole remaining population, with wives and children, were now waiting at the road-sides to receive him; and each group as he passed, in their delight at the spectacle and by the blandness of his appearance, gave vent to all manner of cries, hailing him as >benefactor<, >saviour< and >only worthy emperor of Rome<. The whole city, moreover, was filled, like a temple, with garlands and incense. Having reached the palace, though with difficulty, owing to the multitude that thronged around him, he offered sacrifices of thanksgiving for his arrival to the household gods. The crowds then betook themselves to festivities and, keeping feast by tribes and families and neighbourhoods, with libations prayed God [!] that Vespasian might himself long be spared to the Roman empire, and that the sovereignty might be preserved unchallenged for his sons and their descendants throughout successive generations. And, indeed, the city of Rome, after this cordial reception of Vespasian, rapidly advanced to great prosperity".

Flavius Josephus (*BJ* 7,4,1) thus describes in great detail, with how overwhelming enthusiasm Vespasian had been welcomed, first in Italy, and then in the City of Rome. Compared with his description of Vespasian's 'real' arrival at Rome in October of AD 70, Frieze B of the Cancellaria Reliefs is lifeless and cold. Josephus also describes that Vespasian went straight away to the Imperial Palace on the Palatine (although the author himself elsewhere seems to contradict this assertion; cf. *BJ* 7,4,4, discussed in the following). - In 'reality' therefore, Vespasian's arrival at Rome was very cheerful and pretty chaotic, and (seemingly) definitely a civil *adventus*.

We know from Josephus' own writings, which have been discussed by T.P. Wiseman (2013, XI-XIII, quoted *verbatim supra*, n. 201, at Chapter I.1.1.), that he, although in the meantime among Vespasian's favourites (so T.P. WISEMAN 2013, XIII), was not present at Vespasian's arrival at Rome in October of AD 70, since he had stayed all the time with Titus in Jerusalem, who only came back to Rome in AD 71, together with the entire victorious army, and accompanied by Flavius Josephus, thanks to whom we are very well informed about the following events, for example the triumph at Rome of June AD 71.

The emperor, whose 'home' had actually been the Imperial Palace on the Palatine, comprising its 'household gods', to whom according to Flavius Josephus (*BJ* 7,4,1) Vespasian prayed, when returning to Rome in early October of AD 70 - in AD 67, when Vespasian received the command to start a new military campaign to end the Great Jewish Revolt - was of course Nero, who had also given Vespasian this command.

**Lorenz Baumer (2007, 105) has commented on Flavius Josephus (*BJ* 7,4,4) as follows:**

"Der detaillierte Bericht über die Rückkehr der beiden Flavier [thus referring to Vespasian and Titus in June of AD 71. This is not true: only Titus came back in AD 71, Vespasian was already in Rome since October of AD 70; cf. *supra* and *infra*] aus dem jüdischen Krieg ist auch in anderer Hinsicht aufschlussreich, denn er schildert, wie Vespasian und Titus nach dem *adventus* auf dem Marsfeld - und somit außerhalb des Pomeriums - auf die Gewährung des Triumphs durch den römischen Senat warteten [with n. 70]".

In his **note 70**, Baumer writes: "Flavius Josephus, *Der Jüdische Krieg (de bello Judaico)* VII 4.4 ...". - For the events, described by Flavius Josephus in this passage, see the following and *supra*, at n. 198., in Chapter I.1.1.

Vespasian, after his return to Rome in October of AD 70, transgressed the *pomerium* - together with his sons Titus and Domitian - on the day of their common triumph in June of AD 71. The Senate had granted Vespasian, Titus and Domitian to celebrate three separate triumphs, Vespasian and Titus for their victories in the Great Jewish War, and Domitian for his actions at Rome during the absence of Vespasian and Titus. - For the siege of the *Capitolium* and Domitian's escape from there on 19th December AD 69, cf. *supra*, in Chapter *Preamble*; Section III.; at point 1.); and *infra*, in volume 3-2, at *Appendix I.*). For the reason, why Domitian was granted this separate triumph, cf. *infra*, at Chapter V.1.i.3.a).

Nevertheless, Vespasian, Titus and Domitian had decided to celebrate one triumph *together* (so Josephus, *BJ* 7,5,3; cf. *supra*, at n. 458, in Chapter III., and *infra*, at n. 477, in Chapter VI.3.). But only after the Senators, with whom Vespasian and Titus had met on the morning of their triumph at the *Porticus Octaviae* - on purpose chosen for that meeting, because located outside the *pomerium* - had announced them officially that the Senate had granted them to celebrate their triumph(s). Vespasian, together with Titus and Domitian, as well as the entire victorious army, that had fought in the Great Jewish War, had then started their triumphal procession by entering the City of Rome through the *Porta Triumphalis*, thereby transgressing the *pomerium* (cf. Flavius Josephus, *BJ* 7,4,4. For detailed discussions; cf. Häuber (2017, 178-202); *infra*, in Chapters *The major results of this book on Domitian*; and *The visualization of the results of this book on Domitian on our maps*; and *infra*, in volume 3-2, at *A Study on the consequences of Domitian's assassination ...; Introduction*; at Section I.

Nota bene, this description of the situation, as described by Flavius Josephus (*BJ* 7,4,4) of the day in June 71, when Vespasian, Titus and Domitian celebrated their common triumph, sounds, as if Vespasian had not yet transgressed the *pomerium* of Rome since his arrival in October 70. In reality, as we have seen above, that was *not* true. Or in other words: this description sounds, as if not only Titus, but also Vespasian had only recently come back from this war - *together with Titus*.

That Vespasian and Titus, together with their entire army, had spent the night before their triumph in June of AD 71, in the vicinity of (other scholars erroneously suggest: at) the *Iseum Campense*, as we are informed by Flavius Josephus, is also of importance for the controversial discussion, when the *Iseum Campense* was

founded, because for example Jon Albers (2013, 245) and quite a few other scholars still assumes a foundation date 'after AD 80'. This is surprising, given the fact that Flavius Josephus (*BJ* 7,5,4) mentions this sanctuary in the context of this triumph of June AD 71 as already existing. For a discussion; cf. *infra*, in volume 3-2, at *Appendix III. When was the Iseum Campense first built?*

Talking about 'reality' is, of course, an euphemism in the context of Josephus' description of Vespasian's arrival at Rome in October of AD 70. Josephus, contrary to Dio Cassius, was a contemporary of Vespasian, and he even knew him personally very well, so in theory his texts are the much more preferable sources. But Josephus, one of the former leaders of the Great Jewish Revolt, belonged now to Vespasian's entourage and wrote his history about the 'Jewish War' at Vespasian's and Titus' commission (cf. *supra*, n. 201, in Chapter I.1.1.). So what we do have in Josephus' account of Vespasian's enthusiastic reception at Rome in October of AD 70, if not 'reality', is certainly Vespasian's and Titus' version of the story, and that differs greatly from how Domitian ordered his artists to describe the same event on Frieze B of the Cancellaria Reliefs.

Rose Mary Sheldon (2007, 129) therefore in my opinion correctly refers to him as: "The collaborationist historian Josephus ...".

**Besides, if we ourselves could choose at which occasion we would rather have been personally present: at Vespasian's arrival at Rome, as described by Flavius Josephus, or at the formal event, as it appears on Frieze B of the Cancellaria Reliefs, the decision between those two alternatives is certainly easy.**

As mentioned before, Irene Bragantini (2018, 243-247; cf. *supra*, at Chapter II.3.1.c)) has aptly compared Domitian's reception of Vespasian at Beneventum in AD 70 with Augustus' famous description of a delegation, led by the *consul*, who had come all the way down to Campania to greet him there, when he returned from Spain and Gaul, the *ire obviam*, an unprecedented honour, as Augustus stated in his *Res Gestae* (12). I am quoting this passage here, because Bragantini refers in this context to the above-quoted text by Josephus (*BJ* 7,4,1) that, commissioned by Vespasian and Titus, and finished in AD 81, thus tells us, as we have seen above, how Vespasian and Titus had wanted these events to be published (cf. *supra*, n. 201, in Chapter I.1.1.). Bragantini's (2018) now convincingly interprets, which importance these events may have had for *Domitian*.

### *The two obelisks, found at Beneventum*

The context of Bragantini's (2018) below quoted passage is her discussion of the two obelisks, found at Beneventum, the hieroglyphic texts of which record the dedication in AD 88/89 of a Temple of Isis there, by a Rutilius Lupus, who should later become the prefect of Egypt. The Temple of Isis at Beneventum, of which no remains are known, the question, whether or not Domitian was personally involved in its construction, as well as these two obelisks, are hotly debated issues.

In the same volume, dedicated to the Iseum Campense, not only Bragantini has studied the Egyptian sanctuary at Beneventum, but also Stefan Pfeiffer (2018, 181, point 5., cf. pp. 186-187). Pfeiffer (2018, 186) writes that interestingly, "The Isis temple in Beneventum [with n. 60, providing references] was built in A.D. 88/89 to honour Domitian's victories over the Dacians and Chatti". - So, in theory, this Temple of Isis at Beneventum and the monument, to which the Cancellaria Reliefs once belonged, may have been dedicated because of the same reason.

Laurent Bricault and Richard Veymiers (2018, 151) write about this subject: "En novembre 89, le Prince [*i.e.*, Domitian], rentré à Rome, célèbre un double triomphe sur les Chattes et les Daces [with n. 159, quoting Suet., *Dom.* 6; cf. *supra*, n. 232, in Chapter I.2.]. Le sanctuaire isiacque qui est alors construit à Bénévent se pare de deux obélisques de granit couverts de hiéroglyphes en l'honneur de l'empereur victorieux placé sous la protection d' <<Isis la grande, mère des dieux, Sôthis, régente des étoiles, maîtresse du ciel, de la terre et des

enfere>> [with n. 160, quoting: "RICIS 505/0801-0802"; cf. *infra*, in volume 3-2, at n. 546, in *Appendix II.c*)]. In their notes, Bricault and Veymiers provide further references.

Bragantini (2018, 246-247) writes: "... it was undoubtedly in the interest of a member of the local elite to win the favour of Domitian: but what reason could have led Rutilius Lupus to offer this dedication, and what could have been the >>reasons of Domitian<< that he adduced? [with n. 13]. As others have already stressed [with n. 14], Beneventum must have been of particular importance to the emperor [*i.e.*, Domitian], who in A.D. 70 met his father there, on Vespasian's return to Rome from Egypt to receive the imperial powers [with n. 15, quoting: "Cass. Dio 65.93-10."].

Josephus' description of the expressions of jubilation with which the people greeted Vespasian on his journey to Rome to take power retained 'triumphal overtones' [with n. 16, quoting: "Joseph., *BJ* 7.68-71".], which recalled the Hellenistic rituals of *apantesis*. These have been described as 'encounters organised between the arriving king and the population of the city, who would come out to welcome him beyond the bastions ...' [with n. 17]. Josephus' information, that 'those that enjoyed any remarkable dignities [...] made haste to meet him at a very great distance' from Rome [with n. 18, quoting: "Joseph., *BJ* 7.4.1 (transl. W. Whiston 1960)."], could hardly have helped but evoke the precedent of the exceptional honour paid to Augustus on his return from Spain and Gaul, when *Ex senatus auctoritate pars praetorum et tribunorum plebi cum consule Q. Lucretio et principibus viris mihi missa est in Campaniam, qui honos ad hoc tempus nemini praeter me est decretus* [with n. 19, quoting: "*Res Gestae* 12."].

If one bears in mind that Augustus provided frame of reference of Domitian, which he invoked, sometimes by contrast, by stressing his opposition to or difference from this formidable model, we might wonder whether - by enhancing the value of the place where he met his father [*i.e.*, Vespasian] (certainly a meeting that by its nature would have possessed an official character, if not that of a 'private triumph') as the starting point for Vespasian's triumphal journey - Domitian intended to allude to the ceremony of *ire obviam* recalled in the *Res gestae*, so invoking the honour 'never before granted to others' of Augustan memory). We could therefore interpret this dedication at Beneventum as representing Domitian's purpose of perpetuating the memory of that 'triumphal arrival', and thus also accomplishing for this same purpose the celebration of the dynasty that was a fundamental necessity for him".

In her notes, Bragantini provides references and further discussion.

But note that the: "starting point for Vespasian's triumphal journey", as Bragantini (2018, 247) writes, was by no means only at Beneventum, where he had first met his son Domitian, but already ca. 250 km further down the *Via Appia* at Brindisi, where Mucianus and other dignitaries had come to meet with Vespasian (cf. Dio Cassius 65,9,3, quoted above). For this meeting of Domitian with his father Vespasian at Beneventum; cf. *supra*, in Chapter *Preamble*; Section *III.*; at point 2.)

Also Luigi Prada ("Obelisk honoring Emperor Domitian and Isis", 2018) interprets the two obelisks at Beneventum and their meaning for Domitian very differently than Bragantini (2018, 246-247, in her above-quoted passage). My thanks are due to Emanuele M. Ciampini for sending me Prada's article.

**Let's now return to our question:**

**how could the fact be visualized on Frieze B that the two protagonists of both groups, who are meeting on Frieze B, Vespasian coming from the right, Domitian coming from the left (cf. here Figs. 1 and 2 drawing: figures: 14 [Vespasian]; 12 [Domitian]), are currently standing stationary in front of each other on either side of the *pomerium*-line - without representing a city gate?**

**Very easily.**

The most important figure on Frieze B, as in the case of Frieze A, is the emperor, at first glance at least. As in Frieze A, the emperor is defined by his facial traits and by his four lictors. Next, as in Frieze A, come the garments of the emperor Vespasian - he is wearing a *tunica* and a *toga*. Vespasian, to arrive at his current position, where we see him on Frieze B, has obviously moved by coming from the right, he is now standing

still, whereas 'at the same time', *Victoria* is crowning him. Vespasian's just described 'movement' means, that he has just arrived from somewhere. The figures on the 'left hand half' of Frieze B show that he has arrived at Rome. Since *Victoria* crowns him at exactly that moment, when the procession of the official representatives of Rome, who have come to receive him, have actually reached Vespasian, it is obvious, that the - historical - moment in early October of 70 AD is represented, when Vespasian came back to Rome for the first time since "he had obtained his recognition as emperor from the Senate", as Rose Mary Sheldon writes (cf. R.M. SHELDON 2007, 141, quoted already above and in more detail *supra*, n. 412, in Chapter III.).

Or in other words, as already suggested by earlier scholars (cf. *supra*, in Chapter IV.1.), what we witness on Frieze B is Vespasian's investiture as the new emperor. I repeat here again in my own English translation the relevant observation by Gerhard Koeppel (1969, 193; cf. *supra*, at n. 454, in Chapter III.), who wrote the following:

'Frieze B [cf. here Fig. 2] of the Cancellaria Reliefs and the lower *adventus* of Trajan's Arch at Beneventum [cf. his Figs. 14 and 15 = here Fig. 46, and *supra*, in Chapter II.3.3.] both represent the beginning of the reign of a new emperor, in [a way by] which the approval of the Senate and the Roman People have been expressed'.

But there is more. Both groups, who meet on Frieze B of the Cancellaria Reliefs, have something in common: because of the constructions of the personalities of the represented figures - (on principle in the case of the *Dea Roma*, as well as in the cases of the allegorical representations *Genius Senatus* and *Genius Populi Romani*), or, because of their offices (in the case of the represented humans: the emperor - in theory - in his current situation, whereas on principle in the cases of the *praetor urbanus* and of the Vestal Virgins) - their actions are spatially defined in regard to the sacred boundary of the City of Rome, the *pomerium*, which in reality was marked by *cippi*.

Interestingly, the relevant spatial limitations of both groups were not the same: one group was only allowed to stay outside the *pomerium* (therefore called *militiae*), the other group was confined to the area within the *pomerium* (therefore called *domi*; cf. for all that *supra*, n. 199, in Chapter I.1.1.).

Because of such legal prescriptions, all those figures on Frieze B, who belong to the party, that has moved from left to right to this meeting with Vespasian, cannot move anywhere else, than where they appear on Frieze B: but contrary to Vespasian, they are all confined to stay *within* the *pomerium*-line of Rome. According to religious prescriptions or to Roman law, they are staying within the area *domi*: the *Dea Roma*, the Vestal Virgins, the *Genius Senatus*, the *Genius Populi Romani* - and even the magistrate, who is heading this long procession, the *praetor urbanus*, namely the togate youth, whom I identify with the young Domitian.

That the togate youth must be the *praetor urbanus*, is clear from yet another prescription: it was, of course, also defined, who was allowed at all to receive a new emperor in an *adventus*-ceremony into Rome, or rather, who could head the procession of the official representatives of the City of Rome, as shown on Frieze B: either the two *consules*, or the *praefectus urbi*, or the *praetor urbanus*. - At least those are the magistrates, with whom the relevant men, who appear on comparable state reliefs, have so far been identified (cf. *supra*, in Chapter II.3.3., with here Fig. 46; and in Chapter V.1.h.1.), as well as *infra*, in Chapter VI.3.).

Because of his age, of those three different magistracies, the togate youth could only hold the office *praetor urbanus* (cf. *supra*, in Chapter V.1.h.1.)) - and the legal competence of the *praetor urbanus*, as already the name of this office indicated, was precisely restricted to the City of Rome *within* its sacred boundary, the *pomerium* (cf. *supra*, n. 185, in Chapter I.1.). Apropos the represented age of this magistrate on Frieze B. Concerning this point; cf also *infra*, at Chapter *The major results of this book on Domitian*.

Besides, if it is true, as suggested here, that the Emperor Vespasian was from the very beginning represented on Frieze B, who is shown as arriving at Rome in the first half of October AD 70, it follows that the togate youth, who receives him, and who, because of the aforementioned reasons, must be identified as the current

*praetor urbanus*, is definitely Domitian, since we know that Domitian held the office *praetor urbanus* since 1st January of AD 70 (cf. *supra*, at n. 189, in Chapter I.1.). To this I will come back below.

**Note also that only Domitian could have had an interest in ordering such a rather stiff representation of Vespasian's *adventus* at Rome as Frieze B (cf. here Fig. 2), and that for the following reasons:**

a) Domitian does not only himself appear together with Vespasian as one of the two protagonists of this panel, but even as the "heimliche Hauptfigur" of this frieze, as Marianne Bergmann has rightly observed (cf. *supra*, n. 191, in Chapters I.1.; cf. Chapter I.3.2.).

And provided, our visualization of the two Cancellaria Reliefs '*in situ*' should be regarded as proof that these two reliefs were indeed two horizontal panels in the passageway of an arch (cf. *supra*, in Chapters I.3.2.; and V.1.d), and here **Figs. 1 and 2 of the Cancellaria Reliefs, drawing, '*in situ*'**, the young togate Domitian is not only the 'secret main figure' on Frieze B, but definitely the main figure;

b) in addition to this, Vespasian with the gesture of his right hand expresses the legitimation of Domitian as the (future) emperor, as (convincingly) suggested to me by Giandomenico Spinola (personal communication; cf. *supra*, at Chapters III.; and IV.1.; see also below, at *The Contribution by Giandomenico Spinola on the Cancellaria Reliefs*), whom I am following here;

c) neither Dio Cassius (65,9-10), nor Flavius Josephus (7,2,1; 4,1), in their above-quoted accounts, although both authors describe Vespasian's 'real' arrival at Rome in October of AD 70, and Flavius Josephus even in great detail, mention Domitian in this context at all (!).

**The reason for point c) was probably the fact, that Vespasian and his entourage, comprising Domitian, coming up from Beneventum, had arrived at Rome in the first half of October AD 70 - together.**

When we ask ourselves, what may actually have happened that day when Vespasian arrived at Rome in the first half of October AD 70, and if we imagine that these proceedings could have been represented in a state relief similar to Frieze B, the following seems to be possible. Domitian, if at all represented on such a relief, in reality should have appeared in that procession that 'moves from right to left' on Frieze B, and is shown as walking *behind* Vespasian.

At best, Domitian could have been positioned *beside* Vespasian. - Thus in theory comparable to Hadrian in regard to Trajan on the above-mentioned panel of the Arch of Trajan at Beneventum, as has been suggested by Diana E.E. Kleiner (1992, 228, Fig. 193), and by Andreas Schmidt-Colinet (2005, 110-111, Abb. 9a; cf. for both, *supra*, at n. 361, in Chapter II.3.3.), and here **Fig. 46**). But, as already mentioned there, other scholars have not followed Kleiner and Schmidt-Colinet in identifying this man with Hadrian.

Although we must consider that neither Dio Cassius, nor Flavius Josephus, in their accounts of the 'real' historical arrival of Vespasian at Rome in October of AD 70, mention Domitian.

**What we can completely rule out on the other hand, after reading Dio Cassius' and Flavius Josephus' descriptions of this historical moment, is that Domitian, in his capacity as *praetor urbanus*, could possibly have headed on that day a procession of - human - representatives of the City of Rome, 'moving from left to right' on such a panel as Frieze B of the Cancellaria Reliefs (cf. here Fig. 2), thus officially *receiving* Vespasian at Rome's sacred boundary, the *pomerium*, coming from *inside*. - Because, in reality, Domitian arrived at Rome *together with* Vespasian, both coming from *outside* (!).**

When we ask ourselves, what else Domitian may have had in mind, when he ordered Frieze B, it seems useful to remember what Gerhard Koeppel (1969, 172-174) wrote (the passage is quoted in more detail *supra*, in Chapter III.):

"Das Relief B von der Cancellaria mit dem Adventus des Vespasian ... In Wirklichkeit hat Domitian seinen Vater nicht in Rom sondern in Benevent empfangen. Das Relief steht also im Widerspruch zur literarischen Überlieferung. **Aber wir dürfen in diesem Fries keinen Bericht des Ereignisses sehen, sondern vielmehr eine Propaganda, die sich als solche auch in den literarischen Quellen feststellen läßt: Domitian, der die Stadt für seinen Vater gehütet hat, übergibt Vespasian bei seiner Ankunft das Imperium ...** [my emphasis]".

To conclude this point. The artists, who designed Frieze B (here Fig. 2), by representing Vespasian, the togate youth Domitian, the *Genius Populi Romani* and an object, on which this Genius sets his left foot, show two protagonists, who meet precisely at that spatial boundary, the *pomerium* of Rome, by which for both their current competences are legally defined, and which neither one is allowed to transgress - at least, as long as both want to act in the relevant capacities, for example enjoy certain privileges that come with their current offices :

a) the Emperor Vespasian, who comes back from a victorious military campaign, and is now in the course of negotiating with the Senate to be granted a triumph, stands outside the *pomerium* of Rome, within the *area militariae*, exactly as also a magistrate *cum imperio* should do under similar circumstances. - Provided, this magistrate or Vespasian do not want to lose their right to celebrate their desired triumphs;

b) whereas the magistrate *praetor urbanus*, who has come 'from within the City of Rome to its sacred boundary, the *pomerium*', in order to receive Vespasian, stands within the *area domi*, likewise exactly as he should do. - Of course, a man, who held the office *praetor urbanus*, could leave the City of Rome, as for example Domitian did, who was *praetor urbanus* since 1st January of AD 70, when he went down in AD 70 to meet his father Vespasian at Beneventum. But outside the *pomerium* of Rome, the *praetor urbanus* could not act in the capacity of his office, that is to say, outside the sacred boundary of Rome, he could not possibly receive an emperor in a solemn *adventus*-ceremony.

That all these prescriptions have been observed, the artists on Frieze B, in my opinion, indicate by simply showing the figures of the togate youth and of Vespasian as standing opposite each other, by defining them as heading two processions that have come to this meeting from opposite directions, as well as by locating the object, on which the *Genius Populi Romani* sets his left foot, precisely between Vespasian's right foot and the left foot of the togate youth. - The specific positionings of the togate youth, of Vespasian, of the *Genius Populi Romani*, and of the lictor, who follows behind Vespasian (cf. here **Figs. 1 and 2 drawing, figure 15**), and the additional presence of *Victoria*, are decisive here. Because the lictor **figure 15**, carrying an axe in his rods, provides the information: Vespasian stands outside the *pomerium*. The representatives of Rome on the lefthand 'half' of Frieze B, who have come to receive Vespasian, indicate, that Vespasian is shown as arriving at Rome. The latter information, together with the fact that *Victoria* is crowning Vespasian at this very moment with the *corona civica*, are enough to tell the beholder the date of the historical event: the first half of October AD 70, but not as yet the precise locale, where the entire scene is set.

On Frieze A, Domitian's (now Nerva's) *paludamentum* gave already the same generic information: the emperor is meant as being 'outside the *pomerium*'. The positioning of the *Dea Roma* provides on Frieze A the information that the Emperor Domitian stands precisely 'just outside the *pomerium*' (cf. here **Figs. 1 and 2 drawing: figures 6** [Domitian, now Nerva]; **9** [*Dea Roma*]); on Frieze B this information is provided by the *Genius Populi Romani*. Because the beholder of Frieze B knew that also the *Genius Populi Romani*, precisely as the *Dea Roma* on Frieze A, was confined to the area within the sacred boundary of Rome, the object, on which the *Genius Populi Romani* sets his left foot, and by implication, the site, where the togate youth is standing immediately to the left of this object, must therefore be meant as being located *inside* the *pomerium*.

And because Vespasian and the togate youth are positioned immediately in front of each other, they must, by definition, stand on either side of the *pomerium*-line (see also *supra*, in Chapter V.1.d)).

It is, therefore, in my opinion, reasonable to follow Simon (1960; 1963) and Koeppel (1969), who realized that we witness on Frieze B Vespasian's *adventus* of AD 70 at the "Pomeriumsgrenze" of Rome, and who have consequently suggested that the object, on which the *Genius Populi Romani* sets his left foot, must, therefore, be one of the *cippi* that marked the *pomerium*-line of Rome. - Because that object has been placed by the artists precisely *between* the two protagonists of those two parties, who are meeting on Frieze B, in order to perform together an *adventus*-ceremony.

Cf. Simon (1960, 152ff.), followed by Koeppel (1969, 172 n. 159; cf. *supra*, n. 416, in Chapter III.); cf. Simon (1963, 9-10; quoted *verbatim supra*, at n. 456, in Chapter III.).

If indeed the focus on Frieze B is on this object between the two protagonists, which is here interpreted as one of the *cippi*, marking the *pomerium*-line, it is tempting to remember the famous *clausula* V of the *lex de imperio Vespasiani* (CIL VI 930), which gave him the right to enlarge the *pomerium* - a chance, which Vespasian actually took (cf. *supra*, n. 199, in Chapter I.1.1.).

Dario Mantovani (2009, 24) comments on the *clausula* V of the *lex de imperio Vespasiani* as follows:

"La clausola V dà a Vespasiano il potere di ampliare il tracciato del pomerio, quando lo ritenga conforme all'interesse pubblico. Il pomerio era uno spazio che veniva tracciato tutt'intorno al circuito delle mura cittadine, al di qua e al di là di esse. Delimitato da cippi e purificato secondo il rito augurale, in questo spazio non si poteva né costruire (nella parte all'interno delle mura) né coltivare o seppellire (nella porzione del pomerio esterno delle mura); esso segnava anche il limite di validità degli auspici urbani, così che il magistrato che partiva per la guerra doveva prendere gli auspici fuori del pomerio. Il potere di estendere il circuito del pomerio - che la legge regia [as for example the *lex de imperio Vespasiani*] appunto attribuisce all'imperatore - tradizionalmente spettava al generale che avesse conquistato nuovo territorio situato nella penisola italiana". - For another quotation from D. Mantovani 2009, cf. *supra*, n. 455, in Chapter III.

**Of course, also concerning the precise location of the *pomerium*-line in relation to the Servian city Wall, there is no *consensus*. Contrary to the just quoted passage from Mantovani (2009, 24), Coarelli (2009b, 70) defines its location as follows. The context of this passage are the efforts to reconstruct the enlargement of the *pomerium* of Rome by Claudius and its enlargement by Vespasian :**

"Nella totale assenza di altre testimonianze antiche, gli unici dati suscettibili di fornire informazioni sulla seconda [*i.e.*, the enlargement of the *pomerium* by Vespasian] si possono ricavare solo dal confronto tra le due linee pomeriali [*i.e.*, that of Claudius and Vespasian], ricostruibili, pur con difficoltà non indifferenti, in base ai cippi superstiti. A tale scopo, sarà fondamentale tener conto, come non sempre è avvenuto, della direzione cui era rivolta l'iscrizione incisa sul cippo, quando è nota. Come hanno visto già i primi studiosi che si sono occupati dell'argomento, questa si leggeva sulla faccia rivolta verso l'interno dell'*urbs*, conferma evidente del fatto che il pomerio è da identificare con la linea >>interna<< alle mura, come ha dimostrato André Magdelain [with n. 39]".

In his **note 39**, Coarelli writes: "Magdelain 1976".

If the object visible on Frieze B is correctly identified here as a *cippus* of the *pomerium*-line, and provided it was indeed the intention of Domitian/ his artists, by so prominently positioning this *cippus* in their composition, to remind the beholder of Vespasian's right to enlarge the *pomerium* - this may be regarded as another hint at the fact that Vespasian is meant here at his historical arrival at Rome in the first half of October of AD 70 - and that this, what we see, is in fact an *adventus* after a victorious military campaign. Because we know that the Senate endowed only those victorious generals with the right to enlarge the *pomerium*, who had considerably enlarged the size of the area of the *Imperium Romanum*.

As already mentioned several times above (cf. *supra*, in Chapters I.2.1.a); and V.1.b)), there is also another iconographic detail, which proves that Vespasian is *not* shown in a mere civilian *adventus*, as has been suggested by Toynbee (1957, 4-5 with n. 1 on p. 5, quoted *verbatim supra*, in Chapter I.1.1.), and by Langer and Pfanner (2018, 79, quoted *verbatim supra*), but instead as coming back from a victorious campaign. This the artists indicate by means of the *rotulus*, carried for Vespasian on frieze B by a man of his entourage (cf. here **Figs. 1 and 2 drawing; figure 17**).

Cf. Langer and Pfanner (2018, 74, quoted *verbatim supra*, in Chapter V.1.g)), according to whom its precise meaning is allegedly unknown, although they likewise quote Simon (1963) in their bibliography, whose interpretation I have followed here without at first realizing this fact.

I repeat in the following, what was already said in Chapter V.1.d:

`to both emperors on the two friezes of the Cancellaria Reliefs belongs a *rotulus*. Domitian (now Nerva) on Frieze A carries it himself in his left hand (cf. here **Figs. 1 and 2 drawing; figure 6**), whereas on Frieze B for Vespasian a *rotulus* is carried by a man of his entourage (cf. here **Figs. 1 and 2 drawing; figure 17**). Both *rotuli* contain the *vota* of these emperors, made by them to the gods, praying them to be granted a victory in the war, to which Domitian on Frieze A is shown as leaving, whereas in Vespasian's case on Frieze B this victory has already been granted - according to Simon (1963, 9, 10) these were the *vota* taken by the commander of an army *pro reditu*'.

**Decisive in this context is the observation by Rita Paris (1994b, 81-82, quoted *verbatim infra*, in Chapter V.1.i.3.a)) that the *corona civica*, with which *Victoria* on Frieze B (cf. here **Figs. 1 and 2 drawing; figure 16**) is shown in the course of crowning Vespasian, was the highest decoration, a general could receive as recognition of a military victory: it had in fact only been granted Augustus and Vespasian, because both, by conducting their wars, had managed to put an end to *civil* wars.**

Paris' (1994b, 81-82) observation thus proves:

a) that the emperor on Frieze B was from the very beginning Vespasian, and -

b) that what we see on this panel is indeed the *adventus* of the Emperor Vespasian in the first half of October of AD 70, who comes back to Rome after his victorious military campaigns in Judaea, and who is crowned by *Victoria* at this very moment with the *corona civica* for having ended the civil war of 68/69.

As already said above, we know that in theory various magistrates could receive an emperor in an *adventus*-ceremony: the two *consules* together, the *praefectus urbi* (for both cf. *supra*, in Chapter II.3.3., and here **Fig. 46**), and the *praetor urbanus*; cf. Erika Simon (1963, 10, quoted *verbatim supra*, in Chapter I.1.). Since the togate youth on Frieze B is acting alone and because of his age, he cannot be a *consul*, nor can he be the *praefectus urbi* because of his age (cf. *supra*, in Chapters V.1.h.1.); and V.1.h.2.); and *infra*, in Chapter VI.3.; in Chapter *The major results of this book on Domitian*; and *infra*, in volume 3-2, at *Appendix I.a*)).

If we, therefore, believe that the togate youth on Frieze B must be the *praetor urbanus*, the togate youth receiving Vespasian in this *adventus*-ceremony may be identified with the young Caesar Domitian, who held the office *praetor urbanus* since 1st January of AD 70.

**If so, Domitian is thus only recognizable on Frieze B because of his age, and a combination of his action - he heads the receiving party in an *adventus*-ceremony - with the specific topographical context, where his action is staged, the meaning of which has just been analysed above.**

Although the fact remains that the head of the togate youth, **figure 12** on Frieze B (cf. here **Figs. 1 and 2 drawing**), has not been destroyed, which is why some scholars have suggested that, therefore, it cannot

possibly be identified as a portrait of Domitian, which should have been destroyed after the emperor's *damnatio memoriae*, of course. Whereas I myself have developed a scenario to explain this fact (cf. *supra*, in Chapter *II.3.1.a*), with reference to Chapter *II.3.2*), John Henderson offers a different solution to this problem, which does not contradict my suggestion, since both hypotheses could be regarded as complementing each other.

**Henderson (2003, 246) writes:** "On Relief 'B', we recognise the features of dear old Vespasian in the front-rank figure to right who is being crowned by a Victory launch. **And we wonder if (we can ever decide if) the young man he is paired with has an individualised, or blankly idealising, visage** [with n. 54]: **a youthful Domitian, or some worthy public servant?** A Domitian, some agree (*never*, in any event, a square-jaw Titus) - a princeling Domitian re-imag(in)ed in a two decades retrospect from the meat of his reign, and hence a Domitian unlike his former self? So Magi reckoned, and 'A' is thus pinpointed as the start or finale of some (major? enough to call for massive sculpture ...) campaign under Domitian's auspices, while 'B' must B [*corr.*: be] a contemporaneous resuscitation of an occasion way back in Vespasian's era - bringing together father and (second) son. If Nerva displaced the head on Domitian's neck in 'A', **perhaps the dead and damned Domitian escaped defacement in 'B' precisely because he looks (so) little like Domitian?** [my emphasis]".

In his **note 54**, Henderson writes: "His [*i.e.*, of **figure 12**] eyes bigger and deeper than the lictors' [*i.e.*, of **figures 1** and **10**], his face *more* individualised than theirs, at least (Simon [1960] 134; Bonanno [1976] 56)". - Note that Anthony Bonanno (1976, 56-57) mentions more arguments than the one, quoted by Henderson, which have led him to identify this head as a portrait of Domitian.

Whereas the context of **figure 12** on Frieze B, the represented age and the typical coiffure and facial traits had led many earlier, and currently still some scholars (all discussed in Chapter *I.1.*) to follow Magi in identifying this togate youth with Domitian (cf. F. MAGI 1939, *supra*, **n. 112**, in Chapter *I.1.*; and *id.* 1945) -

*inter alia* Fuhrmann (1940; 1941; cf. *supra*, **n. 113**), Toynbee (1946; 1957; cf. *supra*, **n. 118**), Lugli (1946; cf. *supra*, **n. 10**), Bianchi Bandinelli (1946-48; cf. *supra*, **n. 112**), Bendinelli (1949; cf. *supra*, **n. 16**), Hammond (1953; cf. *supra*, **n. 18**), Simon (1960; 1963; cf. *supra*, **n. 119** [and **n. 456**, in Chapter *III.*], Hanfmann (1964; cf. *supra*, **n. 23**), Béranger (1964, cf. *supra*, **n. 24**), Daltrop (1966; cf. *supra*, **n. 120**), Keller (1967; cf. *supra*, **n. 121**), Koeppel (1969; cf. *supra*, **n. 122**), Andreae (1973, cf. *supra*, **n. 31**), Bandinelli and Torelli (1976; cf. *supra*, **n. 32**), Bonanno (1976; cf. *supra*, **n. 32**), Lochin (1990, cf. *supra*, **n. 46**), Kleiner (1992; cf. *supra*, **n. 129** [and **n. 394**, in Chapter *III.*]), Kuhoff (1993, cf. *supra*, **n. 47**), Paris (1994b; cf. *supra*, **n. 47**); Ramage and Ramage (1996; cf. *supra*, **n. 49**), Hugo Meyer (2000; cf. *supra*, **n. 397** - but H. MEYER, although recognizing in the extant portrait of the togate youth Domitian, erroneously thought that this portrait had been recut from an alleged original portrait of King Tiridates; cf. *supra*, **n. 130**), Pfeiffer (2009; cf. *supra*, **n. 59**), Pollini (2017b; cf. *supra*, **n. 72**), Chabrečková (2017; cf. *supra*, **n. 73**), Sheldon (2023, in press; cf. *supra*, **n. 74**), Claudia Valeri and Giandomenico Spinola (cf. *supra*, in Chapter *Introductory remarks and acknowledgements*), Giandomenico Spinola (cf. *supra*, in Chapter *III.*; and below, at *The Contribution by Giandomenico Spinola on the Cancellaria Reliefs*), and myself,

- the situation had changed - but obviously not for all following scholars, as the above-quoted list shows - as soon as Andreas Rumpf (1955-56; cf. *supra*, **n. 172**, in Chapter *I.1.*) had realized that Domitian, as the *praetor urbanus*, should wear the *calcei senatorii*, instead of the simple *calcei*, as the togate youth on Frieze B actually does. Rumpf therefore rejected Magi's identification of the togate youth with Domitian. Rumpf was followed by Marianne Bergmann (1981; cf. *supra*, at **ns. 168-170**, in Chapter *I.1.*) who in her turn was followed in this respect by many other scholars (cf. *supra*, **n. 128**, in Chapters *I.1.*; see also Chapters *I.1.1.*; and *V.1.h.1.*). Rumpf (*op.cit.*), in addition to this, had argued that the face of the togate youth is not a portrait. This was likewise followed by Bergmann (*op.cit.*), and she in turn was followed by many subsequent scholars (cf. *supra*, **n. 128**, and in Chapters *I.1.*; *I.1.1.*; *V.1.h.1.*; *V.1.i.1.*; and *VI.1.*).

But as we have also seen above (cf. *supra*, at n. 193, in Chapter I.1., and in Chapter V.1.h.1.)), it may well be that the artists, by showing the togate youth on Frieze B with these shoes, simply made a mistake. Although I have myself likewise discussed this possibility (cf. *supra*, at ns. 144, 156, in Chapter I.1.), I have followed Jocelyn M.C. Toynbee (1957; cf. *supra* at n. 205, in Chapter I.1.1., and at n. 469, in Chapter VI.) in suggesting that Domitian and/ or his artists had deliberately decided to show the togate youth Domitian on Frieze B with these simple *calcei*, because the wearing of those shoes was appropriate for members of the *ordo equester*.

The reason being that Domitian since 21st December of AD 69 held also the title *Princeps iuventutis*, a position always closely related with the *ordo equester*, which is why in this case his wearing of those shoes could be appropriate. The reason, why I am following Toynbee (1957, 8 with n. 11, quoted *verbatim infra*, at n. 205, in Chapter I.1.1.) in this respect, is the fact that she observed that the *Princeps iuventutis* was the 'heir presumptive to the Empire' (for that hypothesis, and its possible consequences, cf. *infra*, in Chapter VI.3.).

**I myself have, therefore, followed the relevant hypotheses of Simon (1960; 1963) and Koeppel (1969), in assuming that on Frieze B the young Caesar and praetor urbanus Domitian and Vespasian are shown in Vespasian's adventus at Rome of the first half of October AD 70, which is staged at the pomerium.**

And that, although I am fully aware of the fact that on Frieze B Vespasian's two lictors (cf. here **Figs. 1 and 2 drawing: figures 8 and 9**, who are not entirely preserved), could in theory have been represented with the axes attached to their rods, exactly as Vespasian's lictor **figure 10** on Frieze B. Note that these three lictors (**figures 8-10**) are positioned on Frieze B within that area, which is here interpreted as being located 'within the *pomerium*', an area, where lictors usually should *not* be shown with their axes attached to their rods. Although there is another state relief, in which exactly the same mistake has likewise been observed, the famous Extispicium Relief in the Louvre (cf. here **Figs. 16-18**).

For that mistake; cf. *supra*, n. 144, in Chapter I.1.; and for the Extispicium Relief; cf. below, at *A Study on Domitian's cult-statue of Iuppiter Optimus Maximus Capitolinus*; and *infra*, in volume 3-2, at *Appendix I.g.3.*); and at *Appendix I.g.4.*

Note also that Vespasian's fourth lictor (**Figs. 1 and 2 drawing: figure 15**), who follows behind Vespasian, is correctly shown with the axe attached to his rods, because he stands outside the *pomerium*. For a detailed discussion of all the problems involved, cf. *supra*, in Chapter I.2.1.c), with n. 250).

***Nerva's re-use of the Domitianic monument or building that comprised the Cancellaria Reliefs.***

The following is a short summary of my Chapter II.3.2., and of the text in Chapter II.3.3.a).

I suggest that Nerva may only have had a couple of days (or weeks?) time to rework the Domitianic monument or building, that contained the Cancellaria Reliefs, into one that celebrated his own achievements (cf. *supra* at n. 352, in Chapter II.3.2., and at n. 363, in Chapter II.3.3.a)); that, therefore, the recutting of Domitian's face on Frieze A into the portrait of Nerva (cf. here **Fig. 1; Figs. 1 and 2 drawing: figure 6**) was not yet finished, when those works were interrupted; and that a possibly planned reworking of the (as I believe) *two* portraits on Frieze B (that of the togate youth/ Domitian and that of Vespasian; cf. here **Figs. 1 and 2 drawing: figures 12** [Domitian]; **14** [Vespasian]) had not even been started (cf. *supra*, in Chapters II.1.c); and II.3.1.), which is why we cannot know, what Nerva may have planned in this respect.

When Nerva, in October of AD 97, decided to have his face recut from that of Domitian on Frieze A, he had, in my opinion, in mind to re-work Frieze A into the *profectio* of himself to his *bellum Suebicum* in AD 97. If indeed the relevant Domitianic structure was a (triumphal) arch, precisely this fact could have alerted Nerva to 'usurp' Frieze A to be re-used as the representation of himself at the *profectio* to this war, perhaps even because also Domitian had victoriously fought against the *Suebi* (cf. *supra*, ns. 345, 346, in Chapter II.3.1.a)).

Whereas I myself am of a different opinion, some scholars have actually suggested that the original phase of Frieze A could have represented Domitian's *profectio* to *this* war, in AD 92 (cf. *supra*, at n. 232, in Chapter I.2.) - but that is, of course, only an unproven hypothesis. - To this I will come back below (cf. *infra*, in Chapters VI.3.; and at *The major results of this book on Domitian*).

The governor of Pannonia had won the *bellum Suebicum*, and sent a laurel wreath, the token of this victory, to Nerva, who, as the emperor, had officially won this war, and therefore added the title *imperator II* to his official title. In addition to this, Nerva celebrated in late October or at the beginning of November AD 97 his victory in the *bellum Suebicum* by dedicating in a solemn ceremony this laurel wreath to Iuppiter Optimus Maximus Capitolinus in his temple on the Capitol, and adopted Trajan, in the course of the same ceremony on the Capitol, as his son, co-Emperor and successor (cf. *supra*, n. 352, in Chapter II.3.2.). Because the Senate granted *both* Nerva and Trajan in November of 97 the victortitle *Germanicus* for this *bellum Suebicum* (cf. *supra*, ns. 322, 323, in Chapter II.1.e)), I suggest that Nerva *a*) either already because of his adoption of Trajan, or *b*) at the latest because he and Trajan received the title *Germanicus* for this same victory, may have ordered the interruption of the re-working of the Domitianic structure, to which the Cancellaria Reliefs belonged, until he could discuss the matter with Trajan in person; but we know also that 'father and son', Nerva and Trajan, would never see each other again before Nerva died.

Finally I have suggested that it may have been Nerva, who ordered the destruction of the Domitianic structure that contained the Cancellaria Reliefs, but for a different reason than that suggested by Langer and Pfanner (2018, 82, 84, quoted *verbatim supra*, in Chapter V.1.a). In my opinion, Nerva may have done this, as soon as he realized that on Frieze A should not only be celebrated his own (*i.e.*, Nerva's) *profectio* to the *bellum Suebicum*, but, of course, also that of his son, co-Emperor and 'co-victor' of this war, Trajan. If Nerva had indeed planned to 'add Trajan' to Frieze A, his artists would have told him, or he himself could have realized, that the addition of the latter to Frieze A was impossible, because the slabs of Frieze A are much too thin to allow the additional carving 'of a second emperor' (cf. *supra*, at n. 363, in Chapter II.3.3.a); and below, in Chapter *The major results of this book on Domitian*).

**V.1.i.3.a) The reconstruction by R. Paris (1994b) of two of the marble reliefs of the *Templum Gentis Flaviae*: 'Vespasian's *adventus* into Rome in October of AD 70' (cf. here Fig. 33), and 'Sacrifice in front of the Temple of Quirinus on the Quirinal' (cf. here Fig. 34). With some observations concerning Domitian's sestertius, issued in AD 95/96 (cf. here Fig. 30), the "Rilievo Terme Vaticano" (cf. here Fig. 31), and the aureus of Augustus, minted in 12 BC, showing the door of the (real) House of Augustus on the Palatine, decorated with the *corona civica* and laurel trees (cf. here Fig. 35)**

Domitian built the *Templum Gentis Flaviae* on the Quirinal, at the site of his father Vespasian's *domus*, where he himself was born (Suet. *Dom.* 1; cf. *Dom.* 15), and where later the Baths of Diocletian were erected (cf. *supra*, in Chapter IV.1.1.h); cf. Chapter IV.1.1.a)). We shall hear below (cf. *infra*, in volume 3-2, at Appendix I.c)), 'the story, told by Tacitus (*Hist.* 3,86) at the very end of his account ... [of Domitian's escape from the *Capitolium* on 19th December AD 69], that Domitian [on 21st December 69] was first hailed as Caesar by the Flavian leaders and their soldiers, and then escorted to the *domus* of his father Vespasian, must have been an overwhelming experience for the young man'. - And I imagine that this was one of the reasons for Domitian to erect the *Templum Gentis Flaviae* right there.

Cf. Figs. 58; 59, labels: Servian city Wall; Baths of DIOCLETIAN; Museo Nazionale delle Terme; site of DOMUS : VESPASIAN; site of TEMPLUM GENTIS FLAVIAE.

The important findings of Rita Paris concerning the relief here Fig. 33 (cf. R. PARIS 1994b, 81-83, Figs. 6; 7a-c), have already been mentioned several times above (cf. *supra*, in Chapters *Preamble*; Section III.; at point 3.; at I.2.1.c); I.3.2.; II.3.1.c); II.3.2; II.3.3.; IV.1.1.h); V.1.d); and at V.1.i.3.)).

Of the *Templum Gentis Flaviae* (cf. *supra*, at Chapter IV.1.1.h)) only some Domitianic structures have been found in excavations within the Baths of Diocletian on the Quirinal/ the Museo Nazionale Romano, few architectural fragments, as well as fragments of at least three reliefs, all carved in Pentelic marble.

Two of these reliefs (cf. here Figs. 33 and 34) will be discussed in the following; of the third relief remains only one fragment, which is why no reconstruction drawing of it could be made. The head of the colossal acrolithic cult-statue of *Divus Titus* (here Fig. 53) has likewise been identified, but so far the marble of this head has not been tested. For marble portraits of Domitian's sister, Flavia Domitilla *minor* (cf. here Figs. 54; 55), who was likewise buried in the *Templum Gentis Flaviae*; cf. *supra*, at Chapter IV.1.1.h).

The measured reconstruction drawings of its architecture and of those two reliefs, published in the catalogue, edited by Rita Paris (1994a and in her publication of 2009), were made by arch. Gloria Marconi.

Cf. Paris (1994b, 84-83); Marconi (1994, 84-91, Tav. I-V; Tav. IV = here Fig. 34; Tav. V = here Fig. 33); Paris (2009, pp. 460-461, with reconstruction drawing of Vespasian's *adventus* by arch. Gloria Marconi [1994] on p. 461 = here Figs. 33; 34; cf. pp. 462-468, cat. nos. 52-63 - the architectural and sculptural fragments, that can be attributed to the *Templum Gentis Flaviae* and on which Marconi's measured reconstruction drawings were based).

Fig. 33. Reconstruction drawing of a relief that once belonged to the *Templum Gentis Flaviae*. Represented is Vespasian's *adventus* into Rome in October of AD 70. From: R. Paris (1994b, 91: "Tav. V. Proposta di ricostruzione parziale della scena con rilievo storico". Drawing: "arch. Gloria Marconi").

Fig. 34. Reconstruction drawing of a relief that once belonged to the *Templum Gentis Flaviae*. Represented is a sacrifice in front of Augustus' Temple of Quirinus on the Quirinal. From: R. Paris (1994b, 90: "Tav. IV. Proposta di ricostruzione parziale della scena con sacrificio, davanti al Tempio di Quirino". Drawing: "arch. Gloria Marconi").

**Fig. 30. Sestertius of Domitian, issued AD 95/96, representing a decastyle temple, which M. Torelli (1987) has identified with the *Templum Gentis Flaviae*. BMC, p. 406, n. 12, R.H. Darwall-Smith (1996, 281, Plate XVIII, Fig. 30). From W. Haberey (1960, Taf. 42, Abb. 1: "Bronzemedaille des Domitian vom Jahre 95-96 n. Chr. aus Grab I"). Cf. R. Paris (1994b, 26, Fig. 14). From: E. Nash (1961, 371, Fig. 452: "Sestertius of the 17th consulate of Domitian (95/96 A.D.)".**

Rita Paris (1994b, 26, Fig. 14) writes: "Sesterzio di Domiziano (95/96 d.C.) con raffigurazione di edificio decastilo". This building has been identified by M. Torelli (1987, 564-567, Fig. 2) as the *Templum Gentis Flaviae*. This was *inter alia* followed by Rita Paris (1994b, 28 with n. 11), and Claudio Parisi Presicce (2008, 28, quoted *verbatim* below and discussed *infra*, in volume 3-2, at *Appendix IV.c.2.*). This is now also considered as a possibility by Lorenzo Kosmopoulos (in: E. LA ROCCA and L. KOSMOPoulos 2023, 130-131, quoted *verbatim supra*, in Chapter IV.1.1.h). Robin Haydon Darwall-Smith (1996, 192), whom I do not follow here, suggests instead that this coin represents the east façade of Domitian's '*Domus Flavia*' on the Palatine.

For those different suggestions to identify the building, which is represented on the reverse of his coin; cf. also *infra*, in volume 3-2, in *Appendix I.g.3.*); and in *Appendix VI.*; at Sections II.; XII..

**Through a remark by Barbara E. Borg (2019, 245 with n. 194), I have been alerted to Rita Paris' publications discussed here:**

**"The so-called 'Dono Hartwig', fragments of architectural ornaments, figures supporting an entablature and relief sculpture, which were found in 1901 during building works for the northern part of the semi-circle of buildings surrounding the Piazza della Repubblica, are generally accepted as belonging to the *Templum* [*Gentis Flaviae*], even though their precise arrangements and display context are still unclear [with n. 194]. The reliefs depict Vespasian and probably his sons in an *adventus* scene as well as a sacrifice, and thus use imagery that we find on state monuments [my emphasis]"**

In her **note 94**, Borg writes: "Gazda *et al.* (eds.) Images of Empire [1996]; Paris, 'Sculpture' [*i.e.*, here R. PARIS 2009], with reconstruction drawing and cat. 52-64; Leithoff, *Vergangenheit* [2014], 192-194, fig. 16".

Borg's last remark made me very curious, but the relief in question (cf. here **Fig. 33**) does not show Vespasian and *both* of his sons in an *adventus* scene, as she suggests (cf. B.E. BORG 2019, 245), since Paris (1994b, 82), whose account will be quoted *verbatim* in the following, is certainly right in interpreting this scene as Vespasian's *adventus* of October of AD 70, when he was received only by Domitian, whereas Titus was still fighting in Jerusalem. Paris herself, who compares the relief here **Fig. 33** with Frieze B of the Cancellaria Reliefs (cf. here **Fig. 2**), suggests that the represented locale is supposed to be Beneventum, whereas in both cases this scene is certainly meant to take place at Rome. - To this I will come back below.

The two ('faceless') figures on the reconstruction drawing of this relief, to whom Borg refers (cf. here **Fig. 33**), are immediately flanking Vespasian on either side. They are conjectural, since no relief fragments suggest their existence, and Paris (1994b, 82) does not even mention them in her discussion of this reconstruction drawing, quoted below.

Gloria Marconi, the author of this drawing, does not mention these figures either; she (1994, 84 with n. 1, Tav. I- V) describes in detail, how she has arrived at her reconstruction drawings, for example Tav. II: "Proposta di ricostruzione del prospetto dell'edificio", and Tav. III: "Assonometria della proposta ricostruttiva". She calculated all the measurements of that part of this building she was able to reconstruct by basing herself on the extant architectural fragments and on the indications given by Vitruvius (*de Architettura*) concerning the proportions of comparable architectural ornaments. Vitruvius' guidelines were also the basis for Marconi's calculations of the heights of the individual figures that appear on the pertaining marble reliefs (cf. her Tav. IV; V [= here **Fig. 34** and **33**]).

The two 'faceless' figures, mentioned above, flanking Vespasian on **Fig. 33** on either side, seem to have been added to this reconstruction drawing in order to arrive at the same width as the reconstruction drawing of the other relief that shows a sacrifice (cf. here **Fig. 34**), and of which only two fragments have survived. Interestingly, all four male figures of Vespasian's entourage on **Fig. 33** are much smaller than the emperor. The male figures of this panel are actually represented in three different scales: 1.) the tallest figure is Vespasian, 2.) the *Genius Populi Romani* and the two 'faceless' figures flanking Vespasian are smaller than the emperor, 3.) the soldier, an adult man, is even smaller than those. He reaches Vespasian only up to his chest, as if he were a child.

**This application of a 'hierarchy of scale' - if indeed part of the original composition of the relief Fig. 33, as is reasonable to assume - thus already appears in a relief, commissioned by Domitian. Above, we had arrived at the conclusion that this peculiar way of visualizing the greater importance of the emperor had only begun - in state art - with the reliefs that decorate Trajan's Arch at Beneventum. Also to these reliefs belongs a panel, in which adult males, comprising the Emperor Trajan, are represented in three different scales (cf. *supra*, in Chapter II.3.3, see also here Fig. 46). Paris (1994b, 75-83, in her Chapter: "Proposta di interpretazione e di ricostruzione") describes her proposal to reconstruct the *Templum Gentis Flaviae*. Her reconstructions, drawn by arch. Gloria Marconi, were based on the architectural and relief fragments, found at a site within the Baths of Diocletian.**

The architectural fragments and the reliefs, which can be attributed to the *Templum Gentis Flaviae*, are today kept in the Museo Nazionale Romano at Rome and at the Kelsey Museum of Archaeology at Ann Arbor in Michigan (U.S.A.). After the destruction of the *Templum Gentis Flaviae*, these fragments were for the first time together on display at the Museo Nazionale delle Terme, *Palazzo Massimo alle Terme*, in the exhibition, the catalogue of which was edited by Paris (1994a).

**Ancient *testimonia* that may illustrate the *Templum Gentis Flaviae*: Domitian's *sestertius*, issued in AD 95/96 (cf. here Fig. 30) and the "Rilievo Terme Vaticano" (cf. here Fig. 31); and the different locations that have been suggested for this building : at the *domus* of Flavius Sabinus, which, in its turn, has been assumed at different places, and at the *domus* of Vespasian at the site of the later Baths of Diocletian**

As already mentioned above (cf. *supra*, in Chapter IV.1.1.h), Paris (1994b, 26-33, esp. p. 28 with n. 11: "La documentazione iconografica") follows Mario Torelli (1987, 564-567, Fig. 2: "immagine del calco ricostruito nel Museo della Civiltà Romana"), in suggesting that the *Templum Gentis Flaviae* is represented on one of the *sestertii*, issued by Domitian in AD 95/96 (cf. here **Fig. 30**), and on the "Rilievo Terme Vaticano" (cf. here **Fig. 31**). For this coin; cf. Paris (1994b, 26 Fig. 14: "Sesterzio di Domiziano (95/96 d.C) con raffigurazione di edificio decastilo [cf. here **Fig. 30**]".

**For the "Rilievo Terme Vaticano", which, in her opinion, shows a *procession* in front of a 'tempio decastilo'; cf. Paris 1994b, 28, Fig. 16 : "Il rilievo del Museo Vaticano e quello del Museo Nazionale [Romano] ricongiunti in un calco del Museo della Civiltà Romana" (cf. here **Fig. 31**). Cf. her Figs. 17-19 on p. 29, and Figs. 1-2 on p. 32.**

Note that Paris (1994b) (erroneously) locates the *Templum Gentis Flaviae* at the site of the *domus* of Flavius Sabinus, which has (erroneously) been identified by Filippo Coarelli ("Gens Flavia, Templum", in: *LTUR* II [1995] 368, who refers to: M. TORELLI: "Domus: T. Flavius Sabinus", in: *LTUR* II [1995] 102-103) with an architecture, excavated underneath the Caserma dei Corazzieri on Via XX Settembre, 12, close to the Church of S. Susanna on the Quirinal.

**Note also that Stephanie Langer and Michael Pfanner (2018, 142-157; cf. *infra*, in volume 3-2, at Appendix I.g.3.)) are instead of the convincing opinion that this relief fragment (cf. here Fig. 31) shows a *sacrifice* in front of this decastyle temple (!).**

Cf. Paris (1994b, 21-25: "La localizzazione del monumento", especially p. 25 with n. 12 - for the (erroneous) location of the *Templum Gentis Flaviae* at the *domus* of Flavius Sabinus and the identification of both with the building, found underneath the Caserma dei Corazzieri). For further discussion of the two locations that have been suggested for the *Templum Gentis Flaviae*; cf. *supra*, in Chapters IV.1.1.a); and at IV.1.1.h).

**In the meantime, Filippo Coarelli (2014, 281) suggests another location for the *domus* of Flavius Sabinus: at the same site, where the late antique *domus* of the Nummii should be built, which stood to the south of Via XX Settembre, opposite the Church of Santa Susanna, and between Via Firenze and Via Torino.**

Also Maria Torelli has hinted at the earlier part of the extremely complicated history of scholarship concerning this subject; cf. below, at the *Contribution by Mario Torelli on the Templum Gentis Flaviae*.

To facilitate the reader an easier understanding of the relevant scholarly debate, I have added to Torelli's *Contribution* a 'Note by the editor'. There I have summarized Maria Cristina Capanna's "*Ipotesi A*" concerning the location of the *Templum Gentis Flaviae*, in which she explains in detail that part of the discussion, at which Torelli has hinted in his text. See Capanna (2008, 173, 174, Fig. 1. The caption reads: "Le ipotesi A e B sul Quirinale"). According to Capanna's "*Ipotesi A*" (2008, 175, Fig. 1) the *Templum Gentis Flaviae* stood within the "Area tra le attuali via del Quirinale, via delle Quattro Fontane, via di S. Vitale, Via Genova" (cf. here **Fig. 59**).

This was the (wrong) location assumed for the *Templum Gentis Flaviae* by Rodolfo Lanciani (III 1990, 209; *id.* III, 194), because he located the Vigna Sadoletto at this site, where, in 1521, the inscription (CIL VI 29788 = ILS 5988) had occurred, which mentions the *domus* of Flavius Sabinus. For this old (but erroneous) location of the Vigna Sadoletto and, therefore, of the *domus* of Flavius Sabinus; cf. also Mariette de Vos (1996, 82).

See for this wrong location of the *Templum Gentis Flaviae* also Lanciani, *FUR*, foglio 16, labels: COLLIS QUIRINALIS; ALTA SEMITA [today: Via del Quirinale]; Via Quattro Fontane; VIGNA DEL CARD[inale] SADOLETO; TEMPLVM GENTIS FLAV.[iae]; Vacca m.[emoria] 37.38; DOMVS FLAVIORUM; AD MALVM PVNICVM.

But note that Filippo Coarelli (2014, 247-256 with ns. 29, 30); see below) has now been able to demonstrate that the Vigna Sadoletto was instead located circa 400 m to the north-east, near the Church of S. Susanna.

Only after finishing writing my *Note by the editor* to Mario Torelli's *Contribution*, did I find that also Eugenio La Rocca (2009, 225-228) had addressed this subject. I have, therefore, quoted La Rocca (2009, 225-228) in my *Note*. But only now have I realized that already La Rocca (2009, 225 with n. 32, providing references) has addressed the fact that the Vigna Sadoletto had earlier been assumed at a wrong location. La Rocca (*op.cit.*) has, therefore, arrived at the convincing conclusion that the *domus* of Flavius Sabinus stood at the site of the (later) *domus* of the Nummii Albini (!). And, when reading now again Capanna's article (2008, 174, Fig.1, pp. 176, 177, at point "5."), did I notice that, in the course of explaining her "*Ipotesi B*" (which is the correct location of the *Templum Gentis Flaviae*), she had likewise already marked on her plan Fig. 1 the *domus* of Flavius Sabinus at the correct site, next to the *domus* of the Nummii (!). See also Andrea Carandini (2007, *Illustrazioni*, "4. Ricostruzione del Quirinale e del Tempio di Quirino. A. Carandini con M.C. Capanna (prima del Georadar, 2007)", label: Privata T. Flavi Sabini; CIL VI 29788; CIL VI 334"; cf. p. VII: "Indice delle illustrazioni a cura di Maria Cristina Capanna; I grafici sono di Maria Cristina Capanna".

But note that most of this was also already known to Fabrizio Pesando ("Malum Punicum, ad", in: *LTUR* III [1996] 208-209), only that I had so far managed to overlook this fact.

For the correct locations of the *domus* of Flavius Sabinus, of the *domus* of Vespasian and of the *Templum Gentis Flaviae*; cf. here **Figs. 58; 59**, labels: COLLIS QUIRINALIS; Servian city Wall; S. Susanna; Caserma dei Corazzieri; site of DOMUS; ALTA SEMITA / Via del Quirinale / Via XX Settembre; Via Firenze; site of DOMUS : T. FLAVIUS SABINUS / DOMUS : NUMMII; Piazza S. Bernardo; Via Torino; VICUS LONGUS; Baths of DIOCLETIAN; site of DOMUS : VESPASIAN / TEMPLUM GENTIS FLAVIAE.

Cf. Federico Guidobaldi ("Domus: Nummii", in: *LTUR* II [1995] 146-147, Figs. 43; 44); p. 146: "Scavata a più riprese a partire del 1877, ma soprattutto negli anni 1883-1886, e poi nel 1893 su un area relativamente vasta centrata sullo sbocco di Via Firenze su Via XX Settembre (sito della Chiesa di S. Caio) ed estesa a SO [sud-ovest] nell'angolo del Ministero della Difesa e a NE [nord-est] in corrispondenza della chiesa metodista [of Saint Andrew; cf. *infra*] e della case Vismara, Mariani e Scafati (*Regio VI*) ...". In the following, Guidobaldi explains in detail that this site has been identified as that of a *domus* of the Nummii because of the find of relevant inscriptions.

See also Werner Eck's remark (1997, 190, n. 150) concerning this *domus* of the Nummii: "Vielleicht 200jährige Persistenz der Familie an diesem Ort").

For the "chiesa metodista", mentioned by Guidobaldi (1995); cf. Eugenio La Rocca (2009, 225 with n. 31, providing references), who writes that this Church was dedicated to "Saint Andrew".

Thanks to the essay by Serena Guglielmi ("Il Quirinale dei Flavi tra *Horti* e *Domus*", 2023, 28 with n. 23, quoted *verbatim infra*) have I now - finally - and right in time been alerted to the fact that also Coarelli (2014, 281) does not identify any more the *domus* of Flavius Sabinus with that *domus*, which has been excavated at the Caserma dei Corrazzieri. I myself had followed Coarelli's (erroneous) identification of those finds with the *domus* of Flavius Sabinus in my earlier *Study*; cf. Häuber (2017, 160); and still in one of the Previews of this book on Domitian, published on our Webserver on 7th August 2022 (last update: 19th May 2023):

"Chrystina Häuber, korrigierte und erweiterte Karte **Map 3** aus C. HÄUBER 2014, jetzt **Fig. 71**'. Dazu einige Textpassagen aus *Appendix I.* aus FORTVNA PAPERS III zur Lokalisierung des *Lucus Fagutalis* und des *mundus*, sowie zur Flucht Domitians vom *Capitolium* am 19. Dezember 69 n. Chr. / corrected and updated **Map 3** from C. HÄUBER 2014, now **Fig. 71**'. With some text passages from *Appendix I.* in FORTVNA PAPERS III concerning the location of the *Lucus Fagutalis* and the *mundus* and concerning Domitian's escape from the *Capitolium* on 19th December AD 69".

Cf. <[https://fortvna-research.org/maps/HAEUBER\\_2022\\_map3\\_Forum\\_Romanum-Oppius.html](https://fortvna-research.org/maps/HAEUBER_2022_map3_Forum_Romanum-Oppius.html)>.

I will now correct this cartographic error concerning the location of the *domus* of Flavius Sabinus on all our maps that will be published *infra*, in volume 3-2.

For the correct locations of the *domus* of Flavius Sabinus and of the *domus* of Vespasian/ the *Templum Gentis Flaviae*; cf. now Coarelli (2014, 71, 255-256, 263, 271-274, 277, 280-281).

**After discussing the *domus* of the Nummii, Coarelli (2014, 280-281) writes that at the same site had earlier stood the *domus* of Flavius Sabinus :**

"È comunque possibile dimostrare che quella [*i.e.*, *domus*] appartenuta ai Nummii era stata preceduta da un'altra *domus*, nella quale è possibile identificare quella di T. Flavius Sabinus, il fratello di Vespasiano: **Elemento determinante è la scoperta, avvenuta in 1893, nel corso della costruzione della chiesa metodista, lungo la via XX Settembre, di una fistula iscritta con il nome del personaggio: TI FLAVI SABINI** [with n. 117]. Il luogo è indicato con grande precisione: "Alla distanza di m. 18 dalla via Firenze, entro l'area dello stesso fabbricato e alla profondità di m. 1,50". **Questa possibilità è confermata dal ritrovamento, nel 1521 di un cippo (oggi perduta) relativo alla stessa proprietà** [with n. 118]: **la provenienza di questo dalla Vigna Sadoletto aveva indotto a collocare la scoperta all'altezza di S. Andrea, a 400 m circa dal luogo di ritrovamento della fistula. In realtà, come abbiamo visto in precedenza** [thus referring back to page 272], **la vigna va situata molto più ad est, non lontano dalla chiesa di S. Susanna: in perfetta corrispondenza con il luogo di ritrovamento della fistula. In conclusione, la casa di Flavio Sabino veniva a trovarsi esattamente nel luogo occupato in seguito dalla *domus* dei Nummii** [my emphasis]".

In his **note 117**, Coarelli writes: "'N<sup>o</sup>Sc' 1893, p. 418; *CIL* XV 7451".

In his **note 118**, he writes: "CIL VI 29788 = ILS 5988: ``*Inter duos / parietes / ambitus privat(us) / Flavi Sabinf* [corr.: *Sabini*; see below, the quote from p. 272]``. Cfr. *sopra*". - **Coarelli thus refers back to his research on the correct location of the Vigna Sadoletto on pp. 247-256 with ns. 29, 30.**

Coarelli (2014, 272, Section: "2) *Le domus dei Flavi*") writes: "La posizione precisa della *domus* [of Flavius Sabinus] si può ricostruire in base a due documenti epigrafici: una fistula scoperta nell' area della chiesa metodista, all'angolo tra via XX Settembre e via Firenze [with n. 88], e un cippo in travertino, trovato nella vigna Sadoletto nel 1521 [with n. 89] con l'iscrizione *inter duos parietes ambitus privat(us) Flavi Sabini* [my emphasis]". In the following, Coarelli refers again to the previous, but erroneous location of the Vigna Sadoletto. In his **notes 88 and 89**, Coarelli provides references.

**See also Coarelli (2014, 272-274) for his earlier, but erroneous identification of the *domus* found at the Caserma dei Corazzieri with that of Flavius Sabinus, for the correct location of this *domus*, and for the location of the *domus* of his brother Vespasian/ the *Templum Gentis Flaviae* :**

"La presenza, sull'altro lato della via XX Settembre (all'interno della Caserma dei corazzieri), di una ricca casa di età neroniano-flavia, dotata di raffinati mosaici parietali, mi aveva indotto inizialmente a proporre l'identificazione con la *domus* di Flavio Sabino [with n. 93], e di conseguenza [cf. Figs. 95; 96 on p. 273] a collocare nella stessa zona anche il *templum gentis Flaviae*, eretto da Domiziano nel luogo ove era nato [with n. 94]. Tuttavia, due argomenti decisivi obbligano a rinunciare all'ipotesi: in primo luogo, la posizione dei resti della casa sul lato settentrionale dell'*alta Semita*, opposto rispetto a quello dove sono apparsi ambedue i [page 273; page 274] documenti epigrafici menzionati [*i.e.*, CIL XV 7451, and CIL VI 29788 = ILS 5988]; ma soprattutto, la posizione ormai accettata del *templum gentis Flaviae* in una zona posta a circa duecento metri più ad est, compresa tra l'ex Planetario, S. Bernardo alle Terme e Piazza della Repubblica.

L'errore nasceva dalla confusione tra la casa di Flavio Sabino (che probabilmente ne era entrato in possesso prima del 51 d.C.) [with n. 95] e quella di Vespasiano, certamente vicine tra loro, ma distinte. Ora, come sappiamo, il *templum gentis Flaviae* era stato costruito da Domiziano nel luogo dove era nato [with n. 96], e quindi in corrispondenza della casa di Vespasiano, dove questi si era trasferito prima del 51 d.C. dalla sua precedente dimora, situata presso il *Septizodium* (forse un precedente dell'edificio severiano) [with n. 97]. A questa casa vanno dunque attribuiti i resti di murature in opera reticolata di età giulio-claudia, sui quali il tempio è costruito [with n. 98].

**Siamo così in grado di riconoscere anche la posizione relativa delle due case, quella di T. Flavius Sabinus e di Vespasiano, che erano in effeffi adiacenti: il limite orientale della prima (analogo a quello della casa dei Nummii: v.[edi] sotto [cf. pp. 277-281]) era la strada antica, corrispondente all'attuale via Torino, che si staccava dall'*alta Semita* all'altezza di S. Susanna, e nella quale si deve probabilmente riconoscere il possibile *vicus ad malum Punicum*, che sappiamo collegato alla stessa chiesa [with n. 99]. Immediatamente al di là di questa via, di cui si conserva parte del basolato, veniva a trovarsi la casa di Vespasiano [my emphasis]**".

In his **note 93**, Coarelli writes: "COARELLI 1984 [*i.e.*, here F. COARELLI 1984a], pp. 147-155: posizione condivisa da M. Torelli, in *LTUR* II, pp. 102s."

In his **note 94**, he writes: "Così anche TORELLI 1987. Per la vera posizione del tempio, si veda sopra, cap.[titolo] II [cf. pp. 194-207, Section: "18. *Templum gentis Flaviae*"]".

In his **note 95**, he writes: "Certamente non dopo il suo consolato (suff.), di data incerta, ma certamente anteriore a quello del fratello, che è del 51: *PIR* F 352".

In his **note 96**, he writes: "Suet., *Dom.* 1.1".

In his **note 97**, he writes: "Suet., *Tit.* 11. Coarelli 2009 [*i.e.*, here F. COARELLI 2009b], pp. 93 s.; LA ROCCA 2009, pp. 224-233".

In his **note 98**, he writes: "CANDILIO 1990-91 [*i.e.*, here D. CANDILIO 1990-1991 [1994]; CANDILIO 2000-2001]".

In his **note 99**, he writes: "*LTUR* III [s. v. *Malum Punicum*, ad], pp. 208 s. (F. Pesando)".

**See also Coarelli (2014, 277) for the fact that the area of the Caserma dei Corazzieri does not belong to the Horti Sallustiani :**

After discussing the *domus* underneath the Caserma dei Corazzieri: "Si deve escludere l'identificazione, proposta in un primo tempo [with n. 107], con la *domus* di Flavio Sabino. Errata è anche l'attribuzione agli *horti Sallustiani*, che si trovavano più a est [corr.: ad ovest; cf. here Figs. 58; 59], e che comunque difficilmente avranno incluso al loro interno una casa urbana, in gran parte inserita all'interno della mura [my emphasis]".

In his **note 107**, Coarelli writes: "Cfr. supra, nota 93".

For Flavius Sabinus and his *domus* on the Quirinal; cf. further *infra*, in volume 3-2. at *Appendix I.a*); and *Appendix I.d*).

**The *domus* at the Caserma dei Corazzieri can thus not be identified with the *domus* of Flavius Sabinus, and it is likewise not located within the Horti Sallustiani**

**Eugenio La Rocca (2020a, 49) dates the mosaics, found at the *domus* of the Caserma dei Corazzieri to the time of Vespasian :**

"Sul mosaico di Hylas il fondale scenico era distinto lateralmente in tre registri, mentre l'edicola centrale, un irreal monoptero non concluso anteriormente, retto in primo piano da candelabri e coronato con acroteri raffiguranti centauri marini, prendeva tutta l'altezza della parete. Le edicole, a *tholos* senza copertura, con colonne ioniche e colonne vegetali, sono leggerissime. In una sorta di *horror vacui*, tutti gli spazi entro le edicole e sulla parete sono coperti da pinakes, da figurine umane e animali, da festoni e elementi decorativi a carattere prevalentemente vegetale di vario genere. **Il mosaico è stato giustamente datato in età vespasiana per il confronto con la parete stuccata della palestra delle terme Stabiane a Pompei, con la quale divide la tendenza verso un decorativismo spinto e un affastellamento di elementi di maniera** [my emphasis]". - La Rocca discusses those mosaics also on p. 17 (with n. 8, quoting M. DE VOS 1997, 57-96), pp. 38, 39 48-49, 76.

Most recently, Serena Guglielmi ("Il Quirinale dei Flavi tra Horti e Domus", 2023, 25-28) has discussed the *domus*, excavated at the Caserma dei Corazzieri, who believes that it had been commissioned by Vespasian. In her opinion, this *domus* stood in the Horti Sallustiani, and that those Horti had been created by the historian Gaius Sallustius Crispus.

"La presenza di una dimora di famiglia spiega forse la predilezione di Vespasiano per la zona del Quirinale, tanto che da imperatore preferiva soggiornare su questo colle. "Viveva poco nel *Palatium*, mentre passava la maggior parte del tempo nei cosiddetti giardini sallustiani, dove riceveva chi voleva" [with n. 12]. Gli *horti* di Sallustio, costruiti nel I secolo a.C. dal celebre storico Caio Crispo Sallustio, occupavano una vasta area sulla sommità del Quirinale compresa tra le odierne via Salaria, via Venti Settembre e le Mura Aureliane [with n. 13]. La residenza, passata nel demanio imperiale sotto Tiberio, fu molto amata dagli imperatori, forse per la bellezza dei suoi giardini, **ma forse soprattutto per la** [page 26] **sua posizione strategica nei pressi delle mura cittadine**, da dove si poteva controllare il più importante accesso in città da settentrione [with n. 14]. **Vespasiano vi si stabilì per lunghi soggiorni, ricevendo qui gli amici e tutti coloro che passavano nella zona** [with n. 15].

Tracce tangibili dell'intervento di quest'ultimo [*i.e.*, Vespasian] sugli *horti Sallustiani* sono state individuate nell'area della attuale via Lucullo, dove tra il 1951 e il 1952 furono scoperti i resti di un criptoportico decorato con pitture, costruito nella seconda metà del I secolo d.C. [with n. 16]. È forse questo il luogo dove Vespasiano era solito passeggiare, una delle attività quotidiane da lui predilette, come ci racconta Svetonio [with n. 17]. **Sempre all'operato** [page 27] **di questo imperatore** [*i.e.*, Vespasian] **potrebbe**

essere attribuita la decorazione a mosaico di un ninfeo parzialmente messo in luce nel 1965 all'interno della caserma dei Corazzieri presso l'odierna via Venti Settembre [with n. 18] (fig. 2) ...

Allo stesso complesso va con ogni probabilità attribuito il mosaico policromo esposto in mostra (fig. 3) [with n. 19]: formato da paste vitree, calcari e conchiglie, il frammento fu scoperto nel 1869 tra i resti di un edificio che giaceva presso il "vicolo sterrato", corrispondente all'attuale Salita di S. Nicola da Tolentino [with n. 20], area che ricade nello stesso isolato della caserma dei Corazzieri.

Vespasiano, come noto, era nato nelle vicinanze di Rieti: fu forse l'origine sabina dei Flavi a determinare la scelta del Quirinale quale luogo di abitazione della famiglia? Secondo la tradizione, i primi occupanti dell'altura furono i Sabini di Tito Tazio: vivere sul "colle dei Sabini" potrebbe essere stata una scelta ben precisa e di rottura con il precedente regime dei Giulio-Claudi [with n. 21].

Sappiamo da Tacito che anche Tito Flavio Sabino, fratello maggiore di Vespasiano, possedeva una *domus* sul Quirinale [with n. 22]. Due documenti epigrafici [page 28] giunti fino a noi - una condotta d'acqua in piombo con impresso il nome del proprietario e un cippo di confine con l'iscrizione "Inter duos parietes ambitus privat(us) Flavi Sabini" - hanno permesso di localizzare la casa nell'area compresa tra le attuali via Firenze e via Torino [with n. 23] (fig. 1).

La residenza è stata spesso confusa con quella del fratello Vespasiano, sebbene sia oggi certo che si tratti di due edifici distinti, tra loro non troppo lontani [with n. 24; my emphasis].

In her note 12, Guglielmi writes: "Cass. Dio 66, 10, 4".

In her note 13, she writes: "Il termine *horti* denota dei possedimenti posti in ambito urbano, ai margini del centro, dei veri e propri giardini domestici nei quali si poteva godere della amenità della vita di campagna rimanendo nelle vicinanze della vita politica ed economica. Sull'argomento vd. [vedi] Cima, Talamo 2008, con bibliografia precedente. Per gli *horti di Sallustio* cfr. Innocenti, Leotta 2004 e Talamo 2008 [corr.: E. TALAMO 1998] [my emphasis]."

In her note 14, she writes: "Cima, Talamo 2008, pp. 112-113".

In her note 15, she writes: "Cass. Dio 66, 10, 4".

In her note 16, she writes: "Innocenti, Leotta 2004, p. 187, con bibliografia precedente".

In her note 17, she writes: "Suet. *Vesp.* 21".

In her note 18, she writes: "LTUR III, s.v. *Horti Sallustiani: Ninfeo o Terme*, pp. 82-83 [M. De Vos]. De Vos 1997".

In her note 19, she writes: "Musei Capitolini, Antiquarium, inv. AC 4941. Per il mosaico vd. [vedi] Salvetti 2003 e Salvetti 2013, pp. 108-112".

In her note 20, she writes: "Questa via è considerata da alcuni studiosi il limite occidentale degli *horti Sallustiani*. La questione topografica dell'area è complessa e ancora oggi non è possibile determinare un confine preciso degli *horti Sallustiani* fra largo S. Susanna e piazza Barberini; diverse sono le opinioni: secondo M. De Vos e C. Salvetti, l'area del monastero di S. Susanna ricadeva in antico nella zona occupata dagli *horti Sallustiani* (De Vos 1997 e Salvetti 2003). Anche in Capanna 2012, pp. 461-462, tavv. 182-183, il ninfeo con decorazione parietale scoperto presso la caserma dei Corazzieri è considerato un nucleo di rappresentanza degli *horti*. Diversa l'opinione di F. Coarelli, il quale attribuisce le testimonianze archeologiche situate nell'area della chiesa di S. Susanna a una o più *domus* aristocratiche, da mettere forse in relazione con la *domus Gabinii*, padre di S. Susanna (Coarelli 2014a [i.e., here F. COARELLI 2014], pp. 274-277). Vd. [vedi] anche Innocenti, Leotta 2004, p. 191 [my emphasis]."

In her note 21, she writes: "De Vos 1997, p. 98".

In her note 22, she writes: "Tac. *hist.*, 3, 69".

In her note 23, she writes: "Si tratta della condotta in piombo CIL XV 7451, scoperta nel 1893 negli scavi per la costruzione della chiesa metodista di Saint Andrew, all'angolo tra via Venti Settembre e via Firenze (Nsc 1893, p. 418) e del cippo di travertino CIL VI 29788, oggi perduto, trovato nel 1521 nella vigna del cardinale Jacopo Sadoletto. Per questa *domus* cfr. La Rocca 2009a, pp. 278-280 e Coarelli 2014b [i.e., here F. COARELLI 2014a], pp. 271-274.

In her note 24, she writes: "Coarelli 2009b [i.e., here F. COARELLI 2014a], p. 93".

**To the above-quoted passage from Serena Guglielmi (2023, 25-28) I should like to add some comments :**

I myself, like Coarelli (2014, 277, quoted *verbatim supra*), do not believe that the *domus* at the Caserma dei Corazzieri stood in the *Horti Sallustiani*; consequently, I do not believe that Vespasian may have commissioned this *domus*.

Guglielmi (2023, 25, n. 13) defines the meaning of the term '*horti*' as follows: "**Il termine *horti* denota dei possedimenti posti in ambito urbano, ai margini del centro, dei veri e proprio giardini domestici nei quali si poteva godere della amenità della vita di campagna rimanendo nelle vicinanze della vita politica ed economica [my emphasis]**".

Here, neither Guglielmi's description of the character, or of the locations of the *Horti* in Rome is very precise, although elsewhere, see Guglielmi (2023, 26), she herself writes about the *Horti Sallustiani*: "**sua posizione strategica nei pressi delle mura cittadine [my emphasis]**".

The latter is indeed the most characteristic feature of the luxurious *Villas* at Rome, which the Romans called '*Horti*': they were *not* located "in ambito urbano", as Guglielmi (2023, 25, n. 13) asserts, but were in reality 'suburban' estates, since (normally) they were built *outside* the Servian city Wall (cf. here **Figs. 58; 71**). One very well known exception from this rule being the *Horti* of Maecenas, one part of which lay also *inside* the Servian city Wall. For the *Horti* of Maecenas; cf. Häuber (1983; 1990; 1991; 1996; 2011; 2014a; online at <[https://FORTVNA-research.org/horti/horti\\_maecenatiani.html](https://FORTVNA-research.org/horti/horti_maecenatiani.html)>); Wiseman (2016) and Coarelli (2019c).

Equally surprising is another exception from this rule. We know that T. Pomponius Atticus lived in his *domus* on the Quirinal, which was, of course, located within the Servian city Wall (cf. here **Figs. 58; 59**; cf. *infra*). Atticus had inherited this property from his maternal uncle, and although Cornelius Nepos, in his biography of Atticus (*Att.* 25.13.1-2), called this property a '*domus*', he mentioned that it comprised a huge park, called "*silva*"; cf. Filippo Coarelli (2014, 268-271, esp. p 268 with n. 68, Section: "1) *La domus di Attico*").

**Let's now apply what was said above to our example discussed here: see the maps Häuber ("Gli *horti* in età flavia", 2009, 313, Fig. 1 [= M. CIMA and E. TALAMO 2008, 112, Fig. 3], and here Fig. 58), in which it is plain to see that the *domus* of the Caserma dei Corazzieri stood *within* the Servian city Wall, whereas the *Horti Sallustiani*, like (almost) all other *Horti* in Rome, were built *outside* the Servian city Wall.**

**Compare the plan of the area, published by Serena Guglielmi (2023, 26, Fig. 1), in which she has marked with a red dot the location of the *domus* at the Caserma dei Corazzieri, and to which she has added the lettering: Horti Sallustiani? See also the following near-by letterings on her plan: Largo Santa Susanna; Piazza S. Bernardo. The caption of her Fig. 1 reads: "Planimetria del Quirinale con l'indicazione delle *domus* dei Flavi (elaborazione grafica S. Guglielmi)".**

Because in Latin the term '*horti*' is also the plural of '*hortus*' ('[market] garden'), T.P. Wiseman (1992, 72, with n. 5) has rightly observed: "**'Gardens' is really a misnomer, what *horti* meant, in the Rome of the late Republic and early Principate, was a luxury *villa* on the edge of the city [in his note 5, he provides references; my emphasis]**".

The two hypotheses, that the *domus* at the Caserma dei Corazzieri stood in the *Horti Sallustiani*, and that it was built by Vespasian, which Guglielmi (2023, 26-27) now repeats, were first suggested by Mariette de Vos (1996; 1997). But both hypotheses have already been refuted a long time ago, as I have mentioned elsewhere.

Cf. Häuber (2014a, 808 with ns. 9, 10): "**The group of the nymphs and Hylas on our relief (fig. 147) shows similarities with the mosaic found in a Flavian *domus* on the Quirinal at the Caserma dei Corazzieri, which was published by Mariette de Vos [with n. 9]. She suggests that this *domus* stood within the *Horti Sallustiani*, and assumes that it was built by the emperor Vespasian [with n. 10; my emphasis]**".

In my **note 9**, I write: "M. De Vos, s.v. *Horti Sallustiani: Ninfeo o Terme*, in *LTUR*, III, 1996, pp. 82-83, fig. 53; *Ead.* 1997, pp. 57-98, figs. 97, 114-118, 123 (followed by Capanna 2012, pp. 457, 461, fig. 165, Tav. 182 G; 183); cf. Ling 2000; Bragantini 2001".

Cf. **note 10**: "Both hypotheses have been refuted; cf. for a summary of the discussion, Häuber 2009, p. 312 with n. 20 [my emphasis]".

Cf. Häuber ("Gli *horti* in età flavia", 2009, 312 with n. 20):

**"In questi *horti* [i.e., the *Horti Sallustiani*] venne eretto soltanto un nuovo edificio in età flavia (al quale appartiene il Criptoportico fig. 1, n. 18) [with n. 20] ...[my emphasis]"**.

In my **note 20**, I write: "Cfr. Innocenti, Leotta 2004, p. 187, n. 9 a fig. 1 (una seconda struttura, p. 187, nota 193, ha una fase di età flavia): Moormann 2004, p. 2. **De Vos 1996b** [i.e., here M. DE VOS 1996], **p. 82; De Vos 1997, pp. 93-98, attribuisce la "residenza tardorepubblicana" della Caserma dei Corazzieri, via XX Settembre 12, agli *Horti Sallustiani* che Vespasiano avrebbe eretto in età flavia** (cfr. Ling 2000, pp. 543, 546 sgg.). **Contra: Innocenti, Leotta 1996; Innocenti, Leotta 2004, p. 191; Hartswick 2004, p. 144; Talamo 1998; Talamo 2008.** Torelli 1995 e Coarelli 1995e [= "Gens Flavia, Templum", in: *LTUR* II [1995] 368-369, Figs. 180-181] identificano questa *domus* con la casa del fratello di Vespasiano (*T. Flavius Sabinus*), la casa natale di Domiziano, sul luogo della quale questi avrebbe fatto erigere il *Templum Gentis Flaviae* [my emphasis]".

In addition to this, Guglielmi (2023, 25) follows the old, but likewise erroneous opinion that the *Horti Sallustiani* were founded by the historian Gaius Sallustius Crispus (1). To this we will now turn.

**The *Horti Sallustiani* were not founded by the historian Gaius Sallustius Crispus (1), as taken for granted by Serena Guglielmi (2023, 25), but instead by his adoptive son, Gaius Sallustius Crispus (2).**

Cf. Häuber ("Gli *horti* in età flavia", 2009, 314):

**"Come costruttore [with n. 56] degli *Horti Sallustiani* si cita spesso lo storico C. Sallustio Crispo (1) [with n. 57]. Poiché Cesare [with n. 58] possedette gli *horti* [with n. 59] di Porta Collina e Sallustio (1) fu suo partigiano, molti studiosi presumono che quest'ultimo ne abbia acquistato gli *horti* alla sua [i.e., Caesar's] morte. Cesare dovette avere qui i suoi *horti*, nei pressi di templi già esistenti della *Fortuna Publica* e di *Venere Ericina* [with n. 60]. Anche alcuni complessi architettonici [with n. 61] e scultorei [with n. 62] vengono attribuiti a lui [i.e., to Julius Caesar]. Così si pensa a proposito del sito dei resti architettonici di piazza Sallustio (fig. 1, n. 13), che in quest'ottica sarebbero il palazzo residenziale adrianeo degli *Horti Sallustiani* e dove dovette trovarsi in quest'ottica anche il palazzo residenziale degli *horti* di Cesare o di Sallustio (1) [with n. 63]. Al contrario, Monika Frass [with n. 64] propone che Sallustio (1) abbia ricevuto gli *horti* poi collegati al suo nome da Cesare come *praemium belli*.**

**Al riguardo, tuttavia, Nicholas Purcell [with n. 65] chiarisce come la relazione di Sallustio (1) con gli *Horti Sallustiani* sia basata sull'errata interpretazione di una fonte [with n. 66], e che come fondatore di tali *horti* si possa ricorrere soltanto all'omonimo pronipote ed erede, C. Sallustio Crispo (2) [with n. 67]. A ragione, Purcell [with n. 68] avverte inoltre come la presunta evidenza degli *horti* di Cesare presso Porta Collina si basi sull'errata interpretazione di un passo di Dione Cassio (XLII, 26, 3 sgg.; del 48 a.C.). Tale passo viene sempre messo in relazione con una notizia di Obsequens (LXXI; del 17 a.C.) riguardante un *prodigium* in *horti Caesaris ad portam Collinam*. Qui tuttavia, Obsequens con "Caesar" non intende Giulio Cesare in persona, quanto piuttosto l'"imperatore", cioè Augusto. Poiché dunque gli *Horti Sallustiani* furono fondati al più presto da Sallustio (2) rimane da chiarire a chi siano da imputare le architetture tardorepubblicane e il loro allestimento nell'area degli *Horti Sallustiani* (*supra*, fig. 1), attualmente ascritti a Cesare o a Sallustio (1) [my emphasis]".**

In my **note 56**, I write: "Così Castagnoli 1972, pp. 384 sgg.; Coarelli 1996c [*i.e.*, here F. COARELLI 1996, 55]; Talamo 1998, p. 116; Talamo 2008, pp. 30, 115; Hartswick 2004, pp. 8-10; Innocenti, Leotta 1996; Innocenti, Leotta 2004, p. 193; Moormann 2004, p. 1; Macaulay 2006, p. 518".

Cf. **note 68**: "Cfr. **Purcell 2001, p. 555 nota 40: ``Contra Talamo [1998] 115: D.C. [*i.e.*, Dio Cassius] 42.26.2, recording *keraunoi* falling on the Capitol, on the `temple of Fortuna called public' and on the gardens of Caesar - certainly three separate places, not two``. Ma tutto ciò non è contrario al fatto che qui si intendano gli *Horti* di Cesare in Trastevere** [my emphasis]".

#### **Post scriptum to the finding that the historian Gaius Sallustius Crispus was not the founder of the Horti Sallustiani**

Already Sir Ronald Syme (1964) had realized that the founder of the *Horti Sallustiani* cannot possibly have been the historian Gaius Sallustius Crispus (1). Nicholas Purcell was kind enough to disclose this fact to me in January of 1983. He had invited me to give a talk at St. John's College in Oxford ("Maecenas, Sallust and Lamia : Imperial Gardens and Roman Art", 21st January 1983). In addition, Nicholas had provided me for my talk with his unpublished manuscript "*Horti of Rome*", in which he comments on the relevant scholarly discussion in great detail, and from which he generously allowed me to quote. I have, of course, waited until Nicholas Purcell (2001, 555) had published all this important information about the *Horti Sallustiani* himself, before I summarized his findings in the above-quoted passage; cf. Häuber (2009, 314). On 10th February 2012, I have published this information about the *Horti Sallustiani* online; cf. Häuber (2012a).

Let's now return to our discussion of the *Templum Gentis Flaviae*.

Whereas the identification of the building underneath the Caserma dei Corazzieri with the *domus* of Flavius Sabinus seemed earlier to be convincing, this could not possibly be at the same time the former location of the *Templum Gentis Flaviae*, because Domitian erected that building at the site of the *domus* of his father Vespasian (Suet., *Dom.* 1; cf. *Dom.* 15).

Rita Paris (1994b, 23 with n. 5) mentions also: "L'esistenza di resti di età domiziana sotto l'aula ottagonale delle Terme di Diocleziano (nota come Planetario), ha fatto avanzare l'ipotesi che parte del grande complesso del *Templum Gentis Flaviae* dovesse trovarsi sul lato sud dell'*Alta Semita*, e fosse stata demolita per far posto all'imponente costruzione [of the Baths of Diocletian] iniziata nel 298 e terminata intorno al 305 d.C." [with n. 5, quoting D. CANDILIO 1990-1991: "Indagini archeologiche nell'aula ottagonale delle Terme di Diocleziano"].

**Daniela Candilio's (1990-1991 [1994]; ead. 1995; ead. 1999; ead. 2000-2001) attribution of those Domitianic structures to the *Templum Gentis Flaviae*, which she has excavated at the Baths of Diocletian, has in the meantime become the *communis opinio*.**

As I only realized after this Chapter was written, this assumption is not true; cf. Paolo Liverani (2021, 87-88; cf. now *id.* 2023, 118-119, the same passage in the Italian version of this essay), quoted *verbatim supra*, in Chapter IV.1.1.h).

**Is the *Templum Gentis Flaviae* indeed represented on Domitian's *sestertius* (here Fig. 30) and on the "Rilievo Terme Vaticano" (here Fig. 31) ?**

Because I believe that Borg (2019, 249, quoted *verbatim supra*, at Chapter IV.1.1.h)), is able to demonstrate that the temple tomb proper of the *Templum Gentis Flaviae* was *not* erected on a round ground-plan, as suggested by J.-C. Grenier (2009, 238) and Filippo Coarelli (2014, 204-207), both quoted *verbatim supra*, at Chapter IV.1.1.a), but instead on a rectangular plan, I believe that we should re-consider the above-mentioned hypothesis by Mario Torelli (1987, 564-567, Fig. 2), followed by Paris (1994b, 28 with n. 11), who has suggested that the *Templum Gentis Flaviae* is represented on one of the *sestertii*, issued by Domitian in AD 95/96 (cf. here Fig. 30), and on the "Rilievo Terme Vaticano". For Domitian's *sestertius*; cf. Paris (1994b, 26, Fig. 14; and for the "Rilievo Terme Vaticano", p. 28, Fig. 16, p. 32, Figs. 1; 2 [= here Fig. 31]). Concerning the "Rilievo Terme Vaticano", see also Claudio Parisi Presicce (2000, 28, quoted *verbatim infra*).

See most recently on both subjects, Lorenzo Kosmopoulos (in: E. LA ROCCA and L. KOSMOPOILOS, 2023, 130-131): "E se resta ancora in sospeso l'interpretazione dell'immagine su un sesterzio domiziano di cui sono conosciuti solo tre esemplari (fig. 7 [= here Fig. 30]), ma che, per la presenza di recinti chiusi, non risponde bene allo schema degli edifici templari entro porticati, solitamente raffigurati su monete con la corte aperta [with n. 51; page 131] l'ipotesi di Mario Torelli, poi ripresa da Rita Paris, non può essere esclusa a priori esclusivamente sulla base di una presunta ricostruzione circolare dell'edificio".

This passage was already quoted, together with Kosmopoulos's **note 51**, *supra*, in Chapter IV.1.1.h).

But we should not forget that other scholars do not reconstruct the *Templum Gentis Flaviae* as a decastyle temple, but rather as an octastyle temple; cf. Maria Cristina Capanna (2008), as observed by Eric M. Moormann (2018, 170 with n. 154, quoted *verbatim* and discussed *supra*, in Chapter IV.1.1.h).

**In our attempt to decide, whether or not the decastyle temples, visible on Domitian's *sestertius* (here Fig. 30) and on the "Rilievo Terme Vaticano" (here Fig. 31) are representations of the *Templum Gentis Flaviae* at all, we should consider a new, important observation. We owe this finding to Eric M. Moormann, who has formulated it in his *Contribution* to this volume, that is dedicated to the *Templum Gentis Flaviae*. But Moormann's observation is, of course, also decisive for the question discussed here :**

**Eric M. Moormann ("Can We Reconstruct the *Templum Gentis Flaviae*?) writes :**

**"The discussion on the number of columns of the temple's façade for instance (cf. Capanna [2008]) remains futile as long as no precise measures of either columns or podium have come to light [my emphasis]"**.

For the context of his just-quoted conclusion; cf. below, at Eric M. Moormann's *Contribution* to this volume.

Fig. 30. *Sestertius* of Domitian, issued AD 95/96, representing a decastyle temple, which M. Torelli (1987) has identified with the *Templum Gentis Flaviae*. BMC, p. 406, n. 12, R.H. Darwall-Smith (1996, 281, Plate XVIII, Fig. 30). From W. Haberey (1960, Taf. 42, Abb. 1: "Bronzemedaille des Domitian vom Jahre 95-96 n. Chr. aus Grab I"). Cf. R. Paris (1994b, 26, Fig. 14). From: E. Nash (1961, 371, Fig. 452: "Sestertius of the 17th consulate of Domitian (95/96 A.D.)".

Fig. 31. "Rilievo Terme Vaticano".

Above: Photo of the reconstruction of this relief in the Museo della Civiltà Romana at the EUR (inv. no. 3725), created in plaster on the basis of both fragmentary reliefs that are kept in the Museo Nazionale Romano and in the Vatican Museums. From: R. Paris (1994b, 28, Fig. 16: "Il rilievo del Museo Vaticano e quello del Museo Nazionale Romano ricongiunti in un calco del Museo della Civiltà Romana").

In the middle: Fragmentary marble relief, Museo Nazionale Romano, Rome (inv. no. 165), representing a decastyle temple in the pediment of which appears 'Rome's foundation story'. Photo; D-DAI Rom Photo Parker (PK) 2283: "Sculpture - Alto rilievo representing the Temple of Romulus; now in a stone-mason's yard in Via Alessandrina".

There is a plaster cast on display at the Museo Gregoriano Profano of this relief in the Museo Nazionale Romano, placed above the original fragment, owned by this collection.

Below: Fragmentary marble relief, Città del Vaticano, Museo Gregoriano Profano (inv. no. 9506), with an emperor (whose head is restored with a portrait of Trajan), accompanied *inter alia* by two lictors, shown in the act of sacrificing. Both fragments belong together. The fact that these lictors carry fasces to which no axes are attached means that the temple stands within the *pomerium*; cf. S. Langer and M. Pfanner (2018, 142-157), whose further suggestion I likewise follow that this relief does not represent a procession, as hitherto believed, but rather a sacrifice. Cf. R. Paris (1994b, 32, Figs. 1; 2). I have numbered the six figures on the relief myself, following S. Langer and M. Pfanner (2018, 147, Abb. 53). Many scholars take for granted that the "Rilievo Vaticano" was found in the Forum of Trajan. This assumption is not true, as already stated by M. Torelli (1987, 504 n. 6, quoted *verbatim infra*, in volume 3-2, at Appendix I.g.3)).

For the "Rilievo Terme Vaticano" see also Claudio Parisi Presicce (2000, 35, cat. no. 3) :

"Rilievo raffigurante una processione davanti a un tempio con la lupa che allatta i gemelli nel frontone (ricostruzione con calchi integrati [= here Fig. 31])

Da origine marmorea in due pezzi al Museo Nazionale Romano (inv. 165) e ai Musei Vaticani (inv. 1146)

Larg.[hezza] cm 165, alt.[ezza] cm 220

**Epoca flavia**

Roma, Museo della Civiltà Romana, inv. 3725

Il rilievo è stato ricomposto nel calco da due frammenti originali: la parte superiore, nota fin dal Cinquecento attraverso alcuni disegni, è stata acquistata sul mercato antiquario dal Museo Nazionale Romano; **l'altra, rinvenuta alla fine del XIV secolo durante la costruzione della chiesa di Santa Eufemia nell'ara del Foro Traiano, è conservata ai Musei Vaticani** [as already said above, this alleged provenance is not true] (Museo Gregoriano Profano, già Lateranense).

La testa detta di Traiano e quella del personaggio collocato davanti alla colonna angolare del tempio sono state restaurate da Thorvaldsen.

La lastra conservata raffigura due togati e quattro littori in processione davanti a un grandioso tempio con dieci colonne scanalate in facciata. Il frontone è decorato con scene relative alle origini di Roma. Nella metà destra del timpano sono raffigurti l'incontro amoroso tra Marte e Rea Silvia e il ritrovamento di Romolo e Remo, allattati alla lupa.

Nell'edificio, identificato inizialmente con il Tempio di Venere e Rom, costruito dall'imperatore Adriano, è stato recentemente riconosciuto il *Templum Gentis Flaviae* [my emphasis]"

Parisi Presicce provides an ample annotated bibliography to this relief, of which I quote here only the following: "Originale: E. Petersen, Due pezzi di rilievo riuniti, in *RM*, X, 1895, pp. 244-251, tav. V (epoca adrianea; Tempio di Venere e Roma); P. Hommel, *Studien zu den römischen Figurengiebeln der Kaiserzeit*, Berlin 1950 [1954], p. 41 ss., Fig. 7 (epoca flavia); E. Simon, in Helbig<sup>4</sup>, I [1963], pp. 727-729, n. 1013 (testa restaurata come Traiano, ma in origine Domiziano, decapitata in antico per la *damnatio memoriae*) .... M. Torelli ... [*i.e.*, here M. TORELLI 1987], pp. 563-567, fig. 2 (*Templum Gentis Flaviae*) ... Calco: ... *Museo della Civiltà Romana, Catalogo*, 1982, p. 678, n. 27 (sala LVI) [my emphasis]".

**Claudio Parisi Presicce (2000, 28) judges the meaning of the "Rilievo Terme Vaticano" (here Fig. 31) convincingly as follows :**

Con la dinastia flavia saliva al potere una famiglia di origine italica, proveniente dalla Sabina, che riuscì a ripristinare il precedente sistema dinastico ereditario soltanto dopo una guerra civile che, tra il 68 e il 69 d.C., vide salire sul trono imperiale, in un clima di forti tensioni militari, prima Galba poi Otone e Vitellio. Il recupero della leggenda dei fondatori di Roma è in relazione con la volontà di legittimare, attraverso l'appropriazione dei simboli legati al destino di Roma e alla sua eternità, l'esercizio del potere, non fondato al momento della nuova pacificazione sulla filiazione sanguigna, ma sul merito e sulla investitura divina.

**Se il tempio decastilo raffigurato nel rilievo diviso tra i Musei Vaticani e il Museo Nazionale Romano (cat. n. 3 [*i.e.*, the "Rilievo Terme Vaticano"; cf. here Fig. 31]) va identificato, secondo la proposta di Mario Torelli, con il *Templum Gentis Flaviae*, avremmo la testimonianza di un vero e proprio programma di appropriazione da parte di Domiziano del ciclo figurativo relativo alla nascita di Roma. L'imperatore flavio [*i.e.*, Domitian] o suo fratello Tito, stando alla recente datazione del torso loricato conservato ai Musei Vaticani (cat. n. 13 [cf. here Fig. 6, right ...), fu il primo a scegliere l'immagine della lupa con i gemelli come tema decorativo della propria corazza [my emphasis]".**

In the context of the "Rilievo Terme Vaticano" (here Fig. 31) we should, in my opinion, also consider the here-so-called "Rilievo Foro Romano" (here Figs. 32.A-E):

**Figs. 32.A-E. Marble fragment of a state relief, the here-so-called "Rilievo Foro Romano". Rome, Forum Romanum, near S. Maria Antiqua. This is at least, where H.R. Goette saw this fragment in 1981; cf. Goette (1983). A-C: photos of this fragment. From Goette (1983, 241, Abb. 1-3. The caption reads: "Relieffragment. Rom, bei S. Maria Antiqua". Photos A-C: Courtesy H.R. Goette. D: measured reconstruction drawing, combining the "Rilievo Vaticano" (cf. here Fig. 31. below) and the "Rilievo Foro Romano" (cf. here Fig. 32.A). From Goette (1983, 243, Abb. 5. The caption reads: "Rekonstruktionszeichnung der Relieffteile 1 [= here Fig. 31.below; Fig. 32.A] und 4 [= here Fig. 31.below]". E: measured reconstruction drawing of the entire togate man, incorporating the fragment. From Goette (1983, 243, Abb. 6. The caption reads: "Rekonstruktion der ganzen Figur mit Fragment Abb. 1 [= here 32.A]". Drawings D-E: M. Reinhold. From: Goette (1983, 239, Abbildungsnachweis).**

For a detailed discussion of the fragment "Rilievo Foro Romano"; cf. *infra*, in volume 3-2, in *Appendix I.g.3.*); at Section V.

**Already Erika Simon (1963, 727-728) has compared the temple, visible on the "Rilievo Terme Vaticano" (cf. here Fig. 31, in the middle) with Domitian's *sestertius* (cf. here Fig. 30). She stated that the frieze, to which those fragments, showing overlifesize figures and being more than 4 m high, belonged to one of the largest Roman state reliefs so far known, and stressed the great similarities of the *lictors* on this panel with those on Frieze A of the Cancelleria Reliefs (cf. here Fig. 1; Figs. 1 and 2 drawing). She provided also other comparisons to support her dating of the relief (cf. here Fig. 31, below) into the Flavian period. Simon observed that the provenance 'Forum of Trajan' for the (lower) fragment in the Vatican Museums is only alleged, and that this (wrong) information had led Thorvaldsen to restore the missing head of the**

emperor (according to Simon originally Domitian) with a portrait of Trajan. The author explained the relief scene, referring to the foundation myth of Rome, that appears in the pediment of this temple [cf. here Fig. 31, above and in the middle], and suggested that this was very well fitting Domitian's self-presentation 'who felt [himself] to be the new founder of Rome. The just-mentioned passages are quoted *verbatim* in the following.

Cf. Simon (1963, 727-728):

"Der Fries, von dem die beiden zusammengehörigen Fragmente stammen, muß ursprünglich über 4 m hoch gewesen sein. Er zählt mit seinen überlebensgroßen Figuren, die von korinthischen Säulen und einem Giebel noch weit überragt werden, zu den größten historischen Reliefs, die uns erhalten sind ... Mit flavischer Kunst wurde zuletzt auch die Archi- [page 728] tekur mit ihrem reichen ornamentalen und figürlichen Schmuck verbunden. **In der Mitte des Giebels liegt schlafend die Vestalin Rhea Silvia** [this figure is reminiscent of the statue called 'Sleeping Ariadne' in the Vatican Museums]. **Auf sie schwebt Mars vom Himml nieder (nur Beine und Lanze sind erhalten). Links davon säugt die Wölfin die Zwillinge Romulus und Remus, die Frucht ihrer Verbindung. Zwei Hirten [to the left of the *lupa*] weichen erregt vor diesem Wunder zurück. In der Giebelecke lagern Tiere ihrer Herde, Widder und Schaf.** Das Gebäude hatte zehn Säulen an der Front, von denen die fünf links von der halb geöffneten Flügeltür alle erhalten sind. Die sechste ganz an der Kante wurde wohl mit Recht schon zur Längsseite gerechnet, die ebenfalls dargestellt war, wie man aus der Angabe des Daches schließen kann. **Auf der Giebelsima wächst ein Geschlinge aus Lotos und Palmetten wie bei den Tempeln im Fries der "Ara Pietatis" (Villa Medici). Im Gegensatz zu jenem claudischen Denkmal sind aber die Menschen in ein "richtiges" Größenverhältnis zur Architektur gebracht, ähnlich wie bei dem Altar aus dem Vespasianstempel von Pompeji. All dies spricht für eine Datierung in flavische Zeit ... Nun erscheint auf einem Sesterz des Domitian vom Jahre 95/96 nach Chr. [cf. here Fig. 30] ein monumentales Gebäude mit Giebel und zehn Säulen an der Front, das sich auf einer reich verzierten doppelt gestuften Terrasse erhebt. Es wurde von E. Nash als der domitianische Neubau der Domus Tiberiana gedeutet. Sein sakrales Aussehen braucht, zumal bei Domitian, nicht zu verwundern, nachdem schon das Haus des Iulius Caesar mit einem Giebel geschmückt gewesen war (Sueton, Caes. 81). In unserem Fries [cf. here Fig. 31, above] ist vielleicht derselbe großartige Palast [*i.e.*, Domitian's *Domus Tiberiana*] gemeint. Sein Giebelschmuck, die römische Gründungssage, die am Palatin spielte, würde zu Domitians palatinischer Behausung trefflich passen, fühlte er sich doch als Neugründer Roms. Man wunderte sich immer, daß die Liktores in dem Fries keine Kränze tragen, obwohl doch wegen des Tempels ein Opferzug gemeint sein müsse. Wenn ein kaiserlicher Palast dargestellt ist, sind wir nicht an die Annahme eines Opfers gebunden ... [my emphasis]".**

In her bibliography, Simon wrote:

"Benndorf-Schöne [1867] 13 Nr. 20. Petersen, Röm. Mitt. 10 (1895) 96. 244 ff. Taf. 5. P. Hommel [1950], Studien zu den röm. Figurengiebeln der Kaiserzeit 41 ff. Taf. 7 (**mit Datierung in flavische Zeit**). Domus Tiberiana: Nash I [1961] 365 ff. Sesterz des Domitian [cf. here Fig. 30]: Nash-Cahn, Antike Kunst I (1958) 24 ff. Nash, Arch. Class. II (1959) 234 ff. Taf. 78. Dazu jetzt Haberey, Bonn. Jahrb. 160 (1960) Taf. 42,1 (Bronzemedaille des Domitian, 95/96 nach Chr. mit drei Figuren im Giebel). Altar aus dem Vespasianstempel Pompeji: Scott Ryberg, Mem. Am. Acc. 22 (1955) 82 ff. Abb. 38a. Zu den Reliefs der Ara Pietatis an der Gartenfront der Villa Medici und im Nuovo Museo Capitolino, Sala VII 15 s. Nash I 74 ff. mit Lit. [my emphasis]".

For the 'Sleeping Ariadne' in the Vatican Museums; cf. Werner Fuchs: "Statue der schlafenden Ariadne", in: *Helbig*<sup>4</sup> I (1963) 109-110 no. 144 (inv. no. 548): "... Ariadne schläft. Der Betrachter weiß: sie ist von Theseus verlassen und harret der Epiphanie des Gottes, der sie erwählt [*i.e.*, Dionysos]".

For the "Rilievi con scene di sacrificio dell'Ara Pietatis Augusti, Villa Medici, nei calchi del Museo della Civiltà Romana", mentioned by Simon (1963, 728) in the context of the relief here Fig. 31; cf. also Paris (1994b,

78, Fig. 4a-b, p. 79), who regards these reliefs as the closest parallels to those of the *Templum Gentis Flaviae* (cf. here **Figs. 33; 34**), which she herself discusses.

**Both, Domitian's *sestertius* of 95/ 96 (cf. here Fig. 30), and the fragmentary Domitianic state relief "Rilievo Terme Vaticano" (cf. here Fig. 31) show a temple with ten columns in the front, which is built on a rectangular ground-plan.** For discussions of both; cf. *infra*, in volume 3-2, at *Appendix I.g.3.*); *Appendix IV.c.2.*); and *Appendix VI.*; at Sections *II.*; *XII.*

There are also discussed the idea of Nash and Simon (both *op.cit.*) that the building represented on Domitian's *sestertius* (cf. here **Fig. 30**) should be identified with the *Domus Tiberiana* on the Palatine. *Appendix I.g.3.*) is dedicated to Domitian's *sestertius* (cf. here **Fig. 30**), and to the "Rilievo Terme Vaticano" (cf. here **Fig. 31**), which, in my opinion, is datable to the Flavian period; with a discussion of Stefanie Langer and Michael Pfanner's (2018, 142-157) account, who date the "Rilievo Terme Vaticano" to the Claudian period instead.

*Let's now turn to Rita Paris's observations (1994b), made  
while studying the reliefs from the Templum Gentis Flaviae*

Rita Paris (1994b, 75-83) discusses also two large reliefs, first the relief, illustrated in the drawing: "Tav. IV. Proposta di ricostruzione parziale della scena con sacrificio, davanti al Tempio di Quirino" (cf. here **Fig. 34**), then the relief: "Tav. V. Proposta di ricostruzione parziale della scena con rilievo storico" (cf. here **Fig. 33**), which she was able to reconstruct thanks to comparisons with Frieze A and B of the Cancelleria Reliefs (cf. her **Figs. 6; 7a-c**; and here **Figs. 1; 2; Figs. 1 and 2 drawing**).

Paris (1994, 9, in her Chapter: "La Storia dei frammenti, 1900-1994") writes:

"Nel 1901 il professor Hartwig acquista sul mercato nove esemplari di sculture e ne fa dono al Museo Nazionale Romano (fig. 1). Da allora questi oggetti sono noti come "dono Hartwig".

Le notizie sul loro rinvenimento si ricavano dalla prima presentazione completa che ne fece lo stesso Hartwig. In poche righe si dice che **i frammenti sono venuti alla luce in occasione dei lavori per la sistemazione della piazza dell'Esedra (ora piazza della Repubblica), corrispondente alla grande esedra delle Terme di Diocleziano, in particolare presso il portico nord della piazza** [with n. 1]. In un elenco degli oggetti entrati nel Museo Nazionale Romano (anni 1900-1904), nella sezione 'Doni', i frammenti sono accuratamente descritti e indicati come provenienti **dallo scavo delle "fondazioni di quella parte del Palazzo e del Portico dell'Esedra in Piazza Termini, che fu costruita ultima e precisamente nella primavera del 1901"**. Le sculture, trafugate dagli operai, "andarono disperse pel mercato antiquario; e fu cura e merito del dr Hartwig di rintracciarli, riconoscerli e studiarli" [with n. 2].

**Altri frammenti, rinvenuti presumibilmente nello stesso luogo, furono acquistati dal professor Kelsey tra la fine del 1900 e l'inizio del 1901 e sono confluiti nelle collezioni del Museo di Ann Arbor, nel Michigan** (per questi si rimanda *infra* p. 93 e sgg. [cf. E.K. Gazda 1994]).

Cf. p. 11: "Nell'ultimo quindicennio gli esemplari conservati ad Ann Arbor sono stati riconosciuti pertinenti allo stesso complesso degli esemplari romani, come si dirà in seguito [with n. 4]. **Il marmo, i dettagli della lavorazione, oltre alle notizie della provenienza sono già prove sufficienti a ricondurli allo stesso contesto dei frammenti romani. Una ulteriore conferma è data dalla evidente possibilità di assemblaggio del torso del soldato di Ann Arbor con la testa di soldato a Roma** [see the colour photograph on the cover of this catalogue, R. PARIS 1994a, in which both fragments are joined, and here **Fig. 33**].

**Anche se per il ritratto dell'imperatore Vespasiano le notizie di provenienza sono più generiche (cat. n. 12 [cf. here Fig. 33]), non vi sono dubbi sulla sua appartenenza allo stesso complesso degli altri esemplari: la testa presenta chiaramente dettagli di lavorazione simili alle altre teste ed ha le stesse tracce di malta degli altri frammenti.**

La storia degli studi dei frammenti Hartwig ha circa un secolo di età [with n. 5]. Dopo la prima edizione, dovuta allo stesso Hartwig, con le ipotesi interpretative dei singoli elementi, **l'interesse degli studiosi si è concentrato quasi esclusivamente sul frammento con la raffigurazione del tempio di Quirino sul Quirinale** [with n. 6; for that relief, cf. pp. 39-41: Il Tempio di Quirino", cf. p. 41, Fig. 4; cf. pp. 52-53, cat. no. 5; cf. p. 90, Tav. IV = here **Fig. 34**; my emphasis]".

In her **note 1**, Paris writes: "Hartwig [1904], p. 26".

In her **note 2**, she writes: "ACS, AA. BB. AA., III vers. busta 83, fasc. 156-3, allegati busta 3, fasc. 13; sulla costruzione del Palazzo si veda *infra* p. 97 e sgg.". Cf. Antonio Federico Caiola (1994, 97-117: "Occasioni per la 'Piazza di Termini'", with Figs. 1-29).

In her **note 4**, she writes: "Köppel 1980".

In her **note 5**, she writes: "Per la bibliografia completa si rinvia a Köppel 1980; Köppel 1984, pp. 59-61; ArchRoma [1990], p. 117 (R. Paris)".

In her **note 6**, she writes: "Per la bibliografia completa si rinvia a Köppel 1984, pp. 59-61 e Paris 1988, p. 37, nota 1".

Paris (1994b, 75) explains, why the fragments, which are now distributed in two different museums, belong together, and from which material they were carved: "... **i frammenti dovevano appartenere ad un complesso di committenza imperiale, come attestano il raffinatissimo livello di lavorazione e l'uso del pregiato marmo pentelico, impiegato, in età flavia, anche per l'Arco di Tito, per il restauro domiziano del Tempio di Giove Ottimo Massimo e per il Tempio del divo Vespasiano ...**

**I frammenti non sono ricomponibili tra loro, ad eccezione del torso loricato di Ann Arbor con la testa di soldato di Roma** [see the colour photograph on the cover of this catalogue, R. PARIS 1994a, in which both fragments are joined, and here **Fig. 33**; my emphasis]".

**Before turning to the relief here Fig. 33, with Vespasian's *adventus*, I wish to summarize some observations concerning the other relief (here Fig. 34). It shows a sacrifice in front of the Temple of Quirinus, which has convincingly been located by Filippo Coarelli at the site of the Palazzo Barberini.**

For a discussion of the locations, suggested for the Temple of Quirinus; cf. Coarelli (2014, 83-112, Chapter: "III I Culti", Section: "1. Quirinus").

Coarelli (2014, 87-93 with Figs. 16; 17) discusses also Andrea Carandini's (2007) location and reconstruction of the ground-plan of the Temple of Quirinus, both of which Coarelli, in my opinion convincingly, rejects. Coarelli (2014, 91-92 with Figs. 105; 106; pp. 294-311, Section: "7. La domus di C. Fulvius Plautianus) locates instead at the site, where Carandini (2007) assumes the Temple of Quirinus, in my opinion convincingly, the *domus* of C. Fulvius Plautianus, the "potentissimo *praefectus praetorio* di Settimio Severo e suocero di Carracalla", as Coarelli writes (2014, 92 with n. 42, providing a reference). This *domus* occurred in the course of building the "traforo Umberto I" in 1900-1902; cf. Coarelli (2014, 91 with n. 40, providing a reference). The identification of this *domus* is certain because of two "fistule aquariae iscritte", found *in situ*; cf. Coarelli (2014, 92 with n. 41).

In his **note 41**, Coarelli writes: "AE 1902, 190; 1903, 45, 125, 126. *LTUR* II, p. 106 (W. ECK)".

See also Coarelli ("Quirinus: Aedes", in: *LTUR* IV [1999] 185-187, esp. p. 186, Fig. 74). The illustration Fig. 74 in Coarelli (1999) is a reproduction of Rita Paris (1994b, 90 Tav. 4 = here **Fig. 34**). The temple of Quirinus, represented on this relief, is according to Coarelli (1999, 185; *id.* 2014, 96-102, Figs. 22-25) the shrine as restored by Augustus in 16 BC; cf. *supra*, at Chapter *V.1.i.2.*)).

For the *domus* of T. Pomponius Atticus; cf. Coarelli (2014, 87, 256, 263, 268-270-271, 285, 314, 323) which was located on the Quirinal, 'near the Temple of Salus and not far from the Temple of Quirinus', and which Coarelli, therefore, on pp. 270-271, convincingly assumes to be north of the road *Alta Semita*.

Cf. here **Figs. 58; 59**, labels: QUIRINAL; Servian city Wall; COLLIS SALUTARIS; PORTA SALUTARIS; site of AEDES : SALUS; ALTA SEMITA; Palazzo del Quirinale; site of DOMUS: C. FULVIUS PLAUTIANUS; site of DOMUS : T. POMPONIUS ATTICUS; PORTA QUIRINALIS; COLLIS QUIRINALIS; PALAZZO BARBERINI: site of AEDES : QUIRINUS.

See also Andrea Carandini (2007, *passim*, and *Illustrazioni*, "4. Ricostruzione del Quirinale e del Tempio di Quirino. A. Carandini con M.C. Capanna (prima del Georadar, 2007)", who locates the Temple of Quirinus instead within the gardens of the Palazzo del Quirinale.

**Coarelli (2014, 96-97) writes about the Temple of Quirinus and the reason, why Domitian ordered a representation of this temple for the marble decoration of the *Templum Gentis Flaviae* :**

"In questa fase [*i.e.*, augustea], piuttosto che in quella precedente, dovuta a Cesare [with n. 61], il tempio [of Quirinus] conobbe un notevole ampliamento, assumendo la forma di periptero dorico, che conosciamo da uno dei rilievi Hartwig [with Fig. 21 and n. 62; cf. here **Fig. 34**] ... [page 97] Sappiamo da Cassio Dione [with n. 66] che l'edificio possedeva 76 colonne, numero che veniva interpretato come una prefigurazione degli anni di vita di Augusto. Si doveva quindi trattare di un diptero ottostilo, con quindici colonne sui lati [with n. 67] e almeno un frontone con sculture rappresentanti l'apoteosi di Romolo-Quirino, come si può dedurre da una sua riproduzione antica, da tempo identificata in una dei rilievi detti Hartwig [with n. 68 and Figs. 22-25].

**Prima di esaminare questo rilievo, che rappresenta certamente il tempio ricostruito da Augusto nel 16 a.C. [with n. 69], si deve sottolineare che la sua realizzazione è da attribuire alla rilevanza che Quirino assume nel periodo flavio, quando l'antica tradizione paretimologica, che spiegava il nome del dio con la sua provenienza da Cures o con il nome sabino della lancia (*curis*) [with n. 70], viene rivisitata in funzione delle origini sabine della nuova dinastia [*i.e.*, the Flavian dynasty; my emphasis]."**

In his **note 61**, Coarelli writes: "Un rifacimento (o quanto meno un restauro) fu certamente realizzato dopo l'incendio del 49 a.C. Cass. Dio 41.14.2-3. Qui venne collocata nel 45 a.C. la statua di Cesare: Cass. Dio 43.45.2-3; Cic., Att. 12.45.2; Att. 13.28.3".

In his **note 62**, he writes: "Cfr. nota 68".

In his **note 66**, he writes: "Cit. a nota 61. Sui problemi che pone il testo per la ricostruzione del tempio, cfr. GROS 1976, pp. 115-119".

In his **note 67**, he writes: "GROS 1976, cit.".

In his **note 68**, he writes: "Si tratta di una serie di frammenti che provengono certamente del *templum gentis Flaviae*: si veda sotto".

In his **note 69**, he writes: "HARTWIG 1904; PETERSEN 1904; HOMMEL 1954, pp. 9-22; GROS 1976, pp. 115-119; HÖLSCHER 1988, pp. 377 s.; KOEPPPEL 1980; KOEPPPEL 1984; TORELLI 1987, pp. 563-582; PARIS 1988; PARIS 1994[a]; WISEMAN 1995, pp. 146-149; CAPPELLI 2000[b]; PARIS 2009".

In his **note 70**, he writes: "Cures: Varro, *l.l.* 5.51; Ov., *fast.* 2.480. *Curis*: Ov. *fast.* 2.477; Paul. Fest. 49 L.; Plut., *Rom.* 29; Serv., *Aen.* 1.292. Cfr. sopra, note 3-4".

I agree with Coarelli's just-quoted interpretation concerning the importance of the god Quirinus for the Flavian dynasty. On the other hand, I follow also those scholars, who have suggested that Augustus and Domitian compared themselves with Romulus (cf. *supra*, in Chapter *Preamble*; Section *III.*; at point *4.*); and *infra*, in volume 3-2, in *Appendix VI.*). If true, it follows that this claim may have been an even stronger motivation for Domitian to order a representation of the Temple of Quirinus/ Romulus on the marble decoration of his *Templum Gentis Flaviae*. - And if so, then both panels together (here **Figs. 33; 34**) praised

Vespasian, who - supported by his sons and co-regents, Caesar Titus in Jerusalem, and Caesar Domitian in Rome - had won his important victories that enabled him to (re-)found the City of Rome. Those achievements in their turn had made Vespasian, or rather the entire Flavian dynasty, comparable to Romulus; cf. *supra*, in Chapters II.3.1.c); and IV.1.1.h); and *infra*, in volume 3-2, in *Appendix VI*. And because already Augustus had regarded himself as the new Romulus, this explains why he restored the Temple of Quirinus on the Quirinal in the first place. Cf. *supra*, in Chapter *Preamble*; Section III.; at point 4.); and *infra*, in volume 3-2, in *Appendix VI*.; at Section III.).

**Let's now turn to the relief here Fig. 33, Vespasian's *adventus* from the *Templum Gentis Flaviae*.**

The reconstruction drawing of the relief of the *Templum Gentis Flaviae*, representing Vespasian's *adventus* into Rome in October of AD 70, which interests us here because of its similarities with Frieze B of the Cancellaria Reliefs (compare here **Figs. 33** and **Fig. 2; Figs. 1 and 2 drawing**), is based on five relief fragments, which are kept in the Museo Nazionale Romano in Rome and at the Kelsey Museum of Archaeology at Ann Arbor, Michigan.

To my assertion that this relief (**Fig. 33**) shows Vespasian's *adventus* into Rome in October of AD 70, I will come back below.

Cf. Paris (1994b, 91, Tav. V = here **Fig. 33**), from left to right we see:

1.) Paris (1994b, 56-57: "**Frammento di rilievo con testa di soldato** cat. n. 7", Museo Nazionale Romano, inv. n. 310257).

To this fragment belongs:

2.) Elaine K. Gazda (1994, 64-65: "**Frammento di rilievo con torso loricato** cat. n. 11", Kelsey Museum of Archaeology inv. n. 2431 h. max. cm 23 ...

Acquistato da F.W. Kelsey, nel febbraio 1901, da F. Romano, il caposquadra di una nuova costruzione vicino al Grand Hotel, presso le Terme di Diocleziano ...

Il frammento di torso conserva una porzione della parte superiore del petto, la mano destra, il polso, la spalla e la parte superiore del braccio di un soldato. Otto fasce, a basso rilievo, della sua lorica segmentata si chiudono dal centro del collo con motivo alternato. Restano due segmenti dallo spallone destro e uno dal sinistro. Intorno al collo indossa un *focale*. **La mano destra del soldato afferra una lancia segnata da un solco a spirale. Vicino al polso si vede il pomo del suo gladio** [my emphasis] ...

**Köppel ha dimostrato che questo frammento si congiunge, all'altezza del collo, con la testa di soldato Hartwig (cat. n. 7).** Egli ricostruisce l'altezza originaria della figura di circa cm 115-120, leggermente inferiore a quello dell'altro soldato [cf. cat. no. 10, which, according to R. PARIS 1994b, 80, does not belong to the relief here **Fig. 33**]. Ambedue le figure dovevano appartenere ad una scena di *adventus*.

Bibliografia

Köppel 1980, pp. 15, 17 e p. 21, n. 5, fig. 5; Köppel 1984, p. 14 e pp. 56-67, cat. 25, fig. 36 [my emphasis]".

Note that arch. Gloria Marconi (1994, Tav. V = here **Fig. 33**), in her reconstruction drawing of this armed soldier, has recomposed both abutting fragments, but has neither reconstructed the lance of this soldier in its entirety, nor his sword.

3.) E.K. Gazda (1994, 66-67: "**Frammento di rilievo con testa dell'imperatore Vespasiano** cat. n. 12", Kelsey Museum of Archaeology inv. n. 2430)".

4.) Paris (1994b, 58-59: "**Frammento di rilievo con testa femminile** cat n. 8", Museo Nazionale Romano, inv. n. 310258)".

5.) Paris (1994b, 60-61: "**Frammento di rilievo con profilo di testa virile** cat n. 9", Museo Nazionale Romano, inv. n. 310259)".

As far as I can see, none of the recent scholars, who have studied the Cancellaria Reliefs (cf. here **Figs. 1; 2; Figs. 1 and 2 drawing**), have discussed Rita Paris' relevant ideas (although S. LANGER and M. PFANNER 2018, 26, list the publication 'R. PARIS 1994b' in their bibliography). As has already been stressed in several Chapters above, Paris's observations are crucial for our understanding of the Cancellaria Reliefs, which are the main focus of this *Study*. And that for the following reason.

Paris convincingly interprets the relief with "scena con rilievo storico" from the *Templum Gentis Flaviae* (cf. here **Fig. 33**) as Vespasian's *adventus* of AD 70, and offers an excellent explanation for the fact that the emperor is wearing the *corona civica*. As we have seen above (cf. *supra*, at Chapters III; and V.1.i.3.), on Frieze B of the Cancellaria Reliefs, which shows the same *adventus* of Vespasian, *Victoria* is shown in the act of crowning the Emperor with precisely this wreath of oak leaves.

Paris (1994b, 81-83), in her description of the relief here **Fig. 33**, quoted *verbatim infra*, stresses that the decoration with this specific wreath was *a*) regarded by Pliny (*HN* 16,3) as "l'emblema più fulgido del valore militare" ('the most splendid symbol of military prowess'), highly superior to the decorations with all other known crowns granted for military victories, and *b*) that Vespasian had been honoured this way because, by conducting his victorious campaigns, he had put an end to the civil war of AD 68-69. - Exactly as Augustus before him, who had received the *corona civica* for likewise having ended a civil war.

**This iconographic detail of Frieze B of the Cancellaria Reliefs - Victoria's crowning of Vespasian with the *corona civica*** (cf. here **Figs. 2; Figs. 1 and 2 drawing: figures: 14 [Vespasian]; 16 [Victoria]**) - **thus further supports the hypothesis of those scholars, whom I am following here, according to which the portrait of the emperor on Frieze B was from the very beginning Vespasian** (cf. *supra*, in Chapters I.1.; III., V.1.h.2.); and V.1.i.3.)).

Paris (1994b, 80-83, in her Chapter: "**Proposta di interpretazione e di ricostruzione**") discusses her reconstructions of the reliefs once belonging to the *Templum Gentis Flaviae*, and Domitian's actions in Rome in AD 69-70, as follows :

"All'altra scena [cf. her Tav. V = here **Fig. 33**] (e ad un altro pannello) dovevano appartenere i frammenti con le teste ideali (cat. nn. 8 e 9), il ritratto di Vespasiano (cat. n. 12) e il soldato (cat. 7).

Queste teste si sono conservate completamente staccate dal fondo del rilievo a cui appartenevano, tranne il soldato del Museo Nazionale Romano [*i.e.*, her cat. no. 7] che conserva a sinistra e a destra del capo parte di una muratura isodoma simile, ma non uguale, a quella che si vede sul frammento con il tempio [*i.e.*, on the other panel; cf. her Tav. IV = **Fig. 34**]. Poichè non è possibile ritenere che questo soldato appartenga alla stessa raffigurazione del tempio, si deve concludere che anche questa scena era ambientata dinanzi ad un edificio. È probabile che le due scene rappresentassero due momenti di una stessa circostanza (la parte commemorativa e quella del sacrificio) e che fossero ambientate all'incirca nello stesso luogo.

Se questi frammenti appartenevano tutti ad un'unica scena [cf. here **Fig. 33**] si può suggerire una lettura da sinistra a destra nel seguente ordine: testa di soldato con parte di torso loricato (altezza della figura m 1,20 [*i.e.*, her cat. no. 7]), testa dell'imperatore Vespasiano (altezza della figura m 1,40 [*i.e.*, her cat. no. 12]), testa ideale femminile (altezza della figura m 1,12 [*i.e.*, her cat. no. 8]), testa ideale maschile (altezza della figura m 1,28 [*i.e.*, her cat. no. 9]).

Come si è già osservato non è possibile inserire, tra questi personaggi, il soldato di Ann Arbor [cf. E.K. GAZDA 1994, 62-63, cat. no. 10], per cui si ricostruisce un'altezza dell'intera figura di m 1,45, che sembra

sproporzionata rispetto a quella degli altri personaggi e addirittura maggiore di quella dell'imperatore. L'imperatore doveva essere, all'incirca, al centro della raffigurazione e presenta il [p. 81] volto leggermente ruotato verso la sua sinistra: nella sua figura era il fulcro della scena. Il militare si trova dietro di lui mentre i due personaggi ideali gli si fanno incontro. **Non si può ricavare, dal poco che si conserva, se le figure fossero statiche o in movimento; la loro disposizione, tuttavia, suggerisce piuttosto una posizione statica, ma di accoglienza che si spiegherebbe in una scena di *adventus* o meglio di *reditus*.**

La comprensione e la parziale ricostruzione della scena è resa possibile dall'analisi di frammenti e dai confronti iconografici con altri rilievi di carattere storico-narrativo (fig. 6 [*i.e.*, Frieze A of the Cancellaria Reliefs; cf. here **Fig. 1; Figs 1 and 2 drawing**]). La testina femminile [*i.e.*, her cat. no. 8] non può essere interpretata se non come una Vittoria, al cui tipo iconografico corrisponde per l'acconciatura e la ghirlanda sui capelli. Questa personificazione è frequente, accanto all'imperatore, nelle raffigurazioni che alludono ad episodi militari e trionfi. Considerando che le dimensioni sono alquanto inferiori a quelle di Vespasiano (come si trova anche ad esempio sul pannello dell'Arco di Tito [cf. here **Fig. 120**]), si può ipotizzare che la figura fosse leggermente sollevata da terra, alle spalle dell'imperatore, come sul rilievo della Cancellaria [*i.e.*, on Frieze B; cf. here **Fig. 2; Figs. 1 and 2 drawing: figure 16**] e sul pannello dell'Arco di Traiano a Benevento [with n. 23].

La testa giovanile di profilo [*i.e.*, her cat. no. 9], in basso rilievo, rappresenta, con ogni probabilità, il *Genius Populi Romani*, il nume tutelare del popolo romano, raffigurato per lo più in un aspetto giovane, in contrapposizione al *Genius Senatus*, più anziano e barbato [with n. 24; cf. her Fig. 7 b; *i.e.*, the head of the *Genius Senatus* of Frieze A of the Cancellaria Reliefs; cf. here **Fig. 1; Figs. 1 and 2 drawing: figure 11**].

Il volto è molto simile a quello dello stesso personaggio su una delle lastre dei rilievi domiziani del Palazzo della Cancellaria (fig. 7c [*i.e.*, the head of the *Genius Populi Romani* of Frieze A of the Cancellaria Reliefs; cf. here **Fig. 1; Figs. 1 and 2 drawing: figure 13**]).

L'elemento fondamentale per la comprensione del significato della scena è la *corona civica*, di foglie di quercia, sul capo dell'imperatore. Nella ritrattistica a tutto tondo sono noti due ritratti di Vespasiano con la corona di quercia sul capo: una del Museo Nazionale Romano [with n. 25], l'altro della Ny Carlsberg Glyptothek [!] di Copenaghen [with n. 26].

Si legge in Plinio che "Con le foglie di queste piante sono fatte le corone civiche, l'emblema più fulgido del valore militare e ormai da tempo anche della clemenza imperiale, da quando cioè per l'empietà delle guerre civili, il non aver uc- [p. 82] ciso un cittadino cominciò a sembrare un merito. Sono più importanti, queste, delle corone murali e vallari e di quelle d'oro, che pure hanno maggiore valore venale; sono superiori anche alle corone rostrate ... (Augusto) a sua volta ricevette quella civica dal genere umano" [with n. 27]. Le poche parole rendono l'idea dell'importanza di questo riconoscimento, *ob cives servatos*, conferito in un'età repubblicana a chi avesse salvato un concittadino, in determinate circostanze, divenuto poi, con Augusto prerogativa imperiale.

Gli autori antichi sono generosi di citazioni riguardo a questa onorificenza che diviene il simbolo della clemenza e della benemerenzza dell'imperatore [with n. 28]. Lo stesso Augusto ricorda: "Per questa mia benemerenzza con decreto del Senato ebbi l'appellativo di Augusto, la porta della mia casa fu pubblicamente ornata di alloro e sull'entrata fu affissa una corona civica " [with n. 29; cf. here **Fig. 35**]. Da allora l'immagine della *corona civica* si ritrova frequente sulle emissioni monetali degli imperatori successivi, con la legenda *ob cives servatos*.

**Questo elemento consente di avanzare una ipotesi riguarda al momento storico a cui si riferisce la scena rappresentata.**

**La guerra civile che tra il 68 e il 69 d.C. ha visto governare prima Galba poi Otone e Vitellio, in un clima di tensione come quello che si era creato per analoghe situazioni, allo scorcio dell'età repubblicana, si risolve con la proclamazione di Vespasiano a imperatore e il ripristino del precedente sistema dinastico ereditario.**

Gli eventi si sono svolti mentre Vespasiano si trovava in Egitto per combattere la guerra giudaica, con accanto il figlio Tito. Già il 1° luglio del 69 viene acclamato imperatore dagli legionari d'Egitto e questo giorno sarà poi considerato il suo *dies imperii*; segue poi il giuramento delle legioni d'Oriente.

A Roma, nella casa del fratello di Vespasiano, il *praefectus urbi* T. Flavio Sabino, il Senato, le cohorti urbane e quelle dei vigili rivendicano l'impero per Vespasiano. Subito dopo, durante l'assalto del

Campidoglio, Flavio Sabino muore, dopo aver tentato una resistenza, mentre Domiziano riesce a salvarsi fuggendo.

Il 21 dicembre Muciano entra a Roma e Vitellio viene ucciso.

**Flavio Giuseppe registra nei giorni tra il 18 e il 21 dicembre del 69 che "il popolo acclama Vespasiano come imperatore facendo Domiziano le funzioni di capo dello Stato"** [with n. 30].

Sedate le lotte in città, resta da reprimere l'insurrezione di *Civilis*, in Germania, a cui fa fronte Muciano con Domiziano, quale *praetor urbanus*.

Al suo ritorno in Italia, nell'ottobre del 70 d.C., Vespasiano, che aveva lasciato il figlio Tito a compiere l'ultimo atto della guerra giudaica, la conquista di Gerusalemme, "preceduto da una tale e così grande fama, celebrò il trionfo sulla Giudea e aggiunse altri otto consolati al precedente" [with n. 31]. **La lastra B dei rilievi della Cancelleria** [cf. here Fig. 2; Figs. 1 and 2 drawing] **rappresenta probabilmente questo ritorno di Vespasiano, accolto a Benevento da Domiziano che riconsegna al padre Roma, preparando così la propria successione.**

Il ruolo di Domiziano è stato fondamentale in assenza del padre. Le notizie riportate dalle fonti sono tuttavia poco clementi nei confronti di alcuni suoi comportamenti. "Titolo e dimora di Cesare [*i.e.*, the 'Domus Tiberiana' on the Palatine; cf. *infra*, in volume 3-2, at Appendix I.d); and Appendix I.e) and here Figs. 123; 124] aveva ricevuto Domiziano; che non dedito ancora a cure di governo, si comportava da figlio dell'imperatore con stupri e adulterii" [with n. 32]. E ancora "Vespasiano attento all'Italia e alle cose di Roma, apprende voci sfavorevoli riguardo a Domiziano; dicevano che egli oltrepassava i limiti imposti all'età e le prerogative di figlio: affida dunque a Tito la parte più valida dell'esercito perché portasse a compimento la guerra giudaica" [with n. 33].

Ma, ufficialmente, Vespasiano si rivolge a Domiziano dicendo "Ti ringrazio, figlio, di avermi permesso di tenere la carica e di non avermi usurpato il trono" [with n. 34].

**La raffigurazione sui bassorilievi** [of the Cancelleria Reliefs] **si deve referire pertanto alla vittoria sulla guerra civile e al ripristino della pace dovuti a Vespasiano, con un ruolo fondamentale svolto da Domiziano. Egli infatti è l'unico membro della famiglia flavia presente a Roma nel momento più drammatico della guerra civile e, poi, come reggente della carica paterna, su cui, nonostante la giovane età, ha gravato, se pur formalmente, l'onere del governo.**

Nonostante la sottile polemica delle fonti, eco dell'atteggiamento della classe senatoria nei confronti del giovane Domiziano, questi si rivela invece rispettoso dell'*auctoritas* paterna e della *pietas* filiale. [p. 83].

**Come Augusto, anche Vespasiano - e per lui Domiziano - ha salvato la patria dalle guerre civili. La conquista dell'imperium è stata assicurata esclusivamente attraverso la vittoria militare, nello stesso modo in cui si era fondata la legittimità del principato di Augusto** [my emphasis]."

In her **note 32**, she writes: "Tacito, *Hist.* IV, 2, 1".

In her **note 33**, she writes: "Tacito, *Hist.* IV, 51, 2". - Paris pertaining text passage sounds, as if Tacitus here says that Vespasian turned back to Rome with a substantial part of his army, but Tacitus (*Hist.* 4,51,2) doesn't say anything like that.

In her **note 34**, she writes: "Cassio Dione, epitome libro LXV, 2, 3".

For further discussion of Domitian's activities in Rome (AD 69-70), to which Rita Paris (1994b, 80-83) in her above-quoted passage refers; cf. *supra*, in Chapter *Preamble*; Section *III.*, at point 2.).

**Also T.P. Wiseman (2019, 9, Chapter: "Understanding Augustus"; Section: "1.2. The young Caesar" [*i.e.*, Octavian/ Augustus]) has studied Augustus' *Res Gestae* (34,2), discussed by Rita Paris (1994b, 82), in her above quoted account, as well as the meaning of the *corona civica*, Octavian/Augustus had received :**

"Figure 3 [= here **Fig. 35**]. The 'civic crown' of oak-leaves: *aureus* of 12 BC. 'In my sixth and seventh consulships [28-27 BC], after I had extinguished the civil wars, although I had power over everything by universal consent I transferred the republic from my power into the control of the Senate and People of Rome. In return for my action I was named Augustus by a resolution of the Senate, the doorposts of my house were publicly decorated with laurels, and a civic crown was fixed above my door' (Augustus *Res gestae* 34.1-2); for 'civic crown' (*corona ciuica*) the Greek version of the text has 'the oak wreath which is given for saving citizens'.

The obverse of the coin shows AVGUSTUS DIVI F(*ilius*), Augustus the son of the deified Caesar; on the reverse, the doorway has laurels on either side and the oak wreath above, with the legend OB C(*ives*) S(eruatos), 'for saving citizens' [all translations: T.P. WISEMAN]. L. CANINIUS GALLVS was the magistrate responsible for minting the coinage. *RIC I*<sup>2</sup> Augustus 419. Sutherland 1984.74. © The Trustees of the British Museum. "All rights reserved".

**Fig. 35. *Aureus* of Augustus, mint of Rome, 12 BC. Showing the doorway of the (real) House of Augustus on the Palatine, with the *corona civica* above the door and two laurel trees on either side. Cf. T.P. Wiseman (2019, 9, Fig. 3). *RIC I*<sup>2</sup> Augustus 419. Sutherland 1984.74. © The Trustees of the British Museum.**

**The meaning of those two laurel trees that flanked the (real) House of Augustus on the Palatine on either side, has been explained by Henner von Hesberg (2006b, 353-354) in his description of the decoration of the Mausoleum of Augustus:**

"Die Statue des Augustus auf der Spitze des Monuments war das älteste Bildwerk am Mausoleum. Im Jahre 27 v. Chr. kamen die vom Senat verliehenen Ehrenzeichen - die Lorbeerbäume neben dem Eingang und der 'Tugendschild' (*clipeus virtutis*) mit der entsprechenden Inschrift - hinzu. Obwohl sie von ihrer Bedeutung her in Widerspruch zur Bedeutung der Anlage standen - **Lorbeerbäume bezeichneten traditionsgemäß das Haus des Pontifex Maximus**, aber nicht sein Grab -, wurden die Ehrenzeichen hier wiederholt (Abb. 43 und 46) [my emphasis]". For the context; cf. Häuber (2017, 488).

For the Mausoleum of Augustus most recently; cf. Henner von Hesberg ("Das Augustus-Mausoleum in Rom und die Verehrung der römischen Herrscher", 2021), and Alfred Schäfer ("Symbols of Power. The Tombs of Roman Rulers and Roman Victory Monuments", 2021).

**But the *corona civica* that appears on Augustus's *aureus* (cf. here **Fig. 35**) has still another meaning, as observed by Hans Rupprecht Goette (1984) in the course of his discussion of different wreaths that appear on three *Dreifussbasen* ('marble bases for tripods').**

Goette (1984, 585-586) writes:

"Eine sehr verwandte Dreifußbasis im Thermenmuseum in Rom (Abb. 11-13) führt uns nun zu einer anderen Form des Kranzes, nämlich zum **Eichenkranz** [with n. 33] ...

Die dritte Seite (Abb. 13) gibt einen **Eichenkranz wieder, auf dem ein Adler mit geöffneten Schwingen zu erkennen ist**. Die Tänie erinnert stark an die beiden anderen Drei- [page 586] fußbasen, ähnlich flattert sie in der Luft. Jedoch hält sie eben nicht eine *corona spicea* zusammen, sondern eine **corona civica** [my emphasis]".

Cf. Goette (1984, 588):

"Es stellt sich die Frage, was konkret mit dem Bild des Adlers mit Kranz ausgesagt werden sollte, aus welchen Traditionen es stammt.

Zuerst taucht es in der römischen Kunst 27 v. Chr. auf Münzrückseiten auf, die die Verleihung der *corona civica ob cives servatos* und die des Augustus-Titels an Octavian propagieren [with n. 51]. Der Eichenkranz spielte dabei auf die *virtus* des Kaisers an, die der ihm verliehene Schild neben der *pietas*, *clementia* und *iustitia* als Kardinaltugend an erster Stelle nannte, und fast zur gleichen Zeit - wohl nicht zufällig - schreibt Horaz in seinen berühmten Römeroden, die die Zeitgenossen an die alten Werte erinnern sollten, die folgenden Verse (III 2, 21ff.) :

*virtus recludens in meritis mori  
caelum negata temptat iter via  
coetusque vulgaris et udam  
spernit humum fugiente penna.*

Die Tugend entreißt also die Menschen, die *virtus* besitzen, dem Los der Sterblichkeit, sie trägt sie in göttliche Sphären auf den Schwingen des Göttervogels empor und läßt sie am göttlich-unsterblichen Leben teilhaben. Dieser ursprünglich stoische Gedanke liegt auch dem Gedicht II 20 zugrunde, in dem Horaz schildert, wie er selbst einst in der Gestalt eines Adlers oder - für Dichter häufiger gebraucht - eines Schwanes die Erde verlassen wird. In der augusteischen Kunst verkörpert die *corona civica* also den Aspekt der *virtus*, die zur Unsterblichkeit führt [my emphasis]".

In his **note 33**, Goette writes: "Rom, Thermenmuseum Inv. 212207: P. Rendini in: A. Giuliano (Hrsg.), Museo Nazionale Romano. Le sculture I 2 (1981) 233 ff. Nr. 31 Abb".

In his **note 51**, he writes: "Brit. Mus. Cat. Mattingly, Coins I 106 Nr. 656-658; P.C. Kent - B. Overbeck - A.U. Stylow - A. und M. Hirmer, Die römische Münze (1973) Taf. 34, 135; V. v. Gonzenbach, Stockholm Studies in Classical Archaeology. Opuscula 5, 1968, 92 Abb. 12,2; Alföldi ... [i.e., here A. ALFÖLDI 1973] 9f. 13 ff. Taf. 2, 1-4; J.-B. Giard, Catalogue des monnaies de l'empire romain I (1976) 144 f. Nr. 911 f. Taf. 35, 911 f. ...".

### Conclusions

First of all we are extremely lucky that Paul Hartwig and Francis W. Kelsey were both not only interested in the marble fragments discussed here, but had also managed to buy them in 1900-1901 on the art market and thus rescued them by donating them to public museums - and also that the above-mentioned scholars, who have studied the iconographies and historical meanings of these remains since then, have come to such excellent results. Especially Gerhard Koepfel (1980; *id.* 1984) who recognized that the head of the soldier in the Museo Nazionale Romano (cf. *supra*, cat. no. 7) belongs to the torso in the Kelsey Museum of Archaeology (cf. *supra*, cat. no. 11), see the reconstruction drawing here **Fig. 33**.

We are likewise extremely fortunate that Daniela Candilio (1990-1991 [1994]; *ead.* 1995; *ead.* 1999; *ead.* 2000-2001) has excavated architectural remains of the Domitianic period within the Baths of Diocletian/ the Museo Nazionale Romano, that she has (convincingly) identified as belonging to the *Templum Gentis Flaviae* (for the location of the *Templum Gentis Flaviae*; cf. the plans here **Figs. 56; 57**); that arch. Gloria Marconi (1994) has created measured reconstruction drawings on the basis of the extant architectural and relief fragments of this building; and that these fragments, as well as these reconstruction drawings have been discussed in detail in the exhibition catalogue, edited by Rita Paris (1994a), by herself and by her co-authors, especially Elaine K.

Gazda (1994), by Filippo Coarelli (1996; 2014), and by Paris (2009b); as well as in the exhibition catalogue, edited by Coarelli (2009a), in which he himself and his co-authors, especially Eugenio La Rocca (2009; cf. now also E. LA ROCCA 2020b), have, in addition to this, discussed the structures, excavated by Candilio, as well as the head of the pertaining colossal acrolithic cult-statue of *Divus Titus* (cf. here **Fig. 53**). See now also the discussion of the *Templum Gentis Flaviae* by Barbara E. Borg (2009), Eric M. Moormann (2021; 2023), Paolo Liverani (2021; 2023), as well as Eugenio La Rocca and Lorenzo Kosmopoulos (2023). For all that; cf. *supra*, in Chapter IV.1.1.h).

As a result of all these efforts, as rightly stated by Borg (2019, 245 with n. 194), in her summary quoted at the beginning of this *Chapter*: 'the so-called *Dono Hartwig*, fragments of architectural ornaments, figures supporting an entablature and relief sculpture, which were found in 1901, are generally accepted as belonging to the *Templum Gentis Flaviae*'.

Although, when reading the summary of the scholarly debate on the *Templum Gentis Flaviae* in Chapter IV.1.1.h), we will find that not all recent scholars judge the situation so positively as Borg does. Nevertheless, when compared with the *status quaestionis* concerning the Cancellaria Reliefs, the results obtained in the discussion of 'the so-called *Dono Hartwig*' may indeed be regarded as quite an achievement.

Of the two reconstructed reliefs once belonging to the *Templum Gentis Flaviae*, we have looked in this Chapter in more detail at that panel, which represents Vespasian's *adventus* of AD 70 (cf. here **Fig. 33**), whereas the other relief (cf. here **Fig. 34**) was only shortly mentioned. This relief (**Fig. 33**), although only five small fragments of it have survived, proves again to be one of those innovative creations, which seem to be so typical for the Domitianic period. And that for the following reasons.

Paris (1994b, 82), in her above quoted account, states:

**"La lastra B dei rilievi della Cancellaria [cf. here Fig. 2] rappresenta probabilmente questo ritorno di Vespasiano [i.e., "nell'ottobre del 70 d.C."], accolto a Benevento da Domiziano che riconsegna al padre Roma [i.e., "le funzioni di capo dello Stato"], preparando così la propria successione [my emphasis]"**.

I agree with Paris (1994b, 82) that the relief from the *Templum Gentis Flaviae* (cf. here **Fig. 33**), like Frieze B of the Cancellaria Reliefs (cf. here **Fig. 2**), represents Vespasian's *adventus* of October AD 70.

But I follow in this *Study* those scholars, who are instead of the opinion that the 'historical event', purportedly represented on Frieze B of the Cancellaria Reliefs (cf. here **Fig. 2; Figs. 1 and 2 drawing**), is supposed to take place at Rome (cf. *supra*, in Chapters I.1.; III.; IV.1.; V.1.i.3.); and below, in Chapters *The major results of this book on Domitian*; and in *The visualization of the results of this book on Domitian on our maps*).

This is clear because neither the *Dea Roma*, nor the Vestal Virgins, or the *Genius Populi Romani*, and the *Genius Senatus*, all of whom appear on Frieze B of the Cancellaria Reliefs, can possibly ever leave the City of Rome. Nor can the *praetor urbanus* Domitian, who heads the just described procession that moves towards Vespasian (cf. here **Fig. 2; Figs. 1 and 2 drawing; figure 12**), act in this capacity outside the *pomerium* of Rome - one of the privileges of the man, who held this office, was to receive a new emperor in an *adventus*-ceremony.

Because of this known spatial restriction of the Vestal Virgins, these likewise spatially defined constructions of the *Dea Roma* and of these two *Genii*, and because of exactly the same spatial restriction that defines the actions of the *praetor urbanus*, we can be sure that all the just mentioned figures, represented on Frieze B of the Cancellaria Reliefs (cf. here **Fig. 2; Figs. 1 and 2 drawing; figure 12**), are meant as staying 'within the sacred boundary of Rome, the *pomerium*'; this area is called *domi*. At the same time we need to consider that in an *adventus*-ceremony the arriving victorious general and his entourage, in the case of Frieze B Vespasian (cf. here **Fig. 2; Figs. 1 and 2 drawing; figure 14**), is confined to remain in the complementary area, defined by the *pomerium*-line, which is, therefore, called *militiae*.

Such a victorious general, who comes from the opposite direction to this meeting point than the party, who is receiving him, is thus obliged to stay outside the *pomerium* of Rome until the Senate has granted him a triumph, which he will then celebrate together with his victorious army. We can, therefore, conclude for Frieze B of the Cancellaria Reliefs: the *Dea Roma*, the Vestal Virgins and the two *Genii*, together with the young Caesar und *praetor urbanus* Domitian, are the official representatives of the City of Rome, who have all come to the *pomerium*-line of Rome to receive Vespasian in this *adventus*-ceremony at precisely that point (for all that cf. *supra*, in Chapter V.1.i.3.)).

***The innovative ideas of Domitian's artist, who created one  
of the panels of his Templum Gentis Flaviae (cf. here Fig. 33)***

What then are the innovative ideas that characterize the relief here **Fig. 33** from Domitian's *Templum Gentis Flaviae*, which represents Vespasian's *adventus* into Rome in the first half of October AD 70?

1.) As was already mentioned above: the application of a 'hierarchy of scale', which is therefore proven to have already started under Domitian, a fact which was previously unknown. Or rather: this innovation was earlier (erroneously) attributed to Trajanic/ Hadrianc art (cf. above, and *supra*, in Chapter II.3.3., and here **Fig. 46**: the reliefs from the Arch of Trajan at Beneventum);

2.) Vespasian in the relief from the *Templum Gentis Flaviae* (here **Fig. 33**), who is accompanied by an entourage, 'faces' the beholder, who thus becomes himself or herself one part of the receiving party. There is no better way to 'integrate' a beholder into a composition than by this seemingly simple decision.

After having finished writing this Chapter, I realized that also Paolo Liverani (2021, 88-89; cf. *id.* 2023, 120) has observed that Domitian was first to order state reliefs, *in which the figures are facing the beholder*. But before quoting Liverani's account, let me anticipate a passage from Chapter V.1.i.3.b); Section I. Introduction.

There I have quoted Diana E.E. Kleiner (1992, 183) who, as far as I can see, was first to observe in her discussion of the Nollekens Relief (here **Fig. 36**) that here 'the emperor [Domitian] and his companions are almost frontal':

'Already Diana E.E.Kleiner (1992, 183) wrote about this panel [*i.e.*, the Nollekens Relief, here **Fig. 36**]: "Also from Domitian's Palace is the so-called **Nollekens Relief** ... known only through drawings (for example, fig. 153), but **it appears to have been manufactured while Domitian was emperor. It depicts a sacrifice that is in the tradition of earlier sacrifice scenes such as those in the Louvre Suovetaurilia Relief** (see fig. 117 [cf. here **Fig. 25**]), **but with two noticeable differences. The figures of the sacrificant - probably the emperor - and his companions are almost frontal, and the human emperor interacts with divinities and personifications (Roma or Virtus and the Genius Senatus); such interactions would become one of the hallmarks of Domitianic art** [my emphasis]".

Let's now turn to the observations, made by Paolo Liverani (2021, 88-89), who, after a discussion of the Nollekens Relief (here **Fig. 36**), mentions fragments of (one or several?) marble state relief(s), found at Domitian's Villa, called *Albanum*, and in which in the case of two of the extant fragments the represented figures face likewise the beholder:

**"More fragments pertaining to great friezes are preserved in the Antiquarium of Villa Barberini at Castel Gandolfo, discovered at various times in the area of the *Albanum Domitiani*, the huge imperial villa situated a few kilometers from Rome along the Via Appia. Some of these marbles were already documented in Piranesi's etchings, others came to light during the works converting Villa Barberini to a papal residence in the thirties of the past century ...**

In the second group are other fragments of reliefs: [with n. 24] a badly damaged portrait of Domitian, originally crowned by a Victory, the shoulder of a togate figure and the bust of a soldier wearing a sophisticated type of cuirass: a mail shirt with small feather-like scales attached to the rings. Both the portrait of the Emperor and the bust of [the] soldier present themselves in a frontal position, an uncommon characteristic in the relief of the first century, highlighting the importance of the figure portrayed in [page 89] the act of addressing the beholder. Unfortunately, we cannot propose any hypothesis about the iconography or the context of the reliefs, but it is clear that the villa had strong public connotations. On its grounds was a theatre for public celebrations and artistic performances, and the fragments just described demonstrate the presence of one or more buildings exalting the military virtues and the victories of the Emperor, according to schemata and iconographies already known from the other triumphal monuments of the same Emperor [my emphasis].

For this just-quoted passage; cf. now Liverani (2023, 120; *i.e.*, the same passage in the Italian version of Liverani's essay of 2021).

In his **note 24**, Liverani writes: "Liverani 1989, 17-18, nn. 1.3".

Let's now return to our main subject.

Next it seems, as if Domitian or his artists had heard the critique of modern commentators concerning Frieze B of the Cancellaria Reliefs (cf. here **Fig. 2; Figs. 1 and 2 drawing**), since relief **Fig. 33** has, compared with this panel, two advantages: *a*) it is easily recognizable that **Fig. 33** is a military *adventus* (or a *reditus*, as R. PARIS 1994b, 81, suggests), because Vespasian is accompanied by an armed soldier; *b*) the locale where the scene takes place is defined by the architecture that appears in the background.

Paris (1994b, 81) identifies the allegorical representation of a young man (her cat. no. 9, of whose head we see on this relief the left profile), as the *Genius Populi Romani*; on the reconstruction drawing here **Fig. 33** he is endowed with a *cornucopia*. Consequently, also this *adventus* relief, which once belonged to the *Templum Gentis Flaviae*, was meant as representing Vespasian's *adventus* into Rome in October of AD 70. The coiffure of this youth; cf. Paris (1994b, 60-61) is not entirely preserved and differs from that of the *Genius Populi Romani* on Frieze A of the Cancellaria Reliefs; cf. Paris (1994b, 80-81, Figs. 6; 7c [cf. here **Fig. 1; Figs. 1 and 2 drawing: figure 13**]). But because this head of a youth certainly belongs to an allegorical figure, I follow for the time being Paris (*op.cit.*) in identifying this young man as the *Genius Populi Romani*. Provided this is true, it is reasonable to assume that it should be possible to identify the architecture in the background of this *adventus* scene. And that because of the following reasons.

As we have heard above (cf. *supra*, in Chapter II.3.2.) Vespasian was in AD 70 61 years old. We see him on the relief **Fig. 33**, arriving at Rome, having come down the *Via Appia* all the way from *Brundisium* (Brindisi), that is to say, a march (?) of 500 kilometres. I, therefore, believe that the architecture behind the head of the soldier (cf. R. PARIS 1994a, cover; *ead.* 1994b, 56-57, Tav. 5 [= here **Fig. 33**]) should be the *Porta Capena* within the Servian city Wall, from which the *Via Appia* issued.

Cf. here **Fig. 58**, labels: Servian city Wall; PORTA CAPENA; VIA APPIA.

The next innovative idea of Domitian's artists, who created the relief here **Fig. 33**, was to have the figures of the soldier and of the *Genius Populi Romani* - who flank Vespasian on either side - face each other. In a 'classic' *adventus* scene, the soldier and Vespasian would belong to the *area militiae*, and the *Genius Populi Romani* to the *area domi* (cf. *supra*, in Chapter V.1.i.3.)).

Here this scheme has been abandoned: the old protagonists are still the same, but in this composition they appear like 'attributes' of the main figure: Vespasian. He is shown as already wearing the *corona civica*, but *Victoria*'s head is much smaller than Vespasian's, which is why Paris's assumption - based on the relevant

detail of frieze B of the Cancelleria Reliefs (cf. here **Fig. 2**) - namely, that Victoria has just crowned Vespasian, is convincing. Therefore, in **Fig. 33**, *Victoria's* head appears next to Vespasian's head. The resulting reconstruction drawing gives the impression that the crowning ceremony has happened shortly before, and the *Porta Capena* in the background (in case it is indeed represented here) shows that this coronation ritual has taken place at Rome.

The details: *Porta Capena*, the crowning with the *corona civica*, and the armed soldier on **Fig. 33**, tell the beholder that the scene represents Vespasian, who just comes back to Rome in AD 70 from his victories in Judaea, by which he has ended the civil wars. Whereas the *Genius Populi Romani* not only defines the locale as 'Rome', but adds to this the information that the Roman People are present at this *adventus*-ceremony, and that they receive Vespasian into the City of Rome.

The relief (**Fig. 33**) thus expresses much of the same content as Frieze B of the Cancelleria Reliefs (cf. here **Fig. 2**). Because the relief from the *Templum Gentis Flaviae* is not completely preserved, we cannot know, how many figures had originally belonged to it, and, as a consequence of this, what else was propagated with this relief. It is for example conceivable that also Domitian was represented on this relief. But one thing is clear: the entourage of the central group 'Vespasian and *Victoria*' consisted either of only two further individuals, or else of four, as indicated in this reconstruction drawing. This rather 'static' reconstruction of the original composition, may, as Paris (1994b, 81) herself writes, be due to the scarcity of the remaining fragments, nevertheless the composition of **Fig. 33** is reminiscent of one of Domitian's coin images, that has already been mentioned before in a different context. The figures represented on this coin are Domitian in the centre, flanked by Minerva and *Victoria*, that is to say, this group consists of only three figures.

Nevertheless is certainly true what was said above about this coin image, when compared with Frieze A of the Cancelleria Reliefs (cf. here **Fig. 1**), which comprizes 17 figures:

''On the reverse of a *sestertius* of AD 92-94, where Domitian appears as a victorious, cuirassed general, he is flanked by two representations: 'his' personal patron goddess Minerva (left), who has obviously led him to this victory, and *Victoria* (right), who is crowning him with a laurel wreath. In a certain sense, we can regard such coin images as quintessential abbreviations of the multifigured scene, represented on Frieze A of the Cancelleria Reliefs - or vice versa''.

Cf. *supra*, at n. 241, in Chapter I.2.. The same is true for the relief from the *Templum Gentis Flaviae* (cf. here **Fig. 33**), with its only three or at the most five figures, when we compare that with Frieze B of the Cancelleria Relief (here **Fig. 2**) with its 17 figures.

**As already mentioned, some fragments of the 'Dono Hartwig' have also been on display in the recent exhibition *Domiziano Imperatore. Odio e amore* in Rome. In the accompanying catalogue, Claudio Parisi Presicce, Massimiliano Munzi and Maria Paola Del Moro (2023, 12) mention for the *Templum Gentis Flaviae* the following "opere 69-74", which they could show : p. 153, "opera 69", is the colossal portrait of Titus (cf. here **Fig. 53**); p. 154, "opere 70-74", are the fragments of the 'Dono Hartwig' that were on display.**

Among the authors, whose essays are published in this catalogue, also Agnese Pergola discusses ("Il dono Hartwig", 2023, 140 with n. 17). Like Rita Paris (1994b), whom I myself have followed in this *Chapter*, Pergola attributes those reliefs and architectural fragments to the *Templum Gentis Flaviae*. Pergola (2023, 141 with ns. 24-27) mentions, in addition to this, Mario Torelli's hypotheses (1987, 564-568) to identify the *Templum Gentis Flaviae* on Domitian's coins (cf. here **Fig. 30**) and on the "Rilievo Terme Vaticano" (here **Fig. 31**), which I myself have likewise followed in this *Study*. Pergola addresses the possible consequences of Torelli's hypotheses, but does not herself follow them.

In her analysis of the reliefs pertaining to the *Templum Gentis Flaviae*, Pergola (2023, 140) comments on the relief here (**Fig. 33**, representing the *adventus* of Vespasian into Rome): "Qui doveva essere visibile anche la

raffigurazione dell'imperatore Vespasiano [with n. 16], la cui testa laureata [!] è riconoscibile in un frammento conservato nel museo di Ann Arbor".

In her **note 16**, Pergola writes: "Paris 1994a, pp. 66-67".

Note that Vespasian on the relief (here **Fig. 33**) is, of course, not crowned with a laurel wreath, but with the *corona civica*, as Pergola (2023, 142) herself later writes.

**Pergola (2023, 141) addresses Torelli's hypotheses, according to which the building, visible on Domitian's coins (here Fig. 30) and on the "Rilievo Terme Vaticano" (here Fig. 31) should be identified with the *Templum Gentis Flaviae*. But her comments and the caption of her Fig. 3, which illustrates the upper part of the "Rilievo Terme Vaticano", show that she herself does not follow Torelli's hypotheses :**

"Del *templum gentis Flaviae* non esistono documenti iconografici certi, tuttavia vi sono alcune ipotesi identificative da tenere in considerazione: l'importanza del monumento ha fatto ipotizzare che esso sia stato rappresentato sui conii monetali di età domiziana, in particolare su un sestertio del 95-96 d.C. raffigurante un imponente complesso articolato in tre corpi di fabbrica [with n. 24]. L'interessante proposta, avanzata da Mario Torelli, è supportata dalle fonti dell'epoca (Marziale e Stazio), che negli stessi anni esaltano la grandiosità di questa nuova costruzione domiziana, e dalla datazione del tempio stesso [with n. 25]. A questa moneta Torelli ha aggiunto anche un altro documento iconografico che, tuttavia, è molto dibattuto sia dal punto di vista dell'interpretazione iconografica che della datazione. Si tratta di un noto rilievo, diviso tra il Museo Nazionale Romano e i Musei Vaticani [with n. 26] e in parte rilavorato in epoca moderna, con la raffigurazione di una processione dinanzi ad un tempio decastilo identificato dal Torelli con quello della *gens Flavia* [with n. 27] (fig. 3). Se si dà credito a questa interpretazione allora il volto del personaggio a destra in primo piano dovrebbe essere identificato con quello dell'imperatore Domiziano che, già in antico, fu eraso in seguito alla *damnatio memoriae* che subì dopo la sua morte (Cass. Dio 68, 1, 1).

**The caption of Pergola's (2023, 141, Fig. 3) reads :** "Roma, Museo Nazionale Romano, Palazzo Massimo alle Terme. Frammento di rilievo con rappresentazione di un tempio, inv. 165 (Su concessione del MiC – Museo Nazionale Romano)".

I do not know this fragmentary relief in the Museo Nazionale Romano from autopsy, because it is currently not accessible, as I was kindly informed by Dott.ssa Carlotta Caruso by E-mail of November 29th 2019, when I had asked her to grant me and Claudia Valeri the permission to study this relief; cf. *supra*, in *Chapter Introductory remarks and acknowledgements*. Previously, this relief was indeed on display at the Museo Nazionale Romano, Palazzo Massimo alle Terme, as Stephanie Langer and Michael Pfanner (2018, 142) at their cat. no. 12, write: "bis vor kurzem im Palazzo Massimo"; but currently this is not true.

But see now *infra*, in volume 3-2, at *Introductory remarks and acknowledgements*: Carlotta Caruso of the Museo Nazionale Romano was kind enough to answer my relevant question by E-mail of 24th October 2023. The "Rilievo Terme" is indeed back again in the Palazzo Massimo, it is not on display, but kept in a deposit.

In her **note 24**, Pergola writes: "Torelli 1987, pp. 564-568".

In her **note 25**, she writes: "Marziale ne parla in particolar modo nel libro XI degli *Epigrammata*, mentre numerosi riferimenti al monumento si trovano nei libri IV e V delle *Silvae* di Stazio".

In her **note 26**, she writes: "Cappelli 2000 [*i.e.*, here R. CAPPELLI 2000c]".

In her **note 27**, she writes: "Torelli 1987, p. 564".

**Concerning the relief from the *Templum Gentis Flaviae* with Vespasian's *adventus* into Rome (here Fig. 33), Pergola (2023, 142) follows Rita Paris interpretation (1994b, quoted *verbatim* above in this *Chapter*) :**

"Ad altra scena [cf. here **Fig. 33**] si devono attribuire i restanti frammenti di rilievo storico secondo una lettura che muove da sinistra verso destra e che vede nell'ordine: la testa di soldato con parte del torso loricato (fig. 4), la testa dell'imperatore Vespasiano, le teste ideali femminile e maschile. Queste ultime due

sono state interpretate come una Vittoria e il *Genius Populi Romani* che si ritrovano spesso in questo tipo di raffigurazioni, grazie anche ai confronti con noti rilievi storici romani [with n. 33]. La presenza della corona civica sulla testa dell'imperatore permette di avanzare una ipotesi circa l'identificazione della scena: la vittoria sulla guerra civile e il ripristino della pace grazie a Vespasiano con il figlio Domiziano che svolse un ruolo fondamentale. Domiziano, infatti, fu l'unico membro della famiglia imperiale a trovarsi a Roma mentre il padre era impegnato in Egitto per combattere la guerra giudaica insieme al figlio Tito e a dover governare come reggente durante il momento più drammatico della guerra civile rivelandosi un buon governatore rispettoso dell'autorità paterna, nonostante le fonti non siano state lusinghiere nei suoi confronti [with n. 34]".

In her **note 33**, Pergola writes: "Paris 1994b, pp. 80-81".

In her **note 34**, she writes: "Tac. *hist.* 4, 2, 1; 51, 2".

**V.1.i.3.b) J. Pollini's discussion (2017b) of the allegedly 'lost' Nollekens Relief (cf. here Fig. 36), which he compares with the Cancellaria Reliefs (cf. here Figs. 1; 2; Figs. 1 and 2 drawing) and Domitian's 'Domus Flavia' / Domus Augustana. With The Contribution by Amanda Claridge**

### Chapter V.1.i.3.b); Section I. Introduction

"The presence of the goddess Roma in Martial's *adventus* scene is mirrored in the Nollekens Relief. A sacrifice related to a triumph would have been an appropriate subject to decorate a stately space in Domitian's Domus Flavia. Military victories leading to triumphs were a basis for deification after death, as in the case of Domitian's father and brother, even if for Domitian the outcome turned out to be different".

John Pollini (2017b, 126).

With "Martial's *adventus* scene", Pollini (2017b, 126) refers to Martial's epigram (8, 65), which he discusses on p. 125.

On 8th February 2023, Franz Xaver Schütz and I have published an earlier version of this Chapter on our Webserver as a Preview for this *Study* on Domitian:

Online at: <<https://FORTVNA-research.org/FORTVNA/FP3.html>>.

**Fig. 36. The Nollekens Relief, on display above the fire place in the White Hall of the Gatchina Palace near St. Petersburg, marble, 88 x 139 cm. F. Bianchini (1738, 68) found this relief in 1722 in the 'Aula Regia' of Domitian's 'Domus Flavia'; cf. S. Cosmo (1990, 837 Fig. 8 [= here Fig. 39]). J. Pollini (2017b, 120, 124; cf. p. 98, Fig. 1. We have copied from this illustration Pollini's numbering of the represented figures) suggests that it shows the togate *triumphator* Domitian, sacrificing in AD 89 just outside Domitian's *Porta Triumphalis*; after which, the Emperor would begin his (last) triumphal procession. Photograph, taken in 1914, when the relief was still preserved in its restored state of the 18<sup>th</sup> century. Courtesy John Pollini.**

The caption of Pollini's Fig. 1 reads: "Photograph taken in 1914 of the Nollekens Relief ... [the author provides a reference for that on p. 107 with n. 47]. Note that only the heads of **nos. 6** [*i.e.*, of Domitian], **8** [*i.e.*, of the *Genius Senatus*] and **10** [*i.e.*, of a boy ministrant] in the foreground and of all the background figures are ancient [my emphasis]".

Pollini (2017b, 97) begins his article as follows:

"Mainstream classical scholarship has long considered as lost a Roman 'historical' relief, excavated in the earlier part of the 18th c.[entury] in the Palace of Domitian on the Palatine hill [with n. 1]. Showing an emperor sacrificing, it is known as the Nollekens Relief after Joseph Nollekens, an accomplished British sculptor who came to possess it in the 18th c.[entury]. Besides being a sculptor and painter, he was a sculptural restorer and dealer active between 1761 and 1770 in Rome [with n. 2], where he worked in the workshops of the sculptural restorer Bartholomeo Cavaceppi and in his own studio [with n. 3]. The relief has been known chiefly from two engravings and a pen-and-watercolor drawing, all produced in the 18th c.[entury], but rather than being lost the relief has been hiding in plain sight in the Gatchina Palace near St. Petersburg [where it has been continuously on display since the 1770s/ early 1780s]".

In his **notes 1-3**, Pollini provides references and further discussion.

Concerning the sculptural decoration of Domitian's 'Aula Regia' at the 'Domus Flavia' on the Palatine, Pollini (2017b) is able to make an important contribution by presenting in great detail the so-called Nollekens Relief, which was found there by Francesco Bianchini in 1722 (cf. *id.* 1738, 68, quoted *verbatim infra*) - a fact which Pollini himself ignores though. As Pollini is able to demonstrate, already in the later 18<sup>th</sup> century the relief had allegedly disappeared. Silvano Cosmo (1990, 837, cf. his plan Fig. 8 [= here **Fig. 39**]) has found out and documented in plan where exactly within Domitian's Palace Bianchini had 'excavated'. - To this I will come back below (cf. *infra*, in Chapter *V.1.i.3.b*); at Section *II.*).

The Nollekens Relief was previously only known from non-photographic images of the 18<sup>th</sup> century, which Pollini (2017b, Figs. 2-4) also illustrates and discusses, whereas he is first to publish photographs of the Nollekens Relief (cf. J. POLLINI 2017b, Frontispiece, and Figs. 1; 10-12; 16). Among those, one is especially important (his Fig. 1 [= here **Fig. 36**]), because it was taken in 1914, when the portrait head of Domitian, appearing on this relief (cf. **figure 6**), was still preserved; this head is now lost. The relief itself, possibly broken into six fragments when found, had been restored in the 18<sup>th</sup> century, and was greatly damaged in World War II and after that. Pollini was also able to find out that a plaster cast of the relief had been produced when it was in Russia, but the whereabouts of the cast is unknown.

Pollini (2017b) has meticulously traced the vicissitudes of the relief summarized above (here **Fig. 36**) since its 'excavation' and its alleged disappearance soon afterwards. Gerhard Koeppel (1984, 65; cf. *id.* 1985, 146, n. 20) was told that the relief has been on display since the 18<sup>th</sup> century at the Gatchina Palace near St. Petersburg. After Koeppel's first discussion of the relief (1984), "O. Neveroff" kindly informed him that the relief was by no means lost, but instead on display in this collection, as Koeppel reported. In the course of his correspondence with his Russian colleagues, Koeppel had also received two photographs of the relief from them, and mentioned this fact also in his "Nachtrag" (1984, 65; cf. *id.* 1985, 146, n. 20). But Koeppel himself never published those photographs, and even his information that the relief had been in the Gatchina Palace since the 18<sup>th</sup> century has been neglected by almost all subsequent scholars. Cf. Pollini (2017b, 97, n. 1, pp. 106-107 with ns. 43-46, who quotes G. KOEPEL 1984, 46-49, 65; *id.* 1985, 146, n. 20).

**Pollini (2017b, 115-118) provides detailed comparisons of the Nollekens Relief relief with the Cancelleria Reliefs (cf. here Figs. 1; 2; Figs. 1 and 2 drawing). His observations refer to many subjects which are of interest in this Study, which is why they have been quoted several times (cf. especially *infra*, in volume 3-2, in Appendix IV.c.1.); and in Appendix VI.; at Section I.).**

**Francesco Bianchini found the Nollekens Relief in 1722, while 'excavating' in the Orti Farnesiani, and precisely within Domitian's Palace on the Palatine. As usual with such early finds, it is crucial to clarify 1.) to exactly which area an 'excavator' at a given time may have had access; and 2.) within which ancient building this 'excavation' was conducted.**

**According to Silvano Cosmo's plan (in his article: "Aspetti topologici e topografici degli Orti farnesiani come premessa alla conservazione ambientale" 1990, Fig. 8 [= here Fig. 39]), who has successfully undertaken both kinds of research in order to draw this plan, Bianchini 'excavated' exclusively at the 'Aula Regia' and the immediately adjacent halls called 'Basilica' and 'Lararium', all three located within the 'Domus Flavia' (cf. also *infra*, in volume 3-2, in Appendix VI.; at Section I.).**

Since on 25th, 26th February, 3rd and 4th March 2020 I have been given access to Bianchini's book (1738) in the Library of the British School at Rome, I could verify Cosmo's cartographic information, given on his Fig. 8: he marks on his plan the areas, where precisely Francesco Bianchini and Pietro Rosa had excavated; cf. his labels: "scavi p. rosa 1861-1864; scavi f. bianchini 1720-26". By reading now Bianchini's book (1738, 50, 68, quoted *verbatim infra*, at Chapter *V.1.i.3.b*); Section *III.*) myself, I realized that he describes explicitly that he 'excavated' within these three halls, and that he found the Nollekens Relief (his Tab. VI.; cf. here **Fig. 36**; cf. his plans Tab. II. and VIII. [= both here **Fig. 8**]) in that hall within the 'Domus Flavia', which was already then (and is still now) called 'Aula Regia'.

Fig. 39. S. Cosmo's plan of the (former) Orti Farnesiani on the Palatine in Rome. From S. Cosmo: "Aspetti topologici e topografici degli Orti farnesiani come premessa alla conservazione ambientale" (1990, 837, Fig. 8). He marks on his plan of the Orti Farnesiani, where Francesco Bianchini and Pietro Rosa had excavated.

Fig. 8). The caption of his figure reads: "Il giardino di Napoleone III (1861 - 1870) Dis.[egno] S. Cosmo". Cf. T.P. Wiseman (2019, 123, Fig. 59: "The Farnese gardens ...").

Cosmo marks on this plan the areas, where exactly within the Orti Farnesiani Francesco Bianchini and Pietro Rosa had excavated, see his labels: scavi p. rosa 1861-64; scavi f. bianchini 1720-26. Cosmo marks also the boundary between the Orti Farnesiani on the Palatine and the adjacent property to the south-west, which at Bianchini's time had been the property of the "Conti Spada", as Bianchini (1738, see the lettering on his plan Tab. VIII [= here Fig. 8]) had also himself indicated on his plan. Cosmo has documented the consecutive owners of this property. See the letterings on his plan: spada 1689-1746 / p. magni 1746-1776 / rancoueil 1776-1816 / c. mills 1816-1849 / smith 1849-1856 /suore della visitazione 1856.

Pollini (2017b, 101-102, 113, 124), who has overlooked Cosmo's account, (erroneously) suggests that Bianchini found the Nollekens Relief elsewhere within the *Domus Augustana*, but where Bianchini has not 'excavated'. - To all this I will come back below (cf. *infra*, in Chapter V.1.i.3.b); at Section II.).

As will be quoted in detail in the following, Pollini provides a thorough analysis of the scene represented on the Nollekens Relief (Fig. 36): the togate *triumphator* Domitian, who is depicted as sacrificing at an altar, accompanied by the *Dea Roma*, the *Genius Senatus*, the two *consules*, two of his *lictors* and one soldier, a *tibicen*, and interestingly also by two "young sacrificial attendants, *ministri* ... *paedagogiani* (servile pages)" from his own household; cf. Pollini (2017b, 113).

When I sent this *Chapter* to Rose Mary Sheldon, asking her to revise my English, I had added at this point:

[I need to check, whether Domitian himself was possibly himself consul in AD 89 ! - meant as a explanation to Rose Mary that I still needed to do this]. Rose Mary was kind enough to answer this question for me by E-mail, adding the following remark: "Domitian was consul every year of his reign except 89, 91, 93, 94 and 96. Pat Southern [1997], Domitian, p. 35". - See also Dietmar Kienast, Werner Eck, Matthäus Heil (2017, 110): from AD 70-95, Domitian held the consulship 17 times (!). For a coin, issued during Domitian's 17th consulship; cf. here Fig. 30.

As we shall see below, Pollini (2017b, 120 with n. 106; cf. *infra*, at Chapter V.1.i.3.b); Section IV.) suggests that the Nollekens Relief shows Domitian sacrificing in AD 89. Pollini himself has not realized that, because of the representation of both *consules* (figures 7 and 9) on the Nollekens Relief, this is in theory actually possible, because - as we have seen above - in that year Domitian did not *himself* hold one of the consulships. To this I will come back below (cf. *infra*, at Chapter VI.3; *Addition: My own tentative suggestion, to which monument or building the Cancellaria Reliefs may have belonged, and a discussion of their possible date*).

The Emperor Domitian [on the Nollekens Relief] is crowned with a laurel wreath, and the *fasces* of his two paludate *lictors* (with axes attached to their rods !) are likewise adorned with laurels. Pollini, therefore, convincingly suggests that Domitian is shown in the course of performing this sacrifice just outside the *Porta Triumphalis*, that was built anew by the emperor, and that immediately after that will begin Domitian's triumphal procession. In Pollini's opinion (2017b, 120 with n. 106, referring to Suet., *Dom.* 6,1), the sacrifice depicted on the Nollekens Relief, must refer to Domitian's last triumph of AD 89 (for that; cf. *supra*, n. 232, in Chapter I.2., and *infra*, in Chapter VI.3.; *Addition: My own tentative suggestion, to which monument or building the Cancellaria Reliefs may have belonged, and a discussion of their possible date*). Pollini also suggests, where in reality Domitian has conducted this sacrifice, which is represented on the Nollekens Relief. - To this I will come back below (cf. *infra*, in Chapter V.1.i.3.b); at Section IV.).

Already Diana E.E. Kleiner (1992, 183) wrote about this panel: "Also from Domitian's Palace is the so-called Nollekens Relief, which was found east of the state dining hall, the Coenatio Jovis. It is today lost and known only through drawings (for example, fig. 153), but it appears to have been manufactured while Domitian was emperor. It depicts a sacrifice that is in the tradition of earlier sacrifice scenes such as those in the Louvre Suovetaurilia Relief (see fig. 117 [cf. here **Fig. 25**]), but with two noticeable differences. The figures of the sacrificant - probably the emperor - and his companions are almost frontal, and the human emperor interacts with divinities and personifications (Roma or Virtus and the Genius Senatus); such interactions would become one of the hallmarks of Domitianic art". - The latter is for example also true of Frieze A of the Cancellaria Reliefs (cf. *supra*, at Chapter I.2., and here **Fig. 1; Figs. 1 and 2 drawing**), and Kleiner's observed frontality of the figures on the Nollekens Relief is also true of the relief from Domitian's *Templum Gentis Flaviae*, which depicts Vespasian's *adventus* into Rome in AD 70 (cf. *supra*, at Chapter V.1.i.3.a) and here **Fig. 33**).

To Kleiner's "Coenatio Jovis" (also referred to as: *Cenatio Iovis*; Triclinium (cf. here **Figs. 8; 8.1**, label: "TRICLINIUM"; **Fig. 58**, label: "TRICLINIUM"; **Figs. 108-110**); and Banquet hall), I will come back below; cf. *infra*, in Chapter V.1.i.3.b); at Section II.

Pollini (2017b, 101) writes: "we know that **the reliefs** were found in the general vicinity of the Aula Regia in the Domus Flavia (fig. 6) ... the excavations were ``within the Farnese Gardens'', created in 1550 by Alessandro Farnese on the N[orth] side of the Palatine, where indeed part of Domitian's Palace is located [with n. 12, providing a reference; my emphasis]". - With "the reliefs", Pollini refers to the Nollekens Relief (*i.e.*, F. BIANCHINI 1738, Tab. VI.; cf. here **Fig. 36**) and to another one, found by Bianchini together with it (cf. J. POLLINI 2017b, 104-105, his Fig. 5 = F. BIANCHINI 1738, Tab. VII. [= here **Fig. 37**]); this relief is obviously now lost.

**Fig. 37. The other fragmentary marble relief, found by Francesco Bianchini in 1722 within the 'Aula Regia' of the 'Domus Flavia', shows four female representations or divinities in Greek dress. From F. Bianchini (1738) Tab. VII.: "Fragmentum anaglyphi repertum in Palatio Caesarum intra Hortos Farnesianos MDCCXXII Hieronymus Rossi incid.". Cf. *infra*, in Chapter V.1.i.3.b); at Section III.**

Cf. Pollini (2017b, 120): the emperor, depicted on the Nollekens Relief (cf. here **Fig. 36: figure 6**), is Domitian. Cf. p. 124: the represented sacrifice "would allude to the sacrifice performed at the Porta Triumphalis, thereby recalling triumph" (for a more detailed quotation of this passage; cf. *infra*, in volume 3-2, at *Appendix IV.c.1.*)).

Cf. Pollini (2017b, 97-99): the Nollekens Relief is on display in the White Hall of the Gatchina Palace near St. Petersburg (cf. his Figs. 10; 11). Cf. pp. 97-99: in this article, Pollini "examines the history of this relief, its discovery and restoration in the 18th c.[entury], its purchase by the Russian noble Ivanovich Shuvalov, and its vicissitudes during World War II and afterwards. Also presented and discussed is the evidence for the condition of the relief in 1914 and subsequently. The 1914 photograph (fig. 1, with my numbering of figures [= here **Fig. 36**]) allows us to compare it with the three earlier non-photographic illustrations (figs. 2-4) in order to address questions about restoration and other details of [page 99] it. The history of the relief and its supposed disappearance in the later part of the 18<sup>th</sup> century are important for the history of collecting and the display of classical antiquities".

After having finished writing this *Chapter*, I received on 22nd April 2020 Paolo Liverani's forthcoming essay ("Historical reliefs and architecture") that has in 2021 appeared in the essay volume, edited by Aurora Raimondi Cominesi *et al.* (2021), and on 30th April 2020, Liverani has kindly granted me the permission to quote *verbatim* from this text. Concerning the Nollekens Relief, Liverani (2021, 88) writes:

"Another interesting document is the so-called Nollekens Relief, representing an imperial sacrifice (fig. 4), [with n. 21] ... In the middle Domitian is shown sacrificing on a little altar, to the right is the Genius of the Roman Senate and the personification of Rome with a young assistant for the sacrifice (*camillus*). To the left

are two lictors carrying the fasces with axes, a flute player and a second *camillus*. **Pollini**, who rediscovered the lost relief, **interprets the scene in connection with the triumph and considers it as the sacrifice performed by the Emperor in front of the Porta Triumphalis before entering the city. Setting aside some minor problem of his reconstruction connected with this gate, [with note 22] the triumphal connotation is based on weak evidence and must remain hypothetical. What appears interesting is the survival of Domitian's portrait in the imperial palace on the Palatine after his *damnatio memoriae*, but, unfortunately, we do not know the exact find spot and cannot solve the riddle [my emphasis]**".

In his **note 21**, Liverani writes: "Pollini 2017 ... [*i.e.*, here J. POLLINI 2017b]".

In his **note 22**, he writes: "Pollini seems to be not aware of the discussion about the position of the Porta Triumphalis after the extension of the pomerial limits". - For a discussion of this subject; cf. *infra*, in Chapter V.1.i.3.b); at Section IV.

Liverani (2021, 88) identifies the represented figures on the Nollekens Relief exactly like Pollini (2017b) himself, but he leaves out the figures in the background (cf. here **Fig. 36: figure 3**, a soldier, and **figures 7 and 9**, two togate men), whom Pollini, in my opinion convincingly, interprets as the *consules*.

**And because we have seen above that in AD 89 Domitian did not himself hold one of the consulships, the appearance of the two *consules* on the Nollekens Relief supports at the same time Pollini's suggested date for the scene depicted on the Nollekens Relief: AD 89 (!).**

Even so, it is interesting that Liverani has not realized that the figures, which he *has* mentioned, are positioned according to strict observations of their relevant spatial restrictions: the right-hand half of the relief represents the area *domi* (with the *Dea Roma* and the *Genius Senatus*, figures who, according to their relevant constructions, are constrained to remain within the *pomerium* of Rome; not by chance the *consules* appear on that side of the relief), the left-hand half of the relief represents the area *militiae* instead (here we see the two paludate lictors, having axes attached to their rods, their *fasces* are adorned with laurels, as well as one soldier). - The soldier is, of course, of special importance, when we try to find out, what the scene might represent. For a detailed description of the two lictors and the soldier; cf. Pollini (2017b, 115, quoted *verbatim infra*, in Chapter V.1.i.3.b); at Section III.).

In the following, I repeat what was already written above (cf. *supra*, at Chapter I.2.1.c):

'It is interesting to compare in the just discussed context the solution, found by the artists who designed the Nollekens Relief (cf. ... here **Fig. 36**). Here the two paludate lictors, who accompany Domitian, and one soldier (**figures 1, 4 and 3**) represent the area *militiae*. All three of them are standing just outside the *pomerium* and appear on the left hand 'half' of the panel - as they should. Whereas those figures, who represent the area *domi*: the *Dea Roma*, the *Genius Senatus* and the two *consules* (**figures 11, 8, 7 and 9**) are standing on the 'right' hand half of the panel - as also they should. The emperor himself thus stands at the *pomerium*-line - as he likewise should, provided we follow Pollini's interpretation. According to his hypothesis, Domitian is performing the sacrifice at (or in front of) the *Porta Triumphalis*. Only after its completion, Domitian will transgress the *pomerium*-line (by passing through his newly built *Porta Triumphalis*), and thus begin his triumphal procession, accompanied by his army and his lictors, who, at the represented moment, are still waiting outside the *pomerium*. And, as soon as the procession will have marched through the *Porta Triumphalis*, it will be solemnly received by the entire populace of Rome, indicated by the city's representatives on the right hand 'half' of the relief.'

Domitian thus stands on the Nollekens Relief at the *pomerium*-line. This the artists, who created the relief, have shown by the distribution of the figures (apart from the two boy ministrants and the flute player) who surround the emperor. In addition to this, Domitian is wearing a *toga*, is crowned with a laurel wreath, and is shown in the act of sacrificing. And because I believe (because of the presence of the two *consules*) that

Pollini is right in suggesting that the scene, visible on the Nollekens Relief, shows an event of AD 89, I therefore wonder what *else* this panel could represent, than what Pollini (2017b) himself suggests.

In addition to the above-mentioned details of the Nollekens Relief itself, which Liverani (2021) has not considered in his reasoning, he ignores the fact that Francesco Bianchini (1738, 68) found the Nollekens Relief within the 'Aula Regia' (cf. *infra*, in Chapter V.1.i.3.b); at Section II.). And because Bianchini documented in great detail the marble decoration of this hall (cf. F. BIANCHINI 1738, Tab. III.; IV. [= here Fig. 9]; cf. *infra*, in Chapter V.1.i.3.b); at Section III.), we know also that the major theme of the 'Aula Regia' was the celebration of Domitian's military victories, cf. Eugenio Polito (2009, 506, quoted *verbatim infra*, in Chapter V.1.i.3.b); at Section III.).

See now for the above-quoted passage from his earlier article Liverani (2023, 119-120 with ns. 21, 22; *i.e.*, the Italian version of his essay of 2021).

**To conclude.** Pollini's (2017b) himself ignores the fact that the Nollekens Relief was actually found within the 'Aula Regia'. Considering not only what was said above about the iconography of the Nollekens Relief itself, but also that the overall theme of this magnificent hall was the praise of Domitian's military victories, which the emperor had celebrated with triumphs, I therefore maintain my earlier judgement. Namely that Pollini's interpretation of the Nollekens Relief, according to which it shows Domitian sacrificing in AD 89 at the *Porta Triumphalis* before beginning his (last) triumphal procession, is sound.

**Before discussing in the following Section, where Francesco Bianchini 'excavated' the Nollekens Relief, I allow myself a digression on the 'excavator', Francesco Bianchini.**

**Paolo Liverani (2000, 67) has characterized Francesco Bianchini as follows:** "Dopo un secolo e mezzo Clemente XI Albani (1700-21) torna a interessarsi alle antichità e nel 1703 nomina mons.[ignore] Francesco Bianchini Commissario alle Antichità di Roma. Si tratta di un uomo i cui interessi abbracciano matematica, astronomia e archeologia e con una vasta rete di conoscenze in tutta Europa. Costui allestisce il «Museo Ecclesiastico», un esperimento di breve vita che durerà solo fino al 1716, ma di grande valore [with n. 14]. Il criterio con cui vengono scelti i materiali è di carattere filologico e storico, senza nessuna concessione estetica. Vengono privilegiati i documenti iscritti che abbiano rilevanza cronologica (per es.[empio] le iscrizioni consolari), senza limitarsi all'antichità, ma comprendendo anche documenti medievali con una modernità di visione assolutamente stupefacente".

In his **note 14**, Liverani writes: "C. Hülsen, Il «Museo Ecclesiastico» di Clemente XI Albani, BullCom 1890, 260-77; Pietrangeli, cit. a nota precedente [= C. Pietrangeli, I Musei Vaticani. Cinque secoli di storia (1986) 3-27]; F. Uglietti, Un erudito veronese alle soglie del Settecento, Mons. Francesco Bianchini 1662-1729 (1986) 61-63; C. M. S. Johns, Papal Art and Cultural Politics. Rome in the Age of Clemens XI (1993) 33-8".

**Chapter V.1.i.3.b); Section II. The Nollekens Relief was found in the 'Aula Regia' within the 'Domus Flavia'**

In order to be able to understand the following discussion of the topography of Domitian's Palace on the Palatine, I suggest that the reader consults all relevant maps simultaneously.

Cf. here **Figs. 58; 71; 73**, labels: PALATIUM; Arch of DIVUS TITUS; VICUS APOLLINIS ?/ "CLIVUS PALATINUS"; ARCUS DOMITIANI / DIVI VESPASIANI ?; Temple of IUPPITER INVICTUS ? or of : IUPPITER STATOR ? IUPPITER VICTOR ? IUPPITER PROPUGNATOR ?; "DOMUS FLAVIA"; "BASILICA"; "AULA REGIA"; "LARARIUM"; "PERISTYLE"; "TRICLINIUM"; DOMUS AUGUSTANA; "Porta principale"; Arch of DOMITIAN ?; Cancellaria Reliefs ?; Vigna Barberini; DI(aeta) (a)DONAEA; site of Nero's CENATIO ROTUNDA; S. Sebastiano; "AEDES ORCI"; SOL INVICTUS ELAGABALUS; IUPPITER ULTOR; CURIAE VETERES?". - For those toponyms; cf. *infra*, in volume 3-2, in *Appendix V.*; at Sections IV. and VII.

See also Silvano Cosmo's plan of the Orti Farnesiani (1990, 837, Fig. 8 [= here **Fig. 39**]); Francesco Bianchini's plan (1738, his Tab. VIII. [= here **Fig. 8**]) of Domitian's Palace on the Palatine (online at: <<https://digi.ub.uni-heidelberg.de/diglit/bianchini1738/0001/image>>); the map SAR 1985, labels: 64: *Domus Flavia*: "Basilica"; 65: *Domus Flavia*: "Aula Regia"; 66: *Domus Flavia*: "Lararium" (the relevant detail of this map is reproduced in: *LTUR* IV [1999] fig. 6, *s.v.* Palatium, but without the numbering of the single structures); Amanda Claridge's plan of the Imperial Palace (1998, 132-133, Fig. 54, p. 135, p. 137, Fig. 57: "Domitian's Palace. Reconstruction of the great Banquet Hall and its fountain courts"; *ead.* 2010, 145-156, esp. pp. 146-147, Fig. 55, p. 148): "'Aula Regia' or Audience Chamber", p. 150, Fig. 57: "Domitian's Palace. Reconstruction of the great Banquet Hall and its fountain courts"; Ulrike Wulf-Rheidt and Natascha Sojc (2009, 268-279, Figs. 1-8); Filippo Coarelli (2012, 2-3, Fig. 1 [= SAR 1985], p. 116, Fig. 29, p. 288, Fig. 88, p. 447, Fig. 153; and the plan published by John Pollini (2017b, 101, Fig. 6): "Plan of Domitian's palace (R. Mar ... [*i.e.*, here R. MAR 2009] fig. 3, slightly altered by author)", in which the 'Aula Regia' is labelled: "Salón de trono", the 'Basilica': "Bas.", the 'Lararium': "Lar.", the entrance to those three halls in the west: "Ingreso", and the larger entrance to the 'Aula Regia' in the north: "Ingreso ceremonial". Pollini's just-mentioned 'slight alteration' in Mar's plan (2009, Fig. 3) of Domitian's Palace consists in the fact that he marks the small hall immediately to the east of the 'Aula Regia' with the lettering: "Lar.[arium]"; and Daniela Bruno ("Region X. *Palatium*", 2017, ill. 13 *Palatium, domus Augustiana*, AD 117-138, Reconstruction by D. Bruno, illustration by inklink). Cf. most recently: Ulrike Wulf-Rheidt (2020); Natascha Sojc (2021); Aurora Raimondi Cominesi and Claire Stocks (2021; *ead.* 2023); Aurora Raimondi Cominesi (2022); and Jens Pflug (2022), all of whom are discussed below in Chapter *The major results of this book on Domitian*; and Roberta Alteri (2023, 31, Fig. 1); to her observations I will come back below, at the end of Section III. of this Chapter V.1.i.3.b).

For summaries of this research; cf. below, at Chapters *The major results of this book on Domitian*; and at *The visualization of the results of this book on Domitian on our maps*.

**This leads us to one of the problems that are connected with Domitian's Palace on the Palatine, which was called *Domus Augustana* in antiquity : the parts discussed here, of which the Palace consists, are unfortunately *not* called by all modern commentators by the same (modern) names.**

From Bianchini's (1738) account and his own plan (his Tab. II [= here **Fig. 8**]), to be discussed below, it is clear that he excavated at the 'Basilica', 'Aula Regia' and 'Lararium' of the 'Domus Flavia'. I follow with this nomenclature of those halls Bianchini (cf. here **Fig. 8**), which is repeated on the map SAR 1985 (cf. *supra*). But note that Bianchini (1738, caption of his Tab. III., quoted *verbatim infra*) erroneously believed that the Domitianic Palace, excavated by him, should be identified with the 'Domus Tiberiana'. In Cosmo's plan (cf. here **Fig. 39**) the area, where Bianchini excavated, is correctly indicated. Ricardo Mar (2009, 256, Fig. 3: label: "Larario", p. 257, Fig. 4, label: "Larario/Tempio") calls another part of the Palace 'Lararium', namely the large eastern peristyle. As we shall see in the following, Pollini (2017b, 103) refers to this structure erroneously as to the "'Adonea Peristyle'". - To the real 'Adonisgarden' in Domitian's Palace I will come back below.

**When discussing with Amanda Claridge the research presented here in 2020, I asked her for advice concerning reconstructions of Domitian's Palace on the Palatine.**

Because at that time I knew only Sheila Gibson's reconstruction drawing of the 'Triclinium'/'Coenatio Iovis'/ Banquet Hall, published by Amanda in her Rome guide; cf. Claridge (1998, 137, Fig. 57; *ead.* 2010, 150, Fig. 57: "Domitian's Palace. Reconstruction of the great Banquet Hall and its fountain courts"), Peter Connolly's (8th May 1935 - 2nd May 2012) coloured reconstruction drawing; cf. Peter Connolly and Hazel Dodge (1998, illustration on pp. 222-223, figure without number. Its caption reads: "Ein Querschnitt durch die rekonstruierte Aula Regia, das Peristyl und *triclinium* der Domus Flavia. Das Dach der Aula Regia wird heute von Experten viel diskutiert - hier wurde es aus Holz rekonstruiert"), and the illustration, published by Daniela Bruno (2017, ill. 13: "*Palatium, domus Augustiana*, AD 117-138", "Reconstruction by D. Bruno, illustration by inklink"). In none of these reconstructions the architectural marbles, found within these Halls

of Domitian's Palace, have been integrated as individual drawings in the way as Gordon Leith had done this in his reconstruction drawings of those Halls in 1913 (cf. here **Figs. 108-110**), to which we will turn below.

Interestingly, of Connolly's just-mentioned coloured reconstruction drawing exists now a version that shows the same image 'back to front'; cf. Aurora Raimondi Cominesi and Claire Stocks (2021, 106, Fig. 2: "Reconstruction of the Domus Flavia on the Palatine (akg-images / Peter Connolly)". Note that the Italian version of their article [2023] does not contain this illustration any more).

This fact is recognizable, when we compare with this image the true locations of the 'Basilica', 'Aula Regia', 'Peristyle' and 'Triclinium' / 'Coenatio Iovis' / Banquet Hall on any plan of Domitian's Palace; cf. for example in Natascha Sojc (2021, 132, Fig. 2), Roberta Alteri (2023, 31, Fig. 1), and here **Figs. 8.1; 58**.

In the following, I repeat a passage, written for *supra*, Chapter *Introductory remarks and acknowledgements*:

In the course of this discussion, Amanda Claridge was kind enough to alert me to 'the reconstruction drawings [of Domitian's Palace on the Palatine] (here **Figs. 108-110**) of the architect Gordon Leith (1885-1965 [whose name Amanda at first did not remember, nor the date of his scholarship]) from South Africa, who had in 1913 a scholarship at the British School at Rome. As Amanda would later confirm ... Gordon Leith had only received a scholarship for one academic year (*i.e.*, from October until June ... Amanda ... had seen his drawings at the British School, where they had been on display, and which, as she recalled, in the 1980s or 1990s had been donated to the Superintendency of the State on the Palatine.

At that stage of our discussion it seemed impossible to trace the architect and his drawings. I myself, although having spent much time at the BSR since late December of 1980, did not remember these drawings, which is why, without Amanda's help, I would never have been able to identify them (!).

The reason being that neither the name of this man, nor the time of his scholarship at the British School were known, and that although Valerie Scott, the Librarian of the BSR, and the archivist Alessandra Giovenco had supported Amanda's relevant research in all possible ways. In the end, Amanda found out by chance that, already a long time ago, four of those drawings have been published by Maria Antonietta Tomei (*Scavi Francesi sul Palatino : le indagini di Pietro Rosa per Napoleone III (1861-1870)*, École française de Rome 1999, figs 225, 228, 229, and 230), who mentions the information that Amanda had in vain been looking for : the name of the architect, Gordon Leith, and the date of his drawings, 1913. But Amanda told me also that she knew that Gordon Leith had created many more of these drawings.

My thanks are due to Francesca Deli, Assistant Librarian of the BSR, for scanning for me in Tomei's publication Gordon Leith's extraordinary reconstruction drawings of Domitian's Palace on the Palatine (cf. here **Figs. 108-110**)'.

See the *Contribution* by Amanda Claridge in this volume: *A note for Chrystina Häuber: Drawings of the interior order of the Aula Regia of the Palace of Domitian on the Palatine, once in the British School at Rome*.

**Why I am telling you all this at the beginning of this Chapter? Because we shall look below at Francesco Bianchini's (1738) documentation of architectural marbles from the 'Aula Regia', and will hear the judgements of recent scholars concerning the sculptural decoration of this hall. We shall also realize that Gordon Leith, with his reconstruction drawings of Domitian's Palace (here Figs. 108-110), has provided a very interesting contribution to this discussion; cf. *infra*, in Chapter V.1.i.3.b); at Section III.**

All this information taken together may be useful for new efforts to reconstruct the interior order of the 'Aula Regia'. Contrary to Bianchini's own reconstruction of the 'Aula Regia' (cf. *id.* 1738, his Tab. II. [= here **Fig. 8**]) and to Gordon Leith's reconstruction of the 'Aula Regia' (1913; here **Fig. 108**), in both of which the interior order of this hall has only one colonnade, we know now that "columns in front of the niches [in the 'Aula Regia'] ... were surmounted by further colonnades, taking the ceiling about 30 m (100 RF [*i.e.*, Roman Feet]) above the floor"; cf. Amanda Claridge (1998, 135; *ead.* 2010, 148). Peter Connolly; cf. Connolly and Dodge

(1998, illustration on pp. 222-223) had already considered this information in his reconstruction (which shows three superimposed colonnades); and of course also Sheila Gibson; cf. Claridge (1998, 137, Fig. 57; *ead.* 2010, 150, Fig. 57); and Daniela Bruno (2017, ill. 13).

Bianchini's plan of the *'Aula Regia'* (1738, Tab. II [= here **Fig. 8**]) shows in the middle of his measured ground-plan of the *'Aula Regia'* a reconstruction of the colonnade of the interior order, using for this reconstruction precisely drawn architectural fragments that were found within the *'Aula Regia'*. But because Bianchini does not explain this reconstruction in his text, it is impossible to know, from this etching alone, whether the relevant parts of this reconstruction : column base, column shaft and architrave, had actually belonged *together*. Even if that had been the case, it is for us likewise impossible to know, whether Bianchini's reconstruction belonged to the lower or rather to (one of) the upper colonnade(s) of the interior order of the *'Aula Regia'*. - Provided it is true, what all three : Sheila Gibson in her reconstruction of the interior order of the *'Triclinium'* / *'Coenatio Iovis'* / Banquet Hall; cf. Claridge (1998, 137, Fig. 57; *ead.* 2010, 150, Fig. 57), Peter Connolly and Daniela Bruno in their reconstructions of the interior order of the *'Aula Regia'* have assumed : namely that in both halls the column shafts of the first two superimposed colonnades had (almost, or even exactly) the same heights, whereas in Gibson's and Connolly's reconstructions of the *'Aula Regia'* and of the *'Triclinium'* the third superimposed colonnade is not as high as the two lower ones; cf. Claridge (1998, 137, Fig. 57; *ead.* 2010, 150, Fig. 57); Connolly and Dodge (1998, pp. 222-223); see also Bruno (2017, ill. 13).

In Chapter *V.1.i.3.b*); at Section *III.*, we will, in addition to this, learn from François de Polignac (2009, 507) that of the interior order of the *'Aula Regia'* some fragments are still preserved of both the architrave of the lower colonnade and of the first superimposed colonnade, both of which, in his opinion, were decorated with friezes showing "peopled scrolls", of which he is able to illustrate one badly damaged fragment. Unfortunately, de Polignac (2009, 507) does not discuss Bianchini's (1738, Tab. II [= here **Fig. 8**]) just-mentioned reconstruction in this context.

By reading de Polignac's text, it seems nevertheless to be obvious that one of de Polignac's (2009) colonnades of the interior order of the *'Aula Regia'* is precisely that, which also Bianchini (1738, Tab. II [= here **Fig. 8**]) has reconstructed. And one thing is definitely clear: Gordon Leith (1913) has integrated exactly the same fragments of architraves with "peopled scrolls", and/ or the reconstruction drawings of them, all mentioned by de Polignac (2009), into one of his own reconstruction drawings. But Leith has not integrated his resulting reconstruction of this architrave into his drawing of the *'Aula Regia'*, where these fragments of friezes with "peopled scrolls" were actually found, but instead into his reconstruction of the *'Triclinium'* (here **Fig. 110**) (!).

After having anticipated these results, let's approach this complex subject in the following together, step by step.

For the following discussion; cf. here **Figs. 8.1; 58; 73**, labels: PALATIUM; "DOMUS FLAVIA"; "BASILICA"; "AULA REGIA"; "LARARIUM"; "PERISTYLE"; "TRICLINIUM".

**Pollini** (2017b, 101-103, in his Section: "**Bianchini and the place of discovery**" [*i.e.*, of the **Nollekens Relief, and of the other relief**; cf. here **Figs. 36; 37**]) writes:

"From Bianchini's discussion of the location of his excavations, we know that the reliefs were found in the general vicinity of the *Aula Regia* in the *Domus Flavia* (fig. 6)". He also mentions the colossal basalt statues of Hercules and Bacchus/Dionysus with Pan (now in Parma's Galleria Nazionale) that once decorated niches in the *Aula Regia* [with n. 11]. He indicates that the excavations were "within the Farnese Gardens", created in 1550 by cardinal Alessandro Farnese on the N[orth] side of the Palatine, where indeed part of Domitian's Palace is located [with n. 12]. **This is further confirmed by the captions to the plates (VI-VII) illustrating both reliefs** [with n. 13]. **Both were probably found in or near the *Horti Adonii* or *Adonea*, in an area that**

separates the "private sector" (Domus Augustana) from the "state sector" (Domus Flavia) of the palace, and just northeast of the grand *triclinium* of the latter [with n. 14]. This garden peristyle appears to [page 102] refer to the area just southeast of the Aula Regia, still within the Farnese Gardens, and facing those of the Villa Spada, so designated by Bianchini in the 1738 publication [with n. 15]. The Villa Spada, formerly known as the Villa Mattei, later became the Villa Mills and is shown on P. Rosa's 1868 plan (fig. 7). Rosa excavated and re-excavated where Bianchini had dug, marked on the former's plan by the dark areas along the E[ast] edge of the "state sector". On that plan my dotted ellipse marks the general area in which Bianchini indicates the two [page 103] reliefs were found. The *Adonea* (correctly located in Rosa's plan) most likely refers to the great peristyle of the Domus Augustana (henceforth the "Adonea Peristyle" [my emphasis]).

Cf. the caption of Pollini (2017b, 102): "Fig. 7. Rosa's excavation on [the] Palatine (1868). Dotted ellipse indicates general area in which Bianchini found the two reliefs [*i.e.*, the Nollekens Relief and the other relief; cf. here Figs. 36; 37] (M.A. Tomei in Hoffmann and Wulf [*i.e.*, here A. HOFFMANN and U. WULF-RHEIDT] 2014 [*corr.*: 2004] fig. 25) [my emphasis]".

Note that in Pietro Rosa's plan (1868) the area in question is (erroneously) labelled as follows: HORTI ADONEA?

Note also that Pollini's 'dotted ellipse', which he added to Rosa's plan, covers part of the area of Rosa's "PERISTILIUM" and of the "HORTI ADONEA?". Bianchini cannot possibly have found these two reliefs within this 'dotted ellipse', because he did not 'excavate' this area at all.

For the area, where Bianchini had actually 'excavated' (only within the "BASILICA", the "AULA REGIA" and the "LARARIUM" of the *Domus Flavia*); cf. Bianchini's own report and his own plans : Bianchini (1738, 48-68, Tab. II; Tab. VIII [= both here Fig. 8]). This has been summarized *infra*, in Chapter *The major results of this book on Domitian*, and will be discussed in detail below.

Cf. the caption of Pollini (2017b, 102): "Fig. 8. Reconstruction of *sacrarium* (form of superstructure of tempietto unknown) in the Adonea Peristyle (M.A. Tomei ... [*i.e.*, here M.A. TOMEI 2009] fig. 6)".

With this caption of his Fig. 8, Pollini gives the impression that the identification of this part of Domitian's Palace (*i.e.*, the eastern peristyle) as the "Adonea Peristyle" could possibly be Maria Antonietta Tomei's hypothesis : but when reading Tomei's article (2009) and Pollini's above-quoted account, it becomes clear that this is Pollini's own (erroneous) identification.

In his **note 11**, Pollini writes: "These two figures were sent to Parma in 1724; Bianchini ... [*i.e.*, here F. BIANCHINI 1738] 54 and 58; P. Zanker ... [*i.e.*, here P. ZANKER 2004] 99, fig. 142".

See for those colossal statues of Dionysos and Hercules also R. MAR (2009, 253, Fig. 2 [Dionysos], p. 259, Fig. 5 [Hercules]); and below, in Chapter *The major results of this book on Domitian*, with further references. Those statues were carved from basanite (*basanites*), not basalt, as Pollini (*op.cit.*) erroneously asserts.

In his **notes 12-14**, Pollini (2017b) does not discuss the contributions to the volume *Gli Orti Farnesiani sul Palatino*, edited by Giuseppe Morganti (1990), of which especially the article by Silvano Cosmo (1990) is of importance in the context discussed here; cf. below, and *infra*, in volume 3-2, in *Appendix VI.*; at Section I.

In his **note 15**, Pollini writes: "For the location of the *Horti Adonii* and the Villa Spada, see Bianchini [*i.e.*, here F. BIANCHINI 1738] 36, 44, 68, *et passim*, pl. VIII [= here Fig. 8] (in the middle of the plan and at the bottom just to the left of the excavated Aula Regia and its two flanking halls). **These gardens are better represented in [Pietro] Rosa's 1868 plan, reproduced in ...** [*i.e.*, here A. HOFFMANN and U. WULF-RHEIDT 2004] 16, fig. 25 (= my fig. 7). Cf. also R. Lanciani, *Forma Urbis Romae* (Rome, repr. 1990) sector [*i.e.*, fol.] 29. Bianchini (*ibid.* 48) mentions the gardens of the Villa Spada located in this area. In Bianchini's words the reliefs were found "dentro gli Orti Farnesi, accanto la facciata del giardino Spada". In the late 19th c.[entury], Ch. Hülsen (... [*i.e.*, here C. HÜLSEN 1895] 252-83) tried to identify the possible findspot of the Nollekens

**Relief, placing it east of Domitian's *Cenatio Iovis* in the Domus Flavia, in roughly the same area as I do [my emphasis]**".

The "*Cenatio Iovis*", mentioned by Pollini (2017b, 102, n. 15), is marked on the plan by Mar (2009, 256, Fig. 3 = J. POLLINI 2017b, 101, Fig. 6). Cf. the map SAR 1985: "67", where this structure is called: *Domus Flavia*: "Triclinium" instead. Cf. here Figs. 58; 73, labels: "DOMUS FLAVIA"; "TRICLINIUM". On Claridge's plan of Domitian's Palace (1998, 132-133, Fig. 54; *ead.* 2010, 146-147, Fig. 55) this structure is labelled: "Banquet hall" (cf. also A. CLARIDGE 1998, 137, Fig. 57; *ead.* 2010, 150, Fig. 57, the caption reads: "Domitian's Palace. Reconstruction of the great Banquet Hall and its fountain courts").

**As correctly indicated by Pollini (2017b, 102, n. 15), his passage: "dentro gli Orti Farnesi, accanto alla facciata del giardino Spada", is actually a *verbatim* quote from Bianchini (1738, 48). But note that Bianchini does by no means say on his page 48, nor anywhere else, anything which could justify Pollini's conclusion that "In Bianchini's words the reliefs were found" - "accanto alla facciata del giardino Spada".**

**We can therefore conclude that Pollini's (2017b, 102, n. 15) interpretation of Bianchini (1738, 48) is wrong, and that fact in its turn has resulted in Pollini's (erroneous) indication of the findspots of the Nollekens Relief (and of the other relief, found together with it; cf. here Figs. 36; 37) on Pollini's Fig. 7: 'in or near the Horti Adonea', and precisely within the area indicated by his 'dotted ellipse'.**

**In reality, Bianchini (1738, 64, Tab. V.) is quite outspoken in his description of the findspot of the Nollekens Relief (cf. here Fig. 36): this and the 'other relief' (cf. here Fig. 37) were found within the 'Aula Regia'.**

First, Bianchini (1738, 64) describes the architecture of the 'Aula Regia', ending on pp. 64-66 with the following phrase: "Rimangono ancora in molti siti di questa sala [*i.e.* the 'Aula Regia'] le incrostature di marmi nobili segati in grosse tavole, che la vestivano : e la ossatura, per così dirla , delle pareti è formata tutta di mat- [page 66] mattoni ...".

In the following (on pp. 66-68), Bianchini allows himself a digression on the numerous brick stamps found there, which were produced in *figlinae*, owned by family members of Domitian called 'Flavia Domitilla'. Bianchini observes that there were altogether four ladies carrying that name, and is especially interested in those, who were active in the *figlinae* business. As a result of this inquiry, Bianchini attributes the construction of the 'Aula Regia' to Domitian, because many of these brick stamps were found there.

Then Bianchini returns to his discussion of the finds, excavated within the 'Aula Regia'. Cf. Bianchini (1738, 68): "Qualunque delle suddette Flavie Domitille fosse la padrona di Felice, che lavorò que'mattoni ; appartiene sempre alla età del suddetto Principe [*i.e.*, Domitian] : **e dimostra, che questi saloni ( giacchè ne' prossimi ancora al maggiore** si ritrovano in opera dentro le arcate delle volte simili suggelli di quel Felice ) siano fabbricati da Domiziano. **Si è ricavato altresì il medesimo tempo della struttura** [*i.e.*, of the 'Aula Regia'] **da un basso rilievo qui ritrovato, ove Tito** [*i.e.*, in reality Domitian] **fratello di Domiziano rappresentasi in atto di sacrificare** [*i.e.*, the Nollekens Relief; cf. here Fig. 36], **di cui qui** [cf. on the border: "Tav. VI."] riporto la figura ; con l'altro frammento di una tavola simile [*i.e.*, the other relief = here Fig. 37], **in cui vedesi un** [cf. on the border: "Tav. VII."] **sacrificio fatto da femmine : la quale può credersi che rappresentasse il sacrificio alla Buona Dea solito farsi dalla moglie del Pontefice Massimo quali furono dell'Imperatore Domiziano Giulia di Tito, e Domizia** [my emphasis]".

Pollini (2017b, 100-101) does not discuss Bianchini's above-summarized passage (1738, 64-68) in its entirety. He, therefore, overlooks the true meaning of what Bianchini writes on p. 68 ("**questi saloni ... al maggiore ... Si è ricavato altresì il medesimo tempo della struttura**"), namely that both reliefs had occurred within that grand structure he describes in detail on pp. 64-68: the 'Aula Regia'.

But Pollini (2017b, 100-101) provides an English translation of that part of the quote from Bianchini (1738, 68), which I have written above in bold, and adds useful comments: "The dating of the building [*i.e.*, of the 'Aula Regia'] is also established by the fact that found here was a bas-relief [*i.e.*, the 'Nollekens Relief'] in which Titus, brother of Domitian, is represented in the act of sacrificing, a figure which I show here (pl. VI = fig. 2 here [cf. here Fig. 36]); with [regard to] the other fragment of a similar panel, in which a sacrifice by females is to be seen (pl. VII = fig. 5 here [= here Fig. 37]), the latter [relief] can be understood as representing the sacrifice to the Bona Dea, usually performed by the wife of the Pontifex Maximus, [but] who were [in the case] of the emperor Domitian, Iulia Titi [daughter of Titus] and Domitia [wife of Domitian] [with n. 8; page 101].

Contrary to Bianchini's comment, the headless female figures in the second relief have nothing to do with a sacrifice since no altar or sacrificial accouterments [!] are depicted, nor is there anything to indicate that the niece or wife of Domitian appears; rather, the presence of a bare-breasted female would suggest that the figures are personifications or divinities [with n. 9]. The bare-breasted figure in the center appears to carry in her right hand a small pouch (if indeed the engraver has represented this object correctly [with n. 10]).

In his **note 8**, Pollini writes: "Since Iulia Titi was never the wife of Domitian, the sense of the last phrase is better conveyed by the Latin [*i.e.*, by the Latin version of F. Bianchini's 1738 text, printed opposite the Italian text] ('quo loco habuit Domitianus Iuliam Titi ac Domitiam')."

In his **note 9**, he writes: "The upper torso of one of the other three figures is substantially preserved and shows that the breasts were draped".

In his **note 10**, he writes: "Engravers often misrepresented objects they did not understand, as in the case of the sacrificial 'pitcher' carried by the boy ministrant in the Nollekens Relief (see below)".

**To Pollini's own interpretation of the 'other relief' (cf. here Fig. 37), I will come back below (cf. *infra*, in Chapter V.1.i.3.b); at Section III.)**

Pollini also suggests, where precisely in Domitian's Palace the Nollekens Relief (cf. here Fig. 36) could have been on display. Since he has not realized that Bianchini (1738, 68) actually says that both reliefs were found within the 'Aula Regia', the suggestions he makes for the display of the Nollekens Relief could only be true, provided at least that that relief had occurred in a secondary context.

Let's first of all read what Pollini writes about the presumed state of the Nollekens Relief, when that was found in 1722. Pollini (2017b, 112-113, Section: "Analysis of the condition of the Nollekens Relief") writes: "Also skillfully masked in the 18th c.[entury] were the repairs [page 113] to the relief of not only restored elements but also original parts, including the ancient heads of nos. 6 [Domitian], 8 [*Genius Senatus*], and 10 [boy ministrant], **which were presumably found separated at the time of excavation, when the relief itself may have been found in as many as 6 pieces** (along all of the principal cracks). (If the relief were not broken when first discovered, then we would have to presume that it suffered some serious mishap thereafter) [my emphasis]."

Let's now turn to Pollini's suggestions about where the Nollekens Relief could have been on display within Domitian's Palace.

Cf. Pollini (2017b, 103, Section: "Bianchini and the place of discovery"): "The imperial sacrifice on the Nollekens Relief would have been appropriate for display in a state room of the Domus Flavia. One possibility is the adjacent room on the E[ast] side of the Aula Regia (Salon du [!] trono) (fig. 6). This room (which Bianchini called the 'Lararium' [cf. here Figs. 8; 8.1, label: "LARARIUM"; Figs. 58; 73, labels: "DOMUS FLAVIA"; "LARARIUM"]) apparently had an altar (later demolished) revetted with marble and set against the middle of its back S[outh] wall [with n. 19] ... The depth of each of the 5 niches is suitable at 1.18 m [with n. 21]. Another possible location for the Nollekens Relief is in the area of the great colonnaded vestibule to the southeast [with n. 22], next to the 'Lararium', or in one of the suites of rooms between the two parallel peristyles of the Domus Flavia and the Domus Augustana (fig. 6) [with n. 23]."

In his notes 19, 21-23, Pollini provides references and further discussion.

**The correct findspot of the Nollekens Relief, as indicated by Bianchini (1738, 68) in the above-quoted passage, was already known to Silvano Cosmo. I therefore anticipate in the following a passage, written below** (cf. *infra*, in volume 3-2, in *Appendix VI.*; at Section I.): 'When we compare Silvano Cosmo's plan (1990, 837, Fig. 8 [= here Fig. 39], illustrated by T.P. WISEMAN 2019, 123, Fig. 59) with the relevant detail of G.B. Nolli's map (cf. C. KRAUSE 1990, 122, Fig. 1), also illustrated by T.P. Wiseman (2019, 43, Fig. 16), it turns out that Bianchini had 'excavated' in the so-called *Aula Regia* and in the immediately adjacent halls '*Basilica*' and '*Lararium*', both within the '*Domus Flavia*'; cf. here **Figs. 58; 73**, labels: "DOMUS FLAVIA"; "BASILICA"; "AULA REGIA"; "LARARIUM". - For the modern name '*Aula Regia*'; cf. Claridge (1998, 132-133, Fig. 54, p. 135; *ead.* 2010, 146-147, Fig. 55, p. 148): "'Aula Regia' or Audience Chamber". See also the map SAR 1985, labels: 64: *Domus Flavia*: "*Basilica*"; 65: *Domus Flavia*: "*Aula Regia*"; 66: *Domus Flavia*: "*Lararium*".

**As we have seen above, Pollini (2017b, 101) suggests instead that the Nollekens Relief (and the other relief, found by Bianchini together with it) were found in or near the *Adonea*, an ancient toponym, which Pollini (erroneously) locates within the *Domus Augustana*. There are several problems connected with Pollini's just quoted hypothesis, that will be discussed in the following.**

Francesco Bianchini's own measured plan of Domitian's Palace, where he had found the Nollekens Relief (cf. *id.* 1738, his Tab. VIII. [= here Fig. 8]), is drawn to "Scala Pedum Romanorum Mille", and is dated 1728. Note that in the plans of Bianchini (1728, published 1738) and of Pietro Rosa (1868 = Pollini's Fig. 7) north is approximately in the middle of the bottom of their plans. - For the problem involved; cf. below, in Chapter *The major results of this book on Domitian* and here Fig. 8.1, with its relating caption.

By writing: "... Both [reliefs] were probably found in or near the *Horti Adonii* or *Adonea*, in an area that separates the 'private sector' (Domus Augustana) from the 'state sector' (Domus Flavia) of the palace, and just northeast of the grand *triclinium* of the latter [my emphasis]" - Pollini (2017b, 101) refers to Pietro Rosa's plan of 1868, in which Rosa has tentatively located the: "HORTI ADONEA?" precisely there, where Pollini locates the *Horti Adonea* in this passage.

**Bianchini (1738, 68; cf. his plan Tab. VIII. [= here Fig. 8]) does not write that the Nollekens Relief was found "in or near the *Horti Adonii* or *Adonea*", as Pollini (2017b, 101) asserts. On the contrary, Bianchini makes clear by the lettering on his plan Tab. VIII, that the area, identified by him as the *Adonea*, belonged to the Orti of the Conti Spada. Note that Bianchini (1738) and Rosa (1868) locate the *Adonea* at the same site within Domitian's Palace.**

In addition to this, Bianchini (1738, 68; cf. his plan Tab. VIII. [= here Fig. 8]) writes explicitly that the Nollekens Relief and the other relief were found in that hall of the Palace, where also "the colossal basalt statues of Hercules and Bacchus/Dionysus with Pan (now in Parma's Galleria Nazionale)" were excavated, as Pollini writes (cf. *id.* 2017b, 101, n. 11, quoting for that, F. BIANCHINI 1738, 54 and 58). - And that hall is located within the '*Domus Flavia*', and was by Bianchini himself (cf. his plan Tab. II. [= here Fig. 8]) and is still today referred to as '*Aula Regia*'.

**The captions of the illustrations of both reliefs; cf. Bianchini (1738, Tab. VI.: the Nollekens Relief (cf. here Fig. 36): and Tab. VII.: 'the other relief' = here Fig. 37) add to this *expressis verbis* that the area in question, where Bianchini found those two reliefs, belonged to the Orti Farnesiani.**

See the caption of the etching of the Nollekens Relief; cf. Bianchini (1738, Tab. VI.; cf. here Fig. 36):

"1. Imp. Titus coronatus et velatus sacrificat super aram ... [follows the description of the other figures that appear on this relief] Anaglyphum marmoreum repertum anno MDCCXXII in Palatio Caesarum intra Hortos Farnesianos Hieronymus Rossi incid."

See also the caption of 'the other relief'; cf. Bianchini (1738, Tab. VII. [= here Fig. 37]): "Fragmentum anaglyphi repertum in Palatio Caesarum intra Hortos Farnesianos MDCCXXII Hieronymus Rossi incid."

Whereas Bianchini (1738) indicates with the lettering on his plan Tab. VIII. [= here Fig. 8]) that the area, (erroneously) identified by him - by Pietro Rosa (1868) and by Pollini (2017b) - as the *Adonea*, belonged to the Orti of the Conti Spada: "Pars Mediana Palatii Caesarum Continet Theatrum Tauri et Hortos Adonios ubi hodie Horti Co : Spada".

Note that underneath this lettering (*i.e.*, in reality to the north of it), Bianchini has drawn the ground-plan of the relevant garden. And underneath the drawing of this garden (*i.e.*, in reality to the north of it) appears his lettering: "ADONEA sive Horti Domitiani Augusti [my emphasis]".

When looking for the first time at Bianchini's (1738, Tab. VIII. [= Fig. 8]) 'Adonis garden' in Domitian's Palace, I had the impression of knowing this garden already, and therefore read his detailed explanations, given in the letterings on his plan Tab. VIII. : only to find out that Bianchini did not draw the flower beds and a central pool of his *Adonea* after some real ancient architectural finds seen by him at this site. His layout of the *Adonea* is instead inspired by the garden, represented on the Severan Marble Plan, which already Giovan Pietro Bellori had correctly identified as 'Domitian's garden of Adonis'. The garden, which appears on these fragments of the Severan Marble Plan, has now been identified with the excavated garden on the large terrace (measuring circa 135 × 165 m = 19.000 square metres) of that part of Domitian's Palace, which is located at the north-east corner of the Palatine, in the area of the (former) Vigna Barberini. - To all this I will come back below. Bianchini (1738) comments on his representation of the *Adonea* in the caption of his plan Tab. VIII. [= here Fig. 8] as follows: "Indicationes adhibitae ad Ichnographiam partis Orientalis Palatii Caesarum quae et DOMVS AVGVSTANA ... Κ Ψ Φ Horti Adonii expressi in Vestigio Veteris Romae ['*Vestigio Veteris Romae*' is the title of Giovan Pietro Bellori's book of 1673, which will be discussed below], ubi à Domitiano exceptum Apollonium Thyanaeum [?] scribit Philostratus, observante in Notis Belloris : à quo eoru structura juxta morem Assyrium erudite explicatur".

**Bianchini (1738, 68; cf. his plan Tab. VIII. [= here Fig. 8]) mentions the find of the Nollekens Relief (F. BIANCHINI 1738, Tab. VI. [= here Fig. 36]) and that of 'the other relief' (F. BIANCHINI 1738, Tab. VII. [= here fig. 37]) within the 'Aula Regia', that is to say that "sala", which is correctly indicated on Cosmo's plan (1990, 837, Fig. 8 [= here Fig. 39]) as the area, where Bianchini had 'excavated'.**

Cf. the map SAR 1985, label: 65: Domus Flavia: "Aula Regia" (for the relevant detail of this map: LTUR IV [1999] fig. 6, *s.v.* Palatium); cf. Claridge (1998, 132-133, Fig. 54, p. 135; *ead.* 2010, 146-147, Fig. 55, p. 148): "'Aula Regia' or Audience Chamber".

### *Domitian's 'Adonis Garden', the Adonaea*

That part of Domitian's Palace on the Palatine, which Francesco Bianchini (1738, plan Tab. VIII. [= here Fig. 8]) and Pietro Rosa (1868 [= J. POLLINI 2017b, Fig. 7]) identified with Domitian's *Adonea*, whom Pollini (2017b) now follows, is not any more regarded as such. The *Adonaea* were instead a garden on the huge (in part) artificial terrace, built by Domitian within his Palace at the north-east corner of the Palatine, known from fragments of the Severan Marble Plan which carry the inscription *DI(aeta) (a)DONAEA*. Later this terrace was occupied by the Vigna Barberini.

**With the identification of the ancient garden at the Vigna Barberini with Domitian's *Diaeta Adonea*, I follow Filippo Coarelli (2009b; 2012; 2017), and I hope to have found further arguments that support his hypothesis (cf. *infra*).**

Cf. Coarelli (2009b, 90-91, Figs. 32; 33: "Frammento della pianta marmorea severiana con *Adonaea*. Lo stesso con la ricostruzione teorica del portico e l'aggiunta del frammento con la scritta *DIA*"; cf. F. Coarelli, in: F. COARELLI 2009a, pp. 438-439. cat. no. 29). See most recently and very detailed for this hypothesis: Filippo

Coarelli (2012, 497- 512, Chapter: "La Formazione dei Palazzi Imperiali; Section: "10. Il complesso di Vigna Barberini"; esp. pp. 515-530; at number 5.).

Of the same opinion is Maria Antonietta Tomei (2009, 288). - See now also Eric M. Moormann (2018, 172, n. 67), and Ulrike Wulf-Rheidt (2020, 186).

**I have elsewhere summarized the recent findings concerning Domitian's 'Adonis Garden' within his Palace on the Palatine; cf. Häuber (2014a, 301-302; see also p. 684) :**

**"The excavations in the Vigna Barberini on the Palatine (map 3 [= here Fig. 71], labels: PALATIUM; Vigna Barberini) have shown that the rectangular terrace which enlarged the plateau of the hill was finished under Domitian as part of his palace [with n. 107]. So far only one third of the building has been uncovered; the substructures of its north wing may have accommodated the *Tabularium principis* [with n. 108]. In the large garden of this building occurred several rows of half *amphorae* embedded in the soil, but upside down. According to Françoise Villedieu [with n. 109], this unusual practice checked the growth of those plants.**

**The excavators do not follow Giovan Pietro Bellori [with n. 110], who was first to identify this building with the *aule Adonidos* [with n. 111], a building in the Palatine palace where Domitian sacrificed to Minerva and received Apollonius of Tyana (Philostratus, VA 7, 32) [with n. 112]. Philostratus says that this place 'was bright with baskets of flowers, such as the Syrians at the time of the festival of Adonis make up in his honour' [with n. 113]. This old hypothesis was based on the fact that the fragments nos. 46a-d of the Severan marble plan [with n. 114] show a large garden, the lettering of which Coarelli [with n. 115] reconstructs as *Di(aeta)* [page 302] (*a*)DONAEA. These fragments do not show adjacent structures, which is why the location of the represented building is controversial [with n. 116].**

**Coarelli [with n. 117] believes that these half-*amphorae* prove his identification of this building as the *Diaeta Adonaea*. I follow him, since, in my opinion, there is no alternative on the Palatine (maps 3 [= here Fig. 71]; 6, labels: DI(aeta) (a)DONAEA; S. Sebastiano; 'AEDES ORCI' [with n. 118]; SOL INVICTUS ELAGABALUS; IUPPITER ULTOR; Vigna Barberini); also Maria Antonietta Tomei, who has studied the gardens within the various *domus* and imperial palaces on the Palatine for many years, shares this opinion [with n. 119].**

**Linda Farrar, taking it for granted that this building is, in fact, the *Adonaea*, comments on these finds from the perspective of garden studies; in my opinion, her observations corroborate Coarelli's hypothesis:**

**"The pots had been set in the ground into a bed of marble chippings and because they were placed so close together, the pots may have served as receptacles for plants associated with the cult of Adonis. A wider spacing would indicate permanently planted pots of flowers or shrubs instead ..."**

**And on the *Diaeta Adonaea* of the Severan marble plan Farrar remarks: "... An elongated rectangular feature across the centre of the garden could be a *euripus*, and the series of irregularly shaped boxes that surround it may be flower beds. However, four blocks, each of four lines (with serifs) have remained a puzzle; these perhaps detail benches or beds upon which the pots containing 'Adonis Gardens' could have been placed. After the plants had died, they could then have been thrown into water, in this case the *euripus*, to complete the full ritual" [with n. 120; my emphasis].**

In my **note 107**, I quote: "M.A. Tomei and F. Villedieu have recently excavated at its north-east corner a structure which they identify as the *coenatio rotunda* in the *Domus Aurea* (Suet., *Nero* 31); cf. Carandini *et alii* 2011, p. 143. They [*i.e.*, A. CARANDINI *et al.* 2011, 143] themselves interpret this structure as a "torre-tempietto" instead and identify the *coenatio rotunda* with the octagonal room within the 'Esquiline Wing' of

the *Domus Aurea* [cf. here **Fig. 71**, labels: MONS OPPIUS; DOMUS AUREA]; cf. p. 145, fig. 11; Carandini, Carafa 2012, Tav. 110-112".

Cf. **note 108**: "Coarelli 2009b, p. 78 with ns. 104, 105; cf. **Villedieu 2009**, pp. 246-247; **according to her the size of the terrace measured c. 135 × 165 m / 19.000 square meters** [my emphasis]". - **For the *Tabularium Principis*, which was certainly accommodated within this substructure; cf. now F. COARELLI 2012, 533-538, Chapter: "V La Formazione dei Palazzi Imperiali"; Section: "11. Tabularium Principis"; discussed *infra*, in volume 3-2, at Appendix IV.b.2.).**

**To my above-quoted note 109, I should like to add a list of publications on the *cenatio rotunda* in Nero's *Domus Aurea*, which has now been identified with the structure, excavated at the (later) Vigna Barberini.**

Cf. Françoise Villedieu (2010; *ead.* 2011a; *ead.* 2011b; *ead.* 2012; *ead.* 2015a; *ead.* 2015b; *ead.* 2016, 107, n. 2; *ead.* 2021 [with complete bibliography]); Filippo Coarelli (2012, 418 with n. 220, p. 504 with n. 529, p. 509 with n. 540); *id.* 2015; *id.* 2021), and Edoardo Gautier di Confiengo (2021), the findings of which the author was kind enough to share with me. Gautier di Confiengo (2021) and Eric M. Moormann (2020b, 19-23), to which Gautier di Confiengo has alerted me as well, compare Nero's *cenatio rotunda* on the Palatine also with the octagonal room within the 'Esquiline Wing' of the *Domus Aurea*. Both of which had approximately the same dimensions : diameter circa 16 m, but the 'Esquiline Wing' of the *Domus Aurea* on the *Mons Oppius* was, as Moormann (2020b, 21) writes: "situato in una parte secondaria ed intima della residenza", whereas the *cenatio rotunda* of the Vigna Barberini, given its location within Nero's *Domus Aurea* located on the Palatine, that served the emperor's official functions like receptions, was obviously "una struttura per i banchetti di stato ufficiale"; cf. Moormann (2020b, 21 with n. 19, providing references). See also Thorsten Opper (*Nero the man behind the myth*, 2021, p. 215: Chapter: "The new Apollo", p. 224: Section: "Post-fire reconstruction"; p. 225, "Fig. 169b Map showing the expansion of imperial palace buildings and monumental squares after the fire of AD 64, labels: 3b ["Cenatio Rotunda?"]; 5b ["Esquiline building"]".

Edoardo was, in addition to this, kind enough to send me the '3D'-reconstructions of the *Domus Aurea*, created by Marco Fano and published by Clementina Panella (2013, 101, Fig. 122, p. 113, Fig. 136).

The caption of Panella's Fig. 122 reads: "Ricostruzione 3D del paesaggio della *Domus Aurea* vista da Est. (Elab.[orazione] Marco Fano)". The caption of her Fig. 136 reads: "Ricostruzione 3D dell'atrio vestibolo e dello *stagnum* guardando verso il Palatino/Velia. (Elab.[orazione] Marco Fano)".

Into these two reconstructions, Panella's Figs. 122 and 136, is also integrated Nero's *cenatio rotunda* on the Palatine. For a plan, into which both Nero's *cenatio rotunda* on the Palatine and the octagonal room within the 'Esquiline Wing' of the *Domus Aurea* on the *Mons Oppius* are likewise integrated; cf. Villedieu (2010, 1090,

Fig. 1.: "Vestiges du palais de Néron ...", who refers to her n. 2 for the cartographic sources of her plan. Interestingly, Villedieu's location of Nero's *cenatio rotunda* within the area of the (later) Vigna Barberini differs from that of the location of this structure, as assumed on Marco Fano's '3D'-reconstructions of the *Domus Aurea*, published in Panella (2013). Fano's location of Nero's *cenatio rotunda* on the Palatine was also marked on a plan, that had been added as a loose sheet to the exhibition-catalogue on Nero, edited by Maria Antonietta Tomei and Rossella Rea (*Nerone*, 2011), and has the following title: "Nerone Nero 12.04.-18.09.2011 Il Percorso della Mostra The Exhibition Itinerary", label 7: "coenatio rotunda".

In our maps, I have followed the location of the *cenatio rotunda*, as suggested by Villedieu (2010, Fig. 1).

Cf. here **Figs. 58; 71; 73**, labels: PALATIUM; DI(aeta) (a)DONAEA; S. Sebastiano; "AEDES ORCI"; SOL INVICTUS ELAGABALUS; IUPPITER ULTOR; site of Nero's CENATIO ROTUNDA; Vigna Barberini; MONS OPPIUS; DOMUS AUREA.

To all this, I should like to add another comment: Françoise Villedieu has now published a new reconstruction of the sanctuary of *Sol Invictus Elagabalus* within the former Vigna Barberini (cf. *ead.*, "Le sanctuaire de *Sol Elagabalus* sur le Palatin : quelques détails sur la construction", 2022).

**Also to my above-quoted note 117, I should like to add a comment: J.-C. Grenier and F. Coarelli (1986) have suggested that the Antinous Obelisk stood originally in the Vigna Barberini, on the tomb of Antinous.**

Jean-Claude Grenier and Filippo Coarelli (1986) and Coarelli (2012, 497- 512, Chapter: "La Formazione dei Palazzi Imperiali; Section: "10. Il complesso di Vigna Barberini"; esp. pp. 530-532; at number 6.), have assumed the tomb of Antinous and the original location of the Antinous Obelisk (here **Figs. 101.a; 101.1**) at the above discussed *Diaeta Adonaea* on the Palatine. Later, Grenier (2008) has suggested, followed by Coarelli (2012), that the tomb of Antinous and the Antinous Obelisk could alternatively have stood in the *Horti Domitiae*; the owner of this estate was the natural mother of the Emperor Hadrian. There Hadrian should later also erect his own Mausoleum (here **fig. 58**). I myself have instead suggested (in 2017, repeated in this *Study*) that the real tomb of Antinous stood at Antinoopolis in Egypt, and that, therefore, the Antinous Obelisk can only have stood on a cenotaph of Antinous, which may have stood in the *Horti Domitiae*. Whereas Coarelli (2017, 669) has rejected my relevant hypothesis, the Egyptologist Richard Bruce Parkinson (2019, 220, with n. 99) has followed it.

For a discussion of all that; cf. below, at *A Study on Hadrian's portrait-statue from Hierapydna* (cf. here **Fig. 29**); at *The research published in my earlier Study (2017): on the tomb of Antinous at Antinoopolis, on his (alleged) tomb at Hadrian's Villa near Tivoli, on his cenotaph at Rome, and on the two pertaining Antinous Obelisks.*

### **Chapter V.1.i.3.b); Section III. Does the design of the Nollekens Relief reflect the topographical context, for which Domitian had commissioned it?**

Pollini (2017b, 113, Section: "An emperor sacrificing") describes Domitian's figure on the Nollekens Relief in detail: "As the primary and **tallest figure**, the emperor [Domitian; **no. 6**] is shown in the middle, sacrificing over a small altar laden with offerings and decorated with ox-heads and garlands. He wears the noble and voluminous toga; this is probably the *toga picta*, the embroidered purplish toga of the *triumphator*, and would originally have been painted. The emperor's head [at least on the photo here **Fig. 36**] is well preserved and shows no evidence of recutting. Under his veil he wears a laurel crown, the tips of which appear to be broken off. The other figures probably also wore laurel crowns at the sacrifice, with the exception of the helmeted female personification (**no. 11** [i.e., the *Dea Roma*]) [with n. 63]. On the emperor's feet are *calcei*

*patricii*, the high double-knotted red shoes of the patriciate [with n. 64]. The location of the altar and the turn of his [*i.e.*, Domitian's] body suggest that the emperor was pouring a libation from a *patera*, evidently correctly re-created by the restorer. **In his other hand, the emperor holds a large book scroll of a type not generally known in antiquity; ancient book scrolls held by Roman magistrates, by contrast, were typically very small** [with n. 65; my emphasis]".

In his **notes 63-65**, Pollini provides references and further discussion.

In his **note 65**, Pollini writes: "See, e.g., the scroll held by Gaius Caesar on the so-called Sandaliarius Altar from Rome, now in the Uffizi Gallery and the "Tiberius Relief" on loan to the Getty Villa Museum. For the former, see ... [*i.e.*, here J. POLLINI 1987] 33-34, pl. 14.1; for the latter ... [*i.e.*, here J. POLLINI 2012] 97, fig. II.31a".

As on Frieze A of the Cancelleria Reliefs (cf. here **Fig. 1; Figs. 1 and 2 drawing: figure 6**), Domitian holds, in my opinion, also on the Nollekens Relief (cf. **Fig. 36: figure 6**) a *rotulus* in his left hand.

**Pollini (2017b, 113) does not explain the just-mentioned iconographic feature 'book scroll', nor does he, in this case, draw comparisons between the Nollekens Relief and the Cancelleria Reliefs.**

Concerning the *rotulus*, held by Domitian (now Nerva; cf. here **Figs. 1; 1 and 2 drawing: figure 6**) himself on Frieze A of the Cancelleria Relief, and concerning the *rotulus*, carried for Vespasian by one of the men of his entourage on Frieze B of the Cancelleria Reliefs (cf. here **Figs. 2; 1 and 2 drawing: figure 17**), I myself have followed the interpretation, given by Erika Simon (1963, 9, 10, quoted *verbatim supra*, in Chapters I.2.1.a), and V.1.b), and *infra*, at Chapter VI.3.), and repeat it here again: 'to both emperors on the two friezes of the Cancelleria Reliefs [cf. here **Figs. 1; 2; Figs 1 and 2 drawing**] belongs a *rotulus*. Domitian (now Nerva) on Frieze A carries it himself in his left hand, whereas for Vespasian a *rotulus* is carried by a man of his entourage. Both *rotuli* contain the *vota* of these emperors, made by them to the gods, praying them to be granted a victory in the war, to which Domitian on Frieze A is shown as leaving, whereas in Vespasian's case on Frieze B this victory has already been granted - according to Simon (1963, 9, 10) these were the *vota* taken by the commander of an army *pro reditu*'. To this I will come back below.

Pollini (2017b) describes also the other 10 figures that appear on the Nollekens Relief in detail. I will only mention them shortly. For the following, see the numbering of these figures on here **Fig. 36**. As we have already heard above, the Emperor Domitian is **figure no. 6** on this relief.

Cf. Pollini (2017b, 113, Section: "Cult personnel"): the **figure no. 5** in the background is a *tibicen*, **nos. 2 and 10** are "young sacrificial attendants, *ministri*". They are precisely "paedagogiani (servile pages)", and belong to Domitian's household. Cf. pp. 114-115 (Section: "Lictors and a soldier"): two lictors (**nos. 1 and 4**) with "*fasces laureati* which imperial *fasces* bore usually on the occasion of a triumph [with n. 76; page 115] ... Both lictors wear low, common-style shoes (*calcei*) appropriate for freedmen, the class to which most lictors belonged [with n. 78]. Both are *paludati*, wearing not a civic toga but a tunic and a military cloak, fastened with a round *fibula*. **The same type of tunic and military cloak fastened with a *fibula* is worn over the shoulders of the background figure (no. 3), but he bears no *fasces* over his left shoulder and because of his beard** [with n. 79] **is probably a Roman soldier of a stock type** [my emphasis]".

In his **notes 76, 78-79**, Pollini provides references.

Pollini (2017b, 115, n. 79) writes:

"Traces of the beard of this figure [**no. 3, i.e.**, of the soldier] are barely visible in the present relief (fig. 12 [*i.e.*, the Nollekens Relief, cf. here **Fig. 36**, illustrating with this photograph its current, badly damaged state]). For the bearded soldiers in the 1st. c.[entury] A.D., see A. Bonanno, *Portraits and other heads on Roman historical relief up to the age of Septimius Severus* (BAR S6; Oxford 1976)".

*In the following, I allow myself a digression on the fact that wearing a beard could identify a man as a soldier - as for example Hadrian in all his portrait-types (cf. here Figs. 3; 29)*

Hans Rupprecht Goette (*Schwertbandbüsten der Kaiserzeit. Zu Bildtraditionen, Werkstattfragen und zur Benennung der Büste Inv. 4810 im Museum der bildenden Künste in Budapest und verwandter Werke. 1. Die Schwertbandbüste Inv. 4810 im Museum der Bildenden Künste*, 2021, 22-23) writes about the fact that wearing a beard may characterize a represented man as a soldier: "Daraus mag man schließen, daß der Portrait-Typus Δο [cf. here **Fig. 3**] des Hadrian bereits sehr viel älter war. Einen historischen Anlaß für ein Bildnis des Hadrian mit jugendlichen Zügen und einer militärisch attributierten Büste oder Gestalt könnte seine Auszeichnung durch Traian gewesen sein, die während des dakischen Feldzuges 105/106 stattfand. Er war damals zum *legatus leg. I Minerviae* ernannt worden [with n. 63]. Bedeutend war zudem die damalige Übergabe eines Siegelringes, die traditionell seit Beginn des Prinzipats, also schon unter Augustus und dann immer wieder durch weitere Kaiser - bei der hier genannten Übergabe soll es sich um ein Siegel des Nerva gehandelt haben, der es demnach bereits seinem Nachfolger Traian überge- [page 23] ben hatte -, als Zeichen der Ernennung zum Caesar verstanden werden konnte [with n. 64]. Freilich scheint auch in jenen früheren Jahren das Alter Hadrians (mehr als 30 Jahre) zu der im Bildnistypus dargestellten jungen Erscheinung nicht recht zu passen - wenn denn der ›schütterer‹ und daher als ›jugendlich‹ verstandene Bart überhaupt auf geringes Alter hinweisen soll. Denn es ist zu bedenken, daß damals (um 106 n. Chr.) bei Traian selbst noch die Unbärtigkeit modisch war; ein Bart wird in flavischer und traianischer Zeit vor allem in militärischen Zusammenhängen gezeigt - sei es bei Soldaten auf Staatsreliefs, sei es auch bei einigen Schwertbandbüsten [with n. 65]. Der noch nicht die Wangen, die Oberlippe und das Kinn vollständig bedeckende Bart Hadrians beim Bildnis im Typus Δο sollte deshalb wohl nicht ausschließlich als Zeichen seines Alters oder seines ›Nachfolgeanspruchs‹ im Sinne Linferts [1976] [with n. 62] interpretiert werden - beides mag durchaus mitschwingen. Wichtiger ist, daß sich hierin ein Hinweis auf den erfolgreichen Militär spiegelt, als der Hadrian nach der Verleihung der *dona militaria* wahrgenommen werden konnte und wohl auch sollte. Dies wurde ihm bei seiner auf das Heer gestützten Herrschaftübernahme im Sommer 117 n. Chr. nochmals nützlich".

For Goette's (2021, 22-23) above-quoted passage, discussed in more detail and comprising the quotation of his footnotes; cf. *infra*, in volume 3-2, at:

*A Study on the consequences of Domitian's assassination .... Or: The wider topographical context of the Arch of Hadrian alongside the Via Flaminia which led to the (later) Hadrianeum and to Hadrian's Temples of Diva Matidia (and of Diva Sabina?). With discussions of Hadrian's journey from Moesia inferior to Mogontiacum (Mayence) in order to congratulate Trajan on his adoption by Nerva, and of Hadrian's portrait-type Delta Omikron (Δο) (cf. here **Fig. 3**). With The fourth and the fifth Contribution by Peter Herz, with The first Contribution by Franz Xaver Schütz, with The Contribution by John Bodel, and with The second Contribution by Angelo Geißen; at Chapter VI.2. Hadrian's portrait-type Delta Omikron Δο (here **Fig. 3**), and at Chapters VI.2.1.-VI.2.4.*

For Hadrian's portrait-type Delta Omikron Δο (here **Fig. 3**); cf. also below, at *The first Contribution by Angelo Geißen: Bemerkungen zur frühen Münzprägung Hadrians in Alexandria*; at *A Study on the colossal portrait of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori at Rome* (cf. here **Fig. 11**). With The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great); and at Chapter *The major results of this book on Domitian*.

**Only after this Chapter had already been published on our Webserver, have I been alerted to the article by Andreas Schmidt-Colinet ("Des Kaisers Bart. Überlegungen zur Propagandageschichte im Bildnis des römischen Kaisers Hadrian", 2005).**

In his English *abstract*, Andreas Schmidt-Colinet (2005, 342-342) writes:

"Differently from all his predecessors, the roman emperor Hadrian (117-134 [corr.: 138] A. D.) did wear a beard. This iconographical change usually is explained as an expression of the philhellenism of this emperor. That means, in adopting the beard of the greek philosophers Hadrian created the image of an intellectual

(`Zeitgesicht´). But, combining archaeological evi- [page 343] dence with written antique [corr.: ancient] sources it can be shown, that Hadrian does not wear the beard of greek philosophers but the beard of roman soldiers or officers, which he had wearred [corr.: worn] already before he became emperor. That means, the beard can be explained as an expression of military virtues and as the emperor's *hommage* [corr.: *homage*] to the roman army. Thus, the portrait of the emperor is an expression of his loyalty to the soldiers. It was this loyalty that Hadrian had to proove [corr.: prove] and to demonstrate especially because of his declared realistic policy of peace. Nevertheless, the `intellectuals´ could understand the beard of the emperor soon as an expression of his philhellenism and with this as part of the image of an intellectual".

Cf. Rainer Gries and Wolfgang Schmale (2005, 342-343: Chapter: "Zusammenfassungen in englischer Sprache - English Summaries"; Section: "Propaganda mit menschlichem Antlitz": "Andreas Schmidt-Colinet (Vienna) Des Kaisers Bart Überlegungen zur Propagandageschichte im Bildnis des Kaisers Hadrian").

Like many scholars before him, Schmidt-Colinet (2005) asks, why, after all his predecessors had been represented clean-shaven, Hadrian decided to be the first emperor wearing a beard. Contrary to those scholars, Schmidt-Colinet does not believe that Hadrian wanted to appear as a *graeculus*, and that for two reasons. Schmidt-Colinet (rightly) suspects that Hadrian was *a*) already wearing this kind of beard before he went to Greece; and *b*) the kind of beard Hadrian was wearing throughout his reign was not the long beard, worn by Greek philosophers (cf. A. SCHMIDT-COLINET' 2005, 102-104, his Abb. 5; 6), but instead the short-cut beard of Roman soldiers. For such beards of Roman soldiers, Schmidt-Colinet (2005, 112-114, Abb. 10a; 10b) illustrates the two bearded soldiers on Frieze A of the Cancelleria Reliefs: his Fig. 10a shows Domitian's bearded *armiger* (cf. here **Fig. 1; Figs. 1 and 2 drawing: figure 14**), and his Fig. 10b shows Domitian's bearded *primipilus* (cf. here **Fig. 1; Figs. 1 and 2 drawing: figure 8**).

**Schmidt-Colinet (2005), therefore, in my opinion convincingly, concludes that the Emperor Hadrian, by wearing in all his portraits this kind of short-cut beard, wanted to be characterized `as a soldier´.**

For the `soldier's beard´, Hadrian was wearing as emperor; cf. here **Fig. 29**, his portrait from Hierapydna at Istanbul. As we shall see below, also Schmidt-Colinet (2005, 115, Abb. 11) refers to this statue.

Schmidt-Colinet (2005, 95, Abb. 1a-b) begins his discussion of the question, why the Emperor Hadrian was represented bearded, with the first portrait-type created for him as emperor, called "Stazione Termini". Schmidt-Colinet ignores Hadrian's above-mentioned portrait-type *Delta Omikron Δο* (here **Fig. 3**), which, in my opinion, shows Hadrian as a circa 20 years old man. This first portrait-type of Hadrian represents the future emperor bearded (and endowed with a baldric !), and, as we have seen above, Hans Rupprecht Goette (2021, 22-23), therefore, rightly observes that already this portrait-type characterized Hadrian `as a soldier´.

Schmidt-Colinet (2005, 107) states that, according to his knowledge, there is so far no proof that Hadrian was already bearded before becoming emperor, although it is commonly assumed that he was wearing a beard since he had been an officer. To this Schmidt-Colinet adds that it would be interesting to know, whether or not Hadrian had decided to wear a beard before his first documented stay in Greece in AD 112: "In der Forschung wird allgemein angenommen, dass Hadrian bereits als Offizier vor seinem Regierungsantritt einen Bart getragen hat, was aus verschiedenen Gründen wahrscheinlich, aber schwer zu beweisen ist. Interessant wäre insbesondere zu wissen, ob Hadrian den Bart bereits trug, bevor er in unmittelbare Berührung mit dem Griechentum kam. Auch dies kann nur wahrscheinlich gemacht, aber nicht bewiesen werden. Der früheste eindeutige Beleg für Hadrians unmittelbaren Kontakt zu Griechenland ist sein inschriftlich für das Jahr 112 n. Chr. belegtes Archontat in Athen [with n. 24]".

In his **note 24**, Schmidt-Colinet writes: "FgrHist 2 B, 257 p. 1184: Felix Jacoby, Die Fragmente der Griechischen Historiker II B. 1929, 1184 Nr. 257 XXV; vgl. [vergleiche] Niemeyer, Hadrians Bart [1983], 42".

Anthony R. Birley (1996, 662) wrote about Hadrian: "In 112 he was archon at Athens, where he was honoured with a statue; its inscription (*ILS 308* = Smallwood [1966] 109) confirms the career in the SHA".

Concerning the questions, posed in Schmidt-Colinet's (2005, 107) above-quoted passage, it is now possible to answer them thanks to research summarized in this *Study* that was focused on Hadrian's portrait-type Delta Omikron ( $\Delta o$ ), here **Fig. 3**.

It is true, what Schmidt-Colinet assumed, that Hadrian, already as an officer, was wearing a beard. This assumption is proven by Hadrian's portrait-type Delta Omikron ( $\Delta o$ ), here **Fig. 3**. Also Colinet's second question can be answered thanks to this research: Hadrian's portrait-type Delta Omikron ( $\Delta o$ ), here **Fig. 3** definitely shows him *before* Hadrian's first documented sojourn in Greece in AD 112..

See again *infra*, in volume 3-2, at *A Study on the consequences of Domitian's assassination ...*; at Chapter VI.2. *Hadrian's portrait-type Delta Omikron  $\Delta o$*  (here **Fig. 3**), and at Chapters VI.2.1.-VI.2.4.

Cf. Chapter VI.2.1. *H.R. Goette's (2021) discussion of Hadrian's portrait-type Delta Omikron ( $\Delta o$ )* (cf. here **Fig. 3**); cf. also the above-quoted passage from Goette (2021, 22-23): he suggests that Hadrian's portrait-type Delta Omikron  $\Delta o$  (here **Fig. 3**) was created to commemorate the fact that in AD 106, during the Second Dacian War, the Emperor Trajan presented Hadrian with the signet ring, which he himself had received from Nerva on the occasion of his adoption by him [in late October or at the beginning of November of AD 97].

Cf. also Chapter VI.2.3. *My own interpretation of Hadrian's portrait-type Delta Omikron ( $\Delta o$ )* (cf. here **Fig. 3**). I believe that Hadrian looks in this portrait-type like a man who is circa 20 years old; he was an officer at that stage and his wearing of a baldric indicates that this portrait-type shows Hadrian in this capacity. I, therefore, suggest that this portrait-type was created at an unknown date to commemorate one or both interrelated events in Hadrian's military career in November of AD 97, when he was 21 years old. Either Hadrian's *Parforceritt* from Moesia *Inferior* to Mogontiacum (cf. here **Fig. 77**), in order to congratulate Trajan on his adoption by Nerva (this portrait-type may also have hinted at Hadrian's *adoption manquée* - his own 'missed' adoption: by Trajan, immediately before Nerva had adopted Trajan in late October or at the beginning of November of AD 97); and/ or the beginning of the resulting 20 year-long cooperation with Trajan (that ended with his adoption? by Trajan, and with his own accession: on the 9th and 11th August of AD 117, respectively).

For Hadrian's *Parforceritt* from Moesia *Inferior* to Mogontiacum (Mainz); cf. below, at *The first Contribution by Franz Xaver Schütz : Zur kartographischen Visualisierung historischer Landschaftselemente zwischen Rhein und Schwarzem Meer von Augustus bis Hadrian* (cf. here **Fig. 77**).

Cf. also Chapter VI.2.4. *A. Claridge (2013) has identified the head of the "Stonethrower" in the battle Scene LXXII on Trajan's Column* (here **Figs. 4; 4.1**) as a copy of Hadrian's portrait-type Delta Omikron ( $\Delta o$ ). I myself do not follow Claridge's identification of her "Stonethrower" with Hadrian, represented in his Delta Omikron ( $\Delta o$ ) portrait-type (here **Fig. 3**), but instead those scholars, who identify this man with a slinger from the *Baleares*. But Claridge's observation opens the question, why on earth Hadrian was presented in his first Delta Omikron ( $\Delta o$ ) portrait-type (here **Fig. 3**) with a kind of beard and a hair-cut that looks exactly like those of the slingers from the *Baleares*, of whom four appear on the Frieze of Trajan's Column (cf. here **Figs. 4; 4.1; 4.2; 4.3**).

For a short summary of all that; cf. below, in Chapter *The major results of this book on Domitian*.

**As a result of his research, Schmidt-Colinet (2005, 114-115, with Abb. 11: "Hadrian, Panzerstatue aus Hierapydna, Istanbul, Archäologisches Museum ...") comes to the following conclusions :**

"Versteht man also die Ikonographie des Bartes Hadrians im Zusammenhang mit den Nachrichten in der antiken Lebensbeschreibung des Kaisers sowie im aktuellen politischen Kontext, so ergibt sich eine ganz klare Botschaft: **Hadrian hat den kurz gehaltenen "Kriegs-" oder "Soldatenbart", den er wahrscheinlich**

als ranghoher Offizier bereits vor seinem Regierungsantritt getragen hat, auch als Kaiser beibehalten ... [page 115] ... Vor diesem Hintergrund werden nun auch andere archäologische Zeugnisse verständlich, die für diesen "Friedenskaiser" sonst eigentlich ganz widersinnig erscheinen müssen: Dies sind zum einen die zahlreichen für Hadrian in den Provinzen errichteten Ehrenbögen, deren Charakter als Triumphbögen zum Teil eindeutig inschriftlich belegt ist. [with n. 34] **Zum anderen sind so auch die gerade für Hadrian besonders zahlreich überlieferten Panzerstatuen zu verstehen (Abb. 11 [cf. here Fig. 29]),** [with n. 35] **die diesen Kaiser eben im militärischen Kostüm zeigen. Besonders aufschlussreich erscheint in diesem Zusammenhang schließlich auch die erstaunliche Tatsache, dass gerade von diesem "friedfertigen Kaiser" mehr Panzerbüsten (Abb. 12) überliefert sind, als von allen übrigen römischen Kaisern [my emphasis]."**

In his **notes 34 and 35**, Schmidt-Colinet provides references and further discussions.

For Hadrian's above-mentioned cuirassed portrait-type, Schmidt-Colinet's Abb. 11, which is known from almost 30 replicas; cf. below, at *A Study on Hadrian's portrait-statue from Hierapydna* (cf. here Fig. 29).

**Based on the recent research on Hadrian's first portrait-type *Delta Omikron Δο* (here Fig. 3), which is summarized in this *Study*, and Schmidt-Colinet's (2005) just-quoted observations referring to the portrait-types, which Hadrian commissioned when he was himself emperor, I have arrived above at the following conclusion, which I repeat here again (cf. *supra*, in Chapter *Introductory remarks and acknowledgements*) :**

"The Emperor Hadrian thus turns out to have presented himself since his first portrait-type 'as a soldier' (cf. here Fig. 3), and throughout his reign as (the first) 'Soldatenkaiser' (cf. here Fig. 29) - as I myself should like to call him therefore (avant la lettre obviously, and, as we should also add, with very different coiffures than the later real 'Soldatenkaiser')."

For the term 'Soldatenkaiser'; cf. Matthias Haake ("Zwischen Herrschertypus und Epochenbegriff. Eine begriffsgeschichtliche und wissenschaftsgeschichtliche Archäologie des Burkhardtschen Pseudoneologismus 'Soldatenkaiser'", 2022)".

Let's now return to our main subject.

Pollini (2017b, 115, Section: "Comparison with the Cancelleria Reliefs") writes:

"The sacrificial ceremony with paludate lictors should in the Nollekens Relief be understood as taking place outside the *pomerium* [with n. 80]". Cf. p. 117: "Similarly in the Nollekens Relief the elderly bearded and long-haired **figure (no. 8)** beside the emperor is identifiable as a personification of the Senate [with n. 87; my emphasis] ... Cf. p. 117: "Very similar to the Roma on both Cancelleria Reliefs is the foreground figure at right in the Nollekens Relief (**no. 11**) [my emphasis]". Cf. p. 118: "To the left and right of the personified Senate, **two figures in the background, nos. 7 and 9, are distinguished by their togas ... they are undoubtedly the two consuls** [my emphasis]". Cf. p. 118: "In the Nollekens Relief, the sacrifice performed by a togate emperor, accompanied by lictors in military dress bearing *fasces laureati*, which are found in the context of imperial triumphs, may bear reference to an actual sacrifice in a liminal space at the old entrance to the *pomerium* by the Porta Triumphalis, through which *triumphatores* passed (see below)".

To this I should like to add that the **figure** in the background, **no. 7**, is indeed wearing a *toga*, the lower seam of which, as well as its *lacinia* are visible at the bottom of the relief, immediately above the lettering "7". This *consul* is, therefore, obviously wearing a similar *toga* as Domitian (**figure 6**), who is standing right in front of him. Of the *toga* of the other *consul*, **figure no. 9**, we see the folds of the *umbo* on his left shoulder. For the names of the different parts of the *toga*, for example *lacinia* and *umbo*; cf. H.R. Goette (1990, 3, Fig. 2).

Cf. Pollini's (2017b, 124, Section: "Triumphal imagery and the scene of sacrifice in the Nollekens relief):  
"Though no trace of paint remains in the Nollekens Relief, the purple of Domitian's toga embroidered with gold would have made him stand out all the more from the other participants in the sacrifice [with n. 116]. **The small altar is shown in the relief, laden with offerings and without any sacrificial animals in evidence, would not have been used for the culminating sacrifice to Jupiter on the Capitoline, which was a bloody sacrifice [with n. 117]. Instead, it would allude to the sacrifice performed at the Porta Triumphalis, thereby recalling Domitian's triumph [my emphasis]**".

In his notes 116 and 117, Pollini provides references and further discussion.

**Let's now turn to 'the other relief' (cf. here Fig. 37), found by Bianchini in 1722 within the 'Aula Regia', together with the Nollekens Relief (cf. here Fig. 36).**

Cf. Pollini (2017b, 99): "Another Roman relief, with a mythological subject (fig. 5 [= here Fig. 37]), was excavated with the Nollekens Relief, but has never been discussed. This led me to question of where within Domitian's Palace the relief might originally have been displayed, and to suggest new ways to identifying certain areas of the palace, their use, and significance".

Cf. Pollini (2017b, 104, Section: "The other relief"):

"The subject of females in Greek dress (fig. 5 [= here Fig. 37]) might have been more appropriate for an area more personal to the emperor, such as the Adonea Peristyle. This was where Domitian once had a private meeting with the philosopher Apollonius of Tyana (Philost. 7.32) [with n. 24]. Apollonius was brought to Domitian as he was sacrificing to his patron goddess Athena/Minerva in the open 'courtyard of Adonis' ... The meeting may have taken place in either of the adjacent suites of rooms. **Because an association with Adonis would be appropriate for Venus and the three Graces, they are quite possibly the females represented in the relief [with n. 27; my emphasis]**".

In his notes 24 and 27, Pollini provides references and further discussion.

This fragmentary relief (cf. here Fig. 37) shows four female representations or divinities in Greek dress and has certainly contained more figures originally. Personally I therefore do not follow Pollini's interpretation of the relief, as representing Venus and the *three* Graces, nor as an appropriate decoration for this presumed 'Adonisgarden'.

And that for the following reasons, *a*) this relief was *not* found 'in or near' that part of Domitian's Palace, which Pollini (2017b, 101-102) identifies with the *Adonea*; and *b*) that part of Domitian's Palace, which Pollini identifies with the 'Adonisgarden', can certainly not be identified with the *Adonea* (cf. *supra*, in Chapter V.1.i.3.b); at Section II.).

**In order to answer the question, posed in the title of this Section : Does the design of the Nollekens Relief reflect the topographical context, for which Domitian had commissioned it? - we need to study Francesco Bianchini's account (1738) in more detail.**

Since I have asked myself, whether or not the area immediately surrounding the 'Aula Regia' of Domitian's 'Domus Flavia' / *Domus Augustana* could possibly be reflected in the specific design of the Nollekens Relief (cf. here Fig. 36), and considering at the same time the construction date of Domitian's Palace on the Palatine (AD 81 until around 92; cf. J. POLLINI 2017b, 120), I have studied below the temple podium right in front of the 'Domus Flavia', following those scholars, namely Filippo Coarelli (1996, 143, Fig. 97) and Vincenzo Graffeo and Patrizio Pensabene (2014; *id.* 2016-2017), who attribute it to the Temple of Iuppiter Invictus.

Cf. *infra*, in volume 3-2, in *Appendix VI.*; at Sections IV.; VII.-X.

For the date of Domitian's Palace; cf. also Françoise Villedieu (2009, 246): "Domiziano era già diventato imperatore quando furono completati i lavori e la data del 92 suggerita dalle fonti per segnare la fine della costruzione del Palazzo Imperiale ...". - Unfortunately she does not quote those "fonti".

Provided this identification of the Temple of Iuppiter Invictus is correct (which I think it is), it is tempting to believe that Domitian, before leaving for this military campaign, had prayed to this Jupiter, asking him to grant him the victory. From this war Domitian has now returned victoriously, as the Nollekens Relief (cf. here **Fig. 36**) 'reports'. Provided it is likewise true that what we see in the Nollekens Relief is Domitian's sacrifice which preceded his (last) triumph, celebrated in AD 89, as Pollini (2017b, 120, 124) suggests. Consequently, the *rotulus*, Domitian is holding in his left hand on the Nollekens Relief, would probably contain his vows, which he had made *pro reditu* before leaving for this military campaign. These vows, Domitian will now fulfill in due course, since Iuppiter Invictus has not only granted him this victory, but has also 'brought him back'. Apart from celebrating Domitian's 'invincibility', the Nollekens Relief thus shows at the same time the emperor's *pietas* in regard to his guardian god, Iuppiter Invictus.

**That the 'Aula Regia', where the Nollekens Relief was found, celebrated Domitian's triumphs (only a specific one, or all of them, for example also that of AD 89?), and obviously also his contribution to Vespasian's victory in the civil wars of AD 68-69, is also indicated by other items of the exuberant decoration of this hall with relevant marble reliefs, as documented by Francesco Bianchini and Giovanni Battista Piranesi.**

**The above-quoted scholars, who discuss Domitian's Palace on the Palatine (cf. *supra*, in Chapter V.1.i.3.b; at Section II.), for example Claridge (1998, 132-133, Fig. 54, p. 135; *ead.* 2010, 146-147, Fig. 55, p. 148), Mar (2009, 255-261, Figs. 2-5), Coarelli (2012, 494-495), Pollini (2017b), Wulf-Rheidt (2020), Sojc (2021), Raimondi Cominesi and Stocks (2021; *ead.* 2023), Raimondi Cominesi (2022), or Alteri (2023) do not mention the fact that the marble decoration of the 'Aula Regia' referred also, or rather: predominantly, to Domitian's military victories. - To this I will come back below, in Chapter *The major results of his book on Domitian*.**

**Cf. Eugenio Polito (2009, 506) on the findings of those scholars, who studied the marble reliefs of the 'Aula Regia' that celebrate Domitian's military victories, for example the famous 'trophies Farnese' at Palazzo Farnese (cf. here Fig. 5.1) :**

**"109 Frammento di fregio con catasta d'armi dall'Aula Regia della Domus Flavia**

Da Roma, Palatino (scavi condotti da Pietro Rosa per conto di Napoleone III, 1861-1870)

Marmo lunense

Alt.[ezza] cm 24; largh.[ezza] cm 44; spess.[ore] cm 13 ...

Soprintendenza Speciale per i Beni Archeologici di Roma, Palatino, Magazzini del Criptoportico, inv. 379583  
90 d.C. circa

**Nella sontuosa decorazione della sala del trono di Domiziano, nota convenzionalmente come Aula Regia, spiccano i resti di un fregio appartenente al colonnato ad avancorpi che scandiva le pareti: la testata di ciascun avancorpo recava nel fregio una Vittoria intenta a ornare un trofeo emergente da una catasta di armi barbariche [*i.e.*, F. BIANCHINI 1738, 54, quoted *verbatim infra*, his Tab. IV. = here Fig. 9]. I due blocchi meglio noti, provenienti dagli scavi settecenteschi del Bianchini (1738, pp. 50-54 [quoted *verbatim infra*]), sono oggi conservati a Palazzo Farnese, dove occupano il centro delle due composizioni di marmi che ornano le nicchie della loggia terrena [cf. here Fig. 5.1]. Proprio in ragione di tale collocazione prestigiosa, questi straordinari esempi della scultura architettonica di età flavia sono entrati nella letteratura archeologica e storico-artistica con il nome convenzionale di "Trofei Farnese" (Durry 1921; [von] Blanckenhagen 1940, pp. 64-69, figg. 52-55, tavv. 17-18; Pensabene 1979). Altri elementi della stessa decorazione, inviati a Napoli insieme al resto della collezione farnesiana, ebbero invece minor fortuna**

(Durry 1935; [von] Blanckenhagen 1940, pp. 65, 68, 94-96, fig. 56, tav. 19 e fig. 88, tav. 32; Pensabene 1979, p. 77, fig. 12; Gasparri 2007, p. 174, nn. 217-218.

La tematica bellica era completata da splendide basi di colonna, il cui plinto era decorato con cataste di armi simili a quelle del fregio: ne resta traccia in un'incisione riprodotta dal Bianchini e in altri documenti grafici settecenteschi, che mostrano appunto una di queste basi, verosimilmente appartenente a una delle colonne che sorreggevano gli avancorpi (Bianchini 1738, p. 52 [quoted *verbatim infra*], tav. III [= here Fig. 9]; cfr. [De] Polignac 2000, pp. 645 sg., fig. 13) e apparentemente perduta. Durante gli scavi ottocenteschi condotti da Pietro Rosa vennero alla luce due ulteriori frammenti dei fregi con Vittorie e trofei: uno con una catasta d'armi, che qui si espone in rappresentanza dell'intera decorazione, l'altro con il resto di un trofeo, oggi irreperibile, ma testimoniato da fotografie d'epoca (Durry 1921, p. 307, fig. 2, fr.[ammento] D; cfr. Tomei 1999, p. 352, fig. 259), forse proprio quello che sormontava la catasta d'armi dell'altro frammento. Il frammento conservato fu verosimilmente ridotto a una sottile lastra e regolarizzato nei margini per consentirne l'inserimento in una dei pilastri ideati da Rosa ed eretti di fronte al Casino Farnese sul Palatino, oggi smontati: nonostante il cattivo stato della superficie, la notevole qualità tecnica (sia pure apparentemente inferiore a quella dei Trofei Farnese) e la peculiarità dell'iconografia bastano comunque a suggerire livello e natura della decorazione della sala del trono imperiale.

Il florilegio di armi barbariche rappresentate nel fregio appartiene al tipico repertorio convenzionale dell'epoca imperiale, destinato a evocare il dominio universale piuttosto che specifiche vittorie. I segmenti di fregio con Vittorie e trofei sono una delle testimonianze più significative di quella smania autocelebrativa che i contemporanei stigmatizzavano in Domiziano (Suet. *Dom.* XIII.7; cfr. D.C. LXVIII.1.1), e che lo avrebbe portato a disseminare Roma di monumenti evocanti i successi militari familiari e personali attraverso la raffigurazione delle armi conquistate: ne restano esemplari spettacolari, quali i trofei oggi affacciati sulla balaustrata della piazza del Campidoglio, noti come "Trofei di Mario" (Tedeschi Grisanti 1977), o i pilastri decorati sulle quattro facce da armi, conservati nel vestibolo degli Uffizi a Firenze, ma provenienti da Roma (Crous 1933), ma anche indizi non sottovalutabili di monumenti perduti, come quello del rilievo degli *Haterii*, sul quale l'arco definito *arcus ad Isis* reca un fregio con armi (LTUR I, p. 97, fig. 52).

#### Bibliografia

Durry 1921, pp. 305 sg., fig. 1, fr.[ammento] C [my emphasis]". - To Eugenio Polito's (2009, 506) above-quoted account I will come back below (cf. *infra*, in volume 3-2, at *Appendix IV.d.4.b*)).

Polito (2009, 506) mentions in the above-quoted passage the indeed (probably) Domitianic relief from the tomb of the *Haterii*; cf. Häuber (2014a, 794). This relief represents six buildings in Rome, among others the "ARCUS AD ISIS", which the Senate had dedicated to Vespasian to celebrate his victories in the Great Jewish War (cf. *supra*, in Chapters IV.1.1.g); and Chapter IV.1.1.h), and here **Figs. 89; 90**).

For the Domitianic marble trophies, (erroneously) called "Trofei di Mario", likewise mentioned by Polito (2009, 506); cf. Häuber (2014a. 77 note 257, pp. 301, 326-327, esp. p. 327 with ns. 365, 366, providing references): "Pirro Ligorio [with n. 365] had already recognized that the two colossal Domitianic marble trophies, until 1590 decorating the *Nymphaeum Alexandri* [likewise called "Trofei di Mario"] on the Piazza Vittorio Emanuele II [on the Esquiline in Rome] and then moved to the balustrade of the Piazza del Campidoglio, had been erroneously identified since the Middle Ages as the trophies erected by C. Marius [with n. 366]".

The marble relief, illustrated by Polito (2009, 506: "109 Frammento di fregio con catasta d'armi dall'Aula Regia della *Domus Flavia*") in the above-quoted account, has again been on display in the exhibition *Domiziano Imperatore. Odio e amore*; cf. Claudio Parisi Presicce, Massimiliano Munzi, and Maria Paola Del Moro (2023, 48, opera no. 22):

"[Opera] 22. Frammento di fregio con catasta d'armi

Marmo lunense

Alt. cm 24; largh. cm 44; prof. cm 13

90 d.C. ca.

Da Roma, Palatino, Aula Regia della *Domus Flavia*,

scavi condotti da Pietro Rosa per conto  
di Napoleone III: 1861-1870  
Roma, Parco Archeologico  
del Colosseo, Museo Palatino,  
inv. 379583".

**In the following, I quote François de Polignac's (2009, 507), already mentioned description of an architectural marble, found within the 'Aula Regia'. This fragment of a frieze, representing "peopled scrolls", belonged to an architrave (of which also other remains are known) was found within the 'Aula Regia'.**

**De Polignac attributes this fragment to the "fregio maggiore" of the "primo ordine", the lower colonnade of the interior order of the 'Aula Regia'. This architrave has also been documented by reconstruction drawings. De Polignac describes, in addition to this, two large fragments of an architrave in the Museo Archeologica Nazionale di Napoli (ex collection Farnese) with a very similar frieze of "peopled scrolls". These fragments were likewise found on the Palatine, and de Polignac attributes them to the "fregio minore" (i.e., the "secondo ordine", the upper colonnade) of the interior order of the 'Aula Regia'. Cf. François de Polignac (2009, 507), cat. no.**

Età flavia, regno di Domiziano

(81-96 d.C)

Questo tipo di fregio, cosiddetto "Peopled Scrolls", con putti o eroti stanti in piedi e circondati da animali affrontati (cervi, tori, pantere ...) tra cespugli e racemi d'acanto, è molto diffuso nell'arte flavia. Si vedono a destra i due piedi di un putto quasi interamente sparito. L'animale nell'atto di saltare verso sinistra tra racemi d'acanto è molto probabilmente un cervide, caratterizzato dalla coda corta. Una parte dell'architrave, conservata, presenta un listello e astragali al disotto del fregio. Da un disegno molto accurato che l'architetto Charles-Louis Clérisseau (Auteuil 1721 - Parigi 1820) fece di questo pezzo (Ermitage, Gabinetto dei Disegni, Collezione Clérisseau, inv. 2160) possiamo vedere che un uccello, oggi poco riconoscibile, figura sul fogliame all'estremità sinistra, davanti al cervide. Questo frammento è particolarmente interessante per la sua provenienza. Come dimostra il disegno di Clérisseau appartenente a un gruppo ben individuato di studi che l'artista francese fece negli anni 1750-1760 dei pezzi architettonici della *Domus Flavia*, scoperti nel corso degli scavi Farnese sul Palatino (1724-1730) e allora raccolti negli Orti Farnesiani sul Palatino, il fregio faceva parte della decorazione architettonica del palazzo di Domiziano, e più precisamente dell'Aula Regia, dalla quale provenono quasi tutti i frammenti rinvenuti nel corso di tali scavi. Le dimensioni e la tipologia dei frammenti permettono di riconoscere un elemento del "fregio maggiore" che correva lungo le pareti dell'Aula in corrispondenza col primo ordine di colonne e di avancorpi riconosciuto come "Trofei Farnese" [cf. here Fig. 5.1], sopra i quali si alzava un secondo ordine.

Molti degli elementi architettonici della *Domus Flavia* furono trasferiti a Napoli all'inizio dell'Ottocento con la collezione Farnese : il nostro è uno dei pochissimo rimasti sul Palatino. Anche se sono di un tipo e di misure leggermente diversi, due grandi frammenti di fregi, oggi visibili nelle collezioni del Museo Archeologico Nazionale di Napoli e anch'essi provenienti dal Palatino (Blanckenhagen, fig. 80, tav. 28 [corr.: 29]; Toynbee, Ward Perkins, p. 15, tav. VIII.1) rappresentano un'altra variante dello stesso motivo e potrebbero corrispondere al "fregio minore", in corrispondenza con l'ordine superiore.

Clérisseau disegnò anche una restituzione di questo frammento, con l'erote alato in posizione frontale a destra, a sinistra, l'uccello su un cespuglio d'acanto (Ermitage, Gabinetto dei Disegni, Collezione Clérisseau,

inv. 2146). Una copia della sua restituzione fu acquistata dall'architetto inglese James Adam (Soane's Museum, *Collezione J. Adam*, vol XXVI, n. 102).

Il contesto del rirovamento e la qualità dell'esecuzione, che suscitò grande interesse negli artisti di ambiente neoclassico confermano la datazione del frammento al regno di Domiziano.

[von] Blanckenhagen 1940, p. 65, I. 1f Tav. 20, fig. 58; Toynbee, Ward Perkins 1950, p. 11, tav. IX.3; Schörner 1995, p. 172, n. 227a, tav. 63.2".

Cf. Peter Heinrich von Blanckenhagen (21st March 1909 Riga - 6th March 1990 New York City).

The complete reference to the above-quoted architectural fragment is: von Blanckenhagen (1940, 64: "Kapitel V. Ornamente der Aula Regia des Domitianspalastes auf dem Palatin";

p. 65: "I. Domitianische Bestandteile

Historisch gesicherte Fragmente"

(then follows a list of these architectural fragments, all of which von Blanckenhagen illustrates).

After his points a) and b): he adds: "An diese, durch Waffendetails datierte und den Grabungsbericht Bianchinis für die Aula gesicherte Fragmente schließen sich als weitere Bestandteile durch Form und Größe an: ...

f) Friesstück, Fragment einer Platte; Teil einer Ranke mit Tier, "Peristyl", Taf. 20 Abb. 58 [= here **Fig. 4.1.2**] des Flavierpalastes. Photo Dr. Fuhrmann".

For the fragment (here **Fig. 4.1.2**); cf. *supra*, in Chapter *Preamble*; Section *III.*; at point 5.) and *infra*, at Chapter *The major results of this book on Domitian*.

**As already mentioned above, I imagine that Gordon Leith (1913) has created the reconstruction of the interior order of the 'Triclinium' (here Fig. 110) as follows. He has drawn the extant fragments of the "fregio maggiore" and of the "fregio minore", as de Polignac (2009, 507) refers to the friezes of the architraves of the "primo ordine" and the "secondo ordine" of the interior order of the 'Aula Regia', both of which were, in his opinion, decorated with "peopled scrolls". Gordon Leith may also have copied the reconstruction drawings of the "fregio minore" of the interior order of the 'Aula Regia'. Finally he has integrated the resulting reconstruction of an entire colonnade into his reconstruction of the 'Triclinium' (cf. here Fig. 110) (!).**

**Bianchini (1738, 50-54) described the unique size and decoration of the 'Aula Regia':**

"... Fu intrapreso di scoprire il di dentro delle muraglie circa l'anno 1720 ; e si riconobbero in quel recinto tre vaste Sale [*i.e.*, the 'Basilica', the 'Aula Regia' and the 'Lararium'; cf. here **Figs. 8; 8.1; 58; 73; 108**] : la principale [*i.e.*, the 'Aula Regia'] delle quali è nel mezzo , ed essendo scoperta interamente , fece vedere una delle più magnifiche strutture , che siano state finora vedute . La pianta [cf. on the border: "Tav. II." = here **Fig. 8**] , che qui ne apporto fedelmente formata sulle misure che possono riscontrarsi nè muri stessi oggidì liberati dall'ingombro delle ruine ; dimostra che stendevasi per lunghezza cento cinquanta piedi Romani , che sono 200 palmi in circa d'Architetto ; e per larghezza piedi cento , cioè palmi 132. Supera perciò di palmi in larghezza la nave maggiore della Basilica di S. Pietro in Vaticano : il che basta a formare qualche idea della magnificenza di sua struttura . Il vasto sito di questo ampio Salone è così distribuito in grandi nicchie maestosamente cavate nelle pareti , e distinte l'una dall'altra per colonne proporzionate a così gran tratto ; che , siccome in ampiezza non vi ha salone , che lo superi ; così in simmetria e magnificenza non vi ha struttura, che lo agguagli ... L'ingresso principale situato nel mezzo della facciata conserva per di dentro la distribuzione delle nicchie indicate . Le due Colonne, che [page 52] che distinguono la nicchia dell'ingresso dalle vicine ; sono di giallo antico , scannellate , alte palmi 28 dall' imo scapo alla cimasa , e grosse a proporzione di quell'altezza , cioè palmi 3 ¼ . Erano sostenute da Basi di marmo Greco detto saligno , le più ricche di ornamenti , che siano mai state osservate . Ne apportiamo qui la figura [cf. on the border: "Tav. III." = here **Fig. 9**] , che dimostra il dado inferiore , o sia plinto , tutto ricoperto da spoglie militari , a guisa di trofei giudiciosamente adattate a quel sito , e scolpite , quanto finamente potrebbero formarsi in cera . Gli altri membri della base ricevono con pari giudizio e delicatezza ornamenti proprj e corrispondenti :

perciocché il toro inferiore è composto da una corona civica nobilmente fasciata nelle sue frondi di quercia e ghiande da una benda , che le circonda e tiene raccolte . La scozia inferiore è coronata da gentili legature di fogliami di acanto , parte raccolti nel boccio , parte sparsi nel calice , tutte vagamente intrecciate . Gli astragali vengono ricoperti da frondi d'olmo , sottilmente escavate a forza di trapano in tutto il giro . La scozia superiore è vestita di fogli d'ellera [*corr.* edera ?] tramezzata con le sue bacche . Ed il toro superiore da un altro ordine di foglia di acanto , sostenute al di sotto con altre lisce , che mirabilmente si accordano . Corrispondente al lavoro delle basi vedesi quello de' capitelli, dell'architrave , del fregio , e della cornice : tut-te [page 54] te scolture de'migliori maestri delle secolo più colto, che fu quello de'dodeci primi Cesari : essendo formate , come appresso vedremo , in tempo di Domiziano . A fine di dare un saggio di tutti questi ornamenti, si rappresenta quella parte di Fregio [cf. on the border: "Tav. IV. = here **Fig. 9**], che soprastava ad uno de' capitelli delle colonne ; nella quale vedesi una Vittoria alata coronare un trofeo composto di spoglie militari con altre appiedi elegantemente intrecciate : tra le quali si possono riconoscere le proprie ancor de' Germani da' berrettoni tessuti di fiocchi , o di lana o di capelli , ad uso della nazione [the emphasis was made by the author himself]".

The caption of Bianchini's plan of the 'Aula Regia' (cf. *id.* 1738, Tab. II. [= here **Fig. 8**]) reads: "Ichnographia Basilicae Palatinae sive Aula Regiae a Domitiano Principe in Palatio Caesarum instauratae nuper verò detectae intra Hortos Farnesianos anno MDCCXXIV".

The illustration (here **Fig. 8**) shows Bianchini's measured ground-plan of the 'Aula Regia', with indication of a scale. On the left hand side (*i.e.*, in reality in the north) appears the main entrance to this hall, marked with the letters "a" and "b", which is flanked by the bases of the columns "c" and "c", one of which is described in Bianchini's above-quoted text and illustrated on his Tab. III (= here **Fig. 9**). Next to the letterings "h" and "i", which appear close to the entrance leading there, is written: "Aditus ad Hortos Adonios, a Domitiano frequentatos". Compare here **Fig. 8.1**, which shows Bianchini's plan Tab. II integrated into our map **Fig. 58**, in order to demonstrate that Bianchini's original plan is not oriented according to 'Grid North' as the current cadastre and as our maps, which are based on the photogrammetric data of Roma Capitale that comprise the cadastre. For a discussion; cf. below, at *The major results of this book on Domitian*.

The caption of Bianchini (1738, Tab. III. [= here **Fig. 9**]) reads: "Bases antiqui operis è candido marmore elegantissimae sculptae , quae in Basilica praecipuâ , sive Aulâ Regiâ Domûs Tiberianae , in Palatio Caesarum à Domitiano instauratâ fulciebant columnas ad ejus ingressum interiùs sitas è flavo marmore probatissimo (vulgo Giallo antico) , assurgentes ad altitudinem pedum XVIII , ibidem reperta cum columnis anno MDCCXXIV . Figura ad mensuram p[r]ototypi exacta unius basis dimidium fideliter rappresentat Balthassar Gabbuggiani delin. et sculp."

Note that in the above-quoted caption of his Tab. III (= here **Fig. 9**), Bianchini (erroneously) identifies that part of Domitian's Palace, to which the 'Aula Regia' belongs, as the 'Domus Tiberiana', which, in reality, is located elsewhere (at the north-west corner) of the Palatine; cf. here **Figs. 58; 73**, labels: PALATIUM; "DOMUS TIBERIANA".

The caption of Bianchini (1738, Tab. IV. [= here **Fig. 9**]) reads: "Trabeatio, di cuius zophoro dictum est pag: 55, item ostiorum maxime aule ornamenta".

As we have seen in the above-quoted passage, Bianchini (1738, 50-54) was especially interested in the weapons appearing on the marble reliefs, he discussed (cf. his Tab. III; IV. [= here **Fig. 9**]), attributing the represented trophies, *inter alia* woolen caps, to Germanic Peoples. Given the extremely high quality of those marbles, it is certainly worth while to study this topic in depth. - As I should only later realize, Joachim Raeder (2010, 141, quoted in more detail *verbatim infra*, in Chapter *The major results of this book on Domitian*) seems so far to be the only scholar, who has identified those weapons ("die auf die Dakerkriege Domitians verweisen"), but he does not explain, how he has arrived at this judgement.

Some of the reliefs representing trophies, 'excavated' and documented by Bianchini (1738) in the 'Aula Regia', are still extant and on display in the cortile of Palazzo Farnese at Rome, the famous 'Farnese trophies' (cf. here Fig. 5.1). They were also drawn by Giovanni Battista Piranesi; cf. Patrizio Pensabene (1979). Cf. M. DURRY 1921; P.H. von BLANCKENHAGEN 1940; and C. GASPARRY 2007, summarized by E. POLITO 2009, 509, quoted *verbatim supra*).

**Bianchini (1738, 50-52) described and illustrated (cf. his Tab. II; III. [= here Figs. 8; 9]) also the fact that the bases of those two marble columns, flanking the main entrance to the 'Aula Regia' (here Figs. 8; 8.1), were decorated with trophies and with the *corona civica*. This iconographic detail may perhaps be read as Domitian's claim to have had an important part in his father Vespasian's victory in the civil war of AD 68/69. Rita Paris (1994b, 82-83, quoted *verbatim supra*, in Chapter V.1.i.3.a)), actually gives Domitian credit for that. - So now also Agnese Pergola (2023, 142, likewise quoted *verbatim supra*, in Chapter V.1.i.3a)).**

To this I will come back below (cf. *infra*, in Chapter VI.3.; *Addition: My own tentative suggestion, to which monument or building the Cancellaria Reliefs may have belonged, and a discussion of their possible date*). For a possible different reason, that could explain, why the *corona civica* was represented on those two marble column bases in Domitian's 'Aula Regia', which flanked the main entrance to this 'reception hall' (here Figs. 8; 8.1; 9); cf. *infra*, in volume 3-2, in Appendix VI.; at Section III.

In order to be able to understand the scenario developed here, we must remember the fact that the ground-plan of the *domus* 'pubblica' of Augustus was certainly much smaller than the ground-plan of Domitian's (later) *Domus Flavia*/ *Domus Augustana*. Apart from that, this hypothesis has two more prerequisites:

provided: *a*) Augustus' *domus* 'pubblica' (as Coarelli (2012, 397-399, 415-416) refers to the here-so-called (real) House of Augustus), had actually stood at the site of Domitian's (later) 'Domus Flavia'/ *Domus Augustana*, and that its entrance had been oriented to the north, as Coarelli (*op.cit.*) suggests; and *b*) that Domitian's *Aula Regia*' (the reception hall !) in his 'Domus Flavia'/ *Domus Augustana* (here Figs. 8; 8.1; 58; 73) had been erected at the precise site of Augustus's *domus* (with its *vestibulum* !) - as I myself suggest here.

If my just-mentioned points *a*) and *b*) are true, those marble column bases in the 'Aula Regia' of Domitian's Palace, which were decorated with a *corona civica* (cf. here Figs. 8; 9), may have reminded the visitors of Augustus's *real corona civica*: because that had been on display in the *vestibulum* of this *domus* of Augustus, above the doorway of the *domus* (here Fig. 35).

For Augustus' *corona civica*; cf. also *supra*, in Chapter V.1.i.3.a).

**Bianchini (1738, p. 52, quoted *verbatim supra*, at the discussion of his Tab. III [= here Fig. 9]) called those above-mentioned column bases: "Basi di marmo Greco detto saligno , le più ricche di ornamenti, che siano mai state osservate [my emphasis]", which, according to Eugenio Polito (2009, 506) do not exist any more.**

Fortunately, Paolo Liverani (1989, 36, cat. no. 15: "base di colonna", inv. no. 36402) publishes a marble column base from the theatre at Domitian's Villa, called *Albanum* at Castel Gandolfo, on display in the *Antiquarium di Villa Barberini a Castel Gandolfo*, which is likewise very richly decorated, *inter alia* also with a *corona civica*, illustrating this column base with a photograph. Liverani himself does not compare this column base with those from the 'Aula Regia' (cf. here Fig. 9), discussed here.

For Domitian's *Albanum*; cf. *infra*, in volume 3-2, at Appendix IV.d.4.b) *Domitian's building project comprising the Campus Martius, the Capitoline Hill and the sella between Arx and Quirinal. With detailed discussion of the Templum Pacis, and some remarks on Domitian's Villa, called Albanum.*

**This opulent marble decoration in the 'Aula Regia', celebrating Domitian's victories, served an important purpose. By borrowing Pollini's (2017b, 126) thoughts, expressed in the final passage of his article: "... Military victories leading to triumphs were a basis for deification after death", which I chose as the epigraph of this chapter, I suggest the following :**

Domitian's '*Domus Flavia*'/ *Domus Augustana* with its '*Aula Regia*' right opposite the Temple of Iuppiter Invictus, decorated as it was with the Nollekens Relief (here **Fig. 36**), which, together with the other above-mentioned items of its 'triumphal' decoration (cf. here **Fig. 9**), celebrated Domitian's 'invincibility' - had been orchestrated by Domitian in order to pave the way for his own divinization after his death.

**Only after having finished writing this Chapter did I realize that Antony Augoustakis and Emma Buckley (2021, 160-161) have expressed in a different context precisely the same thought as Pollini (2017b, 127) in the just-quoted passage by discussing Silius Italicus (*Pun.* 3.607-629) :**

**"Silius Italicus, author of the seventeen books *Punica*, does not even directly address the Emperor in the poem, but - via the prophetic voice of Jupiter - also praises Domitian as distinguished poet and warrior, as part of the larger praise of the Flavian dynasty. [with n. 11; my emphasis]**

This extract gives a flavour of the encomium [with n. 12; follows the quotation of Silius Italicus, *Pun.* 3.612-629, in Latin and in English translation, ending with the following passage, and adding to this their own comments] :

**... Then, son of gods and father of gods to be [i.e., Domitian], rule the lands blessed with paternal sway. The house of heaven will receive you in old age and Quirinus will yield his throne to you, as your father and brother place you in their midst : and the temple of your starry son will gleam next to you [my emphasis]. Voiced by the king of the gods and arbiter of fate, who maps Rome's rise to greatness ... to Domitian's eventual apotheosis, these words are not just embedded panegyric of an emperor, impressive though he is in eloquence and ability to bring peace. Rather, Silius makes Domitian's accomplishments, future military victories, and eventual apotheosis the climax and *telos* of all Roman history, an up-to-date iteration on an ideology of epic first programmed by Virgil for Augustus [with n. 13; my emphasis]"**.

In their **notes 11-13**, Augoustakis and Buckley provide references and further discussions.

Let's now return to the Nollekens Relief.

In order to fully understand the meaning of the Nollekens Relief (here **Fig. 36**) and that of the 'other relief' (here **Fig. 37**) in its original context, we should, of course, study Domitian's entire masterplan (or possibly even the *Gesamtkunstwerk*) of his '*Domus Flavia*'/ *Domus Augustana*, an analysis which I cannot possibly provide here. At least some crucial details of the overall picture have already been discussed in this *Study*. We have for example heard below (cf. *infra*, in volume 3-2, in *Appendix VI.*), that Domitian had intentionally built his Palace at the site of the hut of Faustulus, where Romulus was raised, and where, therefore already Augustus (and later Nero) had chosen to reside - and that the latter fact had been immortalized by the name of Domitian's Palace : *Domus Augustana*. See also *supra*, in Chapter *Preamble*; Section *III.*, at point **4.**).

Neither should we forget that some monuments functioned as a kind of prelude to his stately home :

Domitian's Arch of *Divus Titus* on the *Velia* (cf. here **Figs. 120; 58**), the Domitianic Arch, which stood opposite the façade of the '*Domus Flavia*', and the Temple of Iuppiter Invictus, immediately adjacent to this arch (cf. below, in Chapter *The major results of this book on Domitian*; and *infra*, in volume 3-2, in *Appendix VI.*; at Sections *IV.*; *VII.-X.*).

The Temple of Iuppiter Invictus had stood at this site since the Republican period, but my guess is that Domitian or his architect Rabirius had cleverly integrated it into the overall statement of this *Gesamtkunstwerk* that aimed, of course, also at commemorating those of his family, but predominantly his own achievements. In addition to this, it is tempting to follow Filippo Coarelli (2012, 283) in assuming that

this Domitianic Arch was dedicated to *Divus Vespasianus*. See for a *verbatim* quotation and discussions below, in Chapter *The major results of this book on Domitian*; and *infra*, in volume 3-2, in *Appendix VI.*, at Section VII.

If true, and considering at the same time that this Arch of *Divus Titus* and this presumed Arch of *Divus Vespasianus* stood on the road that visitors to Domitian's Palace were obliged to take, the choices to erect these two arches there were at the same time a clear statement that his own reign was based on that of his two immediate predecessors, *Divus Vespasianus* and *Divus Titus*, as already stated by Coarelli (2012, 483, quoted *verbatim infra*, at Chapter *The major results of this book on Domitian*). If this arch in front of the '*Domus Flavia*'/ *Domus Augustana* was indeed dedicated to *Divus Vespasianus*, we may also wonder, what content Domitian might have chosen for the marble decoration of that monument.

**Fig. 120. The Arch of *Divus Titus* on the *Velia* in Rome. Cf. Paolo Liverani (2021, 83): "We can exemplify what is at stake by examining the decoration on the Arch of Titus ... a monument whose construction was planned by the Roman Senate shortly before the premature death of Titus, but which had to be built and finished under his brother and successor, Domitian". Cf. Diana E.E. Kleiner (1992, 183): "The inscription on the attic of the Arch of Titus indicates that the monument was erected by the senate and people of Rome in honour of the divine Titus, son of the divine Vespasian".**

For discussions: cf. *supra*, in Chapter *Preamble*; Section III., at point 2.); below, in Chapter *The major results of this book on Domitian*; and *infra*, in volume 3-2, at *Appendix IV.d.2.f*).

The passageway of the Arch of *Divus Titus* on the *Velia* is decorated with two famous relief panels, the "spoils scene" and the "triumph relief", and at the apex of the vault of this arch there is a relief representing "the apotheosis of Titus"; cf. Diana E.E. Kleiner (1992, 187, Fig. 155, p. 188, Fig. 156, p. 189, Fig. 157). On the 'spoils scene' stands at the far right an arch (*i.e.*, the *Porta Triumphalis*), through which the triumphal procession is marching, This arch is crowned by what seems to be statue groups. The centre of those statues is occupied by Domitian on horseback, accompanied to his left by his walking personal patron goddess Minerva, both are flanked on either side by the triumphal quadrigas of Vespasian and Titus, each of which pulled by four horses; cf. Diana E.E. Kleiner (1992, 185, Fig. 155).

Photos: Courtesy Franz Xaver Schütz (4-IX-2019). Cf. now Liverani (2023, 115) for the above-quoted passage (*i.e.*, the Italian version of his essay of 2021).

For further discussion; cf. below, at n. 477, in Chapter VI.3.; in Chapter *The major results of this book on Domitian*; and *infra*, in volume 3-2, at *Appendix IV.d.2.f*).

For my hypothesis that the Cancellaria Reliefs (here **Figs. 1; 2; Figs. 1 and 2 drawing; Figs. 1 and 2 of the Cancellaria Reliefs, drawing, 'in situ'**) could have decorated this Arch of Vespasian, or rather the third arch, which Coarelli (2009b, 88; *id.* 2012, 283, 481-483, 486-491) assumes at the "Porta principale" of Domitian's Palace *Domus Augustana* (here **Figs. 8.1; 58**), which, according to Coarelli, was dedicated to Domitian himself:

Cf. *infra*, at Chapter VI.3. *Summary of my own hypotheses concerning the Cancellaria Reliefs presented in this Study; Addition: My own tentative suggestion, to which monument or building the Cancellaria Reliefs may have belonged, and a discussion of their possible date; at Chapters The major results of this book on Domitian; at point 4.); at The visualization of the results of this book on Domitian on our maps; and infra*, in volume 3-2, at *Appendix IV.d.2.f*).

**Post scriptum. Some observations concerning Domitian's Palace on the Palatine '*Domus Flavia*'/ *Domus Augustana* by Roberta Alteri ("La reggia del Dominus et deus sul Palatino: cenni sul linguaggio architettonico", 2023)**

Alteri's essay (2023) is published in the exhibition-catalogue *Domiziano Imperatore. Odio e amore*, edited by Claudio Parisi Presicce, Massimiliano Munzi and Maria Paola Del Moro (2023), which reached me only after I had finished writing the entire manuscript of the first volume of this *Study* on Domitian.

Concerning Domitian's Palace on the Palatine, Alteri adds further information that was so far in part unknown to me, which is why I quote in the following the relevant passages from her text.

**Roberta Alteri (2023, 29-30) writes about Domitian's Palace on the Palatine :**

**"Il palazzo di Domiziano** si configurava pertanto come un grandioso complesso architettonico nel cuore dell'*Urbs*, **degno di un *dominus et deus***, che si sviluppava verticalmente fino a 50 metri di altezza ed era percepito dai suoi abitanti *"par domus est caelo"* (Mart. 8, 36, 12). La facciata principale era prospiciente alla cd. [cosiddetta] *Area Palatina* [with n. 5], raggiungibile [page 30] **salendo il cd.** [cosiddetto] **Clivo Palatino che, ai piedi dell'Arco di Tito, si staccava perpendicolarmente dal tracciato della Sacra Via** per risalire le pendici settentrionali del colle. Questo, fiancheggiato da *tabernae* con portici sulla fronte, passava al di sotto di **un altro arco ad unico fornice, fatto erigere dallo stesso Domiziano, forse come accesso monumentale alla sua residenza** [with n. 6]. **Non è escluso che l'ingresso del palazzo fosse nella zona della cd.** [cosiddetta] *No man's land* [with n. 7].

La cd. [cosiddetta] *Domus Flavia* si articolava intorno a un grande peristilio con portico su quattro lati, provvisto di una vasca centrale ottagonale [*i.e.*, the labyrinth fountain; cf. here Fig. 8.2] inquadrata in un rettangolo, ricostruibile, almeno per tre lati, con due ordini sovrapposti [with n. 8], **mentre il lato sud era aperto verso il Triclinio, un enorme ambiente con abside e con triplo ordine corinzio** di colonne libere con fusti monolitici in granito del Foro, collocate a ridosso della parete. A nord del peristilio si aprivano le grandi aule destinate alle udienze: **L'Aula Regia al centro**, la Basilica, e il Larario. **L'Aula Regia in particolare, a pianta rettangolare con nicchie sui quattro lati e un'abside al centro del lato di fondo, destinata verosimilmente all'imperatore, è stata ricostruita con tre ordini di colonne sovrapposte** che sostenevano trabeazioni sporgenti e rientranti [with n. 9] ...

Il complesso palaziale si articolava pertanto in giganteschi ambienti ... Questi ...rientrano in un più ampio e unitario programma ornamentale e definiscono il *decor* ... ispirato al noto gigantismo domiziano e rispondente alla funzione dei singoli spazi [with n. 14; my emphasis]".

Cf. p. 34: **"Questa ricchezza e particolarità delle varianti presenti nella residenza domiziana assurgeranno a modello e diventeranno prototipo delle botteghe dei periodi successivi, che ripeteranno lo stile di Domiziano, specialmente quello palaziale, ancora nel II e nel III secolo d.C.** [with n. 21; my emphasis]".

In her **note 5**, Alteri writes: "Qui forse si radunava la clientela dell'imperatore per la cerimonia della *salutatio matutina*: Cassatella 1986, p. 523; *LTUR* I, 1993, p. 119, s.v. *Area Palatina*, [M. Torelli]; Mar 2009".

In her **note 6**, she writes: "Coarelli 2009b, p. 88; Mar 2009, p. 258; Coarelli 2012, p. 482".

In her **note 7**, she writes: "Finsen 1969, pp. 9-10; Wulf-Rheidt, Sojc 2009, p. 269".

In her **note 8**, she writes: "Gibson, Delane [*corr.*: DeLaine], Claridge 1994, pp. 67 ss.; **Caprioli 2021, p. 81 propone la ricostruzione del primo ordine con fusti in portasanta e pavonazzetto e capitelli compositi, e del secondo con capitelli compositi e corinzi** [my emphasis]".

In her **note 9**, she writes: "**Caprioli 2021, p. 80: il primo ordine presentava fusti in giallo antico e pavonazzetto, il secondo fusti in giallo antico e capitelli compositi, il terzo fusti in granito grigio del Foro su cui poggiavano probabilmente capitelli corinzi** [my emphasis]".

In her **note 14**, she writes: "Sull'argomento vd. [vedi] Caprioli 2021, pp. 71-93. **I frammenti di decorazione architettonica della *Domus Augustana* sono stati oggetto di un lungo lavoro di analisi e studio, ancora in corso, da parte del professor P. Pensabene e della dottoressa F. Caprioli** [my emphasis]".

In her **note 21**, she writes: Pensabene, Caprioli 2009; Caprioli 2021".

**To the above-quoted passages from Roberta Alteri's article (2023), I should like to add some comments :**

a) Concerning Domitian's Palace, Alteri (2023, 29) addresses the old, but, as she rightly states, erroneous division of this Palace, which in antiquity was referred to as *Domus Augustana*, into an (alleged) public part in the west, called '*Domus Flavia*' and an (alleged) private part in the east, called *Domus Augustana*. The term

'*Domus Flavia*' is post-antique. For detailed discussions of this subject; cf. above in this Chapter V.1.3.b); at Section II.; and below, in Chapter *The major results of this book on Domitian*.

Although the term '*Domus Flavia*' is definitely wrong, I myself still label on our maps (cf. here **Figs. 8.1; 58; 73**) the relevant part of Domitian's Palace with this term, but write it with inverted commas: "DOMUS FLAVIA", in order to indicate "that this is the so-called *Domus Flavia*". The reason being that the term '*Domus Flavia*' is still used by scholars, even by those, who know that it is wrong.

b) Alteri herself (2023), by choosing this title for her account (see also a passage on her p. 29, quoted *verbatim* above), still follows the ancient reproach, according to which Domitian had demanded to be addressed in public as '*dominus et deus*'. As we have seen above, in Chapter *Preamble*; at Section II., it has, in my opinion, been demonstrated by several scholars that this reproach is unfounded.

c) For the two arches, mentioned by Alteri (2023, 30): the Arch of *Divus Vespasianus*?, as suggested by Filippo Coarelli (2009b; 2012), standing in front of the façade of the '*Domus Flavia*', and the Arch of Domitian, which likewise according to Coarelli (2009b; 2012) stood at the "Porta principale" of Domitian's *Domus Augustana*/ the *No man's land* (here **Figs. 8.1; 58; 78**); cf. above, in this Section III. of Chapter V.1.i.3.b); and below, in Chapter *The major results of this book on Domitian*; at point 4.) Filippo Coarelli's (2009b, 88; *id.* 2012, 283, 286-291, 481-483) suggestion that Domitian could have dedicated the Arcus Domitiani on the Palatine to his father, Divus Vespasianus; and at *The Arcus Domitiani/ of Divus Vespasianus ?*, the Arch of Domitian at the main entrance of his Palace on the Palatine, the *Domus Augustana*, and Domitian's (alleged) Temple of Iuppiter Propugnator, the Temple of Iuppiter Invictus in front of his *Domus Augustana*.

d) For the large labyrinth fountain in the '*Peristyle*' of the '*Domus Flavia*'; cf. here **Figs. 8.1; 8.2: 58; 73**; cf. *supra*, in Chapter *Preamble*; Section III., at point 4.); and below, at *The second Contribution by Eugenio La Rocca: Una nota sul labirinto del Palatino*.

e) Alteri (2023, 31 n. 14) mentions still ongoing and in part unpublished research on the architectural fragments, found in Domitian's *Domus Augustana*, that has been conducted since a long time by Patrizio Pensabene and Francesca Caprioli.

My thanks are due to Patrizio Pensabene for writing me by E-mail of 25th March 2023, that his book on the Flavian Palaces on the Palatine, that he has written together with Francesca Caprioli (*Par domus est caelo*, 2023), is in the press. The title of their book is a line by Martial (8,36,12), which refers to Domitian's Palace on the Palatine, and that has also been mentioned by Alteri (2023, 30).

#### **Chapter V.1.i.3.b); Section IV.). *The Nollekens Relief, Domitian's sacrifice at his Porta Triumphalis, and the controversy concerning the location of this building***

In my opinion, Pollini (2017b, 120 with n. 106) convincingly suggests that the Nollekens Relief (here **Fig. 36**) represents Domitian sacrificing in AD 89 immediately outside the *Porta Triumphalis*. Like Pollini (*op.cit.*), I assume that Domitian did that at the *Porta Triumphalis*, built anew by the emperor, and that Domitian would have started this triumph (which turned out to be his last) immediately after this ceremony.

The location of Domitian's *Porta Triumphalis* is hotly debated. Ignoring the recent discussion of the various locations of the *Porta Triumphalis* over time, Pollini (2017b, 120-126, Section: "Triumphal imagery and the scene of sacrifice of the Nollekens relief", with Figs. 19-23) follows Filippo Coarelli's (1968, 68, 79-83, 86; cf. *id.* 1988, 363, 372, 381, 400-402, 443-450, 451-452, 454-459; *id.* 2003, 374) erroneous location of the Imperial *Porta Triumphalis* between and to the south of the two Republican Temples of Fortuna and Mater Matuta in the *Forum Boarium*; cf. Pollini (2017b, 121, Fig. 20).

Filippo Coarelli's (wrong) location of Domitian's *Porta Triumphalis* at the "Area sacra di S. Omobono" was also followed by Ranuccio Bianchi Bandinelli and Mario Torelli (1976, *ARTE ROMANA*, *scheda 2*, who quote F. COARELLI 1968 for this hypothesis); they have attributed the Cancellaria Reliefs (cf. here **Figs. 1; 2; Figs. 1 and 2 drawing**) to this presumed *quadrifrons* (cf. their *scheda 105*).

Within the 'Area sacra di S. Omobono' have been excavated two Republican Temples of Fortuna and of Mater Matuta. At the site in question, Domitian's *quadrifrons* (*i.e.*, his *Porta Triumphalis*) was not found, as asserted by Coarelli, but instead six pillars of a *via tecta*; cf. Richard Neudecker (1990, 176 with ns. 13, 14). Neudecker has also pointed out that the reliefs, illustrated by Coarelli in this context (1988), do not show exclusively the imperial *Porta Triumphalis*, as asserted by Coarelli, but in reality different arches. Pollini (2017b, Figs. 21-23) follows also in this respect Coarelli (1988) by illustrating the same reliefs again, erroneously asserting that they all show Domitian's *Porta Triumphalis*. At the same time, Pollini follows Coarelli's likewise erroneous identification of the Temple of Fortuna at the Forum Boarium with that of Fortuna Redux, which, as we know, stood next to Domitian's *Porta Triumphalis*.

Coarelli's relevant hypotheses have been refuted, apart from Neudecker (1990) also by myself; cf. Häuber (2005, 51-55, Section: "III.4. The *Porta Triumphalis*") [with my reconstruction of the Republican *Porta Triumphalis/ Porta Carmentalis*], esp. p. 53 with ns. 385-390 [discussion of Coarelli's wrong location of Domitian's *Porta Triumphalis*, also on Coarelli's wrong identification of the Temple of Fortuna Redux], p. 55 with n. 412). See also Häuber (2017, 111-112 n. 56, pp. 168, 178-202, esp. p. 200 [with a summary of the most recent discussion concerning the various locations of the *Porta Triumphalis* and concerning the suggestion that the Arco di Portigallo could be identified as a *pomerium*-gate and/ or as Domitian's *Porta Triumphalis*; a hypothesis which I myself do not follow], Section: "The *pomerium* of Claudius and some routes possibly taken by Vespasian, Titus and Domitian on the morning of their triumph in June of AD 71", discussing *inter alia* G. FILIPPI and P. LIVERANI 2014-2015 relevant findings). For further discussion of the course of the *pomerium*; cf. Häuber (2017, 583-584, n. 306).

**Personally I refrain from trying to suggest a location for Domitian's *Porta Triumphalis*.**

Cf. here **Figs. 58; 73**, labels: CAPITOLIUM; Servian city Wall; PORTA CARMENTALIS; Republican PORTA TRIUMPHALIS [this is my own reconstruction of the Republican *Porta Triumphalis*]; VICUS IUGARIUS; Area sacra S. Omobono; S. Omobono; A; B [these letters mark the Republican Temples of Fortuna and Mater Matuta : Temple A is attributed to Fortuna, Temple B to Mater Matuta]; FORUM BOARIUM.

The *via tecta* between the Republican temples is indicated by the short dark blue line (*i.e.*, an ancient road), oriented from north to south, which appears between the ground-plans of both temples (drawn red, to indicate ancient buildings).

For the above-mentioned sanctuary of Fortuna and Mater Matuta at the *Forum Boarium* most recently, cf. Giuseppina Pisani Sartorio and Paola Virgili (2020; cf. p. 166, Fig. 1: illustrating a plan of these two Republican temples and the single archaic temple, excavated underneath the eastern shrine). The two authors, who have both excavated at this sanctuary, do not mention in their article Coarelli's hypotheses discussed here concerning Domitian's *Porta Triumphalis*. And when meeting with Giuseppina Sartorio on 22nd February 2020 in Rome, she was kind enough to explain to me that she herself is likewise of the opinion that Coarelli's relevant assertions are not true.

Paolo Liverani (2021, 88), in his discussion of Pollini's article (2017b), does not mention in this context that in several of his earlier publications, he had suggested that Domitian's *Porta Triumphalis* should be identified with the former Arco del Portogallo. This fact he has mentioned earlier in this essay; cf. Liverani (2021, 84, with ns. 10-12). For a discussion of Liverani's relevant hypothesis; cf. Häuber (2017, summarized above).

See now Liverani (2023, 116117 with ns. 11-13; *i.e.*, the Italian version of his essay of 2021).

**V.2. Summary of the publication by M. Wolf (2018) concerning the Cancellaria Reliefs and the architectural fragments found together with them**

In the following I repeat my texts that were written for the Chapters *II.3.1.b)* and *VI.3.*

The publication of Markus Wolf (2018) turns out to be the German original of his Italian article of 2015; the illustrations are the same, whereas the text and the notes are slightly different, but the publication of 2018 comprises two more illustrations: his Abb. 31 shows the court of the Palazzo della Cancellaria and his Abb. 32 the tomb of Aulus Hirtius.

Cf. Markus Wolf (2018, 90-94, Abb. 33-40 (all relevant architectural fragments that were found together with the Cancellaria Reliefs that are the basis of his two reconstructions); cf. his Abb. 42: "Erster Rekonstruktionsvorschlag des >>Cancellaria-Bogens<< als freistehendes Bogenmonument ..."; cf. his Abb. 43: "Zweiter Rekonstruktionsvorschlag, des >>Cancellaria-Bogens<< als Eingangsbogen ...". In neither one of these publications (2015; 2018), Wolf refers to his other publication. He has overlooked the discussion of Massimo Pentiricci (2009) concerning the question to which kind of monument or building the Cancellaria Reliefs may have belonged, nor does Wolf mention the Arch of Titus in the *Circus Maximus* as a possible comparison (cf. the new reconstruction of this Arch of Titus by Marialetizia Buonfiglio 2017 and her colleagues, here **Fig. 121**, and *supra*, at Chapter *I.3.2.*), which, in my opinion, is the most obvious arch that we should compare with the ">>Cancellaria-Bogen<< als freistehendes Bogenmonument", as Wolf (2018, 93) himself refers to his **1.** reconstruction.

This Arch of Titus was built by the Roman Senate in AD 81 as main entrance to the *Circus Maximus* (cf. here **Fig. 121**). It is much larger than Domitian's Arch of *Divus Titus* on the *Velia* (cf. here **Fig. 120**). For an arch of the size of this Arch of Titus in the *Circus Maximus* we can imagine horizontal panels for its central bay that must have had the proportions of the Cancellaria Reliefs. Even provided those were not only 6,06 m long, as suggested in Magi's reconstruction, which you see here in **Figs. 1 and 2**, and in our tentative reconstruction (here **Figs. 1; 2 of the Cancellaria Reliefs, drawing, 'in situ'**), but instead 7,05 m long, as suggested by Wolf (2018, 94), who follows the new, but in my opinion erroneous, reconstruction of the Cancellaria Reliefs by Langer and Pfanner (2018; cf. *supra*, at Chapter *V.1.d*). This Arch of Titus in the *Circus Maximus* was thus presumably built at about the same time as Domitian's Arch of *Divus Titus* on the *Velia*, which was erected 'after AD 81' (cf. *supra*, at **n. 244**, in Chapter *I.2.*). Cf. Paolo Liverani (2021, 83), quoted *verbatim supra*, in Chapter *V.1.i.3.b*); Section *III.*, at the caption of **Fig. 120**, the Arch of *Divus Titus* on the *Velia*.

As we have seen above, Wolf (2015) has made the first two reconstructions that are based on the Cancellaria Reliefs and on the architectural fragments, that were found together with those panels (for his reconstructions, as published by M. WOLF 2015, cf. *supra*, at **ns. 75-81**, in Chapter *I.1.*, and at **ns. 284; 298**, in Chapter *I.3.2.*, and at **n. 363**, in Chapter *II.3.3.a*), and *infra*, at Chapter *VI.3.*).

Concerning the question, whether or not the Cancellaria Reliefs and the architectural fragments, found together with them, had belonged to the same structure, Wolf (2015 and 2018) has come to exactly the same conclusion as I myself - although for very different reasons. Wolf (2015; cf. *supra*, at **ns. 75-81**, in Chapter *I.1.*, and at **ns. 284; 298**, in Chapter *I.3.2.*) calls his **2.** reconstruction: "un'entrata con volta a botte in un edificio domiziano con colonne addossate" ('an arched entrance to a Domitianic building with engaged columns', which he, in his second publication (cf. M. WOLF 2018, 95) refers to as: 'eine gewölbte Eingangssituation in einem domitianischen Großbau mit vorgestellten Säulen'. According to Wolf (2015; cf. *supra*, at **n. 79**, in Chapter *I.1.*) the passageway, to which the soffit blocks belonged that were found together with the Cancellaria Reliefs, was ca. 5,10 m wide.

As we can see in both of his publications (cf. M. WOLF 2015; 2018), to Wolf's **2.** reconstruction, which he has based on these architectural fragments, comprising the architrave block carrying the inscription *PP FECIT* (*CIL VI, 40543*; cf. *supra*, **n. 81**, in Chapter *I.1.*), the Cancellaria Reliefs do *not* belong. The reason being that

the arch, which this architecture comprises, is not deep enough to accommodate reliefs as horizontal panels that have the length of the Cancelleria Reliefs.

Markus Wolf (2015) calls his **1.** reconstruction, that contains the Cancelleria Reliefs, an "arco onorifico isolato" (cf. *supra*, n. 79, in Chapter I.1.), whereas in his publication of 2018, he refers to it as a "freistehendes Bogenmonument" (2018, 95, caption of his Abb. 42). But because of its inscription *PP FECIT*, which in his **1.** reconstruction belongs in Wolf's opinion, together with the Cancelleria Reliefs, to the same 'free standing arch monument', he comes in both publications to the final conclusion that the structure in question should *not* be regarded as a honorific arch.

Wolf (2018, 93-94; cf. C. WOLF 2015, 319-320) writes: "Die Inschrift des römischen >>Cancelleria-Bogens<< [...] p(ater) p(atriciae) fecit deutet auf eine kaiserliche Stiftung des [page 94] Monumentes hin. Es kann sich demnach nicht um einen Ehrenbogen zu Ehren eines Kaisers gehandelt haben, vielmehr um einen vom Kaiser, also Domitian, gestifteten Bau [with n. 15]". In his n. 15, Wolf writes: "Freundlicher Hinweis von W. Eck und H. v. Hesberg".

Wolf (2015; 2018) comes in both publications to the conclusion that of his two reconstruction, the **2.** one - which does *not* contain the Cancelleria Reliefs - is in his opinion preferable, although his **1.** reconstruction (that of the freestanding arch containing the Cancelleria Reliefs) should be considered as an option as well.

In his second publication Wolf (2018, 94-96 with ns. 16-17; cf. M. WOLF 2015, 319-320 with n. 10) writes:

"Denkbar wäre auch, daß alle betrachteten Elemente nicht von ein-und demselben Monument stammen. Die Friesplatten mit den Cancelleria-Reliefs sind mit circa 7.05 m im Vergleich mit dem Titusbogen [on the *Velia*] verhältnismäßig lang für ein Bogenmonument. Als Alternative zu einem echten Bogenmonument soll hier daher eine neutralere Variante einer gewölbten Eingangssituation in einem domitianischen Großbau mit vorgestellten Säulen vorgeschlagen werden, wie wir sie in einer ähnlichen Weise vom Domitiansstadion kennen, dort allerdings in einer etwas kleineren korinthischen Ordnung, die vor die mit ionischen Halbsäulen gegliederte Fassade hervortrat [with n. 16]. Die aufgenommenen Bauglieder können in diesem zweiten Rekonstruktionsvorschlag zu derselben, den Zugang flankierenden Säulenstellung ergänzt werden, vielleicht ohne Postament und Attika (Abb. 43). Der mit den Soffittenplatten gewölbte Durchgang kann weniger tief gewesen sein, **und die langen Reliefs [i.e., the Cancelleria Reliefs] fallen in diesem Vorschlag heraus. Die kaiserliche Stifterinschrift im Gebälkfries würde besser zu diesem zweiten Rekonstruktionsvorschlag eines Eingangsbogens in einen domitianischen Großbau passen als zu einem freistehenden, echten Bogenmonument** [with n. 17]. **Aber beide Möglichkeiten sind zu diskutieren.** Es handelt sich um zwei Versuche und Vorschläge der Arbeit mit den erhaltenen Architekturfragmenten von der Cancelleria [my emphasis]".

In his **note 16**, Wolf writes: "A. M. Colini, Stadium Domitiani (Roma 1998 [ristampa anastatica of the book, first published in 1943]) 31 Abb. 12 Taf. XV.XVII.XXIV".

In his **note 17**, he writes: "Freundlicher Hinweis von W. Eck und H. v. Hesberg".

Concerning the possible location of the monument or building, to which the Cancelleria Reliefs (cf. here **Figs. 1; 2; Figs. 1 and 2 drawing**) may have belonged, Wolf (2018, 91) writes: "**Im Folgenden soll ... versucht werden, auf der Grundlage einer neuen Bauaufnahme dieser Bauglieder Vorschläge für die Rekonstruktion eines Monumentes mit einem Bogen aus domitianischer Zeit zu machen, das wohl auf dem Marsfeld stand** [with n. 1]".

In his **note 1**, Wolf does not suggest a more precise hypothesis (than "wohl auf dem Marsfeld") concerning 'the location of the former Cancelleria Building', but acknowledges only the help of those scholars, who have supported his work. Cf. Wolf (2015, 317 with n. 1), where he did not as yet suggest that this monument 'probably stood on the *Campus Martius*'. - To this I will come back below (cf. *infra*, at Chapter VI.3.).

Wolf (2018, 91-93) discusses in detail the architrave block, found together with the Cancellaria Reliefs, which carries the inscription *PP FECIT* (CIL VI, 40543; cf. *supra*, n. 81, in Chapter I.1.; and below in Chapter *The major results of this book on Domitian*) and provides comparisons for it. He does not compare this architrave block with the dedicatory inscription of Domitian's Temple of Minerva at Domitian's *Forum/ Forum Nervae/ Forum Transitorium*, that was already mentioned above (cf. *supra*, at Chapters II.3.1.b); II.3.1.c)), which was likewise written on the architrave. Also on stylistical grounds this architrave block, carrying the inscription *PP FECIT*, has been compared with "*Le Colonnacce*" at Domitian's *Forum/ Forum Nervae/ Forum Transitorium*.

Cf. Klaus Stefan Freyberger (2018, 97; cf. *infra*, at Chapter V.3.). For Domitian's *Forum/ Forum Nervae/ Forum Transitorium*; cf. below, in Chapter *The major results of this book on Domitian*; and *infra*, in volume 3-2, at Appendix IV.d.2.a-f); and Appendix IV.d.4.b).

I repeat in the following, what I wrote for Chapter II.3.1.b):

‘The Temple of Minerva at Domitian's *Forum* at Rome was a temple located within a larger building, that was only finished and dedicated by Nerva. Heinrich Bauer and Chiara Morselli [with n. 349], in their discussion of the *Forum Nervae*, write: "L'iscrizione di Nerva, che occupava non solo il fregio [of the Temple of Minerva] ma anche l'architrave levigato, tramandataci quasi interamente, sostituiva probabilmente quella di Domiziano ed è databile al 97/98 d.C. [CIL VI 953 = 31213] ...". Cf. H. Bauer and C. Morselli: "Forum Nervae", in: *LTUR* II (1995) 307-311, Figs. 115, 147, 148’.

For a reconstruction in "3D" of Domitian's *Forum/ Forum Nervae/ Forum Transitorium*; cf. Alessandro Viscogliosi (2009, 203, Fig. "1. Foro Transitorio, veduta ricostruttiva verso il tempio di Minerva (Inklink)". In this reconstruction, the façade of the Temple of Minerva is visible, showing the above quoted inscription on its architrave '*in situ*'; cf. p. 206, Figs. "5. Foro Transitorio, >le Colonnacce<"; cf. p. 207, Figs. "7-9. Foro Transitorio, interpretazione delle fasi (Viscogliosi); pianta della prima e della seconda fase (da Viscogliosi 2008)".

### **V.3. Summary of the publication by K.S. Freyberger (2018) concerning the architectural fragments found together with the Cancellaria Reliefs**

In the following I repeat what was written for Chapter II.3.1.b). Klaus Stefan Freyberger discusses in his account all those architectural fragments, found together with the Cancellaria Reliefs, that are also the basis of the two reconstructions by Markus Wolf (2018, 90-94, Abb. 33-40 [illustrations of the relevant architectural fragments, found together with the Cancellaria Reliefs]; cf. *supra*, at Chapter V.2.). For discussions of those architectural fragments, cf. also *supra*, n. 76, in Chapter I.1.; as well as at Chapters I.3.; I.3.1.; I.3.2.; II.3.1.b); V.2.

Freyberger (2018, 97) writes: "**Das korinthische Pilasterkapitell folgt in dem Aufbau der Dekorelemente und der plastischen Modellierung, der Machart, entsprechenden spätdomitianischen Kapitellen der Domus Flavia auf dem Palatin in Rom, wofür die Kapitelle im Paedagogium und im Westperistyl des Kaiserpalastes die besten Vergleichsbeispiele bieten** [with n. 1; my emphasis].

In his **note 1**, Freyberger writes: "... [*i.e.*, here K.S. FREYBERGER 1990] 13-20 Nr. 6.21 Taf. 2c; 3a".

For Freyberger's "Westperistyl" of the '*Domus Flavia*'; cf. the map SAR 1985: it is the peristyle immediately to the south of: "65": "Domus Flavia: "Aula Regia". On the southern slope of the Palatine of this map is also marked: "69: Paedagogium".

Cf. here **Figs. 8.1; 58; 73**, labels: PALATIUM; "DOMUS FLAVIA"; DOMUS AUGUSTANA; "PERISTYLE".

For the "Pilasterkapitell", mentioned by Freyberger (2018, 97); cf. Markus Wolf (2018, 92, *supra* at Chapter V.2.: "Abb. 33 Pilasterkapitell PK1", cf. p. 93: "Abb. 34 Pilasterkapitell PK1 ... [drawing]").

Elsewhere, Freyberger (2018, 97) writes:

**"An den Kassetten des Soffittenblocks finden sich Dekorelemente wie der Eier- und Perlenstab, die eine spätromianische Datierung befürworten. Vergleichbar sind der Eierstab mit seinen langen Eiern, den U-förmigen Schalen und den Pfeilspitzen sowie der dick umrandete Pfeifenstab mit den entsprechenden Motiven an Gebälken im Flavierpalast [with n. 3] und an den Kassetten des Titusbogens in Rom [with n. 4]. Die Übereinstimmungen in den gezeigten Vergleichen legen nahe, dass alle Bauglieder in dem letzten Jahrzehnt des 1. Jhs. n. Chr. von einer stadtrömischen Werkstatt hergestellt wurden, die auch für das Kaiserhaus auf dem Palatin tätig war [my emphasis]."**

In his **note 3**, Freyberger writes: "[C.] Leon 1971 ... 120.132-134. 264. 267. 273 Taf. 45,1-3; 46,1"

In his **note 4**, he writes: "[M.] Pfanner 1983, 30-33 Taf. 25-30; 99,6".

For the "Soffittenblock", mentioned by Freyberger (there were in fact found more than one of these architectural fragments); cf. M. Wolf (2018, 93, *supra* at V.2.: "Abb. 35 Soffittenblock S 1" and "Abb. 36 Soffittenblock S 1 ... [drawing]"; p. 94: "Abb. 37 Soffittenblock S 2" and "Abb. 38 Soffittenblock S 2 ... [drawing]").

**In his final conclusion, Freyberger (2018, 97) thus dates all these architectural fragments to the late Domitianic period, and attributes them to a workshop that was also active at Domitian's Palace on the Palatine, the *Domus Flavia* [ / *Domus Augustana*].**

In addition to this, Freyberger (2018, 97) compares on stylistical grounds the architrave block, carrying the inscription *PP FECIT*, that was found together with the Cancellaria Reliefs, with "*Le Colonnacce*" at Domitian's *Forum* / *Forum Nervae* / *Forum Transitorium*.

**Freyberger's contribution (2018, 97) thus supports the hypothesis suggested here (cf. *supra*, at Chapters II.3.1.b); II.3.1.c); and *infra*, in volume 3-2, at Appendix IV.d.2.a-f); and Appendix IV.d.4.b)) that the Cancellaria Reliefs can be compared with Domitian's *Forum* / *Forum Nervae* / *Forum Transitorium*. And that for the following reasons:**

- 1.) The inscription *PP FECIT* (CIL VI, 40543; cf. *supra*, n. 81, in Chapter I.1.), that was found in the same area as the Cancellaria Reliefs, is inscribed, exactly like the dedicatory inscription of Domitian's Temple of Minerva within Domitian's *Forum* / *Forum Nervae* / *Forum Transitorium* on an architrave block (for a discussion of such architrave blocks, carrying dedicatory inscriptions, cf. M. WOLF 2018, 91-93, *supra* at Chapter V.2.);
- 2.) The architrave block, carrying the inscription *PP FECIT*, that was found together with the Cancellaria Reliefs, has been compared on stylistical grounds by Freyberger (2018, 97) with "*Le Colonnacce*" at Domitian's *Forum* / *Forum Nervae* / *Forum Transitorium* (cf. here **Fig. 49**).

For a reconstruction in "3D" of Domitian's *Forum* / the *Forum Nervae*, cf. Alessandro Viscogliosi (2009, 203, Fig. "1. Foro Transitorio, veduta ricostruttiva verso il tempio di Minerva (Inklink)". In this reconstruction, the façade of the Temple of Minerva is visible, showing the above-quoted dedicatory inscription on its architrave 'in situ'; cf. p. 206, Figs. "5. Foro Transitorio, >le Colonnacce<"; cf. p. 207, Figs. "7-9. Foro Transitorio, interpretazione delle fasi (Viscogliosi); pianta della prima e della seconda fase (da Viscogliosi 2008)".

## VI. Final Conclusions concerning the Cancellaria Reliefs

Since I have so far not myself thoroughly studied the Cancellaria Reliefs, I wish to end my observations with Diana E.E. Kleiner's<sup>468</sup> final remark in her discussion of these Friezes:

"The jury is still out, so to speak, on the Cancellaria Reliefs, but it becomes increasingly apparent that the careful study of the heads of the main protagonists on state reliefs for evidence of reworking will have as critical an effect on their interpretation as the study of reworked heads has already had on understanding the chronology and political iconography of imperial portraiture".

Since I wrote this, I have had the chance to study on four occasions the heads of Vespasian und of the young Domitian on Frieze B, standing in front of the original, and, as a result of this, am now even more convinced than before that Magi, many other later scholars, as well as Claudia Valeria and Giandomenoco Spinola (cf. *supra*, at *Introductory remarks and acknowledgements*), and Giandomenico Spinola (cf. *supra*, at Chapter III. See also below, at *The Contribution by Giandomenico Spinola on the Cancellaria Reliefs*) are right by assuming that those heads have *not* been reworked and that they, from the very beginning, have represented Vespasian and the young Domitian respectively (cf. here **Figs. 1 and 2 drawing: Figures 14 [Vespasian]; 12 [Domitian]**).

In the Sommersemester of 2009<sup>469</sup>, when introducing my students to the scholarly discussion of the Cancellaria Reliefs, I had addressed them as follows:

"10.) Dia - Detail des Cancellariareliefs A mit Portrait Nervas, Vat. Mus. [with note 511].

Ich zeige Ihnen hier und im Folgenden die beiden sog.[enannten] Cancellariareliefs, Relief A und B. Es handelt sich um zwei Marmorreliefs, die ursprünglich offenbar zusammengehört hatten, und deren Hauptperson jeweils Kaiser Domitian gewesen war. Auf dem hier im Ausschnitt gezeigten Relief A wurde in der Antike das Portrait Domitians in ein Nervaportrait umgearbeitet, auf dem Relief B wurde aus dem Domitiansbildnis<sup>470</sup> ein Vespasiansportrait. Aber selbst das ist umstritten, so wurde neuerdings behauptet, dass der Domitianskopf auf dem Relief A ursprünglich ein Nerobildnis gewesen sei, was jedoch mit guten Gründen abgelehnt worden ist [with note 512].

Die Entscheidung, ob diese Reliefs in nderonischer oder flavischer Zeit gearbeitet wurden, ist nicht unerheblich, denn es handelt sich um Teile eines bedeutenden Baudenkmals, an dem Klassische Archäologen ja auch gerne Stiluntersuchungen vornehmen möchten. Bei einem Deutungsversuch müsste es eigentlich gelingen, sowohl für die ursprüngliche Bedeutung dieser Reliefs einen Lösungsvorschlag zu bieten, als auch für die Bedeutung ihrer umgearbeiteten Zustände. Es gibt zahlreiche Versuche, und das Ganze ist so etwas wie der ultimative Test für die Gelehrsamkeit eines Kandidaten - vergleichbar dem Singen eines hohen C, das Sopranistinnen, die Opernstar werden und bleiben wollen, mühelos produzieren müssen. Falls Sie auf einen Schlag berühmt werden möchten, wären diese Reliefs, vorausgesetzt, Sie könnten die skizzierten Probleme lösen, genau das richtige Studienobjekt.

Aber Spaß beiseite ... [‘but joking apart ...’].

There is a German saying: "aus Spaß wurde Ernst", which means: 'it began as a joke and then became serious' - this did not happen to my students, as anticipated, but obviously to myself ...

More than ten years later, I have now again tried to judge the ever growing amount of scholarship focussing on the Cancellaria Reliefs, that is (only in part) summarized in this *Study*.

<sup>468</sup> D.E.E. KLEINER 1992, 192.

<sup>469</sup> C. HÄUBER 2009b, 168 with ns. 511, 512 (providing references).

<sup>470</sup> with this assumption I had at that time followed T. HÖLSCHER 2009a (cf. *supra*, at Chapter III.); as explained in this *Study*, I have in the meantime changed my mind.

When asking myself, what that has done to *me*, I can only say to have definitely reached my limits, and there are two things that have surprised me most. The first kind of unexpected experiences concerned some of the hypotheses that have been published on the subject, the second resulted from a comparison of these Roman state reliefs with some portraits of politicians, made by the Italian sculptor Pietro Canonica in the 20<sup>th</sup> century. In the following, the Chapters VI.1. and VI.2. are dedicated to those 'two kinds of my unexpected experiences', while writing this *Study*, whereas in Chapter VI.3. are summarized my own hypotheses presented here.

### **VI.1. Summary of the hypotheses that have been published on the Cancellaria Reliefs by other scholars**

The Cancellaria Reliefs have been discussed since 1938 (cf. *supra*, ns. 4-6, 145, in Chapter I.1.). They have inspired, in the following 85 years until now, a large number of scholars to bring together an incredible amount of observations, historical knowledge and antiquarian *Gelehrsamkeit*.

These scholarly texts, regarded as a whole, are in themselves, as far as I am concerned, already a delight to read - although not all of them, as I must also confess. At the same time, those scholars, who so far published their opinions concerning these friezes, come from different disciplines and have applied a wide spectrum of methodological approaches. When regarded as a whole, their findings therefore provide an ideal case study for teaching purposes. Despite those very different expertises, which are manifest in this rich body of scholarship, this has not prevented some of these authors to judge other scholars' conclusions in a way, as if commanding also themselves the same kind of knowledge or experience.

The tones of these texts, again regarded as a whole, thus comprise every conceivable nuance between scholarly modesty and arrogance. What is positive in the case of the latter scholars, to whom I am referring here, is the fact that they still definitely read those other scholars' work, which they were criticizing. Really alarming is, in my opinion, something else: in some cases the authors discussed here knew exactly of the existence of related scholarly work, but did not discuss its results in their own accounts - seemingly especially in those cases, when those other scholars are of a different opinion than they themselves. Social sciences and/ or philosophy are not exactly those disciplines, in which I can say something really informed myself, but while reading this entire amazing scholarly production, I found especially these ethic aspects in themselves worth while to be further studied.

When it comes to the results concerning my own field of study, the scholarly findings related to the Cancellaria Reliefs reach from the seemingly simple, but in reality very important observation that these friezes were carved *in situ*, that is to say, when they were already attached to their monument, to the equally convincing conclusion that their *classical* style does not necessarily mean that they were carved in the Hadrianic period (as has been suggested). This style has rather deliberately been chosen due to the fact that the slabs are so thin that the artists could not possibly have carved 'typically *baroque* Flavian reliefs' (as suggested by P.H. von BLANCKENHAGEN 1940) out of them; as for example those of the Arch of *Divus Titus* on the *Velia*; cf. here **Fig. 120**). Other findings consist in (at times) far reaching considerations concerning the historical events, that are supposed to have been represented on these Friezes in their (alleged) different carving phases.

Especially interesting are the facts that the heads of the emperors on both friezes and the head of the togate youth on Frieze B have been identified very differently, and that many scholars believe that the portraits of the two emperors (here **Figs and 2 drawing: figure 6** on Frieze A, and **Fig. 14** on Frieze B) have been recut from portraits of other emperors; in addition, it has been suggested that also the head of the togate youth (**Figs. 1 and 2 drawing: figure 12** on Frieze B) has been reworked. So far no consensus has been reached concerning the interpretations of the actions of both emperors, nor concerning the gestures, that both are making with their right hands. Also the shoes, worn by the bearded Genius (**Figs. 1 and 2 drawing: figure**

11), and by the togate youth on Frieze B, have attracted much interest. Other lively discussions tried to answer the questions, whether Frieze A shows a *profectio* or rather an *adventus*, and what Frieze B might represent.

The extant portrait of the emperor on Frieze A (*i.e.*, of Nerva; **Fig.1; Figs. 1 and 2 drawing: figure 6**) was first identified as being that of Domitian. Then it was observed that the head of this emperor was originally a portrait of Domitian, the face of which had later been reworked into a portrait of Nerva. Some scholars, who likewise recognized Nerva in this portrait, believed that his portrait was already created in the first carving phase of Frieze A. Other scholars have suggested that, before being recut into a portrait of Nerva, the head of the emperor on Frieze A had originally been a portrait of Hadrian, or, that this head had at first been a portrait of Nero, then of Domitian, and finally of Nerva. What the emperor on Frieze B is concerned, it has been suggested that its extant head was from the beginning a portrait of Vespasian, other scholars believe that this head had previously been a portrait of Trajan, Domitian or Nero (here listed in the chronological order of the relevant publications).

Compared with all other 33 figures, that appear on both Cancellaria Reliefs (which comprise 17 figures each), the togate youth on Frieze B is by far the most controversial one, since scholars disagree, whether the represented youth should be identified as a portrait, or else as an 'ideal' figure. One scholar has even suggested that this figure belongs to an alleged *interim* sphere between human beings and 'ideal' figures, that is allegedly typical of Roman state reliefs. Those scholars, who took the represented youth for a portrait, identified him as Domitian (although one scholar believed that the extant portrait of Domitian had been reworked from the alleged original head of King Tiridates), Nerva, and Hadrian.

The togate youth on Frieze B is wearing the 'simple *calcei*', instead of the *calcei senatorii*, which he should wear as *praetor urbanus*, an office that Domitian held at the historical moment that, according to Magi (1939; 1945; cf. *supra*, n. 112, at Chapter I.1.), is represented on Frieze B (*i.e.*, Vespasian's *adventus* into Rome in the first half of October AD 70). Therefore, it has been suggested that this youth cannot be identified with Domitian, as Magi had likewise suggested, since these shoes characterize the represented man as being of equestrian rank. The scholar (cf. *supra*, n. 172; cf. n. 125, both at Chapter I.1.), who first observed those 'wrong shoes', worn by the togate youth - ('wrong', when assumed that this figure represents Domitian) - has, therefore, identified this youth as the allegorical representation of the *Ordo Equester*. This assumption has been refuted, because the representation of the *Ordo Equester* should instead be shown as wearing the *trabea*, that is to say, the garment which was typical of the equestrian order. And, as has been rightly observed by other scholars, the iconography of this allegorical representation (*i.e.*, the *Ordo Equester*) is unknown (cf. *supra*, ns. 156, 172, at Chapter I.1.).

Further eight scholars (discussed *supra*, n. 128 in Chapter I.1., and in Chapters I.1.; and I.1.1.), have supplied additional identifications for the togate youth on Frieze B (here **Figs. 1 and 2 drawing: figure 12**):

1.) the first scholar, who suggested that the extant portrait of Vespasian on Frieze B was recut from an (alleged) original portrait of Domitian, identified the togate youth, standing in front of 'Domitian'/Vespasian, as an 'ideal' figure, whose function cannot be defined, because this youth, in the opinion of this author, is neither of senatorial rank (because of the 'simple shoes' he is wearing), nor of equestrian rank (because he is not wearing a golden ring). This scholar doubted also that three other figures on Frieze B, the here-so-called *Genius Senatus* (referred to as unidentified bearded *Genius* instead), and the here-so-called *Genius Populi Romani* (referred to as *Honos* instead), and the here-so-called *Dea Roma* (referred to as unidentified seated amazon-like goddess instead), may be identified as such. To the effect, that this author is unable to suggest, where the scene on Frieze B is staged, and what it may represent. - Those identifications of these three figures on Frieze B (*Genius Senatus*, *Genius Populi Romani*, *Dea Roma*), that I am following here, had likewise first been suggested by Filippo Magi (1939; 1945; cf. *supra*, at Chapter I.1.).

Of those scholars, who have discussed the assumptions of the first author, I have chosen seven, who have suggested the following identifications for the togate youth on Frieze B:

- 2.) as the *equus* L. Iulius Vestinus, who is entrusted by 'Domitian'/ Vespasian with the *restitutio Capitolii* (i.e., of the third Temple of *Iuppiter Optimus Maximus Capitolinus*, built by Vespasian, after the second temple had been destroyed on 18th/ 19th December AD 69), in a ceremony that took place on the Capitoline on 21st June 70;
- 3.) as an unknown man, shod with *calcei*, who is standing in front of the Emperor 'Domitian'/ Vespasian. This scholar cannot define the function of this unknown man. Therefore the author, apart from suggesting that the scene on this panel shows an *adventus*, cannot say, what precisely Frieze B may represent;
- 4.) as an anonymous *equus* of the *gens Flavia*, whom 'Domitian'/ Vespasian, as *pontifex maximus*, by the gesture of his right hand, installs as an 'anonymous representative' of a new priesthood of the imperial cult, the *Sodales Flaviales Titiales*;
- 5.) as a magistrate of equestrian rank, who is shown, together with 'Domitian'/ Vespasian, in the ceremony of the *consecratio* of the Temple of *Fortuna Redux*, that took place on the *Campus Martius* (after Domitian's victory in the Sarmatian War in 93 AD);
- 6.) as a magistrate, who receives from 'Domitian'/ Vespasian the order, to build the fourth Temple of *Iuppiter Optimus Maximus Capitolinus* (after the third temple, built by Vespasian, had been destroyed in 80 AD);
- 7.) as the *praefectus urbi*, who welcomes 'Domitian'/ Vespasian at his *adventus* into Rome in AD 81. As already discussed above, the assumption that the togate youth could be the *praefectus urbi*, is impossible<sup>471</sup>.
- 8.) one scholar states that the togate youth is much debated, but does not define his function, nor does he himself suggest, what Frieze B might represent.

In my opinion, none of these eight hypotheses may be regarded as a convincing explanation of the scene, represented on Frieze B. In the case of three of these just mentioned eight hypotheses, the authors have themselves stated to be unable to say, what Frieze B may represent, the other five hypotheses have been refuted by other scholars. As I only found out when writing Chapter *V.1.h.1.*), even six out of these eight hypotheses have been refuted by other scholars (cf. *supra*, at Chapter *V.1.h.1.*)).

Still another scholar believed that also the head of this togate youth on Frieze B has been reworked: in his opinion, this head was originally a portrait of King Tiridates, recut into the extant portrait of the young Domitian. Also this hypothesis has been refuted (cf. *supra*, at Chapter *I.1.*)).

Consequently, it has been suggested that the emperor, who first commissioned the Cancellaria Reliefs, was either Nero, Domitian, or Hadrian (here listed in the chronological order of those emperors), and that the friezes had been reworked under Nerva - the latter assumption is proven beyond any doubt by his extant portrait on Frieze A (cf. *supra*, at Chapter *I.1.*)).

After this Chapter was written, appeared the publication by Stephanie Langer and Michael Pfanner (2018) on the Cancellaria Reliefs; their hypotheses concerning the togate youth and the emperor on Frieze B are summarized above (cf. *supra*, at Chapters *V.1.h.*); *V.1.h.1.*); and *V.1.h.2.*)).

For summaries of the scholarship related to the Cancellaria Reliefs, written by other scholars, see also *supra*, n. 133, at Chapter *I.1.*

## ***VI.2. Comparison of these Roman state reliefs with some portraits of politicians, made by Pietro Canonica***

In the first half of the 20<sup>th</sup> century, the Italian sculptor Pietro Canonica (1869-1959) received a wide range of commissions from reigning monarchs, their relatives, and by other prominent individuals all over Europe

---

<sup>471</sup> cf. *supra*, at ns. 182-189 in Chapter *I.1.*; cf. at Chapter *I.1.1.* For the office *praefectus urbi*; cf. also *infra*, in volume 3-2, at *Appendix I.a.*

and abroad<sup>472</sup>. At the orders of these people, Canonica created sculptural portraits of these sovereigns and/or of their relatives, also of over lifesize proportions, sometimes integrated into large, multifigured

<sup>472</sup> In this and the next note will be quoted the relevant accounts by Bianca Maria Santese 2017b and Carla Scicchitano 2017, both of whom do not only identify the individuals, whom Pietro Canonica has portrayed, but who explain also who these people were, as well as how the artist was related to them. After quoting some introductory remarks by Santese 2017b about Canonica's early years that led him very quickly to international fame, I have compiled in the following a list of Pietro Canonica's portraits, comprising reigning monarchs of the period, members of their families, as well as other representatives of the European aristocracy of the time; their names are emphasized.

B.M. SANTESE (2017b, 13, with n. 1), begins her Chapter: "Pietro Canonica, scultore, musicista, pittore. Un artista completo", with a quotation from Canonica's *Memorie*. In her note 1, she writes: "P. Canonica, *Ricordi della mia vita*, s.d. (ca. 1945-1949), da qui citate come *Memorie*, raccolte e poi trascritte da Maria Assunta Riggio, seconda moglie dell'artista, p. 3 (Archivio Museo Canonica)". See also Santese (2017b, 42, in her Chapter: "Da Gallinara a studio e residenza di artista: genesi di un museo"): "Canonica decise infatti di contrarre un secondo matrimonio con Maria Assunta Riggio, giovane studiosa che gli fu accanto già dagli anni '40 come sua assistente, e che curò la redazione delle *Memorie* scritte sulla base dei ricordi del Maestro [with n. 19: "Certificato di matrimonio ..."]."

Cf. B.M. SANTESE 2017b, 15-16: "Nel 1887 [when Canonica was eighteen years old] ottenne la prima commissione per realizzare quattro statue per la Chiesa di San Lorenzo e Maria Addolorata a Villanova ... Nel 1891 espose alla Triennale di Milano e all'Esposizione di Palermo, dove gli venne assegnata la medaglia d'argento, e due anni dopo [*i.e.*, 1893] partecipò al Salon di Parigi con una nuova versione in marmo di *Dopo il voto*, opera che rivelò la sua perizia tecnica ed anche la sua capacità di interpretare i più profondi sentimenti dell'animo umano. Ottenne la menzione onorevole e la definitiva affermazione a livello internazionale, sancita dall'acquisto dell'opera da parte del collezionista Goupil. **Grazie all'amicizia con le nobildonne Letizia e Matilde Bonaparte**, che lo introdussero negli ambienti artistici parigini, l'artista entrò in contatto con Anatole France, Edmonde de Goncourt e August [!] Rodin, ed aprì un piccolo studio anche a Parigi [with n. 6: "*Memorie* pp. 31-35"; my emphasis] (Fig. 4: "Dopo il voto. Gesso. Calco dell'originale in marmo. 1893").

**Da quel momento partecipò con successo alle maggiori esposizioni nazionali ed internazionali (Venezia, Milano, Torino, Palermo, Monaco, Dresda, Londra e Parigi), e le sue frequentazioni con l'alta aristocrazia europea, entusiasta del gusto raffinato e idealizzante di questo scultore, gli aprirono le porte delle corti inglesi, francesi, tedesche e polacche, dove venne ospitato in ville e regali [page 16] castelli** [with n. 7: "*Memorie* pp. 50-55 e pp. 67-70"; my emphasis]. Innumerevoli sono i volti aristocratici che videro espressa nel marmo la loro più secreta interiorità: ritratti palpitanti ed incisivi, eseguiti con una perizia tecnica rara e una grande sicurezza nel modellato". Cf. p. 16: "In questo periodo [1899] l'artista ottenne numerosi riconoscimenti da parte della critica e dell'alta aristocrazia del tempo. Strinse amicizia con la **duchessa di Genova, Elisabetta di Sassonia, con sua figlia, la regina Margherita, moglie di Umberto I, e con gli altri membri della famiglia reale** [with n. 9; my emphasis] (Fig. 5: "Elisabetta di Sassonia con la figlia regina Margherita a Stresa in lutto dopo l'assassinio di Umberto I"). Cf. her note 9: "Con la duchessa di Genova Canonica instaurò un rapporto di vera amicizia, che lo portò ad essere suo ospite nella villa di Stresa [on the Lago Maggiore] per ben 17 anni, nei periodi estivi. Qui Canonica incontrò **re Umberto**, alla vigilia dell'attentato che lo uccise, e proprio a Stresa l'artista ha eretto un monumento in suo onore nel 1901. *Memorie*, pp. 39-44. A Stresa Canonica fu sempre legato, ottenne la cittadinanza onoraria nel 1952 e dispose una donazione di opere che, dopo varie trasversie, nel 2011 hanno trovato degna collocazione in una sala del palazzo comunale. Ravera 2004; Burba 2012 [my emphasis]".

Cf. B.M. SANTESE 2017, 17: "Nel 1901 la Biennale di Venezia lo vide [*i.e.*, Canonica] partecipare con le *Comunicande*, e nel 1902 trionfò con le esposizioni alla Royal Academy di Londra e Berlino, dove entrò in contatto con i **duchi di Portland** e, introdotto a Buckingham Palace, eseguì tra gli altri i busti di **Edoardo VII**, della **Regina Alexandra** e della **Principessa Victoria** [my emphasis]". Cf. pp. 17-19 with n. 14, Fig. 8, portrait of **Donna Franca Florio** (1904-07) [in my personal opinion the most stunning of Pietro Canonica's portraits]; cf. p. 19, portrait of **Emily Doria Pamphilj** (1904), Fig. 9. Cf. p. 23: "Nel primo dopoguerra non tralasciò l'attività di ritrattista e mantenne stretti contatti con l'aristocrazia italiana ed europea. Nel contempo iniziò una proficua attività con i nuovi paesi emergenti, gli Stati nati dal disfacimento degli imperi. Ha compiuto infatti importanti missioni internazionali in Turchia, in Iraq e in Egitto, realizzando ritratti e monumenti per **Kemal Atatürk**, per il **re Faysal** e per il **re Fuad** [with n. 21, providing further discussion; my emphasis] (Figg. 15 e 16)". Cf. the caption of her Fig. 15: "Monumento a Kemal Atatürk. Istanbul 1928". Cf. the caption of her Fig. 16: "Monumento a re Faysal. Esterno della fonderia di Vetralla, con Thaon di Revel. 1933". - The photo shows Thaon di Revel standing immediately in front of the equestrian statue of King Faysal, thus demonstrating that the equestrian statue was clearly over lifesize. Cf. p. 23: "In piena II guerra mondiale si recò [*i.e.*, Canonica] in **Romania**, nel 1943, dove realizzò i **ritratti dei reali**, e trattò per concludere una pace separata con le Alleati, ma la sua missione diplomatica fallì [with n. 23: "*Memorie*, pp. 148-152"; my emphasis] (Fig. 17)". Cf. the caption of her Fig. 17: "**Michele di Romania** in posa davanti al modello eseguito da Pietro Canonica. Sinaia. 1943 [my emphasis]". Cf. pp. 29-30 in her section: "Collaboratori e allievi": in connection with the commission to create equestrian statues of the "**Granduca Nicolaj Nicolajevich**" and of "**zar Alessandro II**", Csar **Nicolaus II of Russia** presented Canonica with a "splendido esemplare di cavallo Orloff" [my emphasis].

Cf. C. Scicchitano (2017, 57, who writes in her Chapter: "Primo itinerario: le sale espositive"): "Tra i ritratti, genere in cui Canonica eccelleva, sono alcuni tra i marmi più belli, prevalentemente personaggi femminili, spesso di nobile rango. **Importanti elementi della collezione ritrattistica sono anche le opere in marmo e gesso che raffigurano personaggi della nobiltà italiana e internazionale, una rappresentanza del Gotha del tempo:** papi e cardinali, re e regine, donne e uomini illustri, scienziati e pensatori". In the following, I quote from her list. Cf. p. 58: "**Donna Franca Florio**" (1904-1907); "**Elena d'Orleans duchessa d'Aosta**" (1904); "**Contessa Maria Mazzoleni Bruschi Falgari** (1920). La nobildonna, ironica e colta, conobbe Canonica negli anni '90, e lo introdusse nei circoli aristocratici di Torino e Roma". Cf. p. 60: "**Principessa Emily Doria Pamphilj**" (circa 1920). Cf. p. 64: "**La presa di Smirne, Monumento a Kemal Atatürk**" (1932); "**Monumento a Simon Bolivar** (1954) Gesso patinata a bronzo". Cf. p. 70: "**Emanuele Filiberto duca d'Aosta**" (1934-1936); "**Michele di Romania** (1943)"; "**Elena, regina di Romania**" (1943). Cf. p. 72 (in the section "Sala V Deposito delle opere"): "La sala infatti raccoglie una sessantina di opere, per la gran parte non presenti nelle sale espositive, un'interessante

monuments, that were put on display on public squares in the countries, reigned by those sovereigns. Several of these portraits/ monuments were completely destroyed<sup>473</sup> in the course of revolutions that resulted

galleria di ritratti di personaggi illustri e di bozzetti e modelli. Tra questi citiamo i busti di *Amedeo Avogadro*, *Giovanni Paisiello*, *re Faysal*, *Ismet Pacha*, *Pio XI*, i rilievi per *Enrico Castelnuovo* e per *Manzoni e Rosmini*, **i tondi in bassorilievo per i monumenti di Atatürk**, i ritratti di *Ida Einaudi* e di *Maria Assunta Riggio*, e di molti altri personaggi illustri (Fig. 16)"; Cf. the caption of her Fig. 16: "**Ritratto di Faysal**. Modello in gesso. 1932". Cf. p. 74: "**Principessa Clotilde di Savoia Bonaparte**" (1912). Cf. p. 76: "Sala VII Questa è la sala della ritrattistica per eccellenza, una galleria di personaggi che rappresentano il Gotha del tempo: re e regine, nobili e nobildonne, uomini illustri, papi, scienziati e pensatori immortalati da Canonica con la consueta abilità tecnica e raffinata capacità di introspezione psicologica. Troviamo i **re Vittorio Emanuele III**, **Edoardo VIII** [corr: VII] **d'Inghilterra** e **Fuad d'Egitto**, **i papi Benedetto XV** e **Pio XII**, e ancora personaggi come Guglielmo Marconi, Luigi Einaudi, Sidney Sonnino, Riccardo Selvatico, Tommaso Vallauri e **Ataturk** ...". Cf. p. 76: "**Elisabetta di Sassonia duchessa di Genova** (1900). Gesso patinato rosso. Calco dell'opera in marmo. Roma, Palazzo del Quirinale. Ubicazione sconosciuta"; "**Granduchessa Maria Paulovna Vladimiro di Russia** (1909). Gesso patinato. Calco dell'opera in marmo. La granduchessa era presidentessa dell'Accademia di Belle Arti di S. Pietroburgo e introdusse Canonica, conosciuto a Parigi, alla corte imperiale dello zar Nicola II, suo nipote". Cf. p. 79: "**Virginia Agnelli Bourbon del Monte** (1914-1919). Modello in gesso. La nobildonna era la moglie di **Giovanni Agnelli, fondatore della FIAT**"; "**Ritratto di Pio XII**" (1939); "**Principesse Elisabetta e Olga Nikolaewna di Grecia**" (1910); "**Amedeo duca d'Aosta**" (1901); "**Principe Adalberto di Savoia**" (1900). Cf. p. 80: "**Principessa Violette Murat** (1906) ... dispersa"; "**Vittorio Emanuele e Maria Pia di Savoia**" (1938); "**Luigi Einaudi** (1948). Gesso patinato a bronzo. Modello originale per l'opera in bronzo. **Il presidente della Repubblica** [Italiana] ebbe cordiali rapporti di amicizia con Canonica e nel 1950 lo nomina Senatore a vita". Cf. p. 81: "**Principessa Giulia di Gangi**" (1939); "**Kemal Atatürk** (1927). Gesso patinato a bronzo. Modello per l'opera in marmo. Fu la prima opera realizzata da Canonica per il presidente della nuova **Repubblica Turca**, che in seguito gli commissionò altri quattro monumenti celebrativi. Nel Deposito è conservato anche il ritratto di **Ismet Pascià**, suo braccio destro, che gli successe nella presidenza [my emphasis]". Cf. p. 83: "**Sidney Sonnino**. Ministro del Regno (1923). Gesso patinato a bronzo. Modello per l'opera in marmo. Palazzo Montecitorio, Roma. **Fu un importante uomo di Stato, più volte ministro. Strinse con gli inglesi il patto di Londra, che impegnò l'Italia all'entrata in guerra nel primo conflitto mondiale** [my emphasis]".

<sup>473</sup> cf. B.M. SANTESE 2017, 19-20: "Nel 1911 lo **Zar Nicola II** gli [*i.e.*, Pietro Canonica] commissionò vari ritratti della famiglia imperiale e l'esecuzione dei monumenti equestri al **granduca Nicolaj Nicolajewitch**, a glorificazione della guerra russo-turca e ad **Alessandro II**, ucciso in attentato nel 1881, promotore di importanti anche se tardive riforme [with n. 17; my emphasis]". Cf. the caption of her Fig. 10: "Inaugurazione del Monumento al granduca Nicolaj Nicolajewich a Piazza Manejanja S. Pietroburgo. 1914". - This photo shows a group of people gathering in front of the monument, who thus demonstrate that the granduca Nicolaj Nicolajewitch and his horse were clearly represented over lifesize.

Cf. B.M. SANTESE 2017, 20: "L'esperienza russa sarà indimenticabile per Canonica, e ne sono testimonianza i numerosi ritratti fotografici e i cimeli conservati nella sua casa e le accorate parole di ammirazione e di rimpianto che riporta nelle sue *Memorie* [with n. 18, with further discussion, quoting Canonica's *Memorie*, pp. 71-99] (Fig. 10)".

Cf. C. Scicchitano 2017, 61: "**L'affermazione di Canonica come ritrattista e autore di opere monumentali si consolidò presso la corte degli zar avendo scolpito per lo zar Nicola II e la zarina Alexandra Feodorovna numerosi ritratti dei membri della famiglia imperiale e di esponenti della nobiltà russa. Lo zar commissionò all'artista anche due grandi opere celebrative: il monumento al granduca Nicolaj Nicolajewich e il monumento allo zar Alessandro II.** Entrambe queste opere furono distrutte negli anni della rivoluzione russa e ne resta testimonianza soltanto grazie ai due grandi modelli originali esposti in questa sala [*i.e.*, sala II] e alle foto storiche custodite nell'Archivio del Museo [my emphasis]". Cf. p. 61: "**Alexandra Feodorovna, zarina di Russia**" (circa 1910). Gesso patinato. Modello originale per l'opera in marmo (S. Pietroburgo, Museo di Paulovsk); "**Monumento allo zar Alessandro II di Russia** (1914). Gesso patinato. Modello dei tre lati del basamento per l'originale in bronzo, mai inaugurato per l'inizio degli eventi bellici. Nel rilievo sono raffigurate le più importanti riforme operate da Alessandro II: l'abolizione della servitù della gleba, la riforma del codice civile e della scuola. Distrutto [my emphasis]".

Apropos, "l'abolizione della servitù della gleba", mentioned by C. Scicchitano 2017, 61, in German called "Leibeigenschaft", and in English: "in bondage". A special kind of this deplorable legal status, the "Schuldenknechtschaft", or "schiavitù per debiti (*nexum*)" of people in ancient Rome, and the date, when that was abolished, will be discussed *infra*, in volume 3-2. at *Appendix IV.b*); and *Appendix IV.c*).

C. Scicchitano 2017, 61, continues immediately after that: "**Nicola II, zar di Russia** (1910). Gesso patinato. Modello per l'opera in marmo. Disperso". Cf. p. 62: "**Alessandro II, zar di Russia** (1913). Gesso patinato a bronzo. Studio per il monumento equestre in bronzo. Disperso"; "**Nicolaj Nicolajewich** (1911). Gesso patinato a bronzo. Studio per il monumento equestre in bronzo per la piazza Manejanja di S. Pietroburgo. Distrutto nel 1917"; "**Alessio Romanoff di Russia** (1910). Gesso patinato. Calco dell'opera in marmo. Disperso"; "**Granduchessa Victoria Melita Kirillo di Russia e figlio** (1908). Gesso patinato. Gesso per l'opera in marmo. Dispersa (Fig. 8)". Cf. p. 64: "**Monumento a Nicolaj Nicolajewich** (1912) Gesso patinato a bronzo. Modello in scala ridotta per il monumento equestre in bronzo per la piazza Manejanja di S. Pietroburgo (Inaugurato nel 1914 e distrutto nel 1917)". Cf. p. 65: "**Monumento a Faysal I re dell'Iraq** (1932-33). Gesso. Modello del monumento equestre in bronzo situato a Bagdad. Unica documentazione del monumento distrutto durante la rivoluzione irachena del 1958. L'opera fu realizzata e fusa nella fonderia annessa alla villa di Canonica a Vetralla

in the fall of those individuals, often already shortly after the completion of those sculptures. Many other of Canonica's works, commissioned by these people, are since those political changes lost.

I mention Pietro Canonica's work in the context of this *Study* on the Cancellaria Reliefs and the other projects of Domitian at Rome because of the following reasons.

Let me first of all repeat, what was written above in Chapter VI. *Final Conclusions concerning the Cancellaria Reliefs*:

'... More than ten years later, I have now again tried to judge the ever growing amount of scholarship focussing on the Cancellaria Reliefs, that is (only in part) summarized in this *Study*. When asking myself, what that has done to *me*, I can only say to have definitely reached my limits, and there are two things that have surprised me most. The first kind of unexpected experiences concerned some of the hypotheses that have been published on the subject, the second resulted from a comparison of these Roman state reliefs with some portraits of politicians, made by the Italian sculptor Pietro Canonica in the 20<sup>th</sup> century. In the following, the Chapters VI.1. and VI.2. are dedicated to those 'two kinds of my unexpected experiences', while writing this *Study*, whereas in Chapter VI.3. are summarized my own hypotheses presented here'.

There were three reasons, why Canonica's oeuvre has interested me in the context of the Cancellaria Reliefs:

1.) one monarch (Czar Nicholas II of Russia) and his Czarina, who had both ordered portraits from Pietro Canonica, were, exactly like Domitian, murdered and, as a consequence of this, many monuments, either commissioned by them, or representing them (*inter alia* works by Canonica), were destroyed. Therefore we could say that Nicholas II and his entire family, like Domitian, had suffered some kind of *damnatio memoriae*;

2.) all the reigning sovereigns, for whom Canonica had created his sculptures, taken together, by the sheer size of their commissions, can actually be compared with a Roman emperor, such as Domitian, and the sculptors who worked for him and that *a*) because of the great importance as well as the wide range of orders, Canonica had received from those people. Especially the sometimes multfigured monuments, comprising the over life size portraits of these individuals, can very well be compared with the state reliefs, commissioned by Domitian, such as the Cancellaria Reliefs (and the monument or building, to which they belonged); and *b*) because of the high artistic quality of Canonica's works.

Although points 1.) and 2.), which concern Canonica's sculptures, are thus comparable with the Cancellaria Reliefs, commissioned by Domitian, my point 3.) defines a great difference between the two subjects, and that is precisely what had surprised me:

3.) Canonica's works in question, contrary to the Cancellaria Reliefs, were *completely* destroyed. - Only by writing this Chapter down, have I realized the obvious reason for that. To this I will come back below.

But before telling you my conclusion, let's first of all turn to two of Canonica's sculptures that belong to the major subjects of his artistic production: *a*) portraits of aristocrats and other sovereigns in Italy, all over Europe and abroad (mostly created before World War I), some of them over life size and integrated into multfigured monuments, and *b*) 'Monumenti ai Caduti' of World War I, erected in several towns in Italy.

---

dove re Faysal soggiornò. Durante le sedute di posa si legò all'artista di profonda amicizia testimoniata da preziosi doni (Fig. 10: "Foto del monumento a Faysal sulla piazza di Baghdad ca. 1935 distrutto nel 1958"). Cf. p. 68: "La Rivista di S. Stefan. Monumento al granduca Nicolaj Nicolajevich 1911-1913. Gesso patinato a bronzo. Modello per il lato anteriore del basamento del monumento in bronzo dedicato al granduca Nicolaj Nicolajevich (1831-1891) a glorificazione della guerra russa turca (1877-78). L'opera, fuso in un unico blocco e finita nell'autunno del 1913, fu spedita via mare da Savona in Russia. Collocata nella piazza Manejnaja di Pietroburgo, sormontata dal monumento equestre, fu inaugurata solennemente alla presenza dello zar Nicola II il 13 gennaio 1914. Distrutta nel corso della Rivoluzione Russa, nel 1917, è documentata da una serie di foto storiche dell'Archivio Canonica [my emphasis]".

Cf. S. LANGER and M. PFANNER 2018, 83 with n. 159 (quoted *verbatim supra*, at Chapter V.1.a)), for Roman Emperors (Geta and Caracalla), the portraits of whom on state reliefs, as a consequence of their *damnatio memoriae*, had been completely destroyed.

Since 1927, that is to say for the 32 last years of his life, Pietro Canonica lived in the *Fortezzuola* at Villa Borghese on the road now called 'Viale Pietro Canonica' (cf. here **Fig. 41**), which accommodates the 'Museo Pietro Canonica a Villa Borghese Museo e casa d'artista'. In front of the museum is on display one of his bronze sculptures, the 'portrait' statue of the mule Scudela, which the artist integrated into various of his 'Monumenti ai Caduti' of World War I.

**Fig. 41. Pietro Canonica (1869-1959), 'Monumento all'Umile Eroè' ('monument of a modest hero'; 1937), bronze. Statue of a mule, which is part of his 'monumento agli Alpini'. This monument is on display in front of the Fortezzuola at the Villa Borghese in Rome, which accommodates the Museo Pietro Canonica. (Photos: F.X. Schütz 03-IX-2019).**

Cf. also below, at *The first Contribution by Laura Gigli concerning Pietro Canonica's statue of the mule Scudela*; and *infra*, in volume 3-2, at *Appendix I.d.1.) Statue of the mule Scudela. Pietro Canonica's 'Monumento all'Umile Eroè' (1937), ('monument of a modest hero'; cf. here Fig. 41), on display in front of the 'Museo Pietro Canonica a Villa Borghese' in Rome.*

Bianca Maria Santese (2017, in her Chapter: "Da Gallinara a studio e residenza di arista: genesi di un museo") describes the history of the *Fortezzuola*, beginning with the Borghese family, whose members used this building in very different ways. Cf. p. 38: "Dopo l'apertura al pubblico della Villa, nel 1903", the Comune di Roma had installed "uffici amministrativi" there, "Infine nel 1919 un rovinoso incendio danneggiò i locali, causandone l'abbandono [with n. 5].

*Genesi di un museo*

Solo nel 1927 l'Amministrazione Comunale diede alla Fortezzuola una nuova destinazione, concedendola in uso allo scultore Pietro Canonica per abitazione e studio, in cambio del restauro della struttura e della donazione delle opere che avrebbe raccolto in quegli spazi opportunamente ristrutturati [with n. 6, providing references]".

^ In her **note 5**, Santese writes: "Ricordiamo che nel 1901 Villa Borghese fu acquisita dallo Stato italiano e nel 1903, ribattezzata Villa Umberto, fu ceduta al Comune di Roma, ad eccezione del Casino Nobile, l'attuale Galleria Borghese, e di un'area destinata all'Istituto Nazionale di Agricoltura, oggi CNEL".

**Close to the museum Pietro Canonica, in the Valle Belle Arti, and precisely at the Piazzale Simon Bolívar, stands one of Pietro Canonica's other works, the equestrian bronze statue of Simon Bolívar (cf. here Fig. 40), which was cast in Canonica's own "fonderia" at Vetralla in 1934 (cf. B.M. SANTESE 2017b, 23).**

To give an example of the importance of Pietro Canonica's portrait commissions, I will discuss in the following his equestrian statue of Simon Bolívar, which is on display on a public square. This was also true of some of Canonica's now destroyed works, which represented portraits of sovereigns or other individuals, whose memory had later been damned. In 1960 was created an ensemble of the two major liberators of South America in the Valle Belle Arti at Rome by placing the equestrian statue of Bolívar, after a major restoration, again at its original site, but now opposite that of José de San Martín, whose equestrian statue was only erected there in 1957.

**Fig. 40. Pietro Canonica (1869-1959), equestrian statue of Simon Bolívar, bronze (1934). Since 1960 (again) on display on the Piazzale Simon Bolívar, the terrace in the Valle Belle Arti underneath the British School at Rome, opposite the equestrian statue of José de San Martín, which appears on the photos illustrated here in the foreground, seen from behind. The latter was erected in 1957 on the square now called Piazza José de San Martín, the terrace, which is located below the Via Omero in the Valle Belle Arti, and opposite the Piazzale Simon Bolívar (Photos: F.X. Schütz 18-IX-2019).**

**Fig. 43. Map of the Valle Belle Arti in Rome and of the adjacent Villa Borghese. OSM (Open Street Map, detail). Last visit: 5th October 2019.**

The inscriptions on the monument to José de San Martín read:

on the front of the pedestal:

"JOSE  
DESANMARTÍN  
LIBERTADOR DE LA ARGENTINA  
CHILE Y PERU"

and on a bronze plaque underneath it:

LAS EMBAJADAS ARGENTINAS ACREDITADAS ANTE  
EL GOBIERNO DE ITALIA Y LA SANTA SEDE AL  
LIBERTADOR GENERAL DON JOSÉ DE SAN MARTIN  
EN EL BICENTENARIO DE SU NASCIMENTO

and on the back of the pedestal:

"GLI ITALIANI  
D'ARGENTINA  
ALLA CITTÀ DI ROMA".

On the east side of the pedestal of the monument to Simon Bolívar there is the signature of the artist:

"P. CANONICA".

The dedicatory inscription is to be found below:

"LE NAZIONI BOLIVARIANE  
BOLIVIA COLOMBIA EQUATORE  
PANAMA PERU VENEZUELA  
QUESTA STATUA DEL LIBERATORE  
SIMON BOLÍVAR OFFRONO A ROMA MADRE  
IN MEMORIA DEL GIURAMENTO  
CHE EGLI PRONUNZIO SUL MONTE SACRO MCMXXXIV".

The inscription on the west side of the pedestal describes the *gestae* of Simon Bolívar:

"NACQUE IL 24 Luglio 1783 IN CARACAS  
NEL 1805 IN COSPETTO DELL'URBE GIURÒ  
DI LIBERARE L'AMERICA LATINA E DI CUSTODIRNE L'INDIPENDENZA  
COME UN LUMINOSO ASILO DELL'UMANITÀ A GLORIA DELLA STIRPE  
IL VOTO COMPI  
IN QUINDICI ANNI DI GESTA EROICHE E DI  
ABNEGAZIONE".

Later was added a bronze inscription to Bolívar's monument, which is placed in front of the statue, underneath its pedestal:

"IL 19 APRILE 1960 FU QUI  
DEPOSITATA LA TERRA DEI  
CAMPI DI BATTAGLIA SU CUI  
TRIONFARONO GLI ESERCITI  
BOLIVARIANI NELLA LORO  
LOTTA PER LA LIBERTÀ".

Sylvia Diebner (2018, 80-88) has studied the history of the 'Valle Belle Arti', and of the buildings which are the reason, why this entire new city quarter was called this way. Her text is published in German and Italian, and I will quote in the following from the Italian version. Of all the buildings, Diebner discusses, I can only single out in this context the nine foreign "Istituti di Cultura", also called academies, which were created in this process. - The Austrian institution was the focus of the publication, for which Diebner was asked to write her contribution.

Three of these academies are located to the north of the Viale delle Belle Arti, on the roads now called Viale Bruno Buozzi and Via Antonio Gramsci, respectively. From west to east they are: 'l'Istituto Austriaco di Cultura a Roma', 'l'Istituto Giapponese di Cultura' and the 'British School at Rome'. To the south of the Viale delle Belle Arti was erected the 'Accademia di Romania in Roma', which stands to the west of the Piazza José de San Martín. To the south and above that terrace, on the road now called Via Omero, are to be found from west to east: 'l'Accademia di Danimarca', 'l'Istituto Svedese', the 'Reale Istituto Neerlandese', 'l'Accademia Belgica', and 'l'Accademia d'Egitto'. In addition to these nine academies, this area is characterized by seventeen monuments of important foreign personalities - all male, as I should like to add. Not by chance, the Valle Belle Arti has, therefore, recently been called the '*memorial garden* of the Valle Giulia', as Diebner (2018, 87) writes. Diebner explains the meaning of the monuments, dedicated to Simon Bolívar and to José de San Martín (cf. here **Fig. 41**), two of altogether six "eroi latinoamericani" (so S. DIEBNER 2018, 88), who have been honoured in this area with statues, in the context of all the other sculptures and inscriptions that have been dedicated to foreigners in the Valle Belle Arti and in the adjacent Villa Borghese.

Diebner (2018, 87-88, in her Chapter: "Valle Giulia durante gli anni del Governatorato di Roma (1925-1944)", in the section: "Valle Giulia: la politica estera sotto forma di statue") writes about these monuments, dedicated to foreigners:

"Nella zona di Valle Giulia e dell'adiacente colle di Villa Borghese, se si escludono i circa duecento busti del Pincio e del Gianicolo, si contano complessivamente diciassette statue offerte in dono dalle diverse nazioni. Questo insieme di statue non è da attribuire a una sistematica operazione decorativa delle zone lasciate libere dalle opere di costruzione. Tutte le personalità raffigurate avevano, infatti, un legame con Roma anche se ciò potrebbe non essere subito chiaro per il visitatore di oggi, magari per mancanza di conoscenze storiche. Prima di addentrarsi in **questo memorial garden di Valle Giulia, come è stato recentemente definito**, occorre ricordare il passaggio al demanio di Stato, avvenuto nel 1930 [corr: 1903; cf. Diebner's German text on page 76 and *supra*], di Villa Borghese insieme al suo vasto parco popolato di statue. Si pensa che l'amministrazione della città volesse così riproporre, nella zona adiacente a Valle Giulia, l'idea di erigere delle statue anche per personalità di fama internazionale, come per fare quasi da specchio al Pincio, nel quale, come nel parco Borghese, si ergevano busti e statue raffiguranti le maggiori personalità politiche e culturali italiane.

Poiché alla base dell'edificazione di tutti questi monumenti vi sono motivazioni legate alla politica estera, sembra opportuno descrivere queste opere non in ordine cronologico, bensì a seconda del rapporto intrinseco instauratosi tra i personaggi rappresentati e la città di Roma o l'Italia. È **interessante notare la fitta**

schiera di monumenti dedicati ai liberatori del Sudamerica, che sono espressione probabilmente dei complessi legami dell'Italia con l'America Latina e che acquistano, dunque, valenza ideologica. L'emigrazione di massa, soprattutto del ceto contadino, interessò in misura maggiore l'America. In alcuni comuni di lingua spagnola e di fede cattolica romana si [page 88] registrò nel tardo XVIII e nel XIX secolo un aumento consistente della comunità di immigrati italiani. Circa 600.000 immigrati in età lavorativa scelsero l'America Latina come meta. Dei 14 milioni di emigrati che abbandonarono l'Italia, tra gli anni '70 dell'Ottocento e la prima Guerra mondiale, il 25 % emigrò in Sudamerica. Il più delle volte queste donazioni all'Italia sotto forma di statue furono dettate dalla volontà di rafforzare i continui rapporti reciproci. In Valle Giulia si contano, a ogni modo, non meno di sei statue a grandezza naturale dedicate a eroi latinoamericani.

Tra tutti probabilmente il più famoso è il "libertador" del Sudamerica, **Simón Bolívar** (1783-1830). Tra il 1811 e il 1821, costui riuscì a unire l'attuale Venezuela e la Colombia in un unico Stato indipendente, di cui egli divenne il primo presidente; negli anni successivi riuscì ad annettere anche la parte nord del Perù alla Gran Colombia, l'attuale Ecuador. Nel 1851 il governo peruviano affidò allo scultore italiano **Adamo Tadolini** (1788-1868) l'incarico di realizzare una statua equestre dell'eroe. Questa stessa statua sembra aver ispirato la realizzazione di un'altra statua eretta nel 1934 a Roma dallo scultore **Pietro Canonica**, dono da parte di tutte le sei nazioni che raggiunsero la propria libertà grazie a Bolívar ovvero: Bolivia, Colombia, Ecuador, Panama, Perù e Venezuela. È interessante, inoltre, notare il fatto che la statua fu eretta in una data che non ricorda in alcun modo Bolívar, bensì alla presenza di Mussolini per i festeggiamenti dell'anniversario ufficiale di Roma, il 21 aprile dello stesso anno. Nel 1960 poi - dopo una completa opera di pulizia della statua - il monumento fu eretto nel giorno del centocinquantenario dell'indipendenza del Venezuela, quindi con una successiva variazione dei rapporti politici, di nuovo a Valle Giulia sulla terrazza sottostante la British School.

Tre anni prima [*i.e.*, 1957] era stata eretta una statua di bronzo, antistante all'Accademia di Romania, raffigurante il primo combattente per la libertà dell'America latina, **José de San Martín** (1778-1850), che nell'iscrizione sul piedistallo viene definito il "libertador de la Argentina, Chile y Peru". **La statua fu realizzata su iniziativa e con il finanziamento della comunità italiana dell'Argentina a opera dell'artista italiano Silvio Olivo** che si ispirò chiaramente alla statua di Lima raffigurante de San Martín vittorioso sulle truppe reali in Cile e Perù, avendo assicurato così nel 1817 l'indipendenza di quello che sarebbe più tardi diventato lo Stato argentino [my emphasis]. Cf. p. 89: "Probabilmente fu la statua eretta in onore di **Simon Bolívar** ad aver incoraggiato gli altri Stati, le altre città o i gruppi di emigranti italiani attivi dal punto di vista politico-culturale a donare anche loro alla città di Roma dei monumenti raffiguranti i propri eroi [my emphasis]".

Carla Scicchitano (2017, 64) writes about a plaster model of Pietro Canonica's statue of Simon Bolívar at the Museo Pietro Canonica: "**Sala III ... Monumento a Simon Bolivar**. 1954. Gesso patinato a bronzo. Modello per la replica del monumento in bronzo e granito (Popayan, Colombia). L'opera originale fu realizzata da Canonica nel 1933, donata dalle nazioni bolivariane al Comune di Roma nel 1934. La sua collocazione attuale a Valle Giulia avvenne il 19 aprile 1960, in occasione della celebrazione del cinquantenario [!] anniversario dell'indipendenza del Venezuela".

Cf. Bianca Maria Santese (2017b, 27), who writes about Pietro Canonica:

"Attivo fino agli ultimi giorni della sua vita, morì a Roma l'8 giugno 1959. I suoi funerali furono celebrati alla presenza delle massime autorità dello Stato nella Basilica di S. Maria degli Angeli, e dal 1977 le sue spoglie riposano nella chiesetta dell'Immacolata a piazza di Siena, nell'amata Villa Borghese [with n. 27]".

In her **note 27**, Santese writes: "Archivio Museo Canonica".

This "chiesetta dell'Immacolata", mentioned by Bianca Maria Santese (2017b, 27), was erected in the Villa Borghese, immediately adjacent to the north-west of the Casina di Raffaello. From the entrance porch of the church, looking in a north-westerly direction, is visible Pietro Canonica's statue of the mule Scudela (cf. here **Fig. 41**), which was erected in front of the museum dedicated to Canonica.

Immediately after that, Bianca Maria Santese (2017b, 27) continues: "A Pietro Canonica in vita non mancarono né successo né riconoscimenti ufficiali: ha ricevuto onorificenze da tutte le nazioni e istituzioni per cui ha lavorato, nel 1929 fu nominato Accademico d'Italia, nel 1930 Accademico di S. Luca e nel 1950, per i suoi *altissimi meriti artistici*, fu nominato Senatore a vita da Luigi Einaudi [with n. 28] (fig. 22). Nonostante i tanti successi e riconoscimenti, dopo la morte la sua fama si affievolì, e fu relegato, con una discutibile *damnatio memoriae*, ai margini della vicenda artistica tra Otto e Novecento [with n. 29]".

In her **note 28**, Santese writes: "Amicizia e stima da parte del Presidente [*i.e.*, of Italy: Luigi Einaudi] sono confermate da diverse foto che li ritraggono insieme [with Pietro Canonica] e in particolare da una sua foto con dedica regalatagli in occasione del suo [*i.e.*, Canonica's] novantesimo compleanno [*i.e.*, her Fig. 22]".

In her **note 29**, she writes: "La storiografia artistica degli anni '50 e '60 del Novecento 'dimenticò' molti dei protagonisti della vicenda artistica tra la fine dell'Ottocento e la prima metà del Novecento, spesso considerati epigoni decadenti della tradizione ottocentesca, o (a seconda dei casi) artisti di 'regime'. L'attenzione si concentrò piuttosto sugli artisti della grande Avanguardia novecentesca, spesso ignorati o emarginati dai regimi totalitari tra le due guerre. Anche la carica di Accademico d'Italia rivestita con orgoglio da Canonica fin dal 1929, ha certamente contribuito a creare un clima di 'sospetto' intorno a Canonica, travolto, suo malgrado e nonostante il suo dichiarato antifascismo, nelle 'epurazioni' ideologiche del secondo dopoguerra. Simoncelli, 2009".

Interestingly, the artist Pietro Canonica has thus himself suffered a kind of *damnatio memoriae* after his death, as Bianca Maria Santese (2017b, 27) observes. But that was not the reason, why I decided to discuss his work in the context of this *Study*, but rather something else. - Although I was glad to have the chance to discuss this matter with Eugenio La Rocca on 17th September 2019 in Rome. La Rocca, who knows Pietro Canonica's work well, did not agree with the idea that the artist might be regarded by some art critics as one of the above-mentioned "artisti di 'regime'" of his time. He added that Canonica is a good sculptor and that, in 200 years time, his work will probably be much more acknowledged than today.

Compared with the dramatic vicissitudes of some of Pietro Canonica's portraits of sovereigns, who suffered *damnatio memoriae* (Czar Nicholas II of Russia suffered the damnation of his memory together with his entire family) soon after Canonica had sculpted their monuments, to the effect that these works were *completely* destroyed, it is remarkable that the Cancelleria Reliefs - like many other Roman marble reliefs or sculptures in the round comprising portraits of emperors and/ or of members of their families - have *not* been destroyed after the fall of that emperor (or that member of his family), who had commissioned them in the first place.

These Roman portraits were instead reused again, at the orders of the succeeding emperor(s), by recutting the portrait(s) of those individuals. And that, although I would have thought that any Roman emperor had much more financial means, marble and artists at his disposal than any of those aforementioned politicians of the 20<sup>th</sup> century. In the specific case of the Cancelleria Reliefs (cf. here **Figs. 1; 2**), the order to recut the portrait(s) of these friezes, had certainly occurred after the fall of one emperor and his subsequent *damnatio memoriae*: Domitian, or, as has also been suggested, after the fall of even two emperors: Nero and Domitian.

Apropos: 'These Roman portraits were instead reused again'. There is, of course, a fundamental difference between any Roman emperor until about the third century AD - so for example Domitian - and Czar Nicolaus II of Russia, who commissioned Pietro Canonica with some of the sculptures, that have been discussed in this Chapter.

I have already mentioned above an observation by Rose Mary Sheldon (quoted in more detail *infra*, in volume 3-2, at *Appendix I.i*)) that can explain, why Pietro Canonica's above-mentioned portraits of monarchs, whose memory was damned, were completely destroyed, whereas the portraits of Roman emperors, who likewise *suffered damnatio memoriae*, were simply recut - and can therefore fortunately still be studied by us today (cf. here **Figs. 1; 2**).

Rose Mary Sheldon (2018, 202) writes:

"... There were too many tasks to accomplish and too many people to watch. Still, the empire continued. Perhaps that is the biggest mystery of all: that despite having the highest rate of attrition of any monarchy in the world, the Roman Empire survived another three centuries ... [*i.e.*, after Augustus' death; my emphasis]".

The answer to the above posed question is, therefore, very simple: contrary to the political situation of Czar Nicolaus II of Russia, with Domitian's assassination, the Roman principate had not come to an end.

For the artist Pietro Canonica and for his statue of the mule Scudela; cf. also *infra*, in volume 3-2, at *Appendix I.d.1.*

**VI.3. Summary of my own hypotheses concerning the Cancellaria Reliefs presented in this Study; Addition: My own tentative suggestion, to which monument or building the Cancellaria Reliefs may have belonged, and a discussion of their possible date**

As explained in detail in this *Study*, I myself believe, like Giandomenico Spinola (cf. *supra*, at Chapter III. See also below, at *The Contribution by Giandomenico Spinola on the Cancellaria Reliefs*), that the Cancellaria Reliefs were commissioned by Domitian and that they originally showed on Frieze A a *profectio* of the Emperor Domitian, and that Frieze B shows the togate youth (in my opinion Domitian; cf. here **Fig. 2; Figs. 1 and 2 drawing: figure 12**), receiving his father, the Emperor Vespasian (cf. here **Fig. 2; Figs. 1 and 2 drawing: figure 14**), 'after Vespasian's victories in the East, that were the foundation, on which he built his dynasty' (for that, cf. *infra*). Represented is Vespasian's *adventus* as the new emperor into Rome in October of AD 70; the fact that *Victoria* is crowning Vespasian with the *corona civica* means that this is the very moment of the investiture of the new Emperor Vespasian.

But in the first place, the *corona civica* was granted *ob cives servatos*, as rightly observed by Rita Paris, who therefore convincingly concludes that Vespasian is honoured with this wreath, which was the highest possible decoration for a military victory, because he had managed to end the civil war. - Like Augustus before him, who had received the *corona civica* because of the same reason (cf. *ead.*, 1994b, 81-82, quoted *verbatim supra*, in Chapter V.1.i.3.a), and here **Fig. 35**).

I also follow Spinola's hypothesis that the gesture, made by Vespasian with his right hand, means the "legittimazione" (so Spinola) of Domitian as (future) emperor by his father, the Emperor Vespasian. In addition, I follow Toynbee (1957)<sup>474</sup> in assuming that Domitian's wearing of the 'simple, equestrian shoes' on Frieze B was intentional (for the meaning of this decision, cf. *infra*).

I thus follow scholars, whose hypotheses have been abandoned by most scholars since a very long time, after Anne Marguerite McCann (1972; cf. *supra*, n. 114, in Chapter I.1., who voted for Trajan) and Marianne Bergmann (1981; cf. *supra*, n. 115, in Chapter I.1.), in my opinion erroneously, had both asserted that the extant head of Vespasian on Frieze B had (allegedly) been recut from the portrait of another emperor. As a consequence of Bergmann's hypothesis, who suggested that this alleged original emperor on Frieze B should be identified with Domitian, she herself (cf. *supra*, at n. 128, in Chapter I.1.), and many scholars following her, had, of course, abandoned Filippo Magi's idea (1939; 1945; cf. *supra*, ns. 112, 117, at Chapter I.1.), to recognize in this togate youth the young Domitian (for detailed discussions, cf. *supra*, n. 128, at Chapter I.1., and in Chapters I.1.1; V.1.h.1.); V.1.i.1.); V.1.i.3.); VI.1.).

---

<sup>474</sup> J.M.C. TOYNBEE 1957, 7-8 (quoted *verbatim supra*, n. 176, in Chapter I.1.).

In order to support my identification of the togate youth on Frieze B as the young Domitian (here **Figs. 1 and 2 drawing: figure 12**), I have - following suggestions by Toynbee (1957) and Simon (1960; 1963) - concentrated on the context, in which this figure is shown on this panel, and on the 'wrong' shoes, he is allegedly wearing (provided he were Domitian: who, holding the office *praetor urbanus* at the represented moment (*i.e.*, the first half of October in AD 70), was entitled to wear the *calcei senatorii*, resulting in the assumptions that he is shown as the current *praetor urbanus* and at the same time as the *princeps iuventutis* (as likewise first suggested by Toynbee; to this I will come back in detail below).

**Contrary to previous scholars, I have also tried to figure out, how the artists had managed to indicate the locale where Frieze A and B are staged, without the aid of architectural backdrops, as are normally typical of state reliefs, for example arches, that in *adventus*-scenes visualize a gate in the Servian city Wall (cf. here Fig. 91). The reason being that the slabs of the Cancelleria Reliefs are obviously too thin to allow such additional carvings.**

**Assuming that the artists have instead chosen and positioned the figures represented on both panels according to the spatial restrictions that those individuals had to observe, I believe to have found such further information which both friezes contain.**

**Since the reliefs show a *profectio* and an *adventus*, the 'invisible' boundary that dictates the movements of all represented figures, is the *pomerium* of Rome.**

This assumption, already suggested by many previous scholars, could be proven, because I was able to identify the amazon-like figure on Frieze A as the *Dea Roma* (cf. *supra*, at chapters I.2; V.1.b); V.1.d); V.1.i.2.)), whereas many other recent scholars have identified her as *Virtus* or as *Roma/Virtus* instead (cf. *supra*, at Chapters I.1.; I.2.); V.1.b)). Then trying to find out, whether or not the artists had designed the composition of Frieze B in similar fashion, I found out that the topographical situation, pictured on Frieze B, corroborates the suggestion, made by Toynbee (1957) and Simon (1960; 1963), to recognize in the togate youth the *praetor urbanus* of the represented historical moment, because that magistrate could only act in this capacity *inside* the *pomerium*.

**In order to verify Toynbee's (1957) and Simon's (1960; 1963) hypotheses, I had asked two questions:**

- 1.) which Roman magistrate could in theory have received a home coming emperor in an *adventus*-ceremony?; and -**
- 2.) under which conditions could the magistrate in question act in this ceremony?**

The answer to the 1.) question was: the magistrates in question, who have been represented in this capacity on state reliefs are for example the two *consules* and the *praefectus urbi*. Both are, for example, represented on two different reliefs of the Arch of Trajan at Beneventum (cf. *supra*, at Chapter II.3.3., and here **Fig. 46**).

Because of his age, the togate youth on frieze B cannot possibly be neither a *consul*, or a *praefectus urbi* (cf. *supra*, at Chapter V.1.h.1.)). But because Toynbee (1957) and Simon (1960; 1963) 1,) correctly (as we know now) assumed that Frieze B shows Vespasian's *adventus* into Rome in October of AD 70; and 2.) because they knew that the young Caesar Domitian was *praetor urbanus consulari potestate* since 1st January AD 70 (cf. *supra*, at n. 189, in Chapter I.1.; cf. at Chapters V.1.h.1.); V.1.i.3.)), Toynbee and Simon (both *op.cit.*), in my opinion convincingly, identified the togate youth with Domitian. To the accounts of Toynbee (1957) and Simon (1960; 1963) I will come back below in more detail.

**But Toynbee (1957) and Simon (1960; 1963) themselves did not address my 2.) above-asked question: the consequences of the spatial restriction, under which a 'praetor urbanus' (as already his name implied) had to operate in the capacity of his office: namely only *within* the *pomerium* of Rome (cf. *supra*, n. 185, in Chapter I.1.; and in Chapter V.1.i.3.)).**

**To have considered this simple fact in my discussion of Frieze B is my own contribution to this debate, and I hope that my 'topographical' approach to this panel has helped to solve the vexed problem, 'whom on earth the togate youth on Frieze B might represent'.**

In addition to this, Franz Xaver Schütz and I have made a visualization of the Cancellaria Reliefs as the horizontal panels in the bay of one of the arches, built by Domitian (cf. here **Figs. 1 and 2 of the Cancellaria Reliefs, drawing, 'in situ'**; *supra*, at Chapters *I.3.*; *I.3.2.*; *V.1.d.*; *V.1.i.3.*) and *infra*, at Chapters *The major results of this book on Domitian*; and at *The visualization of the results of this book on Domitian on our maps*).

This has resulted in the following observations. When both friezes are attached to opposite walls in the passageway of an arch and viewed together - as in our 'in situ'-visualization - the togate youth on Frieze B results as standing almost precisely opposite the figure of the Emperor Domitian (now Nerva) on Frieze A (cf. here **Figs. 1 and 2 drawing; figures 12** [togate youth/ Domitian]; **6** [Domitian/ Nerva]). This visualization demonstrates, in addition to this, that Domitian and the togate youth are heading processions that move in the same direction as the beholder, who passes under this arch.

**In my opinion these two facts support my hypothesis to identify the togate youth with the young Caesar Domitian.**

In the case of the emperor, represented on Frieze B (cf. here **Figs. 1 and 2 drawing; figure 14** [Vespasian]), I have pursued the following avenue of research, which differs from that of all previous recent scholars. I have tried to find out whether the iconographical details, represented on Frieze B, could possibly support Filippo Magi's (1939; 1945) assumption that the represented emperor on this frieze had been Vespasian from the very beginning. In my opinion, this is actually the case (for the following, cf. *supra*, at Chapters *V.1.i.2.*; *V.1.h.2.*; *V.1.i.3.*; *V.1.i.3.a.*)).

One result of my relevant research refers to the figure of the *Dea Roma* on Frieze B (here **Fig. 2; Figs. 1 and 2 drawing; figure 2**): this representation of the goddess follows the iconography of the *Dea Roma* that Vespasian chose for a *sestertius*, issued in AD 71 (cf. here **Fig. 112**), which commemorated his revival of the archaic festival of the *Septimontium*, which was henceforth again celebrated at Rome, and especially lavishly by Domitian (cf. *supra*, at Chapter *V.1.i.2.*)). This finding proves that the amazon-like figure on Frieze B actually represents, as correctly suggested by Magi (1939; 1945; cf. *supra*, **n. 112**, in Chapter *I.1.*), not *Virtus*, as some scholars assume, but instead the *Dea Roma*.

Magi (1939, *quoted verbatim supra*, **n. 112**, at Chapter *I.1.*, and 1945, cf. *supra*, at **n. 192**, in Chapter *I.1.*, and at **n. 194**, in Chapter *I.1.1.*), had likewise - correctly - suggested that Frieze B represents Vespasian's *adventus* at Rome in (the first half of) October of AD 70 (as we know now). Scholars have rejected this hypothesis (cf. *supra*, at Chapter *V.1.i.3.*)) on the following three grounds:

- a) Vespasian is wearing a *tunica* and a *toga*, which they do not regard as appropriate for a general, who comes back from a victorious military campaign;
- b) Vespasian is not accompanied by soldiers, which in their opinion is not appropriate for a (military) *adventus*; and
- c) *Victoria* crowns Vespasian with a *corona civica*, instead of with a *corona triumphalis*, which they would regard as appropriate for a victorious general, who is shown in an *adventus*-ceremony. - But see below.

**As I hope to have demonstrated above (cf. *supra*, at Chapter *V.1.i.3.*)), all three points a)-c) faithfully record the real historical situation of the first half of October AD 70, when Vespasian came back to Rome for the first time since he had obtained his recognition as the Roman emperor by the Senate.**

At the same time Vespasian came back for the first time after his victories in the Great Jewish War. Dio Cassius writes that Vespasian was clad in *tunica* and *toga* already when he had arrived at Brindisi (and *ergo* also, when he arrived at Rome), and we know from Dio Cassius and from Flavius Josephus that Vespasian did not come back together with his victorious army. The reason being that Titus was still fighting with this army the Great Jewish War at that stage, who came only back to Rome (together with this army) in AD 71.

**Also the choice of the artists, who decided to show *Victoria* on Frieze B in the act of crowning Vespasian with the *corona civica*, is correct: this crown denotes the reigning emperor and, as correctly interpreted by earlier scholars, this detail of Frieze B therefore visualizes the investiture of the new Emperor Vespasian.**

After this Chapter was written, I learned from Rita Paris (1994b, 82), that my above-mentioned point *b*) is not (quite) correct: contrary to my assertion, Vespasian was actually accompanied by part of his army, when he came back to Rome in October of AD 70. - To this I will come back below.

**The three points a)-c) listed here therefore do not fit for any other historical personality and event than for Vespasian in the first half of October AD 70, when he, coming back from his victories in the East, arrived at the first time (as the new emperor) at the City of Rome.**

Rita Paris (1994b) has added to all this the most important observation that **Vespasian is crowned with a *corona civica* by *Victoria* because he had managed to end the civil war**, since this crown was granted *ob cives servatos*. - Like Augustus before Vespasian, who had received the *corona civica* because of the same reason: "... questo riconoscimento, *ob cives servatos*, conferito in un'età repubblicana a chi avesse salvato un concittadino, in determinate circostanze, divenuto poi, con Augusto, prerogativa imperiale"; cf. Paris (1994b, 82; cf. *supra*, at Chapter V.1.i.3.a), and here Fig. 35).

**Of course no other emperor (after Augustus) than Vespasian could therefore have been crowned by *Victoria* with a *corona civica* because of that reason.**

Given the fact that the composition of Frieze B was designed a long time after the historical event, it may well be that the represented scene comprises 'glimpses in the future'. I have suggested this for two iconographic features:

*a*) in the case of the choice of the statue-type(?) of the *Dea Roma* on Frieze B, which should only appear on a *sestertius*, issued by Vespasian in AD 71 to commemorate the fact that he had revived the archaic festival of the *Septimontium* at Rome (cf. *supra* at Chapter V.1.i.2.) and here Fig. 112);

*b*) in the case of the *cippus*, on which the *Genius Populi Romani* on Frieze B sets his left foot. If that object (by the way the only one, represented on both friezes, which indicates the locale, where the scene takes place) is here correctly identified as a *cippus* that marks the *pomerium*-line, this may have two further consequences. Because, if so, this could be understood as a further hint at:

1.) the identity of the represented emperor, namely again Vespasian, because we know from the *V. clausula* of the *lex de imperio Vespasiani* (CIL VI 930), that Vespasian was given the power to enlarge the *pomerium*, if he should find such an operation useful - and which Vespasian actually did;

2.) this *cippus* of the *pomerium*-line, at the same time, may have been chosen to show the beholder something else: the represented scene must be (in a certain sense) a military *adventus* of Vespasian because, according to Roman law, only a victorious general, who had enlarged the area of the Imperium Romanum, was granted the power to enlarge the *pomerium* of Rome at all (cf. *supra*, n. 199, in Chapter I.1.1., and at Chapter V.1.i.3.)).

Besides, as already mentioned several times above (cf. *supra*, at Chapters I.2.1.a); and V.1.b)): Vespasian is *not* shown in a mere civilian *adventus*, as has been suggested by Langer and Pfanner (2018, 79, quoted *verbatim*

*supra*, at Chapter V.1.i.3.)), and by other scholars, but instead definitely as coming back from a victorious campaign. This the artists indicates by means of the *rotulus*, carried for Vespasian by **figure 17** on Frieze B. Besides, also Domitian/ Nerva on Frieze A carries such a *rotulus*, both of which recent scholars have mentioned, but were unable to explain.

I repeat in the following, what was already said in Chapters I.2.1.a); V.1.b); and V.1.i.3.b); at Section III.):

`to both emperors on the two Friezes of the Cancellaria Reliefs belongs a *rotulus*. Domitian (now Nerva) on Frieze A carries it himself in his left hand (cf. here **Figs. 1 and 2: figure 6**), whereas on Frieze B for Vespasian a *rotulus* is carried by a man of his entourage (cf. here **Figs. 1 and 2 drawing: figure 17**). Both *rotuli* contain the *vota* of these emperors, made by them to the gods, praying them to be granted a victory in the war, to which Domitian on Frieze A is shown as leaving, whereas in Vespasian's case on Frieze B this victory has already been granted - according to Simon (1963, 9, 10) these were the *vota* taken by the commander of an army *pro reditu*'.

As mentioned several times before, I follow Magi (cf. *supra*, n. 162, at Chapter I.1.) also in assuming that the amazon-like figures on Frieze A and B should both be identified as the *Dea Roma*. The discussion of the *Dea Roma* on Frieze B in Chapter V.1.i.2.) was already mentioned above, the identification of the amazon-like figure on Frieze A, who is certainly not *Virtus*, let alone *Roma/Virtus*, but the *Dea Roma*, is discussed *supra*, in Chapters I.1.; I.2.; I.2.1.

As I hope to have shown above (cf. *supra*, at Chapters I.1.; I.3.; I.3.2.; V.1.d)), a number of deliberate choices for the composition of Frieze B define the young Domitian, not the Emperor Vespasian, as the most important figure of the entire scene. This had first been suggested by Magi (1939)<sup>475</sup>, followed by many other scholars, for example by Bianchi Bandinelli (1946-48): Domitian is heading the representatives of the City of Rome towards their meeting with Vespasian. We know that the scene, as depicted on Frieze B, is not historical in so far as there are no literary sources, which describe such a ceremony. What we do have is the information that Vespasian, after landing in Brindisi, had arrived at Rome 'in the first half of October 70 AD' (cf. *supra*, at n. 195, in Chapter I.1.1.), and that Domitian had gone from Rome all the way down to Beneventum to welcome Vespasian there. Cf. *supra*, in Chapter Preamble, Section III.; at point 2.); and at n. 208, in Chapter I.1.1., and at ns. 415, 456, in Chapter III.).

When we compare those historical facts with the represented scene on Frieze B, it becomes clear - as of course noted by all previous scholars since Magi himself, who believed that Frieze B shows Vespasian's *adventus* of October AD 70 - that this is not a correct illustration of 'annals' of some sort, but rather the idealised representation of the young Domitian performing his professional duty in an important state ceremony, the *adventus* of a new emperor. Such a protocol could exclusively be fulfilled by the man, who held one of the highest ranking offices at Rome, an office, which was only subordinate to that of a consul. As pointed out by Simon (1963; quoted *verbatim supra*, at n. 181, in Chapter I.1.), these choices of the composition may therefore be read as a means of defining the rôle of the *praetor urbanus*, who, as chief magistrate currently present at Rome, held the appropriate office at Rome, to welcome a new emperor in an *adventus*-ceremony.

Simon (1963; cf. *supra*, at n. 181, in Chapter I.1.), was of the opinion that the *praetor urbanus*, depicted on Frieze B, at the represented moment was the chief magistrate currently present at Rome, arguing that both

<sup>475</sup> F. MAGI 1939, 205 (quoted *verbatim supra*, n. 112, in Chapter I.1.); F. MAGI 1945, 111 (quoted *verbatim supra*, at n. 463, in Chapter IV.1.); followed by the following scholars: H. FUHRMANN 1940, Sp. 472; H. FUHRMANN 1941, Sp. 544-545; R. BIANCHI BANDINELLI 1946-48, 259 (all three quoted *verbatim supra*, at Chapter IV.1.); J.M.C. TOYNBEE 1957, 5-6 (quoted *verbatim supra*, at n. 208, in Chapter I.1.1.), E. SIMON 1963, 9 (quoted *verbatim supra*, at n. 456, in Chapter III.); G. KOEPPPEL 1969, 172 (quoted *verbatim supra*, at Chapter IV.1.); R. BIANCHI BANDINELLI and M. TORELLI 1976, ARTE ROMANA, scheda n. 105 (quoted *verbatim supra*, in Chapter IV.1.) wrote something slightly different than Magi (whom they otherwise follow in many respects): on Frieze B "è raffigurata una scena incentrata sul giovane Domiziano e su Vespasiano"; cf. S. LANGER and M. PFANNER 2018, 55-56, Frieze B: "Figur 12" (cf. *supra*, at Chapters V.1.e); and V.1.h.1.)).

*consules*, Vespasian and Titus, were away, conducting wars. I have only much later realized, that Titus was *not consul* at that stage, although it is true that he was away conducting a war (cf. *supra*, n. 413, in Chapter III.). But there is another fact that may have had importance here: not a single *consul* would usually have received an emperor in an *adventus*-ceremony, but instead both *consules*, at least on the representation known to us this is the case (cf. *supra*, at ns. 360, 361, in Chapter II.3.3., and here Fig. 46).

**This observation, if true, may be regarded as another argument in favour of the assumption that the togate youth on Frieze B (here Figs. 1 and 2 drawing; figure 12) may be identified as the current *praetor urbanus*.**

We know also, that Domitian held the position *praetor urbanus* since 1st January 70 (cf. *supra*, at n. 189, in Chapter I.1.).

**In theory, apart from the *consules* and the *praetor urbanus*, also the *praefectus urbi* could have received an emperor in an *adventus*-ceremony, but this office was always held by a senator, usually a senior *ex-consul*.**

Cf. *supra*, at n. 183, in Chapter I.1., at ns. 360, 361, in Chapter II.3.3, and here Fig. 46, and *infra*, in volume 3-2, at Appendix I.a)).

**Therefore, the togate youth on Frieze B is much too young for that office. See also the discussion of this point below, in Chapter *The major results of this book on Domitian*.**

Because of his office *praetor urbanus*, Domitian was a member of the Senate, and therefore entitled to wear the *calcei senatorii*. Domitian's choice (in case that is true), not to wear those boots on Frieze B, but instead the 'equestrian shoes' may mean that Domitian wanted at the same time to be characterized on Frieze B as the *Princeps Iuventutis* (for whom the wearing of those shoes was appropriate), a title Domitian held since 21st December AD 69. With these assumptions, I likewise follow Toynbee (1957; cf. *supra*, at ns. 189, in Chapter I.1., and at n. 204, in Chapter I.1.1.). The title *Princeps Iuventutis* meant nothing less than that Domitian was 'the heir presumptive to the Empire' (so J.M.C. TOYNBEE 1957, 8 with n. 11, quoted *verbatim supra*, at n. 205, in Chapter I.1.1, and at n. 469, in Chapter VI.).

As I have only realized after writing this Chapter, it has also been suggested by Langer and Pfanner (2018; discussed *supra*, in Chapter V.1.h.1.)), that this wearing of the 'wrong' shoes on the part of the togate youth, may simply be explained by a mistake, made by the artists (so S. LANGER and M. PFANNER 2018, 66. Cf. pp. 76-77 with ns. 121-123, quoted *verbatim supra*, at n. 193, at Chapter I.1., for other similar mistakes, which the authors have observed on the Cancelleria Reliefs). - Independently of Langer and Pfanner (2018), I have myself come to the same conclusion (cf. *supra*, at ns. 144, 156, in Chapter I.1.; with detailed discussion).

**Frieze B 'documents' Domitian's first important public appearance at Rome (that we know of), since he had received the title *Princeps Iuventutis*. The latter hypothesis, if true, would mean that Domitian chose to appear on Frieze B 'as the heir presumptive to the Empire' (so J.M.C. TOYNBEE 1957, 8 with n. 11).**

**Provided this assumption is correct, this would corroborate Giandomenico Spinola's hypothesis (personal communication; cf. *supra*, at ns. 420, 455, in Chapter III. See also below, at *The Contribution by Giandomenico Spinola on the Cancelleria Reliefs*), according to which, also on Frieze B, Vespasian, with the gesture of his right hand, expresses in person and in a public ceremony, the "legittimazione" of Domitian as future emperor, a gesture which in a certain way 'acts out' publicly in the first half of October AD 70, what had already been legally defined the year before, on 21st December AD 69, when Domitian received the title *Princeps Iuventutis* - but that had happened in absence of his father, the Emperor Vespasian, and *not* in a formal public ceremony. -**

For the circumstances, under which Domitian had received this title, which are reported by Tacitus (*Hist.* 3,86); cf. *supra*, at Preamble; Section III., at point 1.); and *infra*, in volume 3-2, at Appendix I.c).

**If that entire scenario should be true, I also suggest, that the intended political message of Frieze B has similarities with a section of the hieroglyphic inscription on Domitian's obelisk (cf. here Fig. 28), the original text of which had presumably been composed by Domitian himself, or rather by his Egyptian consultants, in close collaboration with him.**

Cf. *supra*, at Chapter IV.1.; and below, at Chapter *The major results of this book on Domitian*; and at *The first Contribution by Emanuele M. Ciampini : La regalità domiziana: una nota egittologica*.

**In the passage of this Egyptian inscription, to which I refer, Domitian states that he has received "la regalità da suo padre Vespasiano il dio" (translation: E.M. CIAMPINI 2004, 163. The emphasis is that of the author; cf. *supra*, n. 467, at Chapter IV.1.).**

**In his text, which the Egyptologist Emanuele Marcel Ciampini was so kind as to write for this Study (cf. *The first Contribution by Emanuele M. Ciampini: La regalità domiziana: una nota egittologica*), we learn that there is not only in one passage of the hieroglyphic texts of Domitian's obelisk a reference to the legitimization of Domitian's reign and to his own divine nature - as I, being not an Egyptologist myself, had suspected (cf. *supra*, at Chapter IV.1.) - but in fact in three different passages of those inscriptions.**

**Ciampini (cf. *The first Contribution by Emanuele M. Ciampini: La regalità domiziana: una nota egittologica*) has analysed these three passages and formulates their common message as follows, they have : "un chiaro intento politico: legittimare la dinastia, e nel caso particolare Domiziano, attribuendogli una natura divina che gli deriva dall'essere discendente diretto degli dei" (i.e., from his father, *Divus Vespasianus*, and his brother, *Divus Titus*; my emphasis).**

This proves, of course, the great importance of the theme 'legitimation' within the entire complex of messages, Domitian wanted to convey with the hieroglyphic texts of his obelisk: not only the 'legitimation of Domitian's reign', as in Frieze B of the Cancellaria Reliefs, but the 'legitimation' of the entire Flavian dynasty.

This is, by the way, likewise hinted at on Frieze B: by the fact that Vespasian is crowned by *Victoria* (for this specific crown, and the meaning of this gesture, cf. *supra*, ns. 385, 386, in Chapter III., and at Chapters V.1.i.3.); V.1.i.3.a)). In addition to this, those hieroglyphic texts of Domitian's obelisk stress Domitian's 'own divine nature', as Ciampini writes (cf. below, at *The first Contribution by Emanuele M. Ciampini: La regalità domiziana: una nota egittologica*).

This latter claim could not be visualized on Frieze B of the Cancellaria Reliefs, in which both Domitian and Vespasian are represented, since there Vespasian is shown in his *adventus* into Rome in the first half of October AD 70, when he was still alive. But Vespasian on Frieze B of the Cancellaria Reliefs, stands, of course, for all that, what Domitian claims to possess in the three passages of the hieroglyphic texts of his obelisk, discussed by Ciampini. In these texts, Domitian does not refer to the past, as in both Friezes of the Cancellaria Reliefs, but he describes his current situation: both his father Vespasian and his elder brother Titus are dead by now and divinized.

When we apply to the scenes represented on the two Cancellaria Reliefs, what we have just learned from Ciampini about the hieroglyphic texts on Domitian's obelisk (cf. *The first Contribution by Emanuele M. Ciampini : La regalità domiziana: una nota egittologica*), we can now much better understand the political messages of those reliefs. - As we have heard above, the represented scene on Frieze A had shown in its first carving phase a *profectio* (others believe: an *adventus*) of Domitian that had, in the opinion of those scholars, either occurred in 83 or in 92(-93) AD (cf. *supra*, at n. 84, in Chapter I.1., and at n. 232, in Chapter I.2.).

I myself suggest something else. I, therefore, repeat here what was written for the Chapter *Introductory remarks and acknowledgements*:

As we shall see, the fact that Domitian ordered a female representation of the *Piroustaë* (cf. here Fig. 49) to appear in the sculptural decoration of his *Forum/ the Forum Nervae/ Forum Transitorium* at Rome, finally allows us to answer the question, for which of his military campaigns Domitian was actually leaving on Frieze A of the Cancellaria Reliefs (cf. here Figs. 1 and 2 drawing; figure 6: Domitian, now with the facial traits of Nerva).

The reason being that recent scholars have shown that the Cancellaria Reliefs have been created by the same workshop that was also active in Domitian's *Forum/ the Forum Nervae/ Forum Transitorium* and in Domitian's Palace on the Palatine '*Domus Flavia/ Domus Augustana*. For that; cf. *supra*, at Chapter V.3.; and below, at Chapter *The major results of this book on Domitian*, at point 2.).

In my opinion what this panel A of the Cancellaria Reliefs shows is Domitian's *profectio* in Rome in the spring of AD 89 to Pannonia. This campaign resulted in victories that he would celebrate with his last triumph at Rome over the Chatti and the Dacians, in November/ December of the same year.

Cf. below, in Chapter *Preamble: Domitian's negative image*; at Section II. *Conclusions: Domitian's representations of his military successes and his claims to be of divine descent and to possess a divine nature*; and *infra*, in volume 3-2, at *Appendix IV.d.2.e*); and *Appendix IV.d.2.f*).

The latter fact, in its turn, provides a *terminus post quem* for the date, at which Domitian may have commissioned the Cancellaria Reliefs (i.e., 'post AD 89').

This means that Domitian had commissioned the Cancellaria Reliefs (cf. here Figs. 1; 2; Figs. 1 and 2 drawing) much later than his obelisk (cf. here Fig. 28), which was carved at the very beginning of his reign, that is to say probably shortly after AD 81 (cf. *supra*, n. 466, at Chapter IV.1).

Vespasian on Frieze B of the Cancellaria Reliefs is shown as coming back to Rome as the new emperor after victories, that were the reason why he had been hailed as emperor by the legions stationed at Alexandria (on 1st July of AD 69), and had later received his recognition as the new Roman emperor by the Roman Senate (on the 21st or rather on the 22nd December of AD 69).

For the precise date (22nd December AD 69); cf. *supra*, in Chapter *Preamble*; Section III., at point 1.). See also *supra*, at n. 222, in Chapter I.2., at n. 455, in Chapter III., and in Chapter V.1.i.3.)).

Only thanks to those victories, Vespasian had become the founder of the Flavian dynasty, of course. Finally, Vespasian's victories and his good government as emperor had secured him, after his death, his apotheosis, divinization and consequently a state cult (cf. *supra*, n. 171, in Chapter I.1.). The same procedure was repeated in the case of Domitian's elder brother Titus, who became emperor after Vespasian's death, his apotheosis, divinization, and state cult followed in due course (for the cult of *Divus Titus*, cf. E. SIMON 1985, 545 with n. 17, p. 549 with n. 27, quoted *verbatim supra*, at n. 181; cf. ns. 182, in Chapter I.1., and at n. 413, in Chapter III.), so that Domitian could claim in the hieroglyphic inscriptions on his obelisk to be a descendent of two *Divi*, namely of his divinized father Vespasian, and of his divinized brother Titus. For that; cf. below, at *The first Contribution by Emanuele M. Ciampini : La regalità domiziana: una nota egittologica*.

The historical events summarized here had all already happened, when Domitian, now himself emperor, commissioned Frieze B (and A) of the Cancellaria Reliefs (cf. here Figs. 1; 2), as well as his obelisk (cf. here Fig. 28).

As rightly pointed out to me by Giandomenico Spinola on 24th September 2018, in the course of our discussion in front of the Cancellaria Reliefs (cf. *supra*, in Chapter IV.1.), Domitian's elder brother Titus is conspicuously absent on Frieze B of those panels (Titus was, of course, in the East at the represented moment in the first half of October AD 70, still fighting the 'Great Jewish War'<sup>476</sup>), whereas in the hieroglyphic

---

<sup>476</sup> for the 'Great Jewish War', cf. *supra*, Chapter I.1., ns. 171, 189; Chapter I.1.1., ns. 195, 198, 200, 201; Chapter I.2., n. 229; and Chapter III., ns. 404, 412, 413, 455.

inscriptions on Domitian's obelisk, Titus is given due credit (cf. *supra*, at Chapter IV.1; see also *The first Contribution by Emanuele M. Ciampini : La regalità domiziana: una nota egittologica*).

When we compare Domitian's idea, *not* to choose a historical situation for Frieze B of the Cancellaria Reliefs, in which, apart from Vespasian and himself, also Titus could have appeared, with his choice to depict exclusively Titus, that we observe in the 'triumph relief' in the bay of Domitian's Arch of *Divus Titus* on the *Velia* (cf. here **Fig. 120**), both decisions seem to follow the same policy. As Diana E.E. Kleiner<sup>477</sup> has realized, on the 'triumph relief' of this Arch of *Divus Titus*, which shows the triumph of AD 71, only Titus is shown in a triumphal quadriga, whereas Vespasian and Domitian are missing. And that, although in reality all three of them had celebrated this triumph together (cf. *supra*, at Chapter V.1.i.3.), both Vespasian and Titus riding in their own triumphal quadrigas, accompanied by Domitian on horseback. Elsewhere, on the 'spoils relief', the other horizontal panel in the bay of this Arch of *Divus Titus*, this has actually been represented. The attic of the arch (*i.e.*, the *Porta Triumphalis*), that stands at the far right of this relief, and through which the triumphal procession is marching, is crowned by what seem to be statue groups (cf. here **Fig. 120**) - as has been noted by many scholars: in reality, a triumphal arch, carrying the statues of the three *triumphatores* Vespasian, Titus and Domitian, could, of course, only have been erected *after* the triumphal procession had taken place.

For a discussion of the Arch of *Divus Titus* on the *Velia*, its topographical context, and its resulting meaning for Domitian; cf. Filippo Coarelli (2009b, 88; 2012, 283, 481-483, 486-491), and Paolo Liverani (2021, 83-84 with n. 4; cf. *id.* 2023, 115-116, the Italian version of his essay), all of which is quoted *verbatim infra*, in Chapter *The major results of this book on Domitian*.

Let's now return to the 'spoils relief' of the Arch of *Divus Titus* on the *Velia*. The centre of those statues, which are standing on the attic of the *Porta Triumphalis* at the far right of this relief (cf. here **Fig. 120**) is occupied by Domitian on horseback. He is accompanied to his left by his walking personal patron goddess Minerva, and both are flanked on either side by the triumphal quadrigas of Vespasian and Titus, each of which pulled by four horses.

**Michael Pfanner<sup>478</sup> has rightly stressed the fact that the overall theme of Domitian's Arch of *Divus Titus* on the *Velia* was not Titus' victory, but his apotheosis. But, as Emmanuelle Rosso has likewise rightly observed : the prerequisite for the apotheosis of a Roman emperor, was, of course, victory:**

**"le triomphe était le préalable nécessaire à l'apothéose [my mphasis]"**.

<sup>477</sup> D.E.E. KLEINER 1992, 188-189 with Fig 156 (cf. pp. 183-191, Figs. 154-157): on the 'triumph relief' in the central bay of the Arch of Titus on the *Velia* at Rome, that was erected by Domitian, only Titus is depicted as riding in a triumphal quadriga in the triumph of AD 71, whereas Vespasian and Domitian are absent, although in reality all three of them had celebrated this triumph together.

Cf. V.M. Strocka (1972, 147): "Wer die sogenannten « historischen Reliefs » römischer Staatsdenkmäler nur als monumentale Wiedergaben historischer Ereignisse zu deuten versucht, gerät bald in Schwierigkeiten ... Er muss sich fragen, warum in dem Triumphrelief des Titusbogens allein Titus auf der Quadriga gezeigt wird, obwohl er, wie wir von Flavius Josephus wissen, im Triumph des Jahres 71 hinter seinem Vater Vespasian den zweiten Platz einnahm".

For the triumph of AD 71, cf. *supra*, n. 198, in Chapter I.1.1.

For the arch, represented on the 'spoils relief', cf. D.E.E. KLEINER 1992, 187: "The Spoils relief (see fig. 155) ... the attic of the relief arch is crowned with four figures, three of which are Domitian, Titus, and Vespasian; the fourth and only female figure is probably Domitian's patron goddess, Minerva. The four figures are accompanied by nine horses. One horse belongs to Domitian and the other eight pull the chariots of Vespasian and Titus".

Cf. M. PFANNER 1983, 91: "Auf dem Bogenmonument des Beutereliefs sind Vespasian und Titus in der Quadriga und Domitian auf dem Pferd dargestellt (s. Taf. 56,4.5 [on this illustration, all these figures are clearly visible. The identification of the female figure, accompanying Domitian, as his patron goddess Minerva, is certainly correct, because she is clad in a long garment]) [with n. 19]], quoted in more detail *verbatim supra*, n. 244, in Chapter I.2..

<sup>478</sup> cf. M. PFANNER 1983, 99. For the above-quoted observation by E. ROSSO, cf. *ead.* 2007, 138; C. HÄUBER 2014a, 719 mit Anm. 279; further for apotheosis, cf. pp. 707-708, with ns. 132-144. Similarly as E. ROSSO 2007, 138, also J. POLLINI 2017b, 126, quoted *verbatim supra*, as epigraph of Chapter V.1.i.3.b); Section I. Introduction.

Also M. PFANNER 1983, 98, in discussing the keystones of the Arch of Titus on the *Velia*, which represent *Virtus* on the 'country side' and *Honos* on the 'city side', remarks: "**Virtus befindet sich auf der kriegerischen Landseite, Honos auf der friedlichen Stadtseite: Die Virtus auf dem Felde ist Voraussetzung für den Honos zu Hause** [my emphasis]" (!).

Considering, what was said above, it is interesting to note that on Domitian's monuments at Rome the three Flavian emperors were neither always depicted together, let alone twice in the same iconographies, and that in the relief decorations of some of these buildings stress was obviously laid on only one of the three men. This great diversity of Domitian's relevant iconographies can best be explained by the sheer number of his new commissions at Rome, many of which, for example his notorious arches, were presumably erected at the same time. In theory, only when all these new public buildings at Rome, with their new political iconographies, were viewed together, would thus have become intelligible for Domitian's contemporaries, that their overall political message was always the same and very simple.

Provided, the portraits of Frieze B (cf. here **Fig. 2**) showed already from the very beginning Vespasian and Domitian, and that the interpretation of this panel suggested here should prove to be correct, we can conclude the following. Frieze B seems to fit nicely to Domitian's usual way of representing the achievements of his dynasty, as already observed in different contexts by Emmanuelle Rosso:

"Ainsi, les honneurs posthumes décernés aux deux premiers Flaviens divinisés [the Emperors *Divus Vespasianus* and *Divus Titus*] `rejouent` sans cesse la victoire fondatrice du nouveau pouvoir"<sup>479</sup>.

But that was only part of the message, conveyed on Frieze B of the Cancellaria Reliefs: that concentrated on the figure of Vespasian, who is crowned by *Victoria*, and which is confined to the `smaller half` of this panel (cf. here **Fig. 2**). Domitian has used this part of the message as a basis to build upon this his own image, which occupies the `larger half` of Frieze B. Here we see the young Caesar Domitian, acting as an ideal politician *domi*, in his capacity as *praetor urbanus*, welcoming his father Vespasian in an *adventus-ceremony*, that had been invented in this specific way by Domitian, who thus mixed historical facts with his own political messages.

What we see is Vespasian's arrival at Rome in AD 70 - which is a historical fact - who is shown as coming back after his victories in the East. A scene, which visualizes not only the investiture of Vespasian as the new Roman Emperor, but also the legitimation of Domitian as future emperor (for a detailed discussion, cf. *supra*, at Chapter V.1.i.3.). At the same time, the scene on Frieze B, in which *Victoria* crowns Vespasian with the *corona civica*, stresses the fact that Vespasian, like Augustus before him (cf. *supra*, at Chapter V.1.i.3.a), and here **Fig. 35**), had been granted this highest decoration for a military victory, because he had ended a *civil* war; cf. Paris (1994b, 81-82, quoted *verbatim supra*, at Chapter V.1.i.3.a)).

**As we have seen above, the latter interpretation of Frieze B of the Cancellaria Reliefs: - to read it as the legitimation of Domitian's reign, expressed by the gesture that Vespasian is making with his right hand - had already been suggested 83 years ago by Fuhrmann (1940, Sp. 471-472; and again *id.* 1941, Sp. 544-545; cf. *supra*, n. 7, both accounts are quoted *verbatim supra*, in Chapter IV.1.).**

Also Magi (1945, 111, quoted *verbatim supra*, at n. 463, in Chapter IV.1.) had suggested this. Magi (1945, 111), in his turn, was followed by Bianchi Bandinelli (1946-48; cf. *supra*, n. 11, quoted *verbatim supra*, in Chapter IV.1.), Toynbee (1957, 5-6 with n. 1; cf. *supra*, n. 21, quoted *verbatim supra*, at n. 208, in Chapter I.1.1.), and Hanfmann (1964; cf. *supra*, n. 23; all discussed also in Chapter I.1.), by Bianchi Bandinelli and Torelli (1976, ARTE ROMANA, *scheda* 105, quoted *verbatim supra*, in Chapter IV.1.), Paris (1994b, 82, quoted *verbatim supra*, in Chapter V.1.i.3.a)), by Pfeiffer (2009, 62, quoted *verbatim supra*, in Chapter II.3.1.), and now by Spinola (cf. *supra*, in Chapters III.; IV.1., and below, at *The Contribution by Giandomenico Spinola on the Cancellaria Reliefs*), and by myself -

- only to be rejected by Koepfel (1969, 172, quoted *verbatim supra*, in Chapter IV.1.), who, arguing that Frieze B shows predominantly the *adventus* of Vespasian, and therefore his investiture as the new Roman emperor (G. KOEPEL 1969, 193, quoted *verbatim supra*, at n. 200, in Chapter I.1.1. - with the young Domitian merely

<sup>479</sup> E. ROSSO 2007, 140; cf. C. HÄUBER 2014a, 787 with n. 45.

heading the receiving party of the representatives of the City of Rome, as not otherwise expectable in such *adventus*-ceremonies).

Although Koepfel (*op.cit.*) had himself admitted in this context, that there could also have been transmitted some other messages on Frieze B (here Fig. 2), only that he himself, dedicating this article to *prospectio*- and *adventus*-scenes, had no personal interest in pursuing this idea at this very moment.

**Since we can now take into consideration also the contents of the hieroglyphic inscriptions of Domitian's obelisk (here Fig. 28) in our relevant reasonings, it is about time, to investigate this question further.**

Because in those inscriptions, Domitian and his Egyptian consultants expressed very clearly in 'outspoken' texts, what precisely of his relationships with Vespasian and Titus was of importance to Domitian's own political situation at the specific moment, when his obelisk was erected. - As we have heard above (cf. *supra*, n. 466, in Chapter IV.1.), Domitian had presumably commissioned this obelisk at the very beginning of his reign, that is to say, shortly after AD 81.

**Those circumstances may be characterized as follows: Domitian's only legitimation to reign as Roman emperor lay in the basic fact of being related to his two direct predecessors as emperors, his now divinized natural father Vespasian, and his natural, now divinized brother Titus respectively.**

This must also have been the reason, why Domitian layed in all his public buildings so much stress on his direct family bonds with those two emperors. Not by chance, but instead because of this very reason, Domitian even erected a huge new building in the *Campus Martius*, called *Divorum*, which he dedicated to *Divus Vespasianus* and to *Divus Titus*

Cf. *supra*, n. 466, in Chapter IV.1.; the other comparable buildings erected by Domitian in honour of Vespasian and Titus are mentioned below by (Pfeiffer 2018, 189).

Already the hieroglyphic texts of Domitian's obelisk express this by praising the entire *gens Flavia*, that in these texts is equated with the dynasty of the Ptolemaic kings, who had reigned over Egypt, simply by using the phraseology of some of their documents, in which the same subject is discussed: the legitimization of a (new) king (cf. below, at *The first Contribution by Emanuele M. Ciampini : La regalità domiziana: una nota egittologica*). - Thus at the same time cleverly diverting from Domitian's in reality presumably not exactly 'easy' political situation at the beginning of his reign - 'uneasy', by judging from the fact that Domitian and his consultants had obviously decided to '>>rejoue<< sans cesse la victoire fondatrice du nouveau pouvoir', as Emmuelle Rosso has aptly described Domitian's relevant policy (cf. *supra*, at n. 479).

The just-mentioned difficulties (not only at the beginning) of Domitian's reign have now been discussed in great detail by Rose Mary Sheldon (*Guarding the Caesars. Roman Internal Security under the Flavian Dynasty*, 2023, in press; Chapter 7; Section: "Imperial Cult"). For a relevant quotation from her text; cf. *supra*, in Chapter *Preamble*; at Section II.

**Stefan Pfeiffer (2018, 189, Chapter: "The themes of Domitian's self-presentation"), who has not discussed the hieroglyphic texts of Domitian's obelisk in this context, has arrived at the same conclusions concerning Domitian's relations with Vespasian and Titus as myself in the above written paragraph :**

"2. Domitian had a special interest in showing his close connection to his dynasty, which legitimized his rule [with n. 93]. He erected several buildings that were related to Vespasian and Titus, the *templum gentis Flaviae* [with n. 94], the *porticus Divorum*, the *templum Divi Vespasiani*, and the arch of Titus". In his notes, Pfeiffer provides references. This passage has already been discussed above (cf. *supra*, in Chapter II.3.1.c)).

On Frieze A of the Cancelleria Reliefs, Domitian, now himself emperor, appears in another event seen in retrospect, leaving for one of his victorious military campaigns. Frieze A thus shows Domitian likewise as the ideal sovereign, this time *militiae* (for Domitian's capacities *domi* and *militiae*, as glorified on both panels,

Cf. *supra*, at n. 248 in Chapter I.2.1.b); see also *supra*, at Chapters V.1.d); and V.1.i.3.); and below, in Chapter *The major results of this book on Domitian*.

But the Cancelleria Reliefs do not only praise Domitian's own excellent *gestae*, they comprise also important statements concerning the Flavian dynasty as a whole - in this respect they have similarities with the hieroglyphic texts on Domitian's obelisk. Although these hieroglyphic texts go in this respect much further, by stating that the Flavian emperors had managed to consolidate the state after 'those who had reigned before', thus referring to the 'bad' emperors of the Julio-Claudian dynasty, as well as by mentioning the great benefactions, brought about by the Flavian emperors for the Roman People (cf. *supra*, n. 466, in Chapter IV.1.; and in Chapter V.1.i.3.)).

Of this complex catalogue of virtues of the Flavian emperors, as described in the hieroglyphic inscriptions of Domitian's obelisk, Domitian had decided to have his artists visualize on both friezes of the Cancelleria Reliefs the most important proofs of the *virtus* of a Roman emperor: invincibility, proven by his military victories. In the case of Frieze B and Vespasian, his victories had been the basis for the foundation of the Flavian dynasty, in the case of Frieze A and Domitian, his victory is the basis of the endurance of the Flavian dynasty, and in both cases these victories are at the same time the guarantee for the "*Aeternitas imperii*" (so A. LICHTENBERGER 2011 in a different context; cf. *supra*, at n. 246, in Chapter I.2.1.a), the 'eternity of the Roman Empire', and thus of the welfare of the Roman People and of all the other subjects, a Roman emperor had to care for.

As we have seen above, in Chapter V.1.i.3.), Flavius Josephus (*BJ* 7,4,1, in the translation of H. St. Tackerey 1928), ended his enthusiastic description of Vespasian's overwhelming reception at the City of Rome in October of AD 70 with a formulation that sounds at least in part very similarly:

"... The crowds then betook themselves to festivities and, keeping feast by tribes and families and neighbourhoods, with libations prayed God that Vespasian might himself long be spared to the Roman empire, and that the sovereignty might be preserved unchallenged for his sons and their descendants throughout successive generations. And, indeed, the city of Rome, after this cordial reception of Vespasian, rapidly advanced to great prosperity".

As mentioned above (cf. *supra*, in Chapter V.1.i.3.)), where the entire passage (*BJ* 7,4,1) is quoted, Flavius Josephus wrote his Book on the 'Jewish War', which he finished in 81, at the order of Vespasian and Titus (cf. *supra*, n. 201, in Chapter I.1.1.). - This means that the above-quoted passage had certainly been approved by Vespasian himself, or else by Titus.

As I have only realized at a second moment, this is another proof that Vespasian strived to emulate Augustus, since I have written elsewhere; cf. Häuber (2017, 380, 526): '... this is precisely the hope expressed by Ovid ... a remark related to the consecration of the *Ara Pacis Augustae*: "You priests, add incense to the flames at the rites of Peace, and let the white victim fall, its brow well soaked. Ask the gods, who incline to pious prayers that the house [meaning the *Domus Augusta*, the family of Augustus] which guarantees her may last long years with Peace" (Ovid, *Fasti* 1.719-22, translation: T.P. and Anne Wiseman 2011)'.  
Cf. the "Comments" by T.P. Wiseman (p. 722 in the same volume). This was already quoted above (cf. *supra*, in Chapter II.3.1.c)).

Considering at the same time the sheer lengths of those two panels, I follow Massimo Pentiricci in assuming that the Cancelleria Reliefs may have been the horizontal panels in the bay of a Domitianic (triumphal) arch

(cf. *supra*, n. 78, in Chapter I.1., and ns. 270; 283, in Chapter I.3.2.). - But as we shall see below, it is possibly more prudent to assume a honorific arch.

The contents of both friezes and the lengths of those panels, taken together, are in my opinion enough to assume this, apart from some considerations concerning the compositions of both friezes (cf. *supra*, in Chapters I.3.2.; V.1.d) and here **Figs. 1 and 2 of the Cancellaria Reliefs, drawing, 'in situ'**), which seem to prove that the Cancellaria Reliefs were designed to be viewed, when mounted opposite each other on parallel walls, that is to say in the bay of an arch.

Especially, when we compare the Arch of Titus, built by the Roman Senate in AD 81 as main entrance to the *Circus Maximus*, that has recently been reconstructed in '3D' (cf. here **Fig. 121**), and which was much larger than Domitian's Arch of *Divus Titus* on the *Velia* (cf. here **Fig. 120**). For an arch of the size of this Arch of Titus in the *Circus Maximus* we can imagine horizontal panels for its central bay that must have had the proportions of the Cancellaria Reliefs. Even provided those were not only 6,06 m long, as suggested in Magi's reconstruction which you see here in **Figs. 1 and 2; Figs. 1 and 2 drawing**, and in our tentative reconstruction (here **Figs. 1 and 2 of the Cancellaria Reliefs, drawing, 'in situ'**), but instead 7,05 m long, as suggested by Wolf (2018, 94; cf. *supra*, at Chapter V.2.). Wolf (*op.cit.*) follows the new, but in my opinion erroneous, reconstruction of Langer and Pfanner (2018; cf. *supra*, at Chapter V.1.d)). This Arch of Titus in the *Circus Maximus* was thus presumably built at about the same time as Domitian's Arch of *Divus Titus* on the *Velia*, which was erected 'after AD 81' (cf. *supra*, at n. 244, in Chapter I.2.)

For the Arch of *Divus Titus* on the *Velia*; cf. now Paolo Liverani (2021, 83-84; *id.* 2023, 115-116, quoted *verbatim infra*, in Chapter *The major results of this book on Domitian*, at point 5.)).

As mentioned before (cf. *supra*, at n. 363, in Chapter II.3.3.), it is, in my opinion, not even necessary to assume that all the other architectural fragments, found together with the Cancellaria Reliefs in the same deposit of the 'Second sculptor's workshop' (for that, cf. *supra*, at Chapters I.3.1.; and V.1.a.1.)) underneath the Palazzo della Cancellaria in the *Campus Martius* in Rome, or in its vicinity, had actually belonged to the same monument or building as those panels: for example the curved soffit blocks, the columns, or the architrave block, carrying the inscription *PP FECIT*, all of which are datable in the late Domitianic period and could in theory have belonged to an arch.

For discussions of those architectural fragments, cf. *supra*, at Chapters I.1.; I.3.; I.3.1.; I.3.2.; II.3.1.b); V.2.; V.3.).

Because *a*) this 'Second sculptor's workshop' had clearly specialized on the re-use of the marble decorations of public buildings, and *b*) because so many Domitianic arches were destroyed at the same time, as Dio Cassius (68,1,1; cf. *supra*, n. 83, at Chapter I.1.) has asserted, all those Domitianic architectural fragments plus the Cancellaria Reliefs, that were found together, if at all belonging to arches, had not necessarily belonged to the *same* arch.

I am not saying that studying all those architectural fragments, as well as the reconstructed stratigraphy of the area in question, where they occurred, as was done in this *Study*, was in any way superfluous: on the contrary, the work of those scholars, who have dedicated so much time and energy on studying those monuments, the stratigraphy, the related ancient architectures and archaeological finds, as well as the topography of the area, whose work I have summarized above (cf. *supra*, at Chapters I.1.-II.4.), is the basis, on which we can now build an informed reconstruction of the topographical situation of the entire area of the Palazzo della Cancellaria and the adjacent Museo Barracco over time. And that in its turn enables us to reconstruct the history of the lifetime of the Cancellaria Reliefs in antiquity with much more confidence. That I, contrary to other scholars, as a result of studying the just mentioned research, have come to the conclusion that the Cancellaria Reliefs did *not* necessarily belong to the same building or monument as any one(s) of those architectural fragments, found together with those panels in this deposit of the 'Second sculptor's workshop', does not, of course, diminish the great importance of that entire research.

Already Markus Wolf (2015; the content of which is repeated only slightly changed in his publication of 2018), who has made the first two reconstructions that are based on the Cancelleria Reliefs and on the above-mentioned architectural fragments, that were found together with those panels, has come to exactly the same conclusion as I myself - although for very different reasons. Wolf (2015; cf. *supra*, at **ns. 75-81**, in Chapter *I.1.*, and **ns. 284, 298**, in Chapter *I.3.2.*; and at Chapters *II.3.1.*; and *V.2.*) calls his 2. reconstruction: "un'entrata con volta a botte in un edificio domiziano con colonne addossate" ('an arched entrance to a Domitianic building with engaged columns', which he, in his second publication (cf. M. WOLF 2018, 95) refers to as: 'eine gewölbte Eingangssituation in einem domitianischen Großbau mit vorgestellten Säulen'.

As we have seen in both of his publications (cf. M. WOLF 2015; and 2018), to Wolf's 2. reconstruction, which he has based on these architectural fragments, comprising the architrave block carrying the inscription *PP FECIT*, the Cancelleria Reliefs do *not* belong. The reason being that the arch, which this architecture comprises, is not deep enough to accommodate reliefs as horizontal panels that have the length of the Cancelleria Reliefs.

If, on the other hand, the inscription *PP FECIT* and the Cancelleria Reliefs *had* belonged to the same building or monument, and assuming at the same time that this inscription was commissioned by Domitian, this structure, possibly an arch, by judging from the content of this inscription, had clearly been erected by Domitian himself (cf. *supra*, **n. 81** and at **n. 83**, in Chapter *I.1.*); so also Wolf (2018, 94 with n. 15, quoted *verbatim infra*), concerning his 1.) reconstruction, an arch, which integrates the Cancelleria Reliefs as the horizontal panels into its central bay. Given Domitian's notorious "Bauwut"<sup>480</sup> ('building rage'), and 'the great number of arches, which he had built' (Dio Cassius 68,1,1), it seems even conceivable that he could have dedicated this triumphal arch *himself* - that celebrated on Frieze A after all one of his own victorious campaigns (!).

And that, although, under 'normal' circumstances, such an triumphal arch should have been *built and dedicated to him* at the order of the Roman Senate, as for example the arch of Trajan at Beneventum (cf. *supra*, **n. 360**, in Chapter *II.3.3.*, and here **Fig. 46**). Another example is the Arch of Titus in the *Circus Maximus* (cf. here **Fig. 121**; cf. *supra*, in Chapter *I.3.2.*), which was built by the Roman Senate in AD 81 as main entrance to the *Circus Maximus*. - Such dedications were at least 'officially' made by the Senate, as we learn from Eric M. Moormann in the case of the *Equus Domitiani* on the Roman Forum (cf. E.M. MOORMANN 2018, 168, quoted *verbatim supra*, **n. 267**, in Chapter *I.3.2.*).

#### **Unfortunately it is, as usual, not as easy as here just assumed (I am again not joking)**

Hans-Ulrich Cain was so kind, as to alert me to something that already Eric Moormann has hinted at in the above-quoted passage, which relates to the *Equus Domitiani*. According to Cain, such arches, and therefore also the arch, to which the Cancelleria Reliefs may possibly have belonged - are *not* triumphal arches, but instead honorific arches, that is to say, the 'official' dedicator was, of course, always the Senate, whereas in reality, the emperor provided the money needed.

Apropos Domitian's 'Bauwut' (cf. *supra*, at **n. 480**). I myself have borrowed above another expression from Eugenio La Rocca (2012, 68): "Il dittatore [Julius Caesar] era poi in procinto di avviare lavori faraonici", which La Rocca coined in describing Julius Caesar's ambitious building projects at Rome: "It therefore seems, as if Domitian ... commissioned new buildings at Rome at a truly 'pharaonic' scale'" (so C. HÄUBER 2017, 167; cf. pp. 158-168; cf. *supra*, in **n. 228**, in Chapter *I.2.*). As mentioned before : when I wrote this, I was not aware of the fact that already Mario Torelli (1987, 575, quoted *verbatim supra*, **n. 228**, in Chapter *I.2.*) had referred to Domitian's building project on the *Capitolium*, as to "il faraonico programma".

---

<sup>480</sup> so S. LANGER and M. PFANNER 2018, 41 with n. 23 (with reference).

**Domitian actually was Pharaoh of Egypt - and we will hear below that building was one of the foremost obligations of the Egyptian king: 'This ethic system [*i.e.*, Ma'at] governed all the actions of the [Egyptian] king - especially his building projects the realization of which, in grandiose manner, was the *raison d'être* of the Egyptian state, governed by the king'.**

Cf. *infra*, at n. 560, in volume 3-2, at Appendix. II.c) My own interpretation of the relief Fig. 111: datable in the Hadrianic period, and representing a sanctuary of Isis at Rome or elsewhere in Italy, it possibly shows the celebrations on the day of the Egyptian festival of New Year; and at Appendix IV.c.2).

Let's now return to the Cancelleria Reliefs.

Markus Wolf (2015) calls his 1. reconstruction, that comprises the Cancelleria Reliefs, an "arco onorifico isolato" (cf. *supra*, n. 79, in Chapter I.1.), whereas in his publication of 2018, he refers to it as a "freistehendes Bogenmonument" (2018, 95, caption of his Abb. 42). But because of its inscription *PP FECIT*, which in his 1. reconstruction belongs in Wolf's opinion, together with the Cancelleria Reliefs, to the same 'free standing arch monument', he comes in both publications to the final conclusion that the structure in question should *not* be regarded as a honorific arch - a conclusion, at which, as already said, I have myself arrived as well:

"Die Inschrift des römischen >>Cancelleria-Bogens<< [...] p(ater) p(atriciae) fecit deutet auf eine kaiserliche Stiftung des Monumentes hin. Es kann sich demnach nicht um einen Ehrenbogen zu Ehren eines Kaisers gehandelt haben, vielmehr um einen vom Kaiser, also Domitian, gestifteten Bau [with n. 15]". Cf. M. Wolf (2018, 93-94; and M. WOLF 2015, 319-320). In his n. 15, Wolf (2018) writes: "Freundlicher Hinweis von W. Eck und H. v. Hesberg".

Be all that as it may !

**VI.3. Summary of my own hypotheses concerning the Cancelleria Reliefs presented in this Study; Addition: My own tentative suggestion, to which monument or building the Cancelleria Reliefs may have belonged, and a discussion of their possible date.**

Almost throughout this *Study*, or, to be precise: until writing one of its latest parts (cf. *supra*, in Chapter V.1.i.3.b); Section III.), I have refrained from trying to attribute the Cancelleria Reliefs to any of the buildings or monuments, commissioned by Domitian at Rome. Many relevant suggestion have been made so far.

Cf. Langer and Pfanner (2018, 81): "Die Art des Baus [*i.e.*, the monument or building, to which the Cancelleria Reliefs belonged] kann trotz zahlreicher Vorschläge nicht bestimmt werden. Alle die in diesem Zusammenhang genannten Bauten Domitians sind spekulativ [with n. 142]". In their note 142, they provide a list of those suggestions.

My own hypothesis, to attribute the Cancelleria Reliefs to one of Domitian's arches on the Palatine (to his Arch of *Divus Vespasianus*, or rather to the Arch of Domitian at the "Porta principale" of his *Domus Augustana*) has so far not been suggested. It is based of Filippo Coarelli's findings concerning those two arches (2009b, 88; *id.* 2012, 283, 481-483, 486-491).

Cf. below, in Chapter *The major results of this book on Domitian*; at point 4.).

Cf. here **Figs. 8.1; 58; 71; 73**, labels: PALATIUM; Arch of DIVUS TITUS; VICUS APOLLINIS ?/ "CLIVUS PALATINUS"; ARCUS DOMITIANI / DIVI VESPASIANI ?; Temple of IUPPITER INVICTUS ? or of : IUPPITER STATOR ? IUPPITER VICTOR ? IUPPITER PROPUGNATOR ?; "DOMUS FLAVIA"; "BASILICA"; "AULA REGIA"; "LARARIUM"; "PERISTYLE"; "TRICLINIUM"; DOMUS AUGUSTANA; "Porta principale"; Arch of DOMITIAN ?; Cancelleria Reliefs ?

At the very end of my discussion of the Cancellaria Reliefs, I should like to explain my own relevant hypothesis in more detail. The reason for my tentative suggestion, to which monument or building the Cancellaria Reliefs may have belonged, are some observations, that have previously not been considered in this context:

a) John Pollini (2017b; cf. *supra*, in Chapter V.1.i.3.b)) is able to show that the Nollekens Relief (cf. here **Fig. 36**) has many similarities with the Cancellaria Reliefs (cf. here **Figs. 1; 2; Figs. 1 and 2 drawing**). Pollini (2017b), in my opinion convincingly, suggests (cf. *supra*, in Chapter V.1.i.3.b); at Section IV.) that the Nollekens Relief shows the *triumphator* Domitian sacrificing in AD 89 at his *Porta Triumphalis*, and that immediately after that the emperor would start his (last) triumphal procession;

b) The Nollekens Relief (cf. here **Fig. 36**) was excavated in 1722. From Francesco Bianchini's posthumous publication (1738) we learn that he found the Nollekens Relief (his Tab. VI.; cf. here **Fig. 36**) and another relief (his Tab. VII. [= here **Fig. 37**]) within the '*Aula Regia*' of Domitian's Palace on the Palatine, the '*Domus Flavia*'/ *Domus Augustana*. John Pollini (2017b) has not realized this important fact, but suggests for both reliefs a wrong findspot within Domitian's Palace, building on that alleged fact further (erroneous) hypotheses (cf. *supra*, in Chapter V.1.i.3.b); at Section II.). Bianchini (1738, 68) says explicitly that the reliefs here **Fig. 36** and **Fig. 37** were found in that hall of Domitian's Palace (called already by Bianchini '*Aula Regia*'), where also "the colossal basalt statues of Hercules and Bacchus/Dionysus with Pan (now in Parma's Galleria Nazionale)" were excavated, as Pollini writes (cf. *id.* 2017b, 101, n. 11, quoting for that, F. BIANCHINI 1738, 54 and 58). As discussed in detail above (cf. *supra*, in Chapter V.1.i.3.b); at Section III.), Bianchini (1738, 50, 52, 54 with Tab. II.-IV. = here **Figs. 8; 9**) describes the architecture, size and decoration of the '*Aula Regia*', and provides a measured ground-plan of Domitian's entire Palace (his Tab. VIII. = here **Fig. 8**). His excellent etchings comprise also a measured ground-plan of the '*Aula Regia*' (his Tab. II. = here **Fig. 9**); an etching, illustrating an uniquely rich decorated marble column base (cf. his Tab. III. = here **Fig. 9**), belonging to a pair of giallo antico columns (cf. p. 50: "mai state osservate") that flanked the main entrance to the '*Aula Regia*' in the north (cf. here **Figs. 8; 8.1**), the plinth of which is decorated with trophies, as well as other finds from that hall (cf. p. 54): a detail of a marble entablature, decorated with a winged Victoria, who is crowning a trophy (illustrated on his Tab. IV. = here **Fig. 9**). Bianchini's illustrations (1738, Tab. III. and IV. = here **Fig. 9**) therefore show that at least one of the iconographic themes of the enormous '*Aula Regia*' was certainly the celebration of Domitian's military victories. According to Eugenio Polito (2009, 506, quoted *verbatim supra*, in Chapter V.1.i.3.b); at Section III.), this was the major subject of the '*Aula Regia*'.

For the '*Aula Regia*' and the colossal statues of Dionysos and Hercules; cf. also Ricardo Mar (2009, 255-261, Figs. 2-5). Those colossal statues were not carved from "basalt", or "greywacke", as is often erroneously asserted, but from "*basanites*"; cf. below, in Chapter *The major results of this book on Domitian*.

For the modern denomination '*Aula Regia*'; cf. Amanda Claridge (1998, 132-133, Fig. 54, p. 135; *ead.* 2010, 146-147, Fig. 55, p. 148): "'Aula Regia' or Audience Chamber". See also the map SAR 1985, labels: 64: *Domus Flavia*: "*Basilica*"; 65: *Domus Flavia*: "*Aula Regia*"; 66: *Domus Flavia*: "*Lararium*".

For the following; cf. here **Figs. 58; 73**, labels: VELIA; Arch of DIVUS TITUS; VICUS APOLLINIS ?/ "CLIVUS PALATINUS"; PALATIUM; ARCUS DOMITIANI/ DIVI VESPASIANI ?; Temple of IUPPITER INVICTUS ? or of IUPPITER STATOR ? IUPPITER VICTOR ? PROPUGNATOR ?; "Porta principale"; Arch of Domitian ?; Cancellaria Reliefs ?; "DOMUS FLAVIA"; DOMUS AUGUSTANA: "BASILICA"; "AULA REGIA"; "LARARIUM"; "TRICLINIUM"; "PERISTYLE";

c) Klaus Stefan Freyberger (2018, 97; cf. *supra*, in Chapter V.3.) observes that the architectural fragments, found together with the Cancellaria Reliefs (cf. here **Figs. 1; 2; Figs. 1 and 2 drawing**), were carved by a late Domitianic workshop that was also active in Domitian's '*Domus Flavia*'/ *Domus Augustana*. - To this I will come back below;

d) Filippo Coarelli (2009b, 88; *id.* 2012, 283; cf. pp. 481-483, 486-491) suggests that the *Arcus Domitiani* in front of the '*Domus Flavia*'/ *Domus Augustana* was "probabilmente dedicato a Vespasiano".

Cf. below, in Chapters *The major results of this book on Domitian*; and in *The visualization of the results of this book on our maps*; and *infra*, in volume 3-2, at *Appendix IV.d.2.f*); and in *Appendix VI.*; at Section VII. - Also to this I will come back below;

e) I follow Coarelli (1996, 143, quoted *verbatim infra*, in volume 3-2, in *Appendix VI.*; at Section VII.) in identifying the temple podium which stands immediately to the west of the *Arcus Domitiani* on the Palatine, and right in front of Domitian's '*Domus Flavia*'/ *Domus Augustana*, as that of Iuppiter Invictus. Coarelli himself (2012, 243, quoted *verbatim infra*, in volume 3-2, in *Appendix VI.*; at Section VII.) identifies it now with the Temple of Iuppiter Propugnator, but this identification turns out to be impossible, because the shrine of Iuppiter Propugnator is only documented for the Imperial period.

Patrizio Pensabene and Vincenzo Graffeo (2014; *id.* 2016-2017, quoted *verbatim infra*, in volume 3-2, in *Appendix VI.*; at Section X.), have in 2009-2013 re-excavated this temple podium, and have found out that there are in reality two different temple podia at this site; they tentatively attribute the eastern foundation to the Temple of Iuppiter Invictus.

Personally I am more confident than Pensabene and Graffeo themselves concerning their attribution of this podium to Iuppiter Invictus. Pensabene and Graffeo found, incorporated into this temple podium, which is datable to the 2<sup>nd</sup> century AD, a Republican temple podium which has one or two building phases; these data fit the assumption to identify the shrine in question with that of Iuppiter Invictus.

This podium has also (but erroneously) been attributed to the Temple of Iuppiter Stator and to the Temple of Iuppiter Victor (for a discussion of all those hypotheses; cf. *infra*, in volume 3-2, in *Appendix VI.*; at Sections III.-V.; VII.- X.).

Assuming for the time being that my identification of this temple podium as that of Iuppiter Invictus is correct, I have above tentatively suggested (cf. *supra*, in Chapter V.1.i.3.b); at Section III.) that the *rotulus*, which Domitian on the Nollekens Relief (cf. here **Fig. 36**) is holding in his left hand, contains his *vota pro reditu*, exactly like the *rotulus*, which Domitian (now Nerva) is holding on Frieze A of the Cancellaria Reliefs in his left hand (cf. here **Fig. 1**; **Figs. 1 and 2 drawing: figure 6**).

In the following I summarize and repeat in part *verbatim*, what was written above (cf. *supra*, in Chapter V.1.i.3.b); at Section III.): Since I have asked myself, whether or not the area immediately surrounding the '*Aula Regia*' of Domitian's '*Domus Flavia*'/ *Domus Augustana* could possibly be reflected in the specific design of the Nollekens Relief (cf. here **Fig. 36**), which, according to Pollini (2017b, 120, 124) shows Domitian, sacrificing immediately before his triumphal procession in AD 89; and considering at the same time the construction date of Domitian's Palace on the Palatine (AD 81 until around 92; cf. J. POLLINI 2017b, 120; F. VILLEDIEU 2009, 246, quoted *verbatim supra*, in Chapter V.1.i.3.b); at Section III.), which corroborates this date, I have studied below the temple podium right in front of the '*Domus Flavia*', following those scholars, who attribute it (tentatively) to the Temple of Iuppiter Invictus (cf. *infra*, in volume 3-2, in *Appendix VI.*; at Sections III.-V.; VII.-X.).

Provided this identification of the Temple of Iuppiter Invictus is correct (which I think it is), it is tempting to believe that Domitian, before leaving for this military campaign, had prayed to this Iuppiter, asking him to grant him the victory. From this war Domitian has now returned victoriously, as the Nollekens Relief (cf. here **Fig. 36**) 'reports'. Provided it is likewise true that what we see in the Nollekens Relief is Domitian's sacrifice which preceded his (last) triumph, celebrated in AD 89, as Pollini (2017b, 120, 124) suggests. Consequently, the *rotulus*, Domitian is holding in his left hand on the Nollekens Relief, would probably contain his vows, which he had made *pro reditu* before leaving for this military campaign. These vows, Domitian will now fulfill in due course, since Iuppiter Invictus has not only granted him this victory, but has also 'brought him back'.

Apart from celebrating Domitian's 'invincibility', the Nollekens Relief (here **Fig. 36**) thus shows at the same time the emperor's *pietas* in regard to his guardian god, Iuppiter Invictus;

f) I follow Filippo Magi (1939; *id.* 1945; cf. *supra*, at n. 112, in Chapter I.1.) and many subsequent scholars, comprising Claudia Valeri and Giandomenico Spinola (cf. *supra*, at *Introductory remarks and acknowledgements*; and *supra*, at n. 455, in Chapter III. See also *The Contribution by Giandomenico Spinola on the Cancellaria Reliefs*),

in assuming that the emperor on Frieze B of the Cancellaria Reliefs (cf. here **Fig. 2**) was from the very beginning Vespasian.

That Filippo Magi (1939; 1945) was right with his assumption that the head of Vespasian on Frieze B is the original portrait, has been proven by Rita Paris (1994b, 81-82, quoted *verbatim supra*, in Chapter V.1.i.3.b). She realized the meaning of the *corona civica*, with which *Victoria* is shown as crowning Vespasian (cf. here **Figs. 1 and 2 drawing: figures 14** [Vespasian]; **16** [*Victoria*]): apart from Augustus, this highest decoration for a military victory was only appropriate in the case of Vespasian, because both emperors had been able to put and end to civil wars.

**Combining the above-mentioned points a)-f) with each other, has resulted in my tentative suggestion (cf. *supra*, in Chapter V.1.i.3.b); at Section III.; and *infra*, in volume 3-2, in Appendix VI.; at Section VII.) that the Cancellaria Reliefs may have decorated the passageway of the Arcus Domitiani/ Divi Vespasiani?, erected by Domitian in front of his `Domus Flavia`/ *Domus Augustana*.**

In the meantime, I have modified this just-quoted hypothesis. I attribute now those panels to one of Domitian's two arches on the Palatine: either to the *Arcus Domitiani*/ Arch of *Divus Vespasianus*?, or to the `Arch of Domitian`, which Coarelli (2012, 283; 481-483, 486-491) postulates at the "Porta principale" of Domitian's Palace called `Domus Flavia`/ *Domus Augustana*, and that Coarelli identifies also with the *Pentapylon*, known from the Constantinian Regionary catalogues.

For discussions; cf. below, in Chapters *The major results of this book on Domitian*; at point 4.); and at *The visualization of the results of this book on our maps*; and *infra*, in volume 3-2, at Appendix IV.d.2.f).

Let me explain to you now this idea in more detail.

Only after Chapter V.1.i.3.b); Section III. was written, did I realize the potential of an observation, published by Klaus Stefan Freyberger (2018, 97), since it may in theory corroborate my hypothesis (cf. below, in Chapter *The major results of this book on Domitian*; and *infra*, in volume 3-2, in Appendix VI.; at Section VII.), according to which the Cancellaria Reliefs could have decorated the Arch of Domitian/ *Divus Vespasianus* ? standing in front of the `Domus Flavia`/ *Domus Augustana*, or else the `Arch of Domitian` at the "Porta principale" of Domitian's `Domus Flavia`/ *Domus Augustana*.

See *supra*, in Chapter V.3. *Summary of the publication by K.S. Freyberger (2018) concerning the architectural fragments found together with the Cancellaria Reliefs*.

In the following I repeat, what was written concerning this point in Chapter V.3.:

`In his final conclusion, Freyberger [2018, 97] dates all these architectural fragments [found together with the Cancellaria Reliefs] to the late Domitianic period, and attributes them to a workshop that was also active at Domitian's Palace on the Palatine, the *Domus Flavia*[/ *Domus Augustana*].

In addition to this, Freyberger (2018, 97) compares on stylistical grounds the architrave block, carrying the inscription *PP FECIT*, that was found together with the Cancellaria Reliefs, with "*Le Colonnacce*" at Domitian's *Forum*/ *Forum Nervae*/ *Forum Transitorium*' (cf. here **Fig. 49**).

Provided the judgement of Freyberger (2018) concerning the architectural fragments, found together with the Cancellaria Reliefs, is true, the following interrelated conclusions seem to be possible:

1.) Freyberger (2018, 97) suggests that the architectural fragments, found together with the Cancellaria Reliefs, were carved by a workshop that was also active at Domitian's `Domus Flavia`/ *Domus Augustana*, and at Domitian's *Forum*/ *Forum Nervae*/ *Forum Transitorium*;

2.) Since Filippo Magi (1939), Bartolomeo Nogara (1939) and Antonio Maria Colini (1938 [1939]) until Massimo Pentiricci (2009; for all of them, cf. *supra*, n. 262, in Chapter I.3.2.), many scholars have suggested that the Cancellaria Reliefs and the architectural fragments, found together with them, have belonged to an arch, built by Domitian; but it was Markus Wolf (2015; 2018), who first visualized this hypothesis in two reconstruction drawings (cf. *supra*, in Chapter V.2);

3.) if points 1.) and 2.) are true, the architectural fragments, found together with the Cancellaria Reliefs, and these panels themselves are therefore now datable: as we have heard above, the construction date of Domitian's Palace on the Palatine (*i.e.*, of the 'Domus Flavia' / *Domus Augustana*) was AD 81 until around 92; cf. Pollini (2017b, 120; and F. VILLEDIEU 2009, 246; cf. for both, *supra*, in Chapter V.1.i.3.b); at Section III.);

4.) if points 1.)-3.) are true, the Cancellaria Reliefs and the architectural fragments, found together with them, could, therefore, in theory have belonged to the Arch of Domitian/ *Divus Vespasianus?*, erected by Domitian in front of his 'Domus Flavia' / *Domus Augustana*, or alternatively to the 'Arch of Domitian', which Domitian had erected at the "Porta principale" of his Palace;

5.) if points 1.-4.) are true, and given the great similarities between the Cancellaria Reliefs (cf. here **Figs. 1; 2; Figs. 1 and 2 drawing**) and the Nollekens Relief (cf. here **Fig. 36**), as observed by Pollini (2017b, *passim*), and as also shown above, in Chapter V.1.i.3.b), these similarities could be explained by the assumption that *both* were part of Domitian's overall masterplan of the Palatine.

**This leads us to the question, whether or not this new information can help us to date the Cancellaria Reliefs more precisely than has hitherto been possible.**

Unfortunately the construction date of the 'Domus Flavia' / *Domus Augustana* (AD 81 until around 92) and Pollini's suggestion, according to which the Nollekens Relief (cf. here **Fig. 36**) refers to Domitian's last triumph in AD 89, does not help us to decide, to which of his military campaigns Domitian is shown as leaving on Frieze A of the Cancellaria Reliefs (cf. here **Fig. 1; Figs. 1 and 2 drawing; figure 6**). As the caption of **Fig. 1** states, scholars have suggested: 'Profectio of Domitian in AD 83 or 92'. We are otherwise informed that Domitian celebrated a triumph over the Chatti in AD 83, one over the Dacians in AD 86, a double-triumph over Chatti and Dacians in AD 89, and an *Ovatio de Sarmatis* in AD 93 (for a discussion of all those wars and triumphs; cf. *supra*, at n. 84, in Chapter I.1., and at n. 232, in Chapter I.2.).

Because of the long time span, within which his Palace was built, both dates suggested for Domitian's *profectio* on Frieze A of the Cancellaria Reliefs, here **Fig. 1** (*i.e.*, AD 83 and 92), seem therefore still to be possible. But there are some other observations that we should likewise consider in this context.

According to Pollini (2017b, 120 with n. 106; cf. *supra*, in Chapter V.1.i.3.b); at Section IV.), what we witness on the Nollekens Relief is a sacrifice, performed by Domitian in AD 89 at his *Porta Triumphalis*, after which the emperor would begin his (last) triumphal procession. This hypothesis is convincing, *inter alia* for a reason, not adduced by Pollini himself. As we have seen above (cf. *supra*, in Chapter V.1.i.3.b); at Sections I. and III.), Pollini (2017b, 118) identifies the two *togati* in the background of the Nollekens Relief (cf. here **Fig. 36: figures 7 and 9**) as the two *consules* of Rome. Because Pollini, in addition to this, suggests that the represented sacrifice takes place in AD 89, his interpretation turns out to be plausible, because 89 was one of the few years during his reign, in which Domitian had not *himself* taken over one of the consulships (the other years being: AD 91, 93, 94 and 96; cf. *supra*, in Chapter V.1.i.3.b); at Section I.).

Throughout Chapter V.1.i.3.b), we have seen that the Cancellaria Reliefs and the Nollekens Relief show many similarities, but there are also important differences, and we should ask ourselves, whether or not those iconographic features can help us to date the Cancellaria Reliefs more precisely.

1.) the 34 figures that appear on the Cancellaria Reliefs (cf. here **Figs. 1; 2; Figs. 1 and 2 drawing**) were not designed according to a hierarchy of scale, whereas that is true for the figures of the Nollekens Relief (cf. here **Fig. 36**), and for the figures of the relief from Domitian's *Templum Gentis Flaviae* showing Vespasian's *adventus* into Rome in AD 70 (cf. *supra*, in Chapter V.1.i.3.a) and here **Fig. 33**);

2.) Diana E.E.Kleiner (1992, 183; cf. *supra*, in Chapter V.1.i.3.b); at Section I.) observes that Domitian and his companions on the Nollekens Relief (cf. here **Fig. 36**) "are almost frontal". This is also true for the figures that appear on the relief from Domitian's *Templum Gentis Flaviae* with Vespasian's *adventus* into Rome in AD 70 (cf. *supra*, in Chapter V.1.i.3.a) and here **Fig. 33**), and likewise for some (but not for all) figures that appear on the Cancellaria Reliefs.

Provided the combination of the two iconographic characteristics, mentioned in points 1.) and 2.), became fashionable at some stage, the Nollekens Relief (cf. here **Fig. 36**) and the Relief from the *Templum Gentis Flaviae* (cf. here **Fig. 33**) could in theory have been carved *at a later moment* than the Cancellaria Reliefs.

If so, the date of the *Templum Gentis Flaviae* ('not before AD 94', or 'in 92-93 at the latest'), could be regarded as a *terminus ante quem* for the Cancellaria Reliefs. But, even provided that were true, that would not help us to solve our inquiry, when precisely Domitian commissioned the Cancellaria Reliefs. Since, as we have seen above, scholars have anyway already suggested that Frieze A of the Cancellaria Reliefs (cf. here **Fig. 1; Figs. 1 and 2 drawing**) represents a *profectio* of Domitian - either that of 83 or that of 92/93). - And after what was just discussed here, both these alternatives still seem to be possible.

For the just-mentioned dates of the *Templum Gentis Flaviae*, I repeat here, what was already written above: 'Concerning the first date of the construction of the *Templum Gentis Flaviae*, Filippo Coarelli (2009b, 94 with n. 311) suggests: 'not before AD 94'; cf. Häuber (2017 162)'. For the alternative date 'in 92-93 at the latest'; cf. Coarelli (2014, 196); both quoted *verbatim supra*, in Chapter IV.1.1.h)

After this Chapter was written, I realized that a remark, written *supra*, in Chapter V.1.i.3.), might support the opinion of those scholars who believe that Domitian on Frieze A was shown in his *profectio* of AD 92:

'When Nerva, in October of AD 97, decided to have his face recut from that of Domitian on Frieze A, he had, in my opinion, in mind to re-work Frieze A into the *profectio* of himself in AD 97 to his *bellum Suebicum*. If indeed the relevant Domitianic structure was a triumphal arch, precisely this fact could have alerted Nerva to 'usurp' Frieze A to be re-used as the representation of himself at the *profectio* to this war, perhaps even because also Domitian had victoriously fought against the *Suebi* (cf. *supra*, **ns. 345, 346**, in Chapter II.3.1.a)). The original phase of Frieze A may actually have represented Domitian's *profectio* to this war, in AD 92 (cf. *supra*, at **n. 232**, in Chapter I.2.) - but that is, of course, only an unproven hypothesis'. - To the question, to which war Domitian is possibly leaving on Frieze A of the Cancellaria Reliefs (cf. here **Fig. 1**), I will come back below.

In the following I anticipate, what was written below (cf. *infra*, in volume 3-2, in *Appendix VI.*; at Section VII.):

'According to Coarelli (2012, 283) the *Arcus Domitiani* in front of the 'Domus Flavia' / *Domus Augustana* [on the Palatine] was "probabilmente dedicato a Vespasiano" - suggesting this *a*) because of the existence of Domitian's Arch of *Divus Titus* on the *Velia* (cf. here **Fig. 120**), and *b*) because of the prescribed path a visitor to Domitian's Palace had to go, coming up from this Arch of *Divus Titus*, and passing underneath this presumed Arch of *Divus Vespasianus*. When we consider both points *a*) and *b*) together, and add to this *c*) that Vespasian was from the very beginning represented on Frieze B (cf. *supra*), it is tempting to believe, that the Cancellaria Reliefs (**Figs. 1; 2; Figs. 1 and 2 drawing**) could have decorated this Arch of *Divus Vespasianus*. If so, Domitian, by using the topographical situation as here described, would again have stressed the fact that his own principate was based on those of *Divus Vespasianus* and *Divus Titus*. This has, of

course, already Coarelli (2012, 483) himself suggested, quoted *verbatim infra*, in Chapters *The major results of this book on Domitian*; and at *The visualization of the results of this book on Domitian on our maps*.

Besides, the fact that the Cancellaria Reliefs and the Nollekens Relief are so similar - which was found within the 'Aula Regia' at the 'Domus Flavia' / *Domus Augustana* (cf. *supra*, in Chapter V.1.i.3.b; at Section II., and here **Fig. 36**), that is to say, at a very short distance to this Arch of Domitian/ *Divi Vespasiani*? - could thus also be explained'. - But, as already mentioned, in the meantime I have abandoned this first hypothesis to attribute the Cancellaria Reliefs to the *Arcus Domitianus*/ the Arch of *Divus Vespasianus*?: now I rather believe that the Cancellaria Reliefs decorated the Arch of Domitian at the "Porta principale", which Coarelli (2012, 2012, 283; 481-483, 486-491) assumes at the north side of Domitian's *Domus Augustana* (to this I will come back below).

Cf. here **Figs. 58; 73**, labels: Arch of DIVUS TITUS; PALATIUM; VICUS APOLLINIS?/ "CLIVUS PALATINUS"; ARCUS DOMITIANI/ DIVI VESPASIANI ?; "DOMUS FLAVIA"; "AULA REGIA"; DOMUS AUGUSTANA; "Porta principale"; Arch of DOMITIAN ?; Cancellaria Reliefs ?

**If indeed this Domitianic arch in front of Domitian's Palace was dedicated to *Divus Vespasianus*, this hypothesis could explain, why this arch was definitely *not* completely destroyed, as we have seen above. Cf. Alessandro Cassatella (1993, 92, Fig. 45; cf. *supra*, at n. 265, in Chapter I.3.2.), who writes:**

**"Le fondazioni dell'arco situate al termine del Clivo Palatino (livello superiore) furono scoperte da G. Boni e da lui attribuite ad una degli archi eretti da Domiziano in così alto numero ... Molti, ma non tutti come sembrano attestare successive emissioni monetali, furono demoliti per la *damnatio memoriae* dell'imperatore [*i.e.*, Domitian] (Cass. Dio 68.1). L'arco palatino, forse per la sua funzione di accesso alla piazza antistante la *domus Flavia* e di probabile limite tra aree pubbliche e di proprietà imperiale, sembra essere risparmiato dal momento che alcuni interventi sulle sue fondazioni risultano posteriori all'età di Traiano. La platea di fondazione è certamente successiva al portico ed al Clivo Palatino, ricostruiti dopo l'incendio del 64 d.C., ed orientata su di essi. Pertanto si è ritenuta probabile l'attribuzione della platea ad un arco di Domiziano ... [my emphasis]"**

The caption of Cassatella's Fig. 45 reads: "*Arcus Domitiani*. Pianta della fondazione del pilone O[vest]. Rilievo di A. Cassatella, 1983". - See also Cassatella 1986.

For the complex building history of this *Arcus Domitiani*; cf. also Françoise Villedieu (2009, 246, with Fig. 4).

**But that the Cancellaria Reliefs could possibly have decorated the *Arcus Domitiani*/ *Divi Vespasiani*? on the Palatine, is so far only my own, unproven hypothesis. Note that of this arch only its western pylon is preserved, which is why we do not know how wide the central passageway was.**

See Alessandro Cassatella ("*Arco di Domiziano sul Clivo Palatino*", 1986) and Maria Antonietta Tomei ("*Le indagini di G. Boni all'Arco di Domiziano: gli scavi e la storia della sistemazione del pilone sotto via S. Bonaventura*", 1997), both of which Amanda Claridge was kind enough to send me.

Only much later should I realize that already Filippo Coarelli (2012, 482, with n. 465, p. 484, Fig. 163) had illustrated Cassatella's plan and had integrated Cassatella's findings into his own reasonings.

Tomei (1997, 194-200) publishes *inter alia* Giacomo Boni's plans, who had re-excavated both piers of this arch in 1918. But because Boni's plans are *a*) not keyed to the cadastre of his time, and I do not own the relevant sheet of this paper cadastre anyway, which I should then first of all integrate into the photogrammetric data (containing the current cadastre), which are the basis of our maps, before I could integrate Boni's cartographic data; and because Boni found *b*) the eastern pier of this arch underneath the Via S. Bonaventura, of which I ignore, whether or not that was located at exactly the site of the current road of that name, and because *c*) these piers have several building phases, which means that the currently visible parts of the western pier do not date to the Domitianic period of this monument, I have refrained from integrating Boni's cartographic information into our maps **Figs. 58; 73**. By making this decision I am not saying that I

regard it as on principle impossible to integrate Boni's cartographic data concerning the two piers of Domitian's Arch into our maps.

On our maps **Figs. 58; 73**, the western pier of Domitian's Arch is located and drawn after the map *SAR 1985*; there it has the label 55: "Arch of Domitian": represented is its visible part, dating to a later period than the Domitianic phase of this arch. For the cartographic data integrated into our map, called in this publication 'Map 5'; cf. Häuber (2014a, 874-875).

When first drawing our map, which is here called **Fig. 73**, we had a similar cartographic problem in the south-western part of the Palatine in the area of the Temple of Magna Mater. This area we could only map after discussions with Patrizio Pensabene and Enrico Gallochio (on Nov. 30th 2010 and May 23rd 2011), who most generously shared all their findings with us and who provided us also with relevant plans; cf. Häuber (2015, 7 with n. 29; *ead.* 2014a, p. XXVI).

Because of these excellent experiences I rather wait until it is possible to discuss the problem, of how to locate those two piers of Domitian's Arch precisely, with those scholars, who have studied them in depth and, if possible, to look at the western pier together with them. Only after having also hopefully found additional cartographic information related to the time, when Boni had conducted his excavation, I would then proceed to integrate those piers into our own maps.

Consequently all my ideas suggested here concerning this Arch of Domitian should, of course, be regarded as preliminary.

**To the discussion of the *Arcus Domitiani/ Divi Vespasiani?*, I will come back below in more detail (cf. *infra*, in volume 3-2, at *Appendix IV.d.2.f*); and at *Appendix IV.d.4.b*). And my idea to attribute the Cancellaria Reliefs either to this arch, or rather to the 'Arch of Domitian' at the "Porta principale" of Domitian's Palace 'Domus Flavia' / *Domus Augustana* is discussed below, in Chapter *The major results of this book on Domitian*.**

**In the following, I will summarize the opinion of other scholars concerning the monument or building that contained the Cancellaria Reliefs.**

We know from the publications by Markus Wolf, who has studied the late Domitianic architectural fragments, found together with the Cancellaria Reliefs, *inter alia* curved soffit blocks, that the pertaining passageway (of an arch?), to which they belonged, was circa 5,10 m wide (cf. *id.* 2015; 2018; quoted *verbatim supra*, at n. 79, in Chapter *I.1.*; cf. also *supra*, in Chapter *V.2.*; and above in this *Chapter*). But it is, of course, not certain that the Cancellaria Reliefs and those soffit blocks had belonged to the *same* monument or building.

Besides, as already said above (cf. *supra*, in Chapter *I.3.2.*):

'Contrary to all earlier scholars, Pentiricci [with note 297] suggests, because of the presence of those Domitianic architectural fragments in the same area, that instead this *entire Domitianic monument or building*, together with the pertaining Cancellaria Reliefs, had been destroyed in the process'.

Cf. my **note 297**: 'M. PENTIRICCI 2009, 61 with ns. 428-431; p. 62 with ns. 440-442, p. 162 with n. 97, p. 204: "§ 3. La ristrutturazione urbanistica in età flavia (Periodo 3)"; cf. pp. 204-205: "L'officina marmoraria presso il sepolcro di Irzio" (quoted *verbatim supra*, in Chapter *I.3.1.*); cf. at n. 261, in Chapter *I.3.2.*

Also S. LANGER and M. PFANNER 2018, 82 (quoted *verbatim supra*, in Chapters *V.1.a*); *V.1.i.1.*), who have not discussed M. PENTIRICCI 2009, suggest that the Cancellaria Reliefs and the monument or building, to which they belonged, were destroyed simultaneously'.

With "the same area", Pentiricci (*op.cit.*) refers to the deposit of the here-so-called 'Second sculptor's workshop, excavated next to the tomb of Aulus Hirtius underneath the Palazzo della Cancellaria; cf. *supra*, in Chapter I.3.1.; and in Chapter V.1.a.1.).

As already mentioned several times, also according to Langer and Pfanner (2018, 82), the monument to which the Cancellaria Reliefs had *actually* belonged, must have been completely destroyed in the course of dismantling those reliefs:

"Wann die Platten [*i.e.*, of the Cancellaria Reliefs; cf. here **Figs. 1; 2**] vom Bau abgenommen worden sind, wissen wir nicht [with n. 150]. Die Umarbeitung zum Nervakopf [of Domitian's portrait on Frieze A; cf. here **Fig. 1; Figures 1 and 2 drawing: figure 6**] war auf jeden Fall unbefriedigend, denn man sah nach wie vor die Domitianslocken und vor allem die unschöne Kante zwischen Nervagesicht und Domitiansfrisur (s. Abb. 20c). Vielleicht ordnete deshalb schon Nerva selbst an, die Platten abzunehmen, was mit dem Abbruch des gesamten Monuments einherging. Das legt der bautechnische Befund nahe, der näher erläutert werden muss (s. Abb. 29)". - Langer and Pfanner's note 150 is quoted *verbatim supra*, in Chapter V.1.i.1.).

But as likewise already mentioned above (cf. *supra*, in Chapter V.1.b)), we should also consider Langer and Pfanner's following observation:

'In addition to this, Langer and Pfanner (2018, 82, 84, both passages quoted *verbatim supra*, in Chapter V.1.a), and again below) suggest that, after Domitian's death the monument or building, to which the Cancellaria Reliefs belonged, was not immediately destroyed, since this structure had presumably served a more general purpose than predominantly celebrating Domitian.

This idea had already been voiced by Marianne Bergmann (1981, 25 with n. 28, quoted *verbatim supra*, at n. 252, in Chapter I.3.), followed by Tonio Hölscher (2009a, 54-56, quoted *verbatim supra*, at n. 253, in Chapter I.3.)'.

Finally I repeat also *verbatim*, what was already quoted *supra*, in Chapter V.1.a):

'Langer and Pfanner (2018, 82) write:

"Die technischen Beobachtungen zu den Reliefs erlauben inhaltliche Rückschlüsse auf die Art des Monuments. Da die Reliefs zuerst am Bau verblieben, muss es sich um ein Denkmal oder Gebäude gehandelt haben, das nicht alleinig und speziell auf Domitian gemünzt war, sondern bei dem mit Hilfe von Umarbeitungen, Umgestaltungen o. ä. [oder ähnlichem] der Bezug zu Domitian eliminiert werden konnte [with n. 152]". In their notes 151, 152, Langer and Pfanner (2018) provide references and further discussion.

Cf. their n. 151: "Dies lässt vermuten, dass die Platten nicht weit durch die Stadt an ihren Ablageort beim Hirtiusgrab transportiert worden sind. Folglich könnte es sich um ein Gebäude auf dem südlichen Marsfeld handeln, zumal dort Domitian eine intensive Bautätigkeit entfaltet hatte. Zur Lokalisierung des ehemaligen >Cancellaria-Baus< s.[iehe] hier die Beiträge von Wolf und Freyberger im Annex". - For the contributions by Wolf and Freyberger, mentioned in this note; cf. *supra*, in Chapters V.2.; V.3.

In the following I repeat, was written above (cf. *supra*, in Chapter V.2.):

'Markus Wolf (2018, 91) writes concerning this point: "Im Folgenden soll ... versucht werden, auf der Grundlage einer neuen Bauaufnahme dieser Bauglieder **Vorschläge für die Rekonstruktion eines Monumentes mit einem Bogen aus domitianischer Zeit zu machen, das wohl auf dem Marsfeld stand** [with n. 1; my emphasis]". - In his **note 1**, Wolf does not suggest a more precise hypothesis (than "wohl auf dem Marsfeld") concerning 'the location of the former Cancellaria Building', but acknowledges only the help of those scholars, who have supported his work. Cf. Wolf (2015, 317 with n. 1), where he did not as yet suggest that this monument 'probably stood on the *Campus Martius*'. Klaus Stefan Freyberger (2018; cf. *supra*, at Chapter V.3.), on the other hand, does not propose 'a location for the former Cancellaria Building' at all'.

Langer and Pfanner (2018, 84) write:

"Die Art des Monuments: Die Friese dienten als Verkleidung eines Ziegel-oder Natursteinbaus. Ob als Pendants oder zu einem größeren Zyklus gehörig, ist unbekannt. **Da das Monument nach der *damnatio memoriae* Domitians vorerst stehen blieb und nur die Kaiserköpfe umgearbeitet wurden, handelte es sich kaum um ein Bauwerk, das ausschließlich auf Domitian gemünzt war. Mitaufgefundene Architekturteile sind flavisch und könnten als Teil einer Bogenarchitektur zu einem auf dem südlichen Marsfeld gelegenen Cancellaria-Monument gehört haben ... [my emphasis]**".

Langer and Pfanner (2018) write elsewhere on p. 84:

"Geschichte der Friese und des Monuments: Irgendwann später wurden die Reliefplatten lieblos abgenommen. Sie gingen dabei zu Bruch und waren, abgestellt am Grabmal des Aulus Hirtius, nicht für eine Wiederverwendung vorgesehen. Im selben Zug brach man, wie der technische Befund an den Platten belegt, das gesamte Monument ab".

### **To conclude the discussion by other scholars concerning the monument or building that contained the Cancellaria Reliefs.**

I think it was worth while to read again the above-quoted opinions concerning the questions, 1.) to which kind of monument or building the Cancellaria Reliefs had belonged, and 2.) what may have happened to this structure in the time span between Domitian's death and the moment, when these panels and other remains of the (same?) monument or building ended up in the deposit of the 'Second sculptor's workshop' underneath the Palazzo della Cancellaria.

'Worth while', because it shows, in my opinion, that it is precisely this part of the history of the Cancellaria Reliefs, namely that of their pertaining 'Cancellaria Building', which is addressed in point 2., that is most difficult, or to be honest, currently impossible to reconstruct. The reason being very simple: because that building or monument, or at least those walls of this structure do not exist any more, to which the Cancellaria Reliefs were once attached.

By asserting this, I am thinking of the pioneering research Lucos Cozza has undertaken, "who studied and documented in 1948 in a measured plan the 'morphology of the ancient wall at the Templum Pacis in Rome", where the Severan Marble Plan had been on display; cf. Häuber (2015, 5 with n. 20, quoting L. COZZA, in: *Pianta marmorea* 1960, pp. 175-195, tab. LXI; and *inter alia* L. FERREA 2006, 45-46 with ns. 11, 12, Fig. 9). - For the installation of the Severan Marble plan at the *Templum Pacis*, cf. also *infra*, in volume 3-2, in *Appendix I.a*); at Section VII.

**For the Severan Marble Plan, Lucos Cozza has thus provided the scholarly community with precisely that kind of 'hard facts' which in the case of the Cancellaria Reliefs are (still) missing.**

**Let's now summarize the other results of this Chapter VI.3.; Addition: My own tentative suggestion, to which monument or building the Cancellaria Reliefs may have belonged, and a discussion of their possible date**

In this Chapter, I have *inter alia* analysed the discussion concerning the dates, suggested for the Cancellaria Reliefs. At the outset of this research, Giandomenico Spinola was kind enough to tell me that the Cancellaria Reliefs (cf. here **Figs. 1; 2**) belong to the late Domitianic period (cf. *supra*, at n. 75, in Chapter I.1., see also below, at *The Contribution by Giandomenico Spinola*). In addition to this, we have learned in this Chapter that these reliefs were created by the same workshop, that was also active at Domitian's *Forum/ Forum Nervae/*

*Forum Transitorium*, and at Domitian's Palace on the Palatine, the '*Domus Flaviae*'/ *Domus Augustana*, for which we have the construction date 'AD 81 until around 92'.

After this Chapter was written up to this point, I realized that already Hans Wiegartz (1996, 172, quoted *verbatim infra*, in volume 3-2. at *Appendix IV.d.2.a*)), was of the opinion that the sculptural decoration of Domitian's *Forum*/ *Forum Nerva*/ *Forum Transitorium* and the Cancellaria Reliefs were contemporary.

**In this part of this *Study*, which is dedicated to the Cancellaria Reliefs, I was thus unable to find a more precise date for the Cancellaria Reliefs. But fortunately also Domitian's building projects at Rome have been discussed in this volume.**

As we shall see below, Domitian's *Forum* and Domitian's Palace are, in addition to this, also therefore closely related, because both were according to Pierre Gros works of Domitian's architect Rabirius; cf. Gros (2009, 106; cf. *infra*, in volume 3-2, at *Appendix IV.d.2.a*); *Appendix IV.d.2.f*).

**By looking in more detail at one of those structures, decorated with sculptures that were created by the same workshop that also made the Cancellaria Reliefs - namely Domitian's *Forum*/ *Forum Nerva*/ *Forum Transitorium* - was finally found such a possible date. I, therefore, suggest that on Frieze A of the Cancellaria Reliefs (cf. here Fig. 1; Figs. 1 and 2 drawing: figure 6), Domitian is shown in the *profectio* to his (second) Dacian War in AD 89.**

Cf. below, at Chapter *The major results of this book on Domitian*; at point 2.); and *infra*, in volume 3-2, at *Appendix IV.d.2.f*) *Domitian's choice to represent the Pirousta* (cf. here Fig. 49) in his *Forum*/ *Forum Nerva*/ *Forum Transitorium* and the date of the Cancellaria Reliefs).

**If true, this fact may be regarded as a *terminus post quem* for the realization of the Cancellaria Reliefs.**

**To conclude Chapter VI.3. Summary of my own hypotheses concerning the Cancellaria Reliefs presented in this Study.**

As already said above, we have so far no information that could prove my hypotheses that are summarized in this Chapter VI.3.

But, since at least I myself believe in my hypotheses presented here, although still being unable to prove any one of them, I hope that this *Study* is nevertheless an appropriate text to be dedicated to my good friend Rose Mary Sheldon.

Not only because she, simultaneously with me, was writing a book on the Flavian emperors (that is now, in 2023, in press), but especially because she is a great expert in those military campaigns that both Cancellaria Reliefs were supposed to remind the People of Rome of, an enterprise (*i.e.*, the construction of the monument or building, to which those panels belonged), that sadly was never accomplished.

Thanks to scholars like Rose Mary, the scholarly community and anyone else, who is interested in ancient Roman *militaria*, will always remember those events, whereas the Cancellaria Reliefs were never finished and disappeared already in circa AD 120 at the latest, as suggested by Filippo Magi (cf. *supra*, at n. 141, in Chapter I.1., quoted *verbatim supra*, n. 255, in Chapter I.3.1.), followed by Massimo Pentiricci (cf. *supra*, at n. 285, in Chapter I.3.2.), or circa AD 150 at the latest, as suggested by Andrea Carignani and Giandomenico Spinola (cf. *supra*, n. 76, in Chapter I.1., and n. 287, in Chapter I.3.2.), that is to say, presumably only circa 30-60 years after the first carving of these panels had been started - being buried in a deposit of the '*Second sculptor's workshop*' underneath the Palazzo della Cancellaria in the course of levelling the relevant terrain in the *Campus Martius*.

Circa 1787 years after that - fortunately for us - the Cancellaria Reliefs were excavated (1937-1939) by Filippo Magi, who has also published them, first in a brilliant note (1939; quoted *verbatim supra*, n. 112, in Chapter I.1.), and then, only very few years after the excavation, in magisterial fashion in a monumental publication (1945)!

*A Study on Domitian's cult-statue of Iuppiter Optimus Maximus Capitolinus (cf. here Fig. 10)*

This *Study* has two Parts :

I. The wall painting 'Aldobrandini Wedding' in the Vatican Museums and the statuette of the 'Euripides' in the Louvre (cf. here Fig. 12), which has been discussed together with it.

II. The Capitoline Triad in statuette format at Guidonia Montecelio (Roma), Museo Civico Archeologico 'Rodolfo Lanciani' (cf. here Fig. 13) and the colossal statue of Jupiter at the Hermitage (cf. here Fig. 10)

*A Study on Domitian's cult-statue of Iuppiter Optimus Maximus Capitolinus (cf. here Fig. 10); Part I.*

*The wall painting 'Aldobrandini Wedding' in the Vatican Museums and the statuette of the 'Euripides' in the Louvre (cf. here Fig. 12), which has been discussed together with it*

Since in January of 2015, Hans Rupprecht Goette has kindly shared his observation with me that the famous, but alleged, statuette of Euripides in the Louvre (cf. here Fig. 12) was 'turned into' the Greek tragedian by restoring a (presumably headless) figure of an enthroned father god, I have pursued his findings further. In this article, Goette convincingly compares the figure's pose and garment *inter alia* with the seated Jupiter in representations of the Capitoline Triad (cf. *id.*, "From Father god to tragic poet ...", forthcoming).

**Fig. 155. Roman wall-painting, 'Aldobrandini Wedding'. Città del Vaticano, Musei Vaticani, Biblioteca (inv. no. 69631). From: C. Häuber (2014a, 831, Fig. 156. Cf. Appendix V; B 30).**

**Fig. 12. Statuette of the seated 'Euripides', marble. Paris, Louvre (MA 343). This figure represented originally Jupiter in the Capitoline Triad (cf. H.R. Goette: "From Father god to tragic poet ...", forthcoming).**

Concerning the painting called 'Aldobrandini Wedding', I have written elsewhere:

**"This wall painting [*i.e.*, the 'Aldobrandini Wedding'; cf. here Fig. 155] is datable in the Augustan period, was found in the *Horti* of Maecenas ... and was commissioned by Maecenas. It represents 'The Persuasion of Helen by Aphrodite' that may be read as the *conditio sine qua non* not only for the Trojan War, but also for the subsequent rise of Rome [with n. 150, providing a reference; my emphasis].**

Laocoon's death, the theft of the Palladion and Helen's abduction, seen under that perspective, are comparable to Virgil's *Aeneid*, in which "there is a strong narrative teleology, reaching beyond the events of the story to the future Rome" - and to Augustus, since: "The purpose of the *Aeneid* was commonly seen in antiquity as to praise Augustus (Servius, *Aen.* pref.)" [with n. 151]". Cf. Häuber (2014a, 626).

In my **note 151**, I wrote: "Both quotes are from D.F. FOWLER, P.G. FOWLER, s.v. Virgil (Publius Vergilius Maro), in: *OCD*<sup>3</sup> (1996) 1606".

Cf. Häuber (2014a, 777-782, "B 30.) The 'Aldobrandini Wedding' wall painting in the Musei Vaticani - the 'Persuasion of Helen by Aphrodite'; cf. Fig. 156 on p. 831. For the findspot of this wall painting, which, in my opinion, was located within the *Horti* of Maecenas, outside the Servian city Wall, to the south of the *Porta Esquilina*, and to the south of the *Via Labicana-Praenestina*; cf. my map 3 [= here Fig. 71].

Cf. **Fig. 71**, labels: HORTI MAECENATIANI; Servian city Wall; PORTA ESQUILINA; VIA LABICANA-PRAENESTINA; XVIII; 42 Building Aldobrandini Wedding.

For discussions of my hypotheses (2014a) concerning the 'Aldobrandini Wedding'; cf. Eric M. Moormann (2015a, 263), and Frank G.J.M. Müller (2019, 69, 70-71), who rejects my identification of the protagonists of the painting with Helen and Paris. On pp. 73-104, he suggests "A New Interpretation": this is his 'old' interpretation, published in 1994, as he (2019, 73 with n. 1) himself admits. Müller (2019, 103, in his Chapter: "Summary") writes that the 'Aldobrandini Wedding' represents the protagonists of Euripides' tragedy "Hippolytos Stephanophoros": Hippolytos, Phaedra, and Aphrodite, "with the exception of Theseus".

Like other scholars; cf. Müller (2019, 105-128, in his Chapter: "Criticism"), also I myself (2014a, 779-780), have rejected Müller's (1994) hypotheses, but for very different reasons. Müller (1994) based his thesis, which he now repeats (in 2019), on two wrong assumptions, *a*) by assuming a wrong findspot for the wall painting 'Aldobrandini Wedding', and, *b*) by (erroneously) suggesting that the wall painting was found in the same area as the famous (but alleged) statuette of 'Euripides' in the Louvre (cf. here Fig. 12).

As Hans Rupprecht Goette found out, this ancient statuette (here Fig. 12) had only been 'turned into' a Euripides by Francesco Ficoroni, who ordered the addition of a modern copy of Euripides's portrait head to this seated figure (of Jupiter!), as well as Greek inscriptions, containing Euripides's name and a list of his works - by the way, a *very* successful operation.

As Hans Rupprecht Goette ("From Father god to tragic poet ...", forthcoming, with n. 10, his Fig. 8: the replica of the Capitoline Triad at Trier), is able to show, the iconography of this male figure (here Fig. 12) is that of Jupiter, represented enthroned in the Capitoline Triad, together with Juno (to his left) and Minerva (to his right). For another complete ensemble of these three divinities, showing Jupiter in a very similar pose and wearing his *himation* in exactly the same fashion as the 'Euripides' (here Fig. 12), see Goette ("From Father god to tragic poet ...", forthcoming, with n. 10), which is now kept in the Museo Civico Archeologico 'Rodolfo Lanciani' (inv. no. 80546) at Guidonia Montecelio (Roma; cf. here Fig. 13). This group was also published by Zaccaria Mari: "Triade Capitolina", in: Francesco Buranelli (2019, 13 [Jupiter alone], cf. pp. 72-73 [illustrating the entire Capitoline Triad]). Hans Rupprecht Goette has kindly allowed me to quote from his forthcoming text.

**Hans Rupprecht Goette ("From Father god to tragic poet ...", forthcoming) writes about Ficoroni's creation of this alleged Euripides (cf. here Fig. 12) :**

"Especially because of the list of plays next to the figure of Euripides the statuette - strangely a mixture of a high relief and a sculpture in the round - became famous. The fact that the head [of this alleged 'Euripides'] has been added (produced as a miniature replica after the inscribed herm of Euripides in the Farnese collection [with n. 7]) in the 18<sup>th</sup> century has been mentioned in most publications only in passing. Philologists and epigraphists were fascinated by the catalogue of plays reported next to the depiction of the poet [*i.e.*, the alleged Euripides; with n. 8] ... But when we look carefully at these inscriptions, several peculiarities strike us.

1. There is inconsistency in the form of the letters: the rounded E in the name on the plinth is different from all rectangular E in the catalogue of tragedies.
2. The first four letters of Euripides' name are inscribed on a surface that is clearly cut back in post-ancient times, so that the top corner of the plinth projects out more than the lower part, the surface plane is not vertically even but curves inwards at an oblique angle (Fig. 3).
3. The rest of the inscribed name is written with the same tool on a triangular marble piece of the plinth that was added during the mid-18<sup>th</sup> century restoration. This indicates that the whole name on the side of the plinth was added in modern times.
4. Moving on to the list of plays on the background (Fig. 7), we see that the title »Antigone« was written twice, in lines 6 and 12; »Archelaos« is missing in the alphabetical order; the title »Bellerophon« in line 15 is inscribed as »Βελλεροφόντης«, »Elektra« is omitted if the remains of »Herakles« - restored by others as »Kadmos« - at the break in line 26 were read correctly. In the right column we see »Kresphontes« and »Likyenios« misspelled.
5. The titles in the right column are incised into the marble in a position (*i. e.* pushed to the left) that the space for the letters takes advantage of the modern break of the stone in a way that the whole word could be inscribed.
6. And underneath »Orestes« there are no more titles listed although one would expect on the existing ancient surface more lines naming plays that would have been inscribed and partly lost on their right edge.

Again – as in the case of the name inscribed on the side of the plinth – we have to doubt the ancient origin of this list ... The poet [*i.e.*, 'Euripides', here Fig. 12] sits on a throne. That is surprising because this is not usual for depictions of a tragedian who usually sits on a klismos or a simple stool. The drapery with the rounded folds at the shoulder is unknown in depictions of Greek mortals [with n. 9]. The same is true for the restored sceptre or thyrsos in the right hand of the figure. All these iconographic details – the seat, drapery of the mantle, and the pose of the arms – are typical for a depiction of the god Zeus who must have been the original subject of this ›relief-statulette‹. But why then a ›relief background‹ behind the back of the throne? What function had this plate in the primary appearance of the small sculpture? The mixture of a statuette and a relief with inscriptions on the background – as it appears today after all the 18<sup>th</sup> century interventions – is unknown in Roman imperial sculpture. Searching for an explanation of this rare combination of an enthroned Zeus (or father god) with a high back of the seat and an additional ›background‹ we find depictions of the god accompanied on both sides by two more deities – Iuno and Minerva – constituting the group of the Capitoline Trias (Fig. 8) [with n. 10]; very similar and inspired by the trias of gods there are depictions of the group of Sarapis with other Egyptian goddesses [with n. 11] showing the bearded god seated on a throne in front of a marble plate in the back. The original fragment of the ›relief statuette of Euripides‹ in the Louvre must have been part of such a sculptural group of deities. Only by re-cutting,

restoring, and inscribing that fragment during the first half of the 18<sup>th</sup> century the famous sculpture has been created".

In his **notes 7-11**, Goette provides references. In his **note 10**, he mentions the replica of the Capitoline Triad at Trier, Rheinisches Landesmuseum (inv. no. ST. 3196), which is illustrated on his Fig. 8, and the Capitoline Triad, now kept in the Museo Civico Archeologico 'Rodolfo Lanciani' at Guidonia Montecelio (Roma), illustrated here on **Fig. 13**.

**Hans Rupprecht Goette's (forthcoming) above-quoted new observations concerning the statuette of 'Euripides' in the Louvre (here Fig. 12) have an important effect. Because there is now no 'need' any more to conclude that the 'Aldobrandini Wedding' should represent one of Euripides's tragedies, by arguing with the (alleged) fact that this 'Euripides' was found in the same area as the 'Aldobrandini Wedding'. Like many other scholars, I have (2014a, 779-780) rejected Müller's hypothesis to recognize in the 'Aldobrandini Wedding' the protagonists of Euripides's "Hippolytos Stephanophoros". Müller (2019, 105-128, in his Chapter: "Criticism") does not discuss my objections to his theories.**

Cf. Häuber (2014a, 779-780, with ns. 24-29, for a discussion of F.G.M. MÜLLER 1994; cf. C. HÄÜBER 2015, 45-53: "Appendix A topographic error [*i.e.*, one of my own errors], the statuette of Euripides in the Louvre and the head of a boy wearing a cap in the Musei Capitolini, Centrale Monte Martini", esp. pp. 49-50, with ns. 206-216 - with further arguments against the hypotheses of Müller 1994, and with my discussion on the statuette of 'Euripides' with Hans Rupprecht Goette.

**In the following, I will summarize, why and how I have become involved in the discussions of Müller and Goette that revolve around the 'Euripides'-statuette in the Louvre and the 'Aldobrandini Wedding'.**

At the request of Frank G.J.M. Müller, I had in November of 2014 found out the real findspot of the 'Euripides' statuette (cf. here **Fig. 12**) by analysing Francesco Ficoroni's relevant report of 1790. I have, of course, informed Frank G.J.M. Müller of the results of my relevant research, and have immediately after that published them; cf. Häuber (2015, 45-53). Previously; cf. Häuber (1990, 93, with ns. 278-280, and 1991, 220-221, cat. no. 26), I had misunderstood one of Rodolfo Lanciani's handwritten schede in the Biblioteca Apostolica Vaticana, to the effect that I had suggested that this sculpture was found within the area of the *Horti* of Maecenas - this conclusion was definitely wrong.

**Based on Ficoroni's (1790) own very detailed report concerning this find, it was possible to identify the vineyard, where Ficoroni's alleged 'Euripides'-statuette (cf. here Fig. 12) had occurred; cf. Häuber (2015, 51): in antiquity this area was completely occupied by the 'Macellum Liviae' and by the adjacent *Campus Esquilinus*. The 'Macellum Liviae' was located immediately outside and to the north of the *Porta Esquilina* within the Servian city wall, and to the north of the *Via Labicana-Praenestina* and of the *Campus Esquilinus*. - This means that the 'Euripides'-statuette and the 'Aldobrandini Wedding' were certainly *not* found within the same area, because the *Horti* of Maecenas, where the 'Aldobrandini Wedding' came to light, were located to the south of the *Via Labicana-Praenestina* (as explained above).**

Cf. here **Fig. 71**, labels: Servian city Wall; PORTA ESQUILINA; VIA LABICANA-PRAENESTINA; CAMPUS ESQUILINUS; "MACELLUM LIVIAE".

Already this provenance of the statuette contradicts Ficoroni's assertion that a find from this area could possibly have been a statuette of Euripides, comprising a list of some of his works (such as here **Fig. 12**), which, if genuine, would have been the appropriate decoration of a library in some *domus*.

In January of 2015 started my discussion of the topography of the area with Hans Rupprecht Goette, who wanted to know the findspot of 'the head of a boy wearing a cap in the Musei Capitolini, Centrale Monte

Martini'. Hans alerted me also to other aspects of this 'Euripides' statuette, that were as yet unknown to me. With his kind consent I quoted in my text Goette's doubts concerning the identification of this statuette as Euripides, written me by Email of 24th January 2015: "... daß ich an der Deutung der Statuette als Euripides Zweifel habe a) wegen der Ikonographie und b) wegen der tiefgreifenden Überarbeitung, die bis zu den inschriftlichen Eintragungen reicht ...". Cf. Häuber (2015, 52 with n. 228, quoting Goette's Email).

Cf. now Goette ("From Father god to tragic poet ...", forthcoming). For the 'boy wearing a cap in the Musei Capitolini, Centrale Monte Martini'; cf. now Goette (2016), and for Francesco Ficoroni; cf. now Ronald T. Ridley (2017). Helke Kammerer Grothaus (2019, 258), in her review of Ronald T. Ridley's book (2017), refers to Goette's and Müller's research, with whom also she had discussed the matter, and declares the 'Euripides' as the result of the 'upgrading' restoration of a statuette of Zeus into one of the Greek poet that was created at the order of Ficoroni: "So fand der Ausgräber Giuseppe Mitelli auf dem Esquilin in der Region, die Ficoroni für den Palast des Titus hielt, 1702 eine Zeusstatuette, die er Ficoroni zum Kauf anbot ([R.T. RIDLEY 2017] S.[eite] 81, 115). Sie befindet sich heute als 'Euripides' im Louvre (MA 343; s.[iehe] F. De Ficoroni, *Le memorie ritrovate nel territorio delle prima e seconda Città di Labico*, Roma 1745, 104; Fundortangabe eventuell reine Fiktion). Offensichtlich wurde sie im Umfeld von Ficoroni verkaufswirksam angepasst (diesen Hinweis verdanke ich H.R. Goette, Berlin, und F.G.J.M. Müller, Amsterdam), die Anregung, in dem Euripides ein Produkt des sog.[enannten] *secolo delle manipolazioni* zu sehen".

**Discussing the matter with Eric M. Moormann in April of 2020, he alerted me to the fact that my suggestion to attribute a political meaning to the 'Aldobrandini Wedding'; cf. Häuber (2014a, 777-782), is a subject regarded by scholars specializing on Roman wallpaintings as highly controversial.**

He himself has recently summarized the relevant research; cf. Moormann (2013). Similarly Frank G.J.M. Müller (1994), in his book on the Boscoreale megalography, as Eric Moormann was kind enough to write me.

But considering the fact that, in my opinion, the 'Aldobrandini Wedding' was commissioned by Maecenas, a close friend of Augustus, I still wonder, whether Maecenas's situation should perhaps be judged differently than that of those men, who have been studied by Müller (1994) and Moormann (2013). Those men had not only lived one generation earlier, but also far away from Rome, in Campania.

Augustus and Maecenas, on the other hand, did not only live in "**Roma**. [L'arte romana] **nel centro del potere**", to borrow the title of Ranuccio Bianchi Bandinelli's famous book (1969). Augustus and Maecenas even were *themselves* the 'centro del potere'.

**Apropos my remark 'a very successful operation', with which I have referred to Ficoroni's 'creation' of the alleged 'Euripides' statuette (cf. here Fig. 12): Ficoroni's concept still worked in 2021.**

And that although all the arguments that preclude this identification have already been presented; cf. Häuber (2015, 45-53) and Helke Kammerer Grothaus's (2019, 258). In both publications reference was made to the relevant research of Hans Rupprecht Goette and Frank G.J.M. Müller, since both scholars had been kind enough to share their relevant findings with Kammerer Grothaus and myself ahead of their own publications, and had allowed us also to mention their results. To this I have myself added further considerations concerning the findspot of this statuette of 'Euripides' that corroborate Goette's own findings.

In a recently published article on portraits of Euripides, Ralf von den Hoff (2021, 40-41, with ns. 20-21) discusses also the statuette in the Louvre (cf. here **Fig. 12**), which he regards as a representation of Euripides and refers to as a "Relief". Von den Hoff suggests that in this sculpture the poet 'has been assimilated to Zeus, by the rendering of his garment and by the choice of the throne', interpreting both iconographic details "als überhöhende Bildformeln". In addition to this, von den Hoff (erroneously) believes that the inscriptions on this statuette are genuine; one of these inscriptions identifies this statuette as Euripides, the others are titles of Euripides's works. - I thank Hans Rupprecht Goette for the reference.

*A Study on Domitian's cult-statue of Iuppiter Optimus Maximus Capitolinus (cf. here Fig. 10); Part II.*

*The Capitoline Triad in statuette format at Guidonia Montecelio (Roma), Museo Civico Archeologico 'Rodolfo Lanciani' (cf. here Fig. 13) and the colossal statue of Jupiter at the Hermitage (cf. here Fig. 10)*

*"Il canto dei grilli fu improvvisamente sovrastato dal rombo di un Diesel, due fari squarciarono la notte, la macchina ruotò sui cingoli e si avviò sferragliando nella campagna deserta ...".*

Valerio M. Manfredi (1994, "Le inchieste del Colonnello Reggiani, p. 142: "Gli dei dell'Impero").

This is how Valerio Massimo Manfredi begins the story, in the course of which the driver of this Diesel that night, with some other men, 'excavates' the Capitoline Triad (here Fig. 13) discussed below. According to Manfredi's story (1994, 140-156; cf. p. 150 for the price: "Venti milioni di dollari"), this Capitoline Triad was supposed to be sold to an art collector in the United States for 20 million \$, but this sculpture was saved, and is now kept at Guidonia Montecelio (Roma), Museo Civico Archeologico 'Rodolfo Lanciani'.

In 1994, in the Castel Sant'Angelo at Rome, there was on display an exhibition that I have unfortunately not seen, but of which I was lucky enough to buy in October of 1994 the above-mentioned catalogue. It has the following title:

*Tesori Dal Buio 1994. Le inchieste del colonnello Reggiani di Valerio M. Manfredi.*

The catalogue was produced by the *Centro Europeo per il Turismo Sport e Spettacolo*. Giuseppe Lepore, *Presidente Centro Europeo per il Turismo*, writes in the 5th (!) preface of this catalogue (on p. 15):

"Le storie narrate da Valerio M. Manfredi su alcuni recuperi ancora pervasi di attualità e di mistero ci accompagneranno nella visita della Mostra ...". Whereas the many, and well known scholars of the COMITATO SCIENTIFICO (p. 6) of this exhibition and its catalogue, who have signed the INTRODUZIONE (pp. 17-19), do not mention Manfredi at all.

The motivation to organize this exhibition project (1994) and to ask Valerio M. Manfredi to write those stories is mentioned by the author of the first preface, Gen. C. A. Luigi Federici, *Comandante Generale dell'Arma dei Carabinieri* (pp. 7-8), who writes on p. 8:

**"Lo scopo primario [of this exhibition - and its catalogue] è comunque quello di restituire al pubblico godimento tanti capolavori che erano sprofondati, per fortuna temporaneamente, nel buio della clandestinità, e di far rivivere, attraverso alcuni episodi, le emozioni, già vissute dai Carabinieri nel corso delle inchieste [my emphasis]"**.

The text with the title *Le inchieste del colonnello Reggiani* was written for the catalogue *Tesori Dal Buio 1994* by the archaeologist and well known writer of historical novels Valerio Massimo Manfredi. All this I found out by reading a text about him in the Italian Wikipedia (cf. *infra*).

Not by chance this exhibition of 1994 marked the 25th anniversary of the foundation of a "Nucleo" of the *Comando Carabinieri Tutela Patrimonio Artistico* in 1969, as mentioned by Gen. C. A. Luigi Federici, the *Comandante Generale dell'Arma dei Carabinieri*, in his preface in the catalogue *Cat. Tesori Dal Buio 1994* (on p. 7).

In 2019, on the occasion of the 50th anniversary of the foundation of the *Comando Carabinieri Tutela Patrimonio Artistico*, was organized the second exhibition of this kind, and Francesco Buranelli (the *Presidente della Commissione Permanente per la Tutela dei Monumenti Storici ed Artistici della Santa Sede*) was asked to curate this exhibition and its catalogue, as he himself has told me.

I therefore, I imagine something similar for the earlier exhibition in 1994 as well.

It was, therefore, obviously the *Comandante Generale dell'Arma dei Carabinieri*, Gen. C. A. Luigi Federici and his men, the organizers of the exhibition and its pertaining catalogue, the *Cat. Tesori Dal Buio 1994*, who had the excellent idea to ask Valerio M. Manfredi to collaborate in this project. Manfredi invented stories, how the famous artworks, on display in this exhibition, were either stolen in Italian museums, private collections or in Churches, or how such clandestine 'excavations' may have been conducted, in which those artworks were found, and how in all these cases the *Comando Carabinieri Tutela Patrimonio Artistico* prevented that those artworks from being sold to foreign countries.

**Valerio M. Manfredi's account (1994), *Le inchieste del colonnello Reggiani*, is a delight to read, and the characters of Colonnello Reggiani and his men, whom Manfredi invents for us, are so convincing that it is no wonder that many of Manfredi's other historical novels have become the basis of very successful movies and television series.**

The latter information I have likewise found in the Wikipedia article that I consulted. In this article appears under the headline: *Opere*, and there under: *Antologie di racconti*, the title: *Le inchieste del colonnello Reggiani*. But this is the title of a different book that Manfredi published in 2015.

Cf. Wikipedia: [https://it.wikipedia.org/wiki/Valerio\\_Massimo\\_Manfredi](https://it.wikipedia.org/wiki/Valerio_Massimo_Manfredi) [15082021].

The Capitoline Triad (cf. here **Fig. 13**) is illustrated in the catalogue *Tesori Dal Buio 1994* on p. 140.

The caption (of the Capitoline Triad; cf. here **Fig. 13**) reads:

"Triade Capitolina

(Giove, Giunone e Minerva)

II-III secolo d.C.

Marmo; cm 60 x 90 x 120

*Rinvenuta nel corso di uno scavo clandestino effettuato nell'area dell'Inviolata, in comune di Guidonia, è stata recuperata in località Stelvio, nel febbraio del 1994, dal Comando Carabinieri Tutela Patrimonio Artistico [the italics are those of the authors]".*

The report concerning this whole procedure by the *Comando Carabinieri Tutela Patrimonio Artistico* itself, which was published 25 years later, in 2019, sounds in some details different than Manfredi's invented story of 1994. But in both accounts this Capitoline Triad could only be saved for the same reason: when the sculpture was found by these clandestine 'excavators' - in Manfredi's story the driver of the above-mentioned Diesel and his companions - one arm was broken off the figure of Minerva (cf. here **Fig. 13**). And because that arm was secured by the *Comando Carabinieri Tutela Patrimonio Artistico* - in Manfredi's story an art dealer in Italy - and in reality a man handling stolen artworks in Switzerland, who was about to export the sculpture to the United States, could be forced to give the sculpture back.

See the catalogue accompanying the exhibition at Rome, Palazzo del Quirinale (Palazzina Gregoriana), edited by Francesco Buranelli (2019, 73, *L'Arte di Salvare l'Arte. Frammenti di storia d'Italia. Mostra organizzata in occasione del 50<sup>o</sup> anniversario del Comando Carabinieri Tutela Patrimonio Culturale 1969 - 2019* [the following text is the caption of an illustration of the Capitoline Triad here **Fig. 13**]) :

"STORIA INVESTIGATIVA DELLA TRIADE CAPITOLINA

*La cosiddetta Triade Capitolina costituisce uno dei recuperi più significativi effettuati dal Comando Carabinieri Tutela Patrimonio Culturale. Il gruppo scultoreo raffigurante le divinità tutelari di Roma antica, Giove, Giunone e Minerva, fu rinvenuto nel corso di scavi clandestini condotti da una banda di tombaroli nei pressi di Guidonia Montecelio (Roma) nel 1992. Il reperto fu illecitamente esportato in Svizzera e qui venduto ad un ricettatore, mentre nel frattempo erano già iniziate le indagini dei Carabinieri che avevano raccolto voci ricorrenti nell'ambiente dei trafficanti sul ritrovamento di un'importante scultura marmorea nell'area laziale. Nel 1993 fu così individuato uno dei tombaroli della banda che, messo davanti alle sue responsabilità, fornì una precisa descrizione dell'opera che permise ai Carabinieri di realizzarne una sorta di identikit, poi diffuso nell'ambiente antiquario per ostacolare la vendita del bene. La prosecuzione delle attività investigative consentì anche di individuare tutti i responsabili dello scavo e di sequestrare un frammento in marmo staccatosi dalla scultura durante le operazioni di scavo clandestino. Tale frammento, esibito come prova dai Carabinieri, fu fondamentale per bloccare una trattativa di vendita della Triade Capitolina già in corso tra il ricettatore svizzero in possesso della scultura ed un collezionista americano. Vista l'impossibilità di trovare compratori e la pressione investigativa esercitata dai Carabinieri, il bene venne finalmente rinvenuto in 1994 abbandonato dai ricettatori vicino al confine svizzero. La Triade Capitolina costituisce oggi uno dei tesori esposti nel Museo Archeologico 'Rodolfo Lanciani' a Guidonia Montecelio [the italics are those of the authors].*

Comando TPC [Comando Carabinieri Tutela Patrimonio Culturale]".

This Capitoline Triad (cf. here **Fig. 13**), which appears also on the cover of the catalogue *Cat. Tesori Dal Buio 1994*, is the only artwork, of those rescued by the 'Carabinieri dell'Arte' (so G. NISTRI 2019, 12), discussed in this earlier catalogue of 1994, that also appears in the second catalogue of 2019.

Cf. Giovanni Nistri, *Comandante Generale dell'Arma dei Carabinieri* (in: F. BURANELLI 2019, 13 [= here **Fig. 13**], photo of a detail of the Capitoline Triad, showing the figure of Jupiter); Francesco Buranelli (2019, 16); and Zaccaria Mari ("20. Triade Capitolina", in: F. BURANELLI 2019, 72-73, with an illustration of the group [here **Fig. 13**]). - Interestingly, in the catalogue of 2019, the earlier catalogue *Cat. Tesori Dal Buio 1994* is not mentioned, not even in Zaccaria Mari's bibliography on the Triade Capitolina, here **Fig. 13** (!).

One of the Capitoline Triads, compared by Hans Rupprecht Goette ("From Father god to tragic poet ...", forthcoming, with n. 10) with this 'Euripides' (cf. here **Fig. 12**), is the above-mentioned group in statuette format that was also published by Filippo Coarelli (in: F. COARELLI 2006a, 514, cat. 118:) "Gruppo in marmo della Triade Capitolina" (cf. here **Fig. 13**), which at the time (until 2012) was kept at Palestrina, Museo Archeologico Nazionale Prenestino (inv. no. 80546).

**Note that in this Capitoline Triad Minerva is enthroned to the right of Jupiter, or to the left of him, when we look at the group.**

Coarelli (*op.cit.*), who convincingly dates this Capitoline Triad (here **Fig. 13**) to the Antonine period, comments on this sculpture as follows: "**Il gruppo (l'unico esistente a tutto tondo) riproduce la Triade Capitolina, nella forma che essa presentava dopo il restauro realizzato da Domiziano dopo l'incendio dell'80, che conosciamo anche da monete del II secolo d. C.** [my emphasis]".

Contrary to what Coarelli asserts in this above-quoted passage, there exists also another version in statuette format of this Capitoline Triad: at Trier (Rheinisches Landesmuseum, inv. no. ST. 3196), mentioned by Goette ("From Father god to tragic poet ...", forthcoming, his Fig. 8, with note 10). - **Note that also in this Capitoline Triad Minerva is enthroned to the right of Jupiter.** Besides, already Domitian himself had issued coins (cf. *infra*, in Volume 3-2, at *Appendix I.g.1.*) and here **Fig. 83**), on which his (fourth) Temple of Iuppiter Optimus Maximus is represented, unfortunately on those coins the pediment of the temple with its sculpture decoration, which we know also from state reliefs (cf. *infra*), is not represented. - But Domitian should also issue coins, on which the cult-statues in his Temple of Iuppiter Optimus Maximus Capitolinus actually appear (cf. *infra*).

This Capitoline Triad (here **Fig. 13**), previously at Palestrina, is now kept at Guidonia Montecelio (Roma), Museo Civico Archeologico 'Rodolfo Lanciani'. Interestingly it has there the same inventory number (80546) as previously in the museum at Palestrina (!). Cf. Zaccaria Mari ("Triade Capitolina", who dates it: "Fine del II-inizi III secolo", in: F. BURANELLI 2019, 72-73, cat. no. 20, cf. p. 13). Add to Mari's bibliography: *Tesori Dal Buio. Le inchieste del colonnello Reggiani di Valerio M. Manfredi* (1994, 141-156); Coarelli (in: F. COARELLI 2006a, 514, cat. 118; and Goette ("From Father god to tragic poet ...", forthcoming, with note 10).

Coarelli's above-quoted statement: "Il gruppo ... [*i.e.*, here **Fig. 13**] riproduce la Triade Capitolina, nella forma che essa presentava dopo il restauro realizzato da Domiziano dopo l'incendio dell'80", is corroborated by the representations of the Capitoline Triad that appear in the pediment of the Temple of Iuppiter Optimus Maximus Capitolinus on the Extispicium Relief (cf. here **Figs. 16-18**), as well as on Marcus Aurelius's above-mentioned sacrifice panel (cf. here **Fig. 19**). For a detailed discussion of both reliefs; cf. *infra*, in volume 3-2, at *Appendix I.g.4.*)

**It seems to be certain that both the sculptural groups of the Capitoline Triad at Trier and at Guidonia Montecelio (Roma) (cf. here Fig. 13), as well as the two reliefs, Extispicium Relief (cf. here Figs. 16-18) and Marcus Aurelius's sacrifice panel (cf. here Fig. 19), all refer to Domitian's (fourth) Temple of Iuppiter Optimus Maximus Capitolinus and its cult-statues.**

**Nevertheless Minerva and Juno do not always appear at the same positions in regard to Jupiter, whom they flank in these representations on either side. So far I cannot decide, which of the two positions of Minerva discussed here should be regarded as the correct one, although I tend to believe that the state reliefs - the Extispicium Relief (cf. here 16-18) and Marcus Aurelius's sacrifice panel (cf. here Fig. 19) should be correct in this respect, but see below.**

I had elsewhere hoped to demonstrate that the positioning of Minerva in the representation of the pediment of Domitian's Temple of Iuppiter Optimus Maximus Capitolinus on Marcus Aurelius's sacrifice panel should be regarded as the correct side (to Jupiter's left, or, when looking at the relief, to the right of Jupiter, thus interpreting Livy [7,3,5] this way; cf. C. HÄUBER 2005, 18 with n. 45, p. 40 with n. 259; quoting *LTUR* I [1993] Fig. 3); cf. Francesco Paolo Arata (2009, 212, Fig.1) and here **Fig. 19**. Now I realize that Livy referred, of course, to the (second) Temple of Iuppiter Optimus Maximus, whereas the temple, which appears on Marcus Aurelius's sacrifice panel, is Domitian's (fourth) Temple of Jupiter. For the (second) Temple of Iuppiter Optimus Maximus, dedicated by Q. Lutatius Catulus (cf. *supra*, at n. 181, in Chapter *I.1.*; and *infra*, in volume 3-2, at *Appendix I.c*); and *Appendix I.d*). But we shall see below, when discussing Stefano De Angeli's account (cf. *LTUR* III [1996] 149), that I was actually right with this assumption.

**On the Extispicium Relief, Jupiter and the two goddesses flanking him, were represented. But when looking at the extant drawings of this relief, I am unfortunately unable to distinguish Juno and Minerva from each other.**

The pediment of Domitian's (fourth) Temple of Iuppiter Optimus Maximus Capitolinus is not extant any more on this relief, but it has been recorded by four Renaissance drawings; cf. A.J.B. Wace (1907, 240-

243), who discusses all four drawings, and on p. 240 the drawing in the Biblioteca Apostolica Vaticana (Cod. Vat. Lat. 3439 f. 83), which he illustrates on his Pl. XX (= here Figs. 16; 17);

**On Marcus Aurelius's sacrifice panel (cf. here Fig. 19), Minerva appears to the left of Jupiter, that is to say, on the right hand side of the relief.**

**And in the Capitoline Triad in statuette format (cf. here Fig. 13), Minerva appears instead on the left hand side of the relief, to the right of Jupiter). Cf. Capitoline Triad, marble. Guidonia Montecelio (Roma), Museo Civico Archeologico 'Rodolfo Lanciani' (inv. no. 80546):**

**<https://www.hermitagemuseum.org/wps/portal/hermitage/digital-collection/22.09.2020>.**

Interestingly, the pose as well as the rendering of the garment of the (alleged) Euripides (cf. here Fig. 12), who was originally a Jupiter, as in the Capitoline Triad (cf. here Fig. 13), as well as the representation of Iuppiter Optimus Maximus Capitolinus in the pediment of Domitian's (fourth) temple of the god on the Extispicium Relief (cf. here Fig. 16), and on Marcus Aurelius's sacrifice panel (cf. here Fig. 19), which likewise shows Domitian's (fourth) Temple of Iuppiter Optimus Maximus Capitolinus, is similar - but not identical - to that of the acrolithic statue of Jupiter (from Castel Gandolfo!) in the Hermitage at St. Petersburg (cf. here Fig. 10), which Oskar Waldhauer (1928, 8, quoted *verbatim infra*) has convincingly dated to the Domitianic period. - To the just mentioned differences in the renderings of those garments I will come back below.

The statue of Jupiter in the Hermitage (here Fig. 10) was, after its excavation in its vicinity, on display at Palazzo Barberini (today: Castel Gandolfo) on Lake Albano, precisely where Domitian had built a luxurious

*Villa*, called *Albanum*. We also know that the cult-statue of Jupiter in Domitian's (fourth) Temple of Iuppiter Optimus Maximus Capitolinus had colossal size and that the entire temple was lavishly decorated.

**Considering the Domitianic date of this statue of Jupiter (here Fig. 10), its colossal size, the decoration of the hall, where it is on display in the Hermitage, and thus 'the power of its placement' in this museum, this statue can perhaps give us an impression of what Domitian's cult-statue of Jupiter in his (fourth) Temple of Iuppiter Optimus Maximus may have looked like. - As we shall see below this is actually true.**

And that, although the left lower leg of this statue of Jupiter in St. Petersburg (here Fig. 10) is exposed, whereas in the figures of Jupiter of the replicas of the Capitoline Triad in statuette format (cf. here Fig. 13) - that have already been identified by other scholars as copies of Domitian's cult-statue of Jupiter in his (fourth) Temple of Iuppiter Optimus Maximus Capitolinus - also the god's left leg is completely covered. - My thanks are due to Eugenio La Rocca for alerting to this fact, to which I will come back below.

With the statement 'power of placement', I have allowed myself to paraphrase the title of Victoria Newhouse's book (*Art and the Power of Placement* 2005).

For Domitian's *Villa Albanum*, its huge extension (because created by integrating two previously different estates into its overall design), its exuberant decoration, and Domitian's possible intention to create with the design of his *Albanum* an allusion to the Acropolis at Athens.

Cf. Henner von Hesberg (2009, 326-333; cf. K. MANFRECOLA 2020; and H.R. GOETTE, "The Portraits of Aischylus, Sophocles, Euripides, and Menander in Roman Contexts. Evidence of the Reception of the Theatre Classics in Late Republican and Imperial Rome", 2022. In this text, which will be discussed in detail *infra*, in volume 3-2, at *Appendix IV.d.4.b*), Goette suggests that Domitian's *Albanum* was possibly "inspired by the topographical situation of the Athenian Acropolis with its south slope". The quote is from an E-mail by Hans Rupprecht Goette of 17th June 2022, with whom I could discuss the matter again). For the Theatre of Dionysos, erected on the southern slope of the Acropolis at Athens; cf. now Goette (2020a).

***Oskar Waldhauer (1928) convincingly dated the statue of Jupiter in the Hermitage (here Fig. 10) in the Domitianic period by comparing its head with those of portraits, inter alia the colossal portrait of Titus (here Fig. 53) in the Museo Archeologico Nazionale at Naples, which Eugenio La Rocca (2009; 2020) has identified as belonging to the cult-statue of Divus Titus in Domitian's Templum Gentis Flaviae at Rome***

But note that only much later should I find out that Waldhauer was even wrong in assuming that this statue of Jupiter (here Fig. 10) was found with its head (!). To this I will come back below. Following Oskar Waldhauer (1928), I had at first (but erroneously) assumed that the right hand of this statue of Jupiter at St. Petersburg (here Fig. 10) is preserved. As we shall see in the following discussion of extant representations of the god Jupiter, the way how this hand is rendered is crucial for the identification of its possible original.

**Oskar Waldhauer (1928, 5) judged the restorations of the statue of Jupiter in the Hermitage (cf. here Fig. 10) as being on the whole correct, although he admitted, by judging from the way its right hand is sculpted, that it certainly originally held a thunderbolt ("Blitzbündel"). Waldhauer discussed, on the one hand, the possibility that the prototype of this statue of Jupiter could have been a cult-statue, made in the 4<sup>th</sup> century BC by Bryaxis himself, or else by 'the circle of Bryaxis', especially mentioning in this context the colossal acrolithic cult-statue of Sarapis at the god's Temple at Alexandria, which in the past has always been attributed to Bryaxis, but came on the other hand to the convincing conclusion that this statue of Jupiter should be regarded as an *original creation* - of the 'typically pompous style of the [Flavian] period, which copies Greek [sculptures], but in its calculated coldness is typically Roman'.**

**Waldhauer (1928, 4) wrote: "Erhaltung: Ergänzt von Pacetti die Nike in der rechten Hand erst in Leningrad hinzugefügt, Meister unbekannt; in der Sammlung Campana hielt die Rechte den Blitz ...**

**Antik sind: Kopf, Rumpf mit der rechten Schuler, beide Hände, die linke mit dem Gelenk, das linke Bein vom Knie bis zur Ferse, die vorderen Teile beider Füße ...".**

Cf. p. 5: **"Die erhaltenen Teile bezeugen die Richtigkeit der Ergänzung; jedoch muß in der Rechten, der länglichen Aushöhlung in der Handfläxhe nach zu urteilen, der Donnerkeil gelegen haben".**

Cf. p. 6: "Die Technik [= cf. p. 5 with n. 1: "Akrolith"] verbindet, wie bemerkt, den Zeus mit dem Otricolityps, das heißt mit einer Gruppe von Werken, die Amelung mit Bryaxis in Zusammenhang bringt [with n. 7; my emphasis]". Cf. p. 8: **"Zeitlich bestimmt werden diese durch datierbare Porträts wie zum Beispiel den Kopf der Domitia in der Ermitage 239 und den Tituskopf in Neapel [cf. here Fig. 53], Bernoulli II Taf. 1-8 ... Wenn die Möglichkeit einer Kopie nach einem Original des vierten Jahrhunderts aus dem Kreis des Bryaxis nicht gelegnet werden soll, so scheint eine andere Annahme die größere Wahrscheinlichkeit für sich zu haben: daß nämlich die Statue eine im wesentlichen originale Schöpfung eines Meisters flavischer Zeit ist, mit freier Benutzung griechischer Typen des vierten Jahrhunderts, ein guter Vertreter des pomphaften Stils der Epoche, der sich an Griechisches anschließt, in seiner berechneten Kühle aber rein römisch ist [my emphasis]".**

Concerning the various cult-statue(s) of Sarapis (and in the Roman period of Serapis) in his Temple at Alexandria, some recent scholars do not believe any more, as Waldhauer (1928, 4) took for granted, that these cult-images had anything to do with the artist of the fourth century BC, called Bryaxis; cf. Häuber (2014a, 725-726, 740).

Waldhauer (1928, 8) compared with the statue of Jupiter in the Hermitage the portrait of Titus [cf. here Fig. 53] "Bernoulli II Taf. 1-8". It seems that this is the portrait of Titus, discussed by Eugenio La Rocca (cat. no. "99 Ritratto colossale di Tito" [here Fig. 53], in: Filippo Coarelli 2009a, 497; cf. p. 496, illustrations of this head, and p. 225). La Rocca quotes for this portrait of Titus in note 1 of his catalogue-entry: "Inv. 110892: Bernoulli 1891, p. 33, n. 13, tav. VIII ...".

On 18th October 2020 I have asked Eugenio La Rocca in an Email correspondence for advice. We compared La Rocca's illustration of this head of Titus (cf. here Fig. 53), which shows it after its plaster restorations of the 19<sup>th</sup> century have been removed; cf. La Rocca (cat. no. "99 Ritratto colossale di Tito", in: F. COARELLI 2009a, 497), with its publication by Johann Jacob Bernoulli (II 1891, pl. 8), realizing that Bernoulli illustrates a photograph of the same portrait of Titus on his plate 8, which shows the head still *with* its plaster restorations. The difference between Waldhauer's and La Rocca's above-mentioned quotations could thus be explained: Waldhauer's formulation: "Bernoulli II Taf. 1-8" is wrong, since only Bernoulli's plate 8 (as correctly indicated by E. LA ROCCA, *op.cit.*) illustrates this portrait of Titus, whereas Bernoulli's plates 1-7 show *different* portraits.

Discussing the matter on 20th October 2020 in an E-mail correspondence also with Hans Rupprecht Goette, has resulted in some more findings, that I also find worth mentioning here.

First of all I should like to explain, why I date this portrait of Titus (cf. here (cf. here Fig. 53) Domitianic. As we have seen above, already Waldhauer (1928, 8) had been of the same opinion. I myself follow with this date La Rocca, who in his turn argues with this head's findspot - which allows its attribution to the *Templum Gentis Flaviae*. This is actually the case, in my opinion, since the provenance of this head of Titus is certain. As reported by La Rocca (cat. no. "99 Ritratto colossale di Tito", in: F. COARELLI 2009a, 497), this head of Titus was found in 1872 "durante i lavori per la fondazione del Ministero delle Finanze, nell'angolo tra via XX Settembre e via Pastrengo", with note 2, referring in this note to his article in this catalogue; cf. La Rocca (2009, esp. pp. 224-225 with ns. 19-20).

That the *Templum Gentis Flaviae* may indeed be assumed very close to the findspot of this head of Titus, namely within the adjacent Baths of Diocletian, has been discussed in detail above ; cf. *supra*, in Chapters IV.1.1.h); V.1.i.3.a), and here **Figs. 56; 57**; cf. *infra*). As has been overlooked by all recent scholars, this had already been suggested by Rodolfo Lanciani (cf. *BullCom* 1, 1872-1873, 229). There, Rodolfo Lanciani has announced the find of the colossal portrait of Titus (here **Fig. 53**), not a colossal head of Vespasian, as has erroneously been asserted. To my great surprise, Lanciani was thus first to identify the site, where this head of Titus had come to light, with the area of the *Templum Gentis Flaviae*. Cf. *supra*, at Chapter IV.1.1.h.

To be precise, La Rocca (2009, 224-225 with ns. 19-20) even argues 'the other way around': the fact that this colossal head of Titus was found at this site corroborates, in his opinion, the hypothesis, first suggested by Daniela Candilio (1990-1991; 1995; 1999; 2000-2001), and now (almost) *communis opinio*, that the architectural remains, excavated by her within the Baths of Diocletian, should be identified as belonging to the *Templum Gentis Flaviae* (cf. *supra*, at Chapters IV.1.1.h); and V.1.i.3.a)).

Next we could ask ourselves, whether or not this head of Titus could belong to a later phase of the sculpture decoration of the *Templum Gentis Flaviae*, which survived until late antiquity, since it is still mentioned in the Constantinian Regionary Catalogues. These catalogues are indeed Constantinian, because they are datable by the fact that they mention the Lateran Obelisk (cf. here **Fig. 101**), which was brought to Rome in AD 357; cf. *infra*, in volume 3-2, in *Appendix VI.*; at Section VII.). For the meaning of the fact that the *Templum Gentis Flaviae* and the Baths of Diocletian are mentioned *together* in the Constantinian Regionary Catalogues; cf. Filippo Coarelli (2014, 204, quoted *verbatim supra*, in Chapter IV.1.1.h), who comes, in my opinion, to the convincing conclusion that both existed at the same time - the *Templum Gentis Flaviae* (*i.e.*, the temple tomb proper) literally within the area of the Baths of Diocletian, where remains of the *Templum Gentis Flaviae* have been found by Candilio (*op.cit.*) in her excavations.

As far as I know, a cult-statue of a temple was in antiquity *a*) only restored, when the original sculpture had been destroyed, and *b*) in the case of the *Templum Gentis Flaviae* we are not informed by our literary sources or any other evidence that one or all of its original cult-statue(s) had been replaced at a later stage. What we do hear is that under Claudius Gothicus, who was Roman emperor from AD 268-270, the *Templum Gentis Flaviae* seems to have been restored. See Filippo Coarelli ("Gens Flavia, Templum", in: *LTUR* II [1995] 368), who writes: "Sembra che un restauro [of the *Templum Gentis Flaviae*] si debba a Claudio il Gotico (*Hist. Aug. Claud.* 3.6; cfr. *trig. tyr.* 33.6: *extat etiam domus pulcherrima (Censorini), adiuncta Gentibus Flaviis, quae quondam Titi principis fuisse perhibentur*). Il tempio esisteva ancora nel IV sec.[olo], dal momento che è citato dai Cataloghi Regionari (Reg. VI) ..."

Also in my opinion, these literary sources, *inter alia* concerning Claudius Gothicus, quoted by Coarelli (*op. cit.*) prove beyond any doubt that the *Templum Gentis Flaviae* still existed at this late time. For Claudius Gothicus; cf. John Frederic Dobson ("Claudius [RE 82] [III] Gothicus, Marcus Aurelius, emperor AD 268-70", in: *OCD*<sup>3</sup> [1996] 340).

**For the time being, I, therefore, believe that my above-suggested dating of the portrait of Titus in Naples (cf. here Fig. 53; MAN inv. no. 110892) to the Domitianic period sounds reasonable, also when considered in the context of those additional data.**

**After having written this down, I received the exhibition-catalogue, edited by Claudio Parisi Presicce, Massimiliano Munzi and Maria Paola Del Moro (*Domiziano Imperatore. Odio e amore*, 2023, 153, *opera* no. 69), in which this colossal portrait of Titus (Fig. 53) is likewise attributed to the *Templum Gentis Flaviae*, or in other words: it is interpreted as the cult-statue of *Divus Titus*, commissioned by Domitian.**

Note that in the above-quoted *lemma* in the *LTUR* II (1995, 368-369), Filippo Coarelli had still (erroneously) assumed the *Templum Gentis Flaviae* at the site of the *domus* of Domitian's paternal uncle, Flavius Sabinus, an opinion, which he would later correct; cf. Coarelli (1999a, 183), assuming the *Templum Gentis Flaviae* now at the site of Vespasian's *domus*, and both at the site of the (later) Baths of Diocletian. See also Coarelli (2009b,

93-94); Coarelli 2014 (194-207; pp. 204-207, quoted *verbatim supra*, at Chapter IV.1.1.a)); cf. Chapter IV.1.1.h). See also *LTUR* V (1999) 262.

Most recently, Eugenio La Rocca has published an article on this subject ("La testa colossale di Tito nel Museo Nazionale di Napoli: uno scandalo agli albori dell'unità d'Italia", 2020b). - My thanks are due to Hans Rupprecht Gotte for providing me with this reference, and to Eugenio La Rocca for sending me this article. See now also Eugenio La Rocca and Lorenzo Kosmopoulos ("Il *Templum Gentis Flaviae*", 2023). For a detailed discussion of their additional findings; cf. *supra*, at Chapter IV.1.1.h).

**After this Chapter was written up to this point, I realized that my above-made statement was certainly not true. In order to explain this error, I repeat here what I had written above:**

'Oskar Waldhauer (1928, 5) judged the restorations of the statue of Jupiter in the Hermitage (cf. here **Fig. 10**) as being on the whole correct, although he admitted, by judging from the way its right hand is sculpted, that it certainly originally held a thunderbolt ("Blitzbündel").'

Because, when this statue of Jupiter was found, its right hand (or even the entire right arm?) was actually lacking (!). From Anna Trofimowa's below-quoted account it is clear that the first restorer of this statue of Jupiter had been Vincenzo Pacetti. If we want to believe that Waldhauer was - somehow - nevertheless right with his judgement, we could for example suggest that Pacetti had seen some remains on the statue's right thigh which had led him to restore the statue's right hand as holding a thunderbolt.

Anna Trofimowa (2020, 77-78, writes in her article "Kopien der Victoria von Calvatone aus dem 19. und 20. Jahrhundert"), in which she discusses *inter alia* the statuette of *Victoria*, held by this statue of Jupiter in its right hand:

"Die Victoriastatuette des Augustus Campana wurde, vermutlich gleich nach dem Verkauf der Sammlung nach Rußland, durch eine andere ausgetauscht. Die neue Victoria (Abb. 5, 6) wurde wohl aus der gleichen Form gefertigt wie die Statuette in der Hand einer anderen kolossalen Skulptur in der Eremitage, des thronenden Jupiter (Abb. 7,8 [cf. here **Fig. 10**]) [with n. 11]. Diese Skulptur wurde in Castel Gandolfo bei Albano bei Ausgrabungen der Villa Domitians durch Thomas Jenkins gefunden. Das Gelände, auf dem sich in der Antike die Kaiservilla befand und nachfolgend die Villa Barberini erbaut wurde, wurde 1785 durch den berühmten Maler, Antikenhändler und Kunstsammler zum Zweck archäologischer Forschungen erworben. Nach Berichten von Giuseppe Antonio Guattani und Frédéric de Clarac [with n. 12] befand sich die Statue schon sehr bald nach ihrer Auffindung bei Vincenzo Pacetti (1746-1820), welcher die Restaurierung durchführte. Der Mantel [page 78] und **die Hand der Statue, die das Attribut hielt, wurden bei der Ausgrabung nicht gefunden**. Es war wohl Pacetti, der diese Teile ergänzte. Bereits restauriert gelangte der Jupiter in die Sammlung Campana und nahm 1850 einen Ehrenplatz in einer Nische an der Fassade der Villa des Marquis ein [with n. 13].

**Pacetti können alle wesentlichen, sehr organisch ausgeführten Ergänzungen der Kolossalstatue** [cf. here **Fig. 10**] **zugewiesen werden: Neu aus Marmor erschaffen wurden der Hinterkopf, der Bart und die Augenbrauen sowie die Arme vom Ellenbogen bis zu den Händen**. In Gips wurden der Mantel, das Zepter und der Adler ergänzt.

Über die Restaurierung der Jupiterstatue berichtete 1853 ausführlich Clarac [with n. 14]; ihr Aussehen in dieser Zeit ist in Fotografien der Jahre 1850 und 1855 überliefert [with n. 15]. Damals hielt Jupiter ein Blitzbündel in den Händen ... [my emphasis].

For this statue of Jupiter at the Hermitage here **Fig. 10**; cf. also Anna Alkseevna Trofimova (2017, 67-88 [Russian text], Abb. 6, a colour photograph of the "Jupiter-Saal", which is discussed in this text; cf. pp. 89-96 [German text]). I thank Hans Rupprecht Goette for the reference.

Let's now return to our main subject.

Since Waldhauer (1928, 4-8, Taf. 1) discussed this statue of Jupiter (cf. here **Fig. 10**) in great detail, comparing its iconography with (almost) all conceivable comparisons in Greek and Roman sculpture, and dating it convincingly to the Domitianic period, it is strange that he did not discuss in this context the two representations of the cult-statue of Jupiter in Domitian's Temple of Iuppiter Optimus Maximus Capitolinus that were already known at his time. Nor did it occur to Waldhauer to compare the iconography of this statue of Jupiter with that of the replicas of the Capitoline Triad, discussed here, of which the copy now at Guidonia Montecelio (Roma), Museo Civico Archeologico 'Rodolfo Lanciani' (cf. here **Fig. 13**), was, of course, not as yet found. But, as we shall see below, copies of this Capitoline Triad were widely spread in the provinces of the Roman Empire, so therefore some of them were presumably already known at Waldhauer's time. In addition to this, A.J.B. Wace's article (1907) on the Extispicium Relief (cf. here **Figs. 16; 17**) was already published. - To this I will come back below.

*The four different Temples of Iuppiter Optimus Maximus Capitolinus,  
their cult-statues of Jupiter - and the copies of those cult-statues*

When reading Wace (1907, 243), it becomes clear that not only he himself was aware of the fact that the temple, appearing on the Extispicium Relief (cf. here **Figs. 16; 17**), was Domitian's Temple of Iuppiter Optimus Maximus Capitolinus. Also Otto Richter (1901, 126 with n 2), whom Wace quoted, and several scholars, who published their work in 1888 and 1889, whom Richter in his turn had discussed, knew that already perfectly well. Richter knew also already that Domitian's temple is likewise visible on Marcus Aurelius's above-mentioned sacrifice relief at the Palazzo dei Conservatori (cf. here **Fig. 19**. For this relief; cf. also H.R. GOETTE 1990, 50, Taf. 24, 1; *LTUR* I [1993] Fig. 1; F.P. ARATA 2009, 212, Fig. 1; and *infra*, in volume 3-2, at *Appendix I.g.4.*).

Wace himself (1907, 240, n. 2) mentioned the following earlier publications on the pediment of the Temple of Iuppiter Optimus Maximus Capitolinus: "For previous discussions of the pediment, see Schulze, *Arch.[äologische] Zeit.[ung]* 1872, Brunn. *Kleine Schriften* i [*i.e.*, here H. BRUNN 1898 I], p. 105, Daremberg Saglio [*i.e.*, here C. DAREMBERG - E. SAGLIO 1887, *Dictionnaire des antiquités Grecques et Romaines ... I*, Pt. 2: C], *s.v. Capitolium*".

We may wonder, whether the cult-statue of Jupiter in Domitian's (fourth) Temple of Iuppiter Optimus Maximus Capitolinus could have been a copy of the cult-statue of Vespasian's (third) Temple of Iuppiter Optimus Maximus, which Vespasian had erected after the (second) Temple of Iuppiter Optimus Maximus had been destroyed by the fire on 18th/19th December AD 69 (cf. *infra*, in volume 3-2, at *Appendix I.d.*). - Already A.J.B. Wace (1907, 243), who based this assumption on a comparison of the representations of both temples on the relevant coins, had come to the conclusion that Domitian, at least with the design of the pediment of his own temple of Jupiter, had faithfully copied the pediment of Vespasian's (third) Temple of Iuppiter Optimus Maximus Capitolinus. - To the relevant coins I will come back below.

**But, even provided that were true, we know now also through the research of Claudio Parisi Presicce and Alberto Danti (2016; cf. *supra*, in Chapter *Preamble*, at Section II.; and *infra*, in volume 3-2, at *Appendix I.e.*)) that only Domitian's (fourth) Temple of Iuppiter Optimus Maximus Capitolinus had the enormous size that previous scholars had attributed to *all four* temples of Jupiter that since the 6<sup>th</sup> century BC had been erected at the same site.**

Since Domitian's temple was much larger than the three previous ones, this could in theory mean that the decoration of the pediment of Domitian's Temple of Iuppiter Maximus Capitolinus (cf. the Extispicium Relief, here **Figs. 16-18**) could have been much more elaborate than any of the earlier three Jupiter temples.

Provided Domitian's (fourth) cult-statue of Iuppiter Optimus Maximus was indeed a copy of Vespasian's (third) cult-statue of Iuppiter Optimus Maximus, we could also ask, whether this third Jupiter cult-statue was, in its turn, a copy of the cult-statue of the (second) temple, which Q. Lutatius Catulus had dedicated in 69 BC (cf. *supra*, n. 181, in Chapter I.1.). - As we shall see below, that was already the opinion of the scholars quoted by Martin Bossert (2000, 21 with n. 19, quoted *verbatim infra*). - My thanks are due to Hans Rupprecht Goette for providing me with a copy of this book.

Only provided the latter assumption were true, we can explain, why both the portrait-statues of Tiberius (cf. here **Fig. 15**) and of Claudius from Cerveteri in the Vatican Museums clearly follow the *same* statue-type of Jupiter as the colossal statue of Jupiter in the Hermitage at St. Petersburg (here **Fig. 10**), comprising the facts *a*) that the right hand of this statue of Tiberius is sculpted in a way, that the emperor could have held a thunderbolt with it, and *b*), that in both statues the left knee and left lower leg are not covered by the represented male's garment.

*The colossal statue of Jupiter in the Hermitage at St. Petersburg is the most impressive one of 33 copies of a statue-type of Jupiter, in which the god holds the sceptre in his left hand.*

*This statue-type of Jupiter was also copied in mirror image: in these statues the god holds the sceptre in his right hand. Of that variant of this statue-type of Jupiter only 6 copies are known: the most impressive one being the colossal portrait of Hadrian (now Constantine the Great) in the Palazzo dei Conservatori*

Caterina Maderna (1988; cf. C. PARISI PRESICCE 2006b, 144-145, quoted *verbatim infra*), has found 33 copies of this version of this Jupiter statue-type, to which also the colossal statue of Jupiter in the Hermitage at St. Petersburg (here **Fig. 10**) belongs. Also the above-mentioned portraits of Tiberius (cf. here **Fig. 15**) and Claudius belong to the same variant of this Jupiter-type. But due to the fact that they were meant to be on display together, they have deliberately been designed as pendants, which is why the pose of the legs of this statue of Tiberius (cf. here **Fig. 15**), when compared with the statue in the Hermitage (here **Fig. 10**), has been adapted accordingly. Of the mirror-image of this statue-type of Jupiter, on the other hand, to which the portrait of Hadrian (now Constantine; cf. here **Fig. 11**) belongs, Maderna has found only six copies.

For the colossal portrait of Hadrian (now Constantine; cf. here **Fig. 11**); cf. *infra*, in volume 3-2, at *Appendix IV.c.1.*); and below, at *A Study on the colossal portrait of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori at Rome* (cf. here **Fig. 11**). With The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great).

Besides, the pose and the rendering of the garment of the statue of Tiberius (cf. here **Fig. 15**) are so similar to those of the statue of Zeus in his Temple at Olympia, which we know from coins and ancient descriptions, on which the reconstruction illustrated here is based (cf. here **Fig. 14**), that we could be tempted to believe that this portrait of Tiberius was copied *directly* after the cult-statue of Zeus Olympios.

For that cult-statue cf. below, in *A Study on the colossal portrait of Hadrian (now Constantine the Great ...* (cf. here **Fig. 11**); and *infra*, in volume 3-2, at *Appendix IV.c.1.*)).

But there are two great difference between those two sculptures: *a*) the attribute held by the represented figure in its right hand (in the case of Zeus Olympios the goddess Nike; cf. here **Fig. 14**; in the case of Tiberius a thunderbolt?, cf. here **Fig. 15**); *b*) the fact that in the statue of Zeus his left lower leg is completely covered by the god's *himation* - which is, by the way, also true for the 'Euripides' (cf. here **Fig. 12**), for the Jupiter in the Capitoline Triad (cf. here **Fig. 13**), and for the bronze statuette of he 'Capitoline Jupiter' in the Metropolitan Museum of Art in New York (cf. here **Fig. 20.1**). - The lower leg of Tiberius's portrait-statue is instead exposed from the left knee downwards, exactly as in the statue of Jupiter in the Hermitage (cf. here **Fig. 10**). - To this iconographic feature I will come back below.

*Some of the copies of the variant of the Jupiter-type, to which the statue of Jupiter in the Hermitage belongs, and which hold the sceptre in their left hand, are characterized by an additional enigmatic iconographic feature: their exposed left knee and lower leg*

This iconographic feature - the exposed left knee and lower leg - already discussed by Waldhauer (1928, 6 with ns. 3, 4) for the statue in the Hermitage (cf. here **Fig. 10**), and in more detail by Parisi Presicce (2006b, 144, quoted *verbatim infra*), has a specific meaning.

**This iconographic detail (i.e., the exposed left knee and lower leg) proves, in my opinion, that indeed, as suggested above, Domitian's (fourth) cult-statue of Iuppiter Optimus Maximus Capitolinus must have copied Vespasian's (third) cult-statue, and that Vespasian's cult-statue of Jupiter in its turn had copied the (second) cult-statue of Jupiter, dedicated by Q. Lutatius Catulus in 69 BC.**

Otherwise Tiberius's portrait-statue (cf. here **Fig. 5**), which for chronological reasons must copy Catulus' cult-statue of the (second) Temple of Iuppiter Optimus Maximus Capitolinus, could not possibly resemble the cult-statue of Domitian's (fourth) temple - provided it is true, as is suggested here, that the statue in the Hermitage (here **Fig. 10**) copies the cult-statue of Domitian's temple.

The coins, issued by Vespasian, Titus and Domitian that represent Vespasian's (third) and Domitian's (fourth) Temple of Iuppiter Optimus Maximus Capitolinus, have been published by Samuele Ranucci (2009, 362, 364, Figs. 10-14): they show very different representations of the Capitoline Triad. Ranucci's illustrations of coins, issued by Domitian, which represent his Temple of Iuppiter Optimus Maximus Capitolinus (Ranucci's Figs. 12 and 13), on the other hand, do resemble the representation of Domitian's Temple of Iuppiter Optimus Maximus Capitolinus on the Extispicium Relief (cf. here **Figs. 16; 17**): the three cult-statues are visible within the temple, but unfortunately it is impossible to discern, which one of the two cult-statues flanking the central cult-statue of Jupiter is meant to be Minerva, and which one is supposed to be Juno.

See also Stefano De Angeli's discussion of the coins representing the second, third and fourth Temples of Iuppiter Optimus Maximus Capitolinus. Cf. *id.*: "Iuppiter Optimus Maximus Capitolinus, Aedes (fasi tardo repubblicane e di età imperiale)", in: *LTUR* III (1996) 148-153, Figs. 99-102).

**As we shall see below, De Angeli in: *LTUR* III (1996, 149, 150) observed that already the cult-statue of Jupiter in Lutatius Catulus's (second) Temple of Iuppiter Optimus Maximus Capitolinus was represented seated, holding in his right hand a thunderbolt and in his left hand a lance [! - in reality, Jupiter's sceptre], and that on the left (i.e., to Jupiter's right), the god was flanked by the cult-statue of Juno, and on the right (i.e., to Jupiter's left) by the cult-statue of Minerva.**

As we have seen above, this arrangement of the three cult-statues, visible on the temple's pediment, is also true of the relief showing Marcus Aurelius sacrificing (here **Fig. 19**) in front of Domitian's (fourth) Temple of Iuppiter Optimus Maximus Capitolinus.

Stefano De Angeli (*LTUR* III [1996] 149) writes about the (second) Temple of Iuppiter Optimus Maximus, built by Lutatius Catulus: "... la cella, tripartita, ospitava al centro il culto di Giove e a sinistra e a destra, rispettivamente quello di Giunone e Minerva [quoting literary sources]"; cf. p. 150: "Due diverse serie monetali di Vitellio del 69 a. C. [corr.: 69 d. C.] ... rappresentano altre raffigurazioni del tempio ... la rappresentazione al suo interno della statua di culto di Giove conferma la posizione seduta di quest'ultima e gli attributi del fulmine nella destra e della lancia [!] nella sinistra".

**Claudio Parisi Presicce (2006b, 144-145) does not realize that the right hand of the statue of Jupiter in the Hermitage (cf. here **Fig. 10**) has erroneously been restored as holding a statuette of Victoria. He nevertheless suggests that the statue-type of Jupiter discussed here copied the cult-image of the Temple of Iuppiter Optimus Maximus Capitolinus, but does not say, which one of the four cult-statues he refers to.**

I quote in the following the passages of Parisi Presicce (2006b), in which he discusses the statue-type of Jupiter, after which the statue in the Hermitage (cf. here **Fig. 10**) and the portrait-statue of Tiberius (cf. here **Fig. 15**) were copied. Parisi Presicce explains also the reason, why in some of these statues of Jupiter the left knee and lower leg of the god is exposed. Note that this iconographic feature occurs only on those more frequent copies of this Jupiter-type, which follow the same scheme as the statue of Jupiter at St. Petersburg (cf. here **Fig. 10**) - those are the statues, in which Jupiter holds the sceptre in his left hand.

Parisi Presicce (2006b) discusses also the mirror-image of the same statue-type, of which the colossal portrait of Hadrian (now Constantine; cf. here **Fig. 11**) is a replica.

Parisi Presicce (2006b, 144-145) writes:

"Il modello per lo schema iconografico della scultura marmorea colossale [*i.e.*, the portrait of Constantine, here **Fig. 11**] può essere individuato in una importante statua di culto della massima divinità di Roma antica, ossia un'immagine di Giove, verosimilmente l'agalma di Giove Ottimo Massimo Capitolino [with n. 24]. Questo tipo statuaria del dio con il busto ampiamente denudato e il ginocchio sinistro nudo, sebbene non molto frequente, si può rintracciare fin nelle province nord-alpine dell'impero [with n. 25]. Esso è noto anche attraverso una statuetta d'argento [with n. 26] e persino come raffigurazione monetale, in particolare su alcune monete e medaglioni di epoca costantiniana con dedica a Iuppiter Conservator [with n. 27] (fig. 46 a-b).

**La scultura più vicina all'immagine imperiale [*i.e.*, the portrait of Constantine, here **Fig. 11**] è quella colossale raffigurante il padre degli dei conservata all'Ermitage [*i.e.*, here **Fig. 10**] [with n. 28], anch'essa seduta sul trono e realizzata come acrolito, con le parti nude in marmo bianco e il panneggio in stucco dorato (fig. 47). **Rispetto al colosso costantiniano** (fig. 48 [cf. here **Fig. 11**]) **la posizione delle braccia e i relativi attributi sono invertiti**, con il globo sormontato da una Vittoria nella mano destra e lo scettro ad asta lunga retto con la sinistra. Il panneggio, invece, come nella statua di Costantino poggia sulla spalla sinistra e non copre, quindi, il braccio sul medesimo lato, che non è abbassato. È probabile che l'inversione nel ritratto imperiale [cf. here **Fig. 11**] fosse determinata dalla posizione della statua in relazione alla dislocazione dell'ingresso principale, non frontale, e al punto di vista privilegiato di chi, entrando nella basilica [of Maxentius], si dirigeva verso l'abside occidentale, che fungeva da cornice alla scultura [for my relevant comments; cf. *infra*, in volume 3-2, at *Appendix IV.c.1.*].**

**La volontà di realizzare la statua colossale [*i.e.*, of Constantine, here **Fig. 11**] con la parte nuda del torso sul lato destro e la porzione del petto, della spalla e del braccio coperti dal panneggio sul lato sinistro può spiegare la variazione rispetto al prototipo, che può essere ricostruito – come ha mostrato Caterina Maderna [with n. 29] - da quarantacinque statue analoghe di imperatori o personaggi di alto rango derivanti dal medesimo modello. Tra queste ripetono lo schema delle braccia presente nella statua dell'Ermitage trentatré esemplari, come per esempio le statue di Tiberio [cf. here **Fig. 15**] e di Claudio da Cerveteri, che mostrano una *variatio* nella posizione [page 145] speculare delle gambe – l'una avanzata e l'altra arretrata – dovuta verosimilmente alla loro dislocazione a pendants. Sei altri esemplari mostrano entrambi gli arti superiori abbassati e hanno la spalla e il braccio sinistri completamente coperti dalle pieghe del mantello, da cui fuoriesce soltanto la mano che regge un attributo. **Gli ultimi sei ripetono nell'atteggiamento delle braccia lo schema della statua costantiniana [*i.e.*, here **Fig. 11**], ma mostrano una disposizione del panneggio molto differenziata all'interno del gruppo. L'elemento più significativo dello schema iconografico è il ginocchio destro [corr.: sinistro] denudato, mentre il sinistro [corr.: destro] è coperto dal panneggio. Questa disposizione del mantello compare di rado, ma esprime un significato particolare, connesso con la divina *maiestas*. Il motivo iconografico, documentato da alcune delle statue imperiali sopra menzionate (fig. 49 [*i.e.*, the portrait of Tiberius, here **Fig. 15**]), soprattutto di epoca giulio-claudia, ha un'ascendenza molto antica, che risale al V secolo a.C. [with n. 30]. La matrice iconologica può essere verosimilmente rintracciata nella nascita di Dioniso dalla coscia di Zeus [with n. 31], che esprime l'autarchica capacità rigeneratrice del padre degli dei [my emphasis]."****

In his **note 25**, Paris Presicce writes: "Tre immagini di Giove con ginocchio nudo sono documentate da REINACH, *RSt*, I, n. 186; II, pp. 13, 190. Altri esemplari sono menzionati da E. ESPÉRANDIEU, *Recueil*

*général des bas-reliefs de la Gaule Romaine*, Paris 1907, III, n. 2347 (triade capitolina da Alise-Sainte-Reine); IX, p. 188, n. 6895 (frammento nel museo di Narbonne)".

In his **note 26**, he writes: "A.B. COOK, *Zeus. A Study in Ancient Religion*, Cambridge 1914, II, fig. 699 (British Museum)".

In his **note 27**, he writes: "J. MAURICE, *Numismatique Constantinienne*, III, Paris 1912, p. 198, tav. VIII, 7; *RIC*, VII, p. 607, pl. 20, n. 42. Cfr. pure il medaglione bronzeo coniato a Roma con Costantino in trono come Giove: A. ALFÖLDI, in *JRS*, 37, 1947, p. 15, tav. I, 7 (Milano, Brera)".

In his **note 28**, he writes: "O. WALDHAEUER ... [*i.e.*, here O. WALDHAEUER 1928], p. 4 ss., fig. 1, tav. I (da Castel Gandolfo); M.B. PIOTROVSKIJ, O.J. NEVEROV, *Ermitage. Le grandi collezioni di un grande museo*, Mosca-San Pietroburgo 2003, p. 201, fig. a p. 200".

In his **note 29**, he writes: "C. MADERNA ... [*i.e.*, here C. MADERNA 1988], p. 24 s.; p. 166 s., n. JT 4, tav. 7, 1 (Tiberio); p. 167 s., n. JT 5, tav. 7, 2 (Claudio)".

In his **note 30**, he writes: "S. VLIZOS, *Der thronende Zeus. Eine Untersuchung zur statuarischen Ikonographie des Gottes in der spätklassischen und hellenistischen Kunst*, Rahden/Westf. 1999".

In his **note 31**, he writes: "Sulle raffigurazioni antiche del racconto mitico, molto rare e assenti nella pittura vascolare greca, A. GREIFENHAGEN, *Kindheitsmythos des Dionysos*, in *RM*, 46, 1931, pp. 27-43, tavv. I a-b, II a; E. CATANI, Un "tondo" figurato dal Museo Piersanti di Matelica e l'iconografia del mito greco della nascita di Dioniso dalla coscia di Zeus, in *AnnMacerata*, XVIII, 1985, pp. 219-256".

*Let's now turn to copies of the cult-statue of Jupiter in the Temple of  
Iuppiter Optimus Maximus Capitolinus in the Roman Provinces*

Whereas Claudio Parisi Presicce (2006b, 144 with n. 25) reports the fact that the statue-type of Jupiter, discussed by him, has also been copied in the northern provinces of the Roman Empire., Martin Bossert (2000, 21-22, Taf 1-2, quoted *verbatim infra*), whom Parisi Presicce himself does not discuss, mentions still more copies of the same statue-type of Jupiter in France, but also in Hungary, even carved in colossal format.

Bossert's (2000) book is an important contribution to the study of a statue-type of Jupiter, which he refers to as "Iuppiter Capitolinus". It is that variant of the statue-type of Jupiter discussed here, in which the god holds the sceptre in his left hand, and of which the colossal statue in the Hermitage is the most impressive copy (cf. here Fig. 10). Bossert himself, in his very detailed discussion of this statue-type of Jupiter, does not mention the statue of Jupiter in St. Petersburg at all. Bossert (*op.cit.*) has likewise overlooked that this statue-type of Jupiter had also been copied in antiquity in mirror image, and that both variants of this statue-type have been defined and in great detail discussed by Caterina Maderna (1988).

The focus of Bossert's (2000) book is the find of fragments of a copy of his statue-type "Iuppiter Capitolinus" at Thun-Almendingen in Switzerland, a *civitas Helvetiorum* located in the Roman province *Germania Superior*. Bossert (2000) reconstructs this cult-statue by basing himself on the replicas of this statue-type, *inter alia* a statuette from the Via Appia Nuova in Rom (cf. here Fig. 20) - which holds the sceptre in his left hand, a thunderbolt in its right hand, and whose left knee and lower leg are exposed.

For this statuette of Bossert's statue-type 'Iuppiter Capitolinus' from the Via Appia Nuova at Rome; cf. M. Bossert (2000, 22 with n. 22, providing a reference, quoted *verbatim infra*, and his Fig. 14 [= here Fig. 20]).

Cf. Fig. 20. Marble statuette of M. Bossert's statue-type "Iuppiter Capitolinus". Rome, Via Appia Nuova. The caption of M. Bossert's *Abbildung 14*, which is illustrated here, reads: "Iuppiter Capitolinus von der Via Appia Nuova, Rom (Italien). Marmor, H[öhe] 80 cm".

Also Bossert (2000, 21, with n. 19) suggests that the statue-type of Jupiter, copied in the Capitoline Triad (cf. here Fig. 13), represents Domitian's cult-statue in his (fourth) Temple of Iuppiter Optimus Capitolinus. In addition to this, Bossert assumes that the cult-images of the last three Temples of Iuppiter Optimus Maximus Capitolinus, were *a*) based on the cult-statue of Zeus at Olympia (cf. here Fig. 14), and followed *b*) the same iconography (following with this assumption H. v. STEUBEN 1963, quoted in his n. 19, and quoted *verbatim infra*). Consequently, Bossert bases his reconstruction of the cult-statue of "Iuppiter Capitolinus" from Thun-Almendingen also on the bronze statuette of the Capitoline Triad, found at the Casa degli Amorini Dorati at Pompeii. For chronological reasons, the iconography of this Capitoline Triad was, in my opinion, either based on Catulus's (second) cult-statue of Iuppiter Optimus Capitolinus, or possibly rather on Vespasian's (third) cult-statue of Iuppiter Optimus Capitolinus.

Martin Bossert (2000, 21) writes about the variant of the statue-type of Jupiter (cf. here Fig. 10), discussed here, in which the god holds the sceptre in his left hand: "Wie die ikonographische Gegenüberstellung mit einem kolossalen Iuppiterkopf in Fréjus [*i.e.*, his Fig. 13] gezeigt hat, dürfte der Allmendinger Götterkopf (Kat. Nr. Ia-b, vgl. Taf. 1, Abb. 13) dem kapitolinischen Typus entsprochen haben [with n. 18].

Für das Kultbild in dem wieder aufgebauten, 82 n. Chr. von Domitian geweihten Tempel auf dem Kapitol beliess man auch nach den Bränden von 69 und 80 den in Anlehnung an den phidiasischen Zeus geschaffenen Statuentypus [with n. 19]: In der erhobenen Linken hält der thronende Gott ein Szepter, die gesenkte Rechte mit Blitzbündel hat er auf den rechten Oberschenkel gelegt, der Kopf ist entweder streng frontal oder leicht nach rechts gewandt. Ein Mantel verhüllt den Unterkörper; eine über Rücken und Schulter geführte Stoffbahn fällt als Zipfel über der linken Brust herab. Meist ist das linke Bein etwas vorgesetzt".

Note that in the above-quoted passage Bossert (2000, 21) says explicitly that the cult-statue of Jupiter in Domitian's (fourth) Temple of Iuppiter Optimus Maximus Capitolinus deliberately copied the iconographies of the previous cult-statues of the (second) and the (third) Temple of Iuppiter Optimus Maximus Capitolinus, that had basically been the same; all those temples of Jupiter had been erected at the same site. According to Bossert, this iconography is characterized by a special rendering of the god's garment, by the fact that Jupiter holds the sceptre in his left hand, and that his left foot is set a little bit advanced, when compared with the right foot. Bossert does not explicitly mention in this context those copies of this variant of this Jupiter-type that are additionally characterized by a bare left knee and a bare lower leg. - As for example his "Iuppiter Capitolinus" from the Via Appia Nuova at Rome, his Abbildung 14 (cf. here Fig. 20), on which he himself has based his reconstruction of the cult-statue of the "Iuppiter Capitolinus" at Thun-Almendingen.

Immediately after that, Martin Bossert (2000, 21-22) continues: "Nach dem berühmten Götterbild in Rom entstanden zahlreiche Darstellungen unterschiedlichen Formats und Materials in Italien und in den Provinzen. Häufig begegnen uns bildliche Wiedergaben der kapitolinischen Trias. Am eindrücklichsten ist wohl die überlebensgrosse Gruppe aus dem Kapitol von Scarbantia (Oedenburg - Sopron, Ungarn), mit über 3 m hohem thronendem Iuppiter. Zu den bekanntesten unter den kleinformatischen Gruppen zählt die bronzene aus der Casa degli Amorini dorati in Pompeji [page 22] [with n. 20]. Vor allem im niedergermanischen Gebiet finden sich wahrscheinlich einer keltischen Himmels- und Wettergottheit angeglichenen thronende Iuppiter auf sogenannten Juppitersäulen [with n. 21].

Die mit dem Iuppiterkopf Kat. Nr. Ia-b in der Grösse übereinstimmenden Körper- und Extremitätenfragmente Kat. Nr. Ic-g scheinen ikonographisch zu einer Sitzfigur des Iuppiter Capitolinus zu passen (vgl. Taf. 1-2). Die Bruchstücke Kat. Nr. Ic-d gehörten zu einem rechten wohl etwas angewinkelten Unterarm. Der Vergleich mit dem kapitolinischen Iuppiter von der Via Appia Nuova, in Rom (vgl. Abb. 14 [= here Fig. 20]), und dem in Neapel aufbewahrten aus der Casa degli Amorini dorati in Pompeji sowie andere Darstellungen dieses Statuentypus erlaubt wahrscheinlich die Ergänzung des weggebrochenen Attributs: Ein bis zum Ellenbogen oder sogar etwas darüber hinausreichendes Blitzbündel ruhte wohl auf Unterarm und Handfläche auf [with n. 22]. Miteinander verbinden lassen sich möglicherweise eine

linke Hand mit Stabrest (Szepter[?]) und ein linker(?) nach oben angewinkelter Unterarm (Kat. Nr. \*le-f) [with n. 23]. Fragment Kat. Nr. \* 1 g könnte von der rechten entblösten Brust stammen (Taf. 2) [with n. 24].

Das Götterbild dürfte ungefähr Lebensgrösse erreicht haben. Die Höhe des nach der Parallele in Fréjus ergänzten Kopfes lag bei rund 25 cm (vgl. Taf. 1 und Abb. 13) [with n. 25]. **Im Aussehen wird die Allmendinger Sitzfigur am ehesten den Iuppiterdarstellungen von der Via Appia Nuova, in Rom, und der Casa degli Amorini dorati, Pompeji, in Neapel, entsprochen haben (vgl. Taf. 1 und Abb. 14 [= here Fig. 20]).** Eine Gesamthöhe von rund 1,4 m ergibt sich nach den Proportionen der Neapler Bronze [with n. 26]. Nach Massen, technischen Merkmalen und überdurchschnittlich guter Qualität kann man dem wohl kapitolinischen Iuppiter (Kat. Nr. la-g) wahrscheinlich Thron I zuordnen (vgl. Kat. Nr. 29a-m), dessen Überreste zum grössten Teil, möglicherweise sogar ausschliesslich, aus demselben Fundkontext stammen [with n. 27]. Unterschiedliche Ausarbeitung an der Innenseite der Rückenlehne und Ansatz eines linken vorgesetzten Fusses am Schemel (Kat. Nr. 29m) stehen in Einklang mit der statuarischen Haltung vom Iuppiter Capitolinus (vgl. Taf. 20 und 22) [with n 28; my emphasis]".

In his **note 18**, Bossert writes: "Vgl. Kat. Anm. 1,5-6. - Vgl. Bauchhenss (Kat. Anm. 1,2 [Cf. note 2: "... G. Bauchhenss, in: LIMC VIII/1 (Zürich/Düsseldorf 1997), 481 Nr. 33".]), 481 Nr. 33 (Typus nicht mit völliger Sicherheit festlegbar)".

In his **note 19**, he writes: "Dazu H. Jucker, *Capitolium restitutum*. Jahrbuch des Bernischen Historischen Museums in Bern 39/40, 1959/60, 289ff.; **H. v. In his **note 23**, he writes: "Auf Aquarell (Burgener 1826, Bl. 7) möglicherweise von Aussenseite her gezeichnet. Abwinkelung zu der bei kapitolinischen Iuppiterfiguren einigermaßen passend, vgl. [vergleiche] Beispiele in Kat. Anm. 1,20-22 [cf. *supra*]".

In his **note 24**, he writes: "Vgl. [Vergleiche] Kat. Anm. I ,17 [cf. note 17: "Lohner 1831, 433 [= C.F.L. Lohner 1831, Römische Alterthümer, welche auf einer bey Allmendingen, Kirchgemeinde Thun, in die Thunallmend eingreifenden Wiese, im Spätjahr 1824 und Sommer 1825 ausgegraben wurden, in: Der Schweizerische Geschichtsforscher, Band 8, Heft 3. Bern, 430ff.]. Vgl. [vergleiche] aber Bauchhenss/Noelke 1981, Nr. 23 und Taf. 70,1; Nr. 41 und Taf. 74,1.]".

In his **note 25**, he writes: "Kopf in Fréjus (vgl. [vergleiche] Kat. Anm. 1,6 [quoted *verbatim infra*], bes. [besonders] Krause 1983, Taf. 11,4) wurde lebensgroßem Kopf Kat. Nr. Ia in den Massen angeglichen. Dabei ergibt sich nach dem Vergleichsbeispiel eine ergänzte Gesamthöhe von 25 cm".

In his **note 26**, he writes: "Größenvergleich nach Massen auf Kalenderblatt, s. Kat. Anm. 1,20 [cf. *supra*]: H des Kopfes dort 4,1 cm, H (ohne linken Arm) 22,3 cm, (inkl.[usive]) 22,7 cm. H des Kopfes von Kat. Nr. Ia nach Fréjus (Kat. Anm. 1,25 [cf. *supra*]) 25 cm:  $4,1 : 22,3 = 25 : X / X = (22,3 \times 25) : 4,1 = 135,9$  cm (errechnete Figurenhöhe ohne 1.[inkem] Arm). -  $4,1 : 22,7 = 25 : X / X = (22,7 \times 25) : 4,1 = 138$  cm (errechnete Gesamthöhe)".

In his **note 27**, he writes: "Siehe «Rekonstruktion» [cf. M. BOSSERT 2000, 21-22]".

In his **note 28**, he writes: "Vgl. Kat. Anm. 29,29-30 [cf. M BOSSERT 2000, 50-56, Kat. no. ]".

**In the above-quoted notes 19, 20 and 25, Bossert (2000) refers back to his notes 5 and 6 that belong to that Section of his text, in which he describes the head of the statue-type "Iuppiter Capitolinus", discussed by him.**

Cf. Bossert (2000, 20): "**Kat. 1a-b Gesichtsfragmente von Iuppiterkopf**

**Vor allem die erhaltenen Bartreste erlauben die Deutung und nähere Bestimmung des Kopfes: In der Mitte geteilter Kinnbart, aus zwei bis drei Lockenreihen gebildeter Wangenbart sowie ein Schnurrbart, der die Oberlippenpartie freilässt und dessen Spitzen zwischen Wangen und Kinnbart herabgeführt sind, kennzeichnen den Kopftypus des Juppiter Capitolinus** [with n. 5]. Diese Eigenheiten finden sich an einem kolossalen Iuppiterkopf in Fréjus [with n. 6], nach dem sich auch das Fehlende ergänzen lässt: Das ovale Gesicht mit kräftiger Stirn wurde von wallendem, über der Stirn anastoleartig aufstrebendem Haupthaar umschlossen (Taf. 1 und Abb. 13) [my emphasis]".

The caption of Bossert's Abb. 13 reads: "Kolossaler Iuppiterkopf von Fréjus (Frankreich). Marmor, H 40 cm".

In his **note 5**, Bossert writes: "Basel: Kaufmann-Heinimann 1977, 18 Nr. 1 und Taf. 1. -Avenches: Leibundgut 1976, 17 Nr. 1 und Taf. 1 (Blitzbündel oder Delphin in der Linken denkbar)".

In his **note 6**, he writes: "Zu Iuppiter Capitolinus vgl. Kat. Anm. 1,5-6.19-22 [cf. *supra*]".

**When we compare Bossert's (2000, 20) above-quoted description of the head of the statue-type "Iuppiter Capitolinus", discussed by him, with the head of the statue of Jupiter at St. Petersburg (cf. here Fig. 10), it is plain to see that the statue in the Hermitage has exactly the same type of coiffure and beard as Bossert's statue-type "Iuppiter Capitolinus". - This fact is indeed remarkable, because, as was already mentioned above: the statue of Jupiter in the Hermitage was found without its head (!). - To this I will come back belong.**

Because Martin Bossert (2000, 21, n. 19) has based his findings concerning the Jupiter statues of his 'Capitoline-type' on earlier scholars, for example, Hans von Steuben (1963), the findings of this scholar are quoted in the following as well.

**Hans von Steuben** ("Statue des Iuppiter Verospi" [in the Vatican Museums], in: *HELBIG*<sup>4</sup> I, 1963, 130-131, no. 176) wrote the following about the statue of the 'Iuppiter Verospi', and about the cult-statues of the last three Temples of Iuppiter Optimus Maximus Capitolinus: "Wohl in der Nähe der Kirche S. Agnese fuori Porta Pia gefunden. Dann im Palazzo Verospi nahe Piazza Colonna ... **Der Torso ließ erkennen, daß die Haltung der ganzen Figur einer Reihe anderer Iuppiterbilder entspricht, denen man bei der Ergänzung folgen konnte. Der Gott thront mit dem Szepter in der erhobenen Linken ... und dem Blitz in der auf dem Schenkel ruhenden Rechten. Er hat ein Bein etwas zurückgesetzt, die Füße schräg nach außen gerichtet.**

Sein Unterkörper ist in einen Mantel gehüllt, von dem ein Stück von hinten über die Schulter gezogen ist und in einem Zipfel auf die Brust fällt. Der Kopf ist leicht geneigt und nach rechts gewendet [page 131]. Dieser Typus ist oft zusammen mit Iuno und Minerva zur kapitolinischen Trias verbunden. Er geht auf das Kultbild im Iuppitertempel auf dem Kapitol zurück, das nach dem Brand des Jahres 85 v. Chr. für den von Catulus wiedererrichteten Tempel geschaffen und nach einem zweiten Brand 69 n. Chr. erneuert wurde. Nach Chalkidius (zu Platon, *Timaios* 440) war die Statue, mit der doch wohl die erste gemeint ist, ein Goldelfenbeinwerk des Apollonios. Sehr wahrscheinlich handelt es sich um denselben, im letzten Jahrhundert vor Chr. in Rom tätigen Meister, der auch den berühmten Torso vom Belvedere (Nr. 265) geschaffen hat ... [my emphasis]".

Stefano De Angeli ("Iuppiter Optimus Maximus Capitolinus, Aedes (fasi tardo repubblicane e di età imperiale)", in: *LTUR* III (1996) 151, suggests instead that the late-antique source, mentioned by von Steuben (*op.cit.*) refers to Domitian's cult-statue of Iuppiter Optimus Maximus Capitolinus: "... mentre una fonte tarda (Chalcid. ad Plat. *Tim.* 38), quasi certamente riferentesi alla statua domiziana, la [*i.e.*, the cult-statue of Iuppiter Optimus Maximus Capitolinus] ricorda come un'opera dello scultore Apollonios (*RE* II Apollonios 122), realizzata verosimilmente nella tecnica crisoelefantina ... [my emphasis]".

**To conclude.** This short survey concerning a statue-type of Jupiter, in which certainly only a small part of the available scholarly discussion could be analysed, had one unforeseen result. This statue-type is of interest to both classical archaeologist - like myself - and to scholars specializing in *Provinzialrömische Archäologie* ('the archaeology of the Roman provinces'). None of the above-discussed scholars of either field provides the complete coverage of the publications that belong to the 'other' field - nor did they have that intention at all, since some of them did not even know that scholars of this 'other' discipline are interested in this subject as well.

I myself cannot possibly provide such a complete discussion of the relevant publications of both fields in this context, but can only hope that in the future the results of both disciplines will be researched and discussed *together*. One thing is already clear now: we have heard above that Caterina Maderna (1988) had found 45 replicas of this Jupiter-type, which she convincingly divided into two variants, comprising:

- 1.) 33 copies of a statue-type of Jupiter, in which the god is holding the sceptre in his *left* hand. - See the most impressive copy of this variant of this statue-type, the colossal acrolithic statue of Jupiter in the Hermitage (cf. here **Fig. 10**); and -
- 2.) 6 copies of a statue-type of Jupiter, in which the god is holding the sceptre in his *right* hand. - See the most prominent copy of this variant of this statue-type, the fragments of the colossal acrolithic statue of Hadrian (now: Constantine the Great) in the Palazzo dei Conservatori (cf. here **Figs. 11** and **11.1**: the digital reconstruction of this statue).

When we add to this the statues of Jupiter of his 'Capitoline-type', collected by Martin Bossert (2000), he traces many copies in the Roman provinces that we may add to those '45 copies', collected by Maderna (1988), whereas Bossert himself ignores the fact that those *other* '45 copies' exist at all.

**As we have seen above, Bossert himself discusses 'only' the 1.) of the above-mentioned variants of this statue-type of Jupiter, in which the god holds his sceptre in his left hand (cf. here Fig. 10).**

We knew already before from Caterina Maderna (1988) and Claudio Parisi Presicce (2006b), that this first variant of this statue-type of Jupiter was much more often copied than the second variant, but Bossert (2000) adds to the previously known ones many more copies of this statue-type. And because, according to Bossert, his 'Capitoline type', the iconography of which had been invented for the (second) Temple of Iuppiter Optimus Maximus Capitolinus, was deliberately copied by the cult-statue of Jupiter in Domitian's (fourth) Temple of Iuppiter Optimus Maximus, this may be regarded as a very important result in the context of this *Study*.

*In the following, I allow myself a digression on the importance of the  
Temple of Iuppiter Optimus Maximus Capitolinus for the indurance of the Roman Empire*

That the just-made assertion is true became evident, when the (second) Temple of Iuppiter Optimus Maximus Capitolinus had been destroyed on 18th/19th December. To illustrate his point, I repeat in the following in part a passage, written for *supra*, Chapter *Preamble*; Section II.: ``As Mario Torelli (1987, 578-579 ...) has rightly pointed out, it was not by chance that a temple of Iuppiter stood right in front of the façade of Domitian's `Domus Flavia' / *Domus Augustana* on the Palatine, the epithet of which is debated ... I am saying `not by chance' because, according to the belief of the Romans themselves, it was their god Jupiter, who granted them their victories (cf. *supra*, at n. 431, in Chapter III.): `At Jupiter's orders and under his guidance the Romans fought their wars, and to him they consequently attributed their military victories' ... Another fact should likewise be considered in this context, and we may wonder, which one of the two was more important. **Namely, that the welfare of the Roman state/ the Roman People could be regarded as directly depending on the most important `state god' of the Romans, as he is sometimes called, namely Iuppiter Optimus Maximus Capitolinus, and, by implication, on the physical state of his temple. That the latter was actually believed became evident when, during the civil war, in the course of the siege of the Capitolium by the Vitellians on 18th/ 19th December AD 69, the (second) Temple of Iuppiter Optimus Maximus Capitolinus was completely destroyed by fire ...**

As a result of this, "the Gauls mistakenly believe that the destruction of the [second] Temple of Jupiter [Optimus Maximus] portends the end of Rome [with n. 20; my emphasis]"; cf. Trevor Luke (2018, 198). In his **note 20**, Luke quotes for this statement Tacitus, *Hist.* 4,54. See also Flavius Josephus (*BJ* 7,4,2) for the uprising of some Germanic tribes in AD 70, likewise as a result of this civil war ...

Therefore, Vespasian hastened to restore this sanctuary by building the (third) Temple of Iuppiter Optimus Maximus Capitolinus ...

Ernst Schulze (1873, 1) has, therefore, aptly commented on this precarious situation as follows: "**Im Jahre 70 [corr.: 69] n. Chr., ging während des Kampfes des Sabinus gegen die Vitellianer dieser zweite Tempel in Flammen auf. Vespasian ließ es nach Wiederherstellug der Ordnung seine erste Sorge sein, den Tempel, das Unterpfand des Reiches, wiederherzustellen [it was Vespasian's first care to restore the Temple of Iuppiter Optimus Maximus Capitolinus, the pledge of the Imperium Romanum']; my emphasis**".

In the great fire of AD 80 also this (third) temple of Jupiter perished. Domitian built the (fourth) Temple of Iuppiter Optimus Maximus Capitolinus, and that, as we know now through the research of Claudio Parisi Presicce and Alberto Danti (2016; cf. *infra*, in volume 3-2, at *Appendix I.e*)), on a much larger scale than the first three temples, but at exactly the same site''.

Let's now return to our main subject.

**I myself follow Martin Bossert (2000, 21), who has based his account in part on the findings of Hans von Steuben (1963, 130-131), in assuming the following: one of the two variants of statues of Jupiter, discussed here, copies the cult-statue of Juppiter in Domitian's (fourth) Temple of Iuppiter Optimus Maximus Capitolinus. These are the statues and statuettes of the more often copied variant (cf. *supra*, at point 1.)), in which the god holds the sceptre in his left hand, and in which the god's left foot is set a little bit advanced, when compared with the right foot, as Bossert (2000, 21) writes. Of course not *all* of those many copies of this variant of the statue-type of Jupiter copy the cult-statue of Domitian's (fourth) Temple of Iuppiter Optimus Maximus Capitolinus, because *a*) some of those sculptures date clearly to an earlier time; and *b*) because Domitian had intentionally stressed the `continuity' of Rome's most important state cult by his decision to *maintain* the well known iconography of Jupiters's cult statue(s).**

When we apply Martin Bossert's above-quoted description of Domitian's (fourth) cult-statue of Iuppiter Optimus Maximus Capitolinus, the following sculptures, discussed here, copy Domitian's cult-statue of Iuppiter Optimus Maximus Capitolinus:

- a) the colossal, Domitianic marble statue of Jupiter, St. Petersburg, Hermitage (here Fig. 10);
  - b) the statue of Jupiter, represented in the pediment of the Temple of Iuppiter Optimus Maximus Capitolinus, visible on the Exispicium Relief (here Figs. 16-18);
  - c) the statue of Jupiter, represented in the pediment of the Temple of Iuppiter Optimus Maximus Capitolinus, visible on Marc Aurelius's sacrifice panel (here Fig. 19).
  - d) the Antonine marble statuette of the Capitoline Triad, Guidonia Montecelio (Roma), Museo Civico Archeologico 'Rodolfo Lanciani' (here Fig. 13).
- Depending on their date, the following sculptures, discussed here, could likewise copy Domitian's cult-statue of Iuppiter Optimus Maximus Capitolinus:

- e) the marble statuette of 'Euripides' in the Louvre (here Fig. 12);
- f) the marble statuette of Jupiter from the Via Appia Nuova (here Fig. 20);
- g) the bronze statuette at the Metropolitan Museum of Art in New York (here Fig. 20.1).

*And what about the exposed left knee and lower left leg of the cult-statue of Jupiter Capitolinus ?*

Stefano De Angeli (in: *LTUR* III (1996, 149, 150) observed that already the cult-statue of Jupiter in Lutatius Catulus's (second) Temple of Iuppiter Optimus Maximus Capitolinus was represented seated, holding in his right hand a thunderbolt and in his left hand a sceptre. De Angeli (*op.cit.*) did not address the question, whether or not the second, third and the fourth cult-statues of Jupiter Capitolinus were represented with exposed left knee and left lower leg. Also Martin Bossert (2000, 21 with n. 19), and the scholars, whom he followed, had come to the conclusion that the iconography of Domitian's (fourth) Temple of Iuppiter Optimus Maximus Capitolinus deliberately followed the iconographies of the second and third cult-statues of this Jupiter. Bossert too does not address the iconographic feature 'bare left knee and bare left lower leg' of some of the copies of this statue-type of Jupiter, although also the statuette from the Via Appia Nuova (here Fig. 20), that he himself has published, belongs to those replicas.

**But because we fortunately have for example the portraits of the Emperors Claudius and Tiberius (here Fig. 15) from Cerveteri in the Vatican Museums, portrayed in this Jupiter iconography, we can, in my opinion, with confidence conclude that the second, third and fourth cult-statues of Iuppiter Optimus Maximus Capitolinus represented the god with exposed left knee and left lower leg.**

If that were true, which I think it is, we must assume that my above-mentioned example f), the marble statuette from the Via Appia Nuova, shows Iuppiter Optimus Maximus correctly with bare left knee and bare lower left leg. Whereas my examples d), the Capitoline Triad (here Fig. 13), e) the statuette of 'Euripides' (here Fig. 12), and g), the bronze statuette in New York (here Fig. 20.1) repeat the cult-statue in this detail incorrectly by covering the god's left knee and left lower leg with his garment.

To this we may add that, according to Stefano De Angeli (in: *LTUR* III (1996, 149, 150), Minerva was seated to the left of Jupiter, or on the right hand side, when looking at those three cult-statues. We have seen above that this arrangement of the Capitoline Triad is correctly represented on the relief showing Marcus Aurelius (here Fig. 19) sacrificing in front of Domitian's (fourth) Temple of Iuppiter Optimus Maximus, whereas in the Antonine statuette of the Capitoline Triad (here Fig. 13), which likewise shows the cult-statues of Domitian's (fourth) Temple of Jupiter, Minerva appears on the 'wrong' side: to the *right* of Jupiter, or on the left hand side of the group (!).

As we have seen above, the colossal statue of Hadrian (now Constantine the Great; here Fig. 11) repeats the same statue-type of Jupiter in mirror image. Interestingly Claudio Parisi Presicce's digital reconstruction of this portrait of Constantine (here Fig. 11.1) shows that in this portrait, Hadrian's (now Constantine's) *right* knee and *right* lower leg are likewise exposed (!).

Cf. Claudio Parisi Presicce (2006b, 147, caption of Fig. 48; cf. p. 127, note \*: "Ricostruzione virtuale del colosso di Costantino realizzata da Konstantin-Ausstellungsgesellschaft Trier mbH, Musei Capitolini e ARCTRON<sup>3D</sup>").

**After having (for the first time) finished writing this Chapter, I received an E-mail by Hans Rupprecht Goette, the contents of which I have already summarized above, in Chapter *Introductory remarks and acknowledgements*:**

'On 21st May 2021 Hans Rupprecht Goette was kind enough to alert me to a passage in the publication by Silvia Aglietti and Alexandra Busch (*Ager Albanus: von republikanischer Zeit zur Kaiservilla = Dall'età repubblicana alla villa imperiale. Albanum 1*, 2020), in which Massimiliano Papini ("I monumenti dell'AGER ALBANUS nella storia degli studi", 2021, 30 with Fig. 14 [= here **fig. 10.1**]) discusses the first find report of the statue of Jupiter in the Hermitage (cf. here **Fig. 10**): **according to this report, the statue was found without its head**. Papini's Fig. 14 is Plate 11 from the book by Giuseppe Antonio Guattani (*Monumenti antichi ovvero notizie sulle antichità e belle arti di Roma per l'anno 1805*, 1805), who published the first restoration of this statue of Jupiter (cf. here **Fig. 10.1**)'.

Hans Rupprecht Goette wrote me in his E-mail of 21st May 2021, in addition to this: "... auf S. 30 mit Abb. 14 schreibt er (M. PAPINI 2021) über die Grabung von Thomas Jenkins im Jahr 1785 in Castelgandolfo:

''... dal sito, presunta sede della villa di Clodio, proviene forse la statua colossale di Giove seduto in trono senza braccio destro e testa, acquistata prima da Giuseppe Valadier e Vincenzo Pacetti e infine approdata, tramite vari passaggi, nel 1861 alla Hermitage [with n. 110] (fig. 14) [my emphasis]''.

Abb. 14 gibt einen Stich der ergänzten Statue. In Anm. 110 steht: "G. A. Guattani, *Monumenti antichi* ... (Roma 1805) Tav. 11 [= here **Fig. 10.1**]".

**Although the statue of Jupiter in the Hermitage at St. Petersburg was found without its head and without its right hand (or without its right arm?), I maintain my hypothesis, suggested here, that it copied the statue of Jupiter in Domitian's (fourth) Temple of Iuppiter Optimus Maximus Capitolinus and repeat in the following another (earlier) passage from above, Chapter *Introductory remarks and acknowledgements*:**

''But, as I only found out later, when reading Anna Trofimowa's discussion of this statue of Jupiter in the Hermitage ("Kopien der Victoria von Calvatone aus dem 19. und 20. Jahrhundert", 2020, 78, on the modern statuette of Victoria this statue of Jupiter is holding in its right hand), the author states that, when this sculpture of Jupiter was excavated, its right hand had *not* been found ... My thanks are due to Hans Rupprecht Goette for sending me Trofimowa's article, to which I will come back below.

Because of its overall iconography, I nevertheless suggest that this statue of Jupiter in the Hermitage at St. Petersburg (here **Fig. 10**) can give us an impression, what the (probably chryselephantine) cult-statue of Iuppiter may have looked like, which Domitian commissioned for his (fourth) Temple of Iuppiter Optimus Maximus Capitolinus. - I maintain this view here, although according to the latest information concerning this point that I have been alerted to ... this statue of Jupiter had not only been found without its right hand (or its right arm ?), but also without its head (!), a fact which previously had not been realized; cf. Massimiliano Papini (2021, 30 with Fig. 14 [= here **Fig. 10.1**]). - My thanks are due to Hans Rupprecht Goette, who provided me also with this information.

The reason for my confidence (back in 2020) that the colossal statue of Jupiter in the Hermitage (here **Fig. 10**) actually copies Domitian's cult-statue of Iuppiter Optimus Maximus Capitolinus lay in the following facts. This statue (here **Fig. 10**) was found in Domitian's Villa, called *Albanum* and is datable in the reign of Domitian. Although only its headless torso had survived, when found, without its right hand (or right arm?), it can nevertheless with confidence be restored as a replica of Jupiter of this specific type. Its pose, left arm, and exposed left knee and lower leg, are exactly those of Domitian's cult-statue, represented in the

pediment of his temple - and that in its turn is known from the Renaissance drawings of the Extispicium Relief (cf. here **Figs. 16-18**). We learn from Anna Trofimowa (2020, 77-78) that the statue (here **Fig. 10**) had first been restored by Vincenzo Pacetti, holding a thunderbolt in its right hand: since its right thigh is ancient, my guess is that Pacetti had seen remains of this thunderbolt on the right leg of the god.

Fortunately, in July of 2023, I should find out something else: the 'Capitoline Jupiter' is also known through the bronze statuette in New York, at the Metropolitan Museum of Art, datable to the 1<sup>st</sup> or 2<sup>nd</sup> century AD, which Stephan Faust (2022, 22-24, Abb. 4 [= here **Fig. 20.1**]) has published, and that I did not know before. This bronze statuette preserves both hands of the god, comprising his attributes thunderbolt and sceptre, as well as his head, whereas the colossal marble statue at the Hermitage (here **Figs. 10; 10.1**) was found without its right hand (or without its right arm ?) and even without its head.

The iconography of this bronze statuette (here **Fig. 20.1**) is (almost) exactly the same as that of the marble statuette from the Via Appia Nuova in Rome (cf. here **Fig. 20**), with the great difference that this marble statuette shows the god with exposed left knee and lower left leg (here **Fig. 20**), whereas in the bronze statuette the left knee and lower left leg are completely covered by the god's garment. Because this statuette (here **Fig. 20.1**) is not precisely datable, we cannot know, whether it represents Domitian's (fourth) cult-statue of Jupiter, or rather the second or the third cult-statue of Iuppiter Optimus Maximus Capitolinus'.

**Fig. 20.1. Bronze statuette representing the 'Capitoline Jupiter', datable to the 1<sup>st</sup> or 2<sup>nd</sup> century AD. Cf. S. Faust (2022, 22-24, Abb. 4: "Bronzestatuette des Jupiter Capitolinus 1.-2. Jh. n. Chr., New York, Metropolitan Museum of Art (Open Access/Public Domain [CCO] <https://www.metmuseum.org/art/collection/search/246686>)".**

**Finally I quote in the following the text from the Website of the Hermitage at St. Petersburg, that relates to the statue of Jupiter kept there (cf. here **Fig. 10**)**

**[https://www.hermitagemuseum.org/wps/portal/hermitage/digital-collection/22.09.2020:](https://www.hermitagemuseum.org/wps/portal/hermitage/digital-collection/22.09.2020)**

"Statue of Jupiter

Ancient Rome, End of the 1<sup>st</sup> century

The statue of Jupiter in the Hermitage collection is one of the largest sculptures from Classical Antiquity in any museum in the world. The statue was found during archaeological excavations at the villa of Emperor Domitian, who reigned from 81 to 96 AD. The colossal statue of the supreme god was made by a Roman sculptor of the Flavian era ...

The art of the Flavian period (69-96 AD) is a magnificent part of the world's heritage. The composition and manner of execution seen in the statue of Jupiter are reminiscent of **the lost statue of Zeus created by Phidias for the temple at Olympia [cf. here **Fig. 14**]. That work was considered one of the Seven Wonders of the World. Dio Chrysostom said in a famous speech that whoever "stood before this image would forget all the terrors and hardships that fall to our human lot"**. In this work the Roman sculptor combined marble with gilded wood and plaster to imitate a finish in gold and ivory.

Title:	Statue of Jupiter
Place:	Ancient Rome
Date:	End of the 1 <sup>st</sup> century
Material	Marble and bronzed plaster
Dimension:	347,0 cm
Acquisition date	Entered the Hermitage in 1862; originally in the Marquis Campana collection in Rome
Inventory Number	ГР-4155 [my emphasis]".

To the statue of Jupiter in the Hermitage at St. Petersburg (cf. here **Fig. 10**), I will come back below (cf. *infra*, in volume 3-2, at *Appendix IV.c.1.*).

*Post scriptum.*

Only after I had finished writing the first volume of my *Study* on Domitian, did I receive the exhibition-catalogue edited by Claudio Parisi Presicce, Massimiliano Munzi and Maria Paola Del Moro (*Domiziano Imperatore. Odio e amore*, 2023), in which the article "Il Campidoglio di Domiziano" by Claudio Parisi Presicce and Eloisa Dodero has appeared. The term 'Domitian's Campidoglio' in the title of their essay is ambiguous by design (exactly as the term 'Capitolium' was in antiquity): because they talk about 'Domitian's Capitoline Hill' and about 'Domitian's (fourth) Temple of Iuppiter Optimus Maximus Capitolinus'.

I quote in the following some passages from their article, *inter alia* because they add further information to subjects, that have also been addressed by my myself in this *Study*, but that was so far unknown to me.

**Claudio Parisi Presicce, Eloisa Dodero ("Il Campidoglio di Domiziano", 2023, 63-68) write :**

**"L'occasione di questo intervento [to erect the fourth Temple for Jupiter Capitolinus] è il devastante incendio dell'80 d.C., preziosa opportunità per l'imperatore [i.e., Domitian] "maniaco della costruzione" [with n. 6] di plasmare Roma a propria immagine e somiglianza. Plutarco, che ricorda di aver visto di persona ad Atene le colonne di marmo pentelico realizzate appositamente per il tempio capitolino, testimonia anche dell'esorbitante costo raggiunto dall'intera doratura del tempio, ben 12.000 [page 64] talenti [with n. 7]; Svetonio, pur riconoscendo all'imperatore l'intensa attività edilizia successiva all'incendio, ne critica la decisione di firmare tutte le opere a suo nome "senza alcuna menzione degli autori precedenti" [with n. 8] ...**

**Flavio Sabino, fratello di Vespasiano e [page 65] *praefectus urbi*, ritiratosi sul colle capitolino insieme al nipote Domiziano, appena diciottenne, e con le poche truppe fedeli, fu posto sotto assedio dalle forze meglio armate e preparate di Vitellio. Il Campidoglio, dunque, tra il 17 e il 18 dicembre del 69 cadde nelle mani dei vitelliani e Flavio Sabino, non avendo ricevuto in tempo i soccorsi, fu fatto prigioniero e giustiziato. Domiziano, invece, si rifugiò presso il guardiano di un tempio [with n. 9] e la mattina dopo sfuggì alla cattura "Isiaci celatus habitu" (travestito da sacerdote di Iside) [with n. 10], divinità egiziana alla quale era dedicato un luogo di culto eretto sul colle fin da epoca repubblicana, denominato *templum Isidis Capitolinae* ...**

**Cosa può aver lasciato nella mente del giovane Domiziano il ricordo della terribile notte tra il 17 e il 18 dicembre del 69, la violenza dell'incendio divampato, la morte dello zio Flavio Sabino, la salvezza nell' [corr.: dall'] *aedituus* di un santuario del colle, la fuga la mattina dopo confuso tra i sacerdoti di Iside? Il desiderio di ringraziare le divinità che lo avevamo [corr.: avevano] protetto ... [page 66] ...**

E anche in questo senso è stata letta la *restitutio* del Tempio di Giove Ottimo Massimo, l'unico intervento domiziano sul colle capitolino ricordato nel Cronografo del 354 d.C., che pure associa a Domiziano la lista più lunga tra quelle di epoca imperiale [with n. 29]. Al rifacimento domiziano del tempio sono stati associati numerosi frammenti in marmo pentelico della decorazione architettonica (fig. 2), che ci restituiscono un edificio gigantesco, con colonne di circa 1,80 m di diametro (di controversa interpretazione restano invece i numerosi lacerti in *opus coementicium* [corr.: *caementicium*] rinvenuti, anche di recente, nell'area capitolina) [with n. 30]. Dai coni monetali di epoca flavia (fig. 3), si ricava l'aspetto di un tempio esastilo sulla fronte (rispettoso, dunque, dell'impostazione tradizionale che non [page 67] poteva essere modificata), con colonne di ordine corinzio [with n. 31]. I coni monetali supportano anche l'appropriazione del tempio vituperata da Svetonio, raffigurando l'edificio con la scritta IMP. CAESAR sull'architrave [with n. 32], senza alcuna indicazione del nome della divinità, Giove, con cui, Domiziano amava identificarsi [with n. 33].

Come è noto, la decorazione frontonale e acroteriale è stata riconosciuta sul rilievo della *Pietas Augusti* (fig. 4 [cf. here **Fig. 19**]), riconducibile a un arco trionfale dedicato a Marco Aurelio e conservato dagli inizi del Cinquecento, insieme ad altri due rilievi provenienti dallo stesso contesto, a Palazzo dei

Conservatori in Campidoglio [with n. 34], e su disegni cinquecenteschi della parte superiore, oggi perduta, di un rilievo con *extispicium* [cf. here Figs. 16-18] – scena di sacrificio – del Museo del Louvre (dalla collezione Borghese) [with n. 35]. Da queste testimonianze indirette si ricava che il frontone mostrava al centro, sedute, le tre divinità venerate all'interno delle tre celle, *Iuppiter* al centro, con ai piedi un'aquila, affiancato da *Iuno* alla sua destra e *Minerva* alla sua sinistra ... [page 68] ...

La conoscenza dei tre simulacri all'interno delle celle del tempio si basa essenzialmente sul notevole gruppo scultoreo rinvenuto a Guidonia nel 1994 [with n. 38; cf. here Fig. 13], sulle fonti letterarie, sulle repliche frammentarie delle statue, in formato ridotto, tra cui la bella testa di Minerva in pentelico dei Musei Capitolini qui in mostra (opera n. 29), e sulle testimonianze iconografiche trasmesse da monete e rilievi [with n. 39]. Nella ricostruzione di Quinto Lutazio Catulo, successiva al distruttivo incendio dell'83 a.C., anche le antiche divinità in terracotta, risalenti alla fine dell'età regia - l'immagine di Giove era opera dello scultore Vulca di Veio - furono sostituite con nuove statue, un colosso forse crisoelefantino per il simulacro di Giove, simulacri di dimensioni verosimilmente inferiori, forse realizzati nella tecnica dell'acrolito, per Giunone e Minerva. Si suppone che le statue catuliane subirono danni più o meno gravi in seguito agli incendi che devastarono il Campidoglio in età augustea e successivamente nel dicembre del 69 e nell'80 d.C. È dunque nella sua versione domiziana che la triade capitolina potrebbe essersi conservata fino alla tarda antichità quando, in concomitanza o poco prima [with n. 40] delle spoliazioni del tempio, è possibile che anche i tre simulacri abbiano subito danneggiamenti, le prime trasformazioni [with n. 41; my emphasis]".

In their **note 6**, Pensabene and Dodero write: "Plut. *Publ.* 15, 5-6".

In their **note 7**, they write: "Plut. *Publ.* 15.4".

In their **note 8**, they write: "Suet. *Dom.* 5; per una panoramica sugli interventi flavii in Campidoglio vd. [vedi] da ultimo Arata 2009".

In their **note 29**, they write: "Su questo importante documento vd. [vedi] in particolare Anderson 1983".

In their **note 30**, they write: "Vd. [vedi] in particolare Danti 2016, pp. 215-217".

In their **note 40**, they write: "Nell'età di Macrino o di Alessandro Severo la statua di Giove risulta essere stata colpita da un fulmine".

In their **note 41**, they write: "*Passio S. Callisti*, Mombritius I, 268".

**To the above-quoted passages from Parisi Presicce and Dodero (2023, 63-68), I should like to add comments to some of those parts, which I have emphasized :**

a) "tra il 17 e il 18 dicembre del 69".

This date, which Presicce and Dodero assume for the siege of the Vitellians of the Capitoline Hill, is wrong: their siege occurred instead from the 18th to the 19th December of AD 69.

For discussions; cf. *supra*, in Chapter *Preamble*; at Section II.; and in Section III.; at point 1.); and *infra*, in volume 3-2, at *Appendix I.c*) *The precise date of Domitian's escape from the Capitolium, M. Volusius' disguise as an Isis priest in 43 BC, and the hypothesis that because of this alleged precedent, Domitian's disguise on 19th December 69 as a priest of Isis should therefore be regarded as an invention*; and at *Appendix I.d*) *Domitian's escape from the Capitolium on 19th December AD 69, which happened on the festival of the Opalia, one day of the Saturnalia*;

b) "Domiziano, invece, si rifugiò presso il guardiano di un tempio [with n. 9] e la mattina dopo sfuggì alla cattura "Isiaci celatus habitu" (travestito da sacerdote di Iside) [with n. 10], divinità egiziana alla quale era dedicato un luogo di culto eretto sul colle fin da epoca repubblicana, denominato *templum Isidis Capitolinae*".

As already said above; cf. *supra*, in Chapter *Preamble*, at Section II.; cf. Section III.; at point 1.): Presicce and Dodero do not address the question, where exactly on the Capitoline Hill Flavius Sabinus and his men (and Domitian) had found refuge on 18th December AD 69. Parisi Presicce and Dodero, therefore, do not suggest, the guardian of which temple on the Capitoline Hill had hidden Domitian. Finally, they convincingly assume that the garments, with which Domitian was disguised 'as an Isis priest' on the morning of 19th December AD 69, had been provided by the (priests of the) Temple of *Isis Capitolina* on the Arx;

c) "le tre divinità venerate all'interno delle tre celle [of the Temple of Jupiter Capitolinus], *Iuppiter* al centro, con ai piedi un'aquila, affiancato da *Iuno* alla sua destra e *Minerva* alla sua sinistra"; with their note 35.

As we have seen above in this *Chapter* (see also *infra*, in volume 3-2, at *Appendix I.g.4.*) *Domitian's sacellum of Iuppiter Conservator, his Temple of Iuppiter Custos, and his (fourth) Temple of Iuppiter Optimus Maximus Capitolinus* (cf. here **Fig. 83**). With The first Contribution by Peter Herz), I have arrived at the same conclusion. But note that Parisi Presicce and Dodero base themselves on different publications, than those that I have consulted. All those publications discuss the Renaissance drawings, which document the Extispicium Relief in the Louvre at Paris (cf. here **Figs. 16-18**), when that still comprised the fragment with the representation of the pediment of Domitian's (fourth) Temple of Iuppiter Optimus Maximus Capitolinus;

d) "La conoscenza dei tre simulacri all'interno delle celle del tempio si basa essenzialmente sul notevole gruppo scultoreo rinvenuto a Guidonia nel 1994 [with n. 38; cf. here **Fig. 13**]"'. In their **note 38**, Parisi Presicce and Dodero write: "Museo Archeologico Nazionale di Palestrina, inv. 80546, per cui vd. [vedi] tra gli altri Coarelli 2009a, p. 514, n. 118 (F. Coarelli), con datazione agli anni centrali del II secolo d.C.".

The Capitoline Triad (here **Fig. 13**) was not 'found at Guidonia in 1994', as Parisi Presicce and Dodero erroneously assert, nor is it on display at the "Museo Archeologico Nazionale di Palestrina". As discussed in this *Chapter*, and as stated in the caption of here **Fig. 13**, the following is true:

"Statuette of the Capitoline Triad, marble. Guidonia Montecelio (Roma), Museo Civico Archeologico 'Rodolfo Lanciani' (inv. no. 80546). Cf. Z. Mari, in: F. Buranelli (2019, 73: "20. Triade Capitolina Fine del II-inizi III secolo ...). Dal Comune di Guidonia Montecelio (Rm), loc. Tenuta dell'Inviolata - Quarto Campanile, Guidonia Montecelio, Museo Civico Archeologico "Rodolfo Lanciani" (già nel Museo Nazionale di Palestrina fino al 2012). Inv. no. 80546. Furto 1992 (scavi clandestini), Guidonia Montecelio (Roma). Recupero: 1994, Livigno (Sondrio))".

e) Parisi Presicce and Dodero write: "Nella ricostruzione di Quinto Lutazio Catulo [of the Temple of Iuppiter Optimus Maximus Capitolinus], successiva al distruttivo incendio dell'83 a.C., anche le antiche divinità in terracotta, risalenti alla fine dell'età regia - l'immagine di Giove era opera dello scultore Vulca di Veio - furono sostituite con nuove statue, un colosso forse crisoelefantino".

Also I myself have studied the (second) Temple of Iuppiter Optimus Maximus Capitolinus, dedicated by Q. Lutatius Catulus, as well as the question, which one(s) of the last three (of the altogether four) cult-statues of

the Capitoline Jupiter could have been created in chryselephantine technique, see above, in this *Chapter* (see also *supra*, at n. 181, in Chapter I.1.; and *infra*, in volume 3-2, at *Appendix I.c*); and *Appendix I.d*)).

f) At the beginning, and at the very end of their important article (not quoted above), Parisi Presicce and Dodero (2023, 63, 68) add very useful information that I myself have not addressed in this *Study* on Domitian at all: it relates to the different stages of the well-documented destruction of Domitian's (fourth) Temple of Iuppiter Optimus Maximus Capitolinus.

***A Study on the colossal portrait of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori at Rome (cf. here Fig. 11). With The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great)***

With discussions of the following subjects: the inscription CIL VI 974 = 40524 (cf. here **Fig. 29.1**), belonging to a colossal statue of Hadrian; the question, where in Rome large blocks of Parian marble like those of the acrolithic statue of Hadrian (now Constantine the Great; cf. here **Fig. 11**) could have been available: at *La Marmorata* in the quartiere Testaccio; the '*Porticus Aemilia*' (erroneously located there, the building in question is in reality identifiable as *Navalia*); and the *Horrea Aemiliana*.

Unforeseen results of this *Study* consist in Part I. in new findings concerning the cult-statue of *Divus Vespasianus* in the Temple of *Divus Vespasianus*, begun by the Emperor Titus and finished by the Emperor Domitian; and in Part II., in contributions to the questions, how the Emperor Domitian managed to provide the People of Rome with all goods needed, and how the emperor organized the supply of his many gigantic buildings projects at Rome with the appropriate building materials.

The motivation to write (Part I.) of this *Study* was at the beginning completely different: it was the result of studying the consequences of Augustus' doctrine (RG 13): *parta victoriis pax*. We owe to John Pollini (2017b, 124 with n. 118) an English translation of Augustus's famous line : 'peace through victory'. Cf. *supra*, in Chapter *What this Study is all about ?*; and *infra*, in volume 3-2, at *Appendix IV.c.1.*). Writing these Chapters resulted in the following conclusion, which I then decided to study in detail:

**'At the time of Constantine the Great, these old Roman convictions were still alive'.**

This *Study* is divided into two Parts:

I. The statue of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori (cf. here **Fig. 11**), the inscription (CIL VI 974 = 40524; cf. here **Fig. 29.1**), and the cult-statue of *Divus Vespasianus* in the Temple of *Divus Vespasianus*. With *The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great)*

II. Ancient Rome's new commercial river port, at *La Marmorata*. With discussions of the '*Porticus Aemilia*' (in reality identifiable as *Navalia*) and of the *Horrea Aemiliana*. With *The sixth Contribution by Peter Herz : Rom. Strukturen der Versorgung*; and with *The second Contribution by Franz Xaver Schütz : Wie schwer war der ägyptische Obelisk, der heute auf der Piazza di S. Giovanni in Laterano in Rom steht?*

**To allow the reader an easier understanding of these very complex subjects, I anticipate in the following a summary of my own relevant results.**

This research started on 26th November 2019, when Hugo Brandenburg and Angelika Geyer were so kind as to present me with Brandenburg's book *Le prime chiese di Roma IV-VII secolo* (2013), in which Brandenburg discusses the colossal portrait of Constantine the Great in the cortile of the Palazzo dei Conservatori at Rome (cf. here **Fig. 11**). The research I conducted in order to understand this portrait of Constantine the Great has resulted in three separate, but interrelated monographs that have, in addition to this, provided new insights concerning Domitian. All three of them are, therefore, published in this book on Domitian:

*A Study on the colossal portrait of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori at Rome (cf. here Fig. 11). With The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great);*

*A Study on Domitian's cult-statue of Iuppiter Optimus Maximus Capitolinus (cf. here Fig. 10); and -*

*A Study on Hadrian's portrait-statue from Hierapydna (cf. here Fig. 29).*

To allow the reader an easier understanding of the entire *Study* on the colossal statue of Hadrian (now Constantine the Great; here **Fig. 11**), I begin with a summary of its two parts:

**Hugo Brandenburg (2013, 16) summarizes the historical events that had led to the creation of this colossal portrait of Constantine the Great in the cortile of the Palazzo dei Conservatori at Rome (cf. here Figs. 11; 11.1). In his conclusion, Brandenburg wrote that Constantine 'put himself under the protection of the god [of the Christians] to guarantee, according to Roman tradition, his victory [over Maxentius at the *Pons Milvius* in AD 312], as *imperator invictus*, and thus the prosperity of the Roman Empire'.**

At first, I was only interested in pursuing the doctrine of 'invincibility' over time, which was my inquiry at that very moment. And this, in its turn, was a result of studying Augustus' doctrine (*RG* 13): *parta victoriis pax*, because we owe to John Pollini (2017b, 124 with n. 118) not only a detailed discussion, but also an English translation of this famous line of Augustus: 'peace through victory'.

Cf. *supra*, in Chapter *Introductory remarks and acknowledgements*; and at *What this Study is all about*; and *infra*, in volume 3-2, at *Appendix IV.c.1.*

And when I read Hugo Brandenburg's (2013, 16) above-quoted statement about Constantine the Great, and realized that '*At the time of Constantine the Great, these old Roman convictions were still alive*', I began to study also the *colossus* of Constantine (here **Figs. 11; 11.1**) itself.

This colossal portrait of Constantine the Great turned out to have originally been a portrait of Hadrian. This hypothesis has (in my opinion convincingly) been suggested by Cécile Evers (1991). It was first followed by Amanda Claridge (1998, 382; *ead.* 2010, 465, who does not provide a reference though - but who had discussed this fact with me in Rome, as soon as C. EVERS's article had appeared in 1991), and rejected by other scholars. I myself hope to add some new observations, which further support Evers's hypothesis. The same is definitely true in the case of Hans Rupprecht Goette's findings. For his new observations concerning the 'metamorphosis' from Hadrian's to Constantine's portrait here **Fig. 11**; cf. below, at *The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great)*.

Evers (1991) had further suggested that five inscriptions, found in the *Forum Romanum*, could (in theory) have belonged to this colossal portrait of Hadrian (now Constantine; cf. here **Fig. 11**), among them the fragmentary inscription *CIL VI 974 = 40524* (cf. here **Fig. 29.1**). This inscription belonged to an honorary portrait-statue of Hadrian, dedicated by the Senate and the Roman People to commemorate Hadrian's victorious suppression of the Bar Kokhba Revolt, as has (in my opinion convincingly) been suggested by Michaela Fuchs (2014, 130 with ns. 45-47, Abb. 8 [= here **Fig. 29.1**]).

According to Geza Alföldy (at *CIL VI* [1996] 40524; cf. here **Fig. 29.1**) and Michaela Fuchs (*op.cit.*), this inscription was not found in the Roman Forum, as assumed by Evers (1991), but instead close to, or within, the Temple of *Divus Vespasianus*; the authors therefore assume that this statue of Hadrian was on display within the Temple of *Divus Vespasianus*.

But note that neither Geza Alföldy (1996) or Michaela Fuchs (2014) suggest, which one of Hadrian's statue-types could have belonged to this honorary inscription (**Fig. 29.1**).

At first, I had followed Evers's (1991) hypothesis, according to which the colossal portrait of Hadrian (now Constantine the Great; here **Fig. 11**) could have belonged to the inscription *CIL VI 974 = 40524* (here **Fig. 29.1**), and had, at the same time, considered Geza Alföldy's (at *CIL VI* 40524) and Michaela Fuchs's (2014, 130) conclusions that the statue, to which this inscription (here **Fig. 29.1**) belonged, was on display *within* the Temple of *Divus Vespasianus*.

Consequently, I have next discussed, what kind of effect the erection of the colossal statue of Hadrian/ Constantine (here Fig. 11) in the *cella* of the Temple of *Divus Vespasianus* could have had on the pre-existing cult-statue of *Divus Vespasianus*. This research has led to the (for me) unforeseen result that the findspot of the colossal head of Vespasian in the Museo Archeologica Nazionale at Naples (MAN, inv. no. 6068) is unfortunately unknown. Some earlier and later scholars have (erroneously) believed that this colossal head of Vespasian had been excavated at the Baths of Caracalla. Whereas I at that stage had followed Filippo Coarelli's (2009b, 77, with n. 90, Fig. 14) attribution of this colossal head of Vespasian to the cult-statue of *Divus Vespasianus* in the Temple of *Divus Vespasianus*; a hypothesis that in the meantime has likewise turned out to be erroneous.

Contrary to my first, above-mentioned hypothesis concerning the inscription (*CIL* VI 974 = 40524; here Fig. 29.1), I now suggest that it belonged to the original portrait-statue of Hadrian, of which almost 30 copies are known, among them the cuirassed statue of Hadrian from Hierapydna in Crete at Istanbul (cf. here Fig. 29).

Cf. below, at *A Study on Hadrian's portrait-statue from Hierapydna* (cf. here Fig. 29); and *infra*, in volume 3-2, at *Appendix IV.c.2.*

Consequently, I was at first unable to make a suggestion, for which context this colossal portrait of Hadrian (now Constantine; cf. here Fig. 11) had originally been created (but now I ask, whether this could have been the cult-statue of *Divus Hadrianus* in the *Hadrianeum*, built by Antoninus Pius).

Studying this colossal statue of Hadrian/ Constantine the Great (here Fig. 11) had also another effect, since Claudio Parisi Presicce (2006b) has compared it with the statue of Jupiter in the Hermitage at St. Petersburg (cf. here Fig. 10), which copies the same prototype of Jupiter as the Hadrian/ Constantine (here Fig. 11) in mirror image. This statue-type of Jupiter (here Fig. 10) (and its variants) was extremely successful in antiquity and has also been copied in statuette format as Capitoline Triad, together with Juno and Minerva (cf. here Fig. 13). I follow Filippo Coarelli (in: F. COARELLI 2006a, 514, cat. 118: "Gruppo in marmo della Triade Capitolina"), who has suggested that this Capitoline Triad in statuette format (cf. here Fig. 13) copies Domitian's cult-statues of his (fourth) Temple of Iuppiter Optimus Maximus Capitolinus.

Most famous among these copies of this Capitoline Triad in statuette format is certainly the statuette of 'Euripides' in the Louvre at Paris (cf. here Fig. 12). As Hans Rupprecht Goette (forthcoming) has demonstrated, this was created at the order of Francesco Ficoroni by turning such a headless copy of Jupiter of a Capitoline Triad into the tragic poet. The colossal statue of Jupiter in the Hermitage at St. Petersburg (here Fig. 10) is datable in the Domitianic period and was found at Castel Gandolfo, which in its turn was built at the site of Domitian's *Villa*, called *Albanum*.

I, therefore, suggest that this statue of Jupiter (cf. here Fig. 10) can give us an impression of the cult-statue of Jupiter in Domitian's (fourth) Temple of Iuppiter Optimus Capitolinus.

Cf. *supra*, at *A Study on Domitian's cult-statue of Iuppiter Optimus Maximus Capitolinus* (cf. here Fig. 10).

Let's now return to our main subject.

Many earlier scholars, for example Heinz Kähler (1960, 391, at Tafel 264) have assumed that the colossal portrait-statue of Constantine the Great (cf. here Fig. 11) should be identified with the statue, seen by Eusebius (*Hist. Eccl.* 10,4,16), who had copied an inscription, set (and therefore presumably also composed) by the Emperor Constantine himself. Constantine had added this inscription to the statue, dedicated to him by the Senate after his victory over Maxentius. In this 'personal statement' by Constantine, the emperor claims that 'thanks to the salvation bringing sign, which is the true proof of *virtus*, I have saved and liberated Rome from the tyrant [*i.e.*, Maxentius], and thanks to my liberation, I have restored the Senate and the Roman People to their old image and to their old splendour'. - Note that Constantine, in addition to this, had ordered the sculptor that his portrait-statue should hold this 'salvation bringing sign' in its right hand. Note also that earlier scholars have identified this 'salvation bringing sign' with a cross.

Claudio Parisi Presicce (2005, 145 with ns. 32, 33; *id.* 2006b, 140), to whom we owe the most detailed discussions of the statue of Constantine (here Fig. 11), does not believe that this statue is the portrait of Constantine, described by Eusebius (*Hist. Eccl.* 10,4,16). - And I think he is right with this judgement.

But contrary to myself, Parisi Presicce (2005, 146, *verbatim* repeated 2006b, 149 with n. 38, p. 150 with n. 42) does not follow Evers (1991) in assuming that this portrait here Fig. 11) had originally represented Hadrian.

When we follow Parisi Presicce's (2006, 154) hypothesis that the Senate had commissioned the statue of Constantine (cf. here Fig. 11) to commemorate his victory over Maxentius, and assume at the same time that also the portrait-statue of Constantine, seen by Eusebius (*Hist. Eccl.* 10,4,16), was based on a Jupiter-type (because the statue held the enigmatic sign in its right hand, and a globe in its left), it follows that the Senate had honoured Constantine with two colossal statues for the same victory that were based on the *identical* version of a statue-type of Jupiter - a situation I myself find impossible to believe.

'Identical', because using for both statues the same, less frequently copied statue-type of a Jupiter, who holds the sceptre in his *right* hand, and the globe in his *left* hand, as Eusebius (*Hist. Eccl.* 10,4,16) reports for *his* statue of Constantine, and as is also true for the extant colossal statue of Constantine (cf. here Figs. 11; 11.1).

But we should also consider in our reasoning that Eusebius (*Hist. Eccl.* 10,4,16) writes that the statue of Constantine, which he described, was erected by the Senate 'a Roma nel luogo più pubblico di tutti'; cf. Parisi Presicce (2006b, 140 with n. 15).

This sounds as if *that* statue of Constantine was standing under the open sky, which is why, in my opinion, the colossal head of Constantine, found in 2005 in the Forum of Trajan (cf. here Fig. 47) could have belonged to the statue of Constantine, mentioned by Eusebius (*Hist. Eccl.* 10,4,16).

According to Klaus Fittschen (2014, 58), the head of Constantine, found in the Forum of Trajan (cf. here Fig. 47), had probably belonged to a cuirassed statue, an iconography that, as we learn from Eugenio La Rocca (2000, 24, with n. 68), is typical of Christian emperors. So, in case that actually was the statue described by Eusebius (*Hist. Eccl.* 10,4,16), it showed Constantine in precisely the same seated pose as the statue of Hadrian (now Constantine; cf. here Fig. 11), *but in a different iconography*: since, instead of representing Constantine *as Jupiter*, as in the *colossus* of Constantine, which was originally a portrait of Hadrian (cf. here Fig. 11), the statue seen by Eusebius (provided the head here Fig. 47 actually belonged to *that*) - very appropriately for this specific dedication - represented Constantine *as Christian emperor*.

The ten extant fragments of the colossal acrolithic statue of Hadrian (now Constantine; cf. here Fig. 11) have been tested: they are sculpted from Parian marble of the best quality, called *lychnites*; cf. Claudio Parisi Presicce (2006b, 152, n. 46); Donato Attanasio, Matthias Bruno and Walter Prochaska (2019, 204, with n. 91).

Claudio Parisi Presicce (2006b, 152) writes concerning this point:

"L'identificazione del marmo [of the fragments belonging to the acrolithic statue of Constantine, here Fig. 11], viceversa, ripropone nuovamente il problema dell'identificazione del soggetto raffigurato in occasione della sua prima lavorazione, dal momento che - per quanto finora è possibile sostenere - i blocchi di marmo pario possono essere stati portati a Roma non oltre l'età adrianea [my emphasis]".

Because Parisi Presicce (2006b, 152) does not provide a reference for the above-quoted statement, this has led to the question, discussed here, of exactly when in the imperial period large blocks of Parian marble of the best quality, called *lychnites*, could in theory have been available at Rome.

See the second part of this *Study*:

**II. Ancient Rome's new commercial river port, at La Marmorata. With discussions of the 'Porticus Aemilia' (in reality identifiable as Navalía) and of the Horrea Aemiliana. With The sixth Contribution by Peter Herz : Rom. Strukturen der Versorgung; and with The second Contribution by Franz Xaver Schütz : Wie schwer war der ägyptische Obelisk, der heute auf der Piazza di S. Giovanni in Laterano in Rom steht?**

This second part of this *Study* is dedicated to ancient Rome's new commercial river port on the Tiber, which is located today in the quartiere Testaccio. The subjects summarized in this Chapter are hotly debated, and I myself follow those scholars, who have come to the following conclusions.

This area is by most scholars (but in my opinion erroneously) identified with the *Emporium*. In post-antique times, this area was called *La Marmorata*, because enormous quantities of marble have come to light there, where they had been stocked in antiquity. In addition, this part is dedicated to the huge *Navalia* (shipdocks), which most scholars (but in my opinion erroneously) identify with the *Porticus Aemilia*.

I myself follow Lucos Cozza and Pier Luigi Tucci (2006; cf. P.L. TUCCI 2012), who have been first to suggest that the *Navalia* at *La Marmorata* were originally erected as shipyards for the maintenance of the ships of the *Navalia*, the port of Rome's warships. The *Navalia*, Rome's port of warships, as long as it was based at Rome, was, in Cozza's, Tucci's and my own opinion, always located in the southern *Campus Martius*. But when, at the end of the first century BC, Octavian/ Augustus had moved the *Navalia*, the port of Rome's warships, from Rome to Ravenna and to Misenum, the *Navalia* at *La Marmorata* were henceforth used commercially.

Also the *Horrea Amiliana* have been assumed in this area of the (alleged) *Emporium/ La Marmorata*. I myself follow instead those scholars, who assume the *Emporium* and the *Horrea Aemiliana* in Rome's old commercial river port, which was located immediately to the west of the *Forum Boarium*.

Apart from the buildings, which in antiquity were erected in Rome's new commercial river port at *La Marmorata*, also their functions will be addressed.

These buildings were used in order to supply Rome with all goods needed - as is also very impressively demonstrated by the near-by ancient dumping-ground, called Monte Testaccio, which is discussed as well. See also *The sixth Contribution by Peter Herz*, written to further illuminate the subjects, dealt with in this Chapter: "Rom. Strukturen der Versorgung". See also *The second Contribution by Franz Xaver Schütz*, dedicated to the heaviest (documented) good, ever transported in antiquity on the Tiber: "Wie schwer war der ägyptische Obelisk, der heute auf der Piazza di S. Giovanni in Laterano steht?"

Let's now turn to this *Study* itself.

**A Study on the colossal portrait of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori at Rome (cf. here Fig. 11). With The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great);**

**Part I. The statue of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori (cf. here Fig. 11), the inscription (CIL VI 974 = 40524; cf. here Fig. 29.1), and the cult-statue of Divus Vespasianus in the Temple of Divus Vespasianus. With The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great)**

In the following will be discussed the colossal acrolithic statue of Hadrian (now Constantine the Great) at the Palazzo dei Conservatori (here **Figs. 11; 11.1**) and the inscription (CIL VI 974 = 40524; here **Fig. 29.1**), once belonging to an honorary statue of the Emperor Hadrian, dedicated to him by the Senate and the Roman

People to commemorate his victory in the Bar Kokba Revolt, as suggested by Géza Alföldy (1996, at *CIL* VI 974 = 40524 = here **Fig. 29.1**), Werner Eck (2003, 162-165), Michaela Fuchs (2014, 130-131, with ns. 45-47, Fig. 8 [= here **Fig. 29.1**]), and Caroline Barron (2018). By calling this portrait (here **Fig. 11**) 'Hadrian (now Constantine)', I anticipate here the final conclusion of my relevant research. So far we do not know, for which context this colossal portrait of Hadrian had been created, but it is tempting to ask, whether this could have been the cult-statue of *Divus Hadrianus* in the *Hadrianeum*, built by Antoninus Pius.

**Fig. 11.** Colossal acrolithic statue of Hadrian (now Constantine the Great). The ten extant fragments of it were carved from the best quality of Parian marble, called *lychnites*, and were found within and near the Basilica of Maxentius. Roma, Musei Capitolini, Palazzo dei Conservatori, courtyard. Photos: Courtesy H.R. Goette (HRG\_3320 f.): 7.2.2017, P3010567 (Unteransicht) und P3010577 am 1.3.2008, P3110473: 11.3.2011) and F.X. Schütz (06-III-2020).

**Fig. 11.1.** "Ricostruzione virtuale del colosso di Costantino realizzata da Konstantin-Ausstellungsgesellschaft Trier mbH, Musei Capitolini e ARCTRON<sup>3D</sup>"; cf. C. Parisi Presicce 2006b, 147, caption of Fig. 48; cf. p. 127, note \*). Courtesy C. Parisi Presicce.

**Fig. 29.1.** Fragmentary inscription (*CIL* VI 974 = 40524), marble, once belonging to an honorary statue of the Emperor Hadrian, dedicated to him by the Senate and the Roman People to commemorate his victory in the Bar Kokba Revolt (so W. ECK 2003, 162-165; M. FUCHS 2014; C. BARRON 2018); and according to G. Alföldy (at: *CIL* VI [1996] 40524, who restored the inscription as shown here) and M. Fuchs (2014, 130) erected within the *cella* of the Temple of *Divus Vespasianus* in the *Forum Romanum*. From: M. Fuchs (2014, 131, Fig. 8: "*CIL*, VI, Pars VIII, Fasc. II [1996], 40524". According to C. Barron (2018, who follows in this respect W. ECK 1999-2003), the honorary statue, to which this inscription belonged, stood "beneath (in front of?)" the Temple of *Divus Vespasianus*, its inscription is kept in the Capitoline Museums, Rome (inv. no. NCE 2529), and is datable: "135 CE Sep 15th to 135 CE Dec 9th". C. Evers (1991, 797, n. 72), according to whom this inscription was found in the *Forum Romanum*, asks, whether it belonged to the colossal statue of Hadrian (now Constantine the Great), here Fig. 11. In my opinion, this dedication belonged to the honorary statue, after which Hadrian's portrait-statue from Hierapydna at Istanbul (here Fig. 29) and almost 30 replicas of this portrait were copied. See below, at *A Study on Hadrian's portrait-statue from Hierapydna* (cf. here Fig. 29); and *infra*, in volume 3-2, at *Appendix IV.c.2*.

When we read Hugo Brandenburg's (2013, 16) below-quoted observations concerning the situation of Constantine the Great in AD 312, and compare that with John Pollini remarks on earlier emperors, who likewise conducted military campaigns (cf. *id.* 2017b, 54, 124, quoted *verbatim infra*, in volume 3-2, at *Appendix IV.c.1.*)), we can conclude the following. Also at the time of Constantine the Great peace still depended on the military victory of the charismatic leader, whose actions "for the benefit of Society", "the working of *Fortuna* through him", as Pollini (*op.cit.*) writes, were dependent of his personal *felicitas* and his *virtus*. In the case of Constantine the Great, however, 'invincibility' was not promised him, or granted, by one of the 'pagan' gods, as had usually happened before, but instead by the god of the Christians.

**Hugo Brandenburg (2013, 16, Chapter 2: "L'Età di Costantino") wrote about Constantine the Great's attitude to Christianity and about his victory at the Milvian Bridge :**

"Nel 311 Galerio, Licinio e Costantino emanano un editto che pone fine alla persecuzione dei cristiani iniziata da Diocleziano nel 303 e riconosce i cristiani come comunità religiosa [with n. 1]. Ciò non costituisce tuttavia un ritorno allo *status quo* esistente prima delle persecuzioni. **In Costantino il cristianesimo trova un attivo ed energico fautore**, che sostiene efficacemente sotto ogni aspetto la religione sino allora messa al bando, ponendosi sotto la protezione della divinità per preservare, seconda la tradizionale concezione romana, la propria vittoria nelle vesti di *imperator invictus*, e quindi la prosperità dell'impero.

Nel 312 Costantino attacca il coreggente e rivale Massenzio, che, fissata la propria residenza a Roma, era divenuto troppo potente e intralciava i suoi progetti egemonici. **Il giorno prima della battaglia decisiva** sulla via Flaminia, in località *Saxa rubra* presso il *pons Milvius* (attuale ponte Milvio) sul Tevere, a nord dell'antica città, **Costantino ha una visione: il sole coperto da una croce luminosa e le stelle che compongono le parole *in hoc signo vinces* ('con questo segno vincerai')**. In una seconda visione, la notte seguente, all'imperatore compare Cristo stesso, che gli ordina di collocare tale simbolo sugli scudi dei suoi soldati [with n. 2]. Queste visioni, che gli promettevano la vittoria, avrebbero evidentemente indotto Costantino ad attaccare il nemico pur disponendo di forze assai inferiori. **La vittoria ottenuta in battaglia lo convinse**, come i quattro imperatori della tetrarchia suoi predecessori, posti sotto la tutela di Giove e di Ercole, **di essere ormai sotto la protezione del Dio cristiano, che conferiva a lui invincibilità (*imperator invictus*) e all'impero integrità e prosperità**. Ciò lo indusse, condizionato dal comune sentire romano, a concedere la propria lealtà alla divinità che gli aveva promesso la vittoria e ad elargire favori e sostegno alla Chiesa cristiana [my emphasis]".

In his **note 1**, Brandenburg wrote: "Testo in LATTANZIO, *De mortibus persecutorum* 34, ed EUSEBIO, *Hist. Eccl.* 8,17".

In his **note 2**, he wrote: "EUSEBIO, *V. Const.* 1, 27-29; LATTANZIO, *De mortibus persecutorum* 44".

**The same author Eusebius, mentioned by Brandenburg (2013, 16, n. 2) in the passage just quoted, also copied an inscription, set (and therefore presumably also composed) by the Emperor Constantine himself. Constantine had added this inscription to a statue, dedicated to him by the Senate after his victory over Maxentius.**

Heinz Kähler identified the statue, described by Eusebius, with the famous colossal acrolithic statue of Constantine (his "Taf. 264" [cf. here **Fig. 11**]), found within and in the vicinity of the Basilica of Maxentius, the remaining ten marble fragments of which are on display in the courtyard of the Palazzo dei Conservatori. This is not necessarily true, but I quote Kähler's account in the following nevertheless, because of this **'personal statement' by Constantine**, in which he claims that **'thanks to the salvation bringing sign [that his statue was holding in its right hand - which some earlier scholars have identified with a cross], which is the true proof of *virtus*, I have saved and liberated Rome from the tyrant [i.e., Maxentius], and thanks to my liberation, I have restored the Senate and the Roman People to their old image and to their old splendour'**.

Cf. Kähler (1960, 391): "Tafel 264. Kolossalkopf Kaiser Konstantins aus der Maxentiusbasilika. Rom, Palazzo dei Conservatori. Marmor [cf. here **Fig. 11**]

**Der 2,60 m [corr.: the head alone is 1,74 m high; cf. *infra*] hohe Kopf des Kaisers steht zusammen mit anderen Bruchstücken der Kolossalfigur, der rechten, einen Stab haltenden Hand** [but note: as we shall see below, this is the 'wrong' right hand], dem linken Knie und den beiden Füßen im Hof des Konservatorenpalastes in Rom. Sie wurden 1487 in den Ruinen der Maxentiusbasilika ausgegraben (Taf. 258). **Neuerdings wurden weitere Reste der Arme und Beine und vor allem ein großer Block mit der linken Brust der Bildstatue unweit des gleichen Baues gefunden** [cf. *infra*]. Die Fragmente gehörten zu der über 10 m hohen Sitzfigur des Kaisers, die der Senat nach der Schlacht an der Milvischen Brücke in der Westapsis der Maxentiusbasilika aufstellen ließ. Dies geschah zwischen 313 und 315. Mit ziemlicher Bestimmtheit darf angenommen werden, **daß die riesige Figur das gleiche Bildwerk ist, von dem Bischof Eusebius von Caesarea, Zeitgenosse Konstantins, Verfasser einer Kirchengeschichte und einer Lebensbeschreibung des Kaisers, berichtet. Wir erfahren durch ihn (h. e. [i.e., *Hist. Eccl.*] 10,4,16) Konstantin habe, als ihm der Senat nach dem Sieg über Maxentius eine große Statue auf dem allervolkreichsten Ort Roms aufstellen ließ, angeordnet, daß ihr das Zeichen in die Rechte gegeben werde, unter dem er gesiegt habe. Dazu habe er unter ihr folgende Inschrift anbringen lassen:**

“Durch dieses heilbringende Zeichen, welches der wahrhaftige Beweis der Virtus ist, habe ich Eure Stadt vom Joch des Tyrannen errettet und befreit, und durch meine Befreiungstat setzte ich Senat und Volk der Römer wieder in ihre alte Erscheinung und in ihren alten Glanz ein”.

Wenn es auch einstweilen unklar bleibt, wie das Zeichen aussah, das die Statue in ihrer Rechten hielt, und was es bedeuten sollte - die Christen konnten es offenbar nach Eusebius als christliches Symbol deuten, während die Heiden in ihm vielleicht ein Sonnenzeichen erkannten - so dürfte an der Datierung des Bildnisses, da das zehnte Buch von Eusebs [*corr.*: Eusebius] erweiterter und verbesserter Kirchengeschichte 315 erschienen ist, kein Zweifel bestehen [my emphasis].

When attending Heinz Kähler's (21. Januar 1905-9. Januar 1974) *Vorlesung*, called: *Kunst der Zeit Konstantins*, held at the Universität zu Köln in the *Wintersemester* of 1972/1973, I found it especially exciting that he himself had discovered another fragment of this acrolithic statue of Constantine, namely the statue's left breast and shoulder. This further acquisition has greatly helped to reconstruct the statue-type (of a seated Jupiter), on which this acrolithic sculpture (cf. here Figs. 11; 11.1) had been based.

Especially because we can, therefore, be sure that Constantine was *not* represented wearing a cuirass, as suggested in the first reconstruction of the statue by Petersen (1900); cf. Claudio Parisi Presicce (2006b, 136, quoted *verbatim infra*). - For the importance of this iconographic detail; cf. Eugenio La Rocca (2000, 24-25, likewise quoted *verbatim infra*).

I started listening to Kähler's (last) *Vorlesung* in October of 1972, immediately after having visited Rome for the first time in September, where I had been with my professors of the Art Seminar Duisburg, among others with Katja Marina ('Karina') Türr, one of Kähler's students. Compared with the art world, I found most of the university people at first rather stiff.

*But Heinz Kähler was different !*

Kähler's lectures were like artistic performances, not only due to his perfect delivery, but because he showed us only things he had studied and published himself and that he was greatly interested in.

**The best story that Kähler told us in his *Vorlesung* was about this fragment of the left chest and shoulder of the colossal statue of Hadrian (now Constantine), here Figs. 11; 11.1 :**

On a hot summer day, while wandering over the Palatine, Kähler had come to the visitors' platform on its north side and looked down on the *Forum Romanum* and on the area to the east of it, with the Basilica of Maxentius. It was late afternoon, very hot and he sat down and fell asleep. He dreamt to be at the Basilica of Maxentius, behind its western apse. There were some high plants and looking behind them, he saw a marble block of a chest, comprising a nipple, and understood in his dream that this fragment belonged to the colossal statue of Constantine. Once awake, he went down to the site he had seen in his dream, found the bushes and - there it was !

The site indicated by Kähler in his *Vorlesung*, where he had discovered this fragment of the left breast comprising a nipple of the colossal statue of Constantine, is that of the ancient road between the Basilica of Maxentius and the 'Temple of Romulus', the '*Vicus ad Carinas*'. - When I discussed the matter on 11th January 2020 with Eberhard Thomas, the former assistant of Heinz Kähler, who had likewise attended Kähler's *Vorlesung* of 1972/73, he very vividly remembered this story as well. To this I will come back below.

Cf. here Fig. 73, labels: FORUM ROMANUM; Basilica of MAXENTIUS; SACRA VIA; "VICUS AD CARINAS"; "Temple of Romulus".

In her discussion of this portrait of Constantine the Great (cf. here Fig. 11), Helga von Heintze (1966, 252-253) has mentioned the fragment, found by Kähler:

"... Die l.[inke] Brust und Schulter befinden sich noch auf dem Forum (Kähler, Jahrb. d. Inst. 67 [1952] [*i.e.*, here H. KÄHLER 1952] 1 ff. Abb. 16. 17) ...".

Helga von Heintze (1966, 252-253) continued:

"Die hier [in the courtyard of the Palazzo dei Conservatori] aufgestellten Fragmente und eines, das erst 1951 auf dem Forum gefunden wurde und dort verblieben ist, gehören zu einer ko-[page 253] lossalen Sitzstatue Konstantins des Großen. Das fehlende Gewand wird aus Metall oder aus Stuck bestanden haben ... Über die Statue kann man aus den Fragmenten Folgendes schließen: Konstantin thronte in aufrechter Haltung, den Kopf leicht zu seiner linken Schulter gewandt, das linke Bein zurückgesetzt. **Der rechte Arm war waagrecht zur Seite gehoben, im Ellbogen gebeugt, die [rechte] Hand stützte sich auf ein Szepter oder eine Lanze, an der Handfläche sind oben und unten Auskehlungen zu erkennen. Das Szepter vermutete man in Form eines Kreuzes auf Grund einer bestimmten Interpretation der Eusebiusstelle (Hist. Eccl. 9,9,10-11) und des Münchener Silbermultiplums [so M. RADNOTI-ALFÖLDI 1963]. Doch wird man diese Annahme ablehnen müssen, da einmal auf der Münze nicht ein Kreuzzepter dargestellt ist und zweitens das Kreuz als christliches Symbol erst am Anfang des 5. Jhs. an Bedeutung gewinnt.** Da vom linken Arm nichts erhalten ist, können wir über seine Haltung nichts aussagen. Einen Panzer kann die Statue nicht getragen haben, da dieser eine Spur am rechten Oberarm hinterlassen hätte [to this we may add: also the fragment of the statue's left breast and shoulder prevents this assumption], wohl aber ein Paludamentum, das den Körper lose einhüllte [my emphasis]".

Cf Heintze (1966, 254: bibliography) writes: "... M. R. Alföldi [*i.e.*, M. RADNOTI-ALFÖLDI], **Die constantinische Goldprägung** [1963] 63 f. Abb. 293; 151 f. (zu Kreuzzepter) ... [my emphasis]".

Averil M. Cameron writes about the Christian historian Eusebius:

"Eusebius, of Caesarea (c.[*irca*] AD 260-339), prolific writer, biblical scholar and apologist, effective founder of the Christian genres of Church history and chronicle, and **the most important contemporary source for the reign of Constantine** ... From his election as bishop of Caesarea [in Palestine] c.[*irca*] 313 until his death in 339, [page 576] Eusebius played a significant role in the ecclesiastical politics in the eastern empire ... His *Life of Constantine*, left unfinished at his death, sought to create the impression of a harmonious and consistent imperial religious policy from the accession of Constantine (306) to the reign of his three sons, beginning in September 337 ...

**Eusebius' integrity as a historian has often been challenged**, and indeed the later part of his ten-book *Ecclesiastical History* (which may have been begun in the 290s but only reached its final form in 324-5) was successively extended and clumsily revised as immediate circumstances changed. The *Life of Constantine*, in four books, has seemed so suspect on the grounds of bias and inconsistencies that Eusebian authorship has been denied. **But the authenticity of the many documents cited or mentioned has been vindicated in one major case by the identification of the same text on papyrus, and modern scholarship is more willing than before to recognize the complexity of Eusebius's methods. The citation of documentary evidence marks both works off from secular historiography** ... [my emphasis]", in: *OCD*<sup>3</sup> (1996) 575-576".

#### **Kähler's fragment of the left chest and shoulder of the acrolithic portrait of Hadrian (now Constantine the Great) refound**

For this fragment of the left breast and shoulder of the acrolithic portrait of Hadrian (now Constantine the Great; cf. here Fig. 11); cf. now Claudio Parisi Presicce (2006b, 127, note \*), who writes that after Kähler

(1952) had described the fragment, nobody ever saw it again. This I can confirm, because when looking for the fragment on Easter 1975 at the site, which Kähler had indicated in his *Vorlesung* in 1972/73 (immediately to the west of the Basilica of Maxentius, at the 'Vicinus ad Carinas'; cf. here **Fig. 73**), I realized that it was not there any more. Parisi Presicce has been able to trace it at the Antiquarium of the Forum Romanum and has published photographs of it; cf. Parisi Presicce (2006b, 136-138, p. 139, Figs. 33-37. Cf. the caption of his Figs. 33-34: "Roma, Antiquarium del Foro. **Frammento di porzione del petto del colosso di Costantino, con il modellato del capozzolo** [my emphasis]").

**Interestingly, the findspot, which Kähler had told us in his *Vorlesung* of 1972/73 for the fragment of Constantine's left chest, Kähler (1952) himself has recorded for a *different* fragment of the same statue:**

Cf. Claudio Parisi Presicce (2006b, 135): "2. **Un breve tratto dell'avambraccio** [destro] lungo 72 cm, con resti della venatura nel modellato è stato ritrovato in anni più recenti ai piedi dell'abside occidentale della basilica [with n. 10]. Trasferito in deposito ai Musei Capitolini negli anni del Governatorato di Roma, si trova esposto insieme agli altri frammenti nel cortile del Palazzo dei Conservatori (MC, dep. 12) (fig. 29) [my emphasis]".

In his **note 10**, Parisi Presicce writes: "**H. KÄHLER** ... [*i.e.*, here H. KÄHLER 1952], p. 14, è l'unico che menziona il frammento, affermando che il rinvenimento avvenne "in den [corr.: dem] Raum zwischen der Basilika [of Maxentius] und den [corr.: dem] sogenannten Romulustempel" e "bei den Arbeiten anlässlich der Freilegung des Templum Pacis durch die Italiener" [my emphasis].

Cf. here **Fig. 73**, labels: FORUM ROMANUM; Basilica of MAXENTIUS; SACRA VIA; "VICUS AD CARINAS"; "Temple of Romulus"; TEMPLUM PACIS.

**On this fragment of Constantine's left chest (here Figs. 11; 11.1), Parisi Presicce (2006b, 136) writes instead:**

"D. **Una porzione del petto sinistro, alta cm 126 circa, con la spalla e l'attacco del braccio, è stata individuata nel 1951 ancora in situ** [with n. 11] e attualmente è conservata nel primo chiostro della chiesa di S. Francesca Romana, sede dell'Antiquarium del Foro Romano (figg. 33-36). **La sua attribuzione all'acrolito ha consentito di escludere che la statua colossale fosse loricata, come era stato affermato da Petersen nel 1900, riproposto nel 1932 da Minoprio con un primo tentativo di ricostruzione grafica** [with n. 12], ed escluso da Delbrueck nel 1933 [my emphasis]".

In his **note 11**, Parisi Presicce writes: "**H. KÄHLER** ... [*i.e.*, here H. KÄHLER 1952], p. 12 s., figg. 7-9 [my emphasis]".

In his **note 12**, he writes: "A. MINOPRIO, A Restoration of the Basilica of Constantine, Rome, in *BSR*, XII, 1932, pp. 10-13, tavv. XI, e VIII-IX. Una parziale ricomposizione dell'acrolito, basata sulle fotografie di molti frammenti, è stata pubblicata da B. ANDREAE ... [*i.e.*, here B. ANDREAE 1973], fig. 633. Una nuova ricostruzione grafica, rimasta inedita, è stata realizzata in occasione dell'intervento di restauro sulle sculture del cortile del Palazzo dei Conservatori eseguito nel 2000, durante il quale la società Modus di Paolo Rolli, su incarico della società Lattanzi, aggiudicataria dell'appalto, ha realizzato le riprese e la restituzione fotogrammetrica dei singoli frammenti. Una secondo tentativo di ricomposizione basato su uno schizzo schematico dei frammenti è stato pubblicato da J.G. DECKERS ... [*i.e.*, here J.G. DECKERS 2005], p. 168, fig. 5".

**These two fragments of the left breast and shoulder and of the right forearm of the colossal acrolithic statue of Hadrian (now Constantine the Great), which Kähler (1952) had described, have been integrated into the digital reconstruction of this statue of Constantine that was created for the exhibition *Konstantin der Große* at Trier (cf. A. DEMANDT and J. ENGEMANN 2007); cf. here **Fig. 11.1**.**

Let's now turn to the discussion of the portrait of Hadrian (now Constantine the Great) by other scholars (cf. here Fig. 11).

**Paul Zanker** (in: K. FITTSCHEN and P. ZANKER 1985 I, 147-152) Cat. no. 122 [cf. here Fig. 11] writes: "Kolossales Bildnis Constantins des Großen im 2. Bildnistypus. Frühconstantinisch. Taf. 151.152. Palazzo dei Conservatori, Cortile. Inv. 1622. H des Antiken ca. 2,97 m, **H Kinn-Scheitel 1,74 m** [my emphasis]".

Cf. p. 148: "Zum Aufstellungsort: **Kopf und Statuenfragmente stammen von einer kolossalen (ca. [circa] 10 m hohen) Sitzstatue**, die einst in der Westapsis der Maxentius- bzw. Constantinsbasilika errichtet war. Das bezeugt eindeutig eine von Buddensieg (a.O. [an angegebenem Ort; *i.e.*, here T. BUDDENSIEG 1962]) veröffentlichte Zeichnung des Francesco di Giorgio Martini, der offenbar im Jahre 1486 Zeuge von Ausgrabungen in der Basilika war. Die Errichtung der Statue steht im Zusammenhang mit einer Änderung der Baukonzeption. Das ursprünglich von Osten nach Westen orientierte Gebäude wurde während des Baus an seiner Südseite mittels einer Sälenvorhalle zur Sacra Via hin geöffnet und erhielt gleichzeitig an der Nordseite in der Achse zum neuen Eingang eine zusätzliche Apsis. **Die Westapsis ist unterkellert, woraus Kähler (a. O. 1952) überzeugend geschlossen hat, daß sie ursprünglich nicht als Aufstellungsort einer kolossalen Statue vorgesehen gewesen sein kann.** Wann die Planänderung der Basilika erfolgte, ist aber unbekannt. Man kann sie deshalb nicht als Argument für die Frühdatierung des Kolosses verwenden (Kähler) ...

Es ist zwar möglich, aber alles andere als sicher, daß die Statue mit der bei Eusebius (Hist. Eccl. 9,9,10-11) erwähnten, vom Senat am "alleröffentlichsten Ort" aufgestellten Statue ... identisch ist. In diesem Fall müßte man das von Eusebius genannte  $\tau\omicron\upsilon\ \sigma\omega\tau\eta\rho\iota\upsilon\ \tau\rho\acute{o}\pi\alpha\iota\omicron\nu\ \pi\acute{\alpha}\theta\omicron\upsilon\varsigma$  im Schema des Kreuzes in der rechten Hand ergänzen.

Nach Eusebius ließ Constantin selbst eine Inschrift unter diese Statue mit dem 'Kreuzzepter' setzen, in der er das heilbringende Zeichen und seine eigene *virtus* gemeinsam als Ursache seiner Siege nennt. Sollten wir es bei unserem Koloß tatsächlich mit den Resten dieser von Eusebius beschriebenen Statue zu tun haben, so bliebe jedoch trotz des 'heilbringenden Zeichens' **die entscheidende und in dieser Monumentalität gegenüber den bisherigen Kaiserbildnissen einzigartige Aussage der Statue: die übermenschliche, göttergleiche Potenz des neuen Herrschers** [my emphasis]". - To Zanker's last remark I will come back below.

In the following, Zanker (1985, 148-149) discusses the various hypotheses, already published at that stage, that this portrait of Constantine had been recut from an earlier one, adding himself some more observations which prove that this assumption is indeed true. I agree with Zanker (*op.cit.*) that this earlier portrait cannot possibly have been Maxentius, whose head has a very different shape, and whose very short, 'military' haircut we know from coins and portraits in the round, from which the rich curls of this Constantine portrait (cf. here Fig. 11) could not possibly have been re-cut. But I do not agree with Zanker that the mere proportions of this acrolithic statue allow only the conclusion that this statue represented, in its original state, a divinity.

From his perspective therefore understandably, Zanker (1985, 148-149) does not address the possibility that the aggrandizement, rightly observed by him in the above-quoted passage in the case of Constantine (by the mere choice to represent the man in such colossal proportions), was therefore not only true for Constantine, but already for the earlier emperor, which this colossal statue had represented (*i.e.*, in my opinion Hadrian).

In his discussion of the western apse of the Basilica of Maxentius, Zanker (1985, 148) follows the relevant conclusions of Kähler (1952), who had observed that underneath this apse there was a basement. And because the acrolithic portrait of Constantine (cf. here Fig. 11) was found within that apse, it is in my opinion clear, that, at the time of Maxentius, no such colossal statue had been planned to be erected there. Because of this additional reason, we can rule out with certainty that the head of this sculpture could originally have been a portrait of Maxentius.

But thanks to the discussion of the subject just mentioned with Eugenio La Rocca on 7th March 2020, I now realize that it is not necessarily as easy as that. Because, being an acrolithic statue, as La Rocca convincingly suggested to me, this colossal portrait of Constantine was *not* as heavy as a massive marble statue would have been.

Eugenio La Rocca (2000, 24-25) analyses the specific stylistic properties of those portraits that can with certainty be attributed to Constantine the Great. He, too, suggests that the iconography of the extant acrolithic portrait of Constantine at the Palazzo dei Conservatori (cf. here Fig. 11) may be explained with the assumption that this is the statue of the emperor mentioned by Eusebius. La Rocca adds more interesting information concerning the meaning of this statue, and (as we know now, erroneously) suggests that it was created by re-using parts from different statues, and lists the various opinions, whom this portrait head may originally have represented :

#### "6. L'imperatore cristiano

Le soluzioni adottate per l'immagine di Costantino sono in tal senso illuminanti. Senza poter stabilire una linea evolutiva coerente, si avverte nei suoi ritratti sicuri il passaggio dalle forme rigide e geometrizzanti di tradizione tetrarchica verso forme più naturalistiche, talvolta raddolcite, ispirate forse alle immagini di Augusto [with n. 163] ...

**La scelta di un'immagine giovanile e atemporale**, accurata nella definizione dei caratteri somatici salienti, eppure prodotta con una sempre maggiore semplificazione dei lineamenti che rasenta l'astrazione, **risultava quella vincente, in quanto sembrava caratterizzare meglio il *fundator quietis*, come recita l'iscrizione di dedica dell'arco a lui dedicato a Roma [i.e., the Arch of Constantine] dopo la vittoria su Massenzio ...**

La colossale statua marmorea dalla basilica di Massenzio (fig. 24) è ormai definitivamente attestata in una fase precoce del suo principato, nel periodo della sua breve permanenza a Roma dopo la battaglia di Ponte Milvio, quando furono celebrati i suoi *Decennalia* [with n. 167]. **Costantino non è raffigurato come un imperatore cristiano ma, secondo la tradizione consolidata, in una trasposizione eroica del tipo di Giove assiso, seminudo, con il mantello ricadente sulla spalla sinistra e intorno ai fianchi. Un medaglione di Gioviano nel quale l'imperatore è seduto su un trono con alta spalliera alla stregua di Giove, con una Vittoria al suo fianco, ed una prigioniera, personificazione di una popolazione barbarica sconfitta, in atto di supplica ai suoi piedi, può dare effettivamente un'idea del tipo, ma con una consistente variante: Gioviano [corr.: Constantine], come meglio si conviene a un imperatore cristiano, non è seminudo, ma loricato, con scudo di lato [with n. 168] (fig. 23). È verosimile che la statua colossale di Costantino sia stata ricavata da pezzi di più statue acrolitiche rimessi insieme con scarse correzioni, ad esclusione, evidentemente, della testa, che comunque è rilavo- [page 25] rata su un precedente ritratto [with n. 169]. Se la statua è stata dedicata dal Senato riconoscente dopo la battaglia di Saxa Rubra [i.e., against Maxentius], non ci si poteva attendere altro: un'immagine che equipara l'imperatore a un dio, tale da indurre rispetto e timore ...**

**Il fatto è che l'acrolito doveva raffigurare non il comandante vincitore, ma il *deus praesens*, e vi era quindi sviluppato al massimo grado il *decorum* consono ad un'immagine collocata nell'abside della più imponente basilica tardoantica ... [my emphasis]"**.

In his notes 163, 167 and 168, La Rocca provides references and further discussion.

In his note 169, he writes: "Non si è giunti a una posizione univoca circa l'imperatore raffigurato prima di Costantino. Harrison 1967, p. 92 ss., pensava che si trattasse di una statua di Traiano nel foro omonimo, sebbene testa e mano destra, di altro marmo, fossero un'aggiunta posteriore. Jucker 1963 [corr.: 1983], p. 54 ss., supponeva invece che per Costantino fosse stata rilavorata una statua colossale destinata a onorare Massenzio nella basilica stessa. Più di recente è stata avanzata la possibilità che la testa fosse pertinente a un acrolito di Adriano: Evers 1991, p. 794 ss., fig. 5-8 [my emphasis]"

La Rocca's (2000, 25) idea that the statue of Constantine (cf. here Fig. 11), represents the Emperor as "*deus praesens*", has now been followed by Claudio Parisi Presicce (2005, 147; cf. *id.* 2006b, 154).

Cf. *infra*, in volume 3-2, at Appendix IV.c.2.); quoted also above, in Preamble; at Section II.

For the inscription FVNDA TORI QVIETIS in the passageway of the Arch of Constantine, which referred to Constantine's defeat of Maxentius at the *Pons Mulvius* in AD 3, and that La Rocca (2000, 24) has mentioned in the above-quoted passage; cf. *supra*, in Chapter *Preamble*; Section III.; at point 5.); and below, in Chapter *The major results of this book on Domitian*.

And, as already mentioned before, Amanda Claridge (2010, 465) has followed Evers's suggestion: "... (though the crease in the ear lobe suggests that the head was actually reworked from one of Hadrian)", thus referring to the relevant observations of Cécile Evers (1991), but without providing a reference. Note that already in the first edition of her Rome guide; cf. Claridge (1998, 382), the author had followed Evers's hypothesis, but in this text she had not as yet mentioned "the crease in the ear lobe". - This point is discussed in detail, *infra*, in volume 3-2, in *Appendix I.a*; at Section XIII.

**La Rocca's (2000, 24-25) analysis has shown that the statue-type used for this acrolithic portrait of Constantine (cf. here Fig. 11) was that of a seated Jupiter. This is understandable because whoever was represented in the original portrait: Trajan, Hadrian or Maxentius, none of them was a Christian.**

Since the time of Augustus, the reigning emperors had usually regarded themselves as the son of Jupiter, and some of them had even been equated with their supreme god.

For discussions of this point; cf. *supra*, in Chapter *Preamble*; at Section II.; below, at Chapter *The major results of his book on Domitian*; and *infra*, in volume 3-2, at *Appendix II.a*)).

Considering at the same time the possibility that this statue of Hadrian (now Constantine) here **Fig. 11**, actually *was* the portrait of Constantine described by Eusebius (*Hist. Eccl.* 10,4,16), Constantine's above-mentioned addition of his inscription to this portrait becomes all the more understandable. Because, as Constantine stated in this inscription, the choice of the 'salvation-bringing sign [that his statue was holding in its right hand - which some earlier scholars have identified with a cross]', which, as Eusebius reports, Constantine had ordered the artists to represent in the statue, had transformed this 'Jupiterlike' portrait of Constantine (cf. here **Fig. 11**) into something completely new.

**But as we shall see below, I myself follow now those scholars, who do *not* believe that the statue of Constantine (here Figs. 11; 11.1) was the one which Eusebius has described.**

When the manuscript of this volume was about to be sent to the press, Franz Xaver Schütz alerted me to the book by Klaus M. Girardet (*Der Kaiser und sein Gott. Das Christentum im Denken und in der Religionspolitik Konstantins des Großen*, 2010, 92), who has likewise come to the conclusion that the colossal statue of Hadrian (now Constantine the Great), here **Figs. 11; 11.1**, is *not* the statue described by Eusebius (*Hist. Eccl.* 10,4,16). To Girardet's observations concerning this colossal portrait of Constantine I will come back below.

**In the following, I will discuss Cécile Evers's (1991) hypothesis, according to which this portrait of Constantine (cf. here Figs. 11; 11.1) was originally a portrait of Hadrian (together with this portrait will also be discussed the inscription *CIL VI 974 = 40524*; cf. here Fig. 29.1, which C. EVERS 1991 has tentatively attributed to this portrait).**

Evers's hypothesis was first followed by Amanda Claridge (1998, 382; *ead.* 2010, 465, who did not provide a reference though), and we shall see below that Evers's hypothesis is now also followed by Hans Rupprecht Goette (cf. below, at *The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great)*), and by myself. After the accounts by Goette and myself were written, Hans fortunately found the article by Klaus Fittschen (2012), from which we learned that already Brigitte Ruck (2007, 242-243) and Klaus Fittschen (2010b, 1103; *id.* 2012b, 75 with n. 68) had followed Evers's (1991) relevant hypothesis (!).

When reading Kähler's account (1960, 381; quoted also *infra*, in volume 3-2, in *Appendix I.a*); at Section XIII.):

"Nach einem Brande im Jahre 307 ließ Maxentius an der Via Sacra, südöstlich des Forum Romanum, über den Trümmern zerstörter Kaufhäuser eine Basilika errichten",

- I had at first thought that this portrait of Hadrian (now Constantine; cf. here **Figs. 11; 11.1**) could have been commissioned by Hadrian for his Temple of Venus and Roma, which, destroyed in the same fire of AD 307, had been restored by Maxentius. But coins, issued by Antoninus Pius, record that portrait-statues of Hadrian and Sabina, which had actually been erected at this temple, were set on very high columns; cf. Alessandro Cassatella ("Venus et Roma, aedes, templum", in: *LTUR* V [1999] 121): "... **Alcuni conii di Antonino, datati al 140-144, raffigurano un tempio decastilo e due colonne con le statue di Adriano e Sabina** (*RIC* III, 110, Nn. 622, 623, 113 N. 651, 114 N. 664; [P.V.] Hill [1989], 16) ed indicherebbero il completamento dei lavori sotto questo imperatore ... [with Fig. 66] ... **Nel 307, distrutto da un incendio, venne** [*i.e.*, the Temple of Venus and Roma] **restaurato da Massenzio** [providing references; my emphasis] ...".

From the above-mentioned coins it is clear that this colossal, acrolithic portrait-statue of Hadrian (now Constantine), here **Fig. 11; 11.1**, was certainly not on display in front of the Temple of Venus and Roma, mounted on a high column, as visible on those coins. Simply because this portrait represented the emperor seated, was 10-12 m high, and had been fixed at several points to the wall(s) behind it. Acrolithic statues were constructions, which is why they could not be put on display under the open sky (cf. *infra*).

*Was the colossal statue of Hadrian (now Constantine), here Figs. 11; 11.1  
originally the cult-statue of Divus Hadrianus in the Hadrianeum ?*

**Franz Xaver Schütz suggests to me that the most obvious place, for which the colossal acrolithic portrait of Hadrian (now Constantine), here Figs. 11; 11.1, could have been created, is, of course, the Hadrianeum (also because in this case it would have stood in the *cella* of this temple). At first glance I agreed, but this attractive hypothesis is likewise impossible (as I at first thought), and that for the following reasons.**

The *Hadrianeum* is still standing, and when we follow at the same time those scholars, who assume that this portrait of Constantine (here **Figs. 11; 11.1**) is the one described by Eusebius (*Hist. Eccl.* 10,4,16), this would mean that the Senate had actually removed the cult-statue of *Divus Hadrianus* (for his divinization; cf. *supra*, n. 331, in Chapter II.2.), from his intact temple, the *Hadrianeum*. And that in order to rework the statue's face into a portrait of Constantine - a procedure, which I find impossible to believe.

As already quoted above, Hugo Brandenburg (2017, 70), in his discussion of the question, whether or not ancient *spolia* could possibly have been re-used for the construction of Constantine the Great's new Basilica of Saint Peter's, writes: "Öffentliche Bauten einschließlich der Tempel, denen man Material in den entsprechenden Maßen und vielleicht auch Anzahl als Spolien hätte entnehmen können, standen nicht zur Verfügung, da sie in gutem Bauzustand waren und bis in die Mitte des 5. Jh. als *ornamenta urbis* unter Schutz standen [with n. 203; quoted *verbatim supra*, in Chapter IV.1.1.c)".

Besides, the *Hadrianeum* is mentioned in the Regionary Catalogues, which are datable to the Constantinian period; cf. *infra*, in volume 3-2, in *Appendix VI.*; at Section VII.

See also Amanda Claridge (2010, 225, with Fig. 94, quoted *verbatim infra*, in volume 3-2, at *Appendix IV.c.2.*); Domenico Palombi ("Regiones quattuordecim", in: *LTUR* IV [1999] Fig. 84: "*Regio IX. Circus Flaminius* ... 15. (Hadrianeum)". For the *Hadrianeum*; cf. now also Claudio Parisi Presicce and Massimo Baldi (2023, in press).

**But, when I had finished writing this volume, I realized a curious fact, when looking again at the digital reconstruction of this colossal statue of Hadrian (now Constantine), here Fig. 11.1. Hadrian has been**

represented in this portrait with *bare feet*, as if he were a dead hero or a god. See for example the statue of Jupiter in the Hermitage (here Fig. 10), showing the god likewise with bare feet; this representation of Domitian's (fourth) cult-statue of Iuppiter Optimus Maximus Capitolinus copies in mirror image that statue-type of Jupiter, of which the portrait of Hadrian (now Constantine), here (Fig. 11; 11.1) is a replica.

Should we, therefore, conclude that the statue here Figs. 11; 11.1 was originally a representation of *Divus Hadrianus*?, or even the cult-statue of *Divus Hadrianus* in the *Hadrianeum*?

Given the enormous size of this acrolithic sculpture, it is anyway difficult to imagine a *different* purpose for it. But also the statue of Tiberius from Cerveteri (here Fig. 15), a replica of the same statue-type of Jupiter (as here Figs. 11; 11.1), is represented with bare feet (possibly because also this was a posthumous portrait?).

For all those sculptures, which copy the statue-type of Jupiter Capitolinus and its mirror-image; cf. *supra*, at *A Study on Domitian's cult-statue of Iuppiter Optimus Maximus Capitolinus* (cf. here Fig. 10).

And, provided the statue (here Figs. 11; 11.1) was indeed originally the cult-statue of *Divus Hadrianus*, how could we explain that this colossal portrait, which had originally represented the dead Emperor Hadrian, being after all the cult-statue in the temple of this divinized emperor, could have been re-used to represent the *living* Emperor Constantine? - I cannot pursue all those questions in this context any more, but hope to have the chance to come back to them in the future.

For the fact that cult-statues were usually represented with bare feet; cf. Rosel Pientka-Hinz ("Die Herstellung von Kultbildern mit kostbarer Kleidung", 2018, 2): "Die Füße aber bleiben für gewöhnlich nackt". - I thank Franz Xaver Schütz for the reference.

Let's now return to our main subject.

I anticipate here also another fact, that we will learn below: this colossal statue of Hadrian (now Constantine), here Figs. 11; 11.1, is certainly not the famous statue of Constantine, described by Eusebius (*Hist. Eccl.* 10,4,16), because the statue of Constantine, which Eusebius saw, had been erected by the Senate 'a Roma nel luogo più pubblico di tutti'; cf. Parisi Presicce (2006b, 140 with n. 15). - Which means that *this* portrait of Constantine the Great cannot possibly have been an acrolithic statue.

Let's now turn to the fragmentary inscription (CIL VI 974 = 40524; cf. here Fig. 29.1) that once belonged to an honorary statue of the Emperor Hadrian, dedicated to him by the Senate and the Roman People to commemorate his victory in the Bar Kokba Revolt (so convincingly M. FUCHS 2014. 130), and which according to Geza Alföldy (at: CIL VI 40524) and Michaela Fuchs (2014, 130) was erected within the Temple of *Divus Vespasianus*.

Reading again the article by Michaela Fuchs 2014 (130, quoted *verbatim infra*), I found that she discusses an inscription (cf. here Fig. 29.1) that belonged, in her opinion, to a colossal honorary statue of Hadrian. This may be identified as a large victory monument, dedicated to Hadrian by the Senate and the Roman People, for having 'liberated Syria and Palestine' - that is to say, for his victory in the Bar Kokhba Revolt.

For a discussion of the Bar Kokba Revolt; cf. *supra*, n. 216, in Chapter I.2.; below, at *A Study on Hadrian's portrait-statue from Hierapydna* (cf. here Fig. 29); and *infra*, in volume 3-2, at Appendix IV.c.2.).

This fragmentary inscription (here Fig. 29.1) was found either within the Temple of *Divus Vespasianus*, or in its vicinity. Geza Alföldy (at: CIL VI 40524) believed that this portrait of Hadrian was erected in the *cella* of the Temple of *Divus Vespasianus*. Fuchs (2014, 130, with n. 47) follows him, not only because of the findspot of the inscription, but also because of its content: in this inscription Hadrian's military success is explicitly

compared with those of the *imperatores maximi* Vespasian and Titus, 'whom, with his victory, Hadrian has even surpassed'.

Michaela Fuchs (2014, 130) writes:

"Auch wenn Hadrian keinen Triumph feierte [*i.e.*, for his victory in the Bar Kokhba Revolt], so hat der Senat den östlichen Erfolg des Kaisers doch auch in Rom - wenn auch sehr zurückhaltend - gewürdigt. Eine fragmentarische Inschrift (Abb. 8 [= here Fig. 29.1]) belegt, dass dem Kaiser ein großes Siegesdenkmal errichtet wurde [with n. 45], ohne dass sich über dessen Charakter Näheres aussagen ließe. Der 90 cm hohe Rest der Inschrifttafel könnte am ehesten zu einer Basis für eine kolossale Statue Hadrians gehört haben, die allem Anschein nach auf dem Forum Romanum im Tempel des Divus Vespasianus [with n. 46] aufgestellt war [with n. 47]. Das Fragment kam in oder nahe den Überresten dieses Gebäudes zutage, doch wird der Zusammenhang nicht nur durch den Fundort nahegelegt, sondern er wird auch aus dem Wortlaut der Inschrift ersichtlich. Der Senat und das Volk von Rom widmeten dieses Denkmal dem Kaiser, weil der dank des vorbildlichen Eifers des von ihm entsandten Heeres im Gefecht Syrien und Palästina befreit und dabei sogar die *imperatores maximi* (d. h. [das heißt] Vespasian und dessen Sohn Titus) übertroffen habe. Damit wird direkter Bezug auf den jüdischen Aufstand genommen, den gut 60 Jahre zuvor die Flavier niedergeschlagen hatten [my emphasis]".

The caption of Fuchs's "Abb. 8" reads: "CIL, VI, Pars VIII, Fasc. II, 40524 [= here Fig. 29.1]".

In her note 45, Fuchs writes: "CIL, VI, 974 = 40524; vgl. ECK 1999b, 310 mit Anm. 79; vgl. *ibid.* 313 mit Anm. 93".

In her note 46, she writes: "Zum Bau vgl. DE ANGELI 1992; COARELLI 2009 [*i.e.*, here F. COARELLI 2009b], 75-77".

In her note 47, she writes: "s. dazu auch G. ALFÖLDY, in CIL, VI, 40524".

Note that neither Geza Alföldy (at: CIL VI 40524), or Michaela Fuchs (2014, 130, with n. 47) address the questions, where exactly within the Temple of *Divus Vespasianus* the honorary statue of Hadrian, to which the inscription (CIL VI 974 = 40524) belonged, could have been on display, and whether or not there are architectural remains that may be interpreted as the base of this statue.

I have at first asked myself whether this colossal portrait of Hadrian, so far not identified (to which the inscription here Fig. 29.1 belonged), erected according to Geza Alföldy (at: CIL VI 40524 = 974) and Michaela Fuchs (2014, 130) within the Temple of *Divus Vespasianus*, could have been the statue of Constantine discussed here (cf. here Fig. 11; 11.1), provided, the head of this sculpture had indeed first represented Hadrian. - As I only found out later, Cécile Evers (1991, 797, n. 72, quoted *verbatim infra*) had already asked this question, with the difference that she assumed that this inscription was found in the *Forum Romanum*.

But let me anticipate here that, after having finished writing the following Chapter (cf. *infra*, in volume 3-2, Appendix IV.c.2.), I have changed my mind and suggest now that this dedication (here Fig. 29.1) belonged to the original, after which Hadrian's portrait-statue from Hierapydna at Istanbul (cf. here Fig. 29) and the almost 30 replicas of this portrait of the emperor were copied.

Cf. below, at *A Study on Hadrian's portrait-statue from Hierapydna* (cf. here Fig. 29).

Consequently, I was unfortunately at first unable to make a suggestion, for which context this colossal portrait of Hadrian (now Constantine), here Fig. 11, had originally been created. - But see now above.

*A discussion of the question, whether the colossal portrait of Hadrian (now Constantine), here Figs. 11; 11.1, could have been on display within the cella of the Temple of Divus Vespasianus*

Although the extant marble fragments of this acrolithic portrait of Hadrian (now Constantine), here **Fig. 11**, may originally have belonged to different statues (but we shall see below that this old assumption is not true), the size of its head is crucial for the following reasonings. It is, in my opinion, impossible at first glance to imagine, where exactly this truly 'colossal' portrait could have been on display within the Temple of *Divus Vespasianus*. Given the fact that the head of Constantine (cf. here **Fig. 11**) is 1,74 m high, whereas the (fragmentary) head of Vespasian (Naples, MAN, inv. no. 6068), which Filippo Coarelli (2009b, 77, with n. 90, Fig. 14) identifies as that of the cult-statue of *Divus Vespasianus* in this temple, measures only 75 cm; the latter cult statue stood within an *aedicula*. - But we shall learn below that Coarelli's assumption that this colossal portrait of Vespasian was found in the area of the Temple of *Divus Vespasianus* is certainly not true.

An acrolithic statue of the proportions of this Hadrian (now Constantine; cf. here **Fig. 11**), which was circa 10 m high, could, in my opinion, not possibly have been erected within the *cella* of the Temple of *Divus Vespasianus*, unless the Senate and the Roman People, by commissioning this colossal portrait of Hadrian would have had the intention to 'dwarf' the already pre-existing cult statue of *Divus Vespasianus*. I am adding this reserve here, provided Filippo Coarelli's (2009b, 77) reconstruction of the cult-statue of *Divus Vespasianus* in the Temple of *Divus Vespasianus* should be true, according to whom this cult-statue was: "certamente ispirata a un tipo di Giove in trono, alta circa 5.50 metri (seduta 4.20)".

Claudio Parisi Presicce (2006b, 154) even suggests that the statue, here identified as Hadrian (now Constantine), was circa 10-12 m high. - Although admittedly the sheer proportions of this statue of Hadrian (cf. here **Figs. 11; 11.1**; if it is this what it was) could illustrate the content of the inscription (*CIL* VI 974 = 40524; here **Fig. 29.1** [provided, that inscription belonged to this portrait of Hadrian, now Constantine, as suggested by C. EVERS 1991, 797, n. 72]; cf. M. FUCHS 2014, 130), since the Senate and the Roman People here declare that Hadrian's victory in the same area of the Empire was even greater than those accomplished there by Vespasian and Titus.

*Concerning this colossal acrolithic portrait of Hadrian (now Constantine; cf. here Fig. 11) we should, therefore, also consider something else: the intended impact of its display*

A 10-12 m high statue within a room can be *very* impressive, depending on how it is orchestrated. When Hadrian was honoured with this portrait (cf. here **Fig. 11**), there existed already the marble *colossus* at the Forum of Augustus (in case that still survived), which, as relevant remains on the back wall of the lavishly decorated 'Sala' or 'Aula del Colosso' indicate, was at seven points fixed to it. The 'Aula' itself was part of the original plan of the *forum* and stood immediately to the west of the Temple of Mars Ultor. Only scarce remains of this *colossus* have survived, its base, which shows that the *colossus* was a standing statue, and which allows the reconstruction of the statue's pose (cf. M. SPANNAGEL 2017, 214, n. 61, Figs. 3-8; 13), as well as marble fragments, of a right hand which held a staff-like object, of a left hand, and of the *colossus's* head with its right eye. They allow the reconstruction of the height of this *colossus* (*i.e.*, more than 10 ½ m) but not of its subject, which is therefore debated. One thing is clear: the chronology of the 'Aula del Colosso' precludes the assumption that this could have been from the beginning a statue dedicated to *Divus Augustus*.

**It is not my intention here to come to a conclusion myself concerning this controversy, I mention this *colossus* only as a possible comparison - in case it still survived at Hadrian's time - that may have been regarded as a model for the installation of this portrait of Hadrian (cf. here Figs. 11; 11.1).**

Martin Spannagel (2017) discusses the complex debate on this *colossus*, but does not follow those, who identify it as a portrait of Augustus. So for example Eugenio La Rocca (1995b; and elsewhere), who believes

that the *colossus* was dedicated to the *Genius* of Augustus. Spannagel (2017) discusses also John Pollini's (2012) relevant account.

See John Pollini (2012, 23-25, 4278), who illustrates on his Plate III a reconstruction of this *colossus*, which shows the togate Augustus, holding a *lituus* in his right hand, and which is meant to represent the *Genius* of Augustus. The caption of Pollini's Plate III reads: "Reconstructed Hall of the Colossus in Forum of Augustus (*lituus* held by statue and restored painting incorrect in my opinion). Courtesy of the Sovraintendenza ai Beni Culturali del Comune di Roma, Archivio Museo dei Fori Imperiali". - Pollini's latter information, taken together with Spannagel (2017, 206 with n. 5), shows that this reconstruction visualizes Eugenio La Rocca's hypothesis, according to which this *colossus* represented the *Genius* of Augustus. - Spannagel (2017, 228-229, with n. 183) refutes the hypothesis that this reconstruction can possible represent the *Genius* of Augustus.

In his **note 183**, which refers to this coloured reconstruction drawing, Pollini's Plate III, Spannagel writes: "Zeichnung Inklink: Ungaro 2007, 147 Abb. 188; Ungaro 2008a, 412 Abb. 10; Meneghini 2009, 75 Abb. 77; Pollini 2012, 23 f. 186. 427 f. Taf. III (mit Kritik am Attribut des Lituus und an der Wiedergabe der in die Wand eingelassenen Gemälde); Meneghini 2015, 42 Abb. 43; zu Tracht und Attributen der Figur s.[siehe] auch Ungaro 2008b, 53 f. Auch die oben Anm. 106–108 angeführten Zeichnungen beruhen auf dieser Rekonstruktion".

Pollini himself (2012, 23-24) observes that the staff-like object in the *colossus's* right hand precludes the assumption that this statue could have represented the *Genius* of Augustus, since comparisons show that, in this iconography, Augustus should have held a *patera* or an *accerra* (a sacrificial bowl or an incense box) in his right hand. Pollini (2012, 24) himself rather believes that the right hand of this *colossus*, if representing Augustus, should have held a "ruler's staff or a spear", but imagines a semi-nude representation of *Divus Augustus* (illustrating as comparisons two portraits of Augustus), a suggestion which, because of the date of the 'Aula del Colosso' (cf. *supra*), is later (in theory) certainly possible, but not, when Augustus commissioned himself a *colossus* for this hall. Pollini (2012, 25) says also that this right hand, which held a staff-like object, could just as well have belonged to the cult-statue of Mars Ultor in his adjacent temple.

Spannagel, on the other hand (2017, 220 with n. 11, Abb. 15), believes that this *colossus* in the 'Aula del Colosso' at the Forum of Augustus was rather a portrait of Julius Caesar. His reconstruction drawing shows the cuirassed *Divus Iulius*, complete with *Sidus Iulium*, who raises his right arm. His *Divus Iulius* does not hold anything in his right hand, since this object could be, in Spannagel's opinion, a lance or a *lituus*, and instead of wearing a cuirass, he could just as well have been clad in a "Hüftmantel" - exactly as Pollini (2012, 24) intends to say, when writing that the *colossus* could have represented a 'seminude *Divus Augustus*'.

**Interestingly, Spannagel (2017) suggests that this was a marble *colossus* 'with a special effect': above Caesar's head there was, in his opinion, a perennial fire, which represented the *Sidus Iulium*, the comet that had appeared shortly after Caesar's assassination, which Augustus ordered to add to all of Caesar's portraits in the round, and which was represented in the shape of a star, also on Augustus's coins.**

Spannagel (2017, 239-244) argues that an architectural feature high up on the back wall of this 'Aula del Colosso', precisely where the head of this *colossus* must have been attached to the wall, allows the assumption of an installation that provided this 'fire' of the *Sidus Iulium* above the *colossus's* head. Another strong argument in favour of Spannagel's hypothesis (2017, 237-239) is the fact that - provided this *colossus* was *not* a portrait of *Divus Iulius* - a statue of Augustus's adoptive father would conspicuously have been missing in the entire building, since Caesar does not appear in the gallery of the *gens Iulia*, represented together with Aeneas, whose portraits Augustus had erected in his *forum*.

**Another interesting and hotly debated topic, summarized by Spannagel (2017), which I cannot address here in detail, is the question, whether the *colossus* in this 'Aula del Colosso' had been an object of veneration, and if so, how.**

Spannagel (2017, 205) writes in his Abstract: "The most spectacular monumental complex founded by Augustus in the city of Rome was the Forum Augustum with the temple of Mars Ultor. During the excavations started in 1924 there were found the base and some marble fragments of a colossus more than 10 ½ m high once standing in a separate room - the so-called Aula del Colosso - at the end of the left, northwestern part of the porticoes framing the area. Before discussing the identity of the god represented by this colossus I try to demonstrate that most of the modern plans of the Forum, influenced by the location of two columns erected after the excavation, show an intercolumnium too narrow in the centre of the façade of the Aula; in truth it may be supposed, as reconstructed by H. Bauer, to have been wider than the lateral ones. As to the meaning of the statue, I try to defend my opinion that it represented deified Caesar now called Divus Julius against E. La Rocca's theory, who interpreted it as a figure of the Genius of Augustus. As an additional argument for my assumption I propose that the connection between the colossus fixed at the enclosure wall of the Forum and an annex room behind it served for supplying the bright flame burning on the top of the star attached to the head of the colossus to show his divinity".

**Provided, this colossus was indeed a portrait of *Divus Julius*, as suggested by Spannagel (2017), that would be of interest also for other subjects discussed in this *Study*. Because, provided this 'Aula del Colosso' at the Forum of Augustus had developed into a very lively and important cult of *Divus Julius*, this could much better explain why later emperors, for example Domitian and Hadrian, had likewise built shrines for the divinized members of their families.**

Let's now return to our main subject.

**As already mentioned, the attribution of the head of Vespasian at the Museo Archeologico Nazionale at Naples (MAN, inv. no. 6068) to the Temple of *Divus Vespasianus* is obviously not true. To illustrate this point, I anticipate here the relevant discussion that was written for *infra*, volume 3-2, at *Appendix IV.c.2.* :**

“After having written this *Chapter* up to this point, I found an information that possibly corroborates the above-mentioned tentative assumption that the sculpture decoration of the Baths of Caracalla could contain older pieces, for example portraits dating to the Flavian period.

Eugenio La Rocca (2009, 225, n. 21), who discusses the colossal portrait of Vespasian at the Museo Archeologico Nazionale [MAN] at Naples (ex collection Farnese, inv. no. 6068), informs us that: "... Si crede che la testa colossale Farnese inv. 6068 provenga, insieme con un altro ritratto colossale di Antonino Pio inv. 6078 (= Ruesch 1911, pp. 248 sg., n. 1029, fig. 63), dalle Terme di Caracalla: Vincent 1981, p. 338".

Cf. R. Vincent, "Les collections Farnèse, Les antiques, in: Le palais Farnèse, a cura dell'École française de Rome, 1.2 (1981), pp. 331 sgg."

Now, interestingly, Filippo Coarelli (2009b) [whom I had followed in my above-summarized reasonings concerning a display of the colossal statue of Hadrian, now Constantine, here **Figs. 11; 11.1** within the *cella* of the Temple of *Divus Vespasianus*] suggests instead that this colossal portrait of Vespasian at Naples (MAN inv. no. 6068) should be regarded as the head of the cult-statue of Vespasian at the Temple of *Divus Vespasianus*.

Cf. Coarelli (2009b, 77, with n. 90, Fig. 14). Emmanuelle Rosso (cat. no. 97 Testa colossale del Divus Vespasianus", Naples, MAN inv. no. 6068, in: F. COARELLI 2009a, 495) writes: "Benché l'appartenenza della testa alla collezione Farnese sia accettata, il luogo preciso di ritrovamento rimane problematico: la provenienza dalle Terme di Caracalla talvolta ipotizzata, è probabilmente da scartare ... [discussing further suggestions]", but note that Emmanuelle Rosso does not discuss Vincent (1981)

In the context discussed here, we may therefore keep in mind the possibility that this (or another portrait of Vespasian?) was actually found at the Baths of Caracalla.

Even later than that, I realized that Eugenio la Rocca, in his most recent discussion of the colossal portrait of Vespasian in the Museo Archeologico Nazionale at Naples (inv. 6068), states that this head was certainly *not* found in the Baths of Caracalla''.

Cf. La Rocca (2020b, 371 with n. 16, quoted *verbatim infra*, in volume 3-2, at *Appendix IV.c.2.*).

As discussed above, in Chapter *IV.1.1.h*), this colossal portrait of Vespasian (MAN Napoli, inv. no. 6068) has most recently (but erroneously) been attributed by Nathalie de Haan and Eric M. Moormann (2021, 82) to Domitian's *Templum Gentis Flaviae*; I repeat in the following the relevant passage from Chapter *IV.1.1.h*):

''Nathalie de Haan and Eric M. Moormann (2021, 82) seem to refer in their text to the (false) information by Fiorelli, mentioned above, that in the area of the *Templum Gentis Flaviae* were found two colossal portraits of the divinized Vespasian and Titus: the head of Titus (here **Fig. 53**), which they do not explicitly mention, and a colossal portrait of Vespasian. De Haan and Moormann (2021, 82) illustrate on the same page the other famous colossal portrait of Vespasian at the MAN Napoli (inv. no. 6068), ex collection Farnese, tentatively suggesting that this portrait could have belonged to the cult-statue of *Divus Vespasianus* in the *Templum Gentis Flaviae*''.

Let's now return to the discussion of the colossal portrait of Hadrian (now Constantine), here **Figs. 11; 11.1**.

If there *was* space enough in the *cella* of the Temple of *Divus Vespasianus* to accommodate a statue with proportions like that of Hadrian (now Constantine), here **Figs. 11; 11.1**, and the Senate and the Roman People had actually ordered to erect this honorary statue for Hadrian right there, the effect would probably have been similar to that of Pheidias's statue of Zeus in his Temple at Olympia, one of the 'Seven Marvels of the ancient [western] World', about which Strabo (8,353-54) wrote:

"The greatest [of the offerings in the Temple of Zeus] was the xoanon of Zeus made by Pheidias of Athens, son of Charmides. Made of ivory, it was so big that, although the temple itself was very large, the artist seem to have failed to hit the right proportions; for although the god is represented as seated, he almost touches the peak of the roof, and so gives the impression that if he stood up he would unroof the temple ... [translation: A. STEWART]".

The statue of Zeus was, of course, not made of ivory, as Strabo asserts, but instead created in chryselephantine technique; cf. Andrew Stewart (1990 I, 259, T[ext] 49). For the 'Seven Marvels of the ancient [western] World'; cf. Kai Brodersen (2007, 58-69, Chapter: "5. Die Statue des Zeus von Olympia"). - To this statue of Zeus (here **Fig. 14**) I will come back below.

**To be able to judge the matter, we should consider the (so far unknown) proportions of the cult-statue of the seated *Divus Vespasianus* in the Temple of *Divus Vespasianus*.**

See for example the reconstruction drawings of the temple *cella* by A.N. Normand; cf. Coarelli (2009b, 76, Figs. 12; 13). This cult-statue of Vespasian was, according to Coarelli (2009b, 77):

"certamente ispirata a un tipo di Giove in trono, alta circa 5.50 metri (seduta 4.20)" - as visible on the reconstruction drawings by A.N. Normand. As already mentioned above, Coarelli's (2009b, 77 with ns. 90-96, p. 76, Figs. 12; 13) reconstruction of the height: "circa 5.50 metri (seduta 4.20)" of this cult-statue of *Divus Vespasianus* is based on the colossal head of Vespasian (Naples, MAN, inv. no. 6068). But this portrait of Vespasian, as far as we know now, and contrary to Coarelli's assumption, was *not* found near the Temple of *Divus Vespasianus*.

**Besides, there are no remains that could be interpreted as the base of an additional colossal statue within the Temple of *Divus Vespasianus*, at least nothing of the kind has been mentioned so far in the literature,**

quoted below. But there are, apart from the base of the cult-statue of Vespasian, no traces of a base for a portrait of Titus either. Some late antique sources assert that the temple was later also dedicated to Titus (an assumption that, in theory, could have been caused by the presence of a cult-statue of Titus in the *cella* of this temple).

This is, according to Stefano De Angeli (*LTUR* V [1999] 124), not true :

"Tramite l'*Itin. Eins.* (IX sec. d.C.) ci è nota per intero l'iscrizione (*CIL* VI 938 = *ILS* 255: DIVO VESPASIANO AVGVSTO SPQR . IMPP . CAESS . SEVERVS ET ANTONINVS PII FELIC AVGG RESTITVER), ora limitata alle sue solo otto lettere finali, che occupava la grande tavola epigrafica della trabeazione, realizzata in occasione del restauro severiano databile tra il 200 e l 205. La chiara ed esclusiva indicazione di Vespasiano mostra che il tempio fu dedicato fin dall'origine, e anche in seguito, solo a quest'ultimo e non fu mai dedicato, o ridedicato, anche al fratello Tito, come, sulla base d alcune fonti tarde e secondarie, che lo vindicano come *templum Vespasiani et Titi* (*Chronogr. a.* 354; *Cur. Reg. VIII:* 115 s. con n. 7 VZ I, non tuttavia la *Not.*, 174 VZ 1) si è spesso ipotizzato o sostenuto (De Angeli [*Templum Divi Vespasiani*, 1992], 160 s.)".

Of the same opinion is Coarelli (2009b, 77-77, with ns. 87-88), who argues with the observation that the extant statue base of the cult-statue of Vespasian could not possibly have accommodated *two* cult-images.

**For the Temple of Divus Vespasianus;** cf. Stefano De Angeli (1992; cf. *id.*: "Vespasianus, Divus, Templum", in: *LTUR* V [1999] 124-125, Figs. 69-71; I, 64-65, 129; II, 152; IV, 84, 109); Filippo Coarelli (2009b, 75-77, Figs. 8 (ground-plan); 9-11; 12; 13: "Tempio di Vespasiano, sezione trasversale ricostruita, con edicola della statua di culto (disegno di A.N. Normand); Tempio di Vespasiano, sezione longitudinale ricostruita (disegno di A.N. Normand)"; 14: "[Drawing of the restored] Testa colossale di Vespasiano. Napoli, Museo Archeologico Nazionale, Collezione Farnese (da *Real Museo Borbonico*)"; Fig. 15. Cf. p. 495, cat. no. 97 "[Derestored] **Testa colossale del Divus Vespasianus** Da Roma, già collezione Farnese. **Marmo Alt.[ezza] parte antica cm 90; alt.[ezza] testa cm 75 Mancano la metà superiore della calotta cranica (derestaurata) ... Napoli, Museo Archeologico Nazionale, inv. 6068 ...** (Emmanuelle Rosso) [my emphasis]".

**After this Study was written, I had the chance to read again the article by Cécile Evers (1991).**

She suggests (on p. 798) a possible display of this presumed portrait of Hadrian (cf. here **Fig. 11**) at the Temple of Venus and Roma, referring to the fact that this temple had been destroyed by fire in 307 (like now independently of her also myself; cf. *supra*), or else (on p. 797 with n. 72), that one of the inscriptions dedicated to Hadrian which according to her were found in the *Forum Romanum* - mentioning *inter alia* the above-discussed fragmentary inscription (*CIL* VI 974 [= *CIL* VI 40524 = here **Fig. 29.1**]) - could have belonged to this colossal portrait of Hadrian (now Constantine; cf. here **Fig. 11**).

**But let me anticipate an observation to be discussed below: this portrait of Hadrian (now Constantine), here Figs. 11; 11.1, could not possibly have been on display somewhere in the Forum Romanum, that is to say, under the open sky (because it was an acrolithic statue, that is to say, a construction).**

Evers (1991, 797) writes: "Où Constantin a-t-il pu se procurer une gigantesque statue d'Hadrien? Les possibilités sont, à vrai dire nombreuses. Après sa mort, on lui aurait érigés un immense quadrigé, probablement sur son mausolée [with n. 71, providing references]. **Si nous cherchons plutôt dans les environs de la basilica nova [i.e., the Basilica of Maxentius], différents emplacements privilégiés viennent à l'esprit. Le Forum lui-même a livré cinq attestations épigraphiques de statues d'Hadrien** [with n. 72] ... [my emphasis]".

In her **note 72**, Evers writes: "N<sup>Sc</sup> 1899, p. 77; C. HÜLSEN, *RM*, 6, 1891, p. 86; *CIL VI 974* [= 40524 = here **Fig. 29.1**]; 1854, 3754, 31302; LAHUSEN ... [*i.e.*, here G. LAHUSEN 1983], p. 21, n. 121; BOATWRIGHT ... [*i.e.*, here M.T. BOATWRIGHT 1987], p. 104 et n. 16 [my emphasis]".

Note that Evers (1991, 797 with n. 72) only mentions that those inscriptions were found in the *Forum Romanum*, without addressing the question, how we should imagine the display of those statues of Hadrian.

Evers (1991, 794-795), after a discussion of the coiffure of the portrait of Constantine (cf. here **Fig. 11**), comes to the following conclusion :

"H. Jucker en déduisant que Constantin avait dû remployer une statue de [page 795] Maxence, probablement destinée au même monument. Cependant, comme P. Zanker l'a fait remarquer, les longues mèches sinueuses surmontant l'oreille droite (fig. 5 [cf. here **Fig. 11**]) et les petites mèches sur la tempe gauche [with n. 59] (fig. 7 [cf. here **Fig. 11**]) ne correspondent pas à celles des portraits connus de Constantin et doivent donc appartenir à la chevelure du personnage précédent, qu'il estime, vu la taille, être une divinité. Maxence, en tout cas, lui paraît exclu vu la forme de sa tête e sa coiffure [with n. 60].

Je suggérerais pour ma part une troisième solution. Une observation attentive de cette œuvre [*i.e.*, here **Fig. 11**] à la lumière rasante m'a convaincue du fait que le personnage originel était barbu. De plus, outre les quelques mèches citées plus haut, nous bénéficions de deux indices physiognomiques heureusement conservés : les oreilles et le nez. Les premières ne semblent pas avoir été retravaillées ; quant à l'appendice nasal, plutôt volumineux, il indique une taille minimale originelle. **Ces oreilles, grandes, charnues, aux lobes pourvus d'un pli en forme de fourche, sont parfaitement reconnaissables : il s'agit, sans conteste, de celles de l'empereur Hadrien, fidèlement reproduites sur tous ses portraits en ronde-bosse** [with n. 61]. Le nez, moyennant une reprise à hauteur de sa base, correspond parfaitement à celui de l'empereur [with n. 62]. **Mais l'argument décisif réside naturellement dans l'indice capillaire : les boucles surmontant l'oreille droite de Constantin sont celles du type III - << Rollockenfrisur >> - d'Hadrien** [with n. 63] (**fig. 8 et 8**). Pour obtenir la frange de petites mèches symétriquement dirigées vers le centre du front, le sculpteur n'a eu qu'à tailler la moitié des << Rollocken >>. Cette opé- [page 796] ration était également nécessaire pour dégager le haut front du colléage de Licinius [*i.e.*, Constantine the Great] [with n. 64; my emphasis]".

In her **note 59**, Evers writes: "Voir les photographies dans JUCKER ... [*i.e.*, here H. JUCKER 1983], fig. 16-17, o 56-57 ; DELBRÜCK ... [*i.e.*, here R. DELBRÜCK 1933], pl. 39".

In her **note 60**, she writes: "ZANKER ... [*i.e.*, here P. ZANKER 1985], I, p. 149. **Je vois assez mal à quelle statue de culte on pourrait attribuer ces mèches.** En dernier lieu, sur Maxence, voir mon article : *Considérations sur l'iconographie de Maxence. À propos d'une nouvelle réplique au Kestner-Museum de Hanovre, dans Niederdeutsche Beiträge zur Kunstgeschichte* (sous presse) [my mphasis]".

In her **note 61**, she writes: "**Les oreilles sont un élément d'identification aussi sûr que les empreintes digitales. Pour celles d'Hadrien : WEGNER ...** [*i.e.*, here M. WEGNER 1939], II, 3, p. 104 ; FITTSCHEN ... [*i.e.*, here K. FITTSCHEN 1977], n. 8, p. 74; ID. ... [*i.e.*, here K. FITTSCHEN and P. ZANKER 1985], I, p. 44, Beil.[age] 27 c-d, 28 d, 23 c-d, etc. **Cette fourche sur le lobe est un critère très pertinent car elle est rarissime sur les portraits d'autres personnages** [my emphasis]".

In her **note 62**, she writes: "Parmi les rares œuvres où celui-ci est entièrement conservé, voir la tête colossale provenant du Château Saint-Ange (Musei Vaticani, Sala Rotonda, Inv. n<sup>o</sup> 543) : G. LIPPOLD ... [*i.e.*, G. LIPPOLD 1936] pl. 43".

In her **note 63**, she writes: "Sur ce type iconographique voir WEGNER ... [*i.e.*, M. WEGNER 1939], p. 13-15 ; Kl. FITTSCHEN ... [*i.e.*, here K. FITTSCHEN 1984], p. 197-207, pl. 56-64 b ; ID. ... [*i.e.*, here K. FITTSCHEN and P. ZANKER 1985], I, n<sup>o</sup> 49 (dernière liste de répliques, d'où il faut soustraire la tête de La Canée [n<sup>o</sup> 15])".

In her **note 64**, she writes: "Front sur lequel il avait fallu empiéter pour sculpter la zone oculaire".

**For the Licinius, mentioned by Evers (1991, 796 with n. 64); cf. Raymond Peter Davis:**

"**Licinius** (*RE* 31a), **Valerius Licinianus**, the Roman emperor **Licinius**, born of peasant stock in (new) Dacia perhaps in the 260s AD, became a close friend and comrade-in-arms of Galerius, who at Carnuntum (308), when Diocletian refused to leave retirement, created him a second Augustus ... Rather than attack Maxentius in Italy, Alexander in Africa, or Constantine in Gaul, Licinius undertook the administration of the diocese ... of Pannonia ... Against Maximinus, he formed an alliance with Constantine I. At Milan (February 313) he married Constantine's half-sister Constantia. His conference with Constantine was interrupted when Maximinus invaded Europe. Licinius defeated him near Adrianople, taking over his Asiatic territories. Licinius and Constantine were now the only claimants to the empire ... For obscure reasons he quarrelled with Constantine (8 October 316) at Cibalae and then at Campus Adriensis ... After Cibalae, Licinius made the *dux limitis* ... Valens emperor, but Valens was executed before Licinius negotiated peace with Constantine early in 317. Licinius agreed to surrender all European territory except the diocese of Thracia. On 1 March 317 he made his infant son and namesake Caesar, and Constantine gave this title to his sons Crispus and Constantine II. Knowing that Constantine would never be happy until he was sole ruler, and suspecting that his own Christian subjects were disloyal, he embarked on a perfunctory persecution. The uneasy peace was broken when Constantine attacked in 324, won a decisive battle at Adrianople (3 July) and besieged Licinius in Byzantium. Licinius put up his *magister officiorum* Martinianus as emperor. Byzantium fell, and at Chrysopolis Licinius was defeated (18 September). He and Martinianus surrendered, and were sent to Thessalonica, where they were accused of plotting and executed in spring 325. Licinius' son was granted his life but executed in 326 ...", in: *OCD*<sup>3</sup> (1996) 856.

For Licinius; cf. now Oliver Schmitt (*Constantin der Große (275-337) Leben und Herrschaft*, 2007, pp. 171-213: "Kapitel 5. Es kann nur einen geben: Constantin, Licinius und der Kampf um die Alleinherrschaft").

**Marianne Bergmann (1997, 142-143) writes about Hadrian's portraits of the 'Rollockentypus', mentioned by Evers (1991, 795, with n. 63) in her above-quoted passage:**

"Umso mehr überrascht ein Typus, der sog.[enannte] Rollockentypus [with n. 26] (Abb. 6,3) der sich aufgrund der Binnenordnung der Typen ans Ende [page 143] einer frühen Gruppe setzen läßt. Bei diesem Typus hat Hadrian plötzlich Falten und eine angespannte Mimik. Es ist versucht worden, diesen Energiegestus mit der Programmatik außenpolitischer Aktivitäten in Verbindung zu bringen [with n. 27]. Das scheint mir nicht naheliegend".

In her **note 26**, Bergmann writes: "Wegner ... [*i.e.*, here M. WEGNER 1940] 13 ff. Taf. 10.11a; Fittschen/Zanker ... [*i.e.*, here K. FITTSCHEN and P. ZANKER I 1985] 49 Nr. 49 Taf. 54.55 mit Replikenliste".

In her **note 27**, she writes: "Fittschen/Zanker ... [*i.e.*, here K. FITTSCHEN and P. ZANKER I 1985] 51".

**Let's now turn to Hadrian's "fourche sur le lobe", mentioned by Evers (1991, 795), in her above-quoted passage, also called the "crease in the ear lobe", the "disegno del padiglione auricolare", or the "charakteristische Falte in den Ohrläppchen", which is typical of all his portrait-types.**

Evers herself (1991, 795, n. 61) calls this characteristic feature of Hadrian's ears: "Cette fourche sur le lobe", whereas Amanda Claridge (2010, 465), as we have seen above, refers to it as: "the crease in the ear lobe". Both are talking about the colossal portrait of Constantine (cf. here **Fig. 11**), which in their opinion was *inter alia* therefore originally a portrait of Hadrian. Claudio Parisi Presicce (2005, 146 with n. 39; repeated *verbatim* in C. PARISI PRESICCE 2006b, 150 with n. 42), who rejects Evers's hypothesis, calls the feature in question: "il disegno del padiglione auricolare".

### Hadrian's portrait-type called Delta Omikron ( $\Delta\omicron$ )

That this peculiar feature of his ear lobes is indeed *the* characteristic of all portraits of Hadrian in the round, has not only been observed by the scholars, whom Evers (1991, 795 with n. 61) has herself quoted, but also by Marianne Bergmann (1997) in her discussion of Hadrian's portrait-type called Delta Omikron ( $\Delta\omicron$ ) (cf. here **Fig. 3**), which has most recently been studied by Hans Rupprecht Goette (2019). Goette has alerted me to this portrait-type as soon as he had realized that this *Chapter* is dedicated to Hadrian's efforts to legitimize his reign at the beginning of his principate. At first I thought that the creation of this portrait-type is apparently the very first proof for the fact that Hadrian actually felt that need himself. Bergmann (1997) and Goette (2019) suggest that in reality this portrait-type of Hadrian has retrospectively been taken up at the end of Hadrian's life by basing it on coin-types, issued in AD 117 at Alexandria.

For Hadrian's portrait-type called Delta Omikron ( $\Delta\omicron$ ), see now also Goette (*Schwertbandbüsten der Kaiserzeit. Zu Bildtraditionen, Werkstattfragen und zur Benennung der Büste inv. 4810 im Museum der bildenden Künste in Budapest und verwandter Werke*, 2021).

As we shall see below, these coins, issued in AD 117 at Alexandria, were according to Angelo Geißen issued at the order of Hadrian himself, who, after Trajan's death on 11th August of AD 117 had been hailed as Roman Emperor

Cf. *infra*, at Chapter *The major results of this book on Domitian*; and at *The Contribution by Angelo Geißen: Bemerkungen zur frühen Münzprägung Hadrians in Alexandria*, with here **Fig. 137**; and *infra*, in volume 3-2, at *Appendix IV.c.1.*). Post Scriptum: *Hadrian's situation in AD 117-118. With The first Contribution by Angelo Geißen: Bemerkungen zur frühen Münzprägung Hadrians in Alexandria*.

One of the four known replicas of the portrait-type Delta Omikron ( $\Delta\omicron$ ) was found at Hadrian's Villa near Tivoli, another replica is kept in the Prado at Madrid (cf. here **Fig. 3**). Because this portrait-type differs greatly from all other previously known ones, despite the provenance of the first known of these heads from one of Hadrian's own properties, scholars at first doubted that this portrait could possibly represent Hadrian.

Cf. Marianne Bergmann (1997, 143 with n. 32). Only this "charakteristische Falte in den Ohrläppchen", as Bergmann describes the crease in the ear lobes of the head from the Villa Hadriana (cf. here **Fig. 3**), a feature, also known from the other heads of the portrait-type Delta Omikron ( $\Delta\omicron$ ), and from all other previously known portraits of Hadrian, convinced scholars in the end that this head (cf. here **Fig. 3**) represents Hadrian.

That this is true, is proven by the coin-types issued at Alexandria in AD 117, representing a portrait-type of Hadrian, which Bergmann (1997, 145 with Fig 10) defines as his "Caesartypus". These coin images have, in her opinion, great similarities with Hadrian's portrait-type Delta Omikron. I will come back to Bergmann's and Goette's discussions of this portrait-type of Hadrian below, at Chapter *The major results of this book on Domitian*.

See also *infra*, in volume 3-2, at *A Study on the consequences of Domitian's assassination ...*

Or: *The wider topographical context of the Arch of Hadrian alongside the Via Flaminia which led to the (later) Hadrianeum and to Hadrian's Temples of Diva Matidia (and of Diva Sabina?). With discussions of Hadrian's journey from Moesia Inferior to Mogontiacum (Mayence) in order to congratulate Trajan on his adoption by Nerva, and of Hadrian's portrait-type Delta Omikron ( $\Delta\omicron$ ) (cf. here **Fig. 3**). With The fourth and the fifth Contribution by Peter Herz, with The first Contribution by Franz Xaver Schütz, with The first Contribution by John Bodel, and with The second Contribution by Angelo Geißen; at Chapters VI.2.; VI.2.1.-VI.2.3.; and *infra*, in volume 3-2, at *Appendix IV.c.1.*). Post Scriptum: *Hadrian's situation in AD 117-118. With The first Contribution by Angelo Geißen: Bemerkungen zur frühen Münzprägung Hadrians in Alexandria*.*

For earlier discussions of Hadrian's portrait of the type Delta Omikron ( $\Delta\omicron$ ), found at Hadrian's Villa near Tivoli, here not mentioned so far; cf. Häuber (1988, 50 with n. 69, Abb. 14: "Bildnis Kaiser Hadrians in der Villa Hadriana, Tivoli"). In my note 69, I wrote: "Aufnahme: G. Fittschen-Badura. J. Bracker, AntPl VIII (1968) 75ff. Abb. 11-13; J. Raeder ... [*i.e.*, here J. RAEDER 1983] 89 ff. Kat. I 88 Villa Adriana Museum Inv. Nr. 2260". - Hans Rupprecht Goette has alerted me now to Donato Attanasio, Matthias Bruno and Walter Prochaska (2019, 194-195), who refer to this portrait-type as to "Hadrian *renatus* or  $\Delta\omicron$  portrait type (cat 131, fig. 15a) and cat. 12, fig. 15b)".

**Evers (1991, 795) has arrived at her conclusion that the colossal portrait of Constantine (cf. here Figs. 11; 11.1) had originally represented Hadrian for the following reasons :**

a) following Paul Zanker (1985 I, 149, cat. no. 122, quoted *verbatim supra*), Evers suggests that the curly coiffure of this portrait of Constantine the Great (cf. here **Fig. 11**) does not occur at any of the known portraits of Constantine, which is why it must belong to the original portrait of Hadrian. Evers also follows Zanker concerning his observation that the shape of this head of Constantine and its coiffure rule out the possibility that the original portrait could have represented Maxentius;

b) because at close inspection she found out that the man, whom this portrait had originally represented, was bearded;

c) because of the remains of some curls of Hadrian's characteristic << Rollockenfrisur >> at both of Constantine's temples;

d) because of the shape of Constantine's nose; and -

e) because of Constantine's ear lobes, that, in Evers' opinion, preserve the original portrait unchanged, and that are rendered precisely as in all undisputed portraits of Hadrian in the round: "Ces oreilles, grandes, charnues, aux lobes pourvus d'un pli en forme de fourche".

To this, I should like to add a personal point:

f) Evers (1991, 795, Figs. 5-8) juxtaposes the right and the left profiles of the colossal portrait of Constantine the Great (cf. here **Fig. 11**) with the right and the left profiles of a lifesize portrait of Hadrian in the Palazzo Braschi at Rome, but she does not discuss those profiles in her text in detail. - To this I will come back below.

But before concentrating on this point, let's for our discussion assume for a moment that Evers is right in assuming that this head of Constantine *had* actually been recut from a portrait of Hadrian.

Now, if indeed the inscription (*CIL* VI 974 = 40524; cf. here **Fig. 29.1**) belonged to the colossal statue of Hadrian (now Constantine; cf. here **Fig. 11**), and the Senate and the Roman People had erected this colossal acrolithic statue of Hadrian within the Temple of *Divus Vespasianus*, as suggested by Geza Alföldy (at: *CIL* VI 40524 = 974) and Michaela Fuchs (2014, 130, with n. 47), we would not be able to say any more that they, 'acknowledged' Hadrian's victory in the Bar Kokhba Revolt, in a manner "wenn auch sehr zurückhaltend" ('rather reserved'), as suggested by Michaela Fuchs (2014, 130), but instead in a truly magnificent fashion.

But the two hypotheses that a) the famous portrait of Constantine the Great (cf. here **Fig. 11**) originally represented Hadrian at all, so Evers (1991, 795, quoted *verbatim supra*), and b) that this (presumed) portrait of Hadrian could have been the honorary statue, to which the fragmentary inscription belonged (cf. here **Fig. 29.1**: *CIL* VI 974 = 40524), as likewise suggested by Evers (1991, 797, note 72, quoted *verbatim supra*), and here (at first glance) also by myself, have so far not been proven.

Besides, as already mentioned several times above, I have in the meantime abandoned this earlier idea by suggesting now that this inscription (cf. here **Fig. 29.1**: CIL VI 974 = 40524) belonged instead to the original, after which Hadrian's portrait-statue from Hierapydna at Istanbul (cf. here **Fig. 29**) and almost 30 replicas of this portrait of the emperor were copied

Cf. below, at *A Study on Hadrian's portrait-statue from Hierapydna* (cf. here **Fig. 29**); and *infra*, in volume 3-2, at *Appendix IV.c.2*.

But even provided the points *a*) and *b*) just mentioned were true, this dedication to Hadrian (here **Fig. 29.1**), commissioned by the Senate and the Roman People, was only at first glance 'truly magnificent', as I have asserted above; and that for the following reason. This colossal seated portrait statue of Hadrian (cf. here **Fig. 11; 11.1** - if this is what it was), which was 'only' circa 10 m (or even 12 m ?) high, must be regarded as 'modest', when compared with the famous bronze portrait of Nero, his *colossus* which was more than 30 m high, the facial traits of which according to Dio Cassius (66,15,1) the Emperor Titus had ordered to rework into a portrait of himself.

Cf. Evers (1991, 796 with n. 66, quoted *verbatim* below, in Chapter *The major results of this book on Domitian*; and again *infra*, in volume 3-2, in *Appendix VI.*; at Section VI.).

Besides, this *colossus*, representing in its current state the Emperor Titus, was still extant, as we know, when the Senate and the Roman People decided to honour Hadrian with the honorary statue, to which the inscription (CIL VI 974 = 40524 = here **Fig. 29.1**), certainly belonged. As suggested by Evers (1991, 797, note 72), this portrait of Hadrian could in theory have been the acrolithic statue of Constantine discussed here (cf. here **Fig. 11**).

For Titus' reworking of Nero's *colossus*; cf. Claudia Lega ("Colossus: Nero", in: *LTUR I* [1993] 295-298). Eric M. Moormann (2018, 164 with ns. 18, 19, pp. 166, 168-169) seems not to be aware of the fact that the face of the *Colossus Neronis* had been reworked into a portrait of Titus.

Cf. *infra*, in Chapter *The major results of this book on Domitian*.

Domitian, given his dependence of, and respect for his father Vespasian and his brother Titus, could not possibly destroy this gigantic bronze *colossus*, representing his brother Titus, or order its reworking into a portrait of himself. Considering, in addition to this, Domitian's vanity, this may perhaps explain, why Domitian agreed that, according to Statius (*Silv.* 1.1 ff.), right in the middle of the *Forum Romanum* his no less gigantic *Equus Domitiani* was erected; cf. Lawrence Richardson Jr. (1992, 144, *s.v.*): "in A.D. 91 in honour of the princeps' campaigns in Germany". - But see Eric M. Moormann (2018, 168, quoted *verbatim infra*).

Cf. Cairoli F. Giuliani ("Equus: Domitianus", in: *LTUR II* [1995] 228-229, Figs. 77-80, and *supra*, in Chapter *Preamble*; Section III.; at point 2.); at n. 267, in Chapter I.3.2.). For the *Equus Domitiani*; cf. also Anne Wolfsfeld (2014, 200 with n. 96, Abb. 7); Lisa Cordes (2014, 346-355); Eric M. Moormann (2021, 46 n. 12); Jane Feijfer (2021, 78); and Antony Augoustakis and Emma Buckley (2021, 161-162, with n. 15).

**See most recently for the *Equus Domitiani* Gian Luca Gregori and Valerio Astolfi (2023, 161) :**

"In ultimo, andrebbe considerato anche il caso dell'*equus Domitiani*, di cui le fonti letterarie documentano la completa distruzione [with n. 26], ma che dovette rappresentare un punto di svolta per l'inserimento di monumenti propagandistici di carattere dinastico in un'area già identificata da Augusto. **Secondo quanto documentato dalle indagini archeologiche il basamento venne riutilizzato per l'*equus Severi***, rivelando un eccezionale caso di continuità funzionale e simbolica con il monumento celebrativo del "tiranno" dannato [*i.e.*, Domitian]: nonostante l'esiguità dei dati a disposizione, la sopravvivenza del basamento nell'articolato paesaggio urbano del Foro Romano non può essere sottovalutata e al contrario potrebbe celare una diversa e più articolata operazione di appropriazione della memoria domiziana [my emphasis]".

In their **note 26**, Gregori and Astolfi write: "Plin. *pan.* 52".

For the *Equus Septimii Severi*, mentioned by Gregori and Astolfi (2023, 161) in the above-quoted passage; cf. below, at Chapter *The major results of this book on Domitian*; see also *infra*, in volume 3-2, at *Appendix IV.c*).

The *Equus Domitiani*, of course, no longer existed when the Senate and the Roman People decided to honour Hadrian with the honorary statue, to which the inscription (*CIL VI 974 = 40524 = here Fig. 29.1*) had certainly belonged.

Talking in this Chapter *inter alia* about *continuitas imperii*, and what kind of actions Roman emperors were expected to undertake in order to guarantee this desired state of affairs, I repeat here, what was already quoted in n. 267, in Chapter *I.3.2.*), because we thus learn Domitian's attitude towards this doctrine:

“T. HÖLSCHER 2009a, 57-58, discussing the possible meaning of the prominent place - and space! - reserved for the Vestal Virgins on Frieze B of the Cancelleria Reliefs [cf. here Fig. 2], writes about the *Equus Domitiani*: **“Il culto di Vesta e il collegio delle Vestali occuparono una posizione chiave nella politica religiosa di Domiziano. Il suo famigerato procedimento contro quattro Vestali, che egli punì con condanne a morte estremamente dure a causa della violazione della regola di castità, da lui trattato come centrale pegno della continuazione dell'eternità di Roma. Il Palladio troiano, conservato dalle Vestali, uno dei più sacri garanti del dominio romano, era allo stesso tempo un immagine di Minerva, la divinità protettrice di Domiziano: così il potere dell'imperatore si collegò in modo strettissimo con il culto di Vesta. Si spiega di conseguenza perché egli sin dall'inizio del suo regno avesse coniato monete con Domiziano recante il Palladio: e anche la sua colossale statua equestre nel Foro lo reggeva in mano [my emphasis]”**.

Cf. Eric M. Moormann (2018, 168: **“The monument [*i.e.*, the *Equus Domitiani*] was officially given by the Senate to honour Domitian's victory over the Chatti and Dacians in A.D. 89 ... [my emphasis]”**).

Considering Moormann's (2018, 168) just-quoted observation, the *Equus Domitiani* was therefore, in theory, dedicated for the same reason as the monument or building that contained the Cancelleria Reliefs (cf. here Figs. 1; 2; Figs. 1 and 2 drawing).

For discussions of all this; cf. *supra*, in Chapter *VI.3. Summary of my own hypotheses concerning the Cancelleria Reliefs presented in this Study; Addition: My own tentative suggestion, to which monument or building the Cancelleria Reliefs may have belonged, and a discussion of their possible date*; below, at Chapter *The major results of this book on Domitian*; and *infra*, in volume 3-2, at *Appendix IV.d.2.f*).

**There are still two more problems related to the portrait of Hadrian (now Constantine; cf. here Fig. 11).**

1.) **Acrolithic statues were “costruzioni”** - as Filippo Coarelli has rightly reminded me on 24th February 2020, when we were discussing the matter in Rome.

**It is therefore, in my opinion, certainly on principle true that, consequently, this colossal acrolithic portrait of Hadrian (now Constantine), cannot possibly have been on display under the open sky.** - This point is interrelated with my point 2.).

Coarelli mentioned to me also that such colossal acroliths could not easily be moved, obviously tacitly assuming that they, therefore, *were* not moved. Although this argument sounds reasonable, the truth is unfortunately that even such colossal “costruzioni” were moved.

**The classic example is Caligula's mad idea to order the transfer of the above-mentioned colossal chryselephantine cult-statue of Zeus from his Temple at Olympia to Rome (cf. here Fig. 14) and to replace its head with a portrait of himself. In the case of Caligula the god Zeus ‘himself’ was able to prevent this. Because, when the workmen, who had already erected a scaffolding, were about to start this operation,**

**'the god's' loud laughter (who was, of course, residing in his statue, as obviously also Caligula believed) had the effect that the scaffolding was moving, and the workmen fled.**

For the cult-statue of Zeus in his temple at Olympia most recently; cf. Stephan Faust (2022, 9-10, Abb. 1 [= here **Fig. 14**]). This colossal chryselephantine statue of Zeus at Olympia was, exactly like an acrolithic one, a 'construction', but was nevertheless later transported to Constantinople, where it was on display in the Lauseion, and where it finally perished in a fire; cf. Stewart (1990 I, 259, 292, T 128; K. BRODERSEN 2007, 67).

Cf. Kai Brodersen (66-67, Chapter: "Die Statue des Zeus von Olympia als Weltwunder", quoting on p. 121: "Sueton, Caligula 22, 2 und 57, 1"): "Caligula gab den Auftrag, die Götterbilder, die besonders verehrt und besonders kunstvoll waren - darunter das des Jupiter [Zeus] von Olympia -, aus Griechenland [nach Rom] zu bringen, ihnen jeweils das Haupt abzunehmen und dafür sein eigenes daraufzusetzen ... **Doch ließ in Olympia die Statue des Jupiter [Zeus], die er auseinanderzunehmen und nach [page 67] Rom bringen zu lassen beschlossen hatte**, plötzlich ein so lautes Gelächter ertönen, daß die Gerüste ins Wanken gerieten und die Arbeiter deshalb flohen [translation: K. BRODERSEN; my emphasis]".

Coarelli (2019a, 377-378), who has recently published his ideas concerning this portrait of Constantine (cf. here **Fig. 11**), by considering the fact that fragments of it were found within and in the vicinity of the Basilica of Maxentius, has followed Hans Jucker (1983) in assuming that this acrolithic statue had originally been a portrait of Maxentius. After discussing (on p. 377, with n. 339, quoting: "FABIANI-COCCIA 2003".) the fact that the recent excavations have shown that the addition of the northern apse to the Basilica of Maxentius is not datable to the Constantinian period (as had previously been taken for granted), but "va attribuita agli ultimi decenni del IV secolo", Coarelli (2019a, 377) continues:

"È dunque inevitabile interpretare questa aggiunta [of the northern apse to the Basilica of Maxentius] come un intervento inteso a soddisfare nuove esigenze, emerse in un periodo di quasi un secolo posteriore alla costruzione dell'edificio ...

Va premesso, a tale proposito, che la nuova datazione dell'abside settentrionale rende inevitabilmente caduca [*corr.*: caduta] l'unica interpretazione ragionevole proposta in precedenza, dovuta a H. Kähler [with n. 342]: e cioè che l'aggiunta della nuova struttura servisse all'introduzione nell'abside ovest - considerata come il tribunale originario - della colossale statua di Costantino (fig. 150), che [page 378] avrebbe reso a sua volta indispensabile la costruzione di un altro tribunale, da riconoscere nella nuova abside. **Il ritratto presenta infatti evidenti tracce di rilavorazione, che ne rendono ovvia l'attribuzione a un altro imperatore precedente, che può essere solo Massenzio** [with n. 343]. Questa è certamente una conseguenza della ridedicazione a Costantino, testimoniata da Aurelio Vittore [with n. 344]: l'abside occidentale era quindi destinata alla statua fin dall'inizio, e non poteva essere utilizzata come tribunale; l'ipotesi di Kähler di conseguenza va esclusa [my emphasis]".

See for the Basilica of Maxentius also *infra*, in volume 3-2, in *Appendix I.a*); at Section XIII.

In his **note 342**, Coarelli writes: "KÄHLER 1952".

In his **note 343**, he writes: "JUCKER 1983. Non sembrano accettabili, considerato il contesto, le diverse identificazioni da altri proposte; si veda la lista in FITTSCHEN-ZANKER 1985, n. 122, pp. 147-152, tavv. 151 s.". Note that Coarelli does not discuss any of the relevant later proposals, discussed here.

In his **note 344**, he writes: "Aur. Vict., *Caes.* 40.26".

Contrary to Coarelli (2019a, 378 with n. 343), I agree with those scholars, who have come to the conclusion that the original portrait of this head of Constantine (cf. here **Fig. 11**) was certainly *not* Maxentius. To this I will come back below.

2.) **The original acrolithic statue, which was turned into this portrait of Constantine (cf. here Figs. 11; 11.1) must not only have been on display indoors, it was also standing right in front of a high wall (or walls), to which it was fixed.**

In the meantime, I had also the chance to read the article by Claudio Parisi Presicce (2005, 145), who was able to demonstrate that "La testa è costituita unicamente dalla metà anteriore, e non sembra avere mai avuto la parte occipitale".

Parisi Presicce's observations (quoted *verbatim* in more detail *infra*) prove that this colossal acrolithic statue stood not only indoors, but, in addition to this, in front of one or several high wall(s), to which it was attached, and that means, in its turn, that this portrait-statue was on display in a way that the ancient beholder could not see the back of its head.

Such an installation is a strong argument against the assumption that this portrait could have been on display somewhere in the Forum piazza, where we may assume that the statue's head would have been visible from all sides.

In the Roman Forum were found the above-mentioned five inscriptions, which Evers (1991, 797 with n. 72) tentatively attributes to the portrait of Hadrian (now Constantine; cf. here **Fig. 11**), *inter alia* the fragmentary inscription (CIL VI 974 = 40524 = here **Fig. 29.1**) discussed here. But the latter inscription, as we have seen above, was either (possibly) found within the Temple of *Divus Vespasianus*, or else in its immediate vicinity. Clementina Panella (2015, 106) summarizes the recent discussion on the portrait of Hadrian (now Constantine; cf. here **Fig. 11**) as follows: "I ritratti di Costantino sono ad esempio in parte riutilizzati e rilavorati [with n. 58]. Alcuni di essi potrebbero essere appartenuti a Massenzio, come l'acrolito colossale rinvenuto nel 1486 nella Basilica Nuova [*i.e.*, the Basilica of Maxentius] oggi nel cortile del Palazzo dei Conservatori [with n. 59] (vd. [vedi] fig. 4), a sua volta forse ricavato da un precedente ritratto e comunque appartenente ad una statua colossale in cui l'imperatore era raffigurato nelle sembianze di Giove seduto in trono ... [my emphasis]". In her notes, she provides references. - I thank Giuseppina Pisani Sartorio for the reference.

**Let's now summarize, what we have learned so far about the portrait of Constantine (here Figs. 11; 11.1).**

As already said above, I personally follow Zanker (1985 I, 148-149, cat. no. 122), who was also followed by Evers (1991, 795) that, because of its shape and its curly coiffure, this colossal head of Constantine (cf. here **Fig. 11**) cannot possibly have been reworked from a portrait of Maxentius. La Rocca (2000, 25 with n. 169, quoted *verbatim supra*) singles out three suggestions made so far, for whom this original portrait may have represented: Harrison (1967): Trajan, a statue erected at his Forum, but with later additions of the head and the right hand. She suggested this to explain that the extant fragments of the acrolith are carved from different marbles. But note that her relevant assumption was based on an error, as we shall see below; Jucker (1983): Maxentius at the Basilica of Maxentius; and Evers (1991): Hadrian. And because Harrison did *not* suggest that Constantine's head (cf. here **Fig. 11**) had been reworked from a portrait of Trajan, and Maxentius is definitely not a possible option, only Hadrian seemed at first glance to be left. - As we shall see below, this is actually true.

**Claudio Parisi Presicce has so far presented the most detailed analyses of the colossal statue of Constantine (here Figs. 11; 11.1).**

Claudio Parisi Presicce (2006b, 127, note \*) lists all his other publications on the subject: 2005, 2006a, and 2007 (which is a German translation of his text 2006b, but published without the notes). In the following, I will quote from his essays 2005 and 2006b. The latter is, according to Parisi Presicce (*op.cit.*) in some respects a

summary of his article 2006a. Concerning those points of his arguments that interest me here, Parisi Presicce (2006b, 145-154), repeats what he has written in his article of 2005, 144-147. Cf. Parisi Presicce (2006b, 145, n. 35), where he provides a bibliography for the statue of Hadrian (now Constantine) here **Figs. 11; 11.1**. Claudio Parisi Presicce (2005, 146) mentions many more published opinions, whom the head of Constantine (cf. here **Fig. 11**) may originally have represented than were here discussed so far.

**Although La Rocca (2000, 25 with n. 169, quoted *verbatim supra*), by singling out the three hypotheses: Harrison (1967): Trajan, Jucker (1983): Maxentius, and Evers (1991): Hadrian, has already provided us with the suggestions that have been made over time concerning the question, whom this colossal statue may originally have represented.**

**Concerning all those hypotheses, Parisi Presicce (2005, 146, *verbatim* repeated 2006b, 149 with n. 38) writes:**

"Come rilevato da Zanker, né le lunghe e spesse ciocche fortemene incurvate sopra l'orecchio e la tempia destri, né la forma e il *ductus* delle piccole ciocche frontali sul lato sinistro corrispondono con il tipo ritrattistico costantiniano, ben noto e documentato. **Essi sembrano appartenere alla testa precedente. Su quest'ultima sono state avanzate diversi ipotesi, nessuna purtroppo accertabile ...** [my emphasis]". Immediately after that, Parisi Presicce (2005, 146; cf. *id.* 2006b, 149-152) lists those hypotheses, but does not explain in all cases in detail, why they are, in his opinion, not acceptable.

Cf. Parisi Presicce (2006b, 149-152, Section: "4. Tipologia del ritratto e datazione"):

"Harrison [with n. 38] ha suggerito una provenienza **del colosso dal Foro di Traiano, ritenendo tuttavia un'aggiunta posteriore la testa e la mano destra, se-** [page 150] **condo la studiosa di marmo diverso; Cecchelli e più tardi Jucker, seguiti da Coarelli, Varner e Deckers** [with n. 39], hanno ipotizzato che il colosso riutilizzato da Costantino **fosse stato eretto precedentemente nella stessa Basilica** e fosse destinato in origine a onorare il suo più ostinato avversario **Massenzio; Zanker** [with n. 40], invece, **ha escluso che la testa potesse raffigurare inizialmente Massenzio** per la forte rientranza all'altezza delle orecchie documentata dai suoi ritratti più sicuri, e propende piuttosto per l'appartenenza a **una divinità; Anderson** [with n. 41] ha proposto di identificare il personaggio raffigurato nel ritratto originario con **Traiano; Evers** [with n. 42] **ha sostenuto che alcuni tratti iconografici – per esempio il disegno del padiglione auricolare – e la parte conservata della capigliatura coincidono con il III tipo ritrattistico di Adriano, denominato 'Rollockenfrisur', e che l'acrolito sarebbe stato prelevato da un edificio costruito da Adriano, in onore del quale sarebbe stato originariamente eretta la statua; La Rocca** [with n. 43] ha avanzato l'ipotesi che **la scultura sia stata ricavata da pezzi di più statue acrolitiche, rimessi insieme con scarse** [page 151] **correzioni ad esclusione della testa, rilavorata su un precedente ritratto. L'Orange** [with note 44], invece, ha proposto una lettura diversa, ritenendo che le rilavorazioni non siano da attribuire a modifiche eseguite su un ritratto pre-costantiniano, ma siano **opera di una rielaborazione cristiana della statua** avvenuta negli anni 324-337 d.C., deducibile dai consistenti ritocchi rilevabili sulla testa e da **una possibile sostituzione degli attributi, ossia il simbolo della croce al posto dello scettro e l'aggiunta del diadema.** L'ipotesi dello studioso norvegese sembra almeno in parte vera, perché, benché non [page 152] sia possibile dimostrare la sostituzione integrale dell'arto, **la mano appartenente al colosso** [with n. 45] **presenta nel palmo due fori di forma e misure diverse, dovuti verosimilmente alla sostituzione dell'attributo.** Il coronamento della testa con un diadema metallico, proposto da L'Orange, non è documentato. **Le sole tracce visibili sono due piccoli fori simmetrici di diametro ineguale praticati alle due estremità del motivo centrale à mandorla'** (fig. 63). È possibile ipotizzare, quindi, soltanto la presenza di una gemma sorretta da due piccoli perni ripiegati inseriti nei due forellini centrali. **Il tipo di pietra, il marmo pario** [with n. 46], **adoperato in tutti i pezzi conservati confermerebbe che il ritratto, riadattato per raffigurare Costantino, facesse parte della medesima statua fin dall'inizio.** L'identificazione del marmo, viceversa, ripropone nuovamente il problema dell'identificazione del soggetto raffigurato in occasione della sua prima lavorazione, dal momento che – per

quanto finora è possibile sostenere – **i blocchi di marmo pario possono essere stati portati a Roma non oltre l'età adrianea** [my emphasis]".

In his **note 38**, Parisi Presicce writes: "E.B. HARRISON ... [*i.e.*, here E.B. HARRISON 1967], p. 92 ss."

In his **note 45**, he writes: "**Come già detto** [cf. *supra*, p. 130, with n. 8], **la mano del colosso costantiniano non è quella finora attribuita, giunta in Campidoglio tra la fine del XVIII e l'inizio del XIX secolo, ma l'altra presente nel cortile del Palazzo dei Conservatori. Il riconoscimento risolve il problema della diversità di marmo della mano finora considerata appartenente all'acrolito, rispetto agli altri frammenti** [my emphasis]".

In his **note 46**, Parisi Presicce writes: "P. PENSABENE, L. LAZZARINI, B. TURI, art. cit. a nota 4 [*i.e.*, here P. PENSABENE, L. LAZZARINI and B. TURI 2002], p. 254, fig. 18, campioni MC 38A e 38 B". - See also Parisi Presicce (2006b, 128, n. 4).

**In the following, I will summarize Claudio Parisi Presicce's own findings.**

Parisi Presicce (2005, 144-147; cf. *id.* 2006b, *passim*) provides a summary of his own recent research. **Parisi Presicce (2005, 146) observes that the original portrait may have been a bearded man.** So already, but for different reasons, Evers's (1991, 795; cf. *supra*, her point b)). **Parisi Presicce (2005, 146) has also found out, that only Constantine's head is ancient, whereas his neck is a restoration of the Renaissance.** See for that research also in more detail Parisi Presicce (2006a); in this article and in Parisi Presicce (2006b, 130 with n. 8 [with a reference to the 'wrong' right hand]).

*The previous attribution of the 'wrong' right hand to the colossal portrait of Hadrian (now Constantine), here Figs. 11; 11.1*

**Parisi Presicce (2006b, 152 with n. 45, quoted *verbatim supra*) explains, why the previous scholars quoted above have attributed the 'wrong' right hand to this portrait of Constantine. This right hand of another colossal marble statue is also on display in the cortile of the Palazzo dei Conservatori, and has slightly smaller proportions than the original right hand of the statue of Hadrian (now Constantine). And because this 'wrong' right hand is carved from different marble, this fact had caused the above-quoted (erroneous) hypotheses, published by some previous scholars.**

**Claudio Parisi Presicce (2006b, 130) writes about this 'wrong' right marble hand of an acrolithic statue, which, together with the real right hand of the colossal acrolithic statue of Constantine, is on display in the cortile of the Palazzo dei Conservatori :** "In questo stesso periodo si affronta per la prima volta il tema della forma e della ricostruzione del colosso [*i.e.*, of Constantine the Great; cf. here **Figs. 11; 11.1**] attraverso i frammenti superstiti, prendendo in considerazione – per la verità per escluderne l'eventuale pertinenza al colosso - la mano, anch'essa destra, di dimensioni superiori al naturale conservata presso lo studio di

Antonio Canova e acquisita alle collezioni capitoline nel 1829 o poco prima [with n. 8]. La sua collocazione nel cortile del Palazzo dei Conservatori, dove era già presente la mano originaria del colosso, ha ingenerato a causa dei successivi spostamenti dei frammenti del colosso sui due lati del cortile una sovrapposizione e in seguito uno scambio tra le due mani, che è stato possibile ricostruire soltanto seguendo le vicende delle rispettive basi. Una definitiva conferma su quale mano sia corretto attribuire al colosso costantiniano si ricava da un'attenta osservazione delle dimensioni generali, che nella mano per errore tradizionalmente attribuita al colosso risultano leggermente più piccole e con un polso troppo stretto perché risulti compatibile con la parte conservata dell'avambraccio. **Anche le linee di frattura della mano delineate con precisione nel disegno di Hubert Robert, perfettamente sovrapponibili con quelle di una sola delle due mani, confermano l'identificazione proposta** [my emphasis].

In his note 8, Parisi Presicce writes: "Descrizione delle sculture, e pitture che si trovano al Campidoglio, compilata da Agostino Tofanelli, edizione emendata ed accresciuta, Roma 1829, p. 135: "**Mano colossale che in oggi è stata riunita con gli altri Frammenti trovati presso il Tempio della Pace**" [my emphasis]". - **With his formulation: 'the other fragments found at the Templum Pacis', Agostino Tofanelli here refers to the fragments of the colossal portrait of Constantine the Great (cf. here Figs. 11; 11.1), found in 1486 within the Basilica of Maxentius - which at the time had erroneously been identified with the Templum Pacis; cf. Parisi Presicce (2006b, 127, with ns. 1, 2 and Fig. 1). For the drawing by Hubert Robert of the right hand that actually belongs to the colossal acrolithic statue of Constantine the Great (cf. here Figs. 11; 11.1), mentioned by Parisi Presicce (2006b, 130) in his above-quoted passage; cf. Parisi Presicce (2006b, 129, Fig. 3).**

*All ten fragments belonging to the colossal portrait-statue of Hadrian(now Constantine), here Figs. 11; 11.1, are sculpted from the best quality of Parian marble, called lychnites*

The marble of all fragments that actually belong to the colossal statue of Hadrian (now Constantine) has been tested. Apart from the neck, which is carved from Carrara marble, the ten original fragments are all sculpted from Parian marble. As Parisi Presicce adds, this means also that all the extant fragments of Constantine's colossal acrolithic portrait had already belonged to the original statue; cf. Parisi Presicce (2005, 146 with n. 43; *id.* 2006b, 152 with n. 46, quoted *verbatim supra*). **Parisi Presicce (2005, 146; *id.* 2006b, 152, quoted *verbatim supra*) adds that, after the reign of Hadrian, Parian marble was not imported to Rome any more.**

To Parisi Presicce's (2006b, 152) above-quoted observation that 'after the reign of Hadrian, Parian marble was not imported to Rome any more', I should like to add a comment.

Hans Rupprecht Goette, who was kind enough as to read this *Study* (this text was at the time part of *Appendix IV.c.1* that is now published below, in volume 3-2), has alerted me by Email of 30th July 2020 to the fact that at Rome Parian marble was still used for portraits from the Antonine period through the 3<sup>rd</sup> century AD. - To this I will come back below.

Let's now return to Parisi Presicce's new findings concerning the colossal portrait of Constantine the Great (cf. here **Figs. 11; 11.1**).

**Cf. Parisi Presicce (2005, 146): at the temples of the head had been inserted separately carved curls, two of these are still preserved.** Cf. Parisi Presicce (2006b, 151), caption of Fig. 59: "Statua del colosso di Costantino. Veduta frontale con la ciocca antistante l'occhio destro"; cf. p. 151, caption of Fig. 60: "Roma, Musei Capitolini, magazzino sculture. Ciocca pertinente als colosso di Costantino".

**In addition to this, Parisi Presicce mentions his hypothesis, that this acrolithic statue of Constantine had been 'constructed' contemporaneously with the western apse of the Basilica of Maxentius; cf. Parisi Presicce (2005, 145; repeated almost *verbatim* in *id.* 2006b, 139-140, where he provides additional illustrations).**

Cf. Parisi Presicce (2006b, 139):

"[Fragment] E. La testa è costituita unicamente dalla metà anteriore e non sembra avere mai avuto la parte occipitale (MC, inv. 757) (figg. 38-40), tenuto conto che il bordo non è lavorato per un accostamento (fig. 41). Il blocco marmoreo è scavato sul retro con tagli regolari, non solo per alleggerire il peso, ma anche per consentire l'alloggiamento di travi e di grappe che permettessero di sostenere e ancorare la testa alla parete posteriore (fig. 42). Il raccordo era forse costituito da un elemento in stucco che riproduceva il nimbo. Ne deriva che la testa è stata lavorata o rilavorata per una statua colossale dimensionata per l'abside occidentale della basilica, alla cui parete di fondo era previsto che fosse accostata. Ciò presuppone che la scultura sia stata eretta contestualmente alla costruzione dell'abside, avendone [page 140] definito fin dall'inizio nella tessitura della parete i punti di ancoraggio, a meno che non si debba immaginare che Costantino sia intervenuto a modificare la basilica, con l'aggiunta della statua colossale, prima che la parete occidentale dell'edificio – e conseguentemente la sua copertura – fosse stata completata". Cf. also Parisi Presicce (2006b, 154 with n. 48).

*The statue-type of Iuppiter, chosen for the statue of Hadrian (now Constantine), here Figs. 11; 11.1*

After discussing in great detail the statue-type of the portrait of Constantine (cf. here **Fig. 11**), Parisi Presicce (2006b, 142-144) comes to the conclusion that this statue is based on the less frequently copied version of a Jupiter-type that was mostly copied in mirror-image. The best example for the latter version of this statue-type is the acrolithic statue of Jupiter in the Hermitage at St. Petersburg (his Fig. 47 = here **Fig. 10**).

For a discussion of this statue; cf. *supra*, at *A Study on Domitian's cult-statue of Iuppiter Optimus Maximus Capitolinus* (cf. here **Fig. 10**).

**Fig. 10. Colossal acrolithic statue of Jupiter. St. Petersburg, Hermitage, from Castel Gandolfo. Cf. C. Parisi Presicce (2006b, 146, Fig. 47, copied after M.B. PIOTROVSKIJ and O.J. NEVEROV 2003, fig. on p. 200). <https://www.hermitagemuseum.org/wps/portal/hermitage/digital-collection/22.09.2020>.**

In the below-quoted passage, Parisi Presicce (2006b, 144) suggests that this lesser-used version of this statue-type of Jupiter was intentionally *chosen* for this portrait of Constantine, thus tacitly assuming that the statue of Constantine was designed in this way to be erected in the western apse of this building. The reason being, in his opinion, that a visitor to the Basilica of Maxentius, who entered the building at its entrance on the Sacra Via, would see the statue of Constantine to his or her own left.

Cf. here **Figs. 58; 73**, labels: FORUM ROMANUM; SACRA VIA; Basilica of MAXENTIUS.

Strangely enough, Parisi Presicce does not address in this context the fact, perfectly well known to him of course, that this acrolith of Constantine has been reworked from the statue of an earlier emperor (in my opinion of Hadrian), of which only the head has been recut into the portrait of Constantine. Elsewhere Parisi Presicce (2005, 147, with n. 47 and Fig. 6; *id.* 2006b, 152-154, with n. 48) observes that the facial traits of Constantine show great asymmetries. He suggests that also this was intentionally done in order to adjust the statue to this specific display at the Basilica of Maxentius. - If Parisi Presicce is right with his reasoning concerning the choice of this particular version of this statue-type of Jupiter, we may wonder, whether also the original statue of Hadrian had been on display in a room in such a way that a visitor, who entered the place, would see the portrait of Hadrian to his or her own *left*.

**Paris Presicce (2006b, 144, Section: "3. L'immagine divina del nuovo imperatore") writes about the statue of Constantine (here Fig. 11) :**

"La scultura più vicina all'immagine imperiale [*i.e.*, here **Fig. 11**] è quella colossale raffigurante il padre degli dei conservata all'Ermitage [with n. 28], anch'essa seduta sul trono e realizzata come acrolito, con le parti

nude in marmo bianco e il panneggio in stucco dorato (fig. 47 [cf. here **Fig. 10**]). **Rispetto al colosso costantiniano** (fig. 48 [cf. here **Fig. 11**]) **la posizione delle braccia e i relativi attributi sono invertiti, con il globo sormontato da una Vittoria nella mano destra e lo scettro ad asta lunga retto con la sinistra.** Il panneggio, invece, come nella statua di Costantino poggia sulla spalla sinistra e non copre, quindi, il braccio sul medesimo lato, che non è abbassato. **È probabile che l'inversione nel ritratto imperiale** [*i.e.*, of the statue of Constantine; cf. here **Fig. 11**] **fosse determinata dalla posizione della statua in relazione alla dislocazione dell'ingresso principale** [of the Basilica of Maxentius], **non frontale, e al punto di vista privilegiato di chi, entrando nella basilica, si dirigeva verso l'abside occidentale, che fungeva da cornice alla scultura** [my emphasis]."

In his **note 28**, Parisi Presicce writes: "O. WALDHAEUER ... [*i.e.*, O. WALDHAEUER 1928], I, p. 4 ss., fig. 1, tav. I (da Castel Gandolfo); M.B. PIOTROVSKIJ, O.J. NEVEROV ... [*i.e.*, here M.B. PIOTROVSKIJ and O.J. NEVEROV 2003, p. 201, fig. a p. 200]."

For Oskar Waldhauer's discussion (1928, 4-8) of this statue of Jupiter; cf. *supra*, in *A Study on Domitian's cult-statue of Iuppiter Optimus Maximus Capitolinus*; at Part II.

**Contrary to some earlier scholars, Parisi Presicce (2005, 145 with ns. 32, 33; *id.* 2006b, 140) is of the (in my opinion convincing) opinion that this acrolith of Constantine (cf. here **Figs. 11; 11.1**) is *not* the statue mentioned by Eusebius.**

Cf. Parisi Presicce (2006b, 140): "È stato proposto che lo scettro [of the statue of Constantine, here **Figs. 11; 11.1**] terminasse con una croce, come nel medaglione in argento conservato a Monaco [with n. 13], e che la statua coincida con quella descritta da Eusebio [with n. 14], eretta dal Senato ``a Roma nel luogo più pubblico di tutti'' [with n. 15]. Sappiamo che quest'ultima recava nella mano sinistra il globo, ma del braccio sinistro del colosso marmoreo [*i.e.*, here **Fig. 11**] nessun frammento è conservato".

In his **note 13**, Parisi Presicce writes: "A. ALFÖLDI, *Das Kreuzszepter Konstantins des Grossen*, in *SchwMüBl*, IV, 16, 1954, pp. 81-86".

In his **note 14**, he writes: "*Hist. Eccl.*, 9, 9, 10-11".

In his **note 15**, he writes: "Ipotesi avanzata da C. CECHELLI ... [*i.e.*, here C. CECHELLI 1951], t. II, pp. 85-88; e ID. ... [*i.e.*, here C. CECHELLI 1954], pp. 17-44, figg. 31-35; ripresa da H. KÄHLER ... [*i.e.*, here H. KÄHLER 1952], p. 28 s."

Although Parisi Presicce (2006b, 140) writes in the above-quoted passage that, according to Eusebius (*Hist. Eccl.*, 9,9,10-11), the statue of Constantine, described by him, was holding a globe in its left hand (whereas of the left arm of the colossal statue of Constantine here **Fig. 11** no remains are left), Parisi Presicce's own reconstruction of the statue of Constantine here **Fig. 11** (cf. his Fig 48 [= here **Fig. 11.1**]) shows Hadrian (now Constantine) holding a globe in his left hand as well. Parisi Presicce's reconstruction is, of course, correct in this point, because Constantine's *right* hand holds a stafflike object (cf. here **Figs. 11; 11.1**).

In addition, Parisi Presicce (2006, 154, quoted *verbatim infra*) follows Kähler's dating (1952). The title of this article is: "Konstantin 313") of the statue of Constantine (cf. here **Fig. 11**), and believes that only the Senate could have commissioned a statue of Constantine in the iconography of a seated Jupiter, 'perhaps to legitimize his victory over Maxentius'. I agree - but that is precisely what is also known of Eusebius's (*Hist. Eccl.* 10,4,16) statue of Constantine; cf. Kähler (1952; *id.* 1960, 391, Tafel 264, quoted *verbatim supra*). As we have seen above, Eusebius (*Hist. Eccl.* 10,4,16) reports, in addition to this, that Constantine himself had ordered that the artists should give his portrait-statue the (so far unidentified) sign in its right hand, which had brought him the victory at the *Pons Milvius*:

*in hoc signo vinces*, the famous line, that we also know thanks to Eusebius (*V. Const.* 1, 27-29).

For Constantine's relevant dreams, which he had before his decisive battle; cf. *Hugo Brandenburg* (2013, 16, quoted *verbatim supra*). When we follow Parisi Presicce's (2006, 154) hypothesis that the Senate had commissioned the statue of Constantine (cf. here **Fig. 11**) to commemorate his victory over Maxentius, and assume at the same time that also the portrait-statue of Constantine, seen by Eusebius (*Hist. Eccl.* 10,4,16), was based on a Jupiter-type (because the statue held the enigmatic sign in its right hand, and a globe in its left), it follows that the Senate had honoured Constantine with two *identical* colossal statues for the same victory - a situation I myself find impossible to believe (but see below). 'Identical', because using for both statues the same, less frequently copied statue-type of a Jupiter, who holds the sceptre in his *right* hand, and the globe in his *left* hand, as Eusebius (*Hist. Eccl.* 10,4,16) reports for *his* statue of Constantine, and as is also true for the extant colossal statue of Constantine (cf. here **Figs. 11; 11.1**).

At first, I have come to the following conclusion: Personally, I therefore find it preferable to follow Cecchelli (1951; *ead.* 1954), and Kähler (1952; *id.* 1960), in identifying the colossal statue of Constantine that we have (cf. here **Fig. 11**), with the statue described by Eusebius (*Hist. Eccl.* 10,4,16). If true, the statue of Constantine (cf. here **Fig. 11**) was the one, which carried in its right hand Constantine's victory-bringing sign. - But see my second hypothesis, formulated below.

But I admit that this hypothesis is so far not provable. First of all Eusebius (*Hist. Eccl.* 10,4,16) writes that the statue of Constantine, which he described, was erected by the Senate 'a Roma nel luogo più pubblico di tutti'; cf. Parisi Presicce (2006b, 140 with n. 15). - This sounds as if *that* statue of Constantine was standing under the open sky, which is why the colossal head of Constantine, found in 2005 in the Forum of Trajan (cf. here **Fig. 47**) could have belonged to the statue, mentioned by Eusebius.

As we shall see below (cf. K. FITTSCHEN 2014, 58), this head of Constantine (cf. here **Fig. 47**) had probably belonged to a cuirassed statue, an iconography, as we have learned above from Eugenio La Rocca (2000, 24, with n. 68), is typical of Christian emperors.

So, in case that actually was the statue described by Eusebius (*Hist. Eccl.* 10,4,16), it showed Constantine in precisely the same seated pose as the statue here **Fig. 11**, but in a different iconography: since, instead of representing Constantine *as Jupiter* (as in **Fig. 11**), the statue seen by Eusebius - very appropriately for this specific dedication - represented Constantine *as Christian emperor*. - To this recently found head of Constantine (cf. here **Fig. 47**) I will come back below.

Parisi Presicce (2006b, 154) writes concerning the meaning and dating of the colossal statue of Constantine (here **Figs. 11; 11.1**):

"La datazione del ritratto [of Constantine; cf. here **Figs. 11; 11.1**], a partire dallo studio di Kähler [1952], viene ormai quasi unanimemente fissata in una fase precoce del principato di Costantino, ossia nel breve periodo della sua permanenza a Roma dopo la battaglia di Ponte Milvio, allorché furono celebrati i decennalia. La dedica della statua colossale all'imperatore, raffigurato secondo una consolidata tradizione pagana nella trasposizione eroica del tipo di Giove assiso, può essere attribuita soltanto al Senato, forse per legittimare la sua vittoria su Massenzio. L'iconografia prescelta e le dimensioni colossali non sono più soltanto allusive, ma equiparano esplicitamente l'imperatore a un dio [my emphasis]".

Provided Parisi Presicce' last sentence is true, which I think it is, this was already true for the original statue, which, in my opinion, represented Hadrian. See also above, the discussion, whether this colossal statue of Hadrian (here **Figs. 11; 11.1**) could originally have been the cult-statue of *Divus Hadrianus* in the *Hadrianeum* (*inter alia* because in this statue Hadrian is represented with bare feet).

### Let's now turn to my own observations.

Concerning my own point *f*) mentioned above, Evers's (1991, 795, Figs. 5-8) juxtaposition of the right and left profiles of the colossal portrait of Constantine the Great (cf. here **Fig. 11**) with those of a lifesize portrait of Hadrian in the Palazzo Braschi (inv. no. 442), this comparison shows in my opinion the following: the right profile of Constantine's head, Evers's Fig. 5, shows striking similarities with the relevant detail of Hadrian's 'Rollockenfrisur', as observed by Evers (1991, 795; cf. *supra*, her point *c*)). To verify this point, it would have been useful, if Evers had drawn and 'numbered' those curls on both Constantine's head and on that of the portrait of Hadrian at the Palazzo Braschi, Evers's Fig. 6, as well as on other portraits of Hadrian with 'Rollockenfrisur'. Evers's (1991, 795, n. 61) "fourche sur le lobe" (cf. *supra*, her point *e*)) on the other hand, is undeniable. Back in 1991, I was therefore convinced that Evers is right with her hypothesis that this head of Constantine was originally a portrait of Hadrian. But, while writing this text, when looking closer at Constantine's left and right profiles, Evers's Figs. 5 and 7, and comparing those with the left and right profiles of the portrait of Hadrian at the Palazzo Braschi, Evers's Figs. 6 and 8, I realized that Constantine's nose, and especially his chin is protruding further than in Hadrian's portrait. The reason being that, compared with Constantine, Hadrian had a much smaller chin.

On 3rd May of 2020, I reached this point of my research and came to the conclusion that Evers's hypothesis, according to which this head of Constantine the Great (cf. here **Fig. 11**) has been recut from a portrait of Hadrian, was probably not true. Because Hans Rupprecht Goette was kind enough to send me the above-mentioned articles by Marianne Bergmann (1997) and himself (2019), in which Hadrian's portrait-type Delta Omikron ( $\Delta\omicron$ ) is discussed, as well as photographs of the replicas from the Villa Hadriana and in the Prado (cf. here **Fig. 3**), I wrote him an E-mail. I explained to Goette, why Bergmann's (1997, 143) mentioning of Hadrian's "charakteristische Falte in den Ohrläppchen", which is typical of all his portraits, was right now so important to me: because I was trying to verify, whether or not this head of Constantine could originally have been one of Hadrian.

But I had second thoughts. Looking again at the evidence, I concentrated on the following interrelated facts that were already discussed above:

- 1.) Claudio Parisi Presicce observed that of fragment E of the acrolithic statue of Constantine (cf. here **Fig. 11**), which comprises the head of Constantine and the attached neck, only the head is ancient, whereas the neck is a Renaissance restoration. In addition to this, the back of Constantine's head is missing and was in Parisi Presicce's opinion never executed;
- 2.) apart from this modern neck, all extant 10 ancient fragments of this acrolithic statue of Constantine are carved from Parian marble. This means, of course, that the artists did not merely reuse a possibly unfinished head of a previous emperor, but, as Parisi Presicce rightly states, that an entire colossal acrolithic statue was reused. And that means in its turn that we need not only to find out, who this original emperor was, but also which function this statue had;
- 3.) according to Parisi Presicce after the reign of Hadrian Parian marble was not transported to Rome any more - but see below;
- 4.) the photo of Constantine's left profile (cf. C. EVERS 1991, 805, Fig. 7) proves Evers's observation right (so on p. 795; cf. *supra*, her point *b*)) that the original portrait showed a bearded man. This fact has also been observed by Parisi Presicce;
- 5.) The coiffure of the original portrait has been cut back from temple to temple across Constantine's entire forehead and we must ask ourselves, why that had been done;

6.) Evers (1991, 795; cf. *supra*, her point c)) has rightly observed that above both temples of Constantine's head there are remains of Hadrian's third portrait-type, called 'Rollockenfrisur'. Unfortunately, she has not provided a detailed comparison of Constantine's coiffure with complete replicas of Hadrian's portrait-type 'Rollockenfrisur'. A precise 'map' of Constantine's coiffure, compared with a drawing of the scheme of Hadrian's portrait-type 'Rollockenfrisur' (derived by comparing several replicas of Hadrian's portrait-type with 'Rollockenfrisur') should enable us to define, how much of Hadrian's 'Rollockenfrisur' has been 'cut back' at Constantine's forehead. - I cannot provide such a graphic documentation here myself, which is why my following scenario can only be regarded as preliminary.

Assuming that already the artists, who created the portrait of Constantine (cf. here **Fig. 11**), could have cut away the neck of the original portrait in the way that it is preserved (because they had observed that, by cutting away the neck, this could provide them with further possibilities to rework the facial traits of this head), I developed the following scenario, which I sent on 5th May 2020 as my second E-mail to Hans Rupprecht Goette.

According to this idea, the artists could have 'tilted' the original head slightly forward in the direction to the beholder. Since they had decided to maintain the ears of the original portrait, they could, of course, only move the head slightly forward, and cut away not very much of the original portrait's forehead and of the facial traits at the front of this head. This operation would have allowed them to carve the facial traits slightly deeper, for example the cheeks to create Constantine's large eyes, and especially the area around the nose, so that it became larger, and in order to create Constantine's protruding chin. Of course this would have had the effect of changing the portrait's neck, which is why they cut it away. The idea, that the artists might actually have proceeded this way is, in my opinion, supported by the fact that the coiffure of the original portrait was cut back from temple to temple across Constantine's entire forehead. Apart from my own scenario, which I have just developed, I see no reason why that operation should have been necessary.

Although I maintain my overall conclusion, I should now like to add a comment to my point 3.), which refers to the statement by Parisi Presicce (2005, 146; *id.* 2006b, 152), according to which, after the reign of Hadrian, Parian marble was no longer imported to Rome.

Parisi Presicce (2006b, 152) writes: "L'identificazione del marmo [of the fragments belonging to the acrolithic statue of Constantine, here **Fig. 11**], viceversa, ripropone nuovamente il problema dell'identificazione del soggetto raffigurato in occasione della sua prima lavorazione, dal momento che – per quanto finora è possibile sostenere – **i blocchi di marmo pario possono essere stati portati a Roma non oltre l'età adrianea** [my emphasis]".

As already mentioned above, I have discussed this point with Hans Rupprecht Goette in an E-mail correspondence, who was kind enough to read this *Study* (this text was at the time part of *Appendix IV.c.1* that is now published below, in volume 3-2). Hans has alerted me by Email of 30th July 2020 to the fact that, at Rome, Parian marble was still used for portraits after the Hadrianic period.

He sent me an article by Donato Attanasio, Matthias Bruno and Walter Prochaska (2019), who have documented this fact. Since I myself am aware of the fact that, at Rome, Parian marble was used for 'ideal' sculpture 'also later than the Hadrianic period' (for example for the 'Esquiline Venus' (cf. here **Fig. 150**, to which I will come back below), both Goette and I agree that, even provided Parisi Presicce's (2006b, 152) relevant assertion were true - for which he himself does not provide a reference - all this evidence proves that at Rome Parian marble was still *used* after the Hadrianic period.

**This means that my above-mentioned point 3.), which relates to the earlier acrolithic statue that was reworked into the portrait of Constantine the Great (cf. here Fig. 11), is misleading, in so far as I had**

**intended to say that the material Parian marble alone precludes a date of the original statue `after the Hadrianic period´. - After what was said above, this is certainly *not* true.**

It is enough to think of the great masses of all kinds of marble and other building material that have still been found in post-antique times at *La Marmorata*, a telling modern toponym for the new ancient commercial riverport (by many scholars erroneously identified with the *Emporium* of Rome), which means that we cannot possibly know how long in antiquity it would in theory have been possible for a sculptor at Rome to work `fresh´ Parian marble, that is to say, marble blocks that were available at Rome's *Horrea*, without being forced to rework already existing sculptures.

To the area called *La Marmorata* I will come back below at Part II. of this *Study*. *Ancient Rome's new commercial river port, at La Marmorata. With discussions of the `Porticus Aemilia´ (in reality identifiable as Navalìa) and of the Horrea Aemiliana. With The sixth Contribution by Peter Herz : Rom. Strukturen der Versorgung; and with The second Contribution by Franz Xaver Schütz : Wie schwer war der ägyptische Obelisk, der heute auf der Piazza di S. Giovanni in Laterano in Rom steht?*

The essay by Attanasio, Bruno and Prochaska (2019) is relevant for the context discussed here, since the authors have tested the marble of 261 Roman portraits, most of which were carved at Rome, *inter alia* the portrait of Constantine (cf. here **Fig. 11**), which is why I quote in the following *verbatim* from their account.

**Attanasio, Bruno and Prochaska (2019, 277) write in their Abstract about the use of Parian marble at Rome:** "The marble provenance of 261 Roman portraits (167 imperial, 94 private) mostly of urban production and dating from the mid 1<sup>st</sup> century B.C. to the early 6<sup>th</sup> century A.D. has been established ... Parian *lychnites*, dominant till the mid 1<sup>st</sup> century A.D., underwent a strong decrease and almost disappeared from the later 2<sup>nd</sup> century onwards".

**Attanasio, Bruno and Prochaska (2019, 204) suggest (in my opinion erroneously) that the original head, recut into the portrait of Constantine (cf. here Figs. 11; 11.1), had been created in the Antonine period:** "Use of Parian marble, either *lychnites* or second choice Parian II marble, in Antonine times, although limited, is confirmed by many quarry blocks recovered from the Isola Sacra and the Fossa Traiana or found near the entrance of the underground quarries at Marathi. Quarry inscriptions carved on the blocks suggest that marble excavations at Paros went on till at least the mid 160s A.D. [with n. 90].

**The value of Parian marble was still recognized by some sculptors, and it is interesting to note that *lychnites* was used in Antonine times for some colossal sculptures. Beside the head of Antoninus Pius already mentioned (cat. 34) most of the fragments of a colossal statue, now visible in the court of Palazzo dei Conservatori at Rome, including the huge head later reworked as a portrait of Constantine, are made of *lychnites* [with n. 91]. Originally the sculpture represented a 2<sup>nd</sup> century emperor, probably from Trajan to Marcus Aurelius [with n. 92], and demonstrate that in this period Parian *lychnites* was still a sought after marble variety [my emphasis]**".

In their **note 90**, Attanasio *et al.* write: "Pensabene *et al.* 2000, 529-538, with previous references".

In their **note 91**, they write: "Pensabene *et al.* 2002".

In their **note 92**, they write: "Delbrück 1933, 121-130".

As discussed above in detail, the marble fragments in the cortile of the Palazzo dei Conservatori comprise 10 fragments carved from Parian marble of the best quality of this specific stone, called *lychnites*, which all belong to the colossal acrolithic portrait of Hadrian (now Constantine). In addition to this, there is also the above-mentioned colossal `wrong´ right hand of Constantine's statue on display there, carved from a different kind of marble, which belongs to a second acrolithic statue.

**For the 'Esquiline Venus' (cf. here Fig. 150); cf. *supra*, at Chapter I.3.1; and *infra*, in volume 3-2, at:**

*A Study on the consequences of Domitian's assassination ...*

*Or: The wider topographical context of the Arch of Hadrian alongside the Via Flaminia which led to the (later) Hadrianeum and to Hadrian's Temples of Diva Matidia (and of Diva Sabina?). With a discussion of Hadrian's portrait-type Delta Omikron ( $\Delta o$ ) (cf. here Fig. 3) and The fourth and the fifth Contributions by Peter Herz ...; at Chapter VI.2.3. My own interpretation of Hadrian's portrait-type Delta Omikron ( $\Delta o$ ) (cf. here Fig. 3) ...; at Hadrian's Delta Omikron ( $\Delta o$ )-portrait-type (cf. here Fig. 3) and the 'Venus from the Esquiline' (cf. here Fig. 150).*

For the 'Esquiline Venus'; cf. also Häuber (1986, 79-82; p. 79: for the material Parian marble; *ead.* 1988; and *ead.* 2014a, Figs. 16 a-f on pp. 40-41; cf. Chapter B 29.), pp. 745-776).

**Let's now turn to the Contribution by Hans Rupprecht Goette.**

Hans Rupprecht Goette answered me by E-mail on 5th May 2020, expressing his agreement with Evers (1991) and with my own ideas that the head of Constantine the Great (cf. here Fig. 11) was originally a portrait of Hadrian, adding some of his own observations which support this idea. On 6th May he has summarized this on my request in an E-mail, that he has kindly allowed me to publish here.

**See below, at *The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great)*; cf. here Fig. 11.**

When I had (almost) finished writing volume 3-1 of this *Study* on Domitian, Hans Rupprecht Goette was kind enough to send me on 2nd June 2023 his just appeared article ("Lesefrüchte? Vom Nutzen gründlicher Autopsie und guter Photodokumentation bei der Untersuchung von Portrait-Umarbeitungen", 2020/2021), in which he explains the relevant methodology in great detail.

Let's now return to my discussion on the portrait of Hadrian (now Constantine) with Hans Rupprecht Goette in May of 2020. In the meantime, I had found another remark by Claudio Parisi Presicce (2005, 146), who has observed that traces under Constantine's chin can possibly be interpreted as caused in the course of removing the beard of the original portrait: "Una certa tagliente rigidità nel profilo della mascella, presente anche in altri ritratti costantiniani realizzati rilavorando teste più antiche (in particolare quello colossale del Metropolitan Museum di New York) e la **piacchiettura ancora visibile nel sottogola, certamente non attribuibile a fenomeni di alveolarizzazione del marmo, indicano che forse il personaggio originariamente raffigurato aveva la barba** [my emphasis]".

Telling this Hans Rupprecht Goette by E-mail, he has sent me on 6th May 2020 on his own account some of his own photographs of the head of Constantine, on which this reworking of the beard under Constantine's chin is visible.

I wrote back the same day that exactly as on the photograph of Constantine's left profile, published by Evers (1991, 805, Fig. 7), also on his own photographs, and on those of Franz Xaver Schütz (for all those cf. here Fig. 11) even the shape of the beard of this earlier portrait is visible, which is clearly Hadrian's beard. The ideas developed here by Hans Rupprecht Goette and myself are corroborated by observations, published by Claudio Parisi Presicce (2006b), which I only read after my own account and *The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great)* had already been written. Parisi Presicce describes and documents with photographs that on Constantine's face the areas of the forehead, at the temples, around the nose and around the chin have definitely been reworked.

Cf. Parisi Presicce (2005, 145-146: "Il volto reca segni inconfutabili di rilavorazione: la fronte è stata chiaramente ribassata sotto la linea dei capelli come esito della trasformazione della pettinatura, evidente

soprattutto nell'area appiattita e fortemente rilavorata davanti alle orecchie in corrispondenza dei due profili. Gli occhi grandi e le [page 146] sopracciglia arcuate sono, invece, quelli del ritratto originario, come pure il naso piuttosto voluminoso e le orecchie, che non sembrano essere state rilavorate". Cf. Parisi Presicce (2006b, 148): "La fronte, infatti, sotto la linea dei capelli, appare decisamente ribassata". Cf. Parisi Presicce 2006b, 150, caption of his Figs. 53-54: "Segni di rilavorazione della capigliatura"; cf. caption of his Figs. 55-56: "Statua del colosso di Costantino. Segni di rilavorazione davanti alle orecchie". Cf. p. 151, caption of his Fig. 58: "Statua del colosso di Costantino. Segni di rilavorazione nel sottogola [my emphasis]".

In addition to this, Parisi Presicce (2006b) has published photographs of Constantine's head (cf. here Fig. 11), on which the beard of the original portrait is visible in the form of 'dark shadows'; cf. p. 141, Figs. 38; 39; 40; 42, p. 151, Fig. 58, p. 153, Fig. 64.

**The observations, made by Klaus Fittschen (2010b; id. 2012b) concerning the portrait of Hadrian (now Constantine the Great; cf. here Fig. 11).**

Only after my *Appendix IV.c.1.*) (from which I have later 'cut out' this *Study on the colossal portrait of Hadrian (now Constantine the Great)* ... (cf. here Fig. 11)), and *The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great)* were both written, Hans Goette has found an essay by Klaus Fittschen, which he was also kind enough to send me.

**In this article ("Lese Früchte IV; 3. Zur Umarbeitung des Kolossalbildnisses Constantins im Hof des Konservatorenpalastes", 2012b), Klaus Fittschen has likewise followed Cécile Evers (1991) by assuming that the colossal head of Constantine the Great (cf. here Fig. 11) had originally been a portrait of Hadrian.**

I myself, although I had tried to find out, whether Fittschen had discussed Evers's (1991) hypothesis, had been unable to find this article. Fittschen (2012b, 75 with n. 68) himself refers to one of his earlier publications (cf. *id.* 2010b, 1103), where he seems to have voiced this opinion for the first time. Fittschen's review (cf. *id.* 2010b) was quoted already elsewhere in this *Study* (cf. *infra*, in volume 3-2, at *Appendix I.g.1.*) in a different context and stood therefore already on my long list of publications to be checked as soon as the libraries would re-open after their closure due to the Corona pandemic.

**Fittschen's observations (2010b; id. 2012b) concerning the reworking of this head of Hadrian will be discussed and quoted *verbatim* in the following. They differ in part from those of Hans Rupprecht Goette (cf. below, at *The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great)*), as well as from my own statements, both of which are published here unchanged (cf. *supra*). But in my opinion, these observations by Goette, Fittschen and myself complement each other.**

Fittschen (2012b, Taf. 24,8.9) illustrates his hypothesis with two reconstruction drawings - thus adding the visual information that, as remarked above in my discussion of Cécile Evers's hypothesis (1991), she herself has not provided the reader with. Fittschen has also made a survey of the various properties of the known replicas of Hadrian's so-called "Roll-Locken-Portrait-Typus", information likewise missing in Evers's (1991) account. Because Fittschen too follows Evers (1991) in assuming that the artist, who reworked Hadrian's head, maintained the ears of this portrait, Fittschen (2012b), as his Taf. 24,9 shows - like myself - takes for granted that the upper part of Hadrian's head must have been tilted 'forward' in order to rework his face into a portrait of Constantine. Fittschen does not mention this fact in his text and assumes, contrary to myself, that, in order to allow this operation, the overall proportions of Hadrian's head, that is to say: its volume (especially its extension from the front to the back) must have been considerably larger than those of the resulting portrait of Constantine. As I hope to demonstrate below, this is not true. Fittschen (2012b, 76-77, with ns. 74-76) - also like myself - is further of the opinion (obviously because of the same assumption), that it was only therefore possible to carve Constantine's large and protruding eyes in the way that it was done.

Contrary to the opinions voiced by Goette (cf. below, at *The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great)*) and myself (cf. *supra*), Fittschen suggests that the artist, in order to create Constantine's facial traits out of those of Hadrian, had to cut away 13 cm of marble (cf. *id.* 2010b, 1103; *id.* 2012b, 76 with n. 71). From this point of view Fittschen comes to the conclusion that the volume of the original head of Hadrian must have been much larger (especially its extension from the front to the back) than the resulting portrait of Constantine.

I discussed this point with Hans Rupprecht Goette on 29th-30th July 2020 in an E-mail correspondence, and I agree with him that the reworking of Hadrian's face into Constantine's facial traits cannot possibly have had the result that Constantine's *head* as a whole is much smaller in regard to the measurement from the chin to the vertex of the head than the original portrait of Hadrian had been. Only the extension from the front to the rear has been considerably reduced. And here Fittschen has overlooked another important finding, documented by Parisi Presicce (2005; *id.* 2006b), because only the extension from the face back to the ears could be reduced at all.

Parisi Presicce (2005, 145; repeated almost *verbatim* in *id.* 2006b, 139-140, quoted *verbatim supra*) rightly observes that the portrait of Constantine does not comprise the back of the head - and it is clear from the way the head was sculpted that also in the original portrait the back of the head was not executed, because it was from the beginning fixed to the wall behind it. Parisi Presicce describes this fact in his text and is able to document it with a photograph of Constantine's head, seen from above (cf. his Fig. 41).

**Parisi Presicce (2006b, 139) writes about the head of Constantine discussed here (cf. here Fig. 11) :**

"[Fragment] E. La testa è costituita unicamente dalla metà anteriore e non sembra avere mai avuto la parte occipitale (MC, inv. 757) (figg. 38-40), tenuto conto che il bordo non è lavorato per un accostamento (fig. 41). Il blocco marmoreo è scavato sul retro con tagli regolari, non solo per alleggerire il peso, ma anche per consentire l'alloggiamento di travi e di grappe che permettessero di sostenere e ancorare la testa alla parete posteriore (fig. 42). Il raccordo era forse costituito da un elemento in stucco che riproduceva il nimbo. Ne deriva che la testa è stata lavorata o rilavorata per una statua colossale dimensionata per l'abside occidentale della basilica [of Maxentius], alla cui parete di fondo era previsto che fosse accostata".

Cf. Parisi Presicce (2006b, 141: the caption of his Fig. 41 reads):

"Come fig. 38 [= "Testa del colosso di Costantino, veduta frontale"]. Particolare della sommità del capo".

For the manufacture of Greek and Roman acrolithic statues in general; cf. Giorgos Despinis (2004; I thank Hans Rupprecht Goette for the reference).

**To conclude.** The following facts, therefore, contradict Fittschen's above-mentioned assumption concerning the alleged overall smaller volume of Constantine's head (when compared with the original portrait of Hadrian, from which it was carved):

1.) the remains of one of Hadrian's 'Roll-Locken' above Constantine's right ear;

2.) the fact that the artist reused Hadrian's ears unchanged for Constantine's portrait.

Points 1.) and 2.) were observed by Evers (1991, 795, with ns. 61-63, Figs. 5; 7), and followed by Fittschen (2012b, 75 with ns. 68, 69);

3.) traces under Constantine's chin, observed and documented by Claudio Parisi Presicce (2005, 146; *id.* 2006b, 151, caption of his Fig. 58, quoted *verbatim supra*), which he has interpreted as remains of the beard of the original portrait. Those traces are also visible on a photograph published here (cf. here Fig. 11).

Fittschen (2010b; *id.* 2012b) does not address the above-mentioned point 3.), because he does not discuss the essays of Parisi Presicce (2005; *id.* 2006b).

Goette (cf. below, at *The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great)*) observes that Constantine's portrait is not so 'flat' as other reworked portraits usually are, which is obvious when we look at Constantine's right and left profiles (cf. here **Fig. 11**) In addition to this, Goette suggests in his *Contribution* that also the removal of Hadrian's beard allowed the artist to carve Constantine's more protruding nose. In my opinion, Goette's just-mentioned observations are enough to prove that Hadrian's facial traits were certainly not cut as deeply as Fittschen (2012b) wants us to believe. Contrary to Fittschen's assertion, I, therefore, maintain also my own suggestion, which is also tacitly assumed on Fittschen's reconstruction drawing of Hadrian's/Constantine's superimposed left profiles (cf. his Taf. 24,9), namely that already the tilting of Hadrian's head in advance provided enough material to carve Constantine's protruding large eyes, nose and chin. - Only that Fittschen, contrary to myself, is of the (as I hope to have demonstrated above with my points 1.)-3.) erroneous opinion that the volume of Hadrian's head must have been considerably larger (especially the extension of the head from the front to the back) than the resulting head of Constantine.

In the reconstruction of this colossal acrolithic statue of Constantine by Claudio Parisi Presicce (2006b, 147, caption of Fig. 48 [= here **Fig. 11.1**]; cf. p. 127, note \*), which is based on "3D"-scans of all ten extant marble fragments, Constantine's head seems to be of much smaller proportions than his body; a fact, which Parisi Presicce himself does not address in his discussion of this reconstruction. But instead of believing that this could support Fittschen's assertion (that the volume of Constantine's head was considerably smaller, especially its extension from the front to the back, than the original portrait of Hadrian), I rather believe that this effect is the result of the chosen perspective, or in other words, the chosen 'viewpoint' of the beholder. - My guess is that this perspective was also chosen because Parisi Presicce (2006b, 140) reports that this colossal statue of Constantine, on display in the western apse of the Basilica of Maxentius, had been erected on a base (which is not represented in the reconstruction though).

When seeing Parisi Presicce's reconstruction (cf. here **Fig. 11.1**) of the acrolithic portrait of Constantine for the first time, I, therefore, thought the emperor's head was possibly intentionally shown as being so small, in order to stress the grandiose proportions of this statue; according to Parisi Presicce (2006b, 154) it was circa 10-12 m high. But Parisi Presicce (2006b) does not mention that any such 'optic correction' had intentionally been added to this reconstruction. Note that in Parisi Presicce's reconstruction (cf. here **Fig. 11.1**) are assembled for the first time all ten surviving marble fragments (including the head), that belong to this colossal portrait of Constantine, and that Parisi Presicce (2006b) is able to demonstrate that all of these fragments were part of one and the same original acrolithic statue - which in the opinion of Cécile Evers (1991) and some of the above-quoted scholars represented Hadrian. - Parisi Presicce's relevant observations at the colossal statue of Constantine lead us back to Fittschen's account.

**Fittschen (2012b, 77, n. 79) asks the following two questions, which, as we have seen above, have been addressed and (in part) answered by other scholars, whose findings Fittschen himself has overlooked :**

**"Wo das Kolossalbildnis Hadrians ursprünglich aufgestellt war und welche Teile außer dem Kopf sonst noch übernommen worden sind, ist weiterhin unbekannt, vgl. [vergleiche] Ruck a. O. [an angegebenem Ort] (Anm. 68 [*i.e.*, here B. RUCK 2007]) 241-253; Fittschen a. O. [an angegebenem Ort] (Anm. 68 [*i.e.*, here K. FITTSCHEN 2010b]) 1103 [my emphasis]"**.

**Fittschen (2012, 77, n. 79) thus asserts that these questions have not been answered so far. - Fortunately this is not (quite) true.**

To begin with Fittschen's (2012b, 77, n. 79) 2.) question: 'which marble fragments, apart from the head [of the colossal acrolithic statue of Constantine, here **Fig. 11**] have been taken over [from the original portrait of Hadrian]?'

Fittschen has overlooked that this question has been discussed in great detail - and answered - by Claudio Parisi Presicce. The relevant passages of Parisi Presicce's publications (2005; 2006b) are quoted *verbatim supra*.

Parisi Presicce (2005, 146, *verbatim* repeated 2006b, 149 with n. 38) believes (in my opinion erroneously) that it is impossible to identify the original emperor, from whose portrait that of Constantine (cf. here **Fig. 11**) had been recut. But Parisi Presicce (2005, 146 with n. 43; *id.* 2006b, 152, with n. 46, quoted *verbatim supra*) is able to demonstrate that the entire acrolithic statue of Constantine was made by re-working only one single portrait, since its still extant 10 marble fragments, which have been tested for the purpose, are all carved from the same best quality of Parian marble, called *lychnites*.

Let's now turn to Fittschen's (2012b, 77, n. 79) 1.) question: 'where was this colossal portrait of Hadrian originally on display'?

Fittschen does not discuss that Cécile Evers (1991, 797, with n. 72) mentions altogether five inscriptions, all found in the *Forum Romanum*, *inter alia* CIL VI 974, which, in her opinion, could have belonged to this portrait of Hadrian. We have learned above from Michaela Fuchs (2004, 130, n. 45) that "CIL VI 974 = 40524" (cf. here **Fig. 29.1**) that Fuchs, who herself does not mention Evers (1991), is interested in this inscription for a different reason.

I have suggested above that both subjects, discussed by Cécile Evers (1991) and by Michaela Fuchs (2004), are possibly related. Geza Alföldy (1996, at CIL VI 40524) believed that this inscription belonged to an honorary statue, dedicated by the Senate and the Roman People to Hadrian, and that it was on display within the Temple of *Divus Vespasianus*. Alföldy's hypothesis has been followed by Michaela Fuchs (2004, 130 with n. 47, Abb. 8 = here **Fig. 29.1**), and above tentatively also by myself (although, as already mentioned above, I have in the meantime abandoned this idea). - To this I will come back below.

Let's now look at Fittschen's (2012b) account in detail.

**Fittschen (2012b, 75-77), after discussing the reworking of the portraits of private individuals, turns to recut portraits of emperors and writes about this colossal portrait of Hadrian (now Constantine):**

"Anders verhält es sich bei Kaiserbildnissen, die - zumindest bis in die Zeit der Tetrarchie - nur umgearbeitet und wiederverwendet werden konnten, wenn der ursprünglich dargestellte Kaiser der *damnatio memoriae* verfallen war [with n. 62]; die Zahl der in Frage kommenden Kandidaten ist überschaubar, sodass in der Regel schon aus dem Kaiser, der in dem wiederverwendeten Bildnis dargestellt ist, geschlossen werden kann, wer sein Vorgänger war [with n. 63] ...

**Das Kolossalbildnis Constantins des Großen im Hof des Palazzo dei Conservatori in Rom ist, wie man seit langem weiß, aus einem älteren Bildnis umgearbeitet worden [with n. 66]. Während man früher vermutete, dass es zunächst Maxentius dargestellt habe und nach dessen *damnatio memoriae* für eine Wiederverwendung zur Verfügung stand [with n. 67], hat Cécil [*corr.*: Cécile] Evers erkannt, dass das Vorgängerporträt Hadrian, also einen >guten< (divinisierten) Kaiser dargestellt hat [with n. 68]. Als Reste von dessen Bildnis sind die beiden Ohren (mit dem berühmten Knick im Ohrläppchen) und eine Haarwelle oberhalb des rechten Ohres erhalten geblieben. Aus diesem Haarrest ergibt sich zugleich eindeutig, dass Hadrian im sog. Roll-Locken-Typus, seinem verbreitetsten Bildnistypus [with n. 69] dargestellt war. Es ist [page 76] deshalb möglich, zeichnerisch zu veranschaulichen, wie das Bildnis Constantins vor der Umarbeitung ausgesehen hat.**

Das Verfahren ist ganz einfach: Da die Ohren Constantins und Hadrians identisch sind, existiert ein fester Anhaltspunkt für den Größenvergleich. Leider steht für den Versuch zur Zeit nur das linke Profil des Constantin-Bildnisses zur Verfügung, da das andere (an dem sich die vom Hadrian-Bildnis

stehengebliebene Locke befindet) für die Herstellung einer reinen Profilaufnahme zu dicht an der Hofwand liegt. Man braucht nun nur das Ohr dieser Profelseite mit dem entsprechenden Ohr im gleichen Format zur Deckung zu bringen (Taf. 24,9). Als Beispiel diente die qualitätvolle Replik in Dunham Massey, an der das linke Ohr besonders gut sichtbar ist [with n. 70].

Der Versuch zeigt deutlich, wieviel Stein vom ursprünglichen Bildnis abgenommen werden musste und dass das Hadrian-Bildnis erheblich größer gewesen sein muss als das jetzige Bildnis Constantins [with n. 71].

Eine gewisse Unsicherheit des hier angewendeten Verfahrens besteht darin, dass nicht sicher ist, ob alle Repliken des >Roll-Locken-Typs< eine einheitliche Tiefenausdehnung besessen haben; Stichproben haben ergeben, dass der Abstand zwischen Nasenspitze (bzw. [beziehungsweise] Lippen) und Rand der Ohrmuschel im Verhältnis zur Kopfhöhe etwas variieren kann [with n. 72]. Der ursprüngliche Kolossalkopf Hadrians könnte also im Profil vielleicht etwas kürzer gewesen sein, sodass die zu beseitigende Marmorplatte nicht ganz so groß war. In jedem Fall stand also genügend Stein zur Verfügung, um daraus das Bildnis Constantins in der Form zu gestalten, in der es vom Auftraggeber gewünscht wurde.

Das zeigt auch derselbe Versuch mit der rechten Profelseite, nur dass wegen der erzwungenen Schrägansicht der Substanzverlust in der perspektivischen Verkürzung nicht unmittelbar abgelesen werden kann (Taf. 24,8); für diesen Versuch wurde eine Schrägansicht der Hadrian-Büste in London [with n. 73] verwendet, von der allein mir eine Aufnahme in dieser Ansicht zur Verfügung stand. Das Ergebnis ist nun keinesfalls überraschend, aber doch wichtig. Denn Marina Prusac hat die These aufgestellt, dass die Augen Constantins nur deswegen so auffallend groß ausgefallen seien, weil mangels Steinmasse eine andere Form nicht möglich gewesen sei [with n. 74]. Ich habe diese These schon an anderer Stelle als abwegig zurückgewiesen [with n. 75]. Sie mit dem zeichnerischen Beleg zusätzlich [page 77] zu widerlegen schien mir auch deshalb nötig, weil sich schon abzeichnet, dass die Kernthese von Prusacs Buch, dass nämlich der für die spätantiken Porträts so typische >spirituelle< Ausdruck aus den Zwängen der Umarbeitung hervorgegangen sei, Anhänger findet [with n. 76].

Es sei auch an dieser Stelle [with n. 77] darauf hingewiesen, dass die Umarbeitung nach einem Modell vorgenommen worden sein muss, das dem damals schon existierenden >Quinquennialien-Typus< Constantins entsprach [with n. 78], die perfekt gelungene Umarbeitung wäre anders kaum möglich gewesen. Da die Kolossalstatue Hadrians für die Überführung in die Maxentiusbasilika ohnehin in ihre Bestandteile zerlegt werden musste [with n. 79]. konnte der Bildhauer die Umarbeitung vermutlich sogar unter Werkstattbedingungen durchführen.

Die übrigen Auffälligkeiten am Constantin-Bildnis hängen alle mit der Umarbeitung aus dem Hadrian-Bildnis zusammen: Die Beseitigung von Teilen des Kalottenhaares und ihr Ersatz durch eingefügte Haarteile (erhalten nur auf der rechten Seite), die separat gearbeiteten und vor den Ohren eingedübelten Koteletten, die bei Constantin ein besonderes Aussehen hatten [with n. 80] und aus dem Ansatz des Backenbartes Hadrians offenbar nicht gewonnen werden konnten, sowie die vier kleinen Bohrlöcher (zwei asymmetrisch verteilte in der >Mandorla< des Stirnhaares, zwei im Schläfenhaar auf der linken Seite), die offenbar von Bohrungen im Haar des Hadrian-Bildnisses herrühren und nicht getilgt werden konnten. Indizien für die Annahme, das Hadrian-Bildnis sei zunächst in das des Maxentius umgearbeitet worden und danach erst in das des Constantin sind m. E. [meines Erachtens] nicht erkennbar [with n. 81; my emphasis]".

The caption of Fittschen's Taf. 24,8 reads: "Rekonstruktion der Umarbeitung des Bildnisses des Constantin im Hof des Palazzo dei Conservatori in Rom aus einem Bildnis des Hadrian (Rekonstruktion: St. Eckardt, nach einer Aufnahme des British Museum, London)".

The caption of Fittschen's Taf. 24,9 reads: "Rekonstruktion der Umarbeitung des Bildnisses des Constantin im Hof des Palazzo dei Conservatori in Rom aus einem Bildnis des Hadrian (Rekonstruktion: St. Eckardt, nach H. P. L'Orange, Das spätantike Herrscherbild von Diokletian bis zu den Konstantin-Söhnen [Berlin 1984] Taf. 53e)".

In his **note 62**, Fittschen writes: "Ob dieser Tabubruch bereits früher, etwa unter Gallien, begangen wurde, ist noch ungeklärt, vgl. [vergleiche] Fittschen a. O. [an angegebenem Ort] (Anm. 59 [*i.e.*, here K. FITTSCHEN 2012a, 637-643])".

In his **note 81**, he writes: "Mehrfach-Umarbeitungen hat es nachweislich gegeben, doch haben sie zu besonders unbefriedigenden Ergebnissen geführt, vgl. z. B. [vergleiche zum Beispiel] die Panzerstatue Nervas aus Velleia (C. Saletti ... [*i.e.*, here C. SALETTI 1968, 52-57 Nr. 12 Taf. 39-42]) oder die Büste eines Asklepiades im Museo Capitolino (Fittschen - Zanker Cain a. O. [an angegebenen Ort] Anm. 6 [*i.e.*, here K. FITTSCHEN, P. ZANKER and P. CAIN, 2010]) 177 f. Nr. 176 Taf. 219. 220). **Davon kann beim Constantin im Kapitol aber nicht die Rede sein. Sein Bildnis ist eben nicht aus einer damnatio memoriae, sondern aus einer Usurpation hervorgegangen** [my emphasis]".

Fittschen (2012b, 77), in his above-quoted **note 81**, calls the fact that an original portrait of Hadrian had been re-used for the colossal portrait of Constantine discussed here (cf. here **Fig. 25,7**), an act of "Usurpation", and compares this procedure to the re-use of portraits, which became possible because of *damnatio memoriae*.

Fittschen thus refers to those reworked portraits, discussed at the beginning of his essay. He follows those scholars who believe that some portraits could be reworked, because the emperors, whom the heads in question had originally represented, had suffered *damnatio memoriae*. Not being myself an expert either in the procedure, called with the modern term '*damnatio memoriae*', or in the field of 'Portraitforschung' in general, and thus concerning the term 'Usurpation' in this context, my thanks are due to Hans Rupprecht Goette for alerting me by E-mail of 30th July 2020 to the most recent discussions of both subjects; cf. Joachim Raeder (2019).

### **Let's now summarize the discussion of the portrait of Hadrian (now Constantine), here Figs. 11; 11.1.**

After what has been said above, I myself - like Amanda Claridge (1998, 382; *ead.* 2010, 465 - but without providing a reference), Brigitte Ruck (2007, 242-243), Klaus Fittschen (2010b, 1103; *id.* 2012b, 75 with n. 68) and Hans Rupprecht Goette (cf. below, at *The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great)*) - follow Cécile Evers's (1991) hypothesis, according to which the famous colossal portrait of Constantine the Great (cf. here **Fig. 11**) was reworked from a statue of Hadrian.

If true, we should now also consider one of her additional ideas; cf. Evers (1991, 797, with n. 72), namely that to this statue of Hadrian may have belonged the fragmentary inscription (CIL VI 974 = 40524 = here **Fig. 29.1**).

As mentioned above, independently of Evers (1991), I have come to the same conclusion. I have suggested this also because of the following reasons. This portrait of Hadrian (now Constantine; cf. here **Fig. 11**) was a colossal acrolithic statue that had to be on display indoors and, in case the inscription (CIL VI 974 = 40524) had actually belonged to it, we would possibly even know for which building the pertaining statue of Hadrian had been created.

Evers believes that the inscription (CIL VI 974 = 40524; here **Fig. 29.1**) was found in the *Forum Romanum*. But since Evers attributes this inscription to the statue of Hadrian (now Constantine; cf. here **Fig. 11**), and because we have seen above that acrolithic statues could not possibly have stood under the open sky, we must look for a building, for which this original colossal statue of Hadrian (now Constantine) could have

been commissioned. This missing information has possibly been provided by Geza Alföldy and Michaela Fuchs, who have themselves not discussed Evers's (1991) hypotheses. Geza Alföldy (at: *CIL* VI [1996] 40524; here **Fig. 29.1**) has specified the findspot of the inscription (*CIL* VI 974 = 40524): it was either found within the Temple of *Divus Vespasianus*, or in the *Forum Romanum* in the immediate vicinity of this temple. Alföldy (at: *CIL* VI 40524) was followed by Fuchs (2014, 130 with n. 47, quoted *verbatim supra*).

**In Michaela Fuchs's opinion (2014, 130), the inscription (*CIL* VI 974 = 40524) belonged to a colossal portrait of Hadrian, dedicated by the Senate and the Roman People to commemorate Hadrian's victory in the Bar Kokhba Revolt, because the inscription declares that, 'with his victories in Syria and Palestine, Hadrian has even surpassed the *imperatores maximi* (i.e., Vespasian and Titus)'.**

Fuchs (2014, 130 with n. 47) is, therefore, like Alföldy of the at first glance very convincing opinion that, because of the findspot of this inscription, in combination with its content, the dedication of the pertaining statue of Hadrian would have been especially appropriate within the Temple of *Divus Vespasianus*. But, as already mentioned above, neither Alföldy, or Fuchs have asked themselves, where exactly within the Temple of *Divus Vespasianus* the portrait-statue of Hadrian, to which the inscription (*CIL* VI 974 = 40524) belonged, could have been on display, or whether or not there are architectural remains in the *cella* of this temple that may be interpreted as the base of this statue.

**As we have seen above, Evers (1991) is of the opinion that the inscription (*CIL* VI 974 = 40524) may have belonged to the colossal acrolithic statue of Hadrian (now Constantine; cf. here **Fig. 11**), a hypothesis that I myself have at first tentatively suggested here again, although it is so far not provable. But, as already mentioned several times above, I have in the meantime abandoned this earlier idea by suggesting now that this inscription (cf. here **Fig. 29.1**; *CIL* VI 974 = 40524) belonged instead to the original, after which Hadrian's portrait-statue from Hierapydna at Istanbul (cf. here **Fig. 29**) and almost 30 replicas of this portrait of the emperor were copied.**

Cf. below, at *A Study on Hadrian's portrait-statue from Hierapydna* (cf. here **Fig. 29**); and *infra*, in volume 3-2, at *Appendix IV.c.2*).

Nevertheless I believe it is worth-while to preserve the above-presented discussion of my first hypothesis concerning the question, to which portrait of Hadrian the inscription (*CIL* VI 974 = 40524; here **Fig. 29.1**) could have belonged (that I have abandoned in the meantime). I hope that other scholars might find this research useful for their own attempts to find out which function this colossal acrolithic portrait of Hadrian (now Constantine; cf. here **Figs. 11; 11.1**) may originally have had.

**Both wars, to which the inscription (*CIL* VI 974 = 40524; here **Fig. 29.1**) thus refers, were fought in the same area of the Roman Empire, and have been discussed in great detail by Rose Mary Sheldon (2007) and by Werner Eck (most recently in his article of 2022; see below).**

**These wars are called 'The Great Jewish War (or Revolt) (AD 67-73)', which Vespasian and Titus had successfully suppressed, and 'The Bar Kokhba Revolt (AD 132-135)', which was suppressed by Hadrian.**

For the 'Great Jewish War'; cf. *supra*, in Chapter *Preamble*; Section *III.*, at point 2.); at n. 171, in Chapter *I.1.*, and at n. 404, in Chapter *III.*; below, at Chapters *The major result of this book on Domitian*; and at *The visualization of the results of this book on Domitian on our maps*. For the Bar Kokhba Revolt; cf. *supra*, at n. 216, in Chapter *I.2*. For both wars; cf. below, at *A Study on Hadrian's portrait-statue from Hierapydna* (cf. here **Fig. 29**)), and *infra*, in volume 3-2, at *Appendix IV.c.2*); also for a discussion, whether Hadrian was involved in the revolt of the Jews in the diaspora, and for the fact that Hadrian had himself *caused* the Bar Kokhba Revolt.

For the Bar Kokhba Revolt; cf. also *infra*, in volume 3-2, at *A Study on the consequences of Domitian's assassination ..... Or: The wider topographical context of the Arch of Hadrian alongside the Via Flaminia which led to*

*the (later) Hadrianeum and to Hadrian's Temples of Diva Matidia (and of Diva Sabina?). With discussions of Hadrian's journey from Moesia Inferior to Mogontiacum (Mayence) in order to congratulate Trajan on his adoption by Nerva, and of Hadrian's portrait-type Delta Omikron ( $\Delta\omicron$ ) (cf. here Fig. 3). With The fourth and the fifth Contribution by Peter Herz, with The Contribution by John Bodel, with The first Contribution by Franz Xaver Schütz, and with The second Contribution by Angelo Geißen; at Chapter III. Was Hadrian himself present at the suppression of the Bar Kokhba Revolt?*

**But as we shall see in a minute, I had at first forgotten to consider some important facts in my reasoning.**

After having finished writing the first draft of this *Chapter*, I have been alerted to two things that I had overlooked so far. Eric M. Moormann mentioned to me the head of Constantine, which was found in 2005 in the Forum of Trajan (here Fig. 47), suggesting to me to study it together with the statue of Hadrian (now Constantine), here Figs. 11; 11.1. And Hans Rupprecht Goette sent me the publication by Ulrich-Walter Gans (2019) on the portrait of Hadrian (now Constantine), here Fig. 11, in which the author has also discussed the head (here Fig. 47). - For this important help I am both colleagues very grateful indeed.

Eric M. Moormann (2016, 283, in his review of K. FITTSCHEN and P. ZANKER IV 2014) writes:

"Among the addenda ... the large head of Constantine [cf. here Fig. 47] found in the sewer of the Forum of Trajan in 2005 forms the most spectacular piece (cat. 50a). It was in view in various exhibitions and is on display in the Mercati Traianei. Like other portraits of this emperor it is the product of reworking on which the debate has concentrated: who was the previous emperor (we may suppose that it was an emperor thanks to the huge format). Fittschen does not accept Zanker's suggestion of two phases (Julio-Claudian emperor and Licinius) and recognizes Licinius only)".

**Fig. 47. Plaster cast of a colossal marble head of Constantine the Great, 0,59 m high. According to K. Fittschen (2014, 58), this portrait was inserted into a (standing), probably cuirassed statue that was circa 3,30 m high. From the Forum of Trajan. Roma, Museo dei Fori Imperiali (inv. no. FT 10337). This plaster cast is on display at the Abgußsammlung of the Freie Universität Berlin. Photos: courtesy H.R. Goette.**

I do not know this head from autopsy.

Because this head of Constantine the Great (here Fig. 47) probably belonged to a cuirassed statue; cf. Fittschen (2014, 58, quoted *verbatim infra*), which was typical of Christian emperors; cf. La Rocca (2000, 24 with n. 168, Fig. 23, quoted *verbatim supra*), I wonder, whether this could have been the above-mentioned portrait-statue, described by Eusebius (*Hist. Eccl.* 10,4,16). If so, Constantine was represented in this statue seated. Eusebius copied the pertaining inscription, set (and therefore presumably also composed) by Constantine himself, who added it to the statue, dedicated to him by the Senate after his victory over Maxentius, and which, according to Eusebius, the Senate had erected 'a Roma nel luogo più pubblico di tutti'. Cf. Parisi Presicce (2006b, 140 with n. 15, quoted in more detail *verbatim supra*). In this 'personal statement', Constantine claimed that 'thanks to the salvation bringing sign [that his portrait-statue of Constantine, at the explicit order of the emperor, was holding in its right hand - and which some earlier scholars have identified with a cross], which is the true proof of *virtus*, I have saved and liberated Rome from the tyrant [*i.e.*, Maxentius], and thanks to my liberation, I have restored the Senate and the Roman People to their old image and to their old splendour'; cf. Kähler (1960, 391, quoted *verbatim supra*).

When I read what turned out to be (at that stage) the most recent publication on the statue of Hadrian (now Constantine), discussed here, an essay by Ulrich-Walter Gans ("Bildhauerkunst zur Zeit der konstantinischen Kaiser", 2019), I realized, that Gans (2019, 257, 260, Fig. 251), discusses also the head of Constantine (an "Einsatzkopf"; cf. here Fig. 47) from the Forum of Trajan. According to Gans, the pertaining statue was circa 4 m high. This head and the head of Hadrian (now Constantine; cf. here Fig. 11), although of different proportions, show according to Gans great stylistic similarities and were in his opinion commissioned at exactly the same time.

Gans (2019, 257-260) discusses the colossal acrolithic statue of Constantine (cf. here **Fig. 11**), with *Textabbildung 130a,b*, *Textabbildung 131a,b*, and *Abbildung 258a-e*, provides bibliography on pp. 555, 610, and refers in his text to (parts of) the above-quoted literature.

Gans (2019, 258) acknowledges the fact that this head of Constantine was recut from an earlier portrait, but he believes that the predecessor cannot be identified (p. 259): neither Augustus, Trajan, or Maxentius are in his opinion possible, nor are there in Gans's opinions traces of a beard, which could allow the identification of the original head as Hadrian or Jupiter. Contrary to Parisi Presicce (2005; *id.* 2006b, quoted *verbatim supra*), who writes *expressis verbis* that the original portrait showed a bearded man, Gans thus expresses his opinion that, in case the portrait of Constantine *would* show 'traces of the beard of the original portrait, this could actually be identified with Hadrian'.

Note that Gans (2019) does not discuss in his account the findings of Klaus Fittschen (2010b, *id.* 2012b) quoted *verbatim supra*) concerning the colossal acrolithic statue of Constantine (cf. here **Fig. 11**); Fittschen (2012b, 77 n. 80) quotes for the head of Constantine from the Forum of Trajan (here **Fig. 47**) also an article by Eugenio La Rocca and Paul Zanker (2007).

**Whereas Gans (2019) himself is obviously unable to see traces of a beard on the portrait of Constantine (cf. here Fig. 11), I myself suggest, like Evers (1991), Parisi Presicce (2005; id. 2006b, quoted verbatim supra), and Hans Rupprecht Goette (cf. below, at *The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great)*), that traces of the beard of the original portrait are indeed very well visible - in form of 'darker areas with stripes' in the case of Evers's (1991) illustrations; in form of 'darker areas' on Constantine's chin and on his cheeks in the photographs illustrated here on Fig. 11, and on those published by Parisi Presicce (2006b; cf. *supra*); and in the form of the unfinished area underneath Constantine's chin that may be interpreted as remains of a once here existing beard that has not been completely removed (for all that; cf. here Fig. 11). Those traces of the beard of the original portrait of the head here Fig. 11 are among the reasons, why I suggest, like Evers (1991), Claridge (1998; *ead.* 2010), Ruck (2007), Fittschen (2010b; *id.* 2012b) and Goette (cf. below, at *The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great)*), that this original portrait depicted Hadrian.**

Gans's own *Abb. 258c* shows the traces under Constantine's chin, to which also Parisi Presicce refers, and which the Italian scholar likewise tentatively interprets as the remains of a beard (cf. *id.* 2005, 146, quoted *verbatim supra*).

In his later article, Parisi Presicce illustrates this detail with a photograph (cf. *id.* 2006b, 151, caption of his Fig. 58: "Statua del colosso di Costantino. Segni di rilavorazione nel sottogola"). Also on Gans's own *Abb. 258d* (Constantine's right profile) and on his *Abb. 258e* (Constantine's left profile), the beard of the original portrait is clearly visible in form of 'darker areas'.

Hans Rupprecht Goette was kind enough to send me Klaus Fittschen's (2014, 57-59) discussion of this head of Constantine from the Forum of Trajan (cf. here **Fig. 47**).

**As we shall see below, Fittschen (2014, 58, quoted verbatim infra) tacitly assumes that this portrait of Constantine (cf. here Fig. 47) had belonged to a standing statue. According to Fittschen (2014, 58), the head of Constantine found in the Forum of Trajan (cf. here Fig. 47) had probably belonged to a cuirassed statue, an iconography that, as we know from Eugenio La Rocca (2000, 24, with n. 68, quoted verbatim supra), is typical of Christian emperors.**

**And because Eusebius (*Hist. Eccl.* 10,4,16) writes that the statue of Constantine, which he described, was erected by the Senate 'a Roma nel luogo più pubblico di tutti'; cf. Parisi Presicce (2006b, 140 with n. 15), which sounds as if *that* statue of Constantine was standing under the open sky, I have suggested above**

**that the colossal head of Constantine, found in 2005 in the Forum of Trajan (cf. here Fig. 47) could have belonged to the statue of Constantine, mentioned by Eusebius (*Hist. Eccl.* 10,4,16).**

We know also that Eusebius's (*Hist. Eccl.* 10,4,16) portrait-statue of Constantine showed the emperor in the same pose as the statue of Hadrian, now Constantine (cf. here Fig. 11): holding the (sceptre with) the victory-bringing sign in his right hand, and the globe in the left hand. From the fact that Eusebius mentioned the globe in the left hand of this portrait of Constantine, we can deduce that this statue was represented *seated*. See the statues, created according to this iconography, that have been discussed and illustrated by Claudio Parisi Presicce (2006b, 144-145, Figs. 44-45; 47; 48 [= here Fig. 11.1]).

**Therefore, provided the colossal head of Constantine, found in 2005 in the Forum of Trajan (cf. here Fig. 47), had actually belonged to the statue described by Eusebius (*Hist. Eccl.* 9,9,10-11 and 10,4,16), it showed Constantine in precisely the same seated pose as the statue of Hadrian (now Constantine; cf. here Fig. 11), but in a different iconography.**

Since, instead of representing Constantine as *Jupiter*, as in the *colossus* of Constantine, which was originally a portrait of Hadrian (cf. here Fig. 11), the statue, seen by Eusebius (provided the head here Fig. 47 actually belonged to *that*), very appropriately for this specific dedication was wearing a cuirass - as Fittschen (2014, 58) suggests- and, therefore, represented Constantine as a *Christian emperor*.

Fittschen (2014, 57) writes about the head of Constantine (here Fig. 47):

cat. no. "50a Kolossales Einsatzbildnis Konstantins des Großen im Quinquennialientypus, aus einem älteren Bildnis (des Licinius?) umgearbeitet. Konstantinisch. Taf. 70; Beil. 17

Museo dei Fori Imperiali. Inv. FT 10337

H [öhe] des Erhaltenen 0,59 m; H [öhe] Kinn-Scheitel 0,435m

**Im Juli 2005 in einem Abwasserkanal unter der südöstlichen Porticus des Trajansforums gefunden (s.[iehe] Text) [my emphasis]".**

Cf. Fittschen (2014, 58):

**"Der Kopf war in eine separat gearbeitete Statue eingesetzt, das war vermutlich auch schon in seiner ursprünglichen Fassung der Fall. Ob die Statue dieselbe war, ist nicht bekannt. Der waagerechte vordere Halsabschluß könnte auf eine Panzerstatue hinweisen [with n. 20]. Das ist ohnehin die nächstliegende Vermutung (vgl. [vergleiche] hier I Nr. 120-121). Nach den von Brigitte Ruck aufgestellten Proportionsregeln [with n. 21] müßte die Statue eine Größe von etwa 3,30 m gehabt haben [with n. 22]. Das entspräche etwa der Größe der Konstantin-Statue in der Vorhalle der Lateran-Kirche (3,22 m) [with n. 23]. In der Statue war der Kopf zusätzlich mit einem Dübel verankert. Ob diese Verdübelung erst der zweiten Verwendung angehört oder auch schon der ersten ist ungeklärt. Zum besseren Sitz in der Aushöhlung der Statue ist der Rand des Halses auf der hinteren Seite abgeschrägt worden. Ob die am Hals zu beobachtenden Abarbeitungen vorgenommen worden sind, um den Hals für das Einsetzen in die Statue passend zu machen [with n. 24] und [corr.: oder] ob das erst für die Zweitverwendung geschehen ist, ist ebenfalls unbekannt; im letzteren Fall ergäbe sich, daß das umgearbeitete Bildnis in eine andere Statue eingesetzt worden sein müßte [my emphasis]".**

In his **note 20**, Fittschen writes: "vgl. [vergleiche] Parisi Presicce ... [*i.e.*, here C. PARISI PRESICCE 2006a] 13ff.; ders. ... [*i.e.*, here C. PARISI PRESICCE 2007] 117 ff. ...".

In his **note 21**, he writes: "Vgl. [vergleiche] Ruck ... [*i.e.*, here B. RUCK 2007] 21".

In his **note 22**, he writes: "Die von La Rocca - Zanker ... [*i.e.*, here E. LA ROCCA and P. ZANKER 2007] angegebene Höhe von über 4 m ist wohl zu hoch".

In his **note 23**, he writes: "Vgl. [vergleiche] Ruck ... [*i.e.*, here B. RUCK 2007] 284 Nr. 36".

In his **note 24**, he writes: "Vgl. [vergleiche] Hannestad ... [in: here: A. DEMANDT and J. ENGEMANN 2007, 102 mit Abb. 11.13.14 (aus Hadriansbildnis umgearbeitet)] 104 Abb. 13".

### Post Scriptum.

As already mentioned above: when the manuscript of this volume was about to be sent to the press, Franz Xaver Schütz alerted me to the book by Klaus M. Girardet (2010), who has likewise come to the conclusion that the colossal statue of Hadrian (now Constantine the Great), here **Figs. 11; 11.1**, is *not* the statue described by the Christian author Eusebius (*Hist. Eccl.* 9,9,10-11).

**Klaus M. Girardet (*Der Kaiser und sein Gott. Das Christentum im Denken und in der Religionspolitik Konstantins des Großen*, 2010, 91-93) writes in his Chapter VI. Frühestes Selbstzeugnis des christlichen Kaisers - Taten, Gesten, Bilder, Worte (312 bis 314); 1. Zwei Statuen und das 'rettungbringende Zeichen' in Rom; a. Der Marmorkoloß im Konservatorenpalast; b. Die Panzerstatue in S. Giovanni in Laterano :**

"a. Der Marmorkoloß im Konservatorenpalast

**Nach langer kontroverser Forschungsdiskussion ist man sich jetzt offenbar darin einig geworden - ob zu Recht, wird noch zu fragen sein (s. u. [siehe unten]) - , daß Eusebius die ca. [circa] 10 m hohe Sitzstatue Konstantins gemeint hat [with n. 412], deren eindrucksvolle Fragmente [cf. here Fig. 11], die in der Westapsis der von Konstantin umgestalteten Maxentius-Basilika [with n. 413] gefunden worden waren, seit einigen hundert Jahren im Innenhof der Konservatorenpalastes zu Rom bewundert werden können [with n. 414].**

**Der Zeigefinger an der rechten Hand (Abb. 23a [cf. here Fig. 11]) ist von der gut sichtbaren Bruchstelle an nicht original. Daher erweckt eine häufig abgebildete Rekonstruktion der Statue mit dem senkrecht nach oben gerichteten Zeigegestus [with n. 415] [page 92] einen unzutreffenden Eindruck. Tatsächlich war der Zeigefinger, schon im noch vorhandenen Ansatz leicht gekrümmt, wie die ganze Hand um einen stabähnlichen Gegenstand gelegt [with n. 416] :**

**Vielleicht handelt es sich bei der Statue, deren Blick quer durch die Maxentiusbasilika nach Osten auf den ernerischen Sonnenkoloß gerichtet war [with n. 417], um eine umgearbeitete, mit den Gesichtszügen Konstantins versehene Maxentiusstatue, die im Schema des Gottes *Iupiter* gestaltet war, vielleicht aber um eine umgearbeitete Götterstatue [with n. 418]. Im übrigen ist auch die Zeit der Umarbeitung und damit die Datierung des Portraits Konstantins unsicher; manche Autoren sprechen sich, möglicherweise zu Recht, für die Zeit der kaiserlichen Vicennalien um 325/26 aus [with n. 419]. Ob das Standbild in späteren Jahren noch ein weiteres Mal verändert worden ist und ob das nicht erhaltene 'Zeichen' in der rechten Hand des Kaisers nun (ursprünglich?) ein kurzes (Kreuz-)Szepter oder (später?) das lange kreuzförmige Vexillum mit dem Christogramm oder ein gewöhnliches kreuzförmiges Vexillum bzw. [beziehungsweise] ein neutrales Langszepter war, läßt sich nicht verlässlich entscheiden [with n. 420]. Ein einfaches Kreuz oder ein Kreuzszepter, auch in verfremdeter Form, halte ich [with n. 421] deshalb für höchst unwahrscheinlich, ja im Grunde für unmöglich, weil das Kreuz erst in späkonstantinischer Zeit zu einem öffentlich und unverhüllt gezeigten Symbol geworden ist [with n. 422]. Im übrigen basiert die Hypothese 'Vexillum mit Christogramm' oder gewöhnliches kreuzförmiges Vexillum, das christlich verstehbar war, auf der Prämisse, daß Eusebius tatsächlich besagte Statue gemeint hat. Das ist aber keineswegs sicher. Ich möchte hier eine Alternative zu erwägen geben [my emphasis]". - To this I will come back below.**

In his **note 412**, Girardet writes: "Zuletzt L'Orange/Unger [*i.e.*, here H.P. L'ORANGE, R. UNGER and M. WEGNER 1984] 70-77; Thümmel, Wende [1998] 171-179; Curran [2000] 82; Barnes, Young Constantine [2006] 18; Turcan, Constantin [2006] 162".

In his **note 413**, he writes: "Zu dieser zuletzt Curran [2000] 80 ff."

In his **note 414**, he writes: "Zur Forschung: Fittschen/Zanker [1985] Kat.-Nr. 122 (mit Taf. 151 und 152), 147-152. - **Vom Kopf war eigens für die Konstantin-Ausstellung 2007 in Trier eine Marmorkopie hergestellt worden, die demnächst in Rom die Stelle des Originals einnehmen wird. Vgl. [vergleiche] dazu Köhne [2007; my emphasis]**".

In his **note 415**, he writes: "Siehe die Abbildung z.B. [zum Beispiel] bei Clauss, Konstantin [2007] 109; Kolb, Herrscherideologie [2001] 206; Brandt, Konstantin [2006] 51; Herrmann-Otto [2007] 103".

In his **note 416**, he writes: "**Richtig daher die neue Rekonstruktion bei Presicce** [*i.e.*, here C. PARISI PRESICCE 2007] 131; Köhne [2007] 247 Abb. 3".

In his **note 417**, he writes: "So jetzt Löhr [2007], mit Rekonstruktionen und Abbildungen".

In his **note 418**, he writes: "Fittschen/Zanker [1985] 149; Presicce [*i.e.*, here C. PARISI PRESICCE 2007] 126-130".

In his **note 419**, he writes: "Siehe nur L'Orange/Unger [*i.e.*, here H.P. L'ORANGE, R. UNGER and M. WEGNER 1984] 76 ff.; Leeb [1992] 62 ff. mit der älteren Literatur".

In his **note 420**, he writes: "**Die Frage stellt sich deshalb, weil zwei rechte Hände erhalten sind, deren eine nach unten hin geschlossen, die andere geöffnet ist, so daß erstere ein kurzes, nach oben aus der Hand herausragendes Szepter, letztere ein langes, auf den Boden aufgesetztes Szepter gehalten haben kann. Abbildungen der Hände: L'Orange/Unger** [*i.e.*, here H.P. L'ORANGE, R. UNGER and M. WEGNER 1984] 70-76 mit Taf. 50 f. **Daß beide Hände zu der gleichen Statue gehören, wird gelegentlich infrage gestellt.** - Langszepter: siehe die Rekonstruktion im Beitrag von Presicce [*i.e.*, here C. PARISI PRESICCE 2007] 131 [my emphasis]".

In his **note 421**, he writes: "Im Gegensatz zu Leeb, Konstantin [1992] 33-39. L'Orange/Unger [*i.e.*, here H.P. L'ORANGE, R. UNGER and M. WEGNER 1984] 65 und 75: ein Kreuz".

In his **note 422**, he writes: "S. o. [siehe oben] bei Anm. 252 ff. - Zur Kontroverse um den Gegenstand auf der Vorderseite des Medaillons von Ticinum s.o. [siehe oben] bei Anm. 375".

**To Klaus M. Girardet's (2020, 91-92) above-quoted text on the colossal statue of Constantine the Great in the Musei Capitolini, Palazzo dei Conservatori (here Figs. 11; 11.1), I should like to add some comments :**

Before formulating my comments on some of Girardet's conclusions, I should like to alert the reader to something else. To the publications, which Girardet mentions in his above-quoted **notes 412-422**, I have added in square brackets their dates, thus obtaining a surprising result: the most recent texts, on which Girardet has based his judgements, were published in 2007.

This allows the hypothesis that this was an old manuscript, which Girardet in 2020 decided to publish, without providing an 'update' of the ongoing research on this subject. This assumption could, for example, explain, why Girardet, referring to the Basilica of Maxentius, writes in his **note 413** :

"Zu dieser zuletzt Curran [2000] 80 ff."

If that were true, this could also explain, why Girardet (2020, 91-92) does not refer to the scholarly debate since 2007. Even, provided this manuscript dates from around 2007, the problem remains that Girardet has not considered some publications that had already appeared *before* that date; those are discussed above, in this *Chapter*. Among those publications the most important ones are 1.) that by Cécile Evers (1991), who has, in my opinion, proven that the head of the colossal statue of Constantine the Great (here **Figs. 11; 11.1**) had been reworked from a portrait of Hadrian; and the following scholarly debate; and 2.) the publication on this colossal statue of Constantine by the director of the Musei Capitolini, Claudio Parisi Presicce (2006b), who has also supervised the creation of the new digital reconstruction of this statue (here **Fig. 11.1**). But note that Parisi Presicce (2006b) does not follow Evers's hypothesis, according to which this portrait had originally represented Hadrian.

Let's now turn to my comments on Girardet's conclusions (cf. *id.* 2020, 91-92):

a) Let me begin with Girardet's **note 416**, in which he mentions "die neue Rekonstruktion bei Presicce" (of the colossal statue of Constantine the Great, here **Fig. 11.1**). According to Girardet's bibliography, this is the following article: "C. P. Presicce, Konstantin als Iuppiter. Die Kolossalstatue des Kaisers aus der Basilika an der Via Sacra. In: Demandt/Engemann (Hg.), Konstantin-Begleitband 117–131", and we learn also in Girardet's bibliography that this "Begleitband" by "Demandt/Engemann" was published in "2007".

Unfortunately, Girardet has based his discussion of Claudio Parisi Presicce's reconstruction of this statue of Constantine the Great (here **Fig. 11.1**) only on this German translation of Parisi Presicce's article (2007), which was published without the footnotes (!). - Only Parisi Presicce's original Italian article (2006b) contains also the footnotes. On this article (2006b) I have myself based in this *Chapter* my own discussion of Presicce's reconstruction of this colossal statue of Constantine (here **Fig. 11.1**). To further illustrate this point, I repeat below a passage of this *Chapter*, in which all of Parisi Presicce's relevant publications are mentioned :

**``Claudio Parisi Presicce has so far presented the most detailed analyses of the colossal statue of Constantine (here Figs. 11; 11.1).**

Claudio Parisi Presicce (2006b, 127, note \*) lists all his other publications on the subject: 2005, 2006a, **and 2007 (which is a German translation of his text 2006b, but published without the notes)**. In the following, I will quote from his essays 2005 and 2006b. The latter is, according to Parisi Presicce (*op.cit.*) in some respects a summary of his article 2006a [my emphasis]''.

I will now proceed to add my comments on Girardet's text (2020, 91-92) in chronological order of the passages that I have emphasized in his text:

b) "Nach langer kontroverser Forschungsdiskussion ... ist man sich jetzt offenbar darin einig geworden, daß Eusebius die ca. [circa] 10 m hohe Sitzstatue Konstantins gemeint hat [with n. 412]", thus referring to the colossal statue of Constantine (here **Figs. 11; 11.1**).

Because already Claudio Parisi Presicce (2006b) has refuted this old hypothesis, the just-quoted statement by Girardet (2020, 91 with n. 412) is not true any more since a very long time. Parisi Presicce has published his relevant findings (in his article of 2006b, quoted *verbatim supra* in this *Chapter*), which Girardet himself does not discuss. Parisi Presicce's most important argument against the identification of the statue of Constantine (here **Figs. 11; 11.1**) with the portrait of Constantine that Eusebius described, consists in the following observation. The statue of Constantine, which Eusebius saw, as Eusebius (*Hist. eccl.* 9, 9, 10-11) explicitly writes, had been erected by the Senate 'a Roma nel luogo più pubblico di tutti'; cf. Parisi Presicce (2006b, 140 with n. 15). Girardet has also himself quoted Eusebius's relevant passage, in which the Christian author states that this portrait-statue of Constantine: "'auf Roms belebtestem Platz' errichtet wurde"; cf. Girardet (2020, with n. 409, quoting: "Eus. HE IX 9, 9–11; VC I 40, 1 f.)).

To this we should add another argument, that has likewise been overlooked by Girardet. In the following, I repeat, therefore, another passage from this *Chapter*:

**``Acrolithic statues were "costruzioni" -**

as Filippo Coarelli has rightly reminded me on 24th February 2020, when we were discussing the matter in Rome.

It is therefore, in my opinion, certainly on principle true that, consequently, this colossal acrolithic portrait of Hadrian (now Constantine) [here **Figs. 11; 11.1**], cannot possibly have been on display under the open sky'.

c) In his **note 414**, Girardet writes: "Vom Kopf [of the colossal statue of Constantine here **Figs. 11; 11.1**] war eigens für die Konstantin-Ausstellung 2007 in Trier eine Marmorkopie hergestellt worden, die demnächst in Rom die Stelle des Originals einnehmen wird. Vgl. [vergleiche] dazu Köhne [2007]".

This is obviously not true, because Franz Xaver Schütz has taken on 6th March 2020 the photographs of the *original* colossal head of Constantine in the courtyard of the Palazzo dei Conservatori, which are illustrated here on **Fig. 11**.

d) "**Der Zeigefinger der rechten Hand** ... ist von der gut sichtbaren Bruchstelle an nicht original. Daher erweckt eine häufig abgebildete Rekonstruktion der Statue mit dem senkrecht nach oben gerichteten Zeigegestus [with n. 415] [page 92] einen unzutreffenden Eindruck. **Tatsächlich war der Zeigefinger, schon im noch vorhandenen Ansatz leicht gekrümmt**, wie die ganze Hand um einen stabähnlichen Gegenstand gelegt [with n. 416, in which he mentions: "**die neue Rekonstruktion bei Presicce**"; my emphasis]".

Since Claudio Parisi Presicce (2016b) has discussed and documented all 10 fragments of this colossal portrait of Constantine (here **Figs. 11; 11.1**) in great detail, a research that has resulted in his new digital reconstruction of the statue (cf. here **Fig. 11.1**), Girardet's relevant efforts are now superseded.

e) "**Vielleicht handelt es sich bei der Statue ... um eine umgearbeitete, mit den Gesichtszügen Konstantins versehene Maxentiusstatue** [with n. 418]". In his **note 418**, Girardet writes: "Fittschen/Zanker [1985] 149; Presicce [*i.e.*, here C. PARISI PRESICCE 2007] 126-130".

But note that both authors write that the original head, from which the portrait of Constantine (here **Figs. 11; 11.1**) has been reworked, cannot possibly have represented Maxentius. Cf. Paul Zanker (in: K. FITTSCHEN and P. ZANKER 1985 I, 147-152, esp. pp. 148-149, Cat. no. 122); and Claudio Parisi Presicce (2005, 146; *id.* 2006b, 149 with n. 38, p. 150 with n. 40), both quoted *verbatim supra* in this *Chapter*.

f) In his **note 420**, Girardet writes: "Die Frage stellt sich deshalb, **weil zwei rechte Hände erhalten sind**, deren eine nach unten hin geschlossen, die andere geöffnet ist ... Abbildungen der Hände: L'Orange/Unger [1984] 70-76 mit Taf. 50 f. **Daß beide Hände zu der gleichen Statue gehören, wird gelegentlich infrage gestellt** [my emphasis]".

For a discussion of the fact that there are two right hands of colossal marble statues on display in the courtyard of the Palazzo dei Conservatori; cf. Parisi Presicce (2006b, 130, 132 with n. 45, quoted *verbatim supra*, in this *Chapter*). Claudio Parisi Presicce (2006b) has, in addition to this, published the results of the recent marble analyses of all those fragments. Ten of those fragments were carved from the same, best quality of Parian marble, called *lychnites*. The 'second' right hand was carved from a different quality of marble and, therefore, certainly did not belong to this colossal statue of Hadrian (now Constantine).

For the right hand, which belonged to the colossal statue of Hadrian (now Constantine); cf. Parisi Presicce (2006b, 129 Fig. 3, p. 131 Fig. 4, p. 138, Figs. 31; 32), and here **Fig. 11.1**. This right hand is also discussed by Girardet (2020, 91 with n. 415, with his Abb. 23; cf. *supra*, at point d)). In addition to this, Parisi Presicce (*op.cit.*) is able to prove for other reasons, why this right hand belongs to the colossal portrait of Constantine, and why the 'other', slightly smaller right hand, belonged to a different colossal portrait-statue.

g) Girardet (2020, 91-91) does not mention the colossal portrait head of Constantine (here **Fig. 47**), which was found in 2005 in a sewer of the Forum of Trajan. This portrait has been discussed above, in this *Chapter*, where I have tentatively suggested that this portrait of Constantine, *inter alia* because of its findspot, could have belonged to the statue, described by Eusebius (*Hist. eccl.* 9, 9, 10-11), which ""auf Roms belebtestem Platz'' errichtet wurde", as Girardet (2020, with n. 409) translates Eusebius's description of its location. - Let's now turn to Girardet's own tentative identification of the portrait-statue of Constantine, seen by Eusebius.

**Girardet (2020, 93, Section: "b. Die Panzerstatue in S. Giovanni in Laterano") writes :**

"Die von Eusebius angesprochene Statue hielt nach Aussage des Bischofs das christianisierte Vexillum, also ein Feldzeichen, in der rechten Hand. Sie läßt deshalb an den Kaiser als Feldherrn und Krieger denken [with n. 423]. **Könnte es sich daher nicht eher um die wohl ca. [circa] 312 entstandene, etwa 3, 3 m hohe Panzerstatue handeln (Abb. 24), die, offenbar gefunden bei den Konstantin-Thermen auf dem Quirinal, heute, an zahlreichen Stellen ergänzt, im Atrium der Lateranbasilika steht [with n. 424]? Denkbar wäre natürlich auch eine nicht erhaltene Statue dieses Typs, die auf dem Forum gestanden haben könnte [with n. 425; my emphasis]**".

In his **note 423**, Girardet writes: "Vgl. [vergleiche] Singor [2003] 483 Anm. 7; Veyne [2007] 144, der mit Blick auf die zitierten Eusebius-Stellen meint, der Kaiser sei ``en guerrier`` dargestellt worden".

In his **note 424**, he writes: "Vgl. [vergleiche] Bruun, *Christian Signs* [1962] 28 mit Anm. 2. - Zur Statue siehe Delbrueck [1933] 118 f. mit Taf. 33 und 34; v. Heintze [1979] 407-417: Beschreibung, 410: Schemazeichnung mit Erhaltenem und Ergänztem, 426 ff. und 430 ff.: zeitliche Einordnung - früh, ca. 312; L'Orange/Unger [1984] 60 f., 126, mit Taf. 43 f. - Die Thermen: Vilucchi [1999]".

In his **note 425**, he writes: "Vgl. [vergleiche] Aur. Vict. XL 28: in Rom seien nach Konstantins Sieg 312 *statuae locis quam celeberrimis, quarum plures ex auro aut argenteae sunt*, errichtet worden".

**To Girardet's (2020, 193) above-quoted text, I should like to add a comment :**

The portrait-statue of Constantine in the Atrium of the Basilica of S. Giovanni in Laterano, which Girardet (2020, 193) himself tentatively identifies with the statue, seen by Eusebius, was found on the Quirinal, near the Baths of Constantine, as Girardet reports. This is why I rather believe that this was *not* the statue 'on display on the most frequented square in Rome', as Eusebius (*Hist. eccl.* 9,9,10-11) wrote. I myself, therefore, tentatively maintain my earlier hypothesis, according to which instead the portrait of Constantine (here **Fig. 47**), from the Forum of Trajan, could have belonged to Constantine's portrait-statue, described by Eusebius.

But I am, of course, curious to learn how other scholars will judge these two new hypotheses concerning the identification of 'Eusebius's statue of Constantine' that I have presented here.

*A Study on the colossal portrait of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori at Rome (cf. here Fig. 11). With The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great)*

With discussions of the following subjects: the inscription *CIL VI 974 = 40524* (cf. here Fig. 29.1), belonging to a statue of Hadrian; the question, where in Rome large blocks of Parian marble like those of the acrolithic statue of Hadrian (now Constantine the Great; cf. here Fig. 11) could have been available: at La Marmorata in the quartiere Testaccio; the 'Porticus Aemilia outside Porta Trigemina' (erroneously located there, the building in question is in reality identifiable as *Navalia*); and the *Horrea Aemiliana*.

*Part II. Ancient Rome's new commercial river port, at La Marmorata.*

*With discussions of the 'Porticus Aemilia' (in reality identifiable as Navalia) and of the Horrea Aemiliana. With The sixth Contribution by Peter Herz : Rom. Strukturen der Versorgung; and with The second Contribution by Franz Xaver Schütz : Wie schwer war der ägyptische Obelisk, der heute auf der Piazza di S. Giovanni in Laterano in Rom steht?*

Part II. is divided into the following Sections:

I. Introduction

II. Ships in the *Portus Augusti* (here **Figs. 98; 99**) and on the Tiber (here **Figs. 105; 106**), which supplied the city of Rome with goods from all over the Empire, and the men, who provided these services

III. The *Porticus Aemilia* outside the *Porta Trigemina* and the *Horrea Aemiliana*, and the discussion of the *opus incertum* building at *La Marmorata*, which has been identified with this *Porticus Aemilia* and as *Navalia*

IV. The *Statio Marmorum* and the 'sculpture industry' at *La Marmorata*, its Tiber ships for the transportation of fresh marble blocks and of finished products, Domitian's Tiber ship delivering a block of marble (**Figs. 105; 106**), Domitian's 'pharaonic' building projects at Rome, and the question, whether the *Navalia* at *La Marmorata* had anything to do with all this. With some remarks on the heaviest object, ever transported on the Tiber in antiquity: the Lateran Obelisk (**Fig. 101**)

## Section I. Introduction

### [1.] epigraph, TUCCI 2006:

"Comunque, è possibile che l'edificio in *opus incertum* [the *Porticus Aemilia/Navalia* discussed here] non ospitasse le navi da guerra pronte al combattimento, ma fosse una specie di arsenale dove si effettuava la manutenzione delle navi ...

Ad ogni modo, al momento della sua costruzione i Romani non potevano immaginare che sarebbero diventati i dominatori del Mediterraneo. Più tardi, per l'evidente assenza di flotte con grandi navi da combattere, l'edificio dovette risultare inutile e addirittura "ingombrante", in una zona che cominciava ad assumere uno spiccato carattere commerciale. Visto il grande spazio coperto a disposizione e le eccezionali caratteristiche della struttura, è probabile che già dalla fine del I secolo a.C. l'edificio sia stato adibito a funzioni commerciali [with n. 48; my emphasis]".

Lucos Cozza and Pier Luigi Tucci (2006, 197 [TUCCI]).

### [2.] epigraph, TUCCI 2006:

"Quindi l'edificio, pur conservando il nome originario di *navalia*, non avrebbe più ospitato navi da guerra, ma cose e oggetti (ovvero merci) "appartenenti alle navi", "delle navi": *navalia*, appunto ... È stato anche sottolineato che i *navalia* (nell'accezione "industriale" del termine) «devono aver costituito un elemento non secondario del paesaggio urbano e suburbano della Roma imperiale» [with n. 54]. Se, come sembra, l'edificio in *opus incertum* di Testaccio va davvero identificato con una serie di *navalia*, la sua riutilizzazione attraverso i secoli e la conservazione del nome originario sulla Forma Urbis illustrerebbero molto bene la trasformazione, dal punto di vista militare ed economico, di Roma e conseguentemente del Tevere, «*rerum in toto orbe nascentium mercator placidissimus*» [with n. 55; my emphasis]".

Lucos Cozza and Pier Luigi Tuci (2006, 198 [TUCCI])

In their **note 54**, Cozza and Tucci write: "MANACORDA 2005, pp. 28-29".

In their **note 55**, they write: "PLIN., *nat.*, III, 5, 54".

The quote from Pliny (*nat. hist.* 3,5,54) refers to the Tiber and reads in more detail, than quoted by Cozza and Tucci (2006, 198 [TUCCI]), as follows:

... *et ideo quamlibet magnarum navium ex Italo mari capax, rerum in toto urbe nascentium mercator placidissimus, pluribus prope solus quam ceteri in omnibus terris ...*, and in an English translation:

"... and consequently it [the Tiber] is navigable for vessels of whatever size from the Mediterranean, and is a most tranquil trafficker in the produce of all the earth ..." (text and translation: H. RACKHAM 1961). - To this I will come back below.

*La Marmorata* (a modern toponym of the new ancient commercial river port), according to many scholars (allegedly) called *Emporium* in antiquity, with warehouses, called *Horrea*: the '*Porticus Aemilia*' (in reality to be identified as *Navalia*), *Horrea Galbana*, *Lolliana*, *Seiana*, etc.) was located in the quartiere called Testaccio, on the left (east) bank of the Tiber, south of the Aventine, south-west of Via Marmorata, and to the north of *Monte Testaccio*; this area was later partly covered by the *ex Mattatoio* (ex abattoir) (cf. here **Figs. 102; 103**).

When at first asking myself, whether the huge building at the Testaccio discussed here (here Figs. 102; 102.1; 102.2; 102.3), should be identified with the *Porticus Aemilia* or rather as *Navalia*, I regarded the following as our main problems:

*Concerning the area of Rome discussed in this Chapter, we have two great problems:  
to document and imagine its daily life in antiquity over time.*

Which is why I have tried with my following text and illustrations (here Figs. 98; 99; 104-106) to 'enliven' this picture.

Fig. 102. *La Marmorata* at the Testaccio, with integration of the buildings documented on the Severan Marble Plan. Of these buildings, the 'NAVALIA' are marked by lettering, they have been identified by L. Cozza and P.L. Tucci (2006). Earlier this huge structure had - in Cozza's and Tucci's (2006; and P.L. TUCCI's 2012), and in my own opinion - erroneously been identified with the *Porticus Aemilia*; as still believed by many scholars. From: L. Cozza and P.L. Tucci (2006, 196, Fig. 12 [TUCCI]), the caption reads: "I *navalia* nella zona di Testaccio (da COARELLI 1974 p. 295, con modifiche di L. COZZA e P. L. TUCCI)".

Fig. 102.1. Ground-plan of the Republican *opus incertum* building at *La Marmorata*, which has been identified with the *Porticus Aemilia* outside *Porta Trigemina* and as *Navalia*. From G.-J. Burgers (*et al.* 2015, 200-201, Fig. 3: "Layout of the *Porticus Aemilia* with the numbering of the aisles and pillars [after Gatti 1934, pl. II. Graphics by V. De Leonardis]").

Fig. 102.2. Two reconstruction drawings of the *opus incertum* building at *La Marmorata*, with integrations of the fragments 23 and 24 of the Severan Marble Plan, on which it is represented. On fragment 23 appears the main inscription of this building, of which only the letters 'LIA' remain.

Fig. 102.2 shows two reconstructions of the main inscription of the *opus incertum* building.

Above: restored as 'AEMI]LIA'. From: G. Carettoni, L. Cozza, A.M. Colini and G. Gatti (*La pianta marmorea di Roma antica. FORMA VRBIS ROMAE*, 1960, testo, p. 95: "schema topografico". Photo: © Sovrintendenza Capitolina ai Beni Culturali).

Below: restored as 'NAVA]LIA'. From: L. Cozza and P.L. Tucci ("Navalia", 2006, 179, Fig. 1). The caption of their Fig. 1 reads: "In alto, l'edificio in *opus incertum* sulla *Forma Urbis* [*i.e.*, the Severan Marble Plan] con l'iscrizione NAVA]LIA (da GATTI 1934, fig. 7, aggiornato e integrato da L. Cozza e P. L. Tucci). In basso, la pianta dell'edificio in *opus incertum* ricostruita in base a scavi e rilievi: gli asterischi indicano le parti tuttora visibili (da GATTI 1934, tav. II, con aggiornamenti di L. Cozza e P. L. Tucci)". Cf. F. de Caprariis (2022, 120, Fig. 5.2), from whom I have borrowed the comparison of both reconstructions of this inscription presented here. The caption of F. de Caprariis's Fig. 5.2 reads: "Fig. 5.2: (*porticus*) *Aemilia* or *Nauvalia*. On the right, fragment 23 of the Marble Plan: note the inscription ]LIA (© Sovrintendenza Capitolina)". F. de Caprariis's Fig. 5.2, above, is obviously a detail of her Fig. 5.1 on p. 119, the caption of which reads: "Fig. 5.1: Testaccio and Trastevere. The archaeological evidence and the Severan Marble Plan (from G. Carettoni-Cozza-Colini-Gatti 1960)".

Fig. 102.3. G. Giovannetti (2016, 24, Fig. 8: "Carta archeologica di Testaccio (da Gatti 1934)". With the *opus incertum* building, labelled as 'PORTICVS AEMILIA'.

Inserted box on top right:

G. Giovannetti: drawing of the structures standing in front of the '*Porticus Aemilia*'/ *Navalia* that are visible on fragments 24c and 24d of the Severan Marble Plan; cf. Giovannetti (2016, 22, Fig. 7: "Riproduzione della parte inferiore della lastra 24c e della 24d, elaborazione grafica dell'autore"), who labels these three buildings as 1, 2 and 3. Comprising *tabernae*, they served, according to Giovannetti, commercial functions, but apart from appearing on the Severan Marble Plan they are, in his opinion, otherwise not datable. But note that E. Rodríguez Almeida (1993a, 20) dated those structures to the Trajanic period. Cf. here Fig. 102.3 for the location of those structures between the '*Porticus Aemilia*'/ *Navalia* and the port building on the bank of the Tiber.

Fig. 102.4. View of *La Marmorata*, etching from Étienne Dupérac's (circa 1520-1604) book (*I vestigi dell'antichità di Roma*, 1575, tav. 23).

Cf. R. Lanciani (III [1990], 192, Fig. 143). The caption reads: "Etienne Du Pérac, *Veduta della Marmorata e dell'Aventino*. Incisione, ne 'I vestigi dell'antichità di Roma', Roma 1575, tav. 23".

The caption of Dupérac's etching reads: "Vestigij d'una parte del monte Auentino che guarda verso Ponente, et il Tevere, quale [Oggi si scriverebbe *la quale*] per esser molto ruinata [Inserisce il concetto della rovina non quello del degrado] non ui si vede altro che muri spezati et rotti, Anchor che antichamente nella sumita [Inserisce il segno di abbreviazione sopra la u e la m indicante il raddoppio del consonante, vuole dire *in alto in cima alla sommità*] ui / fossero bellissimi Tempj et edificij, nel segno A uogliono [Allude a fonti antiche che parlano di saline] chi ivi fossero le saline, hoggidi questo luoco si chiama la marmorata, perche ui si scaricano diuerse pietre di mischio et di marmo qualli si trouano [*come quelle che si trovano*] al porto d' / Ostia, nel segno B. è l'altra rippa del fiume doue arrivano tutti gli vascielli [oggi sarebbe *vascelli*] et mercantie che uengono per la marina in Roma". The comments on Dupérac's text in the square brackets are those written to me by Laura Gigli on 19th April 2022.

Fig. 102.5. Marble altar found in 1739 [corr.: 1737] at *La Marmorata*. London, British Museum (inv. no. 1914,0627.1), 0,72 m high. Date: 69-79 AD. From its inscription (*CIL VI 301*) we learn that it was dedicated to Hercules by Primigenius Iuencianus, a slave or freedman of the Emperor Vespasian, who calls himself in this inscription a *tabularius a marmoribus* (a "book-keeper in the marble trade"). Primigenius Iuencianus was, likewise according to the comments on this altar by the Curator of the British Museum (quoted after D. BOOMS 2016), "an official involved in the marble trade under Vespasian". Photo: © The Trustees of the British Museum.

Fig. 102.6. The republican structure in the *Forum Holitorium* (a 'covered road', or porticoed street), leading from a north-westerly direction to the *Porta Carmentalis* in the Servian city Wall. Photos: Courtesy Franz Xaver Schütz (11-V-2022).

Fig. 102.7. Altar of *Magna Mater* and *Navisalvia*, which refers to the legend of Claudia Quinta and to the arrival of the sacred stone of *Magna Mater* at Rome in 204 BC. Rome, Musei Capitolini. Cf. A. D'Alessio (2014, 11, Fig. 8: "Roma, Musei Capitolini: altare della *Mater Deum* e di *Navisalvia*". Photo: © Sovrintendenza Capitolina ai Beni Culturali).

*Part II.* of this *Study* is *inter alia* dedicated to the *opus incertum* building at *La Marmorata*, which has been identified with the *Porticus Aemilia* outside *Porta Trigemina* and as *Navalia* (cf. here **Figs. 102; 102.1; 102.2; 102.3**).

After having finished writing this *Chapter*, two articles by Francesca de Caprariis reached me on 17th March 2022, which the author, with whom I had discussed in an E-mail correspondence the fragments of the Severan Marble Plan 23 and 24b-d, that *inter alia* represent this building, was kind enough to send me by her own account ("L'invisibile Roma dei Fulvi", 2019, and "Public buildings and Urban Landscape: A View from the Riverfront"; this article has appeared in 2022, and the author was kind enough to send me a scan of it on 16th February 2023). In these essays, de Caprariis (*op. cit.*) discusses likewise the 'Porticus Aemilia'/Navalia problem, and I have decided to still incorporate a discussion of her findings into my text. - On 20th April 2022, de Caprariis generously granted me by E-mail her permission to publish here some passages from the latter manuscript ahead of publication.

Unlike myself, de Caprariis (*op. cit.*) follows those scholars, who identify the building in question with the *Porticus Aemilia*. Both de Caprariis (2019; *ead.* 2022) and I base our conclusions on different parts of the vast available scholarly discussion. But, as the following will show, this has not caused our contrary opinions, but rather the fact that we obviously interpret some of the statements by Lucos Cozza and Pier Luigi Tucci in their article of 2006 and by Tucci (2012) very differently. For some of de Caprariis's statements;

cf. *infra*, in Section III., where they are quoted as the [9.], [11.] and [12.] **epigraphs**. In Section III., I have discussed also many of de Caprariis's other observations in detail.

**I have, therefore, quoted here three of Cozza's and Tucci's statements *verbatim*, which are of special importance to my own hypothesis.**

See two passages from Cozza and Tucci (2006, 197, 198 [TUCCI]), quoted above as the [1.] and [2.] **epigraphs** in this Section I. ; and below, in Section III., at *The discussion of the Navalía at La Marmorata by Lucos Cozza and Pier Luigi Tucci (2006) and Tucci (2012)*, where will *inter alia* be addressed the observation by Cozza and Tucci (2006, 180 [TUCCI]).

In Cozza and Tucci (2006, 180 [TUCCI]), the authors interpret the *opus incertum* building discussed here as "*dei navalía*", but not as '*the Navalía*', the shipsheds for warships, which "*ospitasse le navi da guerra pronte al combattimento*", as they themselves write. In Cozza's and Tucci's (2006) opinion, these *Navalía* at *La Marmorata* were rather built as an "arsenal" (shipyard) for the Roman warships; see for all that also *supra*, the [1.] **epigraph**.

When trying to decide for myself, whether the huge *opus incertum* building at *La Marmorata*, discussed here, should be identified with the *Porticus Aemilia* outside *Porta Trigemina* or rather as *Navalía*, I have at first not considered the results of the recent first scientific excavations (2011-2013), to which we will now turn, simply because I did not as yet know the relevant publications.

Franz Xaver Schütz has solved the problem by finding on 18th March 2022 on the Internet the article by Gabriel Cabral Bernardo (2014), who has participated in these excavations in September of 2013; cf. *infra*, in Section III., where the very telling title of his article is quoted as the [7.] **epigraph**. Fortunately we learn from Bernardo (2014), and from Tucci (2012, 575, n. 3) the names of the directors of these excavations: Gert-Jan Burgers and Renato Sebastiani, who have already published these excavations, together with their co-excavators.

As already mentioned, Franz Xaver Schütz and I had even personally met with Renato Sebastiani on 13th September 2019, when we visited the *Nuovo Mercato del Testaccio* together with Francesco Buranelli, Susanna Le Pera and Luca Sasso D'Elia, and saw by chance Sebastiani's at the time ongoing excavations at this site; cf. *supra* at Chapter *Introductory remarks and acknowledgements*. To this I will come back below.

De Caprariis (2022, 131, n. 49) mentions one of these texts by Renato Sebastiani (*et al.* 2016), from which we learn the title of another of their articles, published in *BABESCH* of 2015. I have, therefore, called the editor of this periodical, my good friend Eric M. Moormann in Amsterdam, who, in his turn, on his own account, contacted Gert-Jan Burgers for me, one of the excavators of the *opus incertum* building at *La Marmorata*.

On 21st March 2022, Gert-Jan Burgers was kind enough to send me this article which he published together with his co-excavators Raphaëlle-Anne Kok-Merlino and Renato Sebastiani ("The Imperial *horrea* of the *Porticus Aemilia*", 2015). For the abstract of this article; cf. *infra*, in Section III., where it is quoted as the [8.] **epigraph**.

On 28th March 2022, two more articles on these excavations by Gert-Jan Burgers reached me, which the author was kind enough to send me as well by request. They were written by himself and by his co-excavators Valerio De Leonardis, Sara Della Ricca, Raphaëlle-Anne Kok-Merlino, Matteo Merlino, Renato Sebastiani and Franco Tella ("*Porticus una extra Portam Trigemina: nuove considerazioni sulla Porticus Aemilia*", 2014a, and "Le trasformazioni del paesaggio subaventino nell'età tardoantica: il caso di studio della *Porticus Aemilia*", 2014b).

Amanda Claridge was kind enough to send me on 3rd April 2022, by request, the article by T.P. Wiseman ("*Walls, gates and stories: Detecting Rome's riverside defences*", 2021a), in which the author addresses *inter*

*alia* the much debated locations of the *Porticus Aemilia* and of the *Porta Trigemina* within the Servian city Wall. See below, in Section III., where one passage of Wiseman's essay (2021a) is quoted as the [10.] epigraph.

On 9th April 2022, I had the chance to call Hugo Brandenburg in Kahla, with whom I had studied at the Universität zu Köln from 1976-1977, and who has since then greatly supported my studies. Brandenburg has not only been studying Constantine the Great for a long time, but also the Basilica of San Paolo fuori le Mura. In this telephone conversation I wanted to know from Brandenburg, what exactly had happened, when Constantine the Great in AD 330 had moved the capital of the Roman Empire from Rome to his newly erected capital Constantinople. For all this; cf. Brandenburg (*Le prime chiese di Roma IV-VII secolo*, 2013). Brandenburg discussed with me also the situation of the area of *La Marmorata* in late antiquity, especially the fact that from the 5<sup>th</sup> century onwards this previously booming new commercial river port of Rome was now being invaded by 'various poor burial grounds', as observed by the excavators Burgers (*et al.* 2014b, 815, discussed and quoted *verbatim* below, in Section III.). To the discussion with Brandenburg I will likewise come back below in Section III.

On 11th April 2022, when searching the inscription *CIL VI 301*, Franz Xaver Schütz realized that it belongs to a marble altar, 'which was found in 1739 [corr.: 1737] at *La Marmorata*' and is kept at the British Museum (inv. no. 1914,0627.1; cf. here **Fig. 102.5**). This altar was dedicated to Hercules by Primigenius Iuvencianus, a slave or freedman of the Emperor Vespasian, who calls himself in this inscription a *tabularius a marmoribus*. This Primigenius was, according to the "Comments" on this altar by the Curator of the British Museum (quoted after D. BOOMS 2016), "an official involved in the marble trade under Vespasian".

On 13th and 17th April 2022, I had the chance to discuss with Peter Herz in Bad Ems in telephone-conversations the name and social standing of Primigenius Iuvencianus, and his position as *tabellarius a marmoribus*. Herz, who has been studying these subjects for a long time in detail, has kindly shared with me his findings concerning the following subjects: the supply of Rome with grain, wine, olive oil, marble and wood, the organization of the responsible imperial administrations, the question of how many ships were, for example, necessary to import the grain necessary for the *frumentationes*, and the question, which rôle the commercial river port at *La Marmorata* must have had for all those activities.

Cf. Herz (*Studien zur römischen Wirtschaftsgesetzgebung. Die Lebensmittelgesetzgebung*, 1988; "Die Energieversorgung in römischer Zeit", 2012; "Die Versorgung einer Metropole. Die wirtschaftlichen Infrastrukturen Roms während der römischen Kaiserzeit", paper read on 17th May 2017 at the Universität Regensburg, Ringvorlesung; *Studien zur römischen Wirtschaftsgesetzgebung. Die Baugesetzgebung*, forthcoming). See now also below, at *The sixth Contribution by Peter Herz : Rom. Strukturen der Versorgung* (with ample bibliography), which Peter Herz was kind enough to write at my request,

At the time, when I was a collaborator of Herz at the Universität Regensburg (2006-2009), a *navis lusoria*, a Roman warship, was built at his Lehrstuhl. With this ship a group of his students, disguised as Romans, made trips on the Danube, for example back and forth to Budapest. For this ship; cf. Hans Ferkel, Heinrich Konen and Christoph Schäfer (*Navis Lusoria: ein Römerschiff in Regensburg*, 2004), and for the journey of this ship from Regensburg to Budapest; cf. Florian Wolfgang Himmler, Heinrich Konen and Josef Löffl (*Exploratio Danubiae: Ein rekonstruiertes spätantikes Flusskriegsschiff auf den Spuren Kaiser Julian Apostatas*, 2014).

On 15th April 2022, while searching for further information concerning *CIL VI 301* and 410, Franz Xaver Schütz found on the Internet a publication by Patrizio Pensabene, in which the author has already answered all the questions I still had concerning those inscriptions, Primigenius Iuvencianus and the *Statio Marmorum* at *La Marmorata* (*Le vie del marmo: I blocchi di cava di Roma e di Ostia: Il fenomeno del marmo nella Roma Antica*, 1994) ! For this lucky find I was very grateful indeed.

On 19th April 2022, Laura Gigli was kind enough to help me transcribe the caption of Étienne Dupérac's etching of 1575 that represents *La Marmorata* (cf. here **Fig. 102.4**). In addition to this, Dupérac's Italian text

contains some words and expressions which are not used any more, and that Laura has translated for me into modern Italian.

On 4th May 2022, Helen Whitehouse, whom I had called in Oxford, and Panorea Alexandratos were kind enough to help me acquire a photo from a drawing of the Paper Museum of Cassiano Dal Pozzo (cf. here **Fig. 106**), and to get in touch with the Royal Collection Trust at London. This drawing represents a relief with three Tiber ships, carved on the plinth of the colossal marble statue of the River God Tiber, which Domitian had commissioned for the Iseum Campense at Rome, after this sanctuary had been destroyed in the fire of AD 80. This statue of the River God Tiber is on display in the Louvre at Paris (here **Fig. 104**), and the drawing of the three Tiber ships is kept at Windsor, at the Royal Library (RL 8739).

It had been, of course, Amanda Claridge who, when discussing with her the photo of one of those Tiber ships, which transports a huge block of marble, and has been published by Patrizio Pensabene and Javier Á. Domingo (2016-2017, 573, Fig. 15 [= here **Fig. 105**]), alerted me to the fact that all three Tiber ships, represented on this relief, have been documented on a drawing, kept in the Paper Museum of Cassiano Dal Pozzo (here **Fig. 106**, discussed below, in Section II.). On 6th May 2022, an E-mail of Daniel Partridge of the Royal Collection Trust (London) reached me, who informed me that, according to their regulations concerning scholarly publications, I may publish the image of this drawing (here **Fig. 106**). For this generous offer I am very grateful indeed.

Amanda Claridge passed away on the morning of 5th May 2022, as I was kindly informed on the same day by her niece Emma Claridge, whom Janet DeLaine had given a list of friends to be informed. For this I am both ladies very thankful. Up until April 17th 2022, I was able to discuss with Amanda the subjects of this *Chapter*. Amanda took great interest in this work, as indeed from its beginning of this entire *Study* (cf. *Introductory remarks and acknowledgements*).

As a matter of fact, it was only because of Amanda's mentioning (2010, 403-404, quoted below in Section III., as the **[5.] epigraph**) of the new interpretation of the huge *opus incertum* building at *La Marmorata* as 'Navalia' by Cozza and Tucci (2006), that I have been alerted to this controversy. In what turned out to be our last telephone conversation, I told Amanda, what I had just written her by E-mail the same day: that, after a very convoluted discussion of these *Navalia* (see below, in Section III.), I have arrived at exactly the same results as she herself did (2010; 2018, 96, Table 5.1) and also as T.P. Wiseman (2021a), whose article Amanda had kindly sent me a couple of days before. Next year (*i.e.*, in 2023) Amanda and I would have known each other for 50 years, and it is impossible for me to express right now what the loss of this old friend means to me.

Since I could not have known that she would leave us so soon, I am glad that I have mentioned in this volume what Amanda has done for me since 1973 (see above, in the *Chapter Dedication*).

My heartfelt thanks are also due to Francesca de Caprariis of the Musei Capitolini, Antiquarium on the Caelian, who has arranged for us on the 6th of May 2022 to study the fragments of the Severan Marble Plan, discussed in this *Study*, and even on very short notice. The fragments in question are: 23, 24 and 36b, of which the former two document the 'Porticus Aemilia' / *Navalia*, discussed in this *Chapter*. At this meeting Eugenio La Rocca, Claudio Parisi Presicce and Franz Xaver Schütz all participated. I thank all of whom for the very interesting discussions.

Between 7th and 13th May 2022, I had the chance to discuss with Filippo Coarelli in Rome the subjects of this *Chapter*, who was also kind enough to read this text. And between 10th and 12th May 2022, T.P. Wiseman, whom I had likewise sent this text, was kind enough to discuss it with me in an E-mail correspondence, and I am especially thankful that he has saved me from some errors.

Peter Herz, whom I had likewise sent this *Chapter*, was kind enough to discuss these subjects with me again in several telephone conversations on 23rd May 2022. Herz sent me on that occasion his above-mentioned manuscript ("Die Versorgung einer Metropole. Die wirtschaftlichen Infrastrukturen Roms während der römischen Kaiserzeit", Vortrag, 17. Mai 2017).

In the context of this *Chapter*, I find especially Herz's (*op. cit.*) following observations interesting that he has addressed in this talk. Herz not only calculates the enormous quantity of grain that was needed for the *annona*, the supply of the City of Rome with grain, but adds to this the (at least for me) surprising fact that all this grain was supplied by private entrepreneurs. The seagoing ships belonging to the 'fleet of grain ships' (for example those visible on here **Figs. 98; 99**), which started for example each June in Alexandria, were privately owned by these men; the only support the Roman State provided was the fact that this 'grain fleet', on its way from Alexandria to Rome, was escorted by Roman war ships (!). Since the entire risk of this trade with grain had to be faced by these entrepreneurs, one wonders, of course, why these men were prepared to provide these services at all to the Roman State. And because one of these men, the Egyptian *Ciro*, will tell us his 'story' below in Section II., as written in her fictional account by Laura Gigli (2022), I find Herz's explanations especially useful. The motivation of those entrepreneurs to provide the Roman State with grain, transported by them in their privately owned ships was, so Herz, to avoid the tax that these men would otherwise have been forced to pay to the Roman State themselves: these entrepreneurs thus intended to gain by means of their services the *immunitas munerum* for themselves (to this I will come back below).

Peter Herz ("Die Versorgung einer Metropole. Die wirtschaftlichen Infrastrukturen Roms während der römischen Kaiserzeit", Vortrag, 17. Mai 2017) writes: "**Der römische Staat hatte sich durch einen juristischen Trick die Möglichkeit eröffnet, diese seegehenden Transportschiffe sehr kostengünstig und vor allem für einen längeren Einsatzzeitraum anzuheuern. Er versprach den Schiffseignern (*navicularii* oder *naukleroi*), die ihr Geld in solchen Schiffen investiert hatten, um sie dann zu den vom römischen Staat vorgegebenen Bedingungen langfristig in den Dienst der *annona* zu stellen, die Befreiung von den Liturgien bzw. [beziehungsweise] *munera* in ihren Heimatgemeinden (*immunitas munerum*)** [my emphasis]".

Thinking of the Egyptian merchant *Ciro* of our example, told by Laura Gigli (2022; see below in Section II.), he had, as every Egyptian citizen, *inter alia* to pay an annual poll tax to the Roman State, called *laographia*. But not only that. The *laographia* (on average 10 silver tetradrachmas pro citizen *per annum*) had to be paid in silver tetradrachmas, whereas the Egyptians themselves for their own work were for example paid in bronze obols. Egyptian citizens, in order to pay *laographia* had, therefore, to go once a year to a bank to change their money into 10 silver tetradrachmas, but this bank would demand a bank charge of 8 % for this operation (!). See for this entire, very complex problem, Angelo Geißen ("Comments by Angelo Geißen: Augustus und das liebe Geld", in: C. HÄUBER 2017, 732-733, with references and my comments).

For coins, with which the above-mentioned Egyptian citizens could have been paid for their own work in Egypt; cf. Häuber (2017, 343-345 with ns. 103-106, with Fig. 7 [= here **Fig. 151**]: Hemidrachmon [?], bronze, minted by Augustus at Alexandria. Obverse: Portrait of Livia, with the legend: *Livia Sebastou* ('Livia, the wife of Augustus'; before 9/10 AD) ... and Fig. 8 [= here **Fig. 152**], Obol, bronze, minted by Augustus at Alexandria. Obverse: Portrait of Augustus, and on the reverse the legend: *Patros Patridos*, referring to Augustus's title *Pater Patriae* bestowed upon him in 2 BC [with n. 103]). Both coins are kept at the Universität zu Köln, Institut für Altertumskunde.

Cf. Häuber (2017, 733): "\* Editor's note:

... Fig. 8 [= here **Fig. 152**] shows a bronze obol. In the example of our Egyptian subject, who wants to pay his annual poll-tax, he has to go to a bank in order to change his money. In theory the exchange rate was: 24 obols for one silver tetradrachma. But there was a problem: at the bank, one silver tetradrachma would have cost him ca. 26 obols (*i.e.*, the bank charge amounted to 8 %)".

On 4th July 2022 Hans Rupprecht Goette was kind enough to inform me by E-mail about a paper, to be read at the Deutsches Archäologisches Institut, Berlin, in the "Reihe 'Bauforschung im Wiegandhaus'". This paper was read on 14th July 2022 by "Dr. Evelyne Bukowiecki (Rom)" and had the following title: "Port Infrastructures in Portus. The Recent Excavations of the École Française de Rome".

Already on 25th April 2022, Paul Scheduling had presented at the Institut für Klassische Archäologie at the University of Munich his *Habilitationsvortrag* ("Ausweitung der Diskurszone. Angemessene Architektur und Ausstattung von Heiligtümern der hellenistischen Zeit in Rom und Latium"), which I had been unable to attend. Because of this subject of his *Habilitationsschrift*, I asked Paul Scheduling on 21st December 2022 in an E-mail, whether he had addressed in this talk two Republican *opus incertum* buildings, which are discussed in this Chapter: the 'Porticus Aemilia' / *Navalia* at *La Marmorata* and the substructure on the eastern slope of the Palatine, which had (presumably) supported the Temple of Fortuna Respiciens.

Paul Scheduling was kind enough to answer me by E-mail on the same day, that he himself has not discussed those monuments, and added to this: "Das haben Maschek und Tombrägel ja auch schon einschlägig getan". Taking his latter remark (erroneously) as a hint to a publication, written by both authors *together*, I was unable to find it though.

On 6th June 2023, I managed to call Paul Scheduling, who told me that he had referred to Martin Tombrägel's book (*Die republikanischen Otiumvillen von Tivoli*, 2011), and to Dominik Maschek's (2013) review of this book. Scheduling told me also that Tombrägel (2011) identifies the *opus incertum* building at *La Marmorata* with the *Porticus Aemilia*, for which Tombrägel follows the dating '174 BC'; whereas Maschek (2013) follows Cozza and Tucci (2006) and Tucci (2012), in assuming that the building at *La Marmorata* should be identified as *Navalia*; Maschek follows also Cozza's and Tucci's much later dating of this building.

Concerning those just-mentioned points, I have thus, in the following discussion (summarized *infra*, in Section III., at my *Conclusions*) - independently of him - arrived at the same results as Maschek (2013). And although I had at that stage (almost) finished writing the entire volume 3-1 of this *Study* on Domitian, I decided to at least quote the relevant passages from Maschek's account; cf. *infra*, in Section III.

Finally, on 13th June 2023, I had the chance to discuss with Peter Herz the decline of Rome in the 5<sup>th</sup> century AD, that has now been very well documented for the area of the Testaccio by the excavators G.-J. Burgers (*et al.* 2014b, 815). I was glad to learn that Herz has actually dedicated an article to this fact ("Rom in der Spätantike. Der Niedergang einer ehemaligen Hauptstadt", 2012). For all of this; cf. *infra*, in Section III.

*To allow the reader an easier understanding of this whole, very complex subject, I anticipate in the following a summary of my own results (cf. infra, in Section III., at my Conclusions) that relate to the opus incertum building at La Marmorata, the 'Porticus Aemilia' / Navalia*

1.) The ground-plan of the *opus incertum* building at *La Marmorata* is represented on the Severan Marble Plan. Scholars have tried to identify this structure *inter alia* by reconstructing its very fragmentary main inscription with which the building was labelled on fragment 23 of the marble plan (and a 'preliminary' inscription on fragment 24b) - but their results are hotly debated.

In my opinion, the data already known before the scientific excavations of 2011-2013 allow a decision between the two above-mentioned alternatives (*i.e.*, *Porticus Aemilia* or *Navalia*), at least concerning the question, what purpose this *opus incertum* building had originally been built for. I, therefore, assume that the building may have been labelled '*Navalia*' on the Severan Marble Plan (cf. here **Figs. 102; 102.2, below**). Guglielmo Gatti (1934; cf. here **Fig. 102.3**) had convincingly identified the *opus incertum* building at *La Marmorata*, of which some architectural remains are still standing, with a huge structure, represented on the Severan Marble Plan (compare also here **Figs. 102; 102.1; 102.2**).

Gatti (1934; cf. here Fig. 102.3) was also first to read the main inscription of the *opus incertum* building, of which only the letters `]LIA` are preserved, as `PORTICVS AEMILIA` (cf. here Fig. 102.3), and Cozza and Tucci (2006) were first to reconstruct this inscription as `[NAVA]LIA` (cf. here Figs. 102; 102.2, below).

The most recent scholarly debate, revolving around the `Porticus Aemilia`/ *Navalia*, is based on analyses of the building's topographical context, the pertaining literary sources and its two inscriptions on the Severan Marble Plan. I apply the same methodology, but, contrary to all previous scholars, consider in my reasonings also another building. This structure is known from an inscription on the Severan Marble Plan which actually documents a building called after the Aemilii - whereas for the *opus incertum* building, carrying the (main) inscription ]LIA on the marble plan, its identification with the `[PORTICUS AEMI]LIA is only a hypothesis.

De Caprariis (2019, 166, quoted *verbatim* below, in Section III., and 2022, 127, with n. 30, quoted in Section III. as the [11.] epigraph), suggests that not only the two alternative readings (`Aemilia` and `Navalia`) of the main and of the `preliminary` inscription on the *opus incertum* building, which appear on fragments 23 and 24 of the Severan Marble Plan, are in theory possible, but so are many more alternatives.

**Contrary to de Caprariis (2022, 127) I am of the opinion that the main inscription of the *opus incertum* building cannot be reconstructed as `AEMI]LIA` and will, in the following, explain the reasons, why.**

De Caprariis's (2022, 120) compares in her Fig. 5.2 two of the hypotheses, suggested for the reading of the main inscription of the *opus incertum* building: `Aemilia` and *Navalia`:*

De Caprariis's (2022, 120, Fig. 5.2, above [cf. here Fig. 102.2, above]), `AEMI]LIA`, is a detail of the reconstruction, created by Gianfilippo Carettoni, Lucos Cozza, Antonio Maria Colini und Guglielmo Gatti (1960; cf. F. DE CAPRARIIS 2022, 119, Fig. 5.1) which, in my opinion, is impossible.

De Caprariis's (2022, 120, Fig. 5.2, below [cf. here Fig. 102.2, below]), `[NAVA]LIA` is the reconstruction by Lucos Cozza and Pier Luigi Tucci (2006) which, in my opinion, is possible.

Compared with the approach that has led to the reconstruction of this inscription by Carettoni, Cozza, Colini and Gatti (1960, here Fig. 102.2, above), Gatti's own earlier (1934) reconstruction of this inscription (cf. here Fig. 102.3) is actually misleading; a fact which I will explain in the following paragraph in detail.

Carettoni *et al.*'s reconstruction (here Fig. 102.2, above) shows the real position of fragment 23 of the Severan Marble Plan within the ground-plan of the *opus incertum* building; this fragment carries the letters `]LIA` of the (main) inscription of the building. Also Cozza's and Tucci's reconstruction (here Fig. 102.2, below) shows the real position of fragment 23 of the Severan Marble Plan within the ground-plan of the *opus incertum* building.

Because of the location of the letters `]LIA` on the Severan Marble Plan, the label `AEMI]LIA` in the reconstruction by Carettoni *et al.* (1960; here Fig. 102.2, above) appears close to the eastern small side of the *opus incertum* building. This is likewise true of the label `[NAVA]LIA` in the reconstruction by Cozza and Tucci (2006; here Fig. 102.2, below). - For that observation; cf. here Fig. 102, which shows the true orientation of the bulding, here identified as *Navalia*.

This fact has in Carettoni *et al.*'s reconstruction (1960; here Fig. 102.2, above) the effect that there is no space left in front of the (restored) label `AEMI]LIA` to add the additional word `PORTICVS`.

Gatti's own reconstruction (1934; cf. here Fig. 102.3), on the other hand, gives the (false) impression that the label `AEMILIA` stood on the right hand half of the building's ground-plan. Gatti's (1934) relevant decision has resulted in the (wrong) impression that on the left hand half of the building's ground-plan could easily have stood the label `PORTICVS`, which Gatti has actually added at this position.

That, in the reconstruction by Carettoni *et al.* (1960), the word `PORTICVS` is missing, has, of course, already been observed by other scholars before me, for example by Steven Tuck (1999; cf. *infra*, and *id.* 2000) and by Filippo Coarelli (2008).

See Coarelli (2008, 463, quoted in more detail below, in Section III. as the [6.] epigraph), who refers with the following observations to the publication by Steven Tuck (2000): "**Più di recente però sono state proposte altre soluzioni, basate sull'aspetto dell'edificio** [*i.e.*, of the *opus incertum* building discussed here, in F. COARELLI's opinion to be identified as *Navalia*], **che non corrisponde alla tipologia del portico, e sull'impossibilità di integrare la parte dell'iscrizione superstite, [---]LIA, con *Porticus Aemilia* per mancanza di spazio.** Si è [*i.e.*, by S. TUCK 2000] così proposto l'integrazione (*Horrea*) Cornelia ... [my emphasis]". - In his bibliography on p. 533, Coarelli quotes: S.L. Tuck ("A new identification for the 'Porticus Aemilia'", 2000).

**For the following reasons, the *opus incertum* building at *La Marmorata*, in my opinion, cannot possibly have represented (one of the two) *Porticus Aemiliae*, built in 193 BC**

a) Because of the above-mentioned considerations concerning Carettoni *et al.*'s reconstruction (1960; here Fig. 102.2, above), the (main) inscription 'LIA' on fragment 23 of the Severan Marble Plan, which labelled the *opus incertum* building at *La Marmorata*, cannot have read 'PORTICVS AEMILIA';

b) this fact precludes, in my opinion, the identification of the *opus incertum* building with the *Porticus Aemilia*, found outside the *Porta Trigemina*, because in that case the inscription of this structure should have read 'PORTICVS AEMILIA', and that for the following reasons:

Coarelli (1988, 147-155; p. 154, Fig. 27 [= *LTUR* I 1993, 358, Fig. 4], Coarelli ("Aemiliana", in: *LTUR* I [1993] 18-19), and most recently Coarelli (2019a, 213 with n. 81) mentions the inscription 'AEMILI[ ]' on fragment 621a-d of the Severan Marble Plan that Emilio Rodríguez Almeida (1981, 115-118, Tav. XXIV) was able to locate in the area of the *old* river port, that is to say, to the north of the Temple of Portunus and to the west of the *Forum Boarium*; cf. Carlo Buzzetti ("Portus Tiberinus", in *LTUR* IV [1999] 155-156, Figg. 60-61). - I myself follow Coarelli's reading of the inscription on fragment 621a-d of the Severan Marble Plan as: 'AEMILI[ANA]'; cf. Coarelli ("Aemiliana", in: *LTUR* I [1993] 19).

Coarelli (2019a, 213 with ns. 81-85, quoted in more detail below, in Section III.), therefore, in my opinion convincingly, attributes the inscription 'AEMILI[ANA]' on fragment 621a-d of the Severan Marble Plan to *Horrea Aemiliana*, the erection of which he attributes to Scipio Aemilianus:

**"L'edificio antico che sorgeva nel luogo dell'odierna Anagrafe va dunque identificato con degli *Horrea Aemiliana*, di probabile destinazione annonaria, che abbiamo proposto di attribuire all'attività di Scipione Emiliano, autore nel corso della sua censura del 142 a.C. di una serie di interventi nella zona del Foro Boario** [with n. 85; my emphasis]".

In his note 85, Coarelli quotes: "COARELLI 1988b [*i.e.*, here F. COARELLI 1988], pp. 84-92, 146-155".

**In 142 BC, as censor, Scipio Aemilianus completed for example also the *Pons Aemilius* (the 'Ponte Rotto'), which stood immediately adjacent to the *Horrea Aemiliana*; cf. Coarelli ("Pons Aemilius", in: *LTUR* IV [1999] 106-107).**

Cf. here Fig. 58, labels: TIBER; PONS AEMILUS; Port. Cf. Fig. 73, labels: PONS AEMILIUS [*i.e.*, the 'Ponte Rotto']; AEDES: PORTUNUS; Servian city Wall; PORTA FLUMENTANA; HORREA [AEMILIANA]; FORUM BOARIUM.

Cf. Ernst Badian ("Cornelius (*RE* 335) Scipio Aemilianus Africanus (Numantinus), Publius, born 185/4 BC as second son of L. Aemilius Paullus (2), adopted as a child by P. Cornelius Scipio (2), son of P. Cornelius Scipio Africanus ... [in 147 BC] he was elected consul ... He was assigned Africa ... and, after ... closing off the enemy's harbour, he overcame long and desperate resistance and early in 146 captured Carthage after days of street fighting. After letting his soldiers collect the booty, he destroyed the city and sold the inhabitants into slavery ... In 142 he was censor with Mummius who mitigated some of his severity. They

**restored the pons Aemilius** [my emphasis] ... [he died in 129 BC]", in: *OCD*<sup>3</sup> [1996] 397-398). Cf. Andrew W. Erskine ("Scipionic Circle is a term used to describe P. Cornelius Scipio Aemilianus and his friends ..." in: *OCD*<sup>3</sup> [1996] 1369). - To L. Aemilius Paullus I will come back below, at point 5.).

The *Villa* of Scipio Aemilianus on the *Collis Latiaris* (or better: *Catialis*; to this correction of the name of the toponym 'Latiaris', I will come back below), one summit of the Quirinal, was bounded in the west by the *Via Flaminia*. This estate had been founded by Publius Cornelius Scipio Africanus *maior* (236-183 BC, *cos.* 205 and 194 BC), whose grand-daughter Sempronia (born circa 164 BC), the sister of the tribunes Tiberius and Gaius Sempronius Gracchus, should marry in 150 or 148 BC her cousin Scipio Aemilianus. The latter is said to have met in this *Villa* with the 'Scipionic Circle'. - For Scipio Aemilianus's *Villas* at Rome on the Quirinal (with the Tomb of the Sempronii) and at the *ager Laurentinus*; cf. Häuber (1994 II, 911-912, 920 with n. 12; *ead.* 2017, 145-153, 184, 328 [also on the family members, who had owned those estates]). For the *Villa* of Scipio Aemilianus on the Quirinal most recently; cf. Coarelli (2019a, 212 with ns. 77-79).

**Interesting in the context discussed here is the fact that the area between the *Via Flaminia* and the *Collis Latiaris* (*Catialis*) on the Quirinal kept the toponym 'AEMILIANA', and that long after the *Villa* of Scipio Africanus *maior* and of Scipio Aemilianus had disappeared;** cf. Häuber (2017, 148-153, 328).

Already T.P. Wiseman ("Rome and the resplendent Aemilii" 1993, 184 with n. 22) mentions the fact that there existed two toponyms called *Aemiliana* at Rome, but Wiseman had overlooked the fact that some scholars locate still another (*i.e.*, a third) toponym called 'Aemiliana' on the Quirinal, at the (former) site of the *Villa* of Scipio Aemilianus; cf. Pierre Grimal (1984, 125). Coarelli (2019a, 212, with a summary of the discussion): Although he does not himself address Grimal's (1984, 123-125) statements concerning the "*Horti Scipionis*", Coarelli, in my opinion convincingly, comes to the conclusion that there were altogether three different toponyms at Rome that were called *Aemiliana*.

Wiseman (1993) locates one of the two toponyms 'Aemiliana', which he is aware of, in the 'Campus Martius' (these are the *Aemiliana* close to the *Diribitorium*). The other toponym *Aemiliana*, according to Wiseman, is mentioned in the inscription *CIL* XV 7150, and "was the great warehouse by the *emporium*, rebuilt in 174", that is to say, that *Porticus Aemilia*, which Wiseman (1993, 184 with n. 21) at that stage (but not any more in T.P. WISEMAN 2021a) identified with the *opus incertum* building at *La Marmorata*, the 'Porticus Aemilia' / *Navalia* in Rome's *new* commercial river port discussed here. In Coarelli's opinion (2019a, 211-212) the inscription *CIL* XV 7150 refers instead to the *Horrea Aemiliana* in the *old* commercial river port of Rome. - To all this I will come back below, in Section III.

#### **To conclude point b):**

Because of all this, the inscription on the Severan Marble Plan on the building in the *new* river port at *La Marmorata*, provided this actually *was* (one of the two) *Porticus Aemiliae*, should, in my opinion, have read 'PORTICVS AEMILIA'. And the inscription on the Severan Marble Plan of the other building, named after the Aemilii, which stood in the *old* river port, provided these actually were *Horrea Aemiliana*, should have read: '[HORREA] AEMILI[ANA]' (or alternatively: simply 'AEMILI[ANA]', as the building is called in our literary sources).

c) the 'Porticus Aemilia' outside the *Porta Trigemina* is called in all our literary sources 'porticus', and in only one source 'Porticus Aemilia', but it never only called 'Aemilia'. Those literary sources are quoted below, in Section III. as the [4.] and [10.] epigraphs.

d) in reality, and likewise as it appears on the Severan Marble Plan, the *opus incertum* building at *La Marmorata* is huge. Therefore, provided this actually *was* (one of the two) *Porticus Aemiliae*, built in 193 BC, it should not have been a problem to place on its ground-plan on the Severan Marble Plan the complete label 'PORTICVS AEMILIA'.

2.) The identification of this *opus incertum* building.

**By its location, typology, plan, elevation and sloping floor it can, in my opinion, be identified as shipsheds (*Navalia*), as correctly observed by Cozza and Tucci (2006; cf. TUCCI 2012).**

Besides, already Tucci (2012) himself has stressed the fact that the identification by Cozza and himself (2006) of this building 'as *Navalia*' rested less on their (erroneous, as we now know; cf. *infra*) reading 'ALIA' of the 'preliminary' inscription on fragment 24b of the Severan Marble Plan as 'NAV[ALIA]' than on the other arguments adduced by them.

See for Cozza's and Tucci's (2006, 179, Fig. 1, above [= here **Fig. 102,2, below**]) erroneous reconstruction of the preliminary inscription (']ALIA'); it appears in their opinion, as indicated in their reconstruction, on fragment 24b of the Severan Marble Plan, immediately below fragment 23, which carries the fragmentary main inscription ']LIA'.

Francesco Paolo Arata and Enrico Felici ("Porticus Aemilia, *navalia* o *horrea*? Ancora sui frammenti 23 e 24 b-d della Forma Urbis", 2011) have corrected Cozza's and Tucci's wrong reading of the 'preliminary' inscription on fragment 24b of the Severan Marble Plan. This will be discussed in detail below, in Section III.

See also de Caprariis (2022, 127, with n. 30, quoted in more detail below, in Section III. as the [11.] epigraph): "... On fragment 24b, that is under the main inscription, of the [by L. COZZA and P.L. TUCCI 2006] supposed supplement [*Nau*]alia only the last two letters are actually visible (fig. 3). [with n. 30]".

In her **note 30**, de Caprariis writes: "See Arata, Felici 2011: 130 ...".

**That is to say, according to Arata and Felici (2011, 128, Fig. 1, p. 130), Alessandro D'Alessio (2014, 13-14, with Fig. 9), and de Caprariis (2022, 122, with Fig. 5.3 (a photo of fragment 24 of the Severan Marble Plan with the inscription "IA" - this is at least, what I see on this illustration - and p. 127 n. 30, quoted *verbatim infra*, as the [11.] epigraph in Section III.), the 'preliminary' inscription on fragment 24b of the Severan Marble Plan consists of only the two letters ']IA'. - Note that the caption of de Caprariis's (2022, 122, Fig. 5.3) reads: "FIGURE 5.3. Detail in raking light of fragment 24b; only the letters I and A were engraved under the main inscription (© Sovrintendenza Capitolina, photo by L. Frazzoni).**

After the autopsy of fragment 24b on 6th May 2022, I can confirm what has already been stated, and documented with illustrations, by those four scholars. Only that I myself do not read ']IA' on fragment 24b, but ']IA', but must confess that, being myself *not* an epigraphist, I cannot judge, whether or not the second letter was 'intended' to be an 'A' by the person who carved this letter.

As we shall see below, in Section III., this is precisely what Cozza and Tucci (2006, 178 [TUCCI]) have written in their note 8: "G. GATTLI, in *Pianta Marmorea* [*i.e.*, here *Pianta Marmorea* 1960 = G. CARETONI *et al.* 1960], p. 82, nota 8, aveva notato i «due segni: I e λ»".

Part of the problem mentioned here was caused by the fact that Cozza and Tucci, when they were in the course of writing their account (2006), did not have access to the fragment 24b of the Severan Marble Plan, which carries the 'preliminary' inscription. This autopsy was, at the time, impossible, as Cozza and Tucci (2006) have themselves stated. Therefore, Arata and Felici (2011), who *had* access to fragment 24b, could correct Cozza's and Tucci's suggested reading of the 'preliminary' inscription on fragment 24b.

I am writing here "'preliminary' inscription" with inverted commas, because Francesca de Caprariis, who generously gave us access to the fragments 23 and 24 of the Severan Marble Plan on 6th May 2022, was also kind enough to tell me her personal opinion that she does not take the inscription on fragment 24b as being 'preliminary'.

The other arguments adduced by Cozza and Tucci (2006) are: the location of the *opus incertum* building close to the Tiber (cf. here **Figs. 102; 102.2, below**) and its typology (*i.e.*, its plan, elevation and sloping floor combined), suggest its identification as *Navalia* (ship sheds). But Cozza and Tucci (2006; and P.L. TUCCI

2012) stressed that these were not *the Navalía* (the port of the warships, that was throughout its lifetime in antiquity [at Rome ! For that fact; cf. below, at point 7.]) based in the southern *Campus Martius*; cf. here **Fig. 107**). According to Cozza and Tucci (*op. cit.*), the *Navalía* at *La Marmorata* were rather built as shipyards for the Roman fleet of warships. In the overall scenario they develop of the later phase of this building, Cozza and Tucci consider (2006, 197, 198 [TUCCI], quoted above as the **[1.]** and **[2.] epigraphs** in this Section I.), in addition to this, its wider topographical context: namely its location within the huge new commercial river port, located to the south of the Aventine, at *La Marmorata*, which was, according to most other scholars, (allegedly) called *Emporium*.

3.) The identification of this new commercial river port at *La Marmorata* with the *Emporium*, mentioned by Livy.

**In my opinion, this (erroneous) identification rests (in great part but not only) on the identification of this *opus incertum* building at *la Marmorata* with the *Porticus Aemilia* outside *Porta Trigemina* because Livy (35,10,12; 41,27,8) mentions this *Porticus Aemilia* and the *Emporium* together.**

For all the literary sources, in which this *Porticus Aemilia* and the *Emporium* are mentioned together; cf. Filippo Coarelli (1999, 116-117, quoted below, in Section III. as the **[4.] epigraph**).

If my assumption is true that this *opus incertum* building at *la Marmorata* cannot be identified with this *Porticus Aemilia* (see below, at point 7.), it follows, in my opinion, that also the *Emporium*, mentioned by Livy (*op. cit.*) cannot be located at *La Marmorata* either.

To be honest, also before Gatti's publication (1934), in which he identified the *opus incertum* building at *La Marmorata* with the *Porticus Aemilia* outside *Porta Trigemina*, the area in question had been identified by Otto Richter (1901, 200) 'for a later period' with the *Emporium*; but see p. 48: for an earlier period (precisely for 56 BC: the story told about Cato Uticensis by Plutarch, *Cat. Min.* 39), Richter assumed the *Emporium* was close to the *Forum Boarium* (which, in my opinion, is the correct location). To this I will come back below, in Section III. Rodolfo Lanciani, on the other hand, does not mark the '*Emporium*' on his map *FUR*, nor does Lanciani mention the toponym '*Emporium*' in the indices of the four volumes of his (*Storia degli Scavi di Roma e Notizie intorno le Collezioni Romane di Antichità*, 1902-1913), which he has published himself in his lifetime.

Already Cozza and Tucci (2006, 176-177 with n. 3, p. 181 with n. 18), D'Alessio (2014, 18 with n. 58) and, as we shall see below, in Section III., also Tucci (2012, 586) and de Caprariis (2019, 172 with n. 101; cf. *ead.* 2022, 133, with ns. 57, 58) have pointed out the problem of locating the *Emporium*, mentioned by Livy, in the area of *la Marmorata*.

But see Coarelli (2008, 462, quoted below, in Section III. as the **[6.] epigraph**), who, although now likewise following Cozza's and Tucci's (2006; and P.L. TUCCI 2012) identification of the '*Porticus Aemilia*' / *Navalía* as *Navalía*, nevertheless still locates the *Emporium* in this area. - So also Coarelli (2019a, 211, 212).

**Unfortunately I am currently unable to verify my hypothesis, according to which the area of *la Marmorata* is not the *Emporium*, mentioned by Livy (35,10,12; 41,27,8).**

**If my hypothesis were true it could, in theory, follow that the new commercial river port at *la Marmorata* (the alleged *Emporium*) was not already built in the 2<sup>nd</sup> century BC - as is taken for granted by many scholars.**

In order to verify my hypothesis, we could, for example, examine all the ancient buildings of the area and predominantly the port building (cf. here **Fig. 102.3**), which Burgers (*et al.* 2014a; 2014b; 2015) and de Caprariis (2019; *ead.* 2022) do not consider in their own reasonings in any detail.

Reading Roberto Meneghini's report (1985) on the excavations of this port building (1979-1986) that he had in part conducted himself, and Giuliano Giovannettis's (2016) analysis of this and all other excavations of

this building, which is based on his own on site analyses and on the pertaining archival material, one thing seems to be clear. This multi-storeyed port building is enormous (so far it has been observed on the river front for a length of 130 m), has many building phases, and part of the ancient evidence has been destroyed, for example in the course of modern 'sterri'. In addition, it has so far not been examined in its entirety, and one of the relevant 'sterri' has not as yet been published.

**Claudio Moccheggiani Carpano (1995, 223) even wrote: "Il complesso portuale studiato da G. Gatti [1934] e parzialmente riesplorato da [G.] Cressedi [1956], è oggi completamente obliterato, se non distrutto, dalle opere di sistemazione dell'area golenale realizzate negli anni '50".**

**Under those circumstances I regard it currently as impossible to verify my above-mentioned hypothesis.**

**But, after this was written, I have been alerted by Amanda Claridge to the article by T.P. Wiseman (2021a) who locates (on p. 30) the *Porticus Aemilia* and the *Emporium*, mentioned together by Livy, outside the *Porta Trigemina*, as Livy writes (but not any more at the Testaccio, as T.P. WISEMAN 1993, 184 with n. 21, had done). Wiseman's relevant passage is quoted below, in Section III. as the [10.] epigraph.**

**Another question, which is closely related to the 'Emporium' problem, is of equal importance and can likewise not be solved in this context. Because we ignore, in my opinion, not only the ancient toponym of the area of the Testaccio/ *La Marmorata*, and consequently the *real* beginning of the *new* commercial river port in this area - but also many details concerning the *entire* trade on the Tiber.**

We will learn below from Patrizio Pensabene and Javier Á. Domingo (2016-2017, 572-573, quoted *infra*, in Section II.), that first the goods, which had been brought with seagoing ships to the *Portus Augusti* (like those on the relief here **Figs. 98; 99**), were then transported with smaller ships on the Tiber to Rome (like those on the relief here **Figs. 105; 106**). Giovannetti (2016, 25, quoted in Section II.) discusses those goods, transported on the Tiber in antiquity, which had been processed in the port building at the commercial river port at *La Marmorata* (cf. here **Figs. 102; 102.3**), which is the focus of his article.

At this port building of the new commercial river port the incoming goods were obviously first of all registered, as we will learn below in this Section I. from Patrizio Pensabene (1994, 321-322), who discusses the marbles, processed at the *Statio Marmorum*, which he convincingly locates at '*La Marmorata*'. Filippo Coarelli (2008, 466; quoted likewise in this Section I.) observes the same procedures in his discussion of the oil *amphorae*, of which the *Monte Testaccio* consists, all of which had certainly been delivered to the river port at *La Marmorata*, and all of which had been registered there. - To the *Monte Testaccio* I will come back below.

Giovannetti (2016, 25) suggests that it was in the port building at *La Marmorata* that it was decided, which ones of all these incoming goods were stored in the *Horrea* at *La Marmorata*, and which were instead directly transported to their final destinations in Rome. But the main problem remains, as we also learn from Giovannetti (2016, 25):

"la domanda fondamentale riguarda proprio quali merci da qui  
[i.e. from the port building at *La Marmorata*] dovettero transitare".

We know, of course, because of the excavated finds, and because of the existence of the *Monte Testaccio*, that in antiquity at the port building of *La Marmorata* had been landed enormous quantities of *marble* and of olive oil, and, as has now been proven by Burgers (*et al.* 2014a, 914), who excavated carbonized grain in the XVIth aisle of the *opus incertum* building, the '*Porticus Aemilia*' (cf. here **Figs. 102.1; 102.2, below**) - grain. - My thanks are due to Rose Mary Sheldon for telling me that 'carbonized' is the correct description of this grain.

In order to answer Giovannetti's (2016, 25) above-posed question, we should try to find out, how all this incoming trade and the pertaining logistics were organized. We could, for example, consider the following points in our reasonings:

*a)* the chronology of the many wharves of very different sizes and providing very different facilities, which have been documented on both banks of the Tiber between Portus and the City of Rome;

*b)* the fact that on the relief with three Tiber ships (cf. here **Figs. 105; 106**) we see how the sailors of one of these ships try hard to prevent a collision with one of the other ships; this relief appears on the plinth of Domitian's colossal marble statue of the River God Tiber (see for *a*) and *b*) below, in Section II.); and -

*c)* that on one occasion, as reported by Tacitus (*Ann.* 15.18.2), 200 ships had been destroyed during a thunderstorm at the *Portus Augusti*, and on another occasion, 100 ships had been destroyed by a fire. Those ships had been docked over night, one next to the other, somewhere in the area discussed here on the banks of the Tiber. - My thanks are due to Peter Herz, who has alerted me to this fact in our telephone-conversation on 17th April 2022.

Cf. below, at *The sixth Contribution by Peter Herz : Rom. Strukturen der Versorgung*, where he discusses this event, reported by Tacitus (*Ann.* 15.18.2), and which he was kind enough to send me on 25th February 2023.

See also Robert Sablayrolles (1994, 115, quoted *verbatim supra*, at Chapter *Preamble*; Section III.), at point 3.) for Domitian's foundation of a firebrigade at Rome's port, Ostia.

**The above-mentioned glimpses of information (*a*), *b*) and *c*)) show, in my opinion, that, in order to better understand the area of *la Marmorata* under scrutiny here, we should study the *entire trade on the Tiber*, of which the activities at the river port at *la Marmorata* were only one part, albeit a very important one.**

As already mentioned above, all this should, of course, be discussed in context with the studies, dedicated to Portus. See for example most recently the paper, read on 14th July 2022 at the Deutsches Archäologisches Institut Berlin by Evelyne Bukowiecki, which had the following title: "Port Infrastructures in Portus. The Recent Excavations of the École Française de Rome".

4.) The date suggested for the *opus incertum* building, which I am following here: 'around 100 BC'.

The building at *La Marmorata* was erected in the Republican period in *opus incertum*, a building technique which, when Gatti (1934) identified this structure with the *Porticus Aemilia* outside *Porta Trigemina*, was dated 'not before the time of Sulla'. Thanks to Gatti's (1934) identification of this structure with this *Porticus Aemilia*, he was convinced that he had proven that this building technique had instead already been started in 193 BC because the *Porticus Aemilia* was erected in that year, as we learn from Livy (35,10,12). For the dating of *opus incertum* 'not before Sulla', and for the literary sources, related to the *Porticus Aemilia*; cf. Filippo Coarelli (1999, 116-117, quoted below, in Section III. as the **[4.] epigraph**).

For Sulla; cf. Ernst Badian ("Cornelius (*RE* 392) Sulla Felix, Lucius [circa 138-79 BC]", in: *OCD*<sup>3</sup> (1996, 400-401).

Concerning the date of the building technique *opus incertum* that was assumed at the time, when Guglielmo Gatti (1934) wrote his article, Cozza and Tucci (2006, 194 [TUCCI]) write: "**Questa tecnica costruttiva fino a molti decenni fa si riteneva tipica dell'inizio del I secolo a.C. e non a caso Gatti [1934] si preoccupò di dimostrare che il "suo" portico in *opus incertum* potesse essere un edificio (la *porticus Aemilia*) realizzato un secolo prima [my emphasis]**".

In my opinion, Gatti's (1934) conclusion that the beginning of *opus incertum* could be dated to 193 BC, because he had identified the *opus incertum* building at *La Marmorata* with the *Porticus Aemilia* outside *Porta Trigemina*, is a classic example of circular reasoning. - Also because Gatti's (alleged) *Porticus Aemilia* would be the only *opus incertum* building that was (allegedly) 100 years older than all the other buildings, erected in

this technique, as also remarked by Amanda Claridge (2010, 403); cf. below, in Section III., there quoted as the [5.] epigraph. As de Caprariis (2019, 172 with n. 104) has observed, more recently, Claridge (2018, 96, Table 5.1), dates the *opus incertum* building discussed here, and identified by her as "Navalia", to "c.[irca] 100 BCE"; cf. *infra*, in Section III., where this passage is quoted as the [9.] epigraph.

On 18th March 2022, I called Amanda Claridge in London, asking her for advice concerning this point. She was kind enough to tell me that currently the beginning of *opus incertum* is generally assumed 'at the end of the 2<sup>nd</sup> century BC' (which is basically the same date as: 'around 100 BC').

Only after having written this down did I find that the same late date ('at the end of the 2<sup>nd</sup> century BC') for the invention of *opus incertum* has already been suggested earlier.

See Steven Tuck ([HORREA CORN]ELIA", in: *LTUR* V [1999] 263): "... the large *opus incertum* structure originally identified by G. Gatti as the *porticus Aemilia* (q.v.) ... **More recent re-evaluation of the dating of *opus incertum* faced concrete (v.[edi] *Magna Mater, aedes*) suggest that both the initial phase of the *porticus Aemilia* in 193 BC (Liv. 35.10.12) and its restoration in 174 BC (Liv. 41.27.89) are too early to have been constructed in that technique. Furthermore the building form does not correspond to either the stoa or quadriporticus shape used in known *porticus* [my emphasis]**".

For the (second phase of) the Temple of *Magna Mater*, built in *opus incertum*, to which Tuck (1999, 263) refers, see Patrizio Pensabene, who dates it to 'the end of the 2<sup>nd</sup> century BC'.

Cf. Pensabene ("*Magna Mater, Aedes*", in: *LTUR* III [1996] 207):

**"Confrontando i dati archeologici con quelli forniti dalle fonti si ricava questa successione:**

- prima fase del tempio in opera quadrata (204-191 a.C.);
- **seconda fase in opera cementizia con caementa in tufo giallo e peperino (fine del II sec.[olo] a.C.) ... [my emphasis]**".

5.) Other dates suggested for the *opus incertum* building at *La Marmorata*, the '*Porticus Aemilia*' / *Navalia*.

Cozza and Tucci (2006, 196 [TUCCI]) suggest that the *Navalia* at *La Marmorata* were built 'after 167 BC'. The reason being that they assume that Livy should have mentioned this building, and because Livy doesn't, they believe that his relevant passage must have stood in the *lacuna* of his text (which had covered the timespan between 167 until 68 BC).

But Cozza and Tucci (2006, 194 [TUCCI]) have also themselves arrived at the date 'end of the 2<sup>nd</sup> century BC' for the *opus incertum* building at *La Marmorata* and that for the following reason:

**"Tuttavia, trascurando le prime sporadiche attestazioni di quel paramento murario e considerando la complessità della struttura architettonica (archi e volte con una luce superiore agli 8 m.), è verosimile che l'edificio di Testaccio sia stato costruito dopo un lungo periodo di sperimentazione, quindi non all'inizio, ma piuttosto nella seconda metà o verso la fine del II secolo a.C. [my emphasis]**". - I must confess that I had at first overlooked that already Cozza and Tucci (2006, 194 [TUCCI]) have suggested this date, which is why I had instead given Amanda Claridge (2018, 96) credit for the suggestion of this date; see below, in Section III., quoted as the [9.] epigraph.

As we have seen above, in point 4.), this date ('end of 2<sup>nd</sup> century BC'), suggested by Cozza and Tucci (2006, 194 [TUCCI]) for the *Navalia* at *La Marmorata*, is exactly the same as that suggested by Claridge for this *opus incertum* building (2018, 96: 'circa 100 BC'). As well as the date, already suggested by Tuck (1999, 263) for the *opus incertum* building at *La Marmorata*, who compares it with it the second Temple of *Magna Mater* on the Palatine, also built in *opus incertum*. As we have seen above, in point 4.), this Temple of *Magna Mater* on the Palatine has been dated by Pensabene (1996, 207) to the 'end of the 2<sup>nd</sup> century BC'.

Coarelli (2008, 464), quoted *infra*, in Section III. as the [6.] epigraph, dates the *Navalia*, as he interprets this building now, 'between 149 and 146 BC'. Alessandro D'Alessio (2014, 18; cf. p. 22) suggests that the *opus incertum* building at *La Marmorata* was erected "nel pieno II secolo" BC ('in full 2<sup>nd</sup> century BC'). And de Caprariis (2022, 134-135, with n. 64) dates the *opus incertum* building as follows: "built presumably around 140 BCE or, if one were to follow the later dating, around [page 135] 100-97 [with n. 64]".

*In the following, I allow myself a digression on A. D'Alessio's (2014) observations concerning the great similarities of the opus incertum of the 'Porticus Aemilia' / Navalia at La Marmorata and that of the substructure on the eastern slope of the Palatine, that (presumably) carried the Temple of Fortuna Respiciens*

Alessandro D'Alessio (2014, 19 with n. 61, Figs. 1; 2; 13) notes the great similarities of the *opus incertum* building at *La Marmorata* with the substructure on the eastern slope of the Palatine, and mentions the fact that already Richard Delbrueck (II 1912, 92) had observed that both buildings could have been erected contemporaneously.

To this substructure on the eastern slope of the Palatine have been attributed the Republican terracotta statues of the 'pediment from Via di S. Gregorio', which, as Alessandro D'Alessio rightly stresses, were thus found on the 'Via Triumphalis'. Most recent scholars, Alessandro D'Alessio (2014, 18 with ns. 59, 60) included, agree, *inter alia* therefore, in identifying this temple as that of Fortuna Respiciens.

In an earlier publication, I had myself (1998a, 92 with n. 34) likewise agreed in identifying this temple as that of Fortuna Respiciens, basing myself on Maria José Strazzulla (1993, 317-334, 349) and on Lucilla Anselmino and Strazzulla (1995). Add to the references, quoted by Alessandro D'Alessio (2014, 18 ns. 59, 60): Laura Ferrea (2002), Coarelli (2012, 200-219), and Mario Torelli (2016). Coarelli (2012, 218), like Alessanfro D'Alessio (2014, 18, 22), attributes this Temple of Fortuna Respiciens to L. Aemilius Paullus, who, in Coarelli's opinion, built this temple in 164 BC, during his censorship, to commemorate his victory at Pydna (168 BC). - As mentioned above, in point 1.), L. Aemilius Paullus was one of the Aemilii, who, as aediles in 193 BC, had built two 'Porticus Aemiliae': one of these porticos, 'outside the *Porta Trigemina*', has (in my opinion erroneously) been identified with the *opus incertum* building at *La Marmorata* discussed here.

Coming back to this complex subject after my first publication (in 1998a), I realize that Alessandro D'Alessio (2014) combines in his above-mentioned scenario four different subjects: 1.) D'Alessio (2014, 19 with n. 61, Fig. 13) has realized that the *opus incertum* building at *La Marmorata* shows so striking similarities with the *opus incertum* of the substructure on the eastern slope of the Palatine that he assumes that they were possibly built by the same workshop ("forse l'opera delle stesse maestranze"; 2.) D'Alessio (2014, 18 ns. 59, 60, p. 22) finds the suggestion "plausibile" that the Temple of Fortuna Respiciens was commissioned by L. Aemilius Paullus; 3.) D'Alessio (2014, 19 with n. 62, Fig. 19), considers, in addition to this, the facts that an *opus incertum* building, 'likewise dating to the 2<sup>nd</sup> century BC', "i c.d. [cosiddetti] 'Criptoportici' del Rione Terra a Pozzuoli", shows even more striking similarities with the *opus incertum* building at *La Marmorata*, and 4.), the close connection of the Aemilii with the Roman colony of Pozzuoli (founded by the Aemilii in 194 BC). Consequently, D'Alessio (2014, 21, 22, 23) concludes that the *opus incertum* building at *La Marmorata* was most probably commissioned by the Aemilii as well.

Alessandro D'Alessio's (2014) just mentioned observations (points 1.) - 4.) are not necessarily related in the way as suggested by him. To illustrate my reserve, I anticipate here a passage from Tucci (2012, 588-589) that was written for Section III.:

**'Concerning the date of the *opus incertum* of the *Navalia* at *La Marmorata*, Tucci (2012, 588-589) writes in response to Enrico Felici (cf. ARATA and FELICI 2011. 144, 141 [FELICI]) :**

"Tuttavia è noto che a partire dal II secolo a.C. gli architetti operanti a Roma 'presero in prestito' una serie di tipologie edilizie dal mondo greco-ellenistico e le realizzarono con archi e volte, anche grazie alle nuove

possibilità offerte dall'*opus caementicium*: non a caso, Felici loda la presunta *porticus Aemilia* come una «completa e originale reinvenzione romana» [with n. 46] ... [page 589] Inoltre l'uso dell'*opus incertum* in una costruzione tanto complessa come quella di Testaccio è forse un po' precoce per un edificio databile tra il 193 ed il 174 a.C. [with n. 47]".

In his **note 46**, Tucci writes: "ARATA, FELICI 2011, p. 144, nota 75 e p. 141".

In his **note 47**, he writes: "FELICI [see n. 46] si basa su uno studio del 1977 di Coarelli, la cui cronologia dell'*opus incertum* è ormai messa in discussione: cfr. LA ROCCA, D'ALESSIO 2011, p. VIII. **Inoltre Felici afferma che «analisi geologiche del cementizio potrebbero fornire ulteriori dati», ignorando che queste analisi sono già disponibili (cfr. JACKSON et al. 2007, p. 37, fig. 7a) e hanno confermato che non c'è nessuna relazione tra l'edificio di Testaccio e la disponibilità di pozzolana di Puteoli, colonia fondata dagli stessi Aemilii nel 194 a.C. [my emphasis]**".

### **To conclude this discussion of Alessandro D'Alessio (2014).**

So far the *opus incertum* building at *La Marmorata*, the substructure on the eastern slope of the Palatine, and the 'cosiddetti Criptoportici' del Rione Terra a Pozzuoli' are individually not datable by certain evidence, for example by literary sources, inscriptions *in situ*, or relevant data found in scientific excavations. This is why Alessandro D'Alessio (2014) has developed the above-summarized scenario.

I myself cannot solve the problems either that are mentioned in the above-listed points 1.) - 4.), and in this point 5.), but wish to stress the following observations.

**Alessandro D'Alessio's (2014, 23) tentative attribution of the *opus incertum* building at *La Marmorata* to the Aemilii rests *inter alia* on his judgement of the substructure on the eastern slope of the Palatine, because for that has been suggested an appropriate date.**

The identification of the substructure on the Palatine rests, in its turn, on three assumptions: *a*) that the 'pediment from Via di S. Gregorio' belonged to a temple standing on top of this substructure, and on the conclusions, based on analyses of the figures of this pediment, that they *b*) belonged to the Temple of Fortuna Respiciens, which *c*) must have been dedicated by L. Aemilius Paullus. - Although (in 1998a) I have myself followed the identification of this temple with that of Fortuna Respiciens, I come now to the conclusion that Alessandro D'Alessio (2014) has not as yet proven his *entire* scenario.

For a discussion of this substructure on the eastern slope of the Palatine and of the 'pediment from Via di S. Gregorio'; cf. *infra*, in volume 3-2, in *Appendix V.*; at Section II. *The valley between Palatine and Caelian and the 'Temple of Fortuna Respiciens' on the map Fig. 73.*

I, therefore, do not follow Alessandro D'Alessio's scenario (2014, 18, 22, 23). I accept neither his dating of the *opus incertum* building at *La Marmorata* ("nel pieno II secolo" BC), nor the - from his perspective consequent - tentative attribution of this building to the Aemilii. I prefer the later date, suggested for the *opus incertum* building at *La Marmorata*: 'at the end of the 2<sup>nd</sup> century BC', as first suggested by Tuck (1999, 263): because that date is based on evidence, which for the *opus incertum* building at *La Marmorata* and for the substructure on the Palatine is still missing. Tuck (*op.cit.*) compared the *opus incertum* building at *La Marmorata* with the (second) Temple of *Magna Mater* on the Palatine (likewise erected in *opus incertum*). The date of this Temple of *Magna Mater* ('at the end of the 2<sup>nd</sup> century BC'), has been suggested by Pensabene (1996, 207), who combined our relevant literary sources with the results of his own excavations of the temple (see above, at point 4.)).

6.) The results of the first scientific excavations of the *'Porticus Aemilia' / Navalía*, conducted from 2011-2013. Those excavations were conducted by Gert-Jan Burgers, Raphaëlle-Anne Kok-Merlino and Renato Sebastiani (and others; cf. *infra*), and published by these three authors (2015); the abstract of their publication (2015) is quoted below, in Section III., as the [8.] epigraph. See also the publications by the excavators Gert-Jan Burgers, Valerio De Leonardis, Sara Della Ricca, Raphaëlle-Anne Kok-Merlino, Matteo Merlino, Renato Sebastiani and Franco Tella (2014a and 2014b), which are discussed below in Section III.

The excavators had the chance to dig immediately outside the *Porticus Aemilia*, as they interpret this building, and in the building within its Xth, XVth and XVIth aisles (of altogether 50 aisles; cf. here Figs. 102; 102.1; 102.2; 102.3).

**Burgers (*et al.* 2015) do not suggest a date for the Republican phase of the *opus incertum* building. They report also that, because no Republican strata were found in their digs, they were unable to define the function, for which it was originally erected. But they state their hope that future excavations may possibly provide information that could help us to understand the purpose for which this structure had originally been built.**

Burgers (*et al.* 2015, 199) reject the opinion that this structure could have been *Navalia*, as suggested by Cozza and Tucci (2006; P.L. TUCCI 2012). Based on the results of their excavations they are themselves able to demonstrate the "highly differentiated history of occupation in the area", and of the *opus incertum* building itself. They could especially document the building's history from the Trajanic period until late antiquity (for the latter; cf. also BURGERS *et al.* 2014a; 2014b). Burgers (*et al.* 2015, 199) state that they were able to demonstrate that in the Trajanic/ Hadrianic period parts of this building had clearly been restructured in order to adapt it to a different use than for which it had originally been erected. By means of those changes those parts of the building *could*, and actually *were* henceforth used as *Horrea*. Burgers (*et al.* 2015, 210) state that: "Most probably, the result of the excavations in the aisle XVI can be projected on a larger part of the *Porticus Aemilia*. It seems plausible that a significant part of the monumental building was turned into *horrea publica* with numerous *cellae* along the rear wall of the *Porticus*, including three corridors in the former Republican building". And further on the same page: "Wheat was the principal product in weight and volume that was imported in the harbours of the Tiber" (with note 28, quoting for this: "Le Gall 2005, 294-296"). The excavators add to this that these are the first *Horrea*, which have so far been documented at Rome in a scientific excavation; cf. Burgers (*et al.* 2015, 199).

Personally I interpret the statements by Cozza and Tucci (2006; and P.L. TUCCI 2012) concerning the *'Porticus Aemilia' / Navalía* differently than Burgers (*et al.* 2015, 199).

Burgers (*et al.* 2014a; 2014b and 2015) have now proven by their excavations within three aisles, and immediately outside the building, its 'highly differentiated use over time' since the Trajanic period (BURGERS *et al.* 2015, 199). But they do not acknowledge that this has already been suggested by Cozza and Tucci (2006, 197 and 198 [both TUCCI; cf. *supra*, quoted as the [1.] and [2.] epigraphs in this Section I.), who, when (on page 197) speaking of the second phase of the lifetime of this building in antiquity (after the warships had abandoned the place at the end of the 1<sup>st</sup> century BC) of not only one future use of this structure, but instead of "*funzioni commerciali* [in the plural !; my italics]", and explicitly mention (on page 198) also the later ('commercial') life of this building in the Imperial period.

7.) Conclusions.

**I cannot find Gatti's (1934) hypothesis convincing according to which the *opus incertum* building at *La Marmorata* should be identified with the *Porticus Aemilia* outside *Porta Trigemina*. For the following interrelated reasons this seems, in my opinion, to be impossible :**

a) provided, we believe that the main inscription of this building, which appears on fragment 23 of the Severan Marble Plan, when intact, should have read *'PORTICVS AEMILIA'*, but for which there is not

enough space on the ground-plan of this building as it is drawn on the Severan Marble Plan (cf. here **Fig. 102.2, above**, and *supra*, at point 1.));

*b*) provided, we believe that the *opus incertum* building at *La Marmorata* was only erected 'circa 100 BC' (cf. *supra*, at point 4.)), as suggested by Claridge (2018, 96), quoted below in Section III. as the **[9.] epigraph**), and already before by Steven Tuck (1999, 263), and by Cozza and Tucci (2006, 194 [TUCCI]);

*c*) provided, we consider that the *opus incertum* building is certainly not a *porticus* (cf. *supra*, at points 1.) and 4.));

*d*) provided, we consider that this architecture clearly follows the typology of *Navalia* (cf. *supra*, at point 2.));

*e*) provided, we consider that we know from Livy (35,10,12; 41,27,8, quoted below in Section III. as the **[4.] epigraph**) that the *Porticus Aemilia* was built in 193 BC and restored in 174 BC;

*f*) provided, we consider that we know from our literary sources (cf. for those below, in Section III., quoted as the **[4.] epigraph**), that the *Porticus Aemilia* stood 'outside the *Porta Trigemina* within the Servian city Wall'.

As we shall learn below in Section III., de Caprariis (2019, 172; cf. *ead.* 2022, 131, with ns. 50-52) has convincingly pointed out that this topographical indication does unfortunately not really help us in our efforts to identify the *opus incertum* building at *La Marmorata*, because it can be interpreted very differently.

But see for the *Porta Trigemina* now also T.P. Wiseman (2021a, 30), who locates the *Porticus Aemilia* outside the *Porta Trigemina*, as Livy writes (but not any more at the Testaccio, as Wiseman had done in 1993, 184 with n. 21. Wiseman's (2021a, 30) relevant passage is quoted below, in Section III., as the **[10.] epigraph**).

**As a result of the above-listed points 1.) - 7.), I follow Cozza and Tucci (2006, 180) in suggesting that the *opus incertum* building at *La Marmorata* was built as "dei *navalia*". But, exactly as Cozza and Tucci (2006; P.L. TUCCI 2012) themselves stress, not as 'the *Navalia*', the port of the warships (which, throughout its lifetime in antiquity at Rome was located in the southern *Campus Martius* and is represented on here Fig. 107), but instead understood, in the first phase of their lifetime in antiquity, 'as shipyards of the Roman fleet of warships'.**

The reasons for my identification as *Navalia* being *a*) the typology of this building, *b*) Cozza's and Tucci's (2006, 197, 198) further arguments, quoted above as the **[1.] and [2.] epigraphs**; see also Tucci (2012, quoted *verbatim infra*, in Section III.), *c*) its chronology (here I follow TUCK 1999, 263, COZZA and TUCCI 2006, 194 [TUCCI]), and A. CLARIDGE 2018, 96: 'circa 100 BC'), and *d*) (for the second phase of its lifetime in antiquity) its location within the new ancient commercial river port of *La Marmorata*.

For the development of my own hypothesis, I have chosen as starting point an observation by Cozza and Tucci (2006, 198 [TUCCI], quoted above in the **[2.] epigraph**):

"È stato anche sottolineato che i *navalia* (nell'accezione "industriale" del termine) «devono aver costituito un elemento non secondario del paesaggio urbano e suburbano della Roma imperiale» [with n. 54; my emphasis]".

In their **note 54**, Cozza and Tucci quote for this important observation: Daniele Manacorda ("Appunti sull'industria edilizia a Roma", 2005, pp. 28-29).

If we assume at the same time that the *opus incertum* building, the *Navalia* at *La Marmorata*, was erected only 'circa 100 BC', as suggested by Claridge (2018, 96; cf. *supra*, at point 4.)), whom I am following here, and similarly already by Tuck (1999, 263; cf. *supra*, at point 4.): 'at the end of the 2<sup>nd</sup> century BC'), and likewise by Cozza and Tucci (2006, 194 [TUCCI]: 'at the end of the 2<sup>nd</sup> century BC'; cf. *supra*, at point 5.)), we can -

tentatively - conclude something slightly different than what has been suggested by Cozza and Tucci (2006) themselves. And that for the second phase of the lifetime of those *Navalia* in antiquity, when, at the end of the 1<sup>st</sup> century BC, as suggested by Cozza and Tucci (2006, 197 [TUCCI], see above, the [1.] epigraph), the former *Navalia* of the warships at *La Marmorata* (understood as shipyards of the Roman fleet of warships), **in the lack of fleets of long warships**, were henceforth used commercially.

*In the following, I allow myself a digression on the reasons, why and when Octavian/ Augustus had moved the 'fleet of long warships' (L. COZZA and P.L. TUCCI 2006) from Rome to Misenum, and what consequences this may have had for the 'Porticus Aemilia' / Navalia at La Marmorata, discussed here*

Apropos, **in the lack of fleets of long warships**: Cozza and Tucci (2006, 197 [TUCCI], see above, the [1.] epigraph) write: "**Più tardi, per l'evidente assenza di flotte con grandi navi da combattere**, l'edificio dovette risultare inutile e addirittura "ingombrante", in una zona che cominciava ad assumere uno spiccato carattere commerciale. Visto il grande spazio coperto a disposizione e le eccezionali caratteristiche della struttura, è **probabile che già dalla fine del I secolo a.C. l'edificio sia stato adibito a funzioni commerciali** [my emphasis]".

I believe that with this just-quoted observation ('in the lack of fleets of long warships'), in combination with their suggested date for this change ("già dalla fine del I secolo a.C."), Cozza and Tucci (2006, 197 [TUCCI]) refer to the fact that Marcus Agrippa, 'since 37 BC, was engaged in creating and training a new fleet of warships' (G.W. RICHARDSON *et al.* 1996; cf. *infra*). Under Augustus, the fleet of warships was not based at Rome any more: Misenum "became one of the principal naval bases (with Ravenna)"; cf. Edward Togo Salmon and Nicholas Purcell (1996, 989).

Thanks to Agrippa's new type of shorter warships and his excellent leadership, Octavian/ Augustus and Agrippa defeated Mark Antony and Queen Cleopatra VII in the decisive naval battle at Actium on 2nd September 31 BC. For Agrippa's faithful and competent support of Octavian/ Augustus, not only in this respect; cf. Häuber (2017, 19, 531 with n. 253, p. 554, Fig. 13, pp. 563-565 [for the events that had led to Actium - and for the consequences of Octavian's victory]).

Cf. Philip de Souza: "After the battle of Actium it [*i.e.*, the warship quinquereme, used by the Romans until that time] was superseded by smaller vessels"; cf. ("**quinquereme** (Greek *πεντήρης*, Latin *quinqueremis*) ... [the emphasis is by the author himself]", in *OCD*<sup>3</sup> (1996, 1290).

Geoffrey Walter Richardson, Theodore John Cadoux and Barbara M. Levick (1996, 1601) write about Agrippa: "... the lifelong friend and supporter of Augustus, was born in 64, 63, or even 62 BC of obscure but probably well-to-do family ... He accompanied Octavius (the future Octavian and Augustus) to Rome from Apollonia after [Julius] Caesar's murder, **helped him to raise a private army ... As consul (37) he fitted out and trained a new fleet for Octavian's war against Sextus Pompeius, converting the lacus Avernus near Cumae into a harbour (portus Iulius) for the purpose, and in 36 won two decisive naval engagements at Mylae and Naulochus [against Sextus Pompeius], where his improved grapnel was highly effective .... In 31 his vigorous naval operations were the primary cause of Mark Antony's defeat ...; at Actium he commanded the left wing ... [my emphasis]**".

To Agrippa and Sextus Pompeius, and the latter's importance for the subject discussed here, I will come back below, in Section III.

What consequences had this decision of Octavian/ Augustus for the *Navalia* at *La Marmorata*?

**Cozza and Tucci (2006, 197 [TUCCI], see above, the [1.] epigraph) did not mention explicitly, what kind of commercial uses (in the plural !) they themselves had in mind, when writing this. I myself will tentatively suggest in the following that these *Navalia* at *La Marmorata*, from the end of the 1<sup>st</sup> century BC onwards, could (*inter alia*?) have been used for commercial ships.**

Before describing my hypothesis step by step, let me anticipate here its preliminary results:

**So far I cannot prove my idea that these *Navalia* at *La Marmorata*, from the end of the 1<sup>st</sup> century BC onwards, could (*inter alia?*) have been used for commercial ships, but will develop in the following a relevant scenario.**

In my opinion, this is (in theory) possible until the structures, visible on the lower part of fragment 24c and on fragment 24d of the Severan Marble Plan (cf. here **Figs. 102.2; 102.3; and 102.3, inserted box**), were erected right in front of the '*Porticus Aemilia*'/ *Navalia*. On the Severan Marble Plan (here **Figs. 102; 102.2; 102.3**) it seems as if these structures had possibly been erected in a long row all the way parallel to the southern façade of the '*Porticus Aemilia*'/ *Navalia*. If so, these structures would have 'blocked' all the entrances to the 50 aisles of the '*Porticus Aemilia*'/ *Navalia*, in a way that ships could not possibly have been transported inside those aisles any more.

These structures have recently been studied by Giuliano Giovannetti (2016, 21-23, Fig. 7 [= here Fig. **102.3, inserted box**]). Because none of these structures has so far been found in the excavations conducted in the relevant area, possibly because the relevant ancient strata were not reached in those digs, Giovannetti (2016, 23) concludes that: "Per le strutture raffigurate nella *Forma Urbis* non si può fare altro che attribuire, logicamente, *un terminus ante quem* in epoca severiana". - But note that Emilio Rodríguez Almeida (1993a, 20) dated these structures to the Trajanic period.

But not only their date, also the functions of the three buildings, visible on fragments 24c and 24d of the Severan Marble Plan, Giovannetti's buildings 1-3 (here **Figs. 102.3; 102.3, inserted box**), are difficult to define. Giovannetti (2016, 21) writes: "**Nella stretta fascia di terreno tra le attrezzature portuali fin qui descritte** [to which his essay is dedicated] **e la porticus Aemilia** [here identified as *Navalia*] **sono documentate delle strutture la cui identificazione ed il cui rapporto con il fronte portuale sono da chiarire** [my emphasis]". Giovannetti's building 1 (here **Fig. 102.3, inserted box**) consists of two large rectangular courtyards, surrounded by *tabernae*, which had at least two storeys, also buildings 2 and 3 contained *tabernae*. Giovannetti (2016, 22), therefore, comes to the following plausible conclusion concerning his buildings 1-3: "**... si può genericamente definire anche per essi una funzione di carattere commerciale vista la collocazione topografica ma è difficile fornire interpretazioni più dettagliate** [my emphasis]".

Burgers (*et al.* 2014a; 2014b; 2015), who themselves do not discuss Giovannetti's (2016) important findings, have documented for the *opus incertum* building, the '*Porticus Aemilia*'/ *Navalia*, discussed here, a great diversity of uses for the time from Trajan/ Hadrian until late antiquity. This is true for the area immediately outside the building and for its Xth, XVth and XVIth aisles (cf. for those aisles here **Fig. 102.1**), which the authors could investigate in their excavations. And, as already quoted above, Burgers (*et al.* 2015, 210) state that: "Most probably, the result of the excavations in the aisle XVI can be projected on a larger part of the *Porticus Aemilia*".

Considering those results of the recent excavations, we might just as well postulate as a working hypothesis that the same 'great diversity of uses' was *a*) true of *all* the 50 aisles of this building, and *b*) that this had already been characteristic for the time before: that is to say, since the building, as Cozza and Tucci (2006, 197 [TUCCI], see above, the **[1.] epigraph**) suggest, at the end of the 1<sup>st</sup> century BC, had been abandoned by the military fleet, and could, henceforth, be used for commercial purposes. - Be all that, as it may !

*The single steps of developing my own hypothesis  
concerning the '*Porticus Aemilia*'/ *Navalia* at *La Marmorata**

De Caprariis (2022, 138-139 with ns. 87; 88), quoted below, in Section III. as the **[12.] epigraph**), where she identifies the *opus incertum* building at *La Marmorata* with the *Porticus Aemilia*, believes that this structure was from the very beginning of its existence in the Republican period connected with the important grain

supply of the City Rome. See for the connection of the (alleged) *Porticus Aemilia* (in my opinion *Navalia*) at *La Marmorata* and the grain supply of Rome also de Caprariis (2019, 166), and de Caprariis (2022, 121 with n. 9, pp. 137-138 with ns. 84 and 85). De Caprariis (2019, 172, n. 105) only mentions the recent excavations of this building, but does not discuss the relevant publications by Burgers (*et al* 2014a, 914); cf. Burgers (*et al.* 2015, 210, quoted below, in Section III.), who have actually proven that grain has been stored in the XVIth aisle of their *Porticus Aemilia*, which they have excavated.

**But note that, thanks to the results of their excavations, Burgers (*et al.* 2014a; 2015) were able to prove that parts of the *opus incertum* building, discussed here, their ‘*Porticus Aemilia*’, had only been adapted to such *Horrea*-functions by means of the architectural changes which are datable to the Trajanic-Hadrianic period.**

In our relevant reasonings we should also consider the well known fact that, in antiquity, enormous quantities of olive oil had been delivered to the commercial port of *La Marmorata*. As not otherwise expectable, many more *amphorae* have also been found in the excavations of the site to the south of the *opus incertum* building, the ‘*Porticus Aemilia*’/ *Navalia*, where recently the *Nuovo Mercato del Testaccio* has been opened; cf. Mirella Serlorenzi and Renato Sebastiani (2011).

*In this context, I allow myself in the following a short digression on the near-by artificial mound Monte Testaccio (cf. here Fig. 102)*

As we have learned above, in the Chapter *Introductory remarks and acknowledgements*, this was ‘a dumping-ground, which over time developed into a very impressive hill, called *Monte dei Cocci* or *Monte Testaccio*, because it consists of nothing else but sherds of terracotta *amphorae* of certain types, in which (mostly) olive oil was transported’.

See Martin Maischberger ("Testaceus Mons", in: *LTUR* V [1999] 28-30), who asks on p. 30 the interesting question, to which *Horrea* the dumping-ground *Monte Testaccio* had belonged, to the *Porticus Aemilia* or to the *horrea Sulpicianana*?: **"Ungeklärt ist schließlich auch noch die Frage, ob die Deponie [i.e., the *Monte Testaccio*] ursprünglich mehreren oder nur einem einzigen Lagerhaus-Komplex zugeordnet war - der *porticus Aemilia* [here identified as *Navalia*] oder den *horrea Sulpicianana*? - und ob ihre Verwaltung staatlicher oder privater Kontrolle unterstand [my emphasis]"**.

**Contrary to Maischberger (1999, 30), I myself do not identify the *opus incertum* building at *La Marmorata* with the *Porticus Aemilia*, but we must, of course, ask ourselves where these oil *amphorae* had been officially ‘registered’ (by officials of the state - customs?), when having been delivered to the commercial port at *La Marmorata*, and subsequently stored, before the emptied *amphorae* were finally discarded.**

I am suggesting this here, because for the ‘imperial marble trade under Vespasian’ we happen to have the relevant proof; see the marble altar carrying the inscription (*CIL* VI 301; here Fig. 102.5), to which we will now turn. As I only realized after having written this down, Coarelli (2008, 466, quoted *verbatim* below), has described precisely the same procedure for the *amphorae*, of which the *Monte Testaccio* consists.

Claudio Mocchegiani Carpano (1995, 222) has mentioned this inscription *CIL* VI 301, which turned out to be a marble altar, found ‘at *La Marmorata*’, that is now kept in the British Museum (here Fig. 102.5). This altar was dedicated to Hercules by Iuvencianus, a slave or freedman of the Emperor Vespasian, who calls himself in the dedicatory inscription a *tabularius a marmoribus*. According to Mocchegiani Carpano, this man was "un addetto alla cura dei marmi (*CIL* VI 301 ...)". And from Coarelli (2019a, 305) we learn that ‘the *tabularii* were clerks of the administration of the state, who wrote the receipts for the delivered products’. - To all this I will come back below.

Maischberger (1999, 29, 28) writes that it has been estimated that circa 53 million (!) *amphorae* have been dumped at what would become the *Monte Testaccio*, which covers, according to him, an area of circa 20-22.000 square metres and still rises 35 m high above the surrounding plain (having originally risen circa 40 m high).

For the *Horrea Sulpiciana* (also called *Horrea Sulpicia*), mentioned by Maischberger (1999, 30), see below, in Section III.: mentioned by Horace (*Carm* 4,12,18), they were probably those, later called *Horrea Galbae* (or *Horrea Galbana*); cf. Lawrence Richardson Jr. (1992, 193, s.v. *Horrea Galbae*, Figs. 35; 43).

Note that Pomponius Porphyrio, in his scholion on Horace (*Carm* 4,12,18), mentions likewise the "*Galbae horrea*".

Cf. Claudio Mocchegiani Carpano (1995, 222): "**Da questo periodo in poi è certo l'inizio della costruzione [at *La Marmorata*, identified by him with the *Emporium*] di grandi horrea (*horrea Galbana, Aniciana, Lolliana*), della porticus Fabaria e del forum Pistorum, e di magazzini destinati alla raccolta e allo smistamento di ogni tipo di mercanzie e derrate** (v.[edi] Lanciani, *FUR* [fols. 34; 40; 44], cfr. Porph. *Hor. carm.* 4.12.18: *Galbae horrea vino et oleo et similibus aliis referta sunt*) [my emphasis]".

For the *Forum Pistorum*, the 'Forum of the bakers'; cf. Domenico Palombi ("*Forum Pistorum*", in: *LTUR* II [1995] 313).

Maischberger (1999, 28-29), as we have seen, writes that the *Monte Testaccio* (cf. here Fig. 102) covers an area of 20-22.000 m<sup>2</sup>: "... *testae*, [page 29] **Tonscherben, bilden den Hauptbestandteil der Aufschüttungsmassen, die über einem annähernd dreieckigen Grundriß mit Seitenlängen von ca. [circa] 180 m an der Nord- und jeweils ca. 250 m an den West- und Ostseiten eine Oberfläche von 20-22.000 m<sup>2</sup> bedecken** [my emphasis]".

But measured with the 'AIS ROMA' in the photogrammetric data of Roma Capitale, the ground-plan of the *Monte Testaccio* covers an area of circa 43.600 square metres. - The difference may perhaps be explained, when compared with Coarelli's description (2008, 465, quoted *verbatim infra*) of the "superficie" of the *Monte Testaccio*, which, according to Coarelli, measures circa "20.000 m<sup>2</sup>". - For those, who know the *Monte Testaccio* from autopsy (like myself), and when looking at Coarelli's plan of the hill on p. 466, it is clear that with "superficie" he refers to the accessible plateau of the *Monte Testaccio*.

On 8th March 2018, Franz Xaver Schütz and I had the chance to visit the *Monte Testaccio*; cf. above, in Chapter *Intoductory remarks and acknowledgements*.

Apropos the *Horrea Sulpicia*, mentioned by Maischberger (1999, 30). Francesca de Caprariis (2019, 172, n. 105) suggests that we might arrive at new results concerning the buildings erected in this area, when we consider the property of the Aemilii and of the Sulpicii there. - In theory, this avenue of research sounds promising. But the "**problematici praedia Tigellini Aemiliana in connessione con gli horrea galbana**", mentioned by de Caprariis (2019, 172, n. 105) in this context, were not located at the area of the Testaccio, as she believes, but instead within the area of the former *Villa* or *Horti* of Scipio Africanus *maior*/ Scipio Aemilianus on the Quirinal. See Coarelli (2019a, 212 with n. 76, discussed below, in Section III.).

Franz Xaver Schütz has not studied *Monte Testaccio* from the point of view of archaeology and history. He is interested in this artificial mound in the context of his own research (*Geovisualisierung anthropogenetischer Geomorphologie in urbanen Räumen am Beispiel der Stadt Rom mit einem Beitrag von Daniel Scherer*, forthcoming 2023).

But, when hearing the questions, posed by Maischberger (1999, 30), to which warehouse(s) the dumping-ground *Monte Testaccio* had once possibly belonged, and whether it had been controlled by the state or by a private institution, Franz had a very interesting idea.

I am mentioning this here although I do not know, whether or not the possible consequences of this idea have already been applied by another scholar to the *opus incertum* building discussed here, the '*Porticus Aemilia*' / *Navalia* at *La Marmorata*. Franz reminded me of the very long time-span, during which this artificial mound, the *Monte Testaccio*, had been 'created', in combination with the highly sophisticated organisation of this dumping-ground (to which I will come back below). If it were possible to prove that, because of those properties of *Monte Testaccio*, this dumping-ground could only have been created by an institution run by the state, it would automatically follow that the warehouse, to which this dumping-ground had belonged, was, of course, likewise run by the state.

According to Maischberger (1999, 30) it is assumed that the dumping-ground *Monte Testaccio* was started in the Augustan period (but see below for a different opinion), but he adds that this has so far not been proven. Maischberger further suggests that either the *Horrea Sulpiciana* (which, as we have seen above, were mentioned by Horace, *Carm* 4,12,18) or the *opus incertum* building discussed here, which he identifies with the *Porticus Aemilia*, could have been the warehouses, to which the dumping-ground *Monte Testaccio* had belonged. Considering that the *Horrea Sulpiciana* (or *praedia Sulpiciana*) in the Augustan period at least, were located on (or else were) private property, we could, at first glance, conclude that those *Horrea* were certainly not run by the state at that time.

**If so, the result of our preliminary research could be: possibly the warehouse, run by the state, which had started the dumping-ground *Monte Testaccio*, could be identified with the *opus incertum* building, the '*Porticus Aemilia*' / *Navalia* discussed here.**

After having written this down, I found that Burgers (*et al.* 2015, 210), as already mentioned, have actually suggested for the *opus incertum* building, which they themselves, like Maischberger (1999, 30), identify with the *Porticus Aemilia*, that, as soon as parts of this Republican building had been restructured for this new purpose, it had been turned into *horrea publica* (!):

**'Burgers (*et al.* 2015, 210) state that: "Most probably, the result of the excavations in the aisle XVI can be projected on a larger part of the *Porticus Aemilia*. It seems plausible that a significant part of the monumental building was turned into *horrea publica* [my emphasis]"**.

If that were true, this would (possibly) contradict my own hypothesis that these former military *Navalia* (in the sense of shipyards), at the time, when *Monte Testaccio* was (presumably) started in the Augustan period, as Maischberger (1999, 30) suggests, had (*inter alia*?) been used as 'commercial *Navalia*'. - But we have also seen that Burgers (*et al.* 2015, 199) date this restructuring of the '*Porticus Aemilia*' / *Navalia* into the Trajanic/Hadrianic period.

**Besides, Claudio Mocchegiani Carpano (1995, 222) was of the opinion that the dumping-ground *Monte Testaccio* was only started in AD 140: "Caratteristica è la testimonianza del commercio dell'olio documentato dal deposito di anfore rotte che costituiscono la collina artificiale del Testaccio (140 d.C. fino alla metà del III sec.[olo]; v.[edi] *Testaceus mons*)".**

**Coarelli (2008, 465-466) writes instead, that the date 'AD 140', connected with the *Monte Testaccio*, can be explained otherwise: "La collina artificiale detta Testaccio ... è alta circa 54 m dal livello del mare (30 al della zona circostante, con una circonferenza di 1 chilometro e una superficie di circa 20.000 m<sup>2</sup> ... La parte superficiale dei depositi, l'unica sufficientemente nota, è composta quasi esclusivamente da anfore olearie provenienti dalla Spagna, di forma tendente allo sferico (chiamate Dressel 20), e con il marchio di fabbrica su una delle anse. Sul corpo sono tracciati, a pennello o a calamo, il nome dell'esportatore, i vari controlli alla partenza e all'arrivo, la data consolare. La maggior parte delle anfore è datata tra il 140 e la metà del III sec.[olo] d.C. ... [my emphass]"**.

**Burgers (et al. 2014a; 2014b; 2015) and Francesca de Caprariis (2019; ead. 2022) although being interested in the results of the archaeological excavations that have been conducted within the entire quartiere Testaccio, leave out in their relevant reasonings the most important site: the huge Monte Testaccio itself !**

Apropos, the above-mentioned highly sophisticated organisation of the dumping-ground *Monte Testaccio*. See our visit of the restaurant 'da Checchino' on 13th September 2019, which is located on Via Monte Testaccio 30, that is to say, 'at the foot of *Monte Testaccio*', and where it is possible to see the *Monte Testaccio* 'from inside'; cf. *supra*, in Chapter *Introductory remarks and acknowledgements*. Or, in other words, also considerations of the above-mentioned kind may possibly contribute to finding the answer to the question, for what purpose the *opus incertum* building at *La Marmorata* had been erected in the first place, or, alternatively, how it had been used at later moments during its lifetime in antiquity.

But not only inside this restaurant it is possible to see 'through those illuminated vitrines', how the Monte Testaccio was created. Also elsewhere, for example on the south-side of the Monte Testaccio, it is today very well visible, how its sherds have been deposited to form this mound; cf. Maurizio del Monte, Paola Fredi, Alessia Pica, and Francesca Vergari ("Geosites within Rome City Center (Italy) : A mixture of Cultural and Geomorphological Heritage", 2013), who, in their turn, quote Ugo Ventriglia (*Geologia del territorio del Comune di Roma*, 2002). I thank Franz Xaver Schütz for those references.

Let's now return to our main subject.

**In the following text, I myself have pursued a very different avenue of research, since I am not so much interested in the provision of the population of Rome in antiquity with all kinds of food stuffs, but rather in the reason why the area discussed here had received its modern toponym 'La Marmorata'.**

**I have, therefore, studied Patrizio Pensabene's and Javier Á. Domingo's article ("Foro Traiano: organizzazione del cantiere e approvvigionamento dei marmi alla luce dei recenti dati di Palazzo Valentini", 2016-2017), in which the authors describe the important ancient 'sculpture industry' that was based at *La Marmorata*.**

Pensabene's and Domingo's findings are especially important in the context of this *Study*, since the authors state that most of the fresh marble blocks carrying consular dates, found at *La Marmorata*, are thus firmly dated to the reign of Domitian. We can, therefore, ask ourselves, whether or not the marble veneer and sculpture decoration of Domitian's 'pharaonic' building projects all over the city of Rome was (in great parts?) created by the men employed at the workshops of this 'sculpture industry' at *La Marmorata*. - To Domitian's 'pharaonic projects' at Rome I will come back below in Sections II. and IV.

**Pensabene and Domingo (2016-2017, 573) write:**

**"Il porto di sbarco principale dei marmi era però quello di Marmorata, ai piedi dell'Aventino (fig. 16), collegato direttamente con la *Statio Marmorum*, da cui provengono blocchi con date consolari già dal periodo di Nerone, soprattutto di Domiziano e in minore misura di II secolo, con un picco in età adrianea. [with n. 161; my emphasis]". - To this article by Pensabene and Domingo I will come back in detail below, in Section IV.**

In their **note 161**, Pensabene and Domingo write: "MAISCHBERGER 1997, pp. 77-81, nota 333".

**Because of the subject that interests us here, I discuss in the following Pensabene's and Domingo's (2016-2017, 573) assertion that the *Statio Marmorum* was located at *La Marmorata* - anticipating that I believe they are right.**

Filippo Coarelli (2019a, 9 with n. 7, pp. 16-17) does not believe that the *Statio Marmorum* was located at *La Marmorata*, as has already been suggested by other scholars.

See Coarelli (2019a, 9 with n. 7): "... **per la *Statio marmorum* sono state avanzate due soluzioni diverse, ambedue incerte** [with n. 7; my emphasis] ...".

In his **note 7**, Coarelli writes: "Per Lanciani (LANCIANI 1891c [corr.: 1891b; i.e., here R. LANCIANI 1891], pp. 34-36 e *FUR*, tav. 15) essa si trovava nei pressi di S. Apollinare, **mentre in MAISCHBERGER 1997, p. 142 si pensa alla zona dell'*Emporium*, a Marmorata** [my emphasis]".

Cf. Coarelli (2019a, 16-17): "9) **Le curatele urbane più simil alla cura aquarum: opera publica (statio urbana, statio marmorum) ... Per quanto riguarda la *statio marmorum*, menzionata [page 17] solo da un'iscrizione severiana** [with n. 43; my emphasis] ...".

In his **note 43**, Coarelli writes: "*CIL* VI 410 = 30760, dove appare un *optio tabellariorum stationis marmorum*". - To the inscription *CIL* VI 410, I will come back below.

**Concerning Pensabene's and Domingo's (2016-2017, 573) statements, that "Il porto di sbarco principale dei marmi era però quello di Marmorata, ai piedi dell'Aventino (fig. 16), collegato direttamente con la *Statio Marmorum*", Giovannetti (2016) adds further observations, which support these assumptions.**

Giovannetti (2016, 18, Figs. 1; 2) publishes a photo and a plan (on which the rooms are labelled with numbers and capital letters) of the very complex multi-storeyed port building comprising docks at *La Marmorata*, to which his essay is *inter alia* dedicated. For Giovannetti's Figs. 1; 2; cf. Roberto Meneghini (1985, 433, Fig. 1, p. 436, Fig. 3).

**Giovannetti (2016, 25) writes about this "struttura portuale di lungotevere Testaccio" (which is the title of his essay):** "La mancanza di ampi tratti dell'edificio [*i.e.*, of this port building] rende difficile comprendere come dovesse avvenire la comunicazione tra i livelli diversi, ovvero tra il criptoportico ed il mole e tra il mole ed il scondo piano, la cui funzione, ripetiamo, rimane ignota ...

**Per gli ambienti su due livelli e per le *tabernae* si può ragionevolmente supporre la funzione di stoccaggio a breve termine delle merci prima del loro trasferimento agli *horrea* o direttamente alla loro finale distribuzione, ma la domanda fondamentale riguarda proprio quali merci da qui dovettero transitare ...**

Il livello di umidità in questi ambienti semipogei e vicini al corso del fiume doveva essere tale che non fosse possibile conservare, se non per brevissimo tempo, merci che si degradano rapidamente per l'umidità quali sicuramente grano e olio. **Non è da escludere che una parte del porto fluviale fosse destinata allo scarico del marmo, un'attività già ampiamente attestata nell'area dell'*Emporium*** [with n. 26]; **tracce di attività connesse alla commercializzazione del marmo vennero rinvenute anche in occasione del primo ristretto saggio stratigrafico che venne praticato nel 1979 a ridosso del muraglione 109 in corrispondenza con l'ambiente XIV** [with n. 27]. **Uno strato in particolare, il numero 10, conteneva circa 628 fra scagli e frammenti di marmi di vario genere, evidenti scarti di lavorazione del materiale che doveva avvenire sicuramente nell'area circostante** [my emphasis]".

In his **note 26**, Giovannetti writes: "**MAISCHBERGER 1997 colloca nell'area della pianura subaventina la *statio marmorum*, l'autorità amministrativa preposta al controllo imperiale sulle cave di marmo. L'attestazione di attività connesse al trasporto ed alla lavorazione del marmo risale dai celebri scavi di Visconti nel 1864** [my emphasis]". - Unfortunately Giovannetti does not list 'VISCONTI 1864' in his bibliography.

In his **note 27**, he writes: "A seguito delle operazioni di sbancamento della banchina fluviale eseguite con mezzi meccanici e della conseguente esposizione della stratigrafia antica fu possibile realizzare una sezione

prospettica della stessa e scavarne stratigraficamente una porzione di 6 m. Non fu possibile indagarne lo sviluppo verso il fiume poiché in quel settore si era già operato uno sterro negli anni '50. La documentazione di questa indagine è rimasta completamente inedita".

**Apropos, the area of the (alleged) *Emporium*, mentioned in the above-quoted passage by Giovannetti (2016, 25).**

**When reading Claudio Mocchegiani Carpano ("*Emporium*", in: *LTUR* II [1995], 222), who applies this toponym to the area called *La Marmorata* here (cf. here Fig. 102.4), we find more details, which support Pensabene's and Domingo's (2016-2017, 573) statements, according to whom "Il porto di sbarco principale dei marmi era però quello di *Marmorata*", and that there were also located sculpture workshops. - In addition to this we learn that, under Vespasian, one of his slaves or freedmen, a *tabularius a marmoribus* (*CIL* VI 301; cf. here Fig. 102.5), was based at this commercial river port *La Marmorata*.**

Immediately after the above-quoted passage on the *Monte Testaccio*, Mocchegiani Carpano (1995, 222) continues: "**Altra testimonianza sull'utilizzazione degli scali dell'Emporio [i.e., at *La Marmorata*] è la presenza di una notevole quantità di materiali marmorei, spesso grezzi di cava, che dovevano essere scaricati in zona ed anche sottoposti ad una prima lavorazione (*NSc* 1886, 22). Nel I sec.[olo] d.C. è sicura la presenza di un addetto alla cura dei marmi (*CIL* VI 301 *Herculi Aug. sacr. ex viso primigenius imp. Caesaris Vespasiani Aug. (servus) Iuvencianus tabul(arius) a marmoribus* [cf. here Fig. 102.5; my emphasis])**".

The *tabularii* were, according to Coarelli (2019a, 305): "... il personale amministrativo (*tabularii*), incaricato di redigere le ricevute attestanti la consegna del prodotto".

Searching for the inscription *CIL* VI 301, mentioned by Mocchegiani Carpano (1995, 222), first in the EDCS, the Epigraphik-Datenbank Clauss / Slaby Manfred Clauss / Anne Kolb / Wolfgang A. Slaby / Barbara Woitas, has resulted in the find that it has the EDCS-ID: "EDCS-17700060". Then Franz Xaver Schütz realized that this inscription belongs to a marble altar dedicated to Hercules, which was found (allegedly in) 1739 [*corr.*: 1737] at *La Marmorata* and is kept at the British Museum (inv. no. 1914,0627.1; cf. here Fig. 102.5).

"Object Type

altar

Museum number

1914,0627.1

Description

Roman marble altar dedicated to Hercules by Primigenius Iuvencianus, an official involved in the marble trade under Vespasian. On the front, Hercules' club and lion skin are depicted in relief.

Production date

69-79 (Flavian)

marble

Dimensions

Height: 72 centimetres Thickness: 30 centimetres Width: 46 centimetre.

Inscription content: HERCVLI AVG SACR EX VISO PRIMIGENIVS IMP CAESARIS VESPASIANI AVG · IUVENCIVS TABVLAR A MARMORIBVS

Inscription transliteration: Herculi Aug(usto) sacr(um) / ex viso / Primigenius / Imp(eratoris) Caesaris Vespasiani / Aug(usti) Iuvencianus tabular(ius) / a marmoribus.

Inscription translation: Sacred to Hercules, Protector of the Emperor, after a vision. Primigenius Iuvencianus, (slave or freedman) of the emperor Caesar Vespasian Augustus, book-keeper in the marble trade.

Curator's comments:

The altar is said to have been found at the Marmorata in Rome in 1739 [*corr.*: 1737]. This was the area where the ancient Roman river port, the emporium, was located. Primigenius Iuvencianus was an administrative official (tabularius), involved in the marble trade under Vespasian. Archaeologists have discovered extensive evidence for marble stores and workshops in this area. It appears that following the great Neronian fire of AD 64, this was where the marble imported into Rome from throughout the Empire was stored and processed. Under Domitian, further marble warehouses and workshops developed on the Campus Martius, and from Trajan and Hadrian on also in Portus on the coast.

The inscription is recorded on the actual object that was dedicated to the god: a large altar. However, it was expected that frequent offerings would follow after the dedication. We learn who the dedicant was - Primigenius, a clerk in the marble trade of Rome. He was either a slave of the emperor (implied by the name of the emperor following in the genitive) or, more likely, one of his freedmen (he has at least two names and the means to dedicate an expensive altar).

The marble that Primigenius oversaw coming into Rome was probably destined for imperially funded projects. Given that he worked under Vespasian, Primigenius may have overseen the import of marble necessary for buildings such as the Colosseum. The relief on the altar shows a club and a lion skin, the attributes of Hercules, the god to whom the altar is dedicated.

(Booms 2016, 84-85)

CIL VI / Inscriptiones urbis Romae Latinae (301)".

The above-quoted passages from the "Curator's comments" of this Webpage of the British Museum, which refer to the marble altar, carrying the inscription CIL VI 301 (here **Fig. 102.5**), are in their turn based on the book by Dirk Booms (2016, 84-85).

**To those above-quoted passages from the Wbpage of the British Museum, I should like to add some comments.**

Let's start with the statement:

**"The altar is said to have been found at the Marmorata in Rome in 1739".**

This altar was instead found in "scavi del 1737" at *La Marmorata*, as observed by Patrizio Pensabene (1994, 322 with n. 89, quoted *verbatim infra*).

Let's now turn to the following statement:

**"Primigenius may have overseen the import of marble necessary for buildings such as the Colosseum".**

The idea sounds at first glance brilliant, because we know that Vespasian had begun the Colosseum, although we also know that this amphitheatre was not exactly a 'marble building'.

Rossella Rea ("Amphitheatrum", in: *LTUR* I [1993] 30-35) describes all the different materials, applied in the Colosseum. Rea mentions also the relatively few parts of the building's decoration that were actually carved in marble. Nevertheless, given the enormous size of the building, even those relatively 'few' items of architectural marbles in the building, when calculated in their entirety, will have amounted to considerable masses of raw material that had to be ordered and then processed. But unfortunately we cannot know, of course, whether the Flavian marbles of the Colosseum were already (all) carved in Vespasian's lifetime, or rather only under Titus. What we do know is that Vespasian was lucky enough to inaugurate himself his *Templum Pacis* in AD 75. This is why Primigenius Iuvencianus may (in theory) have been in the enviable position to be involved in this project, which, concerning the subject 'marble decoration' represented without any doubt the *non plus ultra* of all imperial buildings at the time existing in the City of Rome.

For Vespasian's *Templum Pacis*; cf. *infra*, in volume 3-2, at *Appendix IV.d.4.b*).

Also because this *Chapter* is *inter alia* dedicated to the people involved in the gigantic trade, by which the population of Rome was supplied with all kinds of goods, I am very glad that, thanks to Claudio Mocchegiani Carpano's (1995, 222) mentioning of him, we found Primigenius Iuvencianus.

Primigenius was another man involved in this trade, and that in a way very different from that of the other, already studied individuals, whom we see on **Figs. 98; 99; 105; 106**. Unfortunately we don't have Primigenius's portrait, like that of the (possible) owner of the seagoing ship which is visible on the Torlonia Relief on the lefthand side (here **Figs. 98; 99**: the owner of this ship is presumably illustrated on this image, he is the man on the left). Nor has anyone drawn Primigenius, showing him at work, as those men on the relief with the three Tiber ships which decorates the base of Domitian's colossal marble statue of the River God Tiber (here **Figs. 105; 106**). But we do learn the name and profession of Vespasian's slave or freedman: Primigenius Iuvencianus. And because Vespasian started what would become one of Domitian's 'pharaonic' projects, the 'Colosseum city', Primigenius is also of interest for this volume on Domitian and his building projects at Rome as a whole. And that because we do now know in Primigenius Iuvencianus at least one person by name, who may personally have been involved in the beginning of this project. And not only that. According to the "Curator's comments" of this Webpage of the British Museum, quoted here, which are based on the book by Dirk Booms (2016, 84-85): "Primigenius Iuvencianus was an administrative official (tabularius), involved in the marble trade under Vespasian". Whether or not that means that Primigenius was in a leading position in the imperial marble trade, I cannot say (he was not; cf. P. PENSABENE 1994, 322 with n. 89, quoted *verbatim infra*). But it seems possible that Primigenius may personally have been involved in the 'Colosseum city' project that would be finished by Domitian.

For Domitian's 'pharaonic' project, the 'Colosseum city'; cf. *supra*, in *Chapter IV.1.1.g*), and *infra*, in volume 3-2, at *Appendix IV.d.4.a*).

Since I was not familiar with some aspects of the inscription (*CIL* VI 301), I called on 13th April 2022 Peter Herz in Bad Ems, asking him for advice. First of all, I was not sure, whether or not 'Primigenius Iuvencianus' could be a name of a slave or a freedman, as is suggested in the "Curator's comments" (quoted after D. BOOMS 2016) on the above-quoted Webpage of the British Museum. In addition, I would have thought that 'ex viso', could have meant 'after a dream' - an assumption, which is not true. Whereas I would have thought that one of Vespasian's slaves should have been called 'Flavius', Herz explained to me the following. Apart from the fact that, in the "Curator's comments" (quoted after D. BOOMS 2016), it is correctly stated: "He [*i.e.*, Primigenius Iuvencianus] was either a slave of the emperor (implied by the name of the emperor following in the genitive) or, more likely, one of his freedmen ...", also both parts of his name have, according to Herz, in addition to this, the same significance. 'Iuvencianus' means that Vespasian must have inherited this man from the Roman family of that name. According to Herz's explanation of his name, 'Iuvencianus' would henceforth have been called like this, after having been bought by a member of this family. And 'Primigenius' refers to the fact, as Herz continued, that some of these Roman families used to own thousands of slaves, whom they could only distinguish from each other by giving them additional

names of this kind. - Peter Herz has kindly allowed me to mention our telephone conversation here. Considering that some Roman families owned so many slaves, I ask myself, whether Primigenius could possibly indeed have been a 'first born son', perhaps one of the 'home-born slaves', who were called 'verna'?

For *vernae*; cf. Michele Renée Salzman (1990, 76, discussed *infra*, in volume 3-1, at *Appendix I.f.1.*)).

**Let's now return to the inquiry, whether or not Pensabene's and Domingo's (2016-2017, 573) assumption is correct, according to which the *Statio Marmorum* was located at the ancient commercial river port of *La Marmorata*. In our relevant reasoning, we should consider the following facts:**

a) The marble altar at the British Museum (inv. no. 1914,0627.1; here **Fig. 102.5**), which carries the inscription *CIL VI 301*, was found 'at *La Marmorata*'; b) it was dedicated to Hercules by Primigenius Iuvencianus, a slave or freedman of the Emperor Vespasian, who calls himself in this inscription a *tabularius a marmoribus* (a "book-keeper in the marble trade") c) Primigenius Iuvencianus, likewise according to the Comments on this altar by the Curator of the British Museum (quoted after D. BOOMS 2016), "was an administrative official (*tabularius*), involved in the marble trade under Vespasian". Because of his position "book-keeper in the marble trade", it seems, in my opinion, impossible to believe that Primigenius Iuvencianus could have been employed *anywhere else* in the imperial administration than at the *Statio Marmorum*. - Or, provided under Vespasian the imperial administration, responsible for the control of the marble quarries, was not as yet called *Statio Marmorum*, Primigenius Iuvencianus must have been employed at a predecessor of such an office that would later be called this way.

I find it, therefore, convincing that Maischberger - for another reason (*i.e.*, the inscription *CIL VI 410*) - has located the *Statio Marmorum* at *La Marmorata*. Cf. Maischberger (1997, 142, quoted after F. COARELLI 2019a, 9 n. 7). As we have seen above, Maischberger's relevant suggestion was followed by Pensabene and Domingo (2016-2017, 573).

In the Epigraphik-Datenbank Clauss / Slaby Manfred Clauss / Anne Kolb / Wolfgang A. Slaby / Barbara Woitas, the inscription *CIL VI 410* has the EDCS-ID: EDCS-17300563.

After I had written this down, Franz Xaver Schütz found the publication by Patrizio Pensabene (1994) on the Internet. Pensabene and Domingo (2016-2017), in their discussion of Maischberger's hypothesis to locate the *Statio Marmorum* at *La Marmorata*, do not mention the fact that this has already been suggested by Pensabene (1994) himself. Also Coarelli (2019a, 9 with n. 7, pp. 16-17, quoted *verbatim* above), in his discussion of the *Statio Marmorum*, has overlooked Pensabene's relevant publication of 1994.

Pensabene (1994, 321-322, 325, 333) discusses the inscriptions *CIL VI 301* and *410*, which interest us here and mentions their precise findspots. He also explains the position of the *tabularius a marmoribus* Primigenius Iuvencianus within the hierarchy of the imperial administration of the marble trade, observes that most fresh marble block, documented so far reached the city of Rome under Domitian, and suggests, in my opinion convincingly, that the *Statio Marmorum* was based at *La Marmorata* :

"[page 321, Section:] 7. Le sigle sui blocchi, l'organizzazzione del lavoro nelle cave e il sistema amministrativo

Già da tempo è stata affrontata dalla storia degli studi l'interpretazione delle sigle amministrative, spesso accompagnate dalle date consolari, che compaiono nei blocchi e nelle colonne conservati ancora nelle cave o trasportati a Roma ... [page 322]

Le sigle e i sigilli hanno permesso di ricostruire l'esistenza di un complesso sistema amministrativo delle cavi imperiali, inizialmente basato su modelli assunti dall'Egitto, ma via via più complessa, dato l'enorme afflusso di marmi che si verifica a Roma soprattutto a partire dall'età flavia: il

sistema aveva a capo un funzionario di alto rango, il *procurator marmorum*, residente probabilmente a Roma presso la *Statio Marmorum*, nei cui uffici ([with n.] 88) erano attive diverse categorie di contabili, i *tabularii*, noti da iscrizioni (89). È probabile inoltre che anche a Porto, in connessione degli estesi depositi di marmi di cava individuati sulla sponda sinistra del canale, dovesse esistere un ufficio dipendente dalla *Statio*, per il controllo dei blocchi che vi arrivavano, per interventi di restauro su quelli danneggiati durante il viaggio e per l'organizzazione del loro invio a Roma ([with n.] 90) ...

Con questo funzionario principale, il *procurator marmorum*, dovevano essere in rapporto di dipendenza, o almeno di collaborazione per il coordinamento degli invii a Roma, i *procuratores* a capo di una o più nelle singole province ([with n.] 91) o che amministravano latifondi imperiali (*praedia*) includenti cave di marmo ... [page 325]

**Il *procurator* e la *Statio Marmorum* di Roma dovevano inoltre essere in collegamento con i centri di raccolta di blocchi e altri manufatti, che erano situati sia nei porti d'imbarco dove affluivano marmi di diverse cave, sia nei porti di sbarco, presso il luogo di destinazione dei marmi: per il primo caso si possono citare i porti di Alessandria e di Efeso e ancora alcuni carichi naufragati, come quello di Punta Scifo (Crotona) che trasportavano blocchi e manufatti di pavonazzetto e di proconnesio; per il secondo caso Porto, dove i marmi erano scaricati per essere trasbordati sui battelli di stazza minore adatti alla navigazione sul Tevere [like those visible on here Figs. 105; 106]: operazioni di cui doveva occuparsi il *corpus traiectus marmorariorum*, noto da un'iscrizione di provenienza ostiense ([with n.] 104), e che non erano indenni di incidenti, data la possibile caduta in acqua di blocchi durante il trasbordo, che potrebbe in parte spiegare, come si è detto, la presenza di blocchi sul fondo del Canale di Fiumicino.**

**Che alcune sigle, ed anche date consolari - nei casi ad esempio in cui si aggiungano ad altre date precedentemente incise sui blocchi fossero apposte non solo nelle cave, ma anche nei centri di raccolta presso i porti d'imbarco e di destinazione, è ora provato dal ricorrere degli stessi nomi di *rationales*, cioè responsabili di un certo settore, in blocchi di diverse cave, ma con la stessa data consolare ... ([with n.] 105)**

...  
[page 333, Section:] 8. Osservazioni conclusive: fasi della diffusione del marmo a Roma

**La produzione di marmi nelle cave imperiali inizia, come si è detto già da Augusto ...**

**La documentazione epigrafica complessiva sui blocchi e sulle colonne abbozzate rinvenuti a Roma, Porto, Ostia e nelle cave abbraccia un periodo che va dall'età giulio-claudia a quella severiana: testimonia, come è stato più volte affermato, l'esistenza di un sistema di raccolta e di distribuzione fortemente centralizzato, a cui era preposto un funzionario di alto rango, denominato *procurator marmorum*, con cui erano collegati i *procuratores* delle cave e il servizio di contabili a Roma.**

Le menzioni delle fonti letterarie ed epigrafiche suggeriscono che le cave statali, in un primo momento, facessero parte del patrimonio dell'imperatore, che per un certo periodo sembra fosse distinto dalle proprietà del fisco imperiale, anche se poi venne a confluire in questo ([with n.] 106). **L'enorme ampliarsi che ebbe l'uso e la diffusione dei marmi a partire dall'età flavia ([with n.] 107), e non solo a Roma, certamente causò la necessità di ridefinire la forma amministrativa del servizio di raccolta dei marmi e l'organizzazione distributiva ...**

**Che fosse proprio il periodo che va da Domiziano agli Antonini, a corrispondere al momento di massimo trasporto e utilizzo a Roma dei marmi bianchi e colorati prodotti nelle cave di proprietà imperiale è confermato dalle date consolari dei blocchi e delle colonne del Canale di Fiumicino e di Ostia. D'altronde è proprio l'impiego sfarzoso di marmi a caratterizzare le grandiose imprese edilizie che mutarono il volto della città in questo periodo: basti pensare alla Domus Flavia sul Palatino, ai fori di Domiziano, Nerva e Traiano, al Claudiano, al Porticus Divorum, ai templi di Vespasiano, di Quirino, di Venere e Roma, di Adriano, di Antonino Pio ecc.. [my emphasis]"**

In his note 89, Pensabene writes; "Si veda in particolare CIL, VI, 410 = 30760, datata tra il 198 e il 209, dove compare il liberto imperiale Semnus che aveva la funzione di *optio tabellariorum stationis marmorum* e che dedica un'ara a Giove Dolicheno sull'Aventino, da dove proviene l'iscrizione. La *statio marmorum* è da intendere non solo come sede degli uffici, ma anche come centro di deposito dei marmi affluenti dalle cavi imperiali, e la sua collocazione ai piedi dell'Aventino, presso l'attuale Lungotevere Marmorata e dunque all'Emporium, si può arguire:

1. dal ritrovamento in questa zona di centinaia di blocchi grezzi di cava (studiati dal BRUZZA, in *AnnInst*, 1870, pp. 105-204) che implicano di necessità un apparato amministrativo per la loro ricezione e smistamento;

2. dalla possibilità di collocare al Testacco, e dunque nelle sue immediate vicinanze, botteghe marmorarie e magazzini per marmi di privati (cfr. SEG, 106, di un marmorario bitino cha [!] aveva la sua bottega, da lui definita *station*, in analogia della *Statio*, presso gli *Horrea Petroniana*, e CIL, VI, 33886, di un *negotiator marmorarius de Galbeis*). Cfr. P. PENSABENE, in *Dd'A 1*, n.s., 903, p. 56ss.;

3. dal ritrovamento negli scavi del 1737 nella Villa [corr: Vigna] Cesarini, sul Tevere, dove si trovava l'*Emporium*, di una dedica ad Ercole di Primigenius Iuvencianus, schiavo di Vespasiano e *tabularius a marmoribus* (CIL, VI, 301 = 30731), dunque di un contabile dell'amministrazione imperiale dei marmi [my emphasis]".

In his **note 90**, he writes: "Cfr. BRUZZA, in *AnnInst*, 1870, p. 123, dove è citato un *tabularius portuensis a rationibus marmorum* noto da una scheda di Muratori (751, 2), ma che pare sia un'invenzione di Pirro Ligorio (CIL, XIV, 31\*): FANT, in *Ancient stones, quarrying, trade and provenance, Acta Archaeologica Iovanensis*, 4, 1992, p. 115".

In his **note 91**, he writes: "Dovevano corrispondere ai *procuratores metallarum* a capo dei distretti minerari, collegati o dipendenti dai *procuratores Augusti* del governo provinciale: cfr. J.M. BLASQUES [corr.: BLAZQUEZ] MARTINEZ, *Administracion de las minas en epoca romana*, in *Mineraria y Metalurgia, Colloquio Madrid 1985 (1989)*, pp. 119.122. Ciò pone il problema dei rapporti tra procuratori delle cave e l'amministrazione provinciale".

In his **note 104**, he writes: "CIL, XIV, 425. Cfr. L. De SALVO, *I battellieri del Tevere in Messina*, 3, 1990 (n.s.), p. 233 sull'ipotesi che il tipo di battello usato da questo corpus fosse *lynter (navis fluminalis: Non. 13,859)* forse raffigurato nel plinto della statua del Tevere al Louvre [cf. here Figs. 105; 106], dove il battello trasporta un grosso blocco di marmo ed è trascinato da *helciarri* con il sistema dell'alaggio".

In his **note 105**, he writes: "BACCINI, *Nuove testimonianze cit.*, pp. 108, 116-117, nn. 13, 14 del 162 d.C. (preferisco di sciogliere HER in Hermolaus e non in Hermas) 102. 103 de 164 d.C.".

In his **note 106**, he writes: "PENSABENE, *Sull'impiego del marmo di Cap de Grande. Condizioni giuridiche e significato economico delle cave di età imperiale*, in *StMisc.* 22, 1974-75, pp. 179-190".

In his **note 107**, he writes: "J.C. FANT, *A distribution model for the Roman imperial marbles*, cit., p. 152".

To Pensabene's **note 89**, I should like to add some comments:

As already mentioned above, I myself do not identify the area of *La Marmorata* with the ancient *Emporium*.

And because Pensabene does not provide a reference for the findspot of the inscription CIL VI 301 (here **Fig. 102.5**), but the correct date of its find, I found it in Rodolfo Lanciani (VI 2000, 111):

"[R. XIII. ORTO CESARINI] 1735 ...". Here the precise location of the 'Vigna Cesarini' is indicated, which is also marked on Lanciani's *FUR* (fol. 40: there the 'Scavi 1735' in this Vigna Cesarini are likewise mentioned): "1737. Scavi Marmorata dei Cesarini CIL [VI] 201. mese aprile! [Ms. Lanc. 114/2, f. 80]".

Let's now return to our main subject.

If we knew for sure that the - *importantissima* - *Statio Annonae* was based in the *new* commercial port at *La Marmorata*, I would immediately subscribe to the hypothesis that the *opus incertum* building there (cf. here Figs. 102; 102.1; 102.2; 102.3) should be identified with the *Porticus Aemilia* outside *Porta Trigemina*. - Because, considering the Republican date and the enormous size of the *opus incertum* building, which many scholars identify with this *Porticus Aemilia*, we must ask ourselves which location of the office of the relevant magistrate, the *praefectus annonae*, could be *more* appropriate?

But my just developed idea is, of course, *not* true !

When checking, where Filippo Coarelli locates the *Statio Annonae*, I found out that my just-mentioned thought was not altogether wrong.

Cf. Coarelli (2019a, 8, Fig. 1: "Pianta di Roma con la posizione degli uffici amministrativi ... 6. Annona [where COARELLI locates the office of the *Statio Annonae* at the site of the building of his p. 159, Figs. 75-77; cf. *infra*], pp. 155-160, 186, 192).

According to Coarelli, the *Statio Annonae* was indeed located within a commercial port, but not in the *new* one, at *La Marmorata*, but, because being already an archaic institution, at the *old* commercial river port, to the west of the *Forum Boarium*. And precisely, as Coarelli suggests, at the *Horrea Aemiliana* (!); cf. Coarelli (2019a, 136 with ns. 2, 3, p. 211). To the *Horrea Aemiliana* I will come back below, in Section III. As could be expected, the *Statio Annonae* was closely related to the nearby Temple of Ceres (and to the Temple of Flora), all of which, according to Coarelli (2019a), stood between the *carceres* of the *Circus Maximus* and the northern slopes of the Aventine, but their precise locations are unfortunately unknown.

Cf. Coarelli 2019a, 155-160; pp. 158, 159, Figs. 75-77, for a building, datable to the imperial period. He tentatively suggests that this building could have accommodated the *Statio Annonae* at a later period; cf. p. 160, for the *praefectus annonae*). For the Temples of Ceres and of Flora; cf. Häuber (2014a, 402 with n. 14, providing references).

**Basing my own working hypothesis on the above-mentioned assumptions, I have concentrated in my following text on two subjects:**

- 1.) asking myself what the *opus incertum* building/ the *Navalia* at *La Marmorata* was possibly used for; and -
- 2.) to get an idea of the *people*, who supplied the population of Rome with all the goods needed by using seagoing ships (cf. here Figs. 98; 99) and small ships on the Tiber (cf. here Figs. 104-106), I have concentrated on the work of one of these men, the Egyptian merchant and owner of several seagoing ships, *Ciro*, described for us in a fictional account by Laura Gigli (2022).

In order to answer the first question, we need to consider the following reasonings:

**Even before the recent scientific excavations of the *opus incertum* building at *La Marmorata* scholars, who studied it, realized that, at a later moment, this building had been adapted for use as a warehouse; see below, in Section III., the [6. epigraph]. This fact alone can, in my opinion, prove that this structure had not been erected for this purpose.**

Cozza and Tucci (2006, 197 [Tucci], quoted above as the [1.] epigraph), assume that this 'change' of the building's purpose (*i.e.*, the beginning of its commercial use) had occurred already at the end of the 1<sup>st</sup> century BC. The excavators Burgers (*et al.* 2014a; 2014b; 2015) have now proven that its drastic architectural changes are datable into the Trajanic/ Hadrianic period; see below, in Section III., the [8.] epigraph. But: the beginning of a 'commercial use' of these originally military *Navalia* (interpreted by COZZA and TUCCI as shipyards of those warships) at the end of the 1<sup>st</sup> century BC can also mean, as I myself suggest, that henceforth these shipsheds were for some time (*inter alia?*) used as 'commercial *Navalia*'. Its architectural changes in the Trajanic/ Hadrianic period, on the other hand, definitely transformed - at least parts of - this enormous building into a warehouse.

**But whereas Burgers (*et al.*, *op. cit.*) were unable to clarify, by means of their excavations, the original function of the Republican *opus incertum* building, I myself follow Cozza and Tucci (2006) in assuming that, because of its location at the bank of the Tiber, its building type and its sloping floor, this building was originally erected as *Navalia* (shipsheds).**

Concerning the construction date of these Republican *opus incertum Navalia*, I follow (*inter alia*) Claridge (2018, 96, quoted below in Section III. as the [9.] epigraph), in assuming that they were built 'circa 100 BC'.

The only certain information we have so far has been generated in the recent excavations 2011-2013, conducted and published by Burgers (*et al.* 2014a; 2014b; 2015). This information does not concern the entire huge building, but only the Xth, XVth and XVIth of altogether 50 aisles (here Figs. 102; 102.1; 102.2; 102.3) and cover the Trajanic period onwards until the area was abandoned. Burials, that were found in adjacent areas, are datable in the 5th and 6th centuries. There were even found burials within the building itself; cf. Burgers (*et al.* 2015, 210 with n. 30, without providing a date for those).

**Therefore, the question arises, how these *Navalia* had been used 'in between' those dates, namely between 'around 100 BC' and the Trajanic period. Or, as Cozza and Tucci (2006, 194-198 [TUCCI]) have themselves asked: 'which *Navalia*'? This question has now also been asked by de Caprariis (2019, 166); and by de Caprariis (2022, 126-131, Section: "5.3. Which *Navalia*?").**

Cozza and Tucci (2006, 196; cf. p. 194 [TUCCI]; ) believe that the *opus incertum* building at *La Marmorata* had been erected 'after 167 BC', and precisely 'at the end of the 2<sup>nd</sup> century BC', as a special kind of *Navalia* for warships, namely as an "arsenal" (shipyards), and that this building had only been adapted to commercial use 'at the end of the 1<sup>st</sup> century BC'; cf. *supra*, the [1.] and [2.] epigraphs in this Section I.

**I myself, following Tuck (1999), Cozza and Tucci (2006), Tucci (2012), Coarelli (2008), Claridge (2010; 2018), and Alessandro D'Alessio (2014, 18 with n. 56, Fig. 12) in rejecting Gatti's (1934) hypothesis, according to which the *opus incertum* building at *La Marmorata* may be identified with the *Porticus Aemilia* outside *Porta Trigemina* have, therefore, no literary source at my disposal that I could apply to this building.**

Consequently, every proposal concerning the original function of this building can only be formulated tentatively, because there is hope that precisely these questions will be clarified in future excavations and/ or studies.

**Nevertheless it is, from my perspective, tempting to believe that these *Navalia* at *La Marmorata* - provided, they were indeed only erected 'around 100 BC - were from the very beginning built as 'commercial *Navalia*', in order to allow the enormous traffic of all kinds of merchandise on the Tiber in antiquity, not only to supply the food stuffs needed for a city of (at times) more than a million inhabitants, but for example also of the building material, needed for Domitian's 'pharaonic' building projects at Rome.**

**For my assertion that Rome in the imperial period had more than one million inhabitants; cf. below, at *The sixth Contribution by Peter Herz : Rom. Strukturen der Versorgung*.**

**But, at second glance, it is not as easy as that !**

Because the proportions of the 50 aisles of those *Navalia*, as convincingly pointed out by Coarelli (2008, 464, see below in Section III., quoted as the [6.] epigraph), show that they were designed "per ospitare le lunghe e strette navi da guerra dell'epoca: in questo caso, cinquanta quinqueremi lunghe poco meno di 60 m".

Cf. Philip de Souza ("quinquereme (Greek πεντήρης, Latin *quinqueremis*), was a warship rowed by oarsmen arranged in groups of five, perhaps with three banks of oars, one above the other; the top two each pulled by a pair of men, the bottom by one ... Larger and heavier than a trireme, it offered space for more marines, missile weapons, and the Roman boarding bridge (Latin *corvus*, raven). The Romans adopted it as their main warship in the Punic Wars, modelling their fleets on captured Carthaginian vessels (Poly. 1. 20 and 59). After the battle of Actium it was superseded by smaller vessels ... [the emphasis is by the author himself]", in *OCD*<sup>3</sup> (1996, 1290).

As we shall see below, in Sections II. and IV., and when studying the relief here **Figs. 105; 106**: ships, in which the merchandise on the Tiber was transported, were *much* shorter than these warships. - Which means that, had the *Navalia* at *La Marmorata* been erected for commercial ships in the first place, it would not have been necessary to build aisles for them that had the enormous length of 67 m; cf. here **Figs. 102; 102.1**.

Nevertheless I find it permissible for the time being - until future excavations hopefully provide us with definitive answers to this question - that, perhaps from the end of the 1<sup>st</sup> century BC onwards, as suggested by Cozza and Tucci (2006, 197 [TUCCI], quoted above as the [1. epigraph], these *Navalia* were used commercially.

Possibly not as yet as warehouses, but perhaps still as *Navalia*, but now for commercial use. By the way, given the enormous size of the building, we may just as well imagine a 'differentiated use' of its 50 aisles already at that time - as has already been proven by Burgers (*et al.* 2014a; 2014b; 2015) for the Trajanic/Hadrianic period until late antiquity - at least for the Xth, XVth and XVIth aisles of this building.

I tentatively suggest that these Republican *Navalia* could have been used as commercial *Navalia* until, at an unknown date, the structures in front of the building were erected, which are visible on the Severan Marble Plan (cf. here **Figs. 102; 102.1; 102.2; 102.3; 102,3, inserted box**). As we have seen above, these structures have recently been studied by Giovannetti (2016, 21-23, Fig. 7 [= here **Fig. 102.3, inserted box**]).

Let's now turn to the merchandise, for example building material, which, in theory, could have been transported on the Tiber with ships that were stationed at the commercial *Navalia*, tentatively assumed here.

As Pensabene's and Domingo (2016-2017) are able to show, this building material, which was imported from abroad, was brought with seagoing ships to *Portus Augusti* (compare here **Figs. 98; 99**), and was from there transported on much smaller ships (cf. here **Figs. 105; 106**) to sculpture workshops all along the Tiber. The most important of these sculpture workshops, according to Pensabene and Domingo (2016-2017), have been found at *La Marmorata* - here was based a real 'sculpture industry'. As soon as the sculpture workshops, based at *La Marmorata*, had produced the commissioned architectural marbles, the same small ships (here **Figs. 105; 106**) then transported these products to their final destinations in the centre of Rome. And I should like to add to Pensabene's and Domingo's (2016-2017) own findings: for example also to Domitian's building sites.

As mentioned above, when at first studying the ongoing debate, whether the huge building at the Testaccio (cf. here **Figs. 102; 102.1; 102.2; 102.3**) discussed here, should be identified with the *Porticus Aemilia* outside *Porta Trigemina* or rather as *Navalia*, I considered only the following two main problems:

*Concerning the area of Rome discussed in this Chapter we have two great problems:  
to document and imagine its daily life in antiquity over time.*

Studying the excavation reports by Burgers (*et al.* 2014a; *id.* 2014b; *id.* 2015) concerning the *opus incertum* building at *La Marmorata*, identified by them with the *Porticus Aemilia* outside *Porta Trigemina* and the articles by Francesca de Caprariis (2019; *ead.* 2022), which are likewise dedicated to the '*Porticus Aemilia*'/ *Navalia*, has enlarged my overall vision respectively.

When considering now the fact that our imagination of 'the daily life in antiquity at *La Marmorata*' depends *inter alia* on the *opus incertum* building, identified either with the *Porticus Aemilia* outside *Porta Trigemina* or as *Navalia*, we have to solve two additional problems:

- a) define the precise date of this building and -
- b) its original function - both are, of course, closely related.

I cannot answer these questions, but wish to add in the following some preliminary thoughts concerning both subjects.

*Ad a)* Currently, I cannot prove the date of the *opus incertum* building at *La Marmorata*, suggested here. If indeed it was only erected 'circa 100 BC' (cf. A. CLARIDGE 2018, 96, quoted below, in Section III. as the [9.] epigraph), whom I am tentatively following here, this structure cannot be identified with the *Porticus Aemilia* outside *Porta Trigemina*, at least in my opinion.

As we have heard above, Steven Tuck ([HORREA CORNELIA], in: *LTUR* V [1999] 263) had already suggested the same date for the *opus incertum* building at *La Marmorata* by comparing its building technique with that of the (second) Temple of *Magna Mater* on the Palatine. Tuck (*op. cit.*) refers to Pensabene ("Magna Mater, Aedes", in: *LTUR* III [1996] 207), who dates this (second) Temple of *Magna Mater* to 'the end of the 2<sup>nd</sup> century BC'.

**Provided, the date 'circa 100 BC', suggested for the *opus incertum* building were true, we must ask ourselves, where in the 2<sup>nd</sup> century BC the grain supply for the Roman People, especially for the *frumentationes*, had been stored.**

And that because it has hitherto been believed by (at least some of) those scholars, who identify the *opus incertum* building at *La Marmorata* with the *Porticus Aemilia* outside *Porta Trigemina*, that this grain had been stored *right there*. So for example also by de Caprariis (2022, 138-139 with ns. 86-88, quoted in part below, in Section III., as the [12.] epigraph).

**But the identification of this structure with the *Porticus Aemilia* outside *Porta Trigemina* by those scholars was *inter alia* based on the sheer size of this *opus incertum* building in the new commercial river port at *La Marmorata*, combined a) with its (alleged) location at the *Emporium*, and b) with the fact that these scholars had overlooked the following hypotheses: for the period in question, it has been suggested that this grain had been stored at the *Horrea Aemiliana* in Rome's old commercial river port near the *Forum Boarium*, and in another structure, likewise called *Aemiliana*, which stood in the *Campus Martius* near the *Diribitorium* and the *Porticus Minucia Frumentaria*. Therefore, this question (i.e., where this grain had been stored at the time in question) can, in my opinion, be answered.**

#### *This question leads us to the locations of the Statio Annonae and of the Horrea Aemiliana*

According to Filippo Coarelli (2019a), the office (called *Statio Annonae*) of the responsible magistrate, the *praefectus annonae*, at the beginning at least, had been located in Rome's old river port close to the *Forum Boarium*, and precisely at the *Horrea Aemiliana*. For the Imperial period, Coarelli (2019a) discusses also an alternative location for the *Statio Annonae*, but still in the same area of the *Forum Boarium*. Those 'Aemiliana ware houses' have been identified by Coarelli (2019a) and other scholars with the huge *Horrea*, found while excavating the building site of the future Palazzo dell'Anagrafe. - This will be discussed in detail below, in Section III.

**Looking for warehouses, where the grain supply for the populace of Rome (*inter alia* for the *frumentationes*) could had been stored, I, therefore, suggest, following Coarelli (1993, 18-19; *id.* 2019a, 214): at those *Horrea Aemiliana* in Rome's old river port, and at the other structure called *Aemiliana* in the *Campus Martius*, which Coarelli locates closely to the *Porticus Minucia Frumentaria*.**

I, therefore, anticipate here the relevant passages, which were written for Section III.:

"In his **note 10**, Giovannetti [2016, 20 with n. 10] writes: "COARELLI 1993 [in: *LTUR* vol. I], pp. 18-19, colloca questi magazzini, interpretati come horrea annonari[a] legati alle frumentationes, nell'area dei resti rinvenuti per i lavori del palazzo dell'Anagrafe, sulla base di Varr., r. r. III, 2, 6 che associa gli horrea alla Porta

Flumentana, che doveva collocarsi proprio nel foro Boario e sulla base di un' iscrizione (CIL, XV, 7150) che indicherebbe la vicinanza degli horrea all'area del Circo Massimo".

**But note that Coarelli (2019a, 214) now assumes the storage of the grain, which was distributed in the *frumentationes*, not only at the *Horrea Aemiliana* in the old commercial river port at the *Forum Boarium*, but also at another building called *Aemiliana* in the *Campus Martius*.**

Concerning these *Aemiliana* of the *Campus Martius*, Coarelli (2019a, 214) writes:

"Comunque, gli *Aemiliana* del Campo Marzio vanno collocati negli immediati paraggi della zona dove avevano luogo tali distribuzioni, cioè della *porticus Minucia* ...". - Cf. Coarelli (2019a, 229-254, Section: "4. Porticus Minucia"; pp. 254-267, Section: "5. *L'identificazione della porticus Minucia: una risposta alle critiche recenti*"), in which he (especially on pp. 263-265), in my opinion convincingly, defends his own identification of the *porticus Minucia vetus* with the porticus on Via delle Botteghe Oscure, which comprised the Temple of the Nymphs: the *Porticus Minucia Frumentaria*, built by Domitian. For that identification; cf. Häuber (2017, 59-60). For Domitian's *Porticus Minucia Frumentaria*; cf. above, in Chapter II.3.1.c); and *infra*, in volume 3-2, at Appendix IV.d.4.b)''.

*Ad b)*, the question of the original function of the *opus incertum* building at *La Marmorata*.

If, on the other hand, this building actually *was* only erected 'circa 100 BC' as shipsheds for warships, which, after the warships had left Rome in the late 1<sup>st</sup> century BC, were henceforth used for commercial ships (or for a variety of purposes?), as I tentatively suggest here, we have to face another problem.

**Giovannetti (2016, 19-20) was able to demonstrate that the multistoreyed port building comprising docks at *La Marmorata*, right in front of the 'Porticus Aemilia' / *Navalia*, to which he has dedicated his article, are dated by brick stamps between the late Domitianic and the Trajanic period.**

Already earlier scholars had believed that these structures were Trajanic. In between this port building with the docks and the 'Porticus Aemilia' / *Navalia* the Severan Marble Plan (cf. here **Figs. 102; 102.2; 102.3; 102.3, inserted box**) shows the already mentioned structures that have likewise been studied by Giovannetti (2016, 21-23, Fig. 7 [= here **Fig. 102.3, inserted box**]). These structures could virtually have 'blocked' the entrances to the 50 aisles (of which some?), in theory, could have been used until this very moment as my putative commercial *Navalia*. As already mentioned, Emilio Rodríguez Almeida (1993a, 20) dated these structures to the Trajanic period.

**Now, if that were true, we must ask ourselves, how henceforth all those goods could have been transported on the Tiber, that passed through the commercial river port at *La Marmorata* ? - Assuming that, in my opinion, in antiquity not only for the fleets of the *wooden* warships shipsheds had to be provided, but also for the *wooden* ships used commercially (for those; cf. here **Figs. 98; 99; 105; 106**).**

The transportation on the Tiber was, of course, directed 'Tiber upstream' and 'Tiber downstream', as Pensabene and Domingo (2016-2017) have demonstrated in the case of building material, that had been stored and manufactured in the relevant workshops, based at the commercial river port at *la Marmorata*.

Their example concerns only the transportation of marble:

*a)* marble blocks were transported on the Tiber with small ships (cf. here **Figs. 105; 106**) from the *Portus Augusti* to the sculpture workshops at *La Marmorata*;

*b)* occasionally ships from the sculpture workshops at *La Marmorata* sailed down to the *Portus Augusti*, to fetch larger marble blocks than those usually stored at *La Marmorata*; those blocks were then brought with such small ships to the workshops at *La Marmorata*, and -

*c)* all the finished architectural marbles (and sculptures?) from the marble workshops at *La Marmorata* were transported with ships to the building sites in the centre of Rome, for which they had been commissioned.

That indeed, from the Trajanic period onwards, goods were stored at the new commercial port of *La Marmorata*, which, therefore, must have been transported on the Tiber, has been proven by Burgers (*et al.* 2014a; 2014b and 2015): at least parts of the *opus incertum* building discussed here, the '*Porticus Aemilia*'/ *Navalia* (here **Figs. 102; 102.1; 102.2; 102.3**), were precisely in the Trajanic/ Hadrianic period converted into *Horrea*. And they were also used as such, as the find of carbonized grain in the XVIth aisle of the building (here **Fig. 102.1**) proves; cf. Burgers (*et al.* 2014a, 914, quoted *verbatim* below, in Section III.).

**We must, therefore, ask ourselves, where exactly at *La Marmorata* from the period onwards, when those structures visible on the Severan Marble Plan (here **Figs. 102.3; 102.3, inserted box**) had been erected, those ships were now based, maintained and repaired, which transported all the goods on the Tiber - and that from *Portus Augusti* to the commercial river port at the Testaccio/ *La Marmorata*, and from *La Marmorata* Tiber upstream and Tiber downstream, as in the example of the marble blocks, studied by Pensabene and Domingo (2016-2017). - As already mentioned, Rodríguez Almeida (1993a, 20) dated those structures to the Trajanic period.**

Burgers and his colleagues (2014a; 2014b; 2015) only had the chance to excavate within the Xth, XVth, and XVIth aisles of their (alleged) *Porticus Aemilia*, the *opus incertum* building (cf. here **Fig. 102.1**). But so far the authors were unfortunately unable to define the purpose, for which this structure had originally been erected in the Republican period. We can, therefore, only wait for the results of their future excavations, which hopefully help us to answer the *two more questions*, which I have added to my original scenario as a result of reading the publications by Burgers *et al.* and of de Caprariis (2019; forthcoming 2022).

**In the meantime we can, in my opinion *tranquillamente*, pursue the train of thought presented in this Chapter, as it had been planned at the very beginning, before the publications by de Caprariis (2019; 2022) and those by Burgers (*et al.* 2014a; 2014b; 2015) have reached me.**

**If at the time of Domitian, the structures visible on the Severan Marble Plan and studied by Giovannetti (2016, 21-23; cf. here **Figs. 102; 102.2; 102.3; 102.3, inserted box**), did not as yet 'block' the entrances to the 50 aisles of the Republican *Navalia* at *La Marmorata*, this could mean that, in theory, under Domitian, the *opus incertum* building, discussed here, could indeed have been used (*inter alia*?) as commercial *Navalia*.**

That under Domitian ships on the Tiber did indeed transport marble blocks (apart from being self-evident) is also proven by the unique representation of such a ship, which is to be found on the plinth of Domitian's colossal marble statue of the River God Tiber in the Louvre. Because of the findspot of this statue we know that Domitian had commissioned it, together with its pendant, the colossal marble statue of the River God Nile in the Vatican Museums (cf. here **Figs. 104-106**), for his restored Iseum Campense at Rome that had been destroyed by the great Fire of AD 80; cf. Alexander Heinemann (2018). In addition to this, Pensabene and Domingo (2016-2017) have discussed the fact that most of the known sculpture workshops on both Tiber banks were based at *La Marmorata*, and that most of the fresh marble blocks carrying consular dates, found there, are firmly dated in the Domitianic period.

But we should not forget two more important facts in our relevant reasoning: the very existence of the *Monte Testaccio*, as well as the ancient buildings in the City of Rome that we can still study today:

1.) The dumping-ground *Monte Testaccio* has gradually grown in antiquity (from the Augustan period onwards or only since 140 AD?) up to circa 40 m height above the surrounding plain. Its location proves that the area in question has once been the (new) commercial river port of the City of Rome.

**Or, as Coarelli (1980, 340) writes: "... il Testaccio - la collina dei cocci - che con i sui 30 metri di altezza, interamente formati dall'accumularsi degli scarichi di anfore provenienti dal vicino porto, costituisce l'archivio, ancora in gran parte inesplorato, della storia economica di Roma";**

2.) "Rome is still nowadays basically a Flavian city"; cf. for that phrase *supra*, in Chapter *Preamble*; Section III., at point 3.); below, in Chapter *The major results of this book on Domitian*; and *infra*, in volume 3-2, at Appendix IV.d.4.c). This observation is based on two epigraphs, published by Eric M. Moormann (2018, 161).

The 2.) point proves the enormous building activities at Rome of all three Flavian emperors together, but especially so of Domitian - and that within a timespan of less than altogether 30 years (from 1st July AD 69 - 18th September 96) ! And when we additionally consider where the building material for Domitian's 'pharaonic' projects at Rome came from, it follows that also in this case the commercial port at *La Marmorata* must have been of the greatest importance. - For all that; cf. *infra*, in Sections II.; IV.

In Section II. of this text, to which we will now turn, I have quoted Laura Gigli's fictional account of the Egyptian merchant *Ciro*, who lived at the time of Marcus Aurelius, and in which she describes, how this man delivered his goods to Rome, using seagoing ships (like those illustrated on here **Figs. 98; 99**), as well as small ships on the Tiber like those visible on **Figs. 105; 106**. Cf. Gigli ("Dal faro di Alessandria alla banchina di Santa Passera: viaggio fra realtà e immaginazione", 2022), which Laura was kind enough to send me.

Next I concentrate in Section II. on the above-mentioned plinth of Domitian's colossal marble statue of the River God Tiber from his rebuilt Iseum Campense in the Louvre (cf. here **Figs. 104-106**), which shows three of such small ships on the Tiber. In one of these ships is transported a huge block of stone, I assume of marble (so already P. PENSABENE 1994, 325 n. 104, quoted *verbatim* above). I also address the consequences, which the findings of those scholars, who have recently studied this relief with the Tiber ships, may have for our understanding of those (putative) commercial *Navalia* at *La Marmorata*, which I tentatively assume here:

1.) Amanda Claridge and Eloisa Dodero (*The Paper Museum of Cassiano dal Pozzo ... Sarcophagi and Reliefs ...*, 2022), the manuscript of which Amanda had been so kind as to send me, and 2.) Patrizio Pensabene and Javier Á. Domingo (2016-2017) - the relevant volume of the *RendPontAcc* Giuseppina Pisani Sartorio was kind enough to present me with.

**Section II. Ships in the Portus Augusti (here Figs. 98; 99) and on the Tiber  
(here Figs. 105; 106), which supplied the City of Rome with goods  
from all over the Empire, and the men, who provided these services**

The City's location on the Tiber, very close to the Mediterranean, was crucial for the development of Rome as the capital of the Roman Empire and for the supply of its, at times, circa one million inhabitants; cf. Häuber (2013, 153, 156).

See now below, at *The sixth Contribution by Peter Herz : Rom. Strukturen der Versorgung*, who writes that Rome had in the imperial period more than one million inhabitants. - For the dramatic decline of the number of Rome's inhabitants in the 5<sup>th</sup> century; cf. Häuber (2014a, 97, quoted *verbatim infra*, in Section III.).

In antiquity, there were many sanctuaries on the banks of the Tiber, which connected *Portus Augusti* (modern Porto), Rome's port on the Mediterranean, with the City of Rome. Countless shipowners, merchants and sailors were involved in the seaborne trade, which supplied Rome, and in those sanctuaries they could have dedicated their thanksgivings for having safely arrived at this port. - Such a votive is obviously the relief here illustrated on **Figs. 98; 99**.

For the sanctuaries on the right bank of the Tiber; cf. Laura Gigli ("Dal faro di Alessandria alla banchina di Santa Passera: viaggio fra realtà e immaginazione", 2022, 269, note 3). None of these votives, found at those sanctuaries, has become as famous as the three representations of ships, discussed in the following: one of

these reliefs shows seagoing ships involved in this trade that have just landed at the port built by Claudius at Porto (here **Figs. 98; 99**), the second is a medallion, which shows a warship on the Tiber on its way to the Tiber Island in Rome (here **Fig. 107**). And the third ship is visible on the 'altare di *Navisalvia*' in the Musei Capitolini (*CIL* VI 492), which refers to the legend of Claudia Quinta and to the arrival of the sacred stone of *Magna Mater* at Rome in 204 BC (cf. here **Fig. 102.7**). - To this I will come back below, in Section III.

With my second example, I am referring to the medallion, issued by the Emperor Antoninus Pius (here **Fig. 107**), that represents the arrival at Rome in 291 BC of the sacred snake of Asklepios. In order to bring Asklepios to Rome, the Romans had escorted the god from Epidauros on a warship (*trireme*). We see the final phase of Asklepios's journey on the Tiber, at the very moment, as his sacred snake (*i.e.*, the god Asklepios himself), is about to 'escape' from this ship to live henceforth on the Tiber Island.

My first example is the magnificent marble relief at the Palazzo Torlonia (here **Figs. 98; 99**), datable to the Severan period, with a visualization of the harbour of *Portus Augusti*. Two large seagoing ships have entered the harbour basin, built by Claudius (identifiable by the lighthouse in the background and the statues of Bacchus and Neptune which refer to the cults of these gods that were located there). Whereas the identification of the ship on the left is debated (cf. *infra*), the ship on the right is clearly bringing merchandise from abroad that is already in the course of being unloaded. As we shall learn below from Patrizio Pensabene and Javier Á. Domingo (2016-2017, 572-573, quoted *verbatim infra*), such goods were then transported on the Tiber from Porto to Rome, using much smaller ships. As has been discussed above, in Section I., many of these ships, before finally delivering their goods to Rome, had first of all landed at the new commercial river port at *La Marmorata*; cf. Giovannetti (2016, 25).

For a discussion of the above-mentioned warship which, in 291 BC, brought the sacred snake of the god Asklepios from Epidauros to Rome; cf. Filippo Coarelli ("Navalia", in: *LTUR* III [1996] 339-340). Coarelli illustrates as his Fig. 64 [= here **Fig. 107**] a medallion, issued under Antoninus Pius. The ship has come upstream on the Tiber and we see the moment as it reaches the Tiber Island - its buildings appear in the background on the right. The snake, coiled on the ship's bow, looks towards its destination and will shortly leave. Asklepios is welcomed by the representation of the Tiber, who, reclining on the waves of his river, raises his right hand to salute the god. But not only Asklepios, also the warship itself has reached its final destination, the Navalia proper (*i.e.*, the port of the warships, in reality located at the *Campus Martius*, on the left bank of the Tiber). As Coarelli convincingly suggests, the two arches on the left hand side of the medallion (which should, of course, appear on the right hand side of the medallion, but there is no space) represented the entrance to the Navalia.

As we shall see below, in Section III., already Wilhelm Adolph Becker (1843, 159-162, 629; 1844, 19-24), by basing himself on the known literary sources, had been first to conclude that the Navalia (the port of the warships) were not based at *La Marmorata*, as was the *communis opinio* at his time (!), but instead at the southern *Campus Martius*.

In the following Section III., I will also discuss the *opus incertum* building at *La Marmorata*, which, on the Severan Marble Plan, is (possibly) likewise called 'Navalia'. As we shall see below, these were possibly (in the second phase of their lifetime in antiquity) shipsheds for civilian ships.

**Fig. 107. Golden medallion, issued under Antoninus Pius, representing the arrival of the sacred snake of Asklepios at Rome in 291 BC. From: F. Coarelli ("Navalia", in: *LTUR* III [1996] 339-340, Fig. 64). The caption of this illustration reads: "Insula Tiberina. Medaglione di Antonino Pio. Cohen II, 271 N. 17 (da Gnechi, *Medaglioni romani* II, tav. 43,1). Disegno di G. Besnier, *L'Ile Tibérine dans l'antiquité* (1902), fig. 19".**

That Coarelli (1996; 339-340) is right in identifying those arches on the medallion here **Fig. 107** as the entrance to the Navalia (*i.e.*, the port of the warships) is proven by the fact that the artist, who created this medallion, shows how this warship is entering one of the arched entrances of the Navalia. Compare the representation of such an arched entrance of *Navalia* on a Roman sarcophagus that has been published by

Pier Luigi Tucci (2012, 588, Fig. 6: "CITTÀ DEL VATICANO, Musei Vaticani, Cortile ottagonale, portico Est. Fronte di sarcofago con scena di porto [250-260 d.C.], dettaglio di *navalia* con arcate [foto Tucci]").

For the marble relief at the Palazzo Torlonia (cf. here **Figs. 98; 99**); cf. most recently Stefania Tuccinardi (cat. no. "26. Bassorilievo con veduta del *Portus Augusti*", in: S. SETTIS and C. GASPARRI 2020, pp. 175-178), and Anna Maria Carruba (2020, 311 with n. 8, Fig. 19), who has analysed and documented the fact that the relief had been entirely painted and that substantial remains of this paint are still preserved.

**Fig. 98. Marble relief with a representation of ships in the *Portus Augusti* at Portus. Roma, Museo Torlonia (MT 430). © Fondazione Torlonia. Photo: Lorenzo De Masi. Cf. S. Tuccinardi (2020, 176-177, cat. 26). Cf. p. 178, for the detail illustrated here on Fig. 99 of the three figures in the "cabina" of the left ship, a bearded man on the left (according to S. Tuccinardi 'obviously the owner of the ship, who has commissioned this relief'; and in C. Cecamore's 2019, 169 [in my opinion erroneous] opinion, the Emperor Septimius Severus), a woman in the middle and a man on the right, shown in the course of sacrificing at an altar standing in front of this group.**

Stefania Tuccinardi (2020, writes about the relief here **Figs. 98; 99**):

"Il rilievo, rinvenuto in occasione degli scavi intrapresi da Alessandro Torlonia nell'area del *Portus Traiani*, viene generalmente interpretato come un ex voto offerto a *Liber Pater* ... La veduta subito apprezzata come importante documento dell'assetto monumentale del *Portus Augusti* .... In primo piano, ... una nave oneraria ad albero unico, vela quadrata e veli di gabbia triangolari, si accinge ad entrare nello specchio d'acqua del Porto di Claudio, annunciato dal celeberrimo faro ... Sulla sommità della cabina, su una sorte di ballatoio, l'armatore della nave, evidentemente il committente del rilievo, il cui volto è ben caratterizzato in senso ritrattistico, accompagnato da una donna, forse la moglie o un'inserviente, e da un secondo personaggio maschile, ringrazia gli dei (*Liber Pater* e *Neptunus*) per il buon esito della navigazione, officiando un sacrificio (sul rito dell'*apobaterion* connesso al rientro in porto cfr. Feuser 2015) ... Un'altra nave, dello stesso tipo, è già attraccata al molo e ha levato la passerella per lo scarico della merce ... [my emphasis]". Cf. p. 178: "La frequenza delle immagini dionisiache ... sembra corroborare l'esegesi tradizionale che individua nel rilievo un'offerta votiva a *Liber Pater*/ *Bacchus*, compiuta da un mercante o da un armatore", a suggestion that could also be corroborated by the letters "V" and "L", visible on the great sail of the ship on the left, which have been read as '*V(otum) L(ibero)*' and as '*V(otum) L(ibens animo solvit)*'. But in the following, Tuccinardi writes that the man in the "cabina" of the ship on the left has also been identified as a portrait of Septimius Severus: "è stata recentemente proposta una diversa interpretazione di tutta la scena, intesa come una rappresentazione della nave imperiale di Settimio Severo di ritorno, a Porto, dal viaggio fatto dall'imperatore in Africa nel 204 d.C. (Cecamore in bibl. [= "Costruire un capolavoro 2019 (C. Cecamore), p. 169"]; si veda anche Chevalier 2001, p. 25) [my emphasis]".

For the "rito dell'*apobaterion* connesso al rientro in porto", mentioned by Stefania Tuccinardi (2020), in her discussion of the relief here **Fig. 99**; cf. also Häuber (2017, 378): the Temple of Augustus at Alexandria was dedicated to Caesar [*i.e.*, Augustus] *epibaterios* ('Tempel of the landing Augustus'; *epibaterios* was an epithet of Apollon, the protector of sailors).

*Because of the (in my opinion erroneous) identification of Septimius Severus on the relief here Figs. 98; 99, I allow myself in the following a digression on this emperor (cf. here Fig. 100)*

Besides, Septimius Severus had indeed a close connection to Ostia and to *Portus Augusti* (cf. here **Figs. 98; 99**); cf. Anna Tatarkiewicz and Krzysztof Królczyk ("Septimius Severus - *restitutor castrorum (et Portus) Ostiensium*", 2019). - My thanks are due to Peter Herz for the reference.

But this man on the Torlonia relief (cf. here **Fig. 99**), in my opinion, is nevertheless certainly not the Emperor Septimius Severus. We happen to know the sculptural decoration of the Quadrifrons at Leptis Magna which commemorated exactly the same visit of the emperor to Africa, mentioned in Tuccinardi's (2020, 178) above-quoted account. One of these reliefs shows (from left) the Empress Julia Domna, the Emperor Septimius Severus and their sons, Caracalla and Geta (cf. here **Fig. 100**).

Note that on 28th January 198 Septimius Severus's son Caracalla received the title Augustus and became thus co-emperor, whereas his son Geta received the title Caesar (to this I will come back below). Note also that Septimius Severus did not travel to Africa in AD 204, as asserted by Claudia Cecamore (2019, 169, mentioned above), but instead in AD 202/203 and again in AD 206/207; cf. Häuber (2014a, 679 with n. 71). We should, because of all this, also expect to see in the relief here **Fig. 99** not only Septimius Severus and Iulia Domna (if at all the male figure on the left and the female figure on **Fig. 99** are meant as portraits of the imperial couple, which I do not believe), but certainly, in addition to this, also their two sons and co-regents, Augustus Caracalla and Caesar Geta.

**Fig. 100. Attic panel from the Quadrifrons at Leptis Magna, marble. Represented is, according to D.E.E. Kleiner (1992, 341, 342, Fig. 310): "the *concordia augustorum* [i.e., of Augustus Caracalla on the left and Augustus Septimius Severus on the right, performing together the gesture *dextrarum iunctio* - between them we see Severus's younger son, Caesar Geta, and to the left of Caracalla Iulia Domna], Septimius Severus, his family, the tutelary deities of his family and of Leptis Magna". Archaeological Museum of Tripoli (Libya). Photo: Courtesy Hans R. Goette (February 2008).**

For a discussion of the above-mentioned reliefs at Leptis Magna, *inter alia* the "Dextrarum iunctio Relief"; cf. Volker Michael Strocka (1972). For the reliefs of this Tetracylon at Leptis Magna, and for other similar representations of the imperial couple, in which their sons Augustus Caracalla and Caesar Geta are never missing; cf. Häuber (2014a, 678-679, with n. 57; the quote is from n. 57):

""D.E.E. Kleiner 1992, pp. 341, 343, fig. 310: Leptis Magna, Tetracylon of Septimius Severus, attic panel with *concordia augustorum*, Septimius Severus, his family [i.e., his wife Iulia Domna and their two sons, Augustus Caracalla and Caesar Geta], the tutelary deities of his family and of Leptis Magna; p. 340 (suggested date for the Tetracylon: 203 AD)"". For a detail of this relief, showing Caracalla, Geta and Septimius Severus; cf. Hans Rupprecht Goette (1990, 60 with n. 300, Taf. 38, 2.

For Caracalla; cf. Anthony R. Birley: "**Aurelius** (RE 46) **Antoninus** (1), **Marcus** (AD 188-217), nicknamed **Caracalla**, emperor AD 198-217. Elder son of L. Septimius Severus, originally called Septimius Bassianus; renamed after M. Aurelius and made Caesar in 195 ... [the emphasis is by the author himself]", in: *OCD*<sup>3</sup> (1996, 221).

For the date, when Septimius Severus's elder son Caracalla received the title Augustus and was thus declared co-emperor, and his younger son Geta received the title Caesar; cf. Häuber (2014a, 686):

"**Geta, born March 7th, 189 AD, was made 'most noble Caesar' at the age of nine on January 28th, 198, when Caracalla** [who was ten years old at that stage] **became Augustus and co-emperor ...** [with n. 149; my emphasis]". The quote is from Anthony R. Birley: "**Septimius Geta** (RE 32), **Publius**, younger son of Septimius Severus and Iulia Domna ...", in: *OCD*<sup>3</sup> (1996, 1389-1390).

When I wrote this, I had no idea that `January 28th, 128' was a *very* meaningful date. See below, at *The fourth Contribution by Peter Herz: Wann wurde Trajan von Nerva adoptiert?* After discussing the reasons, why previously a wrong date for Trajan's adoption had been suggested, Herz concludes: "... und zweitens hat man vergessen, **dass wir seit 1940 das Feriale Duranum haben. In dem findet sich das Datum 28. Januar für den Beginn der Alleinherrschaft Trajans. Dieser Tag ist durch eine ganze Reihe von Inschriften als Feiertag bekannt und wurde später von Septimius Severus genutzt, um am 28. Januar 198, also genau nach einhundert Jahren, sowohl die offizielle Einnahme der parthischen Hauptstadt Ktesiphon zu feiern als auch seinen Sohn Caracalla zum Mitherrscher (Augustus) zu ernennen** [my emphasis]".

The facts that Septimius Severus chose the date 'January 28th, 128' for his celebrations of the taking of the capital of the Parthian Empire, Ktesiphon, in combination with his certainly likewise solemn declaration of his sons Caracalla as Augustus and Geta as Caesar, can all be explained with Septimius Severus's 'self-adoption' into the Antonine family. For Septimius Severus's "Selbstadoption" ('self-adoption') into the Antonine family; cf. Achim Lichtenberger (2011, 48, 64, 97, 322, 386; quoted *verbatim* and discussed *supra*, in Chapter V.1.b)). In his magnificent Façade-Nymphaeum at the south-east corner of the Palatine at Rome, called Septizonium, appeared a multfigured group of portrait-sculptures, representing Septimius Severus in the midst of his family and his self-acclaimed ancestry, here even traced back to the Emperor Nerva - as also stressed in the pertaining inscription (CIL VI 1032 = 31229). Cf. Susann S. Lusnia (2004, 517, 526, 533, 538-541, quoted *verbatim* in: C. HÄUBER 2014a, 688, note 167); and below, at *The fourth Contribution by Peter Herz : Wann wurde Trajan von Nerva adoptiert?*

Cf. here **Fig. 73**, labels: PALATIUM; "DOMUS SEVERIANA"; SEPTIZONIUM.

Let's now return to *La Marmorata*.

For the huge area of *La Marmorata* at the modern quartiere called Testaccio discussed here we have unfortunately no ancient visualizations, what it may have looked like in antiquity: apart from the famous representation of three small ships, one of them with a huge block of marble (cf. here **Figs. 105; 106**), to which we will now turn. That this relief (here **Figs. 105; 106**) is meant to show a scene on the Tiber is clear from the fact that it decorates the plinth of the colossal marble statue of the River God Tiber in the Louvre, which Domitian, together with the pendant colossal marble statue of the River God Nile in the Vatican Museums (cf. here **Fig. 104**), had commissioned for the water basin in front of his Temple of Serapis at the Iseum Campense, erected anew by Domitian after the great fire of AD 80 had completely destroyed this sanctuary. Cf. *infra*, in volume 3-2, at *Appendix I.g.1.*); *Appendix I.g.2.*); *Appendix II.a.*); *Appendix III.*); *Appendix IV.c.1.*); and *Appendix IV.d.4.b.*

There is also another generic representation of this kind, which is meant to show a ship on the Tiber, but those two reliefs (cf. here **Figs. 105; 106**, and this other relief) do not offer views of specific locations somewhere in the area discussed here. For both monuments; cf. Patrizio Pensabene and Javier Á. Domingo (2016-2017, 572 with ns. 155, 157, quoted *verbatim infra*, in Section IV.).

**Fig. 104.** Colossal marble statue of the River God Tiber, Paris, Louvre (MA 593). Cf. A. Heinemann (2018, 717, Fig. 3). Colossal marble statue of the River God Nile, Città del Vaticano, Musei Vaticani, Museo Chiaramonti (inv. no. 2300) Cf. A. Heinemann (2018, 216, Fig. 2). Photo: D-DAI Rom 81.2187. Domitian commissioned these two statues of the River Gods Tiber and Nile for his Temple of Serapis at his newly erected Iseum Campense, where they were on display in the huge water basin of the Exedra; cf. here, the maps **Figs. 58-61**; and *infra*, in volume 3-2, at *Appendix I.g.2.*); and at *Appendix II.a.*

**Fig. 105.** Detail of the plinth of this colossal marble statue of the River God Tiber, Paris, Louvre (MA 593), showing a relief with a small ship on the Tiber, with which a huge block of marble is transported. From: P. Pensabene and J.Á. Domingo (2016-2017, 573, Fig. 15). Courtesy P. Pensabene and J.Á. Domingo.

**Fig. 106.** The same relief, a greater section of the scene: three ships and also the men, who are hauling the ship with the marble block on the left hand side of the relief. From the Paper Museum of Cassiano Dal Pozzo, Windsor, Royal Library (RL 8739). Cf. A. Claridge and E. Dodero (*The Paper Museum of Cassiano dal Pozzo, Series A, Part III, Sarcophagi and Reliefs*, 4 vols., London: Royal Collection Trust (2022, 853-854, cat. no. 563). Photo: Courtesy Royal Collection Trust / © Her Majesty Queen Elizabeth II 2022.

Amanda Claridge, with whom I had discussed the above-mentioned Tiber ship that appears on Pensabene's and Domingo's (2016-2017, 573, Fig. 15 = here **Fig. 105**) photograph, was kind enough to send me on 9th April 2021 information concerning a drawing of the plinth of this statue of the Tiber (cf. here **Fig. 106**), which

was made when the statue was still on display at the Belvedere of the Papal Palace, which now belongs to the Musei Vaticani. These (originally three, now two) sheets of a larger drawing belong to the Paper Museum of Cassiano Dal Pozzo, and are kept at Windsor Castle, Royal Library (RL 8739; cf. here **Fig. 106**). They will be published in the catalogue raisonné as A.III.563 in: Amanda Claridge and Eloisa Dodero ("*The Paper Museum of Cassiano dal Pozzo, Series A, Part III, Sarcophagi and Reliefs*, 4 vols. 2022, pp. 853-854, cat. no. 563, which has appeared in the meantime in 2022). Amanda alerted me also to an earlier publication of the drawings here **Fig. 106** by Cornelius C. Vermeule ("*The dal Pozzo-Albani drawings of classical antiquities in the Royal Library at Windsor Castle*", *Transactions of the American Philosophical Society*, n.s. 51.2, 1966 [i.e., here CC. VERMEULE 1966b], pp. 5-170, p. 51 (s.v. 8739)).

I know the statue of the Tiber in the Louvre (cf. here **Fig. 104**) from autopsy but must confess that so far I was not interested in the reliefs carved on its plinth.

These two sheets of an originally larger drawing in the Paper Museum of Cassiano dal Pozza (here **Fig. 106**) indicate that the artist, who created this relief, had represented altogether three ships on the Tiber, two of them moving upstream, one of them downstream. Whereas the two boats on the left and in the middle are transporting goods, the one on the left upstream, the boat in the middle downstream, the ship on the right, which is turned in upstream direction, is docked on the left bank of the Tiber and some men are in the course of loading goods on it. The relief itself shows more porters, those, who are missing on **Fig. 106**, were, therefore, obviously represented on the third, now missing sheet of the drawing. The men aboard those ships are, accordingly, engaged in very different occupations. On the far left of the scene we see three other men, walking on the left bank of the Tiber, who are hauling the ship with which the huge block of marble is transported upstream.

The intention of the artist, who designed this composition, was obviously to describe as many typical occupations as possible of those men, who were attached to those entrepreneurs in the naval trade on the Tiber who actually managed the immense task of 'supplying the city of Rome with all goods needed'. For a detailed analysis of the actions of the men who appear on the relief (here **Fig. 106**); cf. Amanda Claridge and Eloisa Dodero (2022, 853, quoted *verbatim infra*).

**Amanda Claridge and Eloisa Dodero (2022, 853) interpret the meaning of those reliefs as follows: "The plinth is carved on all four sides in illustration of the benefits of the river". But because that was combined with a "scene apparently representing the founding of the city of Rome on the left side", there were certainly, as they themselves add, many more levels how the iconography of Domitian's statues of the Tiber and of the Nile could be understood.**

**Heinemann (2018, esp. pp. 228, 231, Fig. 12.a) discusses Domitian's colossal marble statues of the River Gods Tiber and Nile (here Fig. 104) and the reliefs on their plinths (here Figs. 105; 106) in detail. To characterize the meaning of the iconographies of those statues, he has, in my opinion, chosen an appropriate title for his article:**

**"Blessings of Empire ...".**

In addition to what Domitian himself or his artists may have intended to visualize with the statue of the River God Tiber (and of the River God Nile) and with the scenes, adorning their plinths, we can regard the relief with the three ships on the plinth of the statue of the River God Tiber discussed here (cf. **Fig. 106**) also as an ideal illustration of the relevant occupations of such men, who were for example employed by the Egyptian merchant called *Ciro*.

This man, whose own lifelong occupation this had been, came from a family of merchants that since a long time was transporting merchandise from Egypt to Rome. Laura Gigli (2022) has now written for us *Ciro's* fictional account, describing, how he delivered his goods to Rome by using obviously exactly the same kind of ships on the Tiber as those that are visible on here **Fig. 106** (to Laura Gigli's fictional account of *Ciro* I will come back below).

Although the artistic quality of this relief (here **Figs. 105; 106**) is rather modest, it nevertheless contains an interesting additional information, namely that there usually was, as not otherwise expectable, quite a 'traffic jam' on the Tiber. This the artist has indicated by his choice that the two ships in the middle and on the right hand side of the scene have come each other so close, that the men aboard the ship in the middle now try very hard to avoid an accident.

**Claridge and Dodero (2022, 853-854, cat. no. 563) write about the drawing of the relief on the plinth of Domitian's colossal statue of the River God Tiber, which shows three ships on the Tiber (here Fig. 106) :**

**"563. Frieze on plinth of statue of the Tiber, river landscape with cargo boats (Vatican Belvedere)**

*CODEX URSINIANUS COPYIST, 1620s*

Windsor, RL 8739, *Bassi Relievi Antichi* 8, fol. 38 Pen and dark brown ink and grey and brown wash over traces of black chalk/graphite 88 × 849 mm. Composed of two sheets, 425 and 430 mm wide, with 6 mm overlap to right ... The frieze is located on the rear of the plinth of the colossal statue of the River Tiber reclining beside the wolf and twins, which may have been already known in the fifteenth century, but was rediscovered in January 1512 between the churches of SS Maria sopra Minerva and Stefano del Cacco (see Brummer 1970, p. 191f.), probably on the site of the Iseum Campense. Soon afterwards the statue was brought to the Vatican Belvedere, where it was placed in the middle of the garden on a base bearing the Medici arms; at least from 1523, it was faced by an equally colossal reclining statue of the Nile (**962**), as documented in a view by Heemskerck of the 1530s. In 1797 it was taken to Paris, together with the Nile and other Vatican antiquities, and (unlike the Nile) never returned.

**The plinth is carved on all four sides in illustration of the benefits of the river, from a continuous stream of fresh water flowing down to the front, to flocks of animals pastured in its meadows along the right side, three boats transporting cargo down river across the rear, and a scene apparently representing the founding of the city of Rome on the left side.** The boat section, which is well preserved (better than the others), is drawn here very accurately at one-third actual size. At left, a long boat with a high prow, containing a large rectangular item (?a monolithic block of stone), is being steered with a long rudder mounted on the stern by a nude figure seated aft, directing three figures in short tunics who are hauling the boat along by ropes, pulled in unison, from the riverbank. The dal Pozzo draughtsman has seen the ropes as attached to the prow, but they may rather have passed beyond that to the towing mast, which can be seen located in front of the cargo. In the next, slightly more laden boat, whose prow is facing the opposite way to the other two, setting off downstream, three men in workmen's tunics are wielding long poles, apparently trying to avoid colliding with the third boat, which is docked with its prow towards the bank at right. This has its steering oar drawn inboard as one of the crew is preparing food in the stern, blowing at a portable stove, while another is seated amidships holding a tablet-shaped object, but not writing, probably stowing the cargo as it is brought on board. The larger shape in front of him is probably some sort of cabin or tent to protect the items he is stowing. The man in the prow has one in each hand [page 854] and the figure in a loincloth coming up the gangplank towards him has something similar on his shoulder. The drawing stops at this point, but there are two more porters behind, completely nude, one balancing a circular object on his head with both hands, and the other a load on his upper back, his left arm propped on his hip. They were possibly drawn on a now missing third sheet of paper, which the open frame lines indicate once joined to the right. All four sides of the plinth were engraved, with various errors ... Cassiano acquired a sketch of the three boats (without the porters) as part of a larger drawing from the later sixteenth century (**1013b**), but **563** is the only known instance from the seventeenth century .... [my emphasis] ... object drawn: Paris, Louvre, Ma 593, marble, frieze ... ".

Let's now return to our main subject.

The area *La Marmorata* is located on the left bank of the Tiber. Also the river's right bank was used in similar ways, but again we have no ancient visualisations of the daily life there.

**At the site of one of those many wharves on the river's right bank was erected in the 2<sup>nd</sup>/ 3<sup>rd</sup> century a tomb, and, on top of this, in the 8<sup>th</sup> and 9<sup>th</sup> centuries was built a Church, called after Santa Passera.**

A saint of that name does not exist, and it is believed that 'Passera' is either a corruption of Saint Ciro's title, 'Abbas Cirus' ('abbot Ciro'), or of the name of 'Santa Prassede' (cf. *TCI-guide Roma 1999*<sup>10</sup>, 868); and Laura Gigli ("Dal faro di Alessandria alla banchina di Santa Passera: viaggio fra realtà e immaginazione", 2022, 269-270, p. 271, with n. 4, p. 272, with n. 7).

**At the Church of Santa Passera were venerated two martyrs from Alexandria in Egypt, the Saints Ciro and Giovanni.**

The Church of Santa Passera (here **Fig. 103**) stands on the right bank of the Tiber in the quartiere Portuense, at the 3rd mile of the ancient *Via Campana* (today: Via della Magliana nuova), underneath the Gianicolo, and opposite the Basilica of San Paolo fuori le Mura (located on the left bank of the Tiber), on the *Via Ostiensis*.

The Church of Santa Passera and the Basilica of San Paolo fuori le Mura, are located to the south of the quartiere Testaccio with *La Marmorata*. The frescos of Santa Passera, on which the Saints Ciro and Giovanni appear, have been restored under the direction of Laura Gigli; cf. Laura Gigli and Gianfrancesco Solferino ("La chiesa di Santa Passera. Riflessioni sui dipinti del presbiterio", 2016); for the ancient wharf of Santa Passera; cf. also Pensabene and Domingo (2016-2017, 572, n. 158, quoted *verbatim infra*).

**Fig. 103. Map of Rome. On the left bank of the Tiber we see the quartiere Testaccio with the Monte Testaccio and the Basilica of San Paolo fuori le Mura, on the right bank of the Tiber there are the quartiere Portuense and the Church of Santa Passera. IGM (Istituto Geografico Militare). Scale: 1: 25.000.**

In reality, the relics of the Saints Ciro and Giovanni had only been brought to Rome from Egypt in the Middle Ages, but Laura Gigli has now written a fictional account of those two saints, as told by Ciro 'himself'.

In this narrative, written by Laura Gigli for her new publication on Santa Passera ("Dal faro di Alessandria alla banchina di Santa Passera: viaggio fra realtà e immaginazione", 2022), Ciro belongs to a family of merchants from Alexandria, who since a very long time deliver goods from Egypt to Rome. Ciro himself has done this all his life and owns now a couple of large seagoing ships (I myself suggest to compare the ships on the relief here **Fig. 98**). In these enterprises, Ciro is supported by his son Giovanni. Since Ciro is fascinated by Rome, he is currently planning to build a tomb for himself on the banks of the Tiber (*i.e.*, the tomb underneath the Church of Santa Passera), in case he should eventually die there on one of his many trips from Alexandria to Porto and further with smaller ships on the Tiber to Rome.

**I have asked our good friend Laura to allow me to quote from 'Ciro's story' here, since she describes in this text in Ciro's name exactly that what is missing in our documentation of this part of ancient Rome, and she has generously allowed me to do so.**

**In her accompanying letter, written on 27th March 2021, and addressed to Hugo Brandenburg and myself, Laura Gigli has explained her interest in the Church of Santa Passera:**

" ... Io ho avuto l'opportunità di condurre i restauri dell'apparato decorativo alto medievale e medievale della chiesa di santa Passera a Roma, sorta fra VIII e IX sec.[olo] sull'impianto di una tomba romana del II/III sec.[olo] in corrispondenza di uno degli approdi sul Tevere. Siamo a via della Magliana proprio di fronte a San Paolo fuori le mura. La curiosa denominazione in onore di una santa mai esistita è successiva a quella iniziale (presumibilmente in onore di Santa Prassede) e a quella dei martiri alessandrini Ciro e Giovanni ...

Laura Gigli".

Laura Gigli ("Dal faro di Alessandria alla banchina di Santa Passera: viaggio fra realtà e immaginazione", 2022, 265-268) begins this article with her fictional account of the ancient Egyptian merchant **Ciro**, who has a number of seagoing ships and supplies the People of Rome with all sorts of goods from Egypt :

"LA NARRAZIONE

*``Mi chiamo **Ciro**, sono nato ad Alessandria, Prefettura d'Egitto, al tempo dell'imperatore Marco Aurelio (161-180). Mio padre lavorava al faro, sull'isola di fronte al porto della città, dove l'ho accompagnato tante volte da bambino ...*

*Mio zio era invece un pescatore e, all'occorrenza, un trasportatore di merci che mi ha ingaggiato presto a lavorare con lui. Un clan egiziano, il nostro, che da generazioni attraversa il Mediterraneo per la pesca, certo, ma soprattutto per rifornire Roma di grano e dei prodotti preziosi richiesti nell'impero, al pari di tutti gli altri popoli che hanno vissuto e vivono sulle sue sponde: cartaginesi, libici, fenici, siriani, libanesi, greci ...*

*Le rotte e la navigazione delle nostre imbarcazioni sono diventate più agevoli da quando si è trasferito ad Alessandria un greco di nome Tolomeo, i cui studi di astronomia e geografia gli hanno [page 266] consentito di precisare i rilievi delle coste e di elaborare le piante del cielo che consentono l'orientamento nel buio della notte. Gli affari della nostra famiglia, grazie all'ausilio di questi strumenti conoscitivi che hanno migliorato la sicurezza in mare, hanno cominciato a prosperare tanto che io stesso posso disporre oggi di una piccola flotta di navi da pesca e da trasporto, adatte alla grande navigazione, che mi consentono di definirmi una sorta di armatore imprenditore. Nel XXI secolo potrei essere considerato un intraprendente manager di famiglia.*

*Seguo personalmente la maggior parte dei viaggi diretti al porto marittimo di Ostia ...*

*Di lì è abbastanza facile risalire il Tevere - c'è anche una strada di alaggio - e poi sbarcare all'altezza della banchina fluviale che sorge alle estreme propaggini delle alture gianicolensi, a ridosso della via Campana, dove, una volta a terra mi ritrovo in un ambiente che non solo è vicino al mercato, ma anche familiare per lingua, costumi, mestieri, vissuto soprattutto da marinai provenienti dal mio paese, dove ho modo di portare e ricevere notizie, di potenziare la rete dei miei contatti e incrementare il numero dei clienti ...*

*Mi trovo bene a Roma, dove mi incontro spesso anche con quelle comunità che si definiscono cristiane: le ho conosciute e in parte frequentate già ad Alessandria dove il fenomeno è diffuso da [page 267] tempo, ma qui, dove vivissima è la memoria degli apostoli, questa cultura e le prospettive che offre mi attirano irresistibilmente. Non credo che mi convertirò ma intanto ho deciso di chiamare mio figlio con un nome ebraico: Giovanni.*

*Mi piace l'atmosfera effervescente e dinamica della città e ho pensato di scegliere proprio questa zona come luogo della mia sepoltura, qualora dovessi morire qui. Mi è capitato di passeggiare varie volte nella quiete della necropoli di Porto, oggi in fase di espansione, traendone ispirazione per quello che potrebbe essere la tomba che io stesso vorrei farmi costruire ... Mi ha colpito molto il mosaico presente in un monumento: raffigura il faro della città che ha condotto in porto due grandi navi che trascinano due barche più piccole sulle quali è possibile scaricare le merci, accompagnato da una scritta in greco che dice:*

QUI CESSA OGNI AFFANNO.

*Che bella immagine per rappresentare l'approdo al termine della vita! Che bella immagine per sottolineare il compimento del destino, non solo quello di un uomo di mare! ... In corrispondenza della banchina di approdo delle merci sul fiume ho visto una tomba in costruzione, architettonicamente simile a quelle di Porto ma con una particolarità che mi intriga: l'ingresso è rivolto a sud sud-est, quindi traguarda esattamente quella meraviglia dell'ingegno umano che mi ha sempre guidato nel ritorno a casa e agevolato le rotte sul mare: il faro del luogo dove sono nato. Mi piacerebbe ricavare per me un ipogeo nella parte antistante alla terrazza di accesso a questa sepoltura in terra straniera e sul soffitto, dove non potrà mai splendere il sole né rifulgere le stelle, far rappresentare l'uno e le altre, una sorta di volta celeste per continuare a indicare la strada che orienta l'uma- [page 268] nità nel suo cammino, che va oltre l'approdo raggiunto dal singolo individuo nella sua vita ...'' [my emphasis]".*

On 11th May 2022, Franz Xaver Schütz had the chance to I visit ourselves the quartiere Testaccio and especially the area, called *La Marmorata* in past centuries, with the huge *opus incertum* building.

In addition to this, we met on 19th May 2022 with Laura Gigli at the Church of Santa Passera, located on the opposite (right) bank of the Tiber (cf. here **Figs. 102; 103**). Unfortunately, the Rettore of the Church of Santa Passera, whom Laura had asked to give us access to Santa Passera, could not join us that day, which is why we need to postpone this detail of our research to a future visit of this Church.

**Section III. The Porticus Aemilia outside the Porta Trigemina and the Horrea Aemiliana, and the discussion of the opus incertum building at La Marmorata, which has been identified with this Porticus Aemilia or as Navalía**

**For the finds in past centuries of enormous masses of all kinds of marbles and other building material at La Marmorata;** cf. Rodolfo Lanciani (II [1901] 25 [the first date, documented by Lanciani, at which such finds were recorded, is: "1558, 16 marzo"], p. 27, *s.v.* Marmorata; p. 27; III [1907] 113, 114, 174, 175, 224, *s.v.* (La) Marmorata; II [1990] 31 [the first date, documented by Lanciani, at which such finds were recorded, is: "1558, 16 marzo"], page 33; III [1990] 120, 191-193, 248-249, *s.v.* (La) Marmorata; cf. p. 121, Fig. 82: "*Sponda subaventina del Tevere: imbarco di una colonna di granito delle terme di Caracalla destinata a Firenze.*, Disegno, in "Disegni delle ruine di Roma", foll. 12v-13", p. 192, Fig. 142: "Baldassare Peruzzi. *Pianta di magazzini veduti sotto l'Aventino presso la "Ripa tiberis"*. Disegno. (Firenze, Uffizi, sch.[eda] 397)", p. 192, Fig. 143: "Etienne Du Pérac, *Veduta della Marmorata e dell'Aventino*. Incisione ne "I vestigi dell'antichità di Roma", Roma 1575, tav. 23" [= here **Fig. 102.4**]); Samuel Platner and Thomas Ashby (1926, 327, *s.v.* Marmorata; p. 200, *s.v.* Emporium, p. 261, *s.v.* Horea Galbae, p. 262, *s.v.* Horrea Lolliana, p. 263, *s.v.* Horrea Seiana, p. 420, *s.v.* Porticus Aemilia (a) extra portam Trigemina); L. Richardson Jr. (1992, 244, *s.v.* Marmorata, pp. 143-144, *s.v.* Emporium, Fig. 35, p. 193, *s.v.* Horrea Galbae [also on the *Horrea Sulpicia*] (Figs. 35, 43, pp. 193-194, *s.v.* Horrea Lolliana, p. 195, *s.v.* Horrea Seiana, p. 311, *s.v.* Porticus Aemilia (1)); Filippo Coarelli ("Horrea Galbana", in: *LTUR* III [1996] 40-42 [also on the *Horrea Sulpicia*], Fig. 29; Figs. I, 171-172; cf. *id.*, pp. 43-44, *s.v.* Horrea Lolliana, Figs. 29; 30); Domenico Palombi ("Horrea Seiana", in: *LTUR* III [1996] 46-47, Fig. 29); Claudio Moccheggiani Carpano ("Emporium", in: *LTUR* II [1995] 221-223 Fig. 69 [plan of the area between the Tiber Island and the area, identified by some scholars with the *Emporium* (*i.e.*, the area referred to here as *La Marmorata*), with integration of the relevant fragments of the Severan Marble Plan]; V [2000] 7).

**See now also:** Lorenzo Quilici ("Sul faro di Portus e una nota in margine al Porto di Traiano", 2017). And, in addition to this: Simon Malmberg ("Understanding Rome as a port city", 2021) and Joelle Prim (*Aventinus Mons*, 2021). For the latter two references I thank Hans Rupprecht Goette and Peter Herz, respectively.

Note that already Otto Richter (1901, 198-199) had listed altogether 14 *Horrea* at Rome.

Cf. F. Coarelli ("Porticus Aemilia", in: *LTUR* IV [1999] 116-117, Figs. 44; 45; II, 69; III, 29); cf. p. 117: **according to Coarelli, the building at La Marmorata discussed here (in my opinion Navalía), identified by him as the Porticus Aemilia, had the following dimensions: "Questo si estendeva in lunghezza da Via B. Franklin a SE [south-east; *corr.*: south-west] a Via Marmorata a NE [north-east] e, nel senso della larghezza, da Via G. Branca a Via A. Vespucci: rispettivamente, per 487 e 90 m. (superficie ca. [circa] 4.5 ettari) [my emphasis]**". To this we may add that the courses of the current roads Via Ambrogio Vespucci and Via Giovanni Branca are determined by the ground-plan of this ancient building, the *Navalía*. Steven Tuck ("[Horrea Corn]elia", in: *LTUR* V [1999] 263) identifies the alleged *Porticus Aemilia* at the Testaccio, which is here interpreted as *Navalía*, (erroneously) as *Horrea Cornelia*. - To this I will come back below.

Note that Lucos Cozza and Pier Luigi Tucci (2006, 175, note \*) write in their acknowledgements: "Gli autori ringraziano Fausto Zevi per aver deciso di pubblicare il presente articolo, Filippo Coarelli per averlo letto in anteprima (con totale apprezzamento) ...".

**Pier Luigi Tucci (2012, 180) mentions considerable smaller proportions of the Navalía than Coarelli ("Porticus Aemilia", in: *LTUR* IV [1999] 117): 487 x 60 m, "quasi 30.000 metri quadrati [my emphasis]**".

The same proportions ("487 by 60 metres") for the ground-plan of the *'Porticus Aemilia' / Navalia* are also assumed by Coarelli (2008, 462), as well as by the first scientific excavators of this building, Gert-Jan Burgers, Raphaëlle-Anne Kok-Merlino and Renato Sebastiani (2015, 200), who identify the structure with the *Porticus Aemilia*, and also by Giuliano Giovannetti (2016, 21, n. 14), who quotes for this information: "GROS, TORELLI 2007, p. 136", and who himself likewise identifies the building with the *Porticus Aemilia*. - In his bibliography, Giovannetti quotes the edition of this book by Gros and Torelli of 2010 instead.

**To allow the reader an easier understanding of this complex discussion, I quote in the following some passages, referred to in this *Chapter* as the [3.] - [12.] epigraphs, that are of importance in this context.**

**But before concentrating on those epigraphs, I allow myself a digression on the well known fact that, long before Lucos Cozza and Pier Luigi Tucci (2006, 180 [TUCCI]) should identify the *opus incertum* building at *La Marmorata* as "*dei Navalia*" (understood by them as shipyards of the warships), *'the Navalia'* (i.e., Rome's port of the warships) had been located in precisely *that* area.**

The scholar, who corrected this error, was, in my opinion, Wilhelm Adolph Becker (1843, 159-162, 629; and 1844, 19-44 [on *'the Navalia'*, the port of the warships]). Basing himself on the known literary sources, Becker was first to conclude that *'the Navalia'* (i.e., the port of the warships) were not based at *La Marmorata*, as was *communis opinio* at his time, but instead in the southern *Campus Martius*.

Becker (1843; and in more detail 1844) analysed *inter alia* the famous story, told by Plutarch (*Cat. Min.* 39) about Cato Uticensis in 56 BC, as well as the story of the arrival at Rome of the sacred snake of Asklepios in 291 BC, which is represented on the golden medallion, issued by the Emperor Antoninus Pius (here **Fig. 107**), and discussed above in Section II.

See Wilhelm Adolph (also: Adolf) Becker (1796-30.9.1846) (*Handbuch der römischen Altherthümer Nach den Quellen bearbeitet erster Theil. Mit vergleichendem Plane der Stadt und vier anderen Tafeln*, 1843; and his publication: *Die römische Topographie in Rom eine Warnung von Wilhelm Adolph Becker Als Beilage zum Ersten Theile seines Handbuches der Römischen Alterthümer*, 1844).

***When asking ourselves, why Becker (1843) is not given credit for this important finding, the reasons may be the following***

The tone, in which Becker wrote his text of 1844 is, admittedly, very polemic, and the title of this publication is nothing less but an intentional offence. Both, taken together, may explain the effect that Becker's book (1843, with its "Beilage" of 1844), is extremely rare in Germany. Of the only three extant copies in German libraries, one is to be found at the Bayerische Staatsbibliothek in München.

What had happened ? Becker's book of 1843 had been reviewed, and Becker published in 1844 a 59-page-long (!) response, the above-mentioned *Beilage* (1844) to his book. Becker (1844, 4) mentions the name of the scholar, who had written this review: "Herr Collegienrat Preller". I assume that the author of this review was Ludwig Preller (15.9.1809-21.6.1861). Becker (*op. cit.*) expressed his opinion that Preller, when writing this review, had been supported by *'friends from the Capitol'*, thus referring to members of the *Instituto di Corrispondenza Archeologica*, founded in 1829, and based *'on the Capitol'*.

Becker (1843; 1844) was *very* critical of some scholars, whose work he discussed in his publications, *inter alia* of Christian Karl Josias Freiherr von Bunsen, one of the founding members of the *Instituto di Corrispondenza Archeologica*, and of Luigi Canina (cf. W.A. BECKER 1844, 4-9, for the reasons), who were among those scholars of the period, who located *'the Navalia'* (the port of the warships) at the Testaccio. Becker (1843; 1844) explained his critique in detail, choosing for the latter text the following title: *Die römische Topographie in Rom eine Warnung* ('The Roman Topography at Rome a Warning'), thus referring to those scholars, based at Rome, whose work he criticized in both his publications (!).

For Bunsen and the *Instituto di Corrispondenza Archeologica* and the three buildings on the *Capitolium*, where it had been based over time; cf. *infra*, in volume 3-2, at *Appendix I.e*).

**Becker (1844, 4) writes about Preller's review of his book (i.e., of W.A. BECKER 1843):** "Herr Collegienrat Preller, der seit einiger Zeit sich in Rom aufhält, hat es übernommen, mit bereitwilliger Unterstützung der Freunde vom Capitele u. s. w. [und so weiter] die Ehrenrettung der italiänischen Topographie und namentlich des Herrn Canina auf Kosten des deutschen Namens [i.e., of W.A. BECKER] zu versuchen [with n. \*] ...". In his **note \***, Becker writes: "Jen. Allg. LZ, 1844. N. 121-127".

**Because Becker's (1843, 159-162, 629; 1844, 24-41) conclusions concerning the Navalía (the port of the warships) are correct, and because he was, to my knowledge, the first scholar to realize that 'the Navalía' (i.e., the port of the warships) were not stationed at *La Marmorata*, but instead in the southern *Campus Martius*, I am of the opinion that he should be given credit for his important findings.**

See Filippo Coarelli ("Navalia", in: *LTUR* III [1996] 340), who lists in his bibliography as the oldest publications on the subject: "Ch. Hülsen, *DissPontAcc* 6 (1896), 246-254 [*non vidi*]" and "Richter, *Topographie* (1901) 201-203".

**Richter (1901, 203 with n. 1) rightly refuted Hülsen's (1896) relevant hypotheses and mentioned "[W.A.] BECKER [1843] p. 160" for only one, albeit decisive observation by which that was possible: Becker (1843, 160), who had based his relevant observation on the above-mentioned story about Cato Uticensis.**

But Richter (1901, 203 with n. 1) did not give Becker explicitly credit for his important finding that - *inter alia* therefore - the Navalía (the port of the warships) could not possibly have been located at the *Emporium*, but instead in the southern *Campus Martius*. - And that although also Richter believed that the location of the port of the warships in the *Campus Martius* was correct (!). Note that Richter (1901, 48) himself located the *Emporium* at Cato *minor*'s time immediately outside the *Porta Trigemina* - which, in my opinion, is correct.

Richter (1901, 203 with n. 1), therefore, refuted Hülsen's hypothesis (1896), who had located the Navalía (the port of the warships) *right there* (i.e., immediately outside the *Porta Trigemina*). 'For the later period' (without indicating a precise date), Richter (1901, 200) assumed the *Emporium* at the Testaccio.

Reading Richter (1901, 203 n. 1) one wonders, whether the surprising current 'absence' in the scholarly discussion of Becker's (1843; 1844) correct location of 'the Navalía' (i.e., the port of the warships) in the *Campus Martius* was caused by Hülsen's account (1896), considering the fact that Hülsen himself (1896) assumed 'the Navalía' (the port of the warships) at a wrong location.

**Interestingly, Lucos Cozza (cf. L. COZZA and P.L. TUCCI 2006, 175 [COZZA]) quotes from a publication of 1905, in which the old, erroneous location of the Navalía (the port of the warships) at *La Marmorata* is regarded as being correct. - Cozza mentioned that at the beginning of his article, written together with Pier Luigi Tucci, because *that* had inspired him - Cozza - to his own idea developed in this article:**

"NAVALIA\*

Consultando un libro del 1905 sulla navigazione interna italiana (*Notizie raccolte dagli Ingegneri del Genio Civile Luigi Cozza e Giovanni Grillo della Berta: Laghi, Fiumi e Canali navigabili*), il nome di Luigi Cozza (1867-1955), padre di mio zio Alessandro Cozza, mi ha subito spinto a leggere il suo testo sul Tevere e a pagina 90 ho trovato lo spunto: «Le opere eseguite dai Papi per il miglioramento della navigabilità si limitarono alla costruzione dei cosiddetti porti di Ripagrande e di Ripetta. Il primo fatto eseguire nel 1692 da Papa Innocenzo XII quasi di fronte all'antico luogo d'approdo costruito dai Romani nel sito detto Navalía, oggi Marmorata».

Subito c'è stata una forte attrazione: la parola *Navalia* mi ha immediatamente portato alle lettere -LIA finali di un nome inciso su un frammento della Pianta Marmorea ...".

**Lucos Cozza knew, of course, that this old location of 'the Navalía' (i.e., the port of the warships) at *La Marmorata* was wrong. See Cozza and Tucci (2006, 176-177 with n. 3, p. 181 with n. 18 [TUCCI]), where the authors discuss in detail this old, but erroneous location of 'the Navalía' (the port of the warships) at *La Marmorata*.**

Let's now turn to the already announced epigraphs.

[3.] epigraph, COZZA 2006:

"Qui mi fermo e lascio il campo a Pier Luigi Tucci e alle critiche future che saranno comunque gradite perché, come diceva Ippocrate a proposito di scienza medica,  
**la nostra vita è breve ma le ricerche continuano,**  
**la conoscenza acquisita è ingannevole, il giudizio è difficile"** [my emphasis].

Lucos Cozza and Pier Luigi Tucci (2006, 176 [COZZA]), on their identification of the *Navalia* at *La Marmorata* (the *opus incertum* building discussed here, that had previously been identified with the *Porticus Aemilia* outside *Porta Trigemina*).

[4.] epigraph, COARELLI 1999:

"PORTICUS AEMILIA. Nel 193 gli edili curuli, M. Aemilius Lepidus (RE I Aemilius 68) e M. Aemilius Paullus (RE Aemilius 114), con il denaro di multe comminate a *pecuarii, porticum unam extra portam Trigeminiam (fecerunt) emporio ad Tiberim adiecto* (Liv. 35.10.12) ... il nesso con l'*Emporium* (v.[edi]), che venne realizzato contemporaneamente, dimostra che la *p[orticus] A[emilia]* era in prossimità del Tevere, certamente a S[ud] dell'Aventino, nella zona di Marmorata .... [page 117] ... Il collegamento tra *Emporium* e *porticus Aemilia* è confermata da Liv. 41.27.8, quando i censori del 174, Q. Fulvius Flaccus (RE VII Fulvius 61) e A. Postumius Albinus (RE XXII Postumius 26), *extra portam Trigeminiam, emporium lapide straverunt stipitibusque saepserunt et porticum Aemiliam reficiendam curarunt, gradibusque ascensum a Tiberi in emporium fecerunt* ... La continuità dei lavori nell'area è dimostrata anche dall'intervento degli edili curuli del 192, M. Tuccius (RE VIIA Tuccius 5) e P. Iunius Brutus (RE X Iunius 54), i quali, sempre con denaro delle multe, *porticum extra portam Trigeminiam inter lignarios fecerunt* (Liv. 35.41.10). Inoltre, i censori del 179, M. Aemilius Lepidus (RE Aemilius 72) e M. Fulvius Nobilior (RE VII Fulvius 91) realizzarono (Liv. 40.51.6) *forum et porticum extra portam Trigeminiam* ...

L'edificio era già stato identificato da [Luigi] Canina [1833], poi da [Rodolfo] Lanciani [1897, 40, fig. 199]. I dubbi in proposito ([Christian] Hülsen [*i.e.*, here H. JORDAN - C. HÜLSEN I.3 [1907], 173 s.], [Thomas] Asby [*i.e.*, here S.B. PLATNER - T. ASHBY [1926] 420]) erano dovuti soprattutto alle caratteristiche tecniche, cioè al tipo di muratura utilizzato, allora ritenuto non anteriore all'età sillana. Il problema è stato risolto da G. Gatti 1934, attraverso l'identificazione dell'edificio nei frammenti della *FUR* [*i.e.*, the Severan Marble Plan] (fr. 23-24, *Pianta marmorea* [1960], tav. 24) ... Dell'iscrizione collocata al margine N[ord] dell'edificio, restano solo le lettere finali [--] LIA [cf. here Figs. 102.2, above; 102.1, below]. Si è supposto (Gatti) che la parola *porticus* fosse stata tralasciata ... La tecnica muraria è un *opus incertum* in tufo di ottima qualità (uno dei più) antichi esempi databili di questa tecnica), che dovrebbe appartenere al rifacimento del 174 a.C. (le strutture del 193 a.C. erano forse realizzate in materiali deperibili ... L'*Emporium* è da identificare nell'ampio piazzale antistante, anch'esso occupato, in età imperiale, da costruzioni utilitarie [my emphasis]).

Filippo Coarelli (in: *LTUR* IV [1999] 116-117).

In the meantime, also Coarelli (2008, 359, 462-464, quoted below as the [6.] epigraph), follows Cozza and Tucci (2006) in identifying the *opus incertum* building at *La Marmorata* as *Navalia*.

[5.] epigraph, CLARIDGE 2010:

"Until recently the letters `LIA' on the Marble Plan were customarily restored as AEMILIA, and the building was identified with a *porticus Aemilia* mentioned by Livy (built by the aediles M. Aemilius Lepidus and I. Aemilius Paullus in 193 BC, rebuilt in 174 BC) which made it by over a century the oldest concrete building anywhere and also put considerable strain on the architectural definition of `porticus'.

In 2006 a new reading [by L. COZZA and P.L. TUCCI] of four letters lightly scratched below the LIA, probably a draft for an [page 404] alternative placement, has provided 'ALIA', ruling out any connection with the Aemilii and their porticus (which can return to being a more normal kind of porticus (see p. 59) and is anyway better located at the NW [north-west] end of the Aventine). The label can now be restored as NAVALIA - shipsheds - an immediately more attractive proposition, compatible with the sloping floor, the fifty divisions and the dimensions of the aisles, which resemble monumental shipsheds elsewhere in the Mediterranean [my emphasis]".

Amanda Claridge (2010, 403-404).

[6.] epigraph, COARELLI 2008:

"LA PIANURA DELL'EMPORIO

L'antico porto di Roma, situato sulla riva sinistra del Tevere, nell'ansa che fronteggia il Velabro e il Foro Boario, non aveva alcuna possibilità di espansione, stretto com'era tra quartieri già intensamente edificati. Quando, dopo la seconda guerra punica, ebbe inizio una fase di intenso incremento demografico e commerciale per la città, fu necessario cercare spazio per la realizzazione di un nuovo complesso portuale, che fosse all'altezza delle necessità che allora si presentavano. Il punto più adatto era la pianura, interamente libera, a sud dell'Aventino: qui i censori [corr.: the aediles] del 193 a.C. Lucio Emilio Lepido e Lucio Emilio Paolo, costruirono il nuovo porto (*Emporium*). Successivamente, i censori del 174 a.C. lastrarono di pietra l'Emporio, lo suddivisero con barriere, creando scalinate di discesa al Tevere.

La fronte verso il Tevere era interamente occupata da un **immenso edificio** realizzato in cementizio con paramento in opera incerta di tufo (uno dei più antichi esempi di questa tecnica), lunga 487 m, largo 60, suddiviso da 294 pilastri in una serie di ambienti ... che formavano 50 navate, larghe 8,30 m ognuna, coperte da serie di volticelle aggettanti le une sulle altre. Alcuni dei muri sono visibili nelle vie Branca, Rubattino, Florio. Il complesso distava dal fiume circa 90 m: questo spazio fu via via colmato, in seguito, e soprattutto in età traianea, da altre costruzioni.

Guglielmo Gatti [1934] ha dimostrato che l'edificio è rappresentato (insieme agli *Horrea Galbana*) in una lastra della pianta marmorea severiana, in cui precedentemente si identificavano i *Saepta Iulia* del Campo Marzio. L'identificazione proposta con la *Porticus Aemilia*, [page 463] costruita nel 194 [corr.: 193] a.C. e rifatta nel 174 a.C., fu generalmente accettata: si sarebbe trattato di conseguenza del più antico esempio di opera incerta conosciuto. Più di recente però sono state proposte altre soluzioni, basate sull'aspetto dell'edificio, che non corrisponde alla tipologia del portico, e sull'impossibilità di integrare la parte dell'iscrizione superstite, [---]LIA, con *Porticus Aemilia* per mancanza di spazio. Si è così proposto l'integrazione (*Horrea*) Cornelia, da identificare con un edificio costruito da Silla, che però [page 464] è del tutto ignoto, e soprattutto sarebbe troppo recente per il tipo di tecnica edilizia utilizzato. Sembra invece cogliere nel segno la proposta di integrare l'iscrizione con [NAVA]LIA, che corrisponde meglio allo spazio disponibile e soprattutto al graffito preparatorio dell'iscrizione, in cui si legge [-]ALIA. L'aspetto dell'edificio, con i suoi ambienti lunghi e stretti, in discesa verso il Tevere corrisponde bene al tipo di struttura, destinata a ospitare le lunghe e strette navi da guerra dell'epoca: in questo caso, cinquanta quinqueremi lunghe poco meno di 60 m. Non si tratta naturalmente del più antico porto militare romano, che è localizzato sulla riva del Campo Marzio, ma piuttosto di *Navala* ricordati da Cicerone, che li attribuisce all'architetto greco Hermodoros di Salamina, noto per la sua attività a Roma nella seconda metà del II sec.[olo] a.C. È probabile che l'opera sia stata realizzata nel corso della terza guerra punica, quindi tra il 149 e il 146 a.C., data che si addice alla tecnica edilizia utilizzata. Più tardi, quando Roma cessò di essere un porto militare, l'edificio venne convertito in un grande magazzino portuale, restringendo tra l'altro le ampie aperture verso il Tevere e chiudendole con porte [the emphasis is by the author himself]".

Filippo Coarelli (2008, 462-464).

[7.] epigraph, BERNARDO 2014:

"Porticus Aemilia: Emporium, Navalia e Horrea em um único colosso"

Gabriel Cabral Bernardo (2014: title of his article).

With the brilliant choice of the title of his article, Gabriel Cabral Bernardo (2014) is able to summarize the complex history of the building, discussed here, the *Porticus Aemilia* / *Navalia*, the history of the relevant scholarship, and of the results of the recent excavations. The author calls himself "Graduando em História pela Universidade de São Paulo", and has participated in September of 2013 at the very last excavation campaign of this building, which was directed by "Gert-Jan Burgers (Koninklijk Nederlands Instituut Rome) e Renato Sebastiani (Soprintendenza Speciale per i Beni Archeologici di Roma)"; cf. Gabriel Cabral Bernardo (2014, 124 with ns. 1; 2).

[8.] epigraph, BURGERS *et al.* 2015:

"Abstract

*The article presents the preliminary results of excavations carried out between 2011 and 2013 among the standing remains of the building commonly identified as the Porticus Aemilia, centrally located in the ancient river harbour of Rome. The common identification of this building as a warehouse has recently been questioned by another school of thought, which contends that it was the Urbs' Navalia or shipshed. The excavations allow us to conclude that such one-sided interpretations fail to do justice to the archaeological evidence, which suggests instead a highly differentiated history of occupation in the area. Although the original use of the building in the late Republican era remains obscure as yet, we have documented multiple traces of abandonment, collapse, rebuilding and restructuring for the various post-Republican phases. The excavations are particularly revealing with regard to the late first and early 2<sup>nd</sup> century AD, when parts of the building were restructured to accommodate horrea. The new data constitute the first scientifically excavated evidence of the existence of horrea in the Urbs [the italics are those of the authors]".*

Gert-Jan Burgers, R.-A. Kok-Merlino and R. Sebastiani (2015, 199).

[9.] epigraph, DE CAPRARIIS 2019:

"I *'Navalia'* di Testaccio, ormai diffusamente datati intorno al 100 a.C. [with n. 104; my emphasis]".

In her **note 104**, de Caprariis writes: "A puro titolo di esempio e perché recente esempio di utile manualistica: CLARIDGEI 2018, p. 96, tabella 5.1."

Francesca de Caprariis (2019, 172).

[10.] epigraph, WISEMAN 2021a:

"The narrow strip of land between the steep Aventine slope and the river was progressively developed as Rome's commercial port, and the early stages of that process are reported by Livy with the unvarying description *extra portam Trigeminam*. [with n. 84; my emphasis]".

In his **note 84**, Wiseman writes: "Livy 35.10.12 (*porticus* and *emporium*, 193 BC), 35.41.10 (*porticus inter lignarios*, 192 BC), 40.51.6 (*porticus*, 179 BC), 41.27.8 (*porticus Aemilia* and steps at the *emporium*, 174 BC); see for instance Le Gall, 1953: 99–103; Bruno, 2012b [*i.e.*, here D. BRUNO 2012]: 399 [my emphasis]".

T.P. Wiseman (2021a, 30).

[11.] epigraph, DE CAPRARIIS 2022:

"One of the original epigraphic arguments for the identification of the *porticus Aemilia* as *Naualia*, is inconclusive: the main inscription on fragment 23 shows for certain only the letters ]lia (fig. 5,2). On fragment 24b, that is under the main inscription, only the last two letters of the supposed supplement [*Nau]alia* are actually visible (fig. 5.3). [with n. 30] The old *Aemilia*, or *Naualia*, or indeed other readings are all possible".

In her **note 30**, de Caprariis writes: "See Arata, Felici 2011: 130. Both the first 'A' and the 'L' of ALIA are in fact the result of the misreading of a drawing by Emilio Rodriguez Almeida (it must be noted that Cozza and Tucci could not check the original fragment). The second set of letters were probably a much later attempt to copy the main inscription. The supplement ALIA would be an important corroborating point in the interpretation of Cozza and Tucci, but not a definitive one: as Tucci has stated several times, their hypothesis stands regardless of the epigraphic argument".

Francesca de Caprariis (2022, 127, with n. 30).

[12.] epigraph, DE CAPRARIIS 2022:

"5.6. Conclusion

**The only safe conclusion is that topography is not of much use 'without the history of practices and functions - what the space was used for and how uses changed'. [with n. 87] We have the traditional scenario [i.e., that of G. GATTI 1934]: in the first half of the second [page 139] century BCE the Aventine plain - the only vast area of the riverbank nearest to the old port - was occupied principally by commercial installations: in terms of speed this would have been a dramatic change and would immediately reflect the needs of a rapidly growing capital on the urban fabric. With the development of the *porticus Aemilia* and the *emporium* in the Aventine plain M. Aemilius Lepidus and L. Aemilius Paulus did indeed hold an *insignis aedilitas*: a brilliant and forward-looking urban plan, and the provision of a suitable infrastructure for the safe supply of grain.**

The old scenario has undoubtedly the advantage of providing a consistent historical context and frankly seems by far more realistic. Historical consistency is an advantage that the new scenario [i.e., that of L. COZZA, P.L. TUCCI 2006; TUCCI 2012] lacks; it is founded on evocative visual and planimetric analogies, but the actual evidence is less telling and far more uncertain. Moreover, the two scenarios are not compatible: one rules the other out. [with n. 88]. The historical consequences of this topographical debate can be summarized in fig. [5.]7a-b. The first actually suitable spot downriver for the commercial expansion is the site of the presumed *naualia*. Choosing it in order to duplicate an already existing and functioning arsenal implies a specific choice of urban layout in which the military aspect is paramount: the choice of a city-state at war, rather than that of a Mediterranean capital [my emphasis]".

In her **note 87**, de Caprariis writes: "Cf. Harris 1999: 10 about Late Antique Rome".

In her **note 88**, she writes: "See, e.g., the position of the *emporium* as shown in Mignone 2016: 86 or Claridge 2018: map 13".

Francesca De Caprariis (2022, 138-139 with ns. 87; 88).

**In the following will be discussed the statements of those scholars, which appear in the epigraphs [1.] - [12.], quoted in Section I. Introduction and above, in this Section III., that relate to the 'Porticus Aemilia' / Navalía at La Marmorata.**

The previous location of the *Porticus Aemilia* at the (alleged) *Emporium*, as for example maintained by Coarelli in the entry of the *LTUR* IV (1999) 116-117, quoted above as the [4.] epigraph, has in the meantime been rejected by Lucos Cozza and Pier Luigi Tucci (2006), because the enormous structure in question (cf. here **Figs. 102; 102.1; 102.2; 102.3**), documented by the Severan Marble Plan at *La Marmorata*, which has traditionally been identified with the *Porticus Aemilia* outside *Porta Trigemina*, can be identified with *Navalia*

instead. That is to say, with 'shipsheds' - but not with 'the *Navalia*', the port of the warships, discussed above in Section II. and illustrated on the medallion here **Fig. 107**, but rather with a shipyard for those warships; cf. Cozza and Tucci (2006, 197, quoted *supra*, in Section I. as the **[1.] epigraph**). - In the meantime, also Coarelli (2008, 462-464, quoted above as the **[6.] epigraph** in this Section III.) follows Cozza and Tucci (2006) in identifying the *opus incertum* building at *La Marmorata* as *Navalia*.

Cozza and Tucci have arrived at this conclusion for a variety of reasons, to be discussed below. Now, since we know that this '*Porticus Aemilia*' was located 'outside the *Porta Trigemina*' of the Servian city Wall, that is to say, immediately to the south of the *Forum Boarium*; cf. Coarelli ("Porticus Aemilia", in: *LTUR* IV [1999] 117, quoted above in this Section as the **[4. epigraph]**), it is anyway difficult to imagine that the structure so named could possibly have stood half a kilometre away, to the south of the Aventine. It was rather located, as suggested by Amanda Claridge (2010, 404, quoted above as the **[5. epigraph]**), 'at the northwest end of the Aventine'. - But, as we have just seen, de Caprariis (forthcoming 2022, 135-139, in part quoted above as the **[12.] epigraph** in this Section III.), still locates the '*Porticus Aemilia* outside *Porta Trigemina*' at *La Marmorata*.

Also Giuliano Giovannetti (2016, 21 with n. 13) identifies the *Porticus Aemilia* (*contra* L. COZZA and P.-L. TUCCI 2006), again, like Coarelli ("Porticus Aemilia", in: *LTUR* IV [1999] 116-117), with the huge structure at the (alleged) *Emporium* at *La Marmorata* cf. here **Figs. 102; 102.4**). Giovannetti does not base his judgement on Francesco Paolo Arata's and Enrico Felici's account (2011), who have likewise rejected Cozza's and Tucci's hypothesis (2006) to identify this building at the Testaccio as *Navalia*. - My thanks are due to Francesco Paolo Arata, who, on 7th January 2021, was so kind as to send me, by request, the article written by himself and Enrico Felici ("Porticus Aemilia, *navalia* o *horrea*? Ancora sui frammenti 23 e 24 b-d della Forma Urbis", 2011).

Pier Luigi Tucci (2012, quoted *verbatim infra*) has responded to Arata and Felici (2011), documenting in more detail the hypotheses, presented in the earlier article by Cozza and himself (2006), and is, in my opinion, able to confirm that the structure at the Testaccio is certainly not the '*Porticus Aemilia* outside the *Porta Trigemina*'. - To the question, how Livy's (35,10,12) description of the *Porticus Aemilia* as being located 'outside the *Porta Trigemina*' may be interpreted, see now most recently, T.P. WISEMAN (2021a, 30, quoted above, as the **[10. epigraph]** in this Section III.), who locates the *Porticus Aemilia* outside the *Porta Trigemina*, as Livy writes (but not any more at the Testaccio, as he had done in 1993, 184 with n. 21). Wiseman's relevant passage is quoted above, in this Section III. as the **[10.] epigraph**. - To this I will come back below, when discussing the essays of Francesca de Caprariis (2019; *ead.* 2022).

*In the context discussed here, we need to understand the debated location of the Horrea Aemiliana*

To the north of the *Porta Trigemina* within the Servian city Wall, that is to say, between the *Forum Boarium* and the Tiber, and precisely underneath the building accommodating the Anagrafe, have been excavated *Horrea*, which Coarelli (1993; confirmed by F. COARELLI 2019a, 213-214) and Giuliano Giovannetti (2016, 20-21) convincingly identify as the *Horrea Aemiliana*, which are known from literary sources.

Giovannetti (2016, 20) writes about Trajan's important building works at Rome, to which also the structures at *La Marmorata*, the (alleged) *Emporium* (cf. here **Fig. 102; 103**) belong, that he himself discusses:

"Questa operazione di rinnovo delle strutture fluviali non si limitò all'area di Testaccio, ma dovette coinvolgere un più ampio tratto della riva del Tevere, come è testimoniato dalle strutture horrearie rinvenute per gli scavi del palazzo dell'Anagrafe nell'area dell'ex *Portus Tiberinus*, variamente identificate negli *horrea Aemiliana* [with n. 10]" - and otherwise. These *Horrea*, excavated at the building site of the 'Palazzo dell'Anagrafe', are dated by brick stamps to the Trajanic period, writes Giovannetti (2016, 20-21, with n. 11), but they were erected at the site of pre-existing structures dating to the Republican period. For those Republican structures; cf. Emilio Rodríguez Almeida (1993, 19-20, Figs. 4-5). For those earlier structures most

recently; cf. Francesca de Caprariis (2019, 164, n. 42, providing references), who herself does not discuss the findings of Giovannetti (2016).

See Giovannetti ("La struttura portuale di lungotevere Testaccio: una nuova analisi della documentazione", 2016, 20 with n. 9, providing a reference), who convincingly compares the building technique of these important Trajanic structures at Rome with those of the "costruzione del nuovo bacino portuale di Portus". Burgers *et al.* (2014a; 2014b and 2015) could, of course, not as yet discuss Giovannetti's important findings.

Considering Giovannetti's (2016) results, it does not surprise at all that, according to Burgers *et al.* (*op.cit.*) also the drastic architectural changes, by which at least parts of the *opus incertum* building at *La Marmorata*, the 'Porticus Aemilia' / *Navalia*, were turned into, and henceforth used, as *Horrea*, are likewise datable in the Trajanic/ Hadrianic period. Cf. the abstract of Burgers (*et al.* 2015), quoted above, as the [8.] epigraph in this Section III.

**These important building works, studied by Giovannetti (2016) had obviously been financed with the booty from Trajan's Dacian Wars. But, as already said above and not otherwise expectable in this volume, Giovannetti (2016, 20) has observed that the new port building comprising docks, erected at the commercial river port at the Testaccio/ *La Marmorata*, had already been begun by Domitian at the end of his reign (!).**

For Trajan's Dacian Wars in detail; cf. *infra*, in volume 3-2, at Appendix IV.d.2.e); Appendix IV.d.2.f); and below, at *The third Contribution by Peter Herz : Der Übergang von Trajan auf Hadrian und das erste Regierungsjahr Hadrians*.

In his note 10, Giovannetti (2016) writes: "COARELLI 1993 [in: *LTUR* vol. I], pp. 18-19, colloca questi magazzini, interpretati come horrea annonari[a] legati alle frumentationes, nell'area dei resti rinvenuti per i lavori del palazzo dell'Anagrafe, sulla base di Varr., r. r. III, 2, 6 che associa gli horrea alla Porta Flumentana, che doveva collocarsi proprio nel foro Boario e sulla base di un' iscrizione (CIL, XV, 7150) che indicherebbe la vicinanza degli horrea all'area del Circo Massimo [my emphasis]".

**But note that Coarelli (2019a, 214) now assumes the storage of the grain, which was distributed in the frumentationes, not only at the Horrea Aemiliana in the old river port at the Forum Boarium, but also at another building called Aemiliana in the Campus Martius.**

**Concerning these Aemiliana of the Campus Martius, Coarelli (2019a, 214) writes:**

"Comunque, gli Aemiliana del Campo Marzio vanno collocati negli immediati paraggi della zona dove avevano luogo tali distribuzioni, cioè della porticus Minucia ...". Cf. Coarelli (2019a, 229-254, Section: "4. Porticus Minucia"; pp. 254-267, Section: "5. L'identificazione della porticus Minucia: una risposta alle critiche recenti"), in which he (especially on pp. 263-265), in my opinion convincingly, defends his own identification of the porticus Minucia vetus with the porticus on Via delle Botteghe Oscure, which comprised the Temple of the Nymphs: the Porticus Minucia Frumentaria, built by Domitian. For that identification; cf. Häuber (2017, 59-60). For Domitian's Porticus Minucia Frumentaria; cf. above, in Chapter Preamble; Section III., at point 3.); and at Chapter II.3.1.c); and *infra*, in volume 3-2, at Appendix IV.d.4.b).

**Giovannetti (2016) himself does not list "COARELLI 1993" in his bibliography, but he obviously refers to Coarelli's entry in the Lexicon Topographicum Urbis Romae ("Aemiliana", in: *LTUR* I [1993] 18-19, Figs. 4-5).**

**Immediately after Coarelli's entry on the "Aemiliana" follows Emilio Rodríguez Almeida's discussion of the same toponym ("Aemiliana", in: *LTUR* I [1993] 19-20, Figs. 4-5), who suggests that for the location of those Horrea Aemiliana, known from literary sources, the site of the above-mentioned area of *La Marmorata*, the (alleged) Emporium (cf. here Fig. 102) seems, in his opinion, to be preferable.**

**At the time, when this first volume of the *Lexicon Topographicum Urbis Romae* (LTUR I, 1993) came out, scholars found it very remarkable that *two* (contradictory) entries on the same subject (i.e., the "Aemiliana") were published in the same lexicon, one after the other.**

On my map Fig. 73, the site of those *Horrea*, found in the building site of the 'Palazzo dell'Anagrafe', which I, following Coarelli ("Aemiliana", in: LTUR I [1993] 18-19; confirmed now in *id.* 2019a, 213-214), identify with the *Horrea Aemiliana*, is labelled as: HORREA, on my map Fig. 58, this site is labelled as: PORT. - For the toponyms, marked on my map Fig. 73; cf. Häuber (2005, *passim*), for an earlier version of this map, 'Arbeitskarte 5'; cf. also Häuber (2014a, map 5 = here Fig. 73).

Cf. here Fig. 73, labels: ARX; CAPITOLIUM; Servian city Wall; PORTA CARMENTALIS; PORTA TRIUMPHALIS; Via del Foro Oltorio; TIBERIS; Via Luigi Petroselli; HORREA [AEMILIANA]; Area Sacra S. Omobono; [Temples] A; B; PORTA FLUMENTANA; site of "Fornix Augusti"; PONS AEMILIUS [i.e., the 'Ponte Rotto']; AEDES: PORTUNUS; FORUM BOARIUM; Round Temple; PORTA TRIGEMINA/ ARCUS LENTULI ET CRISPINI. Cf. Fig. 58, labels: CAPITOLINE; Servian city Wall; TIBER; PORT; PONS SUBLICIUS; PORTA TRIGEMINA; FORUM BOARIUM; Servian city Wall; PORTA TRIGEMINA; CLIVUS PUBLICIUS [here identified with the Clivo dei Publicii]; AVENTINE.

**As we have seen above, in Section I., Coarelli (2019a) now discusses two different locations for the *Statio Annonae*, the earlier of which he still assumes at the site of the *Horrea Aemiliana*.**

Cf. Coarelli (2019a, 8, Fig. 1: "Pianta d Roma con la posizione degli uffici amministrativi ... 6. Annona [where COARELLI locates the office of the *Statio Annonae* at the site of the building of his p. 159, Figs. 75-77; cf. *infra*]. On the one hand, Coarelli maintains his earlier suggestion that the *Statio Annonae*, being an archaic institution, was located at the old *Portus Tiberinus* adjacent to the *Forum Boarium*, and precisely, at the *Horrea Aemiliana*; cf. Coarelli (2019a, 136 with ns. 2, 3, p. 211). See also Coarelli (2019a, 213-214), where he confirms his earlier (1993) location of the *Horrea Aemiliana* at the site of the Palazzo dell'Anagrafe. Coarelli tentatively suggests also that later the *Statio Annonae* could have been accommodated in a building, datable in the imperial period, that was excavated to the west of the *Circus Maximus*. This building stood between the *carceres* of the *Circus Maximus* and the northern slopes of the Aventine; cf. Coarelli (2019a, 158-159, Figs. 75-77).

**In his discussion of the *Horrea Aemiliana*, Coarelli (2019a, 213) mentions also the *Pons Aemilius***

To the *Pons Aemilius* has in the past been attributed the inscription on fragment 621 of the Severan Marble plan which reads: 'AEMILII'; in Coarelli's opinion (most recently: 2019a, 213), this is not true. Because Rodríguez Almeida (1981), in Coarelli's opinion (2019a, 213 with n. 81), has correctly attributed this fragment of the Severan Marble Plan to the area in question, Coarelli, in my opinion convincingly, attributes the inscription 'AEMILII' to the *Horrea Aemiliana*. - Cf. Emilio Rodríguez Almeida (1981, 115-118, tav. XXIV).

Cf. Filippo Coarelli ("Aemiliana", in: LTUR I [1993] 19): "Tra i frammenti della pianta marmorea severiana che sembrano rappresentare questi *horrea*, FUR [i.e., *Forma Urbis Romae*, the Severan Marble Plan, fragment] 621 reca la scritta incompleta AEMILII, da integrare verosimilmente *Aemili[ana]* (la scritta non può infatti appartenere al vicino *pons Aemilius*, cui si riferisce già l'altra didascalia della pianta marmorea, *inter duos pontes*). [Per tale interpretazione v.[edi] sotto, *Aemiliana* di E. Rodríguez Almeida]". - The comment at the end of this lexicon article, in square brackets, is an addition by the editor, E.M. Steinby. - To Rodríguez Almeida (1993) I will come back below.

For a drawing of the fragment 621a-d, which carries the inscription 'AEMILII'; cf. LTUR I (1993, 358, Fig. 4; the caption reads: "Aemiliana FUR [i.e., here G. CARETTONI *et al.* 1960], fr. 620, 621a-d, 623, 625, 626, 627, 628a-b, 630 (da Coarelli, *Foro Boario* [1988], 154 fig. 27)".

See also Coarelli ("Pons Aemilius", in: *LTUR* IV [1999] 106-107, Figs. II, 123-125; 37).

**After having written this down, I found out that, already long ago, this complex subject has also been discussed by T.P. Wiseman (1990; 1993). This leads us to an inscription, which may perhaps prove that the *Horrea Aemiliana* (as also all other ware houses ?) had their own (fleet of) ships:**

**The inscription *CIL* XV 7150 (*navis harenaria quae servit in Aemilianis*)  
and the three toponyms called 'Aemiliana' at Rome**

The here-so-called first toponym called *Aemiliana* was located in the old commercial river port, and, as already mentioned above, Coarelli (2019a, 213-214) identifies this toponym *Aemiliana* with *Horrea Aemiliana*, which he identifies with the huge warehouse, excavated in part at the building site of the Palazzo dell'Anagrafe (I am following his hypotheses here); the here-so-called second toponym called *Aemiliana* referred to a building in the *Campus Martius* in the vicinity of the *Diribitorium*. Coarelli (1993, 18-19; *id.* 2019a, 214) identifies this building as a warehouse, where grain was stored that was distributed in the *Porticus Minucia Frumentaria*. After a discussion of those two toponyms called *Aemiliana* will follow below a short summary concerning the here-so-called third toponym *Aemiliana*: this was located on the Quirinal, at the site of the former *Villa* or *Horti* of Scipio Africanus *maior*/ Scipio Aemilianus, and was also referred to by Tacitus (*Ann.* 15, 40) as *praedia Tigillini Aemiliana*.

**T.P. Wiseman (1990, 733) writes in his review of Coarelli (*Il Foro Boario dalle origini alla fine della repubblica*, 1988) :**

"Another important discussion ([in: F. COARELLI 1988, pp.] 147-55) concerns the place - or places - called 'Aemiliana'. Varro (*RR* III 2.6) refers to two areas technically outside the city : *nam quod extra urbem est aedificium, nihilo magis ideo est villa, quam eorum aedificia qui habitant extra portam Flumentanam aut in Aemilianis*. According to C.[oarelli], the two final phrases are a hendiadys referring to the same place : the *Aemiliana* were *horrea Aemiliana*, warehouses by the river harbour.

His [*i.e.*, Coarelli's] best argument is *CIL* XV 7150, which refers to a *navis harenaria quae servit in Aemilianis*, and he reads fragment 621 of the *Forma Urbis* [*i.e.*, the Severan Marble Plan] **not as AEMILI [VS PONS]** [with n. 5] **but as AEMILI[ANA], which is certainly possible**. But why should Varro use two different phrases to refer to the same place? And why should hairdressers and cosmeticians (*CIL* VI 37811) live and work in a warehouse?

Even more serious is Suet. *Claud.* 18.1, which shows the emperor occupying the *Diribitorium* to provide help during a fire in *Aemilianis*. C.[oarelli] tries to explain this with a very tenuous argument: (a) the *Aemiliana* were grain warehouses ; (b) the *Diribitorium* was next to the *Porticus Minucia*, where *frumentum publicum* was distributed; (c) the Suetonius passage refers to Claudius' 'urbis annonaeque cura'. But (a) is a mere assumption; (b) does not explain why Claudius should occupy one site supposedly relevant to the grain supply when another was on fire; and (c) fails to distinguish between Suet. *Claud.* 18.1 (*cura urbis*) and 18.2 (*cura annonae*) - our passage is an example of the former.

**The conclusion is inescapable: there were at least two places known as *Aemiliana*. It may not be a coincidence that there were at least two *porticus Aemiliae*, both built by the aediles M. Lepidus and L. Paullus in 193 BC (*Livy* XXXV 10. 12). One was along the road just north of the *arx*, from the *Porta Fontinalis* to the altar of Mars: that would fit the Varro passage (technically outside the city) and Suetonius' reference to the *Diribitorium* (nearby but not dangerously close). The other was the great warehouse by the *emporium*, rebuilt in 174: that would fit the *navis harenaria* inscription. The Aemilii were a very conspicuous family ; they gave their name to a bridge, a basilica, two great roads, even a whole *regio* of Augustan Italy. It would be not surprising if their two porticoes gave rise to *Aemiliana* as a toponym in both the relevant areas of Rome [my emphasis]".**

**Discussing those two buildings again in his article "Rome and the resplendent Aemilii", Wiseman (1993, 184) writes: "And both constructions [*i.e.*, both *Porticus Aemilliae*] evidently gave rise to the toponym *Aemiliana*, surviving in both places even in the imperial period [with n. 22; my emphasis]"**.

In his **note 22**, Wiseman writes: " (a) *CIL* XV. 7150 (*navis harenaria quae seruit in Aemilianis*) must refer to a riverside location; (b) *Suet. Claud.* 18. 1 (Claudius at the *Diribitorium* during a fire in the *Aemiliana*) must refer to the Campus Martius area; Varro, *RR* 3. 2. 6, Tac. *Ann.* 15.40 and *CIL* VI 37811 are more likely to refer to (b) than to (a). F. Coarelli, *op. cit.* (n. 26 below [*i.e.*, F. COARELLI 1988]), pp. 147-55, makes a heroic effort to attribute all the references to the same place, but in vain: see *Gnomon*, 62 (1990) [*i.e.*, T.P. WISEMAN 1990, quoted *verbatim* above], 733".

**Contrary to Wiseman's (1993, 184, n. 22) own intentions he has - unwittingly - already quoted a literary source that possibly refers to the here-so-called third toponym *Aemiliana* : Tacitus (*Ann.* 15,40).**

See for that: Emilio Rodríguez Almeida (1993, 20), who, after discussing the literary sources that, according to Wiseman (1990; 1993), refer to the here-so-called first and second toponym *Aemiliana*, writes:

"Pare sicuro, comunque, che da questi generici *A.[emiliana]* si devono distinguere i *praedia Tigillini Aemiliana* di cui [parla] Tacito, *ann.* 15.40, a proposito dell'incendio neroniano.

[L. Vidman, *Fasti Ostienses*<sup>2</sup> [1982], 71 distingue fra gli *A.[miliana]* situati sul fiume, e gli *A.[miliana]* che sarebbero da localizzare nelle vicinanze del *Diribitorium*, forse sulle pendici del Quirinale, cfr. *Suet. Claud.* 1.1 n.d.r.] [my emphasis]"

The comment at the end of this lexicon article, in square brackets ("n.d.r." = nota della redazione), is an addition by the editor, Eva Margareta Steinby.

To Vidman (1982, 71) I will come back below.

**For the two toponyms called *Aemiliana*, discussed by Wiseman (1990; 1993) in the above quoted passages, see also Ö. Harmanşah "Aemiliana (1)", in: Haselberger *et al.* 2002 [= 2008] 41); and A.B. Gallia and E.J. Kondratieff ("Aemiliana (2)", in: Haselberger *et al.* 2002 [= 2008] 41).**

**I myself have elsewhere discussed the here-so-called third toponym *Aemiliana*, the site of the former *Villa* or *Horti* of Scipio Africanus *maior*. Scipio Africanus *maior* was married to Aemilia, the sister of L. Aemilius Paullus, one of the two aediles who, in 193 BC, had built 'the *Porticus Aemilia* outside *Porta Trigemina*' discussed here. These *Horti* of Scipio Africanus *maior* were later owned by his son-in-law, Tiberius Sempronius Gracchus, the father of the tribunes Tiberius and Gaius Sempronius Gracchus and of Sempronia, who should marry Scipio Aemilianus.**

**Cf. Häuber (1994 II, 912 with ns. 13-31; and *ead.* 2017, 148-149, Section: "The *horti Scipionis* on the *Collis Latiaris*"):**

" ... Pierre Grimal (1984, 125) has alerted us of the fact that, 'since the end of the Republic, the entire quarter outside the Servian city Wall, immediately to the north of the Capitoline, up to the first slopes of the Quirinal, had been known under the name >*Aemiliana*<'. As he likewise convincingly suggested (cf. Grimal 1984, 124; cf. pp. 123-125), part of the vast property of the *horti Scipionis* was later owned by Agrippa, a fact that, in Grimal's opinion, had certainly facilitated his project to build the *Aqua Virgo*. On p. 106 n. 8, Grimal 1984 wrote that the area of the *horti Scipionis* belonged to the *Campus Martius*. I myself follow T.P. Wiseman [page 149] 1993b, 220, who suggests instead that the boundary of the *Campus Martius* in the east had 'probably' always been the *Via Flaminia/Via Lata*. But Wiseman 1993b, 222, writes also: 'Scipio Africanus owned *horti* in the *Campus* (Cic. *nat. deor.* 2.11, *ad Q. fr.* 2.2.1; cf. Gran. Lic. 9.4 F) ...'; cf. F. Coarelli 2014a [*i.e.*, here F. COARELLI 2014], 124-125 (to this I will return below, *infra*, p. 328).

For literary sources, that corroborate Grimal's observation that there had existed a quarter, called *Aemiliana*, in the area indicated by Grimal (*op.cit.*); cf. L. Richardson, JR. (1992a, 3; *s.v.* *Aemiliana*, and *op.cit.*, p. 11, *s.v.* *Amphitheatrum Statilii Tauri*; quoted *verbatim infra*, p. 328); Rodríguez Almeida ("*Aemiliana*", in: *LTUR I* (1993) 19-20, Figs. 4-5); and Andrew B. Gallia and Eric J. Kondratieff ("*Aemiliana* (2)", in: Haselberger *et al.* 2002 [= 2008] 41)".

Cf. Häuber (2017, 145-148, Section: "The *Sepulcrum* of the Sempronii", which, in my opinion, stood within the area of the *Villa / Horti* of Scipio Africanus *maior*/ Scipio Aemilianus; cf. pp. 151-153, Section: "**The consular auspices, preceding the elections at the Saepa, that were taken [by the consul Tiberius Sempronius Gracchus, the father of Tiberius and Gaius Gracchus] on the Collis Latiaris at the horti of Scipio Africanus maior (in 163 BC, as described by Cicero Nat. D. 2.3.10-11) [my emphasis]**"; cf. pp. 149-153, for the most recent findings concerning the *Villa* or *Horti* of Scipio Africanus *maior*/ Scipio Aemilianus, *inter alia* published by Coarelli (2014, 122-129), who is able to prove that the Cornelii Scipiones had indeed property in the area in question. Cf. Coarelli ("*Horti Scipionis*", in: *LTUR III* [1996] 83), where he had already tentatively located the '*Horti Scipionis*' on one summit of the Quirinal, the *Collis Latiaris*.

**See most recently on those consular auspices, taken by the consul Tiberius Sempronius Gracchus on the Collis Latiaris on the Quirinal; cf. Filippo Coarelli ("*Collis Catialis e Auguraculum del Quirinale a proposito di un articolo recente*", 2022a, 272 with n. 36). As the title of his article implies, Coarelli follows G. Gruchalski (2020) in accepting that the toponym '*Collis Latiaris*' for the south-western summit of the Quirinal should be corrected in: '*Collis Catialis*'.**

**For the here-so-called first, second, and the third toponym *Aemiliana*, the *Villa* of Scipio Aemilianus, or *praedia Tigellini Aemiliana*, cf. most recently, Coarelli (2019a, 212 with ns. 75-79) :**

"Prima di procedere oltre, è necessario esaminare un altro testo che, per il collegamento erroneamente stabilito con gli *Aemiliana* di Varrone [here, following COARELLI, referred to as the first toponym *Aemiliana* in the old commercial river port] e con quelli di Suetonio [here, following COARELLI, referred to as the second toponym *Aemiliana* in the *Campus Martius*, near the *Diribitorium*], ha costituito a lungo un ostacolo a quella che ci sembra la giusta soluzione del problema. A proposito dell'incendio neroniano, Tacito [with n. 75] afferma che, dopo un apparente sosta, le fiamme sarebbero riprese con rinnovato vigore a partire da un luogo denominato *praedia Tigellini Aemiliana* [with n. 76].

**Che si tratti di una realtà diversa da quelle finora considerate risulta anche dal fatto che si parla di una proprietà di Tigellino, ciò che aveva contribuito ad acuire il sospetto sulle responsabilità di Nerone nell'incendio: abbiamo a che fare, naturalmente, con un complesso privato. Potrebbe trattarsi, ad esempio, della villa suburbana di Scipione Emiliano [with n. 77], forse localizzata sul Quirinale [with n. 78]. Considerare questa posizione ``più vicina'' al *Diribitorium* rispetto alla riva del Tevere e quindi più accettabile per gli *Aemiliana* menzionati da Suetonio nella vita di Claudio, come pretende Vidman [with n. 79], è oltretutto errato: tra la zona di Magnanapoli, dove forse va collocata la villa di Scipione, e il *Diribitorium* ci sono circa 800 metri di linea d'aria; tra quest'ultimo e il Tevere circa 500 [my emphasis]**".

In his **note 75**, Coarelli writes: "Tac., *ann.* 15.40".

In his **note 76**, he writes: "*LTUR IV*, pp. 158 s. (E. Papi)".

In his **note 77**, he writes: "Cic., *nat. deor.* 2.4.11".

In his **note 78**, he writes: "*LTUR III*, p. 83 (F. Coarelli)".

In his **note 79**, he writes: "Sopra, nota 60".

Cf. Coarelli's note 60: "[*fasti Ostienses*] I.I. XIII 1, p. 191; VIDMAN 1982, 38, 3. p. 43 (commento a p. 71, dove si propone giustamente di collocare gli *Aemiliana* vicino al *Diribitorium*, escludendo di conseguenza l'identificazione con l'edificio omonimo di *CIL XV 7150*, sul quale si veda COARELLI 1988b [*i.e.*, here F. COARELLI 1988], pp. 147-155; *LTUR I*, pp. 19-20 (F. Coarelli, E. Rodríguez [Almeida]). Vanno qui menzionati i liberti *de Aemilianis* attestati nella necropoli tra Porta Salaria e Porta Pinciana (*CIL VI 37811 = ILS 9427*), che potrebbero far parte del personale di questi *horrea*".

**To Coarelli's just-quoted text (2019a, 212 with ns. 77, 78), I should like to add a comment:**

Reading this detail it is obvious that Coarelli developed this book (2019a) from a very old manuscript, as he himself (2019a, 7) writes. Because, as mentioned above: in the meantime 'Coarelli (2014, 122-129) was able to demonstrate that the Corneli Scipiones had indeed property in the area in question', which is why his tentative location of the 'Horti Scipionis' in the above-quoted text (*i.e.*, 2019a, 212): 'in the area of the Largo Magnanapoli' is now proven to be correct. To be precise: Coarelli (2014, 127-129) has based himself on a (lost) inscription (*CIL* I<sup>2</sup>, p. 202, VI 31608), inscribed on a marble pedestal, that was found in 1877 'between Palazzo Rospigliosi and Via Mazzarino'. This inscription reads: *P. Cornelius P.f. / Scipio*, and belonged, in Coarelli's (convincing) opinion, to a portrait on display in a *Lararium* that had represented Scipio Africanus *maior* or Scipio Aemilianus; cf. Häuber (2017, 152-153).

**To the "praedia Tigellini Aemiliana", mentioned by Coarelli (2019a, 212 with n. 76), we will come back below, when discussing De Caprariis (2019, 172), who (erroneously) locates that estate at the Testaccio:**

De Caprariis (2019, 172, with note 105) writes: "Un approcio possibile e auspicabile sarebbe anche un censimento attento delle testimonianze per l'età repubblicana nella pianura aventina [*i.e.*, of the quartiere Testaccio; with n. 105]".

In her **note 105**, de Caprariis writes: "Che potrebbe rivelare delle sorprese, a partire dal quadro anche familiare e affaristico dell'occupazione della pianura fatto da Robert Étienne (1987, pp. 235-249). Le testimonianze letterarie sono deboli ma non inesistenti: **oltre i praedia Sulpicia (ÉTIENNE 1987, pp. 230-242), i problematici praedia Tigellini Aemiliana in connessione con gli horrea galbana (GUILHEMBET, ROYO 2008, pp. 213-216), collegherebbero topograficamente le proprietà delle due gentes** [my emphasis]".

**For the locations of the here-so-called three toponyms Aemiliana at Rome discussed here :**

1.) the *Horrea* , excavated at the site of the Palazzo dell'Anagrafe in the old river port close to the *Forum Boarium*; 2.) a (so far unidentified) warehouse in the *Campus Martius*, close to the *Diribitorium* and the *Porticus Minucia Frumentaria*; and 3.) the site of the former *Villa* or *Horti* of Scipio Africanus *maior*/ Scipio Aemilianus on the *Collis Latiaris* (one summit of the Quirinal)/ Largo Magnanapoli, bound in the west by the *Via Flaminia*/ *Via Lata*, that is to say, by the *Campus Martius* (this estate was later referred to by Tacitus, *Ann.* 15,40, as *praedia Tigellini Aemiliana*) :

Cf. here **Figs. 58; 59; 73**, labels: TIBER; PONS AEMILIUS; PORT; HORREA [AEMILIANA]; FORUM BOARIUM; CAMPUS MARTIUS; SAEPTA; DIRIBITORIUM; PORTICUS MINUCIA FRUMENTARIA; VIA FLAMINIA/ VIA LATA/ Via del Corso; "Via Petrarca" / CLIVUS SALUTIS ? Piazza SS. Apostoli; S. Croce; Pontificia Università Gregoriana; HORTI / VILLA : SCIPIO AFRICANUS MAIOR / SCIPIO AEMILIANUS; AEMILIANA; Via della Dataria; SEPULCRUM : SEMPRONII; Servian city Wall; PORTA SALUTARIS; QUIRINAL; ALTA SEMITA; Site of AEDES : SALUS; Palazzo del Quirinale; Fontana di Monte Cavallo/ 'Quirinal obelisk'; COLLIS MUCIALIS; COLLIS LATIARIS (CATIALIS); PORTA SANQUALIS; Largo Magnanapoli; Palazzo Pallavicini Rospigliosi; Via Mazzarino.

***The discussion of the Navalía (here Fig. 102) by Amanda Claridge (2010); part of this text was chosen as the [5.] epigraph in this Section III.***

The author identifies the *opus incertum* building at *La Marmorata* as *Navalía*.

Cf. Claridge (1998, 367-368): "Monte Testaccio - the Amphora Mountain. Map, Fig. 181: 5", pp. 368-369: "Porticus Aemilia. Map Fig. 181: 7"; *ead.* 2010, 402-403: "Monte Testaccio - the Amphora Mountain. Map, Fig.

182: 6"; pp. 403-405: "Navalia (*Porticus Aemilia*) and Tiber Wharves. Map, Fig. 182: 8". Cf. pp. 403-404, where Claridge states that the building hitherto (erroneously) referred to as the *Porticus Aemilia* should instead be identified as *Navalia*, shipsheds: "Until recently the letters 'LIA' on the Marble Plan were customarily restored as AEMILIA, and the building was identified with a *porticus Aemilia* mentioned by Livy (built by the aediles M. Aemilius Lepidus and L. Aemilius Paullus in 193 BC, rebuilt in 174 BC) which made it by over a century the oldest concrete building anywhere and also put considerable strain on the architectural definition of 'porticus'. In 2006 a new reading [by L. COZZA and P. L. TUCCI] of four letters lightly scratched below the LIA, probably a draft for an [page 404] alternative placement, has provided 'ALIA', ruling out any connection with the Aemilii and their porticus (which can return to being a more normal kind of porticus (see p. 59) and is anyway better located at the NW [north-west] end of the Aventine) [my emphasis]".

**This (approximate) location of the *Porticus Aemilia* is also suggested by T.P. Wiseman (2021a, 30, quoted above as the [10.] epigraph in this Section III.**

But note that Wiseman (*op. cit.*) does not consider in his reasoning the findings of Pier Luigi Tucci (2011-2012) concerning the location of the *Pons Sublicius*, who assumes this bridge much more to the south. Interestingly, already Lanciani (*FUR*, fol. 34) had located the "PORTA TRIGEMINA", and, consequently, also the "PORTICVS EXTRA PORTAM TRIGEMINAM", in precisely the same area as now Tucci (2011-2012, 180, Fig. 2): under the steep western slope of the Aventine (below the Basilica of S. Sabina), midway between the *Forum Boarium* and the Testaccio, and precisely there, where, at Lanciani's time, remains of the pillars of an ancient bridge were still extant, which for example already Giambattista (G.B.) Nolli in his large Rome map (1748; cf. here **Fig. 153**) had attributed to the "Vestigia del Ponte Sublicio", as Tucci. (2011-2012, 185, with Fig. 4) observes; cf. Tucci (2011-2012, 203, Fig. 8, for the former location of the pillars of this bridge, below the Basilica of S. Sabina).

**Fig. 153. The area under the steep western slope of the Aventine (below the Basilica of S. Sabina) on Giambattista (G.B.) Nolli's Large Rome map (1748), who labelled the stone pillars in the Tiber, which were visible at his time, as "Vestigia del Ponte Sublicio".**

Lanciani (*FUR*, fol. 34) labels these (former) pillars of an ancient bridge as "VESTIGIA PONTIS". To the north of his 'Porta Trigemina', Lanciani (*FUR*, fol. 34) labels the Clivo di Rocca Savella as "IMVS PVBLICII CLIVVS". Although the *Clivus Publicius* is mentioned in the flight of Gaius Gracchus in 121 BC: from the Aventine, running (or rather: limping; cf. T.P. Wiseman 2021a, 33) down the *Clivus Publicius*, passing through the *Porta Trigemina* in the Servian city Wall and over the *Pons Sublicius* to Trastevere, Lanciani does not mark the *Pons Sublicius* on his *FUR* (fols. 28; 34) !

To Gaius Gracchus flight, the (real) *Clivus Publicius* (*i.e.*, the Clivo dei Publicii) and the Clivo di Rocca Savella, I will come back below.

**Immediately after that, Claridge (2010, 404) continues:**

**"The label can now be restored as NAVALIA - shipsheds - an immediately more attractive proposition, compatible with the sloping floor, the fifty divisions and the dimensions of the aisles, which resemble monumental shipsheds elsewhere in the Mediterranean [my emphasis]".**

Cozza's and Tucci's reading of the 'preliminary' inscription ("ALIA") on fragment 24b of the Severan Marble Plan, mentioned above by Claridge (2010, 404) is discussed in Cozza's and Tucci's article (2006, 176-180, Section: "L'iscrizione e le precedenti identificazioni"). Their suggested reading of the 'preliminary' inscription has been proven to be wrong by Francesco Paolo Arata and Enrico Felici (2011), who reject also Cozza's and Tucci's identification of the structure in question as *Navalia*. - For a detailed discussion of this controversy; cf. Alessandro D'Alessio (2014, 13-14, Fig. 9).

**We shall learn below from Francesca de Caprariis (2019, 166 with n. 60) that, in the meantime, even more additional readings of this inscription have been suggested.**

Tucci (2012) has responded to Arata and Felici and has at the same time summarized the entire discussion of the article by Cozza and Tucci (2006), results, which I will not repeat here again in their entirety. Tucci (2012, 581 with n. 16, states for example also that A. CLARIDGE 2010, 403-404, quoted *verbatim supra*, has misunderstood the real importance of COZZA's and TUCCI's reading 'ALIA' of the 'preliminary' inscription within COZZA's and TUCCI's overall hypothesis of 2006).

**Now, part of the problem had consisted in the fact that Cozza and Tucci, when they were in the course of writing their account (2006), did not have access to the relevant fragment 24b of the Severan Marble Plan, which carries the 'preliminary' inscription. This autopsy was at the time simply impossible. Cozza and Tucci (2006, 178 with n. 8 [TUCCI], quoted *verbatim infra*) have, of course, also themselves mentioned this important fact. Therefore, Arata and Felici (2011), who *had* access to fragment 24b, could correct Cozza's and Tucci's suggested reading of the 'preliminary' inscription on fragment 24b by saying that the letters assumed by Cozza and Tucci do not exist in the suggested form.**

Since I myself have likewise not seen this preliminary inscription on fragment 24b of the Severan Marble Plan, I cannot judge this detail of the controversy based on personal autopsy.

**On 6th May 2022, I could finally study fragment 24b. I, therefore, agree with Arata and Felici (2011) that there are only two letters visible, but not 'IA', as suggested by them: the only letters which I could see on this fragment are: 'I' and 'λ'.**

**As we shall see below, this is precisely what Cozza and Tucci (2006, 178 [TUCCI]) have written in their note 8: "G. GATTI, in *Pianta Marmorea* [i.e., here *Pianta Marmorea 1960* = G. CARETTONI *et al.* 1960], p. 82, nota 8, aveva notato i «due segni: I e λ»".**

But I agree with Tucci (2012) that Cozza's and his own hypothesis of 2006 to identify the building in question as *Navalia* did *not* depend on their reading of the preliminary inscription as ("ALIA"; cf. here **Fig. 102,2, below**, discussed above, in Section I.), but rather on their analysis of the typology of its architecture, as well as on the fact that the building stands close to the Tiber and has a sloping floor. As a matter of fact, Cozza and Tucci (2006) found for all the features of the building at the Testaccio shipsheds all over the Mediterranean with exactly the same characteristics. Even for the most puzzling fact, namely the building's rather large distance to the Tiber, they found parallels in the case of other shipsheds.

Cf. Cozza and Tucci (2006, 180-187, Section: CARATTERISTICHE ARCHITETTONICHE DELL'EDIFICIO [TUCCI]; cf. pp. 194-198, Section: "QUALI NAVALIA?"; cf. pp. 187-194, Section: "LA FUNZIONE DELL'EDIFICIO" [TUCCI]).

**Immediately after the above-quoted passage, Claridge (2010, 404) continues, by suggesting a solution to the problem that these presumed shipsheds were built at some distance to the river, which is not to be found in Cozza and Tucci (2006), and therefore obviously her own hypothesis (as she herself has confirmed in a telephone conversation):**

**"We have to envisage a different relationship to the river (perhaps fronting onto a port-basin, which was later filled in and built over by the buildings visible on the Marble Plan [cf. here Figs. 102; 102.2; 102.3; 102.3, inserted box]) and the form and function of the building was evidently altered, to what we see on the Marble Plan - a huge warehouse or distributive space - while keeping its original name, but there would be nothing strange in that. Who built the original building and when are still uncertain, a date between 140 and 70 BC seems most likely [my emphasis]". - See her Figs. 189a; 189b; 189c on pp. 404-405.**

Claridge's (2010, 404) idea that the *Navalia* at *La Marmorata* 'may have fronted on a port-basin', has been commented favourably by Tucci (2012, 585 n. 34, quoted *verbatim infra*), but has been rejected by de Caprariis (2022, 131, n. 49): "The idea of a harbour basin in front of the building, to give room for the ships to be maneuvered has to my knowledge no foundation ([M. CANDACE and C.M.] Rice 2018: 203-4). See the surveys and excavations in the area (Sebastiani, Serlorenzi 2011 [*corr.*: Serlorenzi, Sebastiani 2011]; Sebastiani *et al.* 2016, with further bibliography)".

Claridge (2010, 512), quotes for the *Navalia*: "NAVALIA. P. L. Tucci and L. Cozza, *ArchCl* 57 (2006)". Note that '*the Navalia*' (*i.e.*, the port of the warships) have been located at the *Campus Martius*; cf. F. Coarelli ("Navalia", in: *LTUR* III [1996] 339-340. For that; cf. *supra*, in Section II., with a discussion of a medallion (here Fig. 107), on which *the Navalia* of the warships at the southern *Campus Martius* are represented.

**Apropos, Claridge's (2010, 404) conclusion: "Who built the original building and when are still uncertain, a date between 140 and 70 BC seems most likely".**

On 7th January 2021, I had the chance to discuss with Amanda Claridge in a telephone-conversation her observations concerning the *Navalia* at *La Marmorata*, which she still maintains, and which I am following here.

**To conclude this survey of Amanda Claridge's (2010) discussion of the *Navalia* at *La Marmorata*.**

**When we consider the combination of literary sources relating to the *Porticus Aemilia*, as summarized by Filippo Coarelli ("Porticus Aemilia", in: *LTUR* IV [1999] 116-117), quoted above as the [4.] epigraph in this Section III., I can only follow Claridge (2010, 403-404, chosen above, in this Section III., as the [5.] epigraph), in suggesting that the building at *La Marmorata* cannot possibly be identified with the *Porticus Aemilia*. And that for the following reasons :**

**a) the building is not what architectural historians usually define as a porticus.**

**The building in question, identified by Claridge (2010, who follows Cozza and Tucci 2006), as *Navalia*, on architectural grounds, is identifiable as shipsheds;**

**b) also because of chronological reasons this building cannot be identified with the *Porticus Aemilia*.**

**If this building were correctly identified with the *Porticus Aemilia*, "... (built by the aediles M. Aemilius Lepidus and L Aemilius Paullus in 193 BC, rebuilt in 174 BC) [this would make] it by over a century the oldest concrete building anywhere"; cf. Claridge (2010, 403). The reason for that objection being that Claridge (2010, 404) dates this building "between 140 and 70 BC", and in Claridge (2018, 96): 'circa 100 BC', quoted above, after de Caprariis (2019, 172, n. 104), as the [9.] epigraph in this Section III.**

See Amanda Claridge (2018, 96), in her "Table 5.1: The standing monuments of ancient Rome", she comments on the *opus incertum* building at *La Marmorata* discussed here, as follows):

"c.[irca] 100 BCE *Navalia* ("Porticus Aemilia"), horrea ...";

**c) finally for topographical considerations this building cannot be identified with the *Porticus Aemilia*.**

**By judging from the literary sources that report on the *Porticus Aemilia*: "the Aemilii and their porticus (which can return to being a more normal kind of porticus (see p. 59) and is anyway better located at the NW [north-west] end of the Aventine"; cf. Claridge (2010, 404). - To this subject I will come back below in my discussion of the hypotheses, formulated by de Caprariis (2019; *ead.* 2022).**

After this Section III. was written up to this point, I had the chance to call Amanda Claridge on 18th March 2022 in London, asking her, how she would now date the beginning of the *opus incertum* technique. She was kind enough to answer me that this is currently assumed 'at the end of the 2<sup>nd</sup> century BC'. - So her statement in her publication of (2018, 96, Table 5.1): 'circa 100 BC', is still valid.

For the (erroneous) location of the *Porticus Aemilia* in the *Campus Martius*; cf. Häuber (2017, 123-124, with references). For the entire area of *La Marmorata* at the Testaccio, the (alleged) *Emporium*; cf. also Giovannetti (2016) and Patrizio Pensabene and Javier Á. Domingo (2016-2017, 572-573, quoted *verbatim infra*, in Section IV.

*The discussion of the Navalía by Lucos Cozza and Pier Luigi Tucci (2006); and Tucci (2012); three passages of their essay (2006) were chosen as the [1.], [2.] and [3.] epigraphs in Section I. and in this Section III.*

The authors were first to identify the *opus incertum* building at *La Marmorata* as *Navalia*.

**Concerning the main inscription 'LIA' of this building at the Testaccio, which appears on its representation on the Severan Marble Plan (cf. here Figs. 102; 102.2, below), Cozza and Tucci (2006, 177 [TUCCI]) write:** "Di recente S. L. Tuck ha proposto una nuova integrazione dell'iscrizione dell'edificio, [(*Horrea*) CORNELIA, basandosi sulla datazione dell'*opus incertum*, sulla riconsiderazione delle informazioni fornite da Livio e sul testo di una lapide dalla Via Salaria: l'edificio di Testaccio sarebbe stato un grande (e sconosciuto) deposito di grano dell'età di Silla [with n. 6]".

In their **note 6**, Cozza and Tucci write: "TUCK 1999; TUCK 2000; TUCK 2005, p. 197, n. 335 [TUCCI]".

**Concerning the preliminary inscription of the building at the Testaccio on the Severan Marble Plan, see also Cozza and Tucci (2006, 178 [TUCCI]; cf. here 102.2, below) :**

"Inoltre nell'iscrizione provvisoria in lettere corsive, che fu incisa più in basso di quella definitiva a lettere capitali ed è ancora parzialmente conservata (Fig. 1 [= here **Fig. 102.2, below**]), Tuck legge una *e* prima della tre lettere già riconosciute (*l i a*), a sostegno della sua identificazione [with n. 8]. Se, come sembra, si tratta effettivamente della traccia di un'ulteriore lettera, tuttavia questa non ha niente a che fare con una *e*, dato che presenta un tratto obliquo e non verticale, come riconosciuto dallo stesso Tuck. Quindi non sarebbe stata la prima *i* di *Aemilia* e neanche la *e* di *Cornelia*, ma un'altra *a*, simile all'ultima lettera dell'iscrizione provvisoria [with n. 9]. **Le quattro lettere a l i a confermano l'intuizione che ha portato alla nuova integrazione dell'iscrizione principale: [NAVA]LIA [my emphasis]**".

In their **note 8**, Cozza and Tucci write: "G. GATTI, in *Pianta Marmorea* [*i.e.*, here *Pianta Marmorea* 1960 = G. CARETTONI *et al.* 1960], p. 82, nota 8, aveva notato i «due segni: I e λ». Rodriguez Almeida, prima di quelle due lettere, vide «una traccia di L dal piede inclinato» (*FUM*, p. 102 [*i.e.*, here E. RODRIGUEZ ALMEIDA 1980]), a sua volta preceduta da un segno inclinato che appare nel suo disegno del frammento 24b (*FUM*, tav. XVI [*i.e.*, here E. RODRIGUEZ ALMEIDA 1980]) ma non è discusso, forse perché in contrasto con l'integrazione convenzionale *Aemilia*. Sul frammento è visibile solo la parte superiore del segno inclinato perché la superficie della lastra fu abbassata verso il margine sinistro per pareggiarla con la lastra accanto; **peraltro non possiamo presentare una fotografia a luce radente del frammento 24b perché per molti mesi, fino al momento della consegna del presente articolo, non è stato possibile aprire la cassa che lo conteneva**. Per le incisioni preliminari sulle lastre della Forma Urbis [*i.e.*, the Severan Marble Plan] cfr. *Pianta Marmorea* [*i.e.*, here *Pianta Marmorea* 1960 = G. CARETTONI *et al.* 1960], pp. 200-201 e tav. R. [my emphasis]".

In their **note 9**, Cozza and Tucci write: "Come conferma un confronto, per esempio, con i *tituli picti* di età severiana delle anfore del vicino monte Testaccio. Tuck si preoccupa solo di scartare la *i* di *Aemilia* e anche la lettera *l*, che è già presente tra le lettere superstite".

**Concerning their identification of this building at the Testaccio, as Navalía Cozza and Tucci (2006, 180 [TUCCI]) write :** "E forse troppo sbrigativo affermare che la *Forma Urbis* [*i.e.*, the Severan Marble Plan] ha sempre ragione. Tuttavia gli eventuali dubbi sulla possibilità **che i 50 ambienti dell'edificio in *opus incertum* fossero in origine dei *navalia*** e le pur legittime perplessità sul loro funzionamento in rapporto al

Tevere, **basate sullo studio delle installazioni simili rinvenute in vari siti del Mediterraneo**, dovrebbero cadere davanti alle quattro lettere finali dell'iscrizione provvisoria: *alia* come *navalia* [my emphasis]".

Concerning the functions of the *Navalia* at the Testaccio and their historical context, Cozza and Tucci (2006, 197 [TUCCI]) write:

"Comunque, è possibile che l'edificio in *opus incertum* [i.e., the *Porticus Aemilia/Navalia* discussed here] non ospitasse le navi da guerra pronte al combattimento, ma fosse una specie di arsenale dove si effettuava la manutenzione delle navi ... Inoltre, una fonte tarda, Isidoro di Siviglia (570-636), afferma che «Navalia sunt loca ubi naves fabricantur. Hoc et textrinum vocatur» (*Etym.* XIV, 8, 38). In *navalia* di questo tipo, più simili ad un arsenale che ad una vera e propria installazione militare, il problema del grande lavoro necessario per muovere le quinqueremi dal Tevere agli stalli e viceversa sarebbe stato meno grave, dato che si sarebbe trattato di operazioni da effettuare *una tantum* e forse preferibilmente nel periodo invernale, il che giustificerebbe la posizione dell'edificio rispetto al Tevere. D'altra parte, i cantieri veri e propri dovevano trovarsi lontano dal fiume (si è pensato alla zona del Campo Marzio occupata dal teatro e dai portici di Pompeo [with n. 47]), quindi queste navi venivano regolarmente spostate "sulla terraferma" e per distanze maggiori di quella che separava l'edificio in *opus incertum* dal Tevere.

Ad ogni modo, al momento della sua costruzione i Romani non potevano immaginare che sarebbero diventati i dominatori del Mediterraneo. Più tardi, per l'evidente assenza di flotte con grandi navi da combattere, l'edificio dovette risultare inutile e addirittura "ingombrante", in una zona che cominciava ad assumere uno spiccato carattere commerciale. Visto il grande spazio coperto a disposizione e le eccezionali caratteristiche della struttura, è probabile che già dalla fine del I secolo a.C. l'edificio sia stato adibito a funzioni commerciali [with n. 48; [my emphasis]]. - Part of this passage has already been quoted above in Section I. as the [1.] epigraph.

In their note 47, Cozza and Tucci write: "COARELLI 1997, pp. 356, 543-544".

In their note 48, they write: "Cfr. ÉTIENNE 1987".

To conclude this survey of Cozza's and Tucci's (2006) discussion of the *Navalia* at *La Marmorata*.

I follow Cozza and Tucci (2006) in almost all details of their reconstruction of their *Navalia* at Testaccio, but not in the just quoted one (cf. L. COZZA and P.L. TUCCI 2006, 197 [TUCCI]), namely that of the "momento della sua costruzione". Immediately before, the authors have explained their dating ('after 167 BC') of this *opus incertum* building. The reason being: the authors assume that the structure must have been mentioned by Livy in the *lacuna* of his work, in which the author had discussed the years 167-68 BC; cf. Cozza and Tucci (2006, 196 [TUCCI]).

But, as observed above, in Section I., I had at first overlooked that already Cozza and Tucci had also suggested to date the *opus incertum* building at *La Marmorata* 'at the end of the 2<sup>nd</sup> century BC': Cozza and Tucci (2006, 194 [TUCCI]) finally arrive at the date 'end of the 2<sup>nd</sup> century BC' for the *opus incertum* building at *La Marmorata* and that for the following reason: "Tuttavia, trascurando le prime sporadiche attestazioni di quel paramento murario e considerando la complessità della struttura architettonica (archi e volte con una luce superiore agli 8 m.), è verosimile che l'edificio di Testaccio sia stato costruito dopo un lungo periodo di sperimentazione, quindi non all'inizio, ma piuttosto nella seconda metà o verso la fine del II secolo a.C. [my emphasis]".

Concerning this point, I myself follow now Cozza and Tucci (2006, 194 [TUCCI]), as well as Amanda Claridge ("2018, p. 96, in: Table 5.1"), who dates the *Navalia* at the Testaccio, "intorno al 100 a.C.", first quoted like this above, in the [9.] epigraph of this Section, after de Caprariis (2019, 172 n. 104). After having read

myself Claridge's publication (2018, 96, Table 5.1), I have now also quoted *verbatim* the relevant passage in my text. See above in this Section III., in my discussion of Claridge's hypotheses concerning those *Navalia*.

Concerning the *Navalia* at *La Marmorata*, I follow Cozza and Tucci (2006) in assuming for their lifetime in antiquity two very different phases:

- 1.) these *Navalia* were built 'at the end of the 2<sup>nd</sup> century BC' as shipyards for the Roman warships, and -
- 2.) 'from the end of the 1<sup>st</sup> century BC onwards, when the long warships had left Rome', these *Navalia* were used commercially. Cf. Cozza and Tucci (2006, 197): "è probabile che già dalla fine del I secolo a.C. l'edificio sia stato adibito a funzioni commerciali"; quoted in more detail above, as the [1.] epigraph in Section I.

Note that Cozza and Tucci (*op. cit.*) themselves do not mention, what kind of 'commercial uses' (note the plural !) these might have been.

**So, the only difference to the scenario, developed by Cozza and Tucci (2006) themselves, consists in my tentative hypothesis, that these *Navalia* could have been - *inter alia*? - used as 'commercial *Navalia*' from the end of the 1<sup>st</sup> century BC onwards.**

In my opinion, this phase ended, when the structures, visible on the Severan Marble Plan, were built in front of these *Navalia*, thus (possibly) preventing henceforth the use of this building as shipsheds. Those structures (cf. here **Figs. 102.3; 102.3, inserted box**) were built at an unknown date and are discussed above, in Section I. - As already mentioned, Emilio Rodríguez Almeida (1993, 20) had dated these structures to the Trajanic period.

For the eminent importance of such commercial ships for the supply of all the goods needed at the City of Rome, see the Sections II.; IV., and here **Figs. 105; 106**.

See for the possible functions of the *Navalia* at the Testaccio also Cozza and Tucci (2006, 198 [TUCCI]) :

"Quindi l'edificio, pur conservando il nome originario di *navalia*, non avrebbe più ospitato navi da guerra, ma cose e oggetti (ovvero merci) "appartenenti alla navi", "delle navi": *navalia*, appunto ... È stato anche sottolineato che i *navalia* (nell'accezione "industriale" del termine) «devono aver costituito un elemento non secondario del paesaggio urbano e suburbano della Roma imperiale» [with n. 54]. Se, come sembra, l'edificio in *opus incertum* di Testaccio va davvero identificato con una serie di *navalia*, la sua riutilizzazione attraverso i secoli e la conservazione del nome originario sulla *Forma Urbis* illustrerebbero molto bene la trasformazione, dal punto di vista militare ed economico, di Roma e conseguentemente del Tevere, «rerum in toto orbe nascentium mercator placidissimus» [with n. 55; my emphasis]". - Part of this passage was already quoted above in Section I. as the [2.] epigraph.

In their note 56, Cozza and Tucci write: "MANACORDA 2005, pp. 28-29".

In their note 55, they write: "PLIN., *nat.*, III, 5, 54".

In his article, in which he responds to Arata and Felici (2011), Tucci (2012, 579-580) writes :

"Nonostante i commenti di Arata e Felici [2011], la nostra proposta di identificare l'edificio in *opus incertum* di Testaccio con un gruppo di *navalia* repubblicani (non i *Navalia* 'con la N maiuscola', dato che altri ricoveri per navi dovevano esistere lungo il Tevere) è ancora pienamente sostenibile - forse più di prima, viste le caratteristiche del muro di fondo. Secondo noi, le ultime tre lettere dell'iscrizione principale, LIA, visibile sui frammenti 23-24 b della *For-* [page 580] *ma Urbis* [*i.e.*, the Severan Marble Plan] che mostrano una parte dell'edificio in questione, potevano e possono ancora essere integrate come NAVAJLIA. Questo, come abbiamo scritto più volte, è stato semplicemente il nostro punto di partenza [my emphasis]".

**Concerning the debate, whether the *opus incertum* building at *La Marmorata* should be identified with the *Porticus Aemilia* outside *Porta Trigemina* or as *Navalia*, Tucci (2012, 582, n. 19) writes :**

"... Nell'introduzione a un volume apparso proprio nel Gennaio 2012 anche La Rocca e D'Alessio menzionano il problema dell'identificazione dell'edificio in *opus incertum* di Testaccio e, pur senza specificare di cosa si tratti (ma è verosimile che alludano ai nostri *navalia*), parlano di «un'interessante revisione critica (anche se sull'argomento, per la sua complessità e per i non pochi problemi che lascia ancora in sospeso, si attende ancora una messa a punto più precisa)»: LA ROCCA, D'ALESSIO 2011, p. VIII. Col senno di poi, credo che un riferimento bibliografico sarebbe stato doveroso: l'interessante «revisione critica» potrebbe essere associata all'articolo di Arata e Felici! Comunque trovo che questo sia un modo civile e scientifico di presentare un problema, pur sollevando dubbi e perplessità".

In the meantime, Alessandro D'Alessio has himself published an article on the subject ("L'edificio in *opus incertum* del Testaccio a Roma. *Status quaestionis* e prospettive di ricerca", 2014).

**Concerning the date, suggested by Cozza and himself for the *Navalia* at *La Marmorata* ('after 167 BC'), Tucci (2012, 586) writes :** "In realtà avevo scritto che il *terminus post quem* per la costruzione dell'edificio è il 167 a.C., l'inizio della lacuna del testo di Livio, e l'intervento di Hermodoros era semplicemente un'ipotesi («se anche l'edificio in *opus incertum* di Testaccio fosse un suo progetto» ecc. [with n. 38]).

In his **note 38**, Tucci writes: "COZZA, TUCCI 2006, p. 196".

**Arata (cf. F.P. ARATA and E. FELICI 2011, 134 [ARATA]) doubts that such huge *Navalia* (purportedly) 'shipsheds for the fleet of Rome's warships' could still have been erected in the middle of the 2<sup>nd</sup> century BC.**

**Tucci (2012, 586) responds by asking, provided the *opus incertum* building at *La Marmorata* should instead be identified with the *Porticus Aemilia* outside *Porta Trigemina*, how on earth the Romans could have erected in 193 BC a 'commercial building' of that size half a kilometre to the south of the centre of Rome? :**

"Arata poi rivela «un'altra evidente incongruenza di non lieve conto. Se si accetta l'ipotesi dei *navalia* come costruzione di poco posteriore alla metà del II sec.[olo] a.C., come giustificare l'impianto di un arsenale militare di tale estensione e complessità in un'area decisamente commerciale destinata programmaticamente ad usi civili fin dalla realizzazione dell'*emporium*» [with n. 39]? A parte la consueta localizzazione dell'*emporium*, la domanda, parafrasata, può essere posta in questi termini: se si accetta l'ipotesi della *porticus Aemilia* come struttura destinata a ricevere le merci e identificabile con l'edificio in *opus incertum* di Testaccio, dunque ben anteriore alla metà del II sec. a.C., come giustificare l'impianto di un edificio commerciale/distributivo/fiscale di tale estensione e complessità in un'area che si trova più di mezzo km a valle del centro urbano, e fuori dalle mura urbane, quando Roma non era ancora divenuta di fatto la padrona assoluta e incontrastata del Mediterraneo? [my emphasis]".

In his **note 39**, Tucci writes: "ARATA, FELICI 2011, p. 134"

**Concerning the date of the *opus incertum* of the *Navalia* at *La Marmorata*, Tucci (2012, 588-589) writes in response to Enrico Felici (ARATA and FELICI 2011. 144, 141 [FELICI]) :**

"Tuttavia è noto che a partire dal II secolo a.C. gli architetti operanti a Roma 'presero in prestito' una serie di tipologie edilizie dal mondo greco-ellenistico e le realizzarono con archi e volte, anche grazie alle nuove possibilità offerte dall'*opus caementicium*: non a caso, Felici loda la presunta *porticus Aemilia* come una «completa e originale reinvenzione romana» [with n. 46] ... [page 589] Inoltre l'uso dell'*opus incertum* in una costruzione tanto complessa come quella di Testaccio è forse un po' precoce per un edificio databile tra il 193 ed il 174 a.C. [with n. 47]".

In his **note 46**, Tucci writes: "ARATA, FELICI 2011, p. 144, nota 75 e p. 141".

In his **note 47**, he writes: "FELICI [see n. 46] si basa su uno studio del 1977 di Coarelli, la cui cronologia dell'*opus incertum* è ormai messa in discussione: cfr. LA ROCCA, D'ALESSIO 2011, p. VIII. **Inoltre Felici afferma che «analisi geologiche del cementizio potrebbero fornire ulteriori dati», ignorando che queste analisi sono già disponibili (cfr. JACKSON et al. 2007, p. 37, fig. 7a) e hanno confermato che non c'è nessuna relazione tra l'edificio di Testaccio e la disponibilità di pozzolana di Puteoli, colonia fondata dagli stessi Aemilii nel 194 a.C. [my emphasis]**".

**At the end of his article, Tucci (2012, 589) comes to the following (in my opinion convincing) conclusions: he himself locates the (real) *Porticus Aemilia* immediately outside *Porta Trigemina* near the *Forum Boarium* and rejects many of the hypotheses, suggested by Arata and Felici (2011):**

**"Sono ancora convinto che la *porticus Aemilia* non abbia niente a che fare con l'edificio in *opus incertum* di Testaccio e che si trovasse verso il Foro Boario [with n. 49]. E, nonostante la mancanza di porte sul retro, non voglio concludere che l'identificazione dell'edificio in *opus incertum* con la *porticus Aemilia* [as suggested by F.P. ARATA and E. FELICI 2011] vada rigettata. Cade semplicemente l'ipotesi [*i.e.*, of ARATA and FELICI 2011] secondo cui si sia di fronte a un edificio in cui le merci transitavano rapidamente, entrando dagli ingressi anteriori e uscendo da quelli posteriori, che in realtà erano finestre. Come d'altra parte ricordava Cozza al termine del suo contributo, «le ricerche continuano, la conoscenza acquisita è ingannevole, il giudizio è difficile» [with n. 50; my emphasis]**".

In his **note 49**, Tucci writes: "Vedi Tucci 2011-2012, per una puntuale discussione su *navalia* e *porticus*, oltre che per l'identificazione del frammento 494 della Forma Urbis [*i.e.*, the Severan Marble Plan] che mostra una vera *porticus* collocata tra l'area della *porta Trigemina* e il Tevere. Sui portici tardo-repubblicani a Roma, vd. [vedi] anche Senseney 2011".

In his **note 50**, he writes: "Cozza, Tucci 2006, p. 176".

See most recently for a similar location of the *Porticus Aemilia* near the *Porta Trigemina*, as suggested above by Tucci (2012, 589 with n. 49): T.P. Wiseman (2021a, 30, quoted above as the **[10.] epigraph** in this Section III.). - But note that Wiseman (*op. cit.*) himself does not discuss Tucci's relevant research (2011-2012; 2012).

**See also Tucci (2012, 591, Section: " SUMMARY") :**

*"According to the authors of an article published in the latest issue of this journal [*i.e.*, of ARATA and FELICI 2011], the building in *opus incertum* at Testaccio, commonly identified with the *porticus Aemilia*, was meant to receive people and wares, but not for any length of time: the *porticus*, in accordance with its etymological root *porta/portus*, is taken to have been a place of transit. However, the rear wall of the building, without entrances, belies this reconstruction and supports identification as Republican shipsheds. The missing letters of the preliminary inscription on fragment 24 b of the Forma Urbis [*i.e.*, the Severan Marble Plan] are of limited relevance and do not justify the rebuttal (based also on a number of misunderstandings) of identification as *navalia*. It is likely that the actual *porticus Aemilia*, one of the several *porticoes* built in the first half of the second century BC, was simply a *porticoed street*, located between the *Forum Boarium* and the *Tiber* [the italics are those of the author]*".

*Dominik Maschek's discussion (2013) of the 'Porticus Aemilia' / Navalia at La Marmorata, in his review of Martin Tombrägel (2011)*

As mentioned above, while discussing with Paul Scheding on 6th June 2023 the *opus incertum* building at *La Marmorata*, he was kind enough to alert me to the publications by Martin Tombrägel (2011) and Dominik Maschek (2013), which I had managed to overlook so far. And although I had at that stage already finished

writing volume 3-1 of this *Study* on Domitian, I decided to quote in the following at least some passages of Maschek's review of Tombrägel's book.

As we shall see further on in this *Section III.*, I have arrived concerning some points, but independently of Maschek, at exactly the same conclusions. Because Maschek (2013) discusses and follows Cozza and Tucci (2006) and Tucci (2012), I have inserted these quotations from Maschek's (2013) review immediately after the discussion of Cozza's and Tucci's own accounts.

**In his review of Martin Tombrägel (2010), Dominik Maschek (2013,1030-1032, Section: "Grundlagen und Methode der Datierung") writes :**

**"Auch zu der von T.[ombrägel 2011] vertretenen absolutchronologischen Einordnung der *opus caementicium*-Bauweise und der damit verbundenen Verschaltungstechniken sind einige Bemerkungen angebracht. Den frühesten chronologischen Fixpunkt seiner Typologie bildet die sogenannte Porticus Aemilia in Rom (S. 41-43; 73). Hier verweist er auf Livius und dessen Datierung des Gebäudes in das frühe 2. Jh. v. Chr. Allerdings sind Deutung und Datierung der in der Literatur traditionellerweise als Porticus Aemilia identifizierten Gebäudereste in Testaccio seit einigen Jahren wieder stark umstritten. Besonders von Pier Luigi Tucci wurden gewichtige Gründe für eine Identifikation des erhaltenen Gebäudes als nach der Mitte des 2. Jhs. v. Chr. errichtete Navalía ins Feld geführt [with n. .5] Unver- [page 1031 ständlicherweise beschäftigt sich T.[ombrägel 2011] in seiner kurzen Replik auf Tuccis Thesen nicht mit den zentralen bautechnischen und konstruktiven Indizien, sondern nur mit drei anderen Argumenten: Erstens mit der Lesung der entsprechenden Forma Urbis-Fragmente, zweitens mit zwei Livius-Stellen, denen zufolge sich die römischen Navalía an anderer Stelle befunden hätten (Liv. 3,26,8; 40,51,4), und drittens mit dem städtebaulichen Kontext des Gebäudes in Testaccio, der für T.[ombrägel 2011] gegen eine Deutung als Schiffshäuser spricht.**

**Gegen alle drei Punkte sind Vorbehalte zu äußern: So wurde erstens durch die Debatte zwischen Tucci und Paolo Arata deutlich, dass die Inschrift auf der Forma Urbis weder für die eine, noch für die andere Deutung einen eindeutigen Beweis liefert. Die Fragmente des Marmorplans müssen also aus der Diskussion ausscheiden. Zweitens hat insbesondere Tucci sehr deutlich gemacht, dass es keineswegs zwingend ist, die Navalía Roms nur an einem einzigen Ort lokalisieren zu wollen. Drittens ist es ein klassischer Zirkelschluss, das Gebäude in Testaccio anhand der Erwähnung bei Liv. 41,27,8 zuerst bereits sicher mit der Porticus Aemilia zu identifizieren, bevor dann im zweiten Schritt mit der städtebaulichen Gesamtsituation argumentiert wird. Alle drei von T.[ombrägel 2011] vorgebrachten Argumente sind also letzten Endes nicht tragfähig. Dennoch geht er fest davon aus, dass das Gebäude in Testaccio die von Livius bezeugte und im Jahr 174 v. Chr. renovierte Porticus Aemilia sein müsse. Dementsprechend konstatiert er auch, "dass die [...] bautechnische Ausführung ungemein ausgereift wirkt" (S. 42). Dies würde tatsächlich zutreffen, sollte es sich bei dem Gebäude in Testaccio um den Neubau der Porticus Aemilia aus der ersten Hälfte des 2. Jhs. v. Chr. handeln. Träfe jedoch die Interpretation Tuccis als Navalía zu, so wäre das Gebäude stattdessen in das dritte Viertel des 2. Jhs. v. Chr. zu datieren und seine Bautechnik keineswegs mehr so "ungemein ausgereift" wie von T.[ombrägel 2011] postuliert. Man wird die Resultate der seit dem Jahr 2010 laufenden Grabungen und Bauuntersuchungen der Soprintendenza und des Niederländischen Instituts abwarten müssen, um Errichtungszeitpunkt und Funktion der Strukturen in Testaccio auf neuer Basis beurteilen zu können. Andere Beispiele für frühe stadtrömische *caementicium*-Architektur nimmt T.[ombrägel 2011] jedenfalls weitgehend aus der Diskussion. Besonders auffällig ist hierbei der Fall der 146 v. Chr. errichteten Porticus Metelli auf dem Marsfeld: Die verfügbare Evidenz wird in einer einzigen Anmerkung auf sehr lapidare Weise abgetan (S. 43 Anm. 230).**

**Die Identifikation der Gebäudereste in Testaccio mit dem Neubau der Porticus Aemilia aus dem Jahr 174 v. Chr. ist für die von T.[ombrägel 2011] vorgelegte Typologie jedenfalls von fundamentaler Bedeutung. Den ausgereiften Charakter des hier beobachtbaren *opus incertum* wertet er als klaren Hinweis darauf, dass die monumentale *opus caementicium*-Bauweise in Rom bereits an der Wende vom 3. [page 1032] zum 2. Jh. v. Chr. praktiziert worden sei (S. 45). Somit dient das an der vermeintlichen Porticus Aemilia des Jahres 174 v. Chr. sichtbare *opus incertum* als absolut chronologischer Ausgangspunkt für alle weiteren typologischen Überlegungen. Von Rom aus habe sich die Technik im Sinne eines "Technologietransfers" (S. 46) in Italien**

verbreitet. Das Aufkommen der Bautechnik außerhalb von Rom müsse also immer später zu datieren sein als die genannten stadtrömischen Beispiele. Zwar stellt T.[ombrägel 2011] selbst fest, dass "es nicht unproblematisch ist, bei einer chronologisch ausgerichteten archäologischen Untersuchung von historischen Bedingtheiten auszugehen" (S. 46), doch ist das oben skizzierte Modell einer linearen, von Rom ausgehenden Verbreitung die maßgebliche Grundprämisse, von der aus alle weiteren Datierungsansätze entwickelt werden [my emphasis]".

In his **note 5**, Maschek writes: Siehe L. Cozza/P.L. Tucci, *Navalia*, *ArchCl* 57, 2006, 175-201; P. L. Tucci, *L'arsenale di Roma in età repubblicana*, *Forma Urbis* 13, 11, 2008, 18-24; P.L. Tucci, *La controversa storia della "Porticus Aemilia"*, *ArchCl* 63, 2012, 575-591; *contra* P. Arata/E. Felici, *Porticus Aemilia, navalia o horrea?*, *ArchCl* 62, 2011, 127-153. In Anm. 216 auf S. 41 führt T.[ömbregel 2011] allerdings nur die Literatur bis 2006 auf".

**To the above-quoted passages from Dominik Maschek's review (2013) of Martin Tombrägel (2010), I should like to add some comments :**

1.) Maschek (2013, 1030) criticizes Martin Tombrägel's discussion of the inscription(s) on the fragments of the Severan Marble Plan, that represent the 'Porticus Aemilia' / *Navalia*, discussed here (cf. here **Figs. 102; 102.2**), by writing: "**So wurde erstens durch die Debatte zwischen Tucci und Paolo Arata deutlich, dass die Inschrift auf der Forma Urbis weder für die eine, noch für die andere Deutung einen eindeutigen Beweis liefert. Die Fragmente des Marmorplans müssen also aus der Diskussion ausscheiden** [my emphasis]".

Seen from Maschek's perspective, his conclusion is understandable. But, as I hope to have demonstrated in this *Chapter*, a solution to this entire problem is actually possible, also thanks to those inscriptions. But only, when the inscriptions on fragments 23 and 24 of the Severan Marble Plan, which represent the *opus incertum* building at La Marmorata (here **Figs. 102; 102.2**), are discussed in context with the altogether three toponyms called *Aemiliana*, which have contemporaneously existed at Rome, one (or two?) of which are even represented on extant fragments of the Severan Marble Plan.

2.) I agree with Maschek (2013, 1030, 1031) in following Cozza and Tucci (2006; 2012) in identifying the *opus incertum* building at *La Marmorata* with *Navalia*. But Maschek has overlooked that Cozza and Tucci (2006) have suggested *different* dates for this building. Maschek mentions only the following dates: "Besonders von Pier Luigi Tucci wurden gewichtige Gründe für eine Identifikation des erhaltenen Gebäudes als nach der Mitte des 2. Jhs. v. Chr. errichtete *Navalia* ins Feld geführt [with n. 5]"; and: "Träfe jedoch die Interpretation Tuccis als *Navalia* zu, so wäre das Gebäude stattdessen in das dritte Viertel des 2. Jhs. v. Chr. zu datieren".

But, as we have seen above, Cozza and Tucci (2006, 194 [TUCCI]) have finally arrived at the following date for the *Navalia* at *La Marmorata*: "Tuttavia ... è verosimile che l'edificio di Testaccio sia stato costruito dopo un lungo periodo di sperimentazione, quindi non all'inizio, ma piuttosto nella seconda metà o verso la fine del II secolo a.C. [my emphasis]".

3.) To Maschek's (2013, 1031) comment: "**Man wird die Resultate der seit dem Jahr 2010 laufenden Grabungen und Bauuntersuchungen der Soprintendenza und des Niederländischen Instituts abwarten müssen, um Errichtungszeitpunkt und Funktion der Strukturen in Testaccio auf neuer Basis beurteilen zu können** [my emphasis]", I should like to add the following.

These excavations were conducted between 2011-2013 by scholars of the Koninklijk Nederlands Instituut te Rome and of the Soprintendenza Speciale per i Beni Archeologici di Roma. They could investigate areas immediately adjacent to the enormous *opus incertum* building, and within it only small parts of the Xth, XVth and XVIth of its altogether 50 aisles (cf. here **Figs. 102; 102.1; 102.2; 102.3**), but without anywhere reaching Republican strata. To the so far published reports by the excavators we will turn next. Unfortunately, these excavations have, therefore, so far not provided precisely that information, which Maschek (2013, 1031) has mentioned in his comment: namely evidence which proves, when exactly, and for what purpose the *opus incertum* building at *La Marmorata* had been erected in the first place.

*The discussion of the opus incertum building at La Marmorata*  
by the excavators Gert-Jan Burgers, Valerio De Leonardis, Sara Della Ricca,  
Raphäelle-Anne Kok-Merlino, Matteo Merlino, Renato Sebastiani and Franco Tella

These publications are in this *Chapter* referred to as 'Burgers *et al.* 2014a' and 'Burgers *et al.* 2014b'. Above has already been quoted the abstract of their publication 'Burgers *et al.* 2015' as the [8.] epigraph in this Section III.

See Gert-Jan Burgers, Valerio De Leonardis, Sara Della Ricca, Raphäelle-Anne Kok-Merlino, Matteo Merlino, Renato Sebastiani and Franco Tella ("*Porticus una extra Portam Trigeminam* : nuove considerazioni sulla *Porticus Aemilia*", 2014a; "Le trasformazioni del paesaggio subaventino nell'età tardoantica: il caso di studio della *Porticus Aemilia*", 2014b), and Gert-Jan Burgers, Raphäelle-Anne Kok-Merlino and Renato Sebastiani ("The Imperial *horrea* of the *Porticus Aemilia*", 2015).

The authors identify the *opus incertum* building at *La Marmorata* (here **Figs. 102; 102.1; 102.2; 102.3**) with the *Porticus Aemilia*.

**Burgers (*et al.* 2014a, 913) write:**

"ABSTRACT

Between 2011 and 2013 three archaeological excavations have been executed in collaboration between the KNIR and the SSBAR near the remains in *opus incertum* in the Roman Rione Testaccio, which not only resulted in additional architectural information about the original building, but revealed a consistent building activity in the Imperial period. Indeed, in the XVIth aisle [cf. here **Fig. 102.1**] a storage room (*horreum*) has been found erected in the first half of the 2<sup>nd</sup> century, whereas outside, along the back wall of the building, two rooms along a road and a water system have been discovered".

The 'KNIR' stands for: 'Koninklijk Nederlands Instituut te Rome', and 'SSBAR' for: 'Soprintendenza Speciale per i Beni Archeologici di Roma'.

**Burgers (*et al.* 2014a, 913) write about their excavations of the *opus incertum* building at *La Marmorata* :**

"Grazie ad una collaborazione tra la Soprintendenza Speciale per i Beni Archeologici di Roma e il Reale Istituto Neerlandese a Roma [with n. 1], tra il 2011 e il 2013 si sono svolte tre campagne di scavo archeologico volte ad indagare una parte degli imponenti resti in opera incerta ancora visibili tra le vie Rubattino, Vespucci, Florio e Branca, nel Rione Testaccio, a Roma".

In their **note 1**, Burgers *et al.* write: "La collaborazione si inquadra all'interno del *Porticus Aemilia Project* (2011-2014) diretto da Renato Sebastiani (SSBAR) e da Gert-Jan Burgers (KNIR)".

**Burgers (*et al.* 2014a, 914) write that they have found different kinds of carbonized grain in the XVIth aisle of the *opus incertum* building (cf. here **Fig. 102.1**), parts of which, in the Trajanic/ Hadrianic period, by means of architectural changes, had been turned into *Horrea*:**

"La presenza di *suspensurae*, il tipo di ingresso, la planimetria dell'ambiente e il rinvenimento di chicchi di farro [in German: Zweikorn, Emmer; in English: Emmer wheat] (*Triticum dicoccum*) ed orzo [in German: Gerste; in English: Barley] (*Hordeum vulgare*) carbonizzati [with n. 11] permettono di identificare il vano B con la cella di un *horreum* [my emphasis] ...

I dati dello scavo delle trincee di fondazione del vano A [in the XVIth aisle] e dei livelli sottostanti le *suspensurae* nel vano B [likewise in the XVIth aisle], al momento fanno ipotizzare che la costruzione dell'edificio di stoccaggio risalga agli inizi del II secolo d.C. [with n. 12]".

In their **note 11**, Burgers *et al.* write: "L'indagine archeobotanica è stata condotta da D. Lentjes".

In their **note 12**, they write: "Lo studio del materiale ceramico è condotto da A. Contino e da L. D'Alessandro; lo studio delle strutture murarie è curato da E. Bukowiecki".

My thanks are due to Rose Mary Sheldon for translating for me in English the terms 'Emmer' and 'Gerste'.

**Burgers (*et al.* 2014a, 917) write that not only the *opus incertum* building at *La Marmorata* itself and its immediate surroundings, but also the entire area underwent major changes in the 2<sup>nd</sup> century AD :**

"Le indagini archeologiche hanno dunque permesso di acquisire nuovi dati sulle complesse fasi di riorganizzazione della *Porticus* messe in atto a partire dal II secolo d.C.: le evidenze rinvenute rafforzano l'ipotesi che in questo periodo l'enorme costruzione fosse utilizzata come "contenitore" di nuovi edifici che ne modificarono l'assetto originario e i percorsi [with n. 16]. Di poco successive, all'esterno dell'edificio repubblicano, furono le operazioni di rialzamento del piano di vita, funzionali a garantire una relazione diretta con l'interno della *Porticus*, cui va riferita sia la costruzione degli ambienti che quella del sistema idrico esterno ad essi [with n. 17]. **Tutti questi interventi sarebbero da collegare ad un più generale quadro di risistemazione degli spazi di stoccaggio che, a partire dal II secolo, prevede una riorganizzazione dell'intera area subaventina ed in particolare delle rive del Tevere presso l'Emporium** [with n. 18; my emphasis]".

In their **note 16**, Burgers *et al.* write: "Cfr. Gatti, 1934: 141".

In their **note 17**, they write: "Le considerazioni fin qui proposte si basano sulla ragionevole ipotesi che il livello di vita originario repubblicano della *Porticus Aemilia* si trovasse alla quota della risega di fondazione del muro di fondo sudorientale e del piano di spiccato delle arcate. Ad oggi non è tuttavia possibile escludere altre possibilità riguardo ai piani di calpestio repubblicani, ipotesi che potrebbero cambiare le attuali ricostruzioni dell'edificio. Si auspica che le prossime campagne di scavo aiutino a sciogliere questo punto [my emphasis]".

In their **note 18**, they write: "Cfr. Rodríguez Almeida, 1984; Aguilera Martín, 2002; Quaranta, Capodiferro, 2011".

Add to the references, quoted by Burgers (*et al.* 2014a, 917, n. 18), also the article by Giuliano Giovannetti (2016), which they have overlooked. Especially Giovannetti's conclusions (cf. *id.* 2016, 23). Because Giovannetti (2016) studies *all* those Trajanic building activities concerning the - to borrow the formulation of Burgers *et al.* (2014a, 917) - "riorganizzazione dell'intera area subaventina ed in particolare delle rive del Tevere presso l'Emporium".

Note that Burgers (*et al.* 2014a, 917), who identify this *opus incertum* building at *La Marmorata* with the *Porticus Aemilia*, take for granted that -

a) the building from its very beginning and not just since those architectural changes of the Trajanic/Hadrianic period, had been used as a warehouse; and -

b) that the area in question may with certainty be identified with the *Emporium*.

I myself follow those scholars who have argued that both assumptions (a and b) are not true. See below, at my *Conclusions*.

**Let's now turn to the publication of the excavators Burgers (*et al.* 2014b).**

See Gert-Jan Burgers, Valerio De Leonardis, Sara Della Ricca, Raphäelle-Anne Kok-Merlino, Matteo Merlino, Renato Sebastiani and Franco Tella ("Le trasformazioni del paesaggio subaventino nell' età tardoantica: il caso di studio della *Porticus Aemilia*", 2014b).

**Burgers (*et al.* 2014b, 813) write:**

"ABSTRACT

The "*Porticus Aemilia Project*" has consisted in three archaeological excavations between 2011 and 2013 which have revealed consistent activity in Late Antiquity. Inside the building the collapsed layers of an imperial structure have been partially removed to create a rectangular shaped space, delimited by dry stone walls and with a beaten earth floor, whereas outside the Porticus some building activity and later a burial ground changed the layout and function of this area drastically".

**Burgers (*et al.* 2014b, 815) describe the important changes that occurred in the area of the Testaccio since the erection of the Aurelian Walls (cf. here Fig. 102), the gradual abandonment of the entire area, and the fact that, 'from the 5<sup>th</sup> century onwards, several small and poor burial grounds have been established there': "I livelli tardoantichi, individuati sia all'interno che all'esterno della *Porticus Aemilia*, hanno rivelato un panorama piuttosto coerente con quello già noto per altre zone della pianura subaventina: forse è già a partire dalla costruzione delle Mura Aureliane - che inglobarono al loro interno l'area di Testaccio - [cf. here Figs. 102; 103] che le strutture commerciali e il nevralgico scalo dell'*Emporium* subirono una crescente defunzionalizzazione e un parziale abbandono. In tutta l'area si riscontrano interventi di colmata artificiale, e dunque di rialzamento dei piani di vita, atti a contrastare le piene del Tevere, e interventi di spoliazione di materiale edile e di riuso di porzioni di edifici in qualche caso ridotti allo stato di ruderi. Proprio questi parziali abbandoni accompagneranno anche la destinazione funeraria dell'area. Se è [page 1816] particolarmente rilevante il caso dello scavo del *Nuovo Mercato di Testaccio* in cui sono venute alla luce deposizioni direttamente impostate sui crolli delle antiche strutture commerciali [with n. 7], **va comunque sottolineato che in gran parte della pianura sono attestate piccole e povere necropoli** caratterizzate da sepolture ad *enchytrismos* o in fossa terragna ricavate all'interno di ambienti o di strutture di servizio ormai in disuso. **È questo il caso di ritrovamenti fatti nell'area dell'*Emporio*** [with n. 8], **del *Nuovo Mercato di Testaccio*, appunto, e di via Marmorata** [with n. 9] **in cui le inumazioni** [page 1817] **tardoantiche coprono un arco cronologico compreso tra V e VII secolo d.C. Con il progressivo venir meno della funzione di centro di ricezione e stoccaggio delle merci e con il conseguente abbandono delle strutture**, la zona perse la sua destinazione originaria e nel corso dei secoli si trasformò progressivamente in campagna suburbana mantenendo questo carattere sino alle soglie del XX secolo [my emphasis]".**

In their **note 7**, Burgers *et al.* write: "Festuccia, Pagano, Verde, 2008: 156-159".

In their **note 8**, they write: "Meneghini, Moccheggiani a, 1985: 15-46; Meneghini, Moccheggiani b, 1985: 86-95".

In their **note 9**, they write: "Quaranta, Capodiferro, 2011: 60-65".

**To the above-quoted passage by Burgers (*et al.* 2014b, 815) I wish to add two comments.**

- 1.) Let's begin with the fact, mentioned by Burgers (*et al.* 2014b, 815) that, 'in the area of the Testaccio, have been established 'from the 5<sup>th</sup> century onwards several small and poor burial grounds';
- 2.) As likewise observed by Burgers (*et al.* 2014b, 815): "forse è già a partire dalla costruzione delle Mura Aureliane - che inglobarono al loro interno l'area di Testaccio - [cf. here **Figs. 102; 103**] che le strutture commerciali e il nevralgico scalo dell'*Emporium* subirono una crescente defunzionalizzazione e un parziale abbandono".

*Ad 1.*) When asking myself what may have caused this appalling development that in the area of the Testaccio have been established 'from the 5<sup>th</sup> century onwards several small and poor burial grounds', I remembered the already mentioned drastic decline of the number of Rome's inhabitants in the 5<sup>th</sup> century that I have discussed elsewhere:

**"Because the western Roman Empire ended in 476 AD [with n. 447] and the population of its capital Rome was to shrink by almost 90 % during the 5<sup>th</sup> century, there was no need any more to maintain its 'pagan' buildings any more, as a matter of fact their intentional destruction begins even earlier than that [with n. 448]; cf. B 33) [my emphasis]". Cf. Häuber (2014a, 97).**

In my **note 447**, I quote: "Cf. P.J. Heather, *s.v.* Odoacer; in *OCD*, 1996<sup>3</sup>, p. 1060; p. 1335, *s.v.* Romulus Augustulus, last western Roman emperor AD 475-476".

Cf. **note 448**: "Santangeli Valenzani 2012, p. 116". - But see now Riccardo Santangeli Valenzani (2022, quoted *verbatim infra*).

See also the review by Riccardo Santangeli Valenzani (2018) of Pier Luigi Tucci's book on the *Forum/ Templum Pacis* (cf. *id.*, *The Temple of Peace in Rome*, I. *Art and Culture in Rome*; II. *Remodelings, Conversions, Excavations*, 2017).

**Santangeli Valenzani (2018) writes about Tucci's discussion of the *Forum Pacis*: "The author [*i.e.*, P.L. TUCCI 2017] barely mentions the transformation of the square into a commercial structure in the 4<sup>th</sup> century, or that it was successively occupied by a vast necropolis in the 6<sup>th</sup> ... [my emphasis]".**

Let's now pursue my just-quoted thought (2014a, 97) further, according to which since the 5<sup>th</sup> century, because of the shrinking of Rome's population, 'there was no need any more to maintain its 'pagan' buildings', and apply that to the above-quoted passage by Burgers (*et al.* 2014b, 815).

**We may (in theory) consequently conclude that, by the 5<sup>th</sup> century, there was likewise 'no need any more to maintain the many warehouses of the previously booming new commercial river port at *La Marmorata*', especially the 'Porticus Aemilia/ Navalia' discussed here (cf. here Figs. 102; 102.1; 102.2; 102.3). As Burgers (*et al.* 2014b, 815) report, the structures of the area had already been partly abandoned and/ or were in ruins, before, beginning in the 5<sup>th</sup> century, the first dead were buried there.**

As was already said above, in Section I. of his Chapter:

'Burials, that were found in adjacent areas [*i.e.*, adjacent to the 'Porticus Aemilia/ Navalia], are datable in the 5<sup>th</sup> and 6<sup>th</sup> centuries. There were even burials found within the building itself; cf. Burgers (*et al.* 2015, 210 with n. 30, without providing a date for those)'. See also Burgers (*et al.* 2014b, 815), where the authors state: "In tutta l'area si riscontrano ... interventi di spoliazione di materiale edile e di riuso di porzioni di edifici in qualche caso ridotti allo stato di ruderi. Proprio questi parziali abbandoni accompagneranno anche la destinazione funeraria dell'area".

What was obviously missing by the 5<sup>th</sup> century at Rome as the latest were not only great parts of the city's former very numerous population, the potential customers (or consumers) of the goods, which in the past had been delivered to this new commercial river port at *La Marmorata*. - To this I will come back below.

Of crucial importance was also that already since AD 330 Rome was not the capital of the Roman Empire any more. Constantine the Great had founded in AD 324 a new imperial residence on the Bosphorus, at the site of the ancient Byzantium (cf. here **Fig. 77**), and in AD 330 he transferred the capital of the Empire from Rome to this newly founded city, now called Constantinople; cf. Hugo Brandenburg (2013, 58, 121, quoted *verbatim infra*).

*On 9th April 2022, I had the chance to discuss all this with Hugo Brandenburg in a telephone conversation*

First of all I wanted to know of him, what exactly Constantine the Great 'had taken with him from Rome to Constantinople'. Brandenburg told me on that occasion, that the old Republican Senate of Rome did not follow Constantine, as I had suspected (to his I will come back below). It consisted at that time of members of the very influential aristocratic Roman families, who gained even greater importance for the Urbs from that moment onwards. Brandenburg told me also that, for his new Senate at Constantinople, Constantine, therefore, chose exclusively dignitaries from the East, in order to counterbalance Rome.

**Then Brandenburg discussed with me in great detail the situation of the area of *La Marmorata* in late antiquity, which, contrary to myself, he knew since many years very well, and that, as we have seen above, lies within the Aurelian Walls (cf. here Figs. 102; 103).**

**I told him about the many burial, found in the recent excavations in this area, and Brandenburg alerted me to the fact that those burials, which, from the 5<sup>th</sup> century onwards, began to encroach the entire area, prove something else: namely in the first place that the old Roman ('pagan') law, according to which it had been strictly forbidden to bury the dead within the settlements, had been given up by that time. To the great importance of the Aurelian Walls for this area (cf. here Figs. 102; 103) I will come back below.**

**Oliver Schmitt (2007) explains in detail, what also Hugo Brandenburg had discussed with me on 9th April 2022: for example, whether Constantine had taken the Roman Senate with him (which I had suspected, thus trying to explain the rapid decline of Rome). The Roman Senators had indeed wanted to move to Constantinople, but because the emperor had created at his new capital a 'second-rate Senate', most Roman Senators preferred to stay on in Rome. I thank Peter Herz for presenting me with a copy of this book.**

Oliver Schmitt (*Constantin der Große (275-337) Leben und Herrschaft*, 2007, 234-235: "Kapitel 6. Ich und sonst keiner: Die Zeit der Alleinherrschaft") writes :

**"Das zu Konstaninopel gewordene Byzanz wurde nicht nur erheblich vergrößert und mit enem prächtigen und kostspieligen Bauprogramm beglückt, es wurde auch in rechtlicher und verwaltungstechnischer Hinsicht dem römischen Vorbild angepasst. Konkret bedeutete das, dass Byzanz, oder Konstantinopel, wie es seit der Einweihung hieß, nicht mehr der Provinzialverwaltung unterstand, sondern einen eigenen Stadtpräfekten erhielt. [with n. 45] Die einzige Einschränkung gegenüber dem alten Rom betraf ausgerechnet den konstantinopolitanischen Senat: Er wurde ausdrücklich nur als *senatus scundi ordinis*, als Senat zweiten Ranges, konstituiert, wie uns der Anonymus Valesianus versichert, seine Angehörigen erhielten den Rang von *virii clari* [with n. 46] und nicht den von *clarissimi*, wie er eigentlich den Senatoren zustand ... Für Senatoren und Angehörige des Hofes ließ der Kaiser auf eigene Kosten prächtige Wohnsitze errichten, oder er gab den Betreffenden große Geldsummen, damit sie sich selbst ein Haus nach ihrem Geschmack bauen konnten. [with n. 47] ... [page 235] ... Wie man anhand der für die Lebensmittelversorgung aufzuwendenden Getreidemengen ermittelt hat, besaß Konstantinopel noch um die Mitte des 4. Jahrhunderts erheblich weniger Einwohner als Rom. [with n. 50] Auch erwies es sich aller kaiserlichen Fürsorge ungeachtet als nicht ganz einfach, Angehörige der Senatsaristokratie als "Senatoren zweiten Ranges" für die neue Hauptstadt zu gewinnen, da dies von vielen Kandidaten zu Recht als Degradierung empfunden wurde. Besonders die stadtrömischen Senatoren hielten sich offensichtlich zurück, während man vermuten kann, dass sich am ehesten solche Aristokraten zu einem Umzug bewegen ließen, die hauptsächlich im Osten begütert waren. [with n. 51; my emphasis]".**

In his **note 45**, Schmitt writes: "Zum Sonderstatus Constantinopels s.[iehe] Cod. Theod. 14,13: *De iure italico urbis Constantinopol(itanae)*; zum Stadtpräfekten s.[iehe] Sokrat. 2,41,1".

In his **note 46**, he writes: "Anon. Vales. I 30".

In his **note 47**, he writes: "Zos. 2,31,3; Soz. [corr.: Sokrat. ?] 2,3,4".

In his **note 50**, he writes: "S.[siehe] Herz, *Lebensmittelversorgung* [1988] 306-311, zum schwierigen Problem der Einwohnerzahl s.[siehe] auch Dagron, *Naissance*, 520-530".

In his **note 51**, he writes: "**Zur Unlust der Senatoren s. bes. [siehe besonders] Them. or. 3,57 (I 67,12-15 Downey); Dagron, Naissance 123** [my emphasis]".

Interestingly, neither Constantine the Great himself, when he moved the capital of the Roman Empire from Rome to Constantinople, nor his successors had obviously envisaged the following, very quick decay of Rome. - To this, and to my discussion with Hugo Brandenburg, I will come back below.

Some of the buildings of the commercial river port at *La Marmorata* were not only partly in ruins by the 5<sup>th</sup> century, also 'the entire area from the 5<sup>th</sup> century onwards, was used for several small and poor burial grounds', as stated by the excavators Burgers (*et al.* 2014b, 815), as we have seen above. Considering all that, I would have thought (erroneously, as we shall learn in a minute) that also the great entrepreneurs had long since left the scene by the 5<sup>th</sup> century.

As we have seen above, in Section II. of this Chapter, in the 'golden days' of the new commercial river port at *La Marmorata*, such entrepreneurs, with their seagoing ships, (like those represented on here **Figs. 98; 99**), had brought their goods to the *Portus Augusti*. Like the Egyptian entrepreneur Ciro of Laura Gigli's (2022, 265-268) fictional account, quoted in Section II. Those goods had then first of all been transported with the much smaller Tiber ships (like those visible on here **Figs. 105; 106**) for example to the commercial river port of *La Marmorata*. According to Giovannetti (2016, 18, Figs. 1; 2, quoted *verbatim* above, in Section I.), these goods had next been registered there, then they were either stored in magazines there, or immediately delivered to customers in Rome. All these people, who were involved in this gigantic trade, had constantly supplied the emperor and his court, the ruling classes of Rome, in short, the up to one million people counting population of Rome with all imaginable goods from overseas.

For the fact that, between Augustus and Constantine the Great, Rome has been a city with up to one million inhabitants; cf. Häuber (2014a, 443 with ns. 200, 201):

**"John Bodel [with n. 200] begins his recent study *From Columbaria to Catacombs* with the calculation that 'between the reigns of Augustus and Constantine, when the population of the city numbered between 750,000 and 1,000,000 inhabitants, the suburbs of the city must have accommodated between ten and a half million and fourteen million burials. Of these we have traces of perhaps 150,000 or less than 1.5 % of the total [with n. 201; my emphasis]".**

In my **note 200**, I write: "Bodel 2008, pp. 178-179; cf. pp. 236-242. He quotes for ancient mortality rates, Bodel 2000, pp. 128-129; cf. now Bodel 2012a [*i.e.*, here J. BODEL 2012]".

Cf. **note 201**: "**Herz 2012, p. 16 with n. 48 postulates instead for the period late antiquity that 'die Bevölkerungszahl der alten Hauptstadt [*i.e.*, Rome] bereits deutlich zurückge[g]angen war'** [my emphasis]".

See now also below, at *The sixth Contribution by Peter Herz : Rom. Strukturen der Versorgung*, where he writes that Rome, in the imperial period, had at times more than one million inhabitants.

Discussing the matter again with Peter Herz on 13th June 2023, I asked him, how he defines the 'imperial period', he answered: until Diocletian. On that occasion, I discussed with Herz also the decline of Rome in the 5<sup>th</sup> century. To this I will come back below.

To my surprise, Giovannetti (2016, 36, with Fig. 8 [= here **Fig. 102.3**]), in the English abstract of his article, describes the situation very different than just imagined by me. As we have seen throughout this *Chapter*, Giovannetti has studied the river port facilities right in front of the '*Porticus Aemilia*' / *Navalia* at *La Marmorata* (cf. here **Figs. 102; 102.2; 102.3**):

"Abstract. **The analysis of the documentation provided during the excavation of the Trajanic port in the '80s led to a more accurate definition of both the chronology and function of the interventions realized inside the building in its late phases.** Peculiar strategies of readjustment were set out from the early 4th until the late 6th centuries A.D., when the port was completely abandoned. The purpose of these operations was to contain floods and subdivided the cryptoporticus in several rooms, which were different by function and, probably, by tenants. Evidence of maintenance still persists even after the 5th century floods, as a sign that **the structure maintained its function to keep the imported goods, whose flow continued throughout the 6th century** [my emphasis]".

Let's for a moment return to Constantine the Great and his successors. When discussing above, in Section II., the fictional account of the Egyptian merchant *Ciro*, written by Laura Gigli (2022, 265-268), we have also looked at a map of this area of the Tiber valley, here **Fig. 103**. This map shows the Church of Santa Passera on the right bank of the Tiber in the quartiere Portuense, at the 3rd mile of the ancient *Via Campana* (today: *Via della Magliana nuova*), underneath the Gianicolo, and opposite the Basilica of San Paolo fuori le Mura (which is located on the left bank of the Tiber), on the *Via Ostiensis*. Both, the Church of Santa Passera and the Basilica of San Paolo fuori le Mura, are located to the south of the quartiere Testaccio with *La Marmorata*.

We have heard above, in Section II., that the Church of Santa Passera was first dedicated to the Saints *Ciro* and *Giovanni*, who originated also in reality from Egypt, and about whom Laura Gigli (2022, 265-268) has now written her fictional account. In this story, Laura has 'transformed' *Ciro* and *Giovanni* into an Egyptian entrepreneur, owner of several seagoing ships and merchant, and his son, who, living at the time of Marcus Aurelius, come from a family, that, since a very long time, has been involved in the seaborne trade, delivering grain and luxury goods from Egypt to Rome.

Why am I mentioning this here?

Because the area of the ancient new commercial river port of the Testaccio with *La Marmorata*, and its decline in late antiquity, should, in my opinion, be discussed together with the Basilica of San Paolo fuori le Mura and the other early churches of the area, for example the Church of Santa Passera. This Church was built in the 8th/ 9th century on top of an ancient tomb, datable to the 2nd/ 3rd century (believed in the Middle Ages to be that of the Saints *Ciro* and *Giovanni*?). This ancient tomb, in its turn, had been built next to a pre-existing "approdo" (*i.e.*, one of the many ancient wharves, documented on both banks of the Tiber). At the Church of Santa Passera (a name of a saint, who does not exist - perhaps referring to Santa Prassede?), were originally worshipped the Egyptian Saints *Ciro* and *Giovanni*.

**Apropos cults. The Torlonia Relief (here Fig. 98) shows the harbour *Portus Augusti* at *Portus*, built by the Emperor Claudius, which is recognizable as such by the statues of *Liber Pater* and *Neptunus* appearing on this relief, who had cults there (see above, in Section II.).**

When comparing that with the commercial river port at the Testaccio/ *La Marmorata* (here **Figs. 102; 103**) it seems at first glance as if there is not a single ancient shrine or temple recorded for this entire vast area. On the other hand, we might ask ourselves, whether or not the later Churches, located there, may have had ancient cults as predecessors. See for those Churches Claudio Mocchegiani Carpano ("Emporium", in: *LTUR* II [1995] 223, Fig. 69): "Le numerose chiese sorte sui ruderi degli antichi edifici erano dette *in Marmorata* (v.[edi] Armellini, *Chiese*: S. Anna de Marmorata, S. Nicolò de Marmorata detta *de marmoratis* nel luogo le 'marmorate' ecc.): ciò a testimoniare anche la presenza di enormi quantità di marmi depositati e l'organizzazione sul luogo di officine medievali per la lavorazione dell'abbondante materiale".

After having written this down, I realized that the above-mentioned assertion is not true: there were at least two cults in the area at the commercial river port at *La Marmorata*, both documented by finds that were excavated in the *Vigna Sforza/ Cesarini*:

1.) a cult of *Hercules*. See the marble altar dedicated to *Hercules* by *Primigenius Iuvencianus*, which was found in 1737 'at *La Marmorata*', and precisely in *Vigna Cesarini*. *Primigenius* was a slave or freedman of the

Emperor Vespasianus, and calls himself in the inscription of this altar a *tabularius a marmoribus* (CIL VI 301; cf. here Fig. 102.5; for a discussion see above, in Section I.);

2.) A cult of *Mater Deum* and *Navisalvia*. See the 'altare di *Navisalvia*' in the Musei Capitolini (CIL VI, 492), which refers to the legend of Claudia Quinta and to the arrival of the sacred stone of *Magna Mater* at Rome in 204 BC (cf. here Fig. 102.7).

**In the following, I allow myself a digression on this cult of *Mater Deum* and *Navisalvia* at this site, because, as rightly observed by Alessandro D'Alessio (2008; 2014), it supports Lucos Cozza's and Pier Luigi Tucci's (2006) identification of the *opus incertum* building at *La Marmorata* as *Navalia*.**

**Alessandro D'Alessio (2008) has suggested that this 'altare di *Navisalvia*', because of its findspot close to the *opus incertum* building at *La Marmorata*, provides a further argument in favour of the identification of this building as *Navalia*. In his more recent study (2014, 10, 12), D'Alessio summarizes this older hypothesis as follows:**

"Dopo la pubblicazione di Cozza e Tucci [2006], il primo a sposare interamente la revisione epigrafica e nuova identificazione dell'edificio del Testaccio come navale, è stato Coarelli in un contributo teso proprio a demolire la citata proposta di Tuck [with n. 14]. Io stesso, sempre in *Archeologia Classica* due anni dopo [2008], ho fondamentalmente accolto l'ipotesi di Cozza e Tucci [2006], seppur con qualche riserva e partendo da essa per tentare una reinterpretazione del rilievo scolpito su un altare in marmo di età claudia conservato ai Musei Capitolini, meglio noto come "altare di *Navisalvia*" (fig. 8 [cf. here Fig. 102.7]) [with n. 15]. Sul lato frontale dell'ara sta infatti la raffigurazione di una nave su cui siede Cibele in trono, alla destra della quale è un personaggio femminile stante connotato come Vestale dal *suffibulum* e dall'*infula* con cui traina l'imbarcazione. Sotto, con precisa corrispondenza tra i primi due nomi e le figure, la dedica *Matri Deum et Navisalviae / Salviae voto suscepto / Claudia Syntyche / d d [dono dat; with n. 16] contrassegna e "spiega" il significato della rappresentazione stessa: l'arrivo del culto della Magna Mater a Roma (e qui più precisamente a Ostia) nel 204 a.C. e la connessa vicenda di Claudia Quinta, eroica protagonista dell'accoglienza della dea in città [with n. 17]. [page 11; page 12]*

Ora, senza rientrare nel merito del percorso apologetico seguito della saga di Claudia Quinta, figura appartenente ai *sacra privata* dei Claudii, opportunamente rivitalizzata e rifunzionalizzata a partire dall'età augustea, ebbene è a me parso di ravvisare una possibile relazione, topografica e di significato, tra la rappresentazione del leggendario episodio sull'altare capitolino e le attività portuali, se non i presunti *navalia*, del Testaccio. L'ara, infatti, fu rinvenuta nel Settecento nei terreni di Vigna Sforza-Cesarini (attuale Lungotevere Testaccio) proprio nelle vicinanze dell'edificio in *opus incertum*, e fu dedicata dalla liberta Claudia Synthye come afferente a un collegio di culto celebrato nel luogo dal personale del porto. Dalla zona, del resto, provengono anche un'altra iscrizione su una piccola lastra offerta dalla stessa liberta [with n. 18] e, probabilmente, una terza perduta in cui compariva un *Q. Nunnius Telephus mag(ister) col(legi) culto(rum) eius* [with n. 19]. Secondo l'opinione prevalente [with n. 20], si tende così a ritenere che la figura 'eroica' (o 'eroizzata') di *Claudia Quinta* si sia gradualmente sovrapposta, in un articolato processo storico-narrativo, a una più antica devozione sviluppatasi in seguito all'introduzione della Magna Mater a Roma e che proprio qui, nell'area dove presumibilmente attraccò la nave con la pietra nera, trovava la sua sede più consona. Sta di fatto che il significato insito nella parola *Navisalvia* è chiaramente esemplificato dalla scena rappresentata sull'altare capitolino, dove Claudia Vestale traina l'imbarcazione di Cibele tirandola appunto in salvo.

Così come il tirare in salvo, all'attracco le navi costituiva una delle operazioni regolarmente svolte dal personale addetto all'ormeggio delle imbarcazioni e al carico e scarico delle merci, se non da quanti eventualmente impegnati nel rimessaggio e nella manutenzione delle navi da guerra all'interno dei presunti *navalia*. Gli stessi soggetti, in fondo, che a quel collegio religioso e "corporativo" (di *Mater Deum* e *Navisalvia*, come ad altri qui documentati) erano così devotamente legati [with n. 21; my emphasis]".

In his **note 13**, D'Alessio writes: "S. TUCK, «A New Identification for the Porticus Aemilia», in *JRA* 13, 2000, pp. 175-182".

In his **note 14**, he writes: "F. COARELLI, «Horrea Cornelia?», in *Res Bene Gestae. Ricerche di storia urbana in onore di Eva Margareta Steinby* (a cura di A. LEONE, D. PALOMBI, S. WALKER), *LTUR*, suppl. IV, Roma 2007, pp. 41-45".

In his **note 17**, he writes: "L'episodio che la riguarda, notissimo nella versione datane da Ovidio (*Fasti* IV, 259-260 e 291-344), narra di come giunta a Ostia, la nave che trasportava la pietra nera di Pessinunte (simbolo aniconico della dea) si insabbiò alla foce del Tevere. Claudia, casta matrona ingiustamente sospettata di impudicizia, pregò la dea di intercedere a suo favore e, afferrata la fune, liberò l'imbarcazione. Nell'esultanza generale, Cibele aveva così testimoniato la purezza della donna e cancellato al contempo l'infausto presagio. La scena è come noto raffigurata anche su un medaglione della diva Faustina: R. TURCAN, *Numismatique romaine du culte métroaque*, Leiden 1983, p. 29 e tav. XIV".

In his **note 18**, he writes: "*CIL* VI, 493: *Navisalviae et / Matri deu(m) [vel div(orum)] d(ono) d(at) / Claudia Synty(che)*".

In his **note 19**, he writes: "*CIL* VI, 494".

In his **note 20**, he writes: "Cfr. F. COARELLI, «I monumenti dei culti orientali a Roma. Questioni topografiche e cronologiche», in *La soteriologia dei culti orientali nell'impero romano* (a cura di U. BIANCHI, M.J. ZEVI, «Culti 'Claudii' a Ostia e a Roma», in *ArchCl* XLIX, 1997, pp. 435-471; P. PENSABENE, «Il culto di Cibele e la topografia del sacro a Roma», in *Culti orientali tra scavo e collezionismo* (a cura di B. PALMA VENETUCCI), Roma 2008, pp. 21-39".

In his **note 21**, he writes: "Cfr. D'ALESSIO, «Navalia, Navisalvia ...», *art. cit.* a nota 15, con bibliografia".

**Besides, the 'cult transfer' of Magna Mater to Rome was indeed, as convincingly stressed by Alessandro D'Alessio (2014, 12), of the greatest importance to those Roman noble families, who could count among their ancestors one of those men, who, in 204 BC, had been granted the great honour of accompanying the sacred stone of the goddess from Pessinus to Rome.**

This is also clear from some fragments of a marble frieze depicting this event in great detail, which are now kept in the Pergamon Museum at Berlin. Those fragments were found on the Esquiline and had obviously decorated the *domus* of a member of such a noble family; cf. Häuber ("Der Aufbruch der Göttin Kybele in Pessinus? Zu einem römischen Marmorrelief im Pergamonmuseum Berlin", 1998b).

**Interestingly, Filippo Coarelli (2012, 406) identifies Claudia Quinta with a standing veiled female figure, represented on the 'Base di Sorrento':**

**"una figura stante femminile velata, rivolta a destra"; cf. p- 407: "Segue una figura di coribante, che danza tenendo un clipeo circolare. Più avanti si riconosce l'immagine in trono di Cibele, affiancata da un leone [my emphasis]".**

Cf. Coarelli (2012, 406-407, Chapter: "V La formazione dei palazzi imperiali"; Section: "5. Vesta Palatina", Fig. 123 [corr.: 122] with ns. 174, 175); cf. Fig. 127. See Coarelli (2012, 402, Fig. 122), the caption of this illustration reads: "Fig. 122, 'Base di Sorrento', lato D: Magna Mater"; the caption of Fig. 127 reads: "'Base di Sorrento'. Rilievo grafico".

Coarelli (2012, 406-407) writes about this figure, the presumed Claudia Quinta on the 'Sorrento Base':

**"Proponiamo di riconoscervi Claudia Quinta, la matrona cui era stata affidata l'accoglienza della dea [*i.e.*, the Magna Mater]: sappiamo infatti che una [page 407] sua statua, collocata nel tempio [della Magna Mater], era sopravvissuta a due incendi, nel 111 a.C. e nel 3 d.C. [with n. 174]. Il fatto era stato interpretato come segno di particolare favore divino per la gens Claudia e in particolare per Tiberio, una statua del quale si era anch'essa salvata in circostanze analoghe [follows the Latin quotation of Tac., *ann.* 4.64.4; with n. 175; my emphasis]"**.

In his **note 174**, Coarelli writes: "Val. Max. 1.8.11; Tac., *ann.* 4.64".

In his **note 175**, he writes: "Tac., *ann.* 4.64.4 [follows the Italian translation]"

Immediately after that, Coarelli (2012, 407) continues: "Se questa interpretazione è giusta, essa fornisce un dato importante per l'attribuzione della base al periodo tiberiano".

I agree with Coarelli, but would argue 'the other way around'. If it could otherwise be proven that the 'Sorrento Base' is datable in the Tiberian period, this would strongly support his brilliant hypothesis to identify this female figure on the base with the famous statue of Claudia Quinta that stood in the temple of Magna Mater on the Palatine and had survived the great fires of 11 BC and of AD 3 (!).

Let's now return to our main subject.

The area of *La Marmorata* should, in my opinion, in late antiquity be discussed together with the above-mentioned early churches of this area for the following reasons: The important *Paradigmenwechsel* ('change of paradigms') of the time, from 'pagan' religions, customs and Roman law to those of Christianity, was for the contemporaries a reality. We nowadays, on the other hand, when trying to reconstruct their lives - in their city of Rome - to reach that goal need to consult the libraries of many *different* (!) disciplines and to discuss such efforts with colleagues of those disciplines. And that not only in the case of scientific excavations, as documented by Burgers (*et al.* 204a; 2014b; 2015), who lists quite a few of such specialist who are analysing their finds.

As, for example in this *Chapter*: with the above-quoted numismatist Angelo Geißen, the ancient historians John Bodet and Peter Herz, and with the art historian Laura Gigli, who, in her own research projects, always collaborates closely with architects. Laura Gigli has not only studied the Church of Santa Passera; cf. Laura Gigli and Gianfrancesco Solferino ("La chiesa di Santa Passera. Riflessioni sui dipinti del presbiterio", 2016), but has also made an interesting decision in her fictional account of the merchant Ciro, who lived at the time of Marcus Aurelius: Laura describes the experiences of this 'pagan' Egyptian Ciro with Christians, first in his home town Alexandria and later in Rome; cf. Gigli (2022, 265-268; quoted *verbatim* above, in Section II.). Hugo Brandenburg, on the other hand, a *Frühchristlicher Archäologe*, a Classical Archaeologist and specialist of Early Christianity, is since a long time studying the Basilica of San Paolo fuori le Mura, as well as the whole area in question.

In the course of our recent telephone conversation on the area of *La Marmorata* in late antiquity, Brandenburg had actually alerted me to the fact that shortly before, when Rome was still a 'pagan' city, it had strictly been forbidden to bury the dead *within* the city walls.

At that time nobody would, therefore, have dreamt of acting in this way. - But since the 5<sup>th</sup> century, that is to say, only shortly later, precisely that has happened everywhere in Rome, and, of course, also in the area of the Testaccio/ *La Marmorata* (see for the location of this area within the Aurelian Walls, here **Figs. 102; 103**).

Let's now turn again to the successors of Constantine the Great and their Church (*i.e.*, San Paolo fuori le Mura) which, and this is the reason, why I find that this is of importance in this context, was only dedicated *after* Constantine the Great had moved the capital of the Roman Empire to his newly erected Constantinople.

As already said above: I find it impossible to believe that Constantine the Great's successors, at the moment of planning this project, and when finally dedicating the Basilica of San Paolo fuori le Mura, could have imagined that this entire area of Rome, so shortly after realizing this extremely ambitious project, could have suffered such a decline, as now so vividly described by Burgers (*et al.* 2014b, 815).

**Concerning the above-mentioned actions of Constantine the Great and his successors, Hugo Brandenburg (*Le Prime Chiese di Roma IV-VII Secolo*, 2013, 58) writes :**

"Sconfitto nel 324 Licinio, reggente la parte orientale dell'impero, Costantino fonda nello stesso anno sulle rive del Bosporo, sul luogo dell'antico Bisanzio, una nuova residenza imperiale, e nella nuova metropoli, che da lui prese il nome Costantinopoli, erige un altro mausoleo ...".

**Brandenburg (2013, 121, in: "Capitolo Sesto La Basilica Teodosiana di S. Paolo sulla Via Ostiense (S. Paolo fuori le Mura)" writes : "L'ultima e più dispendiosa fondazione imperiale a Roma, successiva al trasferimento della capitale dell'impero - voluto da Costantino nel 330 - nella neofondata Costantinopoli, è la basilica di S. Paolo sulla via Ostiense, a due miglia dalle porte della città. La basilica in onore dell'apostolo Paolo conclude la serie delle chiese memoriali edificate nel IV secolo a Roma.**

**Nel tardo autunno del 386 i tre imperatori regnanti, Teodosio, Valentiniani II e Arcadio, indirizzano uno scritto al rappresentante del potere imperiale a Roma, il *praefectus urbi* Sallustio [with n. 1, providing a reference]. La missiva conteneva indicazioni per la costruzione di una basilica sulla tomba dell'apostolo in una necropoli lungo la via Ostiense ... [my emphasis]"**.

For Licinius and Constantine the Great, both mentioned by Brandenburg (2013) in the two above-quoted passages; cf. the first Part of this *Study*: *I. The statue of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori* (cf. here **Fig. 11**) and the inscription (CIL VI 974 = 40524; cf. here **Fig. 29.1**). With The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great).

On 3rd January 2023 reached me a letter by Angelika Geyer with the obituary notice of Hugo Brandenburg, who had passed away on 26th December 2022.

As already mentioned, I was fortunate to study with him at the Universität zu Köln since 1973, and he has since then, and especially in discussions since May of 2018, opened my eyes for many new topics, which are presented in this book and in my forthcoming one on the Laocoon.

To illustrate the point that Brandenburg was not only the great scholar of late antiquity, for which he is known, but equally gifted as a very inspiring and generous teacher, I repeat, what was already mentioned in the above-quoted *Chapter*. To this I should like to add that it was also a delight to discuss with him:

Angelika Geyer's and Hugo Brandenburg's present of his book *Le Prime Chiese di Roma* (2013) on 26th November 2019 resulted for example in the fact that I began to study three different subjects that, to my own surprise, turned out to be closely related to Domitian. These texts are, therefore, published in this book:

*A Study on the colossal portrait of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori at Rome* (cf. here **Fig. 11**) ...; *A Study on Domitian's cult-statue of Iuppiter Optimus Maximus Capitolinus* (cf. here **Fig. 10**); and *A Study on Hadrian's portrait-statue from Hierapydna* (cf. here **Fig. 29**).

Let's now return to our main subject.

Of course, what Burgers *et al.* (2014b, 815) describe in the above-mentioned point :

1.), that, 'in the area of the Testaccio, have been established from the 5<sup>th</sup> century onwards several small and poor burial grounds', was the very end of a long process. Because -

2.) As likewise observed by Burgers (*et al.* 2014b, 815): "forse è già a partire dalla costruzione delle Mura Aureliane - che inglobarono al loro interno l'area di Testaccio - [cf. here **Figs. 102; 103**] che le strutture commerciali e il nevralgico scalo dell'*Emporium* subirono una crescente defunzionalizzazione e un parziale abbandono".

As is well known, already Robert Coates Stephens (2001) has convincingly explained the dramatic changes in late antiquity on the Esquiline and Caelian that had occurred as a result of the erection of the first phase of the Aurelian Walls (AD 271-275). For my own studies on the Esquiline, I have greatly profited from Coates Stephens's (2001) observations; cf. Häuber (2014a, 665, 667).

**I can, therefore, only agree with the statement of Burgers (*et al.* 2014b, 815) that the decline of the area of the Testaccio may (possibly) have begun because of the erection of the Aurelian Walls (AD 271-275).**

**In addition to this, I would also like to argue 'the other way around': the final decline of the entire ancient city of Rome - comprising the area of the Testaccio, now also documented by their excavations and so vividly described by Burgers (*et al.* 2014b, 815) - had been announced by events, which, in their turn, had motivated the Emperor Aurelian to erect at Rome (AD 271-275) his 'Aurelian Walls' in the first place.**

See for the Aurelian Walls here **Fig. 71**, inserted box on top right, which shows our map of archaic Rome with all its later city walls.

**Many years ago my good late friend Lucos Cozza, who knew that I had lived for a long time in Cologne, explained to me - with a big smile - why the Emperor Aurelian had decided to build the 'Aurelian Walls': because in AD 259 Postumus had founded at Cologne his 'Gallic empire'; in 1987, Cozza has also published this hypothesis ("Osservazioni sulle mura aureliane a Roma", 1987, 43-46, with ns. 20-23).**

When Cozza disclosed this hypothesis to me, I only knew the extraordinary large and beautiful *aurei*, issued by Postumus at Cologne. But when studying those coins with the numismatist Angelo Geißen at the Universität zu Köln in 1975, none of us had the foggiest idea, which important effect Postumus had made on the Emperor Aurelian, let alone that Aurelian could have decided to commission 'his' city walls at Rome because of Postumus's announcement of, and long time existing (!), 'Gallic empire'.

I have elsewhere mentioned Lucos Cozza's brilliant idea: "L. Cozza sieht den Baubeginn der Aurelianischen Mauer als Folge des in Köln ausgerufenen gallischen Sonderreichs des Postumus (259-268) [with n. 413]". Cf. Häuber (1990) 106. In my **note 413**, I quote for Cozza's hypothesis: "AnalRom16, 1987, 43 f. mit Anm. 20ff."

For Postumus; cf. John Frederick Drinkwater ("Postumus (*PLRE* 1.720), Marcus Cassianus Latinus, Gallienus' military commander from AD 259, quarrelled with the young prince, Saloninus, and his civilian advisers during the barbarian attacks following the capture of Valerian (260). He seized power and established himself as Roman emperor in Gaul, Britain and Spain. He defended his 'Gallic empire' against both Germanic invaders and Gallienus (265), but was killed by his own troops after defeating the rebel Laelianus (269).

Postumus' strength and weakness was his determination not to march on Rome. This enabled him to defend the west, but strained the loyalty of his army and allowed no 'legitimate' emperor to trust him entirely [the emphasis is by the author himself]", in: *OCD*<sup>3</sup> (1996, 1235).

**For the Aurelian Walls, which, according to her, were erected by Aurelian for different reasons than those suggested by Cozza (1987); cf. Giuseppina Pisani Sartorio ("Muri Aureliani", in *LTUR* III [1996] 290-299), who writes on p. 290 :**

"MURI AURELIANI. La costruzione delle mura fu decisa dopo la terza invasione degli Alemanni era penetrata oltre il sistema difensivo predisposto da Gallieno lungo la direttrice Milano-Verona-Aquileia, e respinta da Aureliano, appena acclamato imperatore, nel 270 e agli inizi del 271" (!). For Giuseppina Pisani Sartorio's most recent discussion of the Aurelian Walls, see her article ("Da Aureliano a Costantino : la difesa di Roma (271-312 d.C.)", 2022).

**But not only the construction of the Aurelian Walls (AD 271-275), and Constantine's decision to move the capital of the Roman Empire in AD 330 to Constantinople must be considered, when we try to explain the decline of the *Urbs* in the 5<sup>th</sup> century, which Burgers (*et al.* 2014b, 815) have now documented for us for the area of the Testaccio. When discussing the matter with Peter Herz on 13th June 2023, he reminded me of the fact that decisive in this respect was, of course, that Alaric had sacked Rome in AD 410. To this we may add the already mentioned fact that the western Roman Empire ended in AD 476.**

In a recent article, Peter Herz has discussed the consequences for the *Urbs* that Alaric had sacked Rome on 24th August AD 410 ("Rom in der Spätantike. Der Niedergang einer ehemaligen Hauptstadt", 2012a). For other consequences of Alaric's 'Sack of Rome'; cf. Häuber (2014a, 799-802, with n. 21).

For Alaric; cf. Peter John Heather ("Alaric, Gothic leader c.[irca] 395.-410 AD ...", in *OCD*<sup>3</sup> [1996] 49 [the emphasis is by the author]).

Herz (2012a) discusses also the consequences of the fact that "in 402, when the presence of the Goths in the Po plain made the former capital Milan unsafe, the western emperor Honorius transferred the court to Ravenna, chosen because of its secure setting behind marshes"; cf. Bryan R. Ward-Perkins ("Ravenna", in: *OCD*<sup>3</sup> [1996] 1294). Considering all those facts, Herz (2012a) has come to the conclusion that, in the 5<sup>th</sup> century, the population of Rome of once over 1 million individuals, amounted now to only circa 250,000.

When this volume was about to be sent to the press, I found the article by Riccardo Santangeli Valenzani ("Roma tardo antica, trent'anni dopo, 2022). It has appeared in a volume, edited by Cyril Courrier (*et al.*, *Rome, archéologie et histoire urbaine : trente ans après l'Urbs*, 1987). In this article, Santangeli Valenzani paints a somewhat different picture of Rome in late antiquity/ the early Middle Ages than in his earlier, above-quoted publications.

Riccardo Santangeli Valenzani (2022) writes in his Résumé:

"The thirty years since the 1985 'L'Urbs' conference have deeply changed our vision of Rome in Late Antiquity and the Early Middle Ages. While still in 1980 R. Krautheimer, for his admirable synthesis on the state-of-the-art of medieval Rome, had only little evidence of the sources and data of religious buildings, the outcomes of numerous excavations nowadays allow us to delineate with much greater accuracy the urban landscape transformations, as well as the demographic and economic life of the city. The resulting picture, far from some catastrophic visions of a substantially depopulated and abandoned Rome, besides the continuous ones, sees a city with a population severely reduced compared to the 4<sup>th</sup> century, but still calculable in tens of thousands of inhabitants, with obvious elements of infrastructure degradation and the partial abandonment of some sectors, but with a substantial maintenance of roads and the urban structure. Even until the beginning of the 8<sup>th</sup> century, Rome remained inserted in the currents of Mediterranean commercial traffic and active production center.

Entrées d'index

Keywords : Late Antique Rome, Roman archaeology, Early Middle Age".

***The discussion of the opus incertum building at La Marmorata by Francesca de Caprariis (2019; 2022), from whose essays were already chosen the [9.], [11.] and [12.] epigraphs in this Section III.***

The author identifies the building at *La Marmorata* with the *Porticus Aemilia* (here **Figs. 102; 102.1; 102.2; 103.3**).

After summarizing the controversial discussion that has followed the proposal of Cozza and Tucci (2006) to identify the (in my opinion alleged) *Porticus Aemilia* at *La Marmorata* as some *Navalia* instead, Francesca de Caprariis (2019, 166, in her Section: "3. POST NAVALIA") writes concerning the reading of the 'preliminary' inscription on fragment 24b of the Severan Marble plan, on which the '*Porticus Aemilia*' (the building here identified as *Navalia*) is documented: "... La 'questione' epigrafica - ancora spesso chiamata in causa - è particolarmente sterile: l'incisione preparatoria sul frammento 24b della pianta marmorea non è decisiva, e, se l'ipotesi relativa ai [*nava*]lia è indipendente dalla lettura a suo tempo proposta [with n. 59], **rimangono aperte altre possibilità, dal vecchio [Aemi]lia al più recente [horrea fisc]alia.**

Quest'ultima proposta, di recente avanzata da Elio De Magistris [with n. 60] ha trovato finora scarso spazio nella discussione scientifica [my emphasis]".

In her **note 59**, de Caprariis writes: "TUCCI 2012, pp. 575-591".

In her **note 60**, she writes: "DE MAGISTRIS 2012, pp. 341-359".

For a discussion of the controversy concerning the reading of the inscription of the *opus incertum* building on fragments 23 and 24b of the Severan Marble Plan; cf. also Alessandro D'Alessio (2014, 13-14, Fig. 9).

Concerning this point, I can only repeat what was already said above: not as yet knowing fragments 23 and 24 of the Severan Marble Plan from autopsy, I myself cannot judge the question related to its preliminary inscription on fragment 24b, but I do hope to have the chance to study this fragment in May of 2022.

But for the time being, I see no reason *not* to trust de Caprariis's judgement, who writes (2022,, 127, with n. 30 quoted above, in this Section *III*. as the **[11.] epigraph**), that of the preliminary inscription on fragment 24b only the last two letters 'IA' survive. - See for fragment 24b of the Severan Marble Plan also the photograph, published by Francesca e Caprariis (2022, 122, Fig. 5.3), or the photo, published by Alessandro D'Alessio (2014, 13 with n. 32, Fig. 9).

**As already mentioned, on 6th May 2022, I had the chance to study fragment 24b myself. I could only see the letters 'I' and 'λ', and thank Francesca de Caprariis for giving us access to the fragments 23 and 24. She was also kind enough to tell me her personal opinion that she does not take the inscription on fragment 24b as being 'preliminary'.**

As was likewise already mentioned above, this is precisely what Cozza and Tucci (2006, 178 [TUCCI]) have written in their note 8: "G. GATTI, in *Pianta Marmorea* [*i.e.*, here *Pianta Marmorea* 1960 = G. CARETTONI *et al.* 1960], p. 82, nota 8, aveva notato i «due segni: I e λ»".

I am, also therefore, convinced that it is nevertheless possible to define what kind of building it was, to which this 'preliminary' inscription on fragment 24b and the main inscription on fragment 23 belong (or at least: for which purpose this building had originally been erected), as I actually tentatively do in this *Chapter*. Of a very different opinion is Alessandro D'Alessio (2014, 21), who, although rejecting both the identifications of the *opus incertum* building with the *Porticus Aemilia* and as *Navalia*, does himself not suggest which purpose this building may have served.

**Also de Caprariis (2022, 127) discusses the readings of the inscriptions on the fragments of the Severan Marble plan, on which the '*Porticus Aemilia*' (the building here identified as *Navalia*) is documented.**

According to de Caprariis, the (main) and the 'preliminary' inscriptions on fragments 23 and 24b of the Severan Marble Plan, which represent the *opus incertum* building at *La Marmorata*, cannot help us in our efforts to identify this building. Cf. de Caprariis (2019, 166, quoted *verbatim* above), and de Caprariis (2022, 127, with Fig. 5.2, above and below [cf. here **Figs. 102.2, above and below**]; Fig. 5.3 and n. 30, quoted above, as the [11.] **epigraph** in this Section III.).

The reason being, according to de Caprariis (*op. cit.*), that not only the suggested readings of Carettoni *et al.* (1960: 'Aemilia'; cf. here **Fig. 102.2, above**) and of Cozza and Tucci (2006: 'Navalia'; cf. here **Fig. 102.2, below**) are both possible, but also other alternatives. Or, as de Caprariis (2022, 127) writes: "**The old Aemilia, or Nauvalia, or indeed other readings are all possible** [my emphasis]".

**Concerning one part of her statement, I am of a contrary opinion than de Caprariis (2022, 127) herself: the position of the letters 'LIA' of the main inscription on fragment 23 of the Severan Marble Plan precludes, in my opinion, the identification of the *opus incertum* building with the *Porticus Aemilia* outside *Porta Trigemina*.**

I myself follow de Caprariis (2019, 166, and *ead.* 2022, 127, with Fig. 5.2, below [cf. here **Fig. 102.2, below**]) in so far, as I likewise believe that both inscriptions on the Severan Marble plan, the (main) inscription on fragment 23 and the 'preliminary' one on fragment 24b, may be reconstructed as 'Navalia'. In the case of de Caprariis's hypothesis (2022, 127, with Fig. 5.2, above) that both inscriptions could likewise be restored as *Aemilia* this seems to be, at first glance, likewise true (cf. here **Fig. 102.2, above**).

But I am, nevertheless, convinced that the main inscription of the *opus incertum* building on fragment 23 of the Severan Marble Plan cannot have read 'Aemilia', as shown in the reconstruction, published by de Caprariis (2022, 120) as her Fig. 5.2, above (cf. here **Fig. 102.2, above**). And, provided that were true, in my opinion, also the 'preliminary' inscription cannot have read 'Aemilia'.

Before explaining my rejection of de Caprariis's assertion (2019, 166, and *ead.* 2022, 127, with Fig. 5.2, above [cf. here **Fig. 102.2, above**]) that the main inscription of the *opus incertum* building could have read 'Aemilia', let me alert you to the following facts.

De Caprariis (2022, 119) has published as her Fig. 5.1 the reconstruction of 'Testaccio and Trastevere' by Gianfilippo Carettoni, Lucos Cozza, Antonio Maria Colini und Guglielmo Gatti (1960). De Caprariis (2022, 120, Fig. 5.2, above) (cf. here **Fig. 102.2, above**) shows a detail of this plan by Carettoni *et al.* (1960), with the *opus incertum* building, labelled: 'AEMI]LIA'.

Contrary to Gatti's (1934) own reconstruction of the *opus incertum* building at *La Marmorata* (cf. here **Fig. 102.3**), in the reconstruction by Carettoni, Cozza, Colini und Gatti (1960; here **Fig. 102.2, above**) it is meritoriously indicated, where exactly within the building's ground-plan the fragment 23 of the Severan Marble Plan is actually located that carries the three remaining letters 'LIA' of the main inscription of the building. Therefore, the reconstructed label 'AEMI]LIA' is positioned on **Fig. 102.2, above** very closely to the eastern short side of the building (for the true orientation of the *Navalia*; cf. here **Fig. 102**). And this has, in its turn, the effect that in the reconstruction by Carettoni *et al.* (1960) there is no chance 'of squeezing in' the additional word 'PORTICVS'. Besides, the latter is exactly what Gatti had indicated on his own reconstruction of this building (1934; here **Fig. 102.3**, label: 'PORTICVS AEMILIA'). Apart from the fact that in all our ancient literary sources, the (real) building in question is always called '*porticus*', and only once '*Porticus Aemilia*', but never only as '*Aemilia*'. For those literary sources, see above, the [4.] and [10.] **epigraphs** in this Section III.

**My rejection of the reconstruction of the main inscription on the *opus incertum* building as 'Aemilia' by Carettoni (*et al.* 1960) - followed by de Caprariis's (2019, 166; *ead.* 2022, 127, as her Fig. 5.2, above [cf. here **Fig. 102.2, above**]) - is based on observations, that can be summarized as follows. The inscriptions of fragments 23 and 24 of the Severan Marble Plan (here **Figs. 102; 102.2**) should be discussed in context of the three toponyms *Aemilian'* that existed at Rome at the same time.**

This leads us to the first toponym *Aemiliana*, the *Horrea Aemiliana* in Rome's old commercial river port:

Coarelli (2019a, 213 with n. 81) has, in my opinion convincingly, suggested that fragment 621a-d of the Severan Marble Plan had belonged to the *Horrea Aemiliana*. Fragment 621a-d carries the inscription 'AEMILII' (cf. *LTUR* I [1993] 358, Fig. 4), and has securely been located in the area of Rome's old river port.

As we have seen above in this Section III., the *Horrea Aemiliana* have been excavated at the building site of the Palazzo dell'Anagrafe. That is to say, the *Horrea Aemiliana* stood in the *old* commercial river port of Rome, next to the *Forum Boarium*. - With this belief, I follow Coarelli ("Aemiliana", in: *LTUR* I [1993] 18-19), as well as his suggestion to read the inscription on fragment 621a-d as: 'AEMILII[ANA]'.

For the location of the *Horrea Aemiliana* in Rome's old commercial river port; cf. here Fig. 58, labels: TIBER; PONS AEMILUS; Port; FORUM BOARIUM. Cf. Fig. 73, labels: PONS AEMILIUS; HORREA [AEMILIANA]; FORUM BOARIUM.

**Provided:**

**a) the *opus incertum* building in the *new* commercial river port at *La Marmorata* was indeed the *Porticus Aemilia* outside *Porta Trigemina*, and**

**b) that the inscription 'AEMILII' on fragment 621a-d of the Severan Marble Plan actually belonged to the *Horrea Aemiliana*, as suggested by Coarelli (2019a, 213 with n. 81) - these two buildings called after the Aemilii, both represented on the Severan Marble Plan, should, in my opinion, somehow have been differentiated:**

the complete inscription of the building in the *old* commercial river port should, in my opinion, have read '[HORREA] AEMILII[ANA]' (or alternatively: 'AEMILII[ANA]', because in the literary sources it is named like this), and the label, appearing on the Severan Marble Plan on the ground-plan of the building in the *new* commercial river port should have read: 'PORTICVS AEMILIA' (likewise because in the literary sources it is always named '*porticus*', and only in one source '*Porticus Aemilia*', but never only '*Aemilia*').

But, as we have just seen, precisely that was certainly *impossible*, because on the drawing of the building's ground-plan on the Severan Marble Plan there is not space enough left to write 'PORTICVS' in front of the (restored) label: 'AEMII]LIA' (cf. here Fig. 102.2, above).

In my opinion, the main inscription of the *opus incertum* building at *La Marmorata* on fragment 23 of the Severan Marble Plan, therefore, cannot have read 'AEMILIA', as suggested by Carettoni (*et al.*'s 1960; cf. here Fig. 102.2, above), followed now by de Caprariis (2019, 166; and 2022, 127, with n. 30, Fig. 5.2, above), quoted above, in this Section III. as the [11.] epigraph.

If true, it follows, in my opinion, that this building has erroneously been identified by Gatti (1934; cf. here Fig. 102.3) with the *Porticus Aemilia* - now followed by de Caprariis (2022, 138-139. with ns. 87; 88, quoted above, in this Section III. as the [12.] epigraph).

Concerning the debated identification of the building '*Porticus Aemilia*'/ *Navalia* at *La Marmorata*, de Caprariis (2019, 168, in her Section: "3. POST NAVALIA") writes:

1.) "... in conclusione: è da escludere un trasferimento dei *Navalia* dal Campo Marzio alla pianura subaventina [my emphasis]".

For this conclusion, here by myself numbered as point 1.), De Caprariis (2019, 168) does not provide a reference. After, therefore, reading again Cozza and Tucci (2006) and Tucci (2012), I can say, that those two authors do *not* suggest anything like that (*i.e.*, a possible "trasferimento dei *Navalia* dal Campo Marzio alla pianura subaventina" - to borrow the phrasing of F. DE CAPRARIIS 2019, 168).

As I have only realized after having written this down, also Coarelli (2008, 464, quoted in more detail above, as the [6.] epigraph in this Section III.) asserts something similar:

"Non si tratta [*i.e.*, in the case of the *Navalia* at *La Marmorata*] naturalmente del più antico porto militare romano, che è localizzato sulla riva del Campo Marzio, ma piuttosto di *Navala* ricordati da Cicerone, che li attribuisce all'architetto greco Hermodoros di Salamina, noto per la sua attività a Roma nella seconda metà del II sec.[olo] a.C. È probabile che l'opera sia stata realizzata nel corso della terza guerra punica, quindi tra il 149 e il 146 a.C., data che si addice alla tecnica edilizia utilizzata. Più tardi, quando Roma cessò di essere un porto militare, l'edificio venne convertito in un grande magazzino portuale ...".

**To Coarelli (2008, 464) just-quoted statement, I should like to add a comment :**

Again, neither Cozza and Tucci (2006), or Tucci (2012) assert anything like that. See Tucci's relevant response (2012, 586 with ns. 37, 38, quoted *verbatim supra* in this Section III., in my discussion of L. COZZA's and P.L. TUCCI's hypotheses) to Arata (in ARATA and FELICI 2011, but without indicating a page number), who had likewise misunderstood what Cozza and Tucci (2006, 196) had intended to say by mentioning Hermodoros in the context of their discussion of their *Navalia* at *La Marmorata*.

**With her statement, here called point 1.), de Caprariis (2019, 168) obviously refers back to her first sentence in her Section "3. POST NAVALIA" on page 166 :**

2.) "Per questo portico non si pone - o non dovrebbe porsi - la questione 'quali *navalia*?', ormai necessaria da quando è stata presentata la proposta di identificare il grande edificio in opera incerta di Testaccio con i *navalia* repubblicani (piuttosto che con la *porticus Aemilia*) [with n. 55; my emphasis].

In her note 55, de Caprariis writes: "Cozza, Tucci 2006, pp. 175-201; Tucci 2012, pp. 575-591".

Considering de Caprariis's (2019, 168, 166) 1.) and 2.) statements: *both* show that, in her opinion, Cozza and Tucci (2006) have (allegedly) asserted that the building at Testaccio, by them identified as *Navalia*, should be identified as '*the Navalia*' (*i.e.*, the port of the warships) - concerning which, as de Caprariis adds, Cozza and Tucci (2006) and Tucci (2012) have (allegedly) asserted that those *Navalia* have been 'moved' from their original location at the southern part of the *Campus Martius* to the Testaccio.

**De Caprariis's relevant assertions are not true. As we have seen above, in Section I., where this passage is quoted *verbatim* : when talking about the building at *La Marmorata*, Cozza and Tucci (2006, 180 [TUCCI]) speak of "dei *Navalia*". - See also Cozza and Tucci (2006, 197, 198 [both TUCCI], quoted in Section I. as the [1.] and [2.] epigraphs).**

**On the contrary :**

**Cozza and Tucci (*op. cit.*) suggest that the *Navalia* at *La Marmorata* were built as "arsenale" (shipyards) for the warships of the Roman fleet - which means that in Cozza's and Tucci's opinion '*the Navalia*' (*i.e.*, the port of the warships in the southern *Campus Martius*) stayed, of course, throughout their lifetime (at Rome !) in antiquity at their traditional location, the southern *Campus Martius*.**

See also Tucci's response (2012, 585, n. 34) to Arata and Felici (2011, 135 [ARATA]):

"Non si può neanche escludere, come suggerito da Claridge 2010, p. 404, che un bacino artificiale fosse stato creato davanti all'edificio [*i.e.*, the *Navalia* at *La Marmorata*] e poi colmato per essere destinato alle strutture lungo il Tevere rappresentate sulla *Forma Urbis* e rinvenute negli scavi. **Arata evidenzia che «né risolve la questione (anzi la complica) pensare che qui da un dato momento non vi fosse più ospitata la flotta militare, ma solo l'arsenale dove si effettuava la manutenzione delle navi»** (Arata, Felici 2011, p. 135). **In realtà, nel mio articolo [*i.e.*, in: L. COZZA, P.L. TUCCI 2006, 197 (TUCCI), here quoted in Section I., as the [1.] epigraph] ipotizzavo che l'edificio di Testaccio potesse essere stato usato *sin dall'origine* per la riparazione e manutenzione delle navi [the italics are those of the author; the emphasis is mine]"**

**That my interpretation of de Caprariis (2019, 168, 166) here-so-called points 1.) and 2.) is correct, is proven by a passage in her text (2022, 120) :**

"In a much-discussed 2006 essay, Lucos Cozza and Pier Luigi Tucci rejected the identification of the building in Testaccio with the *porticus Aemilia*, proposing the supplement [*Naua*]*lia* instead of [*Aemi*]*lia* on the fragmentary inscription of this section of the marble plan: **according to their reading, the original function of the building was thus to accommodate the military fleet (fig. 5.2)** [my emphasis]"

**See also the last sentence of her conclusion: de Caprariis (2022, 139: "5.6. Conclusion"), quoted in more detail above, as the [12.] epigraph in this Section III. :**

"The historical consequences of this topographical debate can be summarized in **fig. 7a-b** [*corr.*: Figure 5.7a-b]. The first actually suitable spot downriver for the commercial expansion is the site of the presumed *naualia*. **Choosing it in order to duplicate an already existing and functioning arsenal implies a specific choice of urban layout in which the military aspect is paramount: the choice of a city-state at war, rather than that of a Mediterranean capital** [my emphasis]"

In my opinion, de Caprariis (2022, 139) has here misunderstood Cozza and Tucci (2006, see their pp. 180, 197, 198 [all TUCCI], all three quoted *verbatim* above in Section I., the latter two as the [1.] and [2.] epigraphs). And that concerning three points:

**a)** Nowhere Cozza and Tucci (2006) or Tucci (2012) suggest that '*the Navalia*' (*i.e.*, the port of the warships in the southern *Campus Martius*, see above, in Section II., and here **Fig. 107**) had been "duplicated" by the *Navalia* at *La Marmorata*, as (erroneously) asserted by de Caprariis;

**b)** Nor call Cozza and Tucci (2006) or Tucci (2012) '*the Navalia*' (*i.e.*, the port of the warships in the southern *Campus Martius*) ever an "arsenal";

**c)** Cozza and Tucci (2006, 197 [TUCCI], quoted above, in Section I. as the [1.] epigraph) call only the *Navalia* at *La Marmorata* an "arsenal" (*i.e.*, a shipyard).

And what Tucci intends to say by calling these *Navalia* at *La Marmorata* an "arsenal", he explains in a passage that was already quoted above. In his response to Arata (cf. F.P. ARATA and E. FELICI 2011, 135 [ARATA]), Tucci (2012, 585, n. 34) writes:

**"In realtà, nel mio articolo [*i.e.*, in: L. COZZA, P.L. TUCCI 2006, 197 (TUCCI)] ipotizzavo che l'edificio di Testaccio potesse essere stato usato *sin dall'origine* per la riparazione e manutenzione delle navi [the italics are those of the author; the emphasis is mine]"**

Finally, in her publication (2022, 129 with n. 39) de Caprariis writes concerning this point:

"These literary attestations [which refer to '*the Navalía*', the port of the warships in the *Campus Martius*] are clear and unambiguous: any source that mentions *Nauvalia* with a topographical indication of sort unfailingly refers to the *Campus Martius*. It is perfectly possible that other shipsheds existed along the riverbank, but the *Nauvalia* with a capital N - the landmark, not the building typology - were upriver from the Tiber Island. **So, if the building in Testaccio where [corr: were] a group of *nauvalia*, it would be a nonspecific, new group of shipsheds, as Tucci has recently conceded.** [with n. 39] This point, which is not always considered or fully understood, makes the 'which *Nauvalia*?' question especially significant [my emphasis]".

In her **note 39**, de Caprariis writes: "Tucci 2012: 579, the Testaccio building is 'un gruppo di *nauvalia* [corr.: *navalia*] di età repubblicana, non i *Navalia* con la N maiuscola, dato che altri ricoveri per navi dovevano esistere lungo il Tevere'".

**Here, in my opinion, de Caprariis (2022, 129, with n. 39) is in part right and in part wrong at the same time: she is right in so far, as she quotes Tucci (2012, 579) (almost) correctly. But she is wrong with her assertion that Tucci has now "conceded" this - in de Caprariis's (erroneous) opinion - alleged *new judgement concerning the Navalía at La Marmorata*.**

On the contrary, as we have just seen in the discussion of de Caprariis's other statements concerning their hypotheses, Cozza and Tucci (2006, 180 [TUCCI]), quoted *verbatim* above, in Section I., and Cozza and Tucci (2006, 197, 198 [both TUCCI], quoted as the [1.] and [2.] **epigraphs** in Section I.), have never written anything else concerning their judgement of the *Navalia* at *La Marmorata*.

**Concerning de Caprariis's (2019, 166) above so-named 2.) point, I think we should differentiate this question:**

I.) considering (the theoretical possibility) that '*the Navalía*' (the port of the warships) still existed in the Severan period in the southern part of the *Campus Martius*, and were labelled '*NAVALIA*' on the Severan Marble plan, we should, probably, not assume a second building called '*NAVALIA*', to be marked on the same marble plan at *La Marmorata*. - Although precisely that seems not to be true, because de Caprariis (2022, 129 with n. 40) herself mentions the example of some 'other *Navalia*', documented by an inscription on fragment 2a-b of the Severan Marble Plan (!);

II.) when it comes to the definition of the function of the building at *La Marmorata* discussed here, I disagree with de Caprariis (2019, 166: above so-named 2.) point). On the contrary, I would say: we actually must ask ourselves *what kind of Navalía* this may have been.

*This leads us to a discussion of 'the Navalía', (i.e., the port of the warships in the southern Campus Martius)*

Besides, as we learn from Filippo Coarelli ("*Navalia*", in: *LTUR* III [1996] 340), we should not expect to have found on the Severan plan the lettering '*NAVALIA*' at the site of the old Republican port of the warships in the southern *Campus Martius* any more:

"È comunque certo che intorno alla metà del I sec.[olo] a.C. essi [*i.e., the Navalía/ the port of the warships in the Campus Martius*] erano, almeno in gran parte, fuori uso, se venivano utilizzati per ospitare le belve destinate ai ludi (Plinius *nat.* 36.40) [my emphasis]".

But see de Caprariis (2019, 168 note 76), who interprets Pliny (*nat. hist.* 36.40) differently.

Also de Caprariis (2019, 168) herself writes about 'the Navalía', the port of the warships in the southern *Campus Martius*: "... *navalia* ... [i.e., 'the Navalía'] **nel Campo Marzio, e che questi erano in uso almeno fino al 56 a.C.** [my emphasis]".

De Caprariis (2019, 167-168 with ns. 71-77) thus refers to the famous story about Cato Uticensis, told *inter alia* by Plutarch (*Cat. Min.* 39), which she also mentions in (2022, 128, with n. 34).

As we have seen above in this Section III., the 'precise topographical description of the theatre of this event', taken together with the report, how the snake of Asklepios was brought with a warship in 291 BC to the Tiber island, had *inter alia* been the basis for Wilhelm Adolph Becker (1843, 159-162, 629; 1844, 24-41) to become the first scholar who (correctly) located 'the Navalía' (the port of the warships) in the southern *Campus Martius*. As discussed above, in Section II., the arrival of the snake of Asklepios at the Tiber island, and 'the Navalía' (the port of the warships), into which this warship, after the completion of its mission, is shown as disappearing, are represented on the medallion (here Fig. 107).

As we have seen above, before Becker's publication (1843), 'the Navalía' (the port of the warships) had been assumed at the Testaccio/ *La Marmorata* (!).

For Cato *minor* or *Uticensis*; cf. Guy Edward Farquhar Chilver and Miriam T. Griffin: "Porcius (*RE* 20) Cato (2), Marcus, 'of Utica' ('Uticensis') (95-46 BC) ...", in *OCD*<sup>3</sup> (1996) 1225-1226.

And de Caprariis (2022, 128), even writes: "**As a matter of fact, the *Navalia* are consistently located in the *Campus Martius* from the fourth century to 25 BCE** at least [my emphasis]". Unfortunately de Caprariis does not provide a reference for the latter date ("to 25 BCE at least").

See also above, in Section I. *Introduction*, where I have discussed the remark of Cozza and Tucci (2006, 197 [TUCCI]), quoted as the [1.] **epigraph** in Section I.: there Cozza and Tucci mention "l'evidente assenza [at Rome] **di flotte con grandi navi da combattere**" at the end of the 1<sup>st</sup> century BC [my emphasis].

Cozza and Tucci (*op. cit.*) are thus, in my opinion, referring to the fact that from 37 BC onwards, Marcus Agrippa had been creating and training a new military fleet. But that was under Octavian/ Augustus (cf. *infra*) not based at Rome any more, but at Misenum and Ravenna.

Apropos, "(Plinius *nat.* 36.40)", mentioned by Filippo Coarelli in the above-quoted text ("Navalia", in: *LTUR* III [1996] 340). Pliny would have been the ideal person, whom we could have 'interviewed' concerning the question, what 'the Navalía', the (former) port of the Roman warships in the southern *Campus Martius* (and likewise the *opus incertum* building at *La Marmorata*, of course !) at his time looked like, and what those buildings were used for.

And that not only because he was obviously interested in 'Navalia', as Pliny's remark (*nat. hist.* 36,40) proves, which is understandable, given his 'profession' at the time of writing. Pliny should dedicate his *Naturalis Historia* in AD 77 to his good friend and comrade-in-arms, Caesar Titus. Perhaps already then, but certainly in AD 79, Pliny was no less than the Emperor Vespasian's 'admiral' of the Roman fleet of warships that since Octavian/ Augustus was based at Misenum (!).

Cf. Häuber (2006, 41; 2009, 314). See also Edward Togo Salmon and Nicholas Purcell (1996, 989): "[Under Augustus, Misenum] became one of the principal imperial naval bases ... The fleet (commanded in AD 79 by the elder Pliny (1), *Plin., Ep.* 6. 16. 20) [my emphasis]".

My thanks are due to Rose Mary Sheldon, who, correcting my English of an earlier draft of this *Chapter*, has added to my assertion that Pliny "was no less than the Emperor Vespasian's 'admiral' of the Roman fleet of warships", the following question: "or only under Titus, or under both?".

When trying to answer Rose Mary's question, I could not find any explicit information; cf. Nicholas Purcell (2012): "Pliny (1) the Elder (AD 23/4-79) Gaius Plinius Secundus, prominent Roman equestrian, from Novum Comum in Gallia Cisalpina ..., commander of the fleet at Misenum ... He became a member of the council of Vespasian and Titus, and was given the command of the Misenum fleet". Under the perspective that he was (possibly) already at the stage of writing his *Naturalis historia* the 'admiral' of the fleet of warships, also the quote from Pliny (*nat. hist.* 3,5,54) in Cozza and Tucci (2006, 198 [TUCCI], quoted in Section I. as the [2.] epigraph) proves to be wisely chosen for the phenomenon, described by Cozza and Tucci in this context.

**Because by choosing this formulation, Cozza and Tucci intend to say: after the Tiber had in the past also transported Rome's fleet of warships, Pliny (*nat. hist.* 3,5,54) states that now the river was only used by commercial ships (!).**

I, therefore, repeat the relevant passage here again:

"The quote from Pliny (*nat. hist.* 3,5,54) refers to the Tiber and reads in more detail, than quoted by Cozza and Tucci (2006, 198 [TUCCI]), as follows: ... *et ideo quamlibet magnarum navium ex Italo mari capax, rerum in toto urbe nascentium mercator placidissimus, pluribus prope solus quam ceteri in omnibus terris ...*, and in an English translation: "... and consequently it [the Tiber] is navigable for vessels of whatever size from the Mediterranean, and is a most tranquil trafficker in the produce of all the earth ..." (text and translation: H. RACKHAM 1961)".

**De Caprariis (2019, 172) concludes:** "... ma è ugualmente notevole la relazione di alcune delle *porticus* di Nobiliore (*post nauvalia*, <ad> *aedem Apollinis medici*) con quello che sarà l'assetto storico del circo Flaminio. Di altre rimane solo la localizzazione, in certi casi problematica (*ad fanum Herculis*, *post Spei ad Tiberim*) [with n. 100], **mentre l'aspetto funzionale si direbbe chiaro per la *porticus extra portam Trigeminam*.**

[a] **La precisa definizione di quest'ultima locuzione, che piuttosto del termine *Emporium* [with n. 101] indicava il distretto commerciale fluviale [with n. 102], è un problema chiave. Non è questa la sede per discutere la questione, ma è evidente che, se si elimina la relazione con l'edificio di Testaccio. [corr : , ] l'espressione *extra portam Trigeminam* perde il legame con la pianura aventina, limitandosi alla stretta fascia di terreno tra Aventino e Tevere ...**

[b] **I 'Navalia' di Testaccio, ormai diffusamente datati intorno al 100 a.C. [with n. 104], complice anche l'attribuzione ad Ermodoro di Salamina ...**

[c] **Un approccio possibile e auspicabile sarebbe anche un censimento attento delle testimonianze per l'età repubblicana nella pianura aventina [with n. 105; my emphasis]".**

In her notes, de Caprariis provides references and further discussion.

In her **note 104**, she writes: "**A puro titolo di esempio e perché recente esempio di utile manualistica: Claridge 2018, p. 96, tabella 5.1. [my emphasis]**". - This is quoted above, as the [9.] epigraph in this Section III.

In her **note 105**, she writes: "Che potrebbe rivelare delle sorprese, a partire dal quadro anche familiare e affaristico dell'occupazione della pianura fatto da Robert Étienne (1987, pp. 235-249). Le testimonianze letterarie sono deboli ma non inesistenti: oltre i *praedia Sulpicia* (ÉTIENNE 1987, pp. 230-242), i problematici *praedia Tigellini Aemiliana* in connessione con gli *horrea galbana* (GUILHEMBET, ROYO 2008, pp. 213-216), collegherebbero topograficamente le proprietà delle due *gentes*. Sull'intera questione v.[edi] RODRÍGUEZ ALMEIDA 2014, pp. 548-559. **Le importanti campagne di scavo e ricerca degli ultimi anni (scavo nuovo mercato di Testaccio, 'porticus Aemilia project')** sono in corso di studio e pubblicazione (bibliografia aggiornata in BUKOWIECKI *et al.* 2018, p. 251, nota 55) [my emphasis]".

To de Caprariis (2019, 172) above-quoted statements, called by me [a], [b], [c], I should like to add some comments:

Ad de Caprariis (2019, 172) point [a], which relates to the controversial locations of the *Porta Trigemina* in the Servian city Wall :

I agree with de Caprariis that the *porticus extra portam Triginam*, by judging from the relevant ancient source, namely Livy (35,10,12; cf. *supra*, F. COARELLI 1999, quoted above, as the [4.] epigraph in this Section III.), was not necessarily located at the Testaccio. And, provided this *Porticus Aemilia* was not located at *La Marmorata*, it follows that also the *Emporium*, mentioned by Livy and all the other ancient authors together with this *Porticus Aemilia*, was not located there either (also for those literary sources; cf. *supra*, F. COARELLI 1999, quoted as the [4.] epigraph in this Section III.).

See now T.P. Wiseman (2021a, 30, quoted above as the [10.] epigraph in this Section III.).

Wiseman interprets Livy's mentioning of the *Porticus Aemilia* and of the *Emporium* precisely in that way, namely by assuming that both were located outside the *Porta Trigemina*, as Livy writes (but not any more at the Testaccio, as T.P. WISEMAN 1993, 184 with n. 21, had suggested; the relevant passages of WISEMAN's texts, 1993 and 2021a, will be quoted *verbatim* below, in this Section III.). As we have already learned above, the location of the *Porta Trigemina* in the Servian city Wall, in its turn, is closely related to the location of the *Pons Sublicius*.

This leads us to the controversy concerning the location of the *Pons Sublicius*.

*The controversy concerning the location of the Pons Sublicius (cf. here Figs. 58; 58.1; 58.2; 73)*

Note that T.P. Wiseman (2021a, 30) locates the *Pons Sublicius* at its 'traditional site', that is to say, close to the *Pons Aemilius*, thus neglecting the new hypothesis, suggested by Tucci (2011-2012, 180, Fig. 2, p. 185, with Fig. 4). As already said, Tucci assumes the *Pons Sublicius* below the steep western slope of the Aventine, midway between the *Forum Boarium* and the quartiere Testaccio, and precisely there, where, at Lanciani's time, remains of several pillars of an ancient bridge were still extant, which already Giambattista (G.B.) Nolli in his large Rome map (1748) had attributed to remains of the *Pons Sublicius* (cf. here **Figs. 153**).

I myself; cf. Häuber (2005, 29, Abb. 5, label: site of PONS SUBLICIUS, p. 36 with 224; not discussed by neither P.-L. TUCCI 2011-2012; F. COARELLI 2019a, 138-142; or T.P. WISEMAN 2021a), have located the *Pons Sublicius* at the same site as Wiseman (2021a). I have argued with the 'street fans', visible in the photogrammetric date on both banks of the Tiber, which may be regarded as certain indications for a formerly at this site existing (ancient) bridge. But at that stage of my research, I had not illustrated these 'street fans' on our maps. Thanks to Franz Xaver Schütz, who has published on our Webserver our georeferenced map of archaic Rome with all later city walls (cf. here **Fig. 71**, inserted box on top right), together with the official OSM-data, this 'street fan' in Trastevere is clearly visible (see also here **Figs. 58.1; 58.2**).

As I realize only now, the relevant 'street fan' in Trastevere, which indicates the former location of the *Pons Sublicius*, had already been mentioned by Filippo Coarelli ("Pons Sublicius", in *LTUR* IV [1999] 112-113, Fig. 38; *Figg. II*, 123-124; the quote is from p. 113). Coarelli followed in this respect J. Le Gall (1953), and added to this also all other known arguments, which prove, also in my opinion, this location of the bridge:

"La posizione del ponte [*i.e.*, of the *Pons Sublicius*], di cui non resta alcuna traccia, può essere fissata con sicurezza in un punto immediatamente a valle del *pons Aemilius*, **come dimostra la più antica viabilità del Trastevere, che sembra convergere in questo punto (Le Gall [1953; *id.* 1953a]). Questa conclusione è confermata dalla tradizione della fuga di Gaio Gracco dall'Aventino all'Gianicolo, che collega il ponte alla porta Trigemina (v.[edi]) e soprattutto dall'identificazione della zona *inter duos pontes* con il tratto di fiume immediatamente a valle del *pons Aemilius*, che si ricava dalla citazione di Lucilio e di C. Titius in *Macr. Sat. 2.12*, confermata da *Iuv. 5.103-106*, da cui risulta che lo sbocco della *cloaca Maxima* (v.[edi]) veniva a cadere in quel punto [my emphasis]**".

In his bibliography, Coarelli quotes Joël Le Gall (1953, 80-86; *id.* 1953a, 78-82). The relevant plan of Le Gall is illustrated in de Carariis (2022, 123, Fig. 5.4). See for the flight of Gaius Gracchus now also Coarelli (2019a, 138-142, Fig. 69: "Itinerario della fuga di Gaio Gracco ..."; Fig. 7). To this I will come back below.

Cf. here **Figs. 58; 73**, labels: AVENTINE; CLIVUS PUBLICIUS [here identified with the Clivo dei Publicii]; Servian city Wall; PORTA TRIGEMINA / ARCUS LENTULI ET CRISPINI; TIBERIS; site of PONS SUBLICIUS; VIA CAMPANA-PORTUENSIS; REGIO XIV; TRANSTIBERIM; Round Temple; CLOACA MAXIMA [the black arrow points at the mouth of the *Cloaca Maxima*; cf. here **Fig. 154**]; VICUS TUSCUS; FORUM BOARIUM; R.[EGIO] XI; PORTA FLUMENTANA; site of "Fornix Augusti"; PONS AEMILIUS [Ponte rotto]; VIA AURELIA; Temple of Portunus; HORREA [AEMILIA]; PORTUS TIBERINUS.

For a discussion of those toponyms; cf. Häuber (2005, 35-38).

**Fig. 154. The Tiber with the mouth of the *Cloaca Maxima*. Above it, we see on the eastern bank of the Tiber the round temple, which stood to the west of the *Forum Boarium*. To the north of the round temple are visible the Temple of Portunus and the Palazzo dell'Anagrafe, underneath of which parts of the *Horrea Aemilia* have been excavated; all these buildings were erected in the old commercial river port of Rome, the *Portus Tiberinus*. Photos: Courtesy Franz Xaver Schütz (23-III-2006).**

In my reconstruction of the topography of the area (2005; here **Figs. 58; 73**), I have followed those scholars, who identify the *Clivus Publicius* with the Clivo dei Publicii (not with the Clivo di Rocca Savella; cf. here **Fig. 58.1**, labels: Clivo dei Publicii; Clivo di Rocca Savella). The motivation to learn more about the location of the *Pons Sublicius* came, when I studied the water marks on the façade of the Church of Santa Maria sopra Minerva, the ancient and post-antique floods of the Tiber, and the destruction of the *Pons Aemilius*.

Cf. Häuber (2017, 358): "The highest watermark visible on Figure 10.2 is that of the year 1598 [with n. 163] (see the lettering: 1598), the line indicating the peak of this flood stands at 3,95 above the square Piazza della Minerva [with n. 164]. It is one of formerly altogether 19 watermarks that once documented this highest flood which was ever recorded for Rome in post-antique times. It had reached at the still existing water gauge ('idrometro') [with n. 165] of the former Porto di Ripetta (cf. here Fig. 10.4) the level of 19,56 m [with n. 166] (!) and had destroyed several bridges, among them the never again restored ancient bridge *Pons Aemilius*, identified at the time with the ancient *Pons Sublicius* [with n. 167], and called Ponte di S. Maria, which was henceforth called Ponte rotto".

In my **notes 163-167**, I provide references.

In my **note 167**, I write: "for those two ancient bridges, cf. Häuber 2005, 35-36 with ns. 222-224, map on Fig. 5, labels: Tiber; PONS AEMILIUS; site of PONS SUBLICIUS; *ead.* 2014 [*i.e.*, here C. HÄUBER 2014a], Map 5 [= here **Fig. 73**, now updated], labels: TIBERIS; PONS AEMILIUS; site of PONS SUBLICIUS. Cf. P.L. Tucci 2011 and here Fig. 3.5 [= here **Fig. 58**, now updated], labels: TIBER; PONS SUBLICIUS. On the latter map, I have followed the relevant findings of P.L. Tucci 2011 [*i.e.*, here P.L. TUCCI 2011-2012; cf. p. 180, his Fig. 2]".

In those earlier accounts I have, exactly like Pier Luigi Tucci (2011-2012, 180, Fig. 2), tried to find *lineaments* in Trastevere, on the right bank of the Tiber, that might indicate the former location of the *Pons Sublicius*: this led to the observation of the above-mentioned 'street fan' in Trastevere. Because we base our maps on the official photogrammetric data of Roma Capitale, they are georeferenced and at the level of parcel boundaries. Both taken together, and using geoinformation technology had the effect that we have arrived on our maps **Figs. 58; 73** at a different location of the *Pons Sublicius* than Tucci (2011-2012, 180, Fig. 2).

To demonstrate this point, I add here the sketches of two new maps: **Figure 58.1** shows an overlay of our map **Fig. 58** with the street level of the OSM data. The maps **Figs. 58** and **58.1** show that the ancient road *Via Aurelia* (drawn as a blue line = an ancient road) led to the ancient *Pons Aemilius*. From the *Via Aurelia* branched off to the south-east a road which survives in modern roads that lead also in direction to the Tiber. **Fig. 58.2**, an enlargement of **Fig. 58.1**, shows that at that scale the street level of the OSM data shows many more street names, among them the names of those roads that belong to our 'street fan': *Via del Buco*, *Via dei Salumi*, *Via Ripense*, *Via Pietro Peretti*. The maps **Figs. 58** and **58.1** show that the ancient road *Via Campana - Portuensis* reached this area from the south-west. Tucci (2011-2012, Fig. 2) has tentatively corrected the northern section of the course of this road towards the Tiber. I have drawn this corrected course of the *Via Campana - Portuensis* on **Fig. 58** as a dotted green line (= a reconstructed ancient road). As visible in the photogrammetric data, after which I drew this map **Fig. 58**, now also documented on **Fig. 58.1**, the modern roads *Via di San Michele* and *Via Ripense* are *lineaments*, which follow this corrected course of the *Via Campana - Portuensis*, thus proving the basis of Tucci's tentative reconstruction right. But the official photogrammetric data of Roma Capitale, after which I drew this reconstructed road on **Fig. 58**, and the OSM data show, that the roads, which are the basis of this reconstructed ancient road, do not end at the site, suggested by Tucci (2011-2012, Fig. 2) for the *Pons Sublicius*, but instead at the point more to the north, where I assume the *Pons Sublicius*.

This is also clear because the other two roads of this 'street fan', documented (1) by the *Via Aurelia*, the *Vicolo del Buco* and the *Via dei Salumi*, and (2) by the *Via Pietro Peretti* (by which the *Pons Aemilius* and the *Pons Sublicius* were, in my opinion, interconnected), lead likewise to the *Via Ripense* - facts that Tucci (2021-2022, Fig. 2) has not realized. The location of the *Pons Sublicius*, indicated by the 'street fan' of those three roads thus turns out to be the traditional location of this bridge.

**Fig. 58.1, first sketch.** Overlay of our updated map Fig. 58 of the 'Campus Martius in the Imperial period with adjacent areas, 2023' with the street level of the OSM data, showing the site of the ancient *Pons Sublicius*. C. Häuber and F.X. Schütz, "AIS ROMA", reconstruction, 2023. The photogrammetric data, on the basis of which Fig. 58 was first drawn (cf. C. HÄUBER 2017, 63, Fig. 3.5), were generously provided by the Sovraintendente ai Beni Culturali of Roma Capitale. For the OSM data; cf. OSM.org [11-VI-2023].

**Fig. 58.2, first sketch.** Enlarged detail of Fig. 58.1. By enlarging the map Fig. 58.1, many more street names became visible in the street level of the OSM data. Some of those streets belong to the above-mentioned 'street fan' in Trastevere. This 'street fan', that is to say, those converging modern roads, may be regarded as *lineaments*, which indicate the point, where once had stood the ancient *Pons Sublicius*. C. Häuber and F.X. Schütz, "AIS ROMA", reconstruction, 2023. The photogrammetric data, on the basis of which Fig. 58 was first drawn (cf. C. HÄUBER 2017, 63, Fig. 3.5), were generously provided by the Sovraintendente ai Beni Culturali of Roma Capitale. For the OSM data; cf. OSM.org [11-VI-2023].

Taking the maps **Figs. 58; 58.1** and **58.2** together, the streets that lead from a westerly direction to the Tiber and to the *Pons Aemilius* are: the VIA AURELIA, Via della Lungaretta, Piazza in Piscinula, Piazza Castellani. The street-fan, leading from three directions to the (former) ancient *Pons Sublicius*, consists of the following roads: *a*) from the north-west: VIA AURELIA; Vicolo del Buco; Via dei Salumi; Via Ripense; *b*) from the south-west: VIA CAMPANA - PORTUENSIS; Via di San Michele; Via Ripense (note that on the sketch **Fig. 58.2**, the letterings [VIA CAMPANA -] PORTUENSIS and Via di San Michele appear 'on top of' each other); and from the north-east: *c*) Via Pietro Peretti, Via Ripense.

The *Clivus Publicius* is mentioned in the report on Gaius Gracchus's flight from the Aventine down to the Tiber. Those, who believe Gaius Gracchus rushed down the Clivo di Rocca Savella on the western slope of the Aventine, consequently, assume the *Porta Trigemina* in the Servian city wall and the *Pons Sublicius* much more to the south than the locations assumed here for both (cf. here **Figs. 58; 73**). The Clivo di Rocca Savella (cf. here **Fig. 58.1**) leads to the already mentioned (former) pillars of a bridge in the Tiber, documented for example by Nolli on his Large Rome Map (1748; here **Fig. 153**), which have, therefore, been attributed to the *Pons Sublicius*. Pier Luigi Tucci (2011-2012, 180, Fig. 2, label: PONS SUBLICIUS; PONS THEODOSII; p. 296, Fig. 9, label: *T = bridge of Theodosius (A.D. 381-387), ex Pons Sublicius (?)*), who likewise locates the *Pons Sublicius* there, supports this idea by asserting that in the area, where I locate on here **Figs. 58; 73** the *Pons Sublicius*, no ancient bridge cannot possibly have existed. He argues with his reconstructions of the Severan Marble plan on both banks on the Tiber in this area, in which no bridge appears.

Tucci (2011-2012) does not say that he has personally viewed the relevant fragments of the Severan Marble Plan, on which he has based his relevant reconstructions. Francesca de Caprariis (2022, 131, with n. 51, Fig. 5.8 [= P.L. TUCCI 2011-2012, Fig. 2], quoted *verbatim* below), who mentions Tucci's reconstructions, does not address the fact that (in theory) Tucci's reconstructions preclude the assumption of the *pons Sublicius* at its 'traditional' site, immediately to the south of the *Pons Aemilius*/ 'Ponte Rotto'. But de Caprariis (2022, 131, with ns. 51, 52, quoted *verbatim infra*) likewise reminds the reader of the fact that the location of the *Pons Sublicius* is dependent of the decision, with which road we identify the *Clivus Publicius*: with the Clivo dei Publicii, or with the Clivo di Rocca Savella. And because I myself do not know those fragments of the Severan Marble Plan from autopsy, on which Tucci (2011-2012, Fig. 2) has based his reconstructions of both banks of the Tiber in this area, I am currently unable to judge, whether or not his reconstructions are correct.

Concerning the identification of the *Clivus Publicius* with the Clivo di Rocca Savella, that has for example also been suggested T.P. Wiseman (1996a; reprinted 1998), this has been refuted by Filippo Coarelli (2019a, 138 with n. 22, p. 139 with Fig. 68 [= T.P. WISEMAN 1996a, Fig. 6]). Coarelli (2019a, 138-142, Fig. 69) himself identifies the *Clivus Publicius* with the Clivo dei Publicii. Coarelli's own reconstruction of the "Itinerario della fuga di Gaio Gracco" (so the caption of his plan Fig. 69), has now been followed by T.P. Wiseman (2021a, 28-29, with Fig. 6 [= F. COARELLI 2019a, 141, Fig. 69], pp. 33, 35).

Let's now return to our main subject.

**De Caprariis (2022, 131) writes about the *Porta Trigemina*:** "In this scenario, the expression *extra Portam Trigemina* would mean a location in the close vicinity of the gate. [with n. 50] **The gate itself is only roughly located at the foot of the Aventine Hill** [with n. 51] but the direction it faced south or west - is paramount and still to be ascertained. [with n. 52; my emphasis]".

In her **note 50**, de Caprariis writes: "**This was an old objection to Gatti's *porticus Aemilia* location: more on this *infra*** [my emphasis]".

In her **note 51**, she writes: "**The label *Porta Trigemina* in fig. 5.8 roughly summarizes its position (Tucci 2011-2012: 180, fig. 2) but it must be kept in mind that the location of the gate is connected with the *clivus Publicius* (either the modern Clivo dei Publici [!] or the Clivo di Rocca Savella). See the following footnote** [my emphasis]".

In her **note 52**, she writes: "This is in fact another topographical debate (of no little consequence to the history of the development of the Republican city): Coarelli 1988: 25-34, with the observations by Wiseman 1990: 730-732 and Ziolkowski 1994: 184-196. See now Tucci 2011-2012: 178-183".

**Add to the publications quoted by de Caprariis (2022, 131, ns. 51, 52) concerning the location and orientation of the *Porta Trigemina*, also Häuber (2005, 35-36, with ns. 219-224, Arbeitskarte 5. For a detail of this Arbeitskarte 5, now updated; cf. here Fig. 73); also for the identification of the *Clivus Publicius* with the Clivo dei Publicii (not with the Clivo di Rocca Savella); Filippo Coarelli (2019a, 138-142, who, as already mentioned above, has refuted the hypothesis that the *Clivus Publicius* could be identified with the Clivo di Rocca Savella); as well as T.P. Wiseman (1996a; reprinted 1998; and 2021a).**

My thanks are due to Amanda Claridge, who was kind enough to send me Wiseman's essay (2021a) on 3rd April 2022. When reading Wiseman's text, I have realized that, to verify his relevant findings in depth, several *measured* phase maps of the area between the Capitoline, the Tiber and the Aventine should be drawn, in order to better understand the various possible courses of the Servian city Wall that he discusses, but illustrating his ideas himself only with cartographic sketches. For earlier versions of his relevant reasonings concerning the locations (and orientations) of the three gates in the Servian city Wall between the Capitol and the Aventine (*Porta Carmentalis*, *Porta Flumentana*, *Porta Trigemina*); cf. Wiseman (1990, 730-731, with three sketches illustrating his hypotheses); and Wiseman (1996a, Fig. 6; reprinted 1998, 96, Fig. 6).

Drawing measured maps takes a long time, and only such maps could be a reliable base for discussions of this kind, at least in my opinion. Therefore, I cannot discuss here all the implications of Wiseman's (2021a) new findings but must postpone this to a future occasion.

**Concerning the toponym *Emporium*, de Caprariis (2022, 133) writes:** "It must be conceded that the Roman *emporium* escapes definition [with n. 57]. As a place name it is not attested beyond the first half of the second century, and its dimensions have probably been overestimated [with n. 58; my emphasis]". - In her **notes 57 and 58** she provides further discussion and references.

**Ad de Caprariis (2019, 172) point [b]:**

The building at *La Marmorata* discussed here is referred to by de Caprariis (2019, 172) as "I 'Navalia' di Testaccio". The author herself (2022, 138-139, with ns. 87; 88, quoted above, as the [12.] **epigraph** in this Section III.) identifies this building with the *Porticus Aemilia*. De Caprariis (2019, 172) quotes Claridge's suggestion (2018, 96, Table 5.1, quoted above, as the [9.] **epigraph** in this Section III.), according to which this building is datable to 'circa 100 BC'. At this point, de Caprariis quotes the *status quaestionis* concerning the date of the beginning of the *opus incertum* technique; or in other words: this is *not* her own opinion. This is clear, when we read her following statement: Caprariis (2022, 134-135 with n. 64) writes about the *opus incertum* building: "built presumably around 140 BCE or, if we were to follow the later dating, around [page 135] 100-97 [with n. 64]".

**Apropos de Caprariis's (2019, 172) mentioning of Hermodoros of Salamis at her point [b] :**

de Caprariis writes: "I '*Navalia*' di Testaccio, ormai diffusamente datati intorno al 100 a.C. [with n. 104], complice anche l'attribuzione ad Ermodoro di Salamina ...".

To this I repeat here, what was already said above: 'See Tucci's relevant response (2012, 586 with ns. 37, 38, quoted *verbatim supra* in this Section III., in my discussion of L. COZZA's and P.L. TUCCI's hypotheses) to Arata (in ARATA and FELICI 2011, but without indicating a page number), who had likewise misunderstood what Cozza and Tucci (2006, 196) had intended to say by mentioning Hermodoros in the context of their discussion of their *Navalia* at *La Marmorata*'.

**Ad de Caprariis (2019, 172, with n. 105), her point [c] :**

I do agree with de Caprariis that new research on the area in question may help us to better understand all the questions concerning the building '*Porticus Aemilia*'/ *Navalia* at *La Marmorata*, addressed here, and throughout this entire *Chapter*.

But, as already said above, the "problematici *praedia Tigellini Aemiliana* in connessione con gli *horrea galbana*", mentioned by de Caprariis (2019, 172, n. 105), were not located at the area of the Testaccio, as she believes, but instead within the area of the former *Villa* or *Horti* of Scipio Africanus *maior*/ Scipio Aemilianus on the Quirinal, discussed above in this Section III. This is my here-so-called third toponym called *Aemiliana*, which existed at the same time at the old centre of Rome as the other two toponyms called *Aemiliana*. See Coarelli (2019a, 212 with n. 76, quoted *verbatim supra*).

*Let's now turn to my own Conclusions -*

**concerning the statements of those scholars, which are quoted in the epigraphs [1.] - [12.] in Section I. Introduction and above, in this Section III. These passages relate to the '*Porticus Aemilia*'/ *Navalia* at *La Marmorata*, and the survey of these texts has led to two (at least for me) surprising results.**

As already said above, in Section I., I had already finished writing this *Chapter*, when the following texts reached me that I have decided to still integrate into my own account. This had the following effect:

'Studying the excavation reports by Burgers (*et al.* (2014a; *id.* 2014b; *id.* 2015) concerning the *opus incertum* building at *La Marmorata*, identified by them with the *Porticus Aemilia*, and the articles by de Caprariis (2019; *ead.* 2022), which are likewise dedicated to the '*Porticus Aemilia*'/ *Navalia*, has enlarged my overall vision respectively';

a) Reading those essays and also those publications again, on which I had based my earlier judgement, this has 'enlarged my overall vision' of the entire scholarly debate in so far as I have now taken the time to 'listen more carefully' to all those authors. To allow the reader a more comfortable study of the entire debate, I have decided to quote the relevant passages from those texts *verbatim*. As a result, this *Chapter* has grown to more than four times its previous size (!);

b) By studying the whole problem again in more depth, I realized a curious connection between the civil war ended by Octavian/ Augustus, which is of importance in the context of both *Navalia* discussed here:

- '*the Navalia*', the port of the warships in the *Campus Martius*, here **Fig. 107**, and  
- the *Navalia* at *La Marmorata*, here **Fig. 102**); and the civil war, ended by Vespasian, discussed *infra*, in volume 3-2, at *Appendix I*.

The 'connection' between these two civil wars, at least in this *Study* on Domitian and his building projects at Rome, consists in the person of Sextus Pompeius. - To this I will come back below.

Ad a) Burgers (*et al.* 2014a; 2014b; 2015) and de Caprariis (2022, 138-139, with ns. 87; 88, quoted above, as the [12.] epigraph in this Section III.) reject the hypothesis of Cozza and Tucci (2006) and Tucci (2012), according to which the *opus incertum* building at *La Marmorata* (here Figs. 102; 102.1; 102.2; 102.3) should be identified as *Navalia*.

Burgers (*et al.* 2014a; 2014b; 2015; cf. here Fig. 102.1; for the *abstract* of their publication of 2015; cf. above, quoted as the [8.] epigraph in this Section III.) and de Caprariis themselves (2022, 120, Fig. 5.2, above; cf. here Fig. 102.2, above) identify this building with the *Porticus Aemilia* instead. Cf. de Caprariis (2022, 138-139, with ns. 87; 88, quoted above, as the [12.] epigraph in Section III.).

Although having carefully studied the arguments of Burgers (*et al.*, *op. cit.*) and of de Caprariis (*op. cit.*), I myself still follow Cozza and Tucci (2006, 180; cf. pp. 197, 198 [all TUCCI], quoted above, in Section I. as the [1.] and [2.] epigraphs), and Tucci (2012), in assuming that the *opus incertum* building at *La Marmorata* cannot possibly be identified with the *Porticus Aemilia*, but was instead built as "dei *Navalia*" (so L. COZZA and P.L. TUCCI 180 [TUCCI]).

But not as 'the *Navalia*', as they themselves formulate, the port of the warships (here Fig. 107), which remained throughout its lifetime in antiquity (at Rome !) in the southern *Campus Martius*. But rather as shipyards for those warships, and that, in the second phase in their lifetime in antiquity, 'from the end of the 1<sup>st</sup> century BC onwards', those *Navalia* at *La Marmorata* were used commercially. - So far the hypotheses, formulated by Cozza and Tucci (2006, 180, 194, 197, 198 [all TUCCI]) and Tucci (2012) themselves.

In this *Chapter*, I myself have added a nuance to Cozza's and Tucci's (2006; P.L. TUCCI 2012) own scenario, by tentatively suggesting that those "funzioni commerciali" (in the plural !) of the *Navalia* at *La Marmorata*, as assumed by Cozza and Tucci (2006, 197 [TUCCI]; quoted above in Section I. as the [1.] epigraph), could possibly have consisted *inter alia* in using those former military shipsheds 'from the end of the 1<sup>st</sup> century' onwards as commercial *Navalia*.

According to my own hypothesis, this second phase of the lifetime of the *Navalia* at *La Marmorata* in antiquity must have ended, when the structures were built that are only visible on the Severan Marble Plan (cf. here Figs. 102; 102.2; 102.3; 103, inserted box). Those buildings stood right in front of these *Navalia*, and provided, those buildings had been erected in front of the entire building (!) - thus (in theory) 'blocking' the entrances to its 50 aisles, at least in case those (presumed) *Navalia* had (*inter alia* ?) indeed been used until this very moment as shipsheds for commercial ships. As we have seen above, in Section I., these structures are so far not precisely datable, as stated by Giovannetti (2016, 21-23, Fig. 7 [= here Fig. 102.3, inserted box]), who has studied them recently. But, as likewise already mentioned, Emilio Rodríguez Almeida (1993, 20) had dated these structures to the Trajanic period.

I am fully aware of the fact that my own findings, presented in this *Chapter* and summarized below, can only be regarded as preliminary. Not only because of my good friend Lucos Cozza's wise remarks concerning his own studies of the *Navalia* at *La Marmorata* (cf. L. COZZA and P.L. TUCCI 2006, 176 [COZZA], quoted above, as the [3.] epigraph in this Section III.).

I also know at least some results of the recent first scientific excavations of this *opus incertum* building at *La Marmorata*, conducted 2011-2013. Which is why it is certainly better to wait with the formulation of an all-embracing hypothesis concerning this '*Porticus Aemilia*'/ *Navalia* for the moment, when those excavations will one day be finished and completely published. A hypothesis that should present this extraordinary structure in its topographical, historical and architectural contexts throughout its complete lifetime in antiquity - and beyond.

The excavators Burgers (*et al.* 2014a; *id.* 2014b; *id.* 2015: the *abstract* of the latter publication is quoted above, as the [8.] epigraph in this Section III.) had so far only the opportunity to investigate some areas immediately outside this enormous *opus incertum* building and the structure itself within parts of its Xth, XVth and XVIth aisles (cf. here Figs. 102; 102.1; 102.2; 102.3).

**Burgers (*et.al.* 2015, 199) state that, by means of their excavations, they were so far unable to clarify for what purpose this building had originally been erected.**

And because they don't address the question, *when* this *opus incertum* structure had possibly been built, my impression is that they may have decided to wait until they can present proofs, provided by relevant excavation results. The authors take for granted that this building has correctly been identified with the *Porticus Aemilia* outside *Porta Trigemina*, rejecting Cozza's and Tucci's (2006; cf. P.L. TUCCI 2012) proposal to identify it as *Navalia*, but they do not discuss this point in detail. Burgers (*et al., op. cit.*) date the dramatic architectural changes of the building, by which it was transformed into *Horrea*, to the Trajanic/ Hadrianic period. In addition to this, they have also found that part of the building were henceforth *used* as *Horrea* (at least its XVIth aisle), and precisely for storing grain. They can also prove that the building, from the Trajanic/ Hadrianic period onwards until late antiquity, was characterized by a great diversity of uses.

**For the time being, I can only express my following impression. Burgers (*et al.* 2014a; *id.* 2014b; *id.* 2015) have been able to prove that, in the Trajanic/ Hadrianic period, by means of dramatic architectural changes of at least parts of it, the *opus incertum* building at *La Marmorata* had been adapted to be used henceforth as *Horrea*. Given that fact, I find it logical to conclude that, consequently, this building had originally been built for a different purpose.**

**My own Conclusions -**  
*concerning the opus incertum building at La Marmorata, or why I do not identify  
this building with the Porticus Aemilia outside Porta Trigemina, but as Navalia*

As observed by Amanda Claridge (2010, 403, quoted above, as the [5.] epigraph in this Section III.) in her discussion of the '*Porticus Aemilia*' / *Navalia* at *La Marmorata* :

"... the building was identified with a *porticus Aemilia* mentioned by Livy (built by the aediles M. Aemilius Lepidus and L. Aemilius Paullus in 193 BC, rebuilt in 174 BC) which made it by over a century the oldest concrete building anywhere and also put considerable strain on the architectural definition of 'porticus'".

See also Claridge (2018, 96, Table 5.1, quoted above, in this Section III. as the [9.] epigraph).

We hear from Livy (41,27,8); cf. Coarelli (1999, 116-117, quoted above as the [4.] epigraph in this Section III.), that "i censori del 174, Q. Fulvius Flaccus (*RE* VII Fulvius 61) e A. Postumius Albinus (*RE* XXII Postumius 26)" restored the *Porticus Aemilia extra portam Trigeminam*: that *Porticus Aemilia*, which was first built and, therefore, named after M. Aemilius Lepidus and L. Aemilius Paullus in 193 BC.

Gatti (1934; cf. here Fig. 102.3) identified the partly extant *opus incertum* building at *La Marmorata*, which is also represented, and even labelled on the Severan Marble Plan (cf. here also Figs. 102; 102.1; 102.2), with this *Porticus Aemilia*. *Inter alia* because Gatti (1934) read the main inscription of this building on the Severan Marble plan, of which only the three letters 'JLIA' survive, as: 'PORTICVS AEMILIA' (cf. here Fig. 102.3).

**Gatti (1934) came to the further conclusion that the beginning of the building technique *opus incertum*, in which this structure had been erected in the Republican period, is, therefore, firmly dated to this early period (*i.e.*, to 193 BC).**

**In my opinion, Gatti's (1934) relevant conclusion is nothing else but a classic example of circular reasoning.**

If that were true, we must ask ourselves, what is left of Gatti's (1934) very influential idea to identify the *opus incertum* building at *La Marmorata* with the '*Porticus Aemilia* outside *Porta Trigemina*'.

**In my opinion, nothing.**

Because, as already observed by Claridge (2010, 404, quoted above as the [5.] epigraph in this Section III.) - and likewise by other scholars:

- With his description of the *Porticus Aemilia* as being located '*extra portam Trigeminam*', Livy (35,10,12) does not necessarily refer to the area of *La Marmorata*.

See now the interpretation of Livy (35,10,12) by T.P. Wiseman (2021a, 30, quoted above, as the [10.] epigraph in this Section III., and again below), who, in my opinion, therefore consequently locates the *Porticus Aemilia* outside the *Porta Trigemina*, as Livy writes (but not any more at the Testaccio, as he had done in 1993, 184 with n. 21).

This first and the following points have been discussed in this *Chapter*, where I have quoted also scholars, who have made those observations long before Claridge (2010), Wiseman (2021a) and myself, and whose results I repeat here:

The assumption that the area of *La Marmorata* had been since the 2<sup>nd</sup> century BC the new commercial river port of Rome is wrong, because it is based on the (erroneous) location of the *Emporium* there. Considering the fact that in our relevant literary sources the *Emporium* is always mentioned *together* with the *Porticus Aemilia* (that is to say, from 193 BC onwards), this means, provided the *Porticus Aemilia* cannot be located at *La Marmorata*, the same must be true for the *Emporium*. For all the literary sources, in which the *Emporium* is mentioned, see above, the [4.] epigraph in this Section III.

See now the interpretation of Livy (35,10,12) by T.P. Wiseman (2021a, 30, quoted above, as the [10.] epigraph in this Section III., and again below), who, in my opinion, therefore consequently locates also the *Emporium* outside the *Porta Trigemina*, as Livy writes (but not any more at the Testaccio, as he had done in 1993, 184 with n. 21);

- if indeed this *opus incertum* building at *La Marmorata* was erected 'circa 100 BC', as suggested by Claridge (2018, 96, Table 5.1, quoted above, as the [9.] epigraph in this Section III.: a date, similarly suggested already before by S. TUCK 1999, 263, and by L. COZZA and P.L. TUCCI 2006, 194 [TUCCI], all of whom quoted and discussed above, in Section I.) - it follows that this building was erected circa 100 years later than the *Porticus Aemilia* of 193 BC;

- this huge *opus incertum* building at *La Marmorata*, to judge from its architectural typology, is not a *porticus*, as likewise observed by Tuck (1999, 263), quoted above, in Section I.) - and by many earlier and later scholars;

- but, by judging from its location close to the Tiber, its architectural typology, combined with its sloping floor, must instead be identified as *Navalia* - together with Cozza and Tucci (2006, 197, 198 [both TUCCI], quoted above as the [1.] and [2.] epigraphs in Section I.; and P.L. TUCCI 2012).

**According to de Caprariis, the (main) and the 'preliminary' inscription on fragments 23 and 24b of the Severan Marble Plan, which represent the *opus incertum* building at *La Marmorata*, cannot help us in our efforts to identify this building.**

Cf. de Caprariis (2019, 166, quoted above and discussed in this Section III., and de Caprariis (2022, 127, with n. 30, with Fig. 5.2, above and below [cf. here **Fig. 102.2, above and below**]; cf. p. 122, Fig. 5.3, quoted above, as the [11.] epigraph in this Section III.).

The reason being, according to de Caprariis (*op. cit.*), that not only the suggested readings of Carettoni *et al.* (1960: `Aemilia'; cf. here **Fig. 102.2, above**) and of Cozza and Tucci (2006: `Navalia'; cf. here **Fig. 102.2, below**) are both possible, but also other alternatives. Or, as de Caprariis (2022, 127) writes: "**The old Aemilia, or Nauvalia, or indeed other readings are all possible** [my emphasis]", quoted in more detail above, in the [11.] epigraph of this Section III.

**Above, in Section I., and in this Section III., in my discussion of de Caprariis's relevant hypotheses (2019, 166; ead. 2022), I have explained the following observations in detail; some of the passages of one of these texts are repeated here *verbatim*.**

**Concerning the inscriptions of the *opus incertum* building on the Severan Marble Plan, I do agree with de Caprariis (2022, 127), that 'the reading *Navalia* is possible'. But the position of the fragment 23 of the Severan Marble Plan within the ground-plan of this building precludes, in my opinion, at the same time the identification of this building with the *Porticus Aemilia*.**

**And that for the following reasons :**

De Caprariis (2022, 119, Fig. 5.1 [= here **Fig. 102.2, above**]) publishes the reconstruction of 'Testaccio and Trastevere' by Gianfilippo Carettoni, Lucos Cozza, Antonio Maria Colini and Guglielmo Gatti (1960). De Caprariis (2022, 120, Fig. 5.2, above) shows a detail of this plan by Carettoni *et al.* (1960), with the *opus incertum* building, labelled: 'AEMILIA'. This reconstruction by Carettoni (*et al.* 1960) indicates the precise position of the fragment 23 of the Severan Marble Plan within the ground-plan of the *opus incertum* building. Fragment 23 carries the letters 'JLIA' of the building's main inscription, which Carettoni *et al.* (1960) have reconstructed as '[AEMI]LIA'. Therefore, the reconstructed label 'AEMILIA' on the drawing by Carettoni (*et al.* 1960; F. DE CAPRARIIS 2022, 120, Fig. 5.2, above; cf. here **Fig. 102.2, above**) is located very closely to the eastern short side of the *opus incertum* building (for the true orientation of this building; cf. here **Fig. 102**). And this fact has, in its turn, the effect, that in the reconstruction by Carettoni *et al.* (1960) there is no chance 'of squeezing in' the additional word 'PORTICVS' in front of the reconstructed label 'AEMILIA'.

Besides, the latter is exactly what Gatti had indicated on his own reconstruction of this building (1934; cf. here **Fig. 102.3**, label: 'PORTICVS AEMILIA'). Apart from the fact that in all our ancient literary sources, the (real) building in question is *always* called 'porticus', and only once 'Porticus Aemilia', but never only 'Aemilia'. For those literary sources, see above, the [4.] and [10.] epigraphs in this Section III. (the latter is quoted again below). That the reconstruction of the main inscription of the *opus incertum* building at *La Marmorata* by Carettoni, Cozza, Colini und Gatti (1960; here **Fig. 102.2, above**) lacks the word 'PORTICVS' in front of the reconstructed label 'AEMILIA' is, of course, known to all scholars discussed here. Also that Gatti (1934; here **Fig. 102.3**), in his own reconstruction, had restored this inscription as 'PORTICVS AEMILIA' is likewise known. Finally it is certainly known to all those scholars that the 'Porticus Aemilia' is always called 'Porticus' in our literary sources, but only once 'Porticus Aemilia', and never only 'Aemilia'. Those literary sources are quoted above, in the [4.] and [10.] epigraphs of this Section III. (the latter is quoted again below).

This leads us to:

*My own contribution to this entire discussion*

**It consists in my hypothesis that I hope to have proven in this Chapter: that the controversy concerning the *opus incertum* building at *La Marmorata* can be solved, when the inscriptions on fragments 23 and 24 of the Severan Marble, which represent the ground-plan of this building, are discussed in the context of the altogether 3 toponyms called *Aemiliana*, which had *contemporaneously* existed in the centre of ancient Rome. In the following summary of my relevant research we shall see that it is also of importance to know, which individuals of the family of the Aemilii had erected the buildings in question.**

The starting point of my relevant research was my rejection of Carettoni (*et al.*'s 1960) reconstruction of the main inscription on the *opus incertum* building as 'AEMILIA', which has been discussed and followed by de Caprariis's (2019, 166; *ead.* 2022, 120, Fig. 5.2, above [= here **Fig. 102.2, above**]; cf. pp. 138-139 with ns. 86-88, quoted *verbatim* above, as the [12.] epigraph in this Section III.

This first finding, in its turn, was based on the following observations: Coarelli (2019a, 213 with n. 81) has, in my opinion, convincingly suggested that fragment 621a-d of the Severan Marble Plan had belonged to the *Horrea Aemiliana*. This fragment of the Severan Marble Plan carries the inscription 'AEMILII' (cf. *LTUR* I [1993] 358, Fig. 4), and has securely been located in the area of the *old* river port. As we have seen above, in this Section III., the *Horrea Aemiliana* have been excavated at the building site of the Palazzo dell'Anagrafe. That is to say, the *Horrea Aemiliana* stood in the *old* commercial river port of Rome, next to the *Forum Boarium*. - With this suggestion, I follow Coarelli ("Aemiliana", in: *LTUR* I [1993] 18-19), as well as his reading of the inscription on fragment 621a-d as: 'AEMILII[ANA]'.

Considering the (alleged) existence of those two buildings, named after the Aemilii, and both (allegedly) represented on the Severan Marble Plan, has led to the following conclusion:

Provided, the *opus incertum* building in the *new* commercial river port at *La Marmorata* was indeed the *Porticus Aemilia* outside *Porta Trigemina*, these two buildings called after the Aemilii, both represented on the Severan Marble Plan, should, in my opinion, somehow have been differentiated: the complete inscription of the building in the *old* river port should, in my opinion, have read '[HORREA] AEMILII[ANA]' (or alternatively: 'AEMILII[ANA]', because in the literary sources it is named like this), and the label, appearing on the Severan Marble Plan on the ground-plan of the building in the *new* commercial river port should have read: 'PORTICVS AEMILIA' (because in the literary sources it is always named '*porticus*', but only in one source '*Porticus Aemilia*', and never only '*Aemilia*'). - But, as we have just seen, precisely that was certainly *impossible*, because on the drawing of the building's ground-plan on the Severan Marble Plan there is not space enough left to write 'PORTICVS' in front of the (restored) label: 'AEMII]LIA' (here **Fig. 102.2, above**).

**If all what was said so far in my conclusions concerning the *opus incertum* building at *La Marmorata* (here Figs. 102; 102.1; 102.2; 102.3) should be true, which I think it is, it follows that this structure, in my opinion, cannot possibly be identified with the *Porticus Aemilia* outside *Porta Trigemina*.**

To my own above-summarized thoughts we may add the following observations by Tucci (2012, 586, quoted *verbatim supra* in this Section III. in the discussion of L. COZZA's and P.L. TUCCI's hypotheses).

Also Tucci (*op.cit.*) stresses the fact that the idea, according to which the *Emporium*, mentioned by Livy, may be assumed in the area of the Testaccio since the 2<sup>nd</sup> century BC, is based on an error. Tucci (2012, 586) adds to this the very convincing remark: Provided, the *opus incertum* building at *La Marmorata* were indeed the *Porticus Aemilia* outside *Porta Trigemina*, how could we explain that the Romans in 193 BC had erected a 'commercial building' of that size half a kilometre to the south of the City of Rome?

**To Tucci's (2012, 586) observation, we may add still another thought. We know that the *Horrea Aemiliana* and the *Pons Aemilius* (which have both been discussed in this Chapter), not by chance, had been erected in and immediately adjacent to the *old* commercial river port of Rome, close to the *Forum Boarium*. I, therefore, see no reason, why the *Porticus Aemilia* should *n o t* have stood in the same area as well.**

Thus, at the very end of this Section III., after this long discussion of the '*Porticus Aemilia*'/ *Navalia*' problem, I have arrived at the same conclusion concerning the (real) *Porticus Aemilia* as T.P. Wiseman (2021a, 30, quoted above, as the [10.] epigraph in this Section III.). - Also Tucci has arrived in two of his publications at the same conclusion (2012, 589, with n. 49, quoted above in this Section III., where he refers to P.L. TUCCI 2011-2012).

*I myself have arrived at the same conclusion concerning the (real) Porticus Aemilia  
as T.P. Wiseman (2021a, 30) for the following reasons*

We learn from Livy (35,10,11-12) that M. Aemilius Lepidus and L. Aemilius Paullus, during their aedilship of 193 BC, had not built only one, but two porticos, both standing outside gates in the Servian city Wall; cf. Wiseman (1993, 184).

In the case of the *Porticus Aemilia*, which was leading *ab porta Fontinali ad Martis aram*, Wiseman (1993, 184) writes that this "was providing a colonnade along the street that led from the gate closest to the Forum to the great new road to the north, the Via Flaminia".

Something similar, I think, is also reasonable to suppose in the case of the other *Porticus Aemilia*, which the aediles of 193 BC, M. Aemilius Lepidus and L. Aemilius Paullus, built 'outside the *Porta Trigemina*': *porticam unam extra portam Trigemina, emporio ad Tiberim adiecto*, as Livy (35,10,11-12) says. Of the "colonnade along the street", as Wiseman (1993, 184 with n. 21) imagines the *Porticus Aemilia*, that led from the *Porta Fontinalis* in the Servian city Wall to the Altar of Mars in the *Campus Martius*, no remains are known.

Cf. **Fig. 59**, labels: CAMPUS MARTIUS; Piazza Venezia; Via del Plebiscito; Structure C: so-called ARA MARTIS; VILLA PUBLICA ? / DOMUS?; VIA FLAMINIA / VIA LATA / Via del Corso. **Fig. 58**, labels: CAPITOLINE; Servian city Wall; PORTA FONTINALIS; VIA FLAMINIA / VIA LATA.

For the 'Structure C: so-called ARA MARTIS; VILLA PUBLICA ? / DOMUS?', marked on our map here **Fig. 59**; cf. Häuber (2017, 175-177).

What we do have is a Republican structure in the *Forum Holitorium* (a 'covered road' ?) (cf. here **Fig. 102.6**), which is called 'porticus' in the scholarly literature, and that is oriented from a north-westerly direction towards another gate in the Servian Wall: the *Porta Carmentalis*, that is to say, towards the second-next gate in the Servian city Wall to the north of the *Porta Trigemina*. Is it conceivable that the 'Porticus Aemilia' outside the *Porta Trigemina* had been a structure of *that* kind as well ?

**Fig. 102.6. The Republican structure in the Forum Holitorium (a 'covered road', or porticoed street), leading from a north-westerly direction to the Porta Carmentalis in the Servian city Wall. Photos: Courtesy Franz Xaver Schütz (11-V-2022).**

On our map here **Fig. 74**, I have drawn this "republikanische Porticus 'O' (eine Via Tecta?)" (here **Fig. 102.6**), which covered a road (drawn as a dark blue line on this map) that led to the *Porta Carmentalis*; cf. Häuber (2005, 51, with n. 368, with references to this Republican *porticus* in the *Forum Holitorium*, and Abb. 2 (= here **Fig. 74**)).

Cf. **Fig. 74**, labels: CAPITOLIUM; PORTA CARMENTALIS; [porticus] O; **Fig. 58**, labels: CAPITOLINE; Servian city Wall; PORTA CARMENTALIS / Republican PORTA TRIUMPHALIS; VICUS IUGARIUS; "VIA TRIUMPHALIS"; **Fig. 59**, labels: FORUM HOLITORIUM; "VIA TRIUMPHALIS".

After having written this down, I realized that already Tucci (2012, 591, Section: "SUMMARY") has written something similar, although Tucci does not refer to the porticoed street (**Fig. 102.6**) discussed here:

*"It is likely that the actual porticus Aemilia, one of the several porticoes built in the first half of the second century BC, was simply a porticoed street, located between the Forum Boarium and the Tiber [the italics are those of the author]"*.

Cf. here **Fig. 73**, labels: CAPITOLIUM; Servian city all; PORTA CARMENTALIS; TIBERIS; HORREA [AEMILIANA]; PORTA FLUMENTANA; AEDES: PORTUNUS; PORTA TRIGEMINA; FORUM BOARIUM.

*Who were those Aemilii, who commissioned all the buildings discussed here ?*

When asking ourselves, who had commissioned the buildings discussed in this *Chapter*, we have just heard above in my conclusion: `... that *Porticus Aemilia*, which was first built and, therefore, named after M. Aemilius Lepidus and L. Aemilius Paullus in 193 BC [my emphasis]´.

And above, in Section I: `Cf. Ernst Badian ("Cornelius (RE 335) Scipio Aemilianus Africanus (Numantinus), Publius, born 185/4 BC as second son of L. Aemilius Paullus (2) ... , in: *OCD*<sup>3</sup> [1996] 397 [the emphasis is by the author])´.

See John Briscoe ("Aemilius (RE 114 (??) Paullus (2), Lucius ... He was elected to a second consulship for 168, and ended the Third Macedonian War by his victory at Pydna ... his two elder sons by his first wife Papiria, had been adopted and became ... Q. Fabius Maximus Aemilianus and P. Cornelius Scipio Aemilianus ... [the emphasis is by the author]", in: *OCD*<sup>3</sup> (1966) 21; cf. John Briscoe (2012).

**This means that one of the two men, after whom both buildings called *Porticus Aemilia* (built 193 BC) were named, namely L. Aemilius Paullus, the `Conquerer of Greece´ (cf. W. REITER 1988) and victor of Pydna (168 BC), was the natural father of Scipio Aemilianus, `the destroyer of Carthage´ (146 BC), who completed the *Pons Aemilius* (in 142 BC) and built the *Horrea Aemiliana*.**

See for L. Aemilius Paullus and his son Scipio Aemilianus and their achievements: T.P. Wiseman ("Rome and the resplendent Aemilii" 1993, 184-185, Fig. 4: "A family tree of the Aemilii Paulli, Cornelii Scipiones and Fabii Maximi ...").

Reading again the article by Peter Wiseman (1993), I realized that Wiseman's (2021a, 30 with n. 84) most recent opinions concerning the complex of questions discussed in this *Chapter* - quoted above, as the [10.] epigraph in this Section III. - differ greatly from those, he himself has published 30 years ago.

I, therefore, repeat here again T.P. Wiseman's relevant laconic remarks (2021a, 30 with n. 84, the [10.] epigraph in this Section III.), immediately followed by his earlier opinions concerning the same subjects:

"The narrow strip of land between the steep Aventine slope and the river was progressively developed as Rome's commercial port, and the early stages of that process are reported by Livy with the unvarying description *extra portam Trigeminam*. [with n. 84; my emphasis]"

In his note 84, Wiseman writes: "Livy 35.10.12 (*porticus* and *emporium*, 193 BC), 35.41.10 (*porticus inter lignarios*, 192 BC), 40.51.6 (*porticus*, 179 BC), 41.27.8 (*porticus Aemilia* and steps at the *emporium*, 174 BC); see for instance Le Gall, 1953: 99–103; Bruno, 2012b [*i.e.*, here D. BRUNO 2012]: 399 [my emphasis]"

Note that in his earlier study of the same subjects also Wiseman (1993, 184) had instead identified `the *Porticus Aemilia* outside the *Porta Trigemina*´ with the *opus incertum* building at *La Marmorata* - exactly as several more recent scholars, whose publications have been discussed in this *Chapter*. Wiseman (1993, 184) had likewise located the *Emporium*, which is mentioned by Livy (35,10,11-12, 41,27,8), at the Testaccio/ *La Marmorata*. - Again exactly as several more recent scholars, whose publications have been discussed in this *Chapter*.

At that stage, Wiseman (1993, 184) had thus followed those scholars, who believed that, thanks to the relevant initiative by the two aediles M. Aemilius Lepidus and L. Aemilius Paullus to erect (one of their two) *Porticus Aemilia*´ in the area of the Testaccio/ *La Marmorata*, this had been nothing less than "the creation of Rome's new commercial quarter" (!): "The first of these porticos [*i.e.*, the *Porticus Aemilia* outside the *Porta Trigemina*] was the huge market hall and warehouse south-west of the Aventine, rebuilt in 174, in its final form (as attested on the Severan marble plan) it was 487m long by 60m wide; with its *emporium adiectum* it represented the creation of Rome's new commercial quarter [with n. 21; my emphasis]"

In his **note 21**, Wiseman writes: "Livy 35.10.11-12, 41.27.8; see A. Boethius in Boethius and Ward-Perkins, *Etruscan and Roman Architecture* (Harmondsworth, 1970), pp. 107f., and E. Nash, *Pictorial Dictionary of Ancient Rome* (London 1968), II 238-40. W. Reiter, *Aemilius Paullus, Conqueror of Greece* (London, 1988) p. 109, absurdly calls it 'a modest building program'".

**Ad b), my realization that Sextus Pompeius (circa 67-36 BC), the younger son of Pompeius Magnus, provides the 'connection' between the two civil wars that are mentioned in this Study on Domitian.**

I am referring here to the civil war, ended by Octavian/ Augustus, which is of importance in the context of the two *Navalia*, discussed in this Chapter: 'the *Navalia*', that is to say, the port of the warships (in the *Campus Martius*; cf. here **Fig. 107**) and the other *Navalia* at *La Marmorata* (which, according to COZZA and TUCCI 2006; P.L. TUCCI 2012, were built as the shipyards of the warships, and were later used commercially; cf. here **Figs. 102; 102.2, below**) - and the Civil War, ended by Vespasian, discussed *infra*, in volume 3-2, at *Appendix I*.

As Rita Paris (1994b) has shown, both Augustus and Vespasian had received the highest possible military decoration for these achievements, the *corona civica*, because they had managed to end those civil wars thanks to their military victories. As is well known, the (real) House of Augustus on the Palatine had been decorated with his *corona civica* (here **Fig. 35**). And, as Paris has convincingly suggested, Vespasian, therefore, is represented as being crowned by Victoria with the *corona civica* on Frieze B of the Cancellaria Reliefs (here **Fig. 2; Figs. 1 and 2 drawing: figure 14**), a fact that has been overlooked by all other recent scholars.

For Rita Paris's (1994a) important findings; cf. *supra*, in *Chapter V.1.i.3.a*, and below, in *Chapter The major results of this book on Domitian*.

After studying for this book on Domitian first the following subjects: cf. *infra*, in volume 3-2, at *Appendix I.c*) *The precise date of Domitian's escape from the Capitolium, M. Volusius' disguise as an Isis priest in 43 BC, and the hypothesis that because of this alleged precedent, Domitian's disguise on 19th December 69 as a priest of Isis should therefore be regarded as an invention,*

- and now this *Chapter* on *La Marmorata*, I realized that Sextus Pompeius played very important rôles in both.

*Appendix I*. in volume 3-2 is dedicated to an event in the Civil War of AD 69: Domitian's flight from the *Capitolium*, which was besieged by the Vitellians. This event took place on 19th December AD 69. Tacitus and Suetonius both report that Domitian could escape thanks to a disguise as an *Isiacus*, or as a priest of Isis. Some scholars have doubted these testimonia, arguing that we learn from literary sources something very similar, which, in their opinion, allows the conclusion that the reports on Domitian's disguise should be regarded as inventions.

Cf. *supra*, in *Chapter Preamble; Section III.*, at point 1.).

These scholars refer to an event during the earlier civil war, in 43 BC. The story goes that M. Volusius, one of the men, who had been proscribed by the triumvirs Mark Antony, M. Aemilius Lepidus and Octavian (the later Augustus), in 43-42 BC, had managed to escape by disguising himself as a priest of Isis, wearing an Anubis mask. Luckily M. Volusius knew that Sextus Pompeius had decided to rescue the proscribed, and Volusius actually managed to reach him. As we will hear *infra*, in volume 3-2, at *Appendix I.c*), Sextus Pompeius had serious reasons to act this way. But, of course, Octavian/ Augustus tried to prevent him from helping the proscribed.

When trying to find out the meaning of a passage, written by Cozza and Tucci (2006, 197 [TUCCI], quoted as the [1.] epigraph in Section I.), I happened to find 'the other, still missing part' of the whole story about Sextus Pompeius.

Cozza and Tucci (2006, 197) write:

**"Più tardi, per l'evidente assenza di flotte con grandi navi da combattere, l'edificio [i.e. the 'Porticus Aemilia' / Navalía at the quartiere Testaccio / La Marmorata discussed here] dovette risultare inutile e addirittura "ingombrante", in una zona che cominciava ad assumere uno spiccato carattere commerciale. Visto il grande spazio coperto a disposizione e le eccezionali caratteristiche della struttura, è probabile che già dalla fine del I secolo a.C. l'edificio sia stato adibito a funzioni commerciali [my emphasis]"**.

Knowing already that Marcus Agrippa at the time in question had been secretly creating a new fleet of warships (cf. *infra*), I now found out, to my surprise, that not only Mark Antony had been the target of Octavian's and Agrippa's plans, but even earlier than that - Sextus Pompeius.

**From what Cozza and Tucci (2006, 197) write, we thus learn that, by the end of the 1<sup>st</sup> century BC, both Navalía, discussed here, were abandoned: 'the Navalía', the port of the warships in the southern Campus Martius (cf. here Fig. 107), and the Navalía at La Marmorata, the shipyards of the warships (cf. here Figs. 102; 102.1; 102.2; 102.3).**

Both facts can, in my opinion, be explained with decisions, made by Octavian/ Augustus during this civil war. As was already quoted above, in Section I., as a result of all this, the military fleet was henceforth not based at Rome any more:

**'See also Edward Togo Salmon and Nicholas Purcell (1996, 989): "[Under Augustus, Misenum] became one of the principal imperial naval bases ... [my emphasis]"**'.

Asking ourselves, how all that had begun, the answer to this question - at least in my opinion - is obviously: "Octavian's war against Sextus Pompeius", as Walter Richardson *et al.* (1996, 1601) write. I repeat, therefore, also the relevant passage, which was written for Section I. *Introduction*:

**'Geoffrey Walter Richardson, Theodore John Cadoux and Barbara M. Levick (1996, 1601) write about Agrippa: "... the lifelong friend and supporter of Augustus, was born in 64, 63, or even 62 BC of obscure but probably well-to-do family ... He accompanied Octavius (the future Octavian and Augustus) to Rome from Apollonia after [Julius] Caesar's murder, helped him to raise a private army ... As consul (37) he fitted out and trained a new fleet for Octavian's war against Sextus Pompeius, converting the lacus Avernus near Cumae into a harbour (portus Iulius) for the purpose, and in 36 won two decisive naval engagements at Mylae and Naulochus, where his improved grapnel was highly effective .... In 31 his vigorous naval operations were the primary cause of Mark Antony's defeat ...; at Actium he commanded the left wing ... [my emphasis]"**'.

**Agrippa's two above-mentioned decisive naval battles ("... [Agrippa] in 36 won two decisive naval engagements at Mylae and Naulochus"), were fought against Sextus Pompeius; cf. Theodore John Cadoux and Robin J. Seager (1996, 1217).**

See Theodore John Cadoux and Robin J. Seager (1996, 1216-1217) for: "**Pompeius (RE 33) Magnus (Pius), Sextus**, younger son of Pompey (Cn. Pompeius Magnus (1)) and Mucia Tertia, was born probably *c.*[circa] 67 BC ... [page 1217] ... the war [against Octavian] was decided by the battle of Naulochos (3 September [36 BC]). Sextus escaped with a few ships to Asia, where he attempted to establish himself, but was forced to surrender to M. Titius, who put him to death ... [the emphasis is by the authors themselves]". For Sextus Pompeius and his political motivations; cf. also T.P. Wiseman (2019, 7, 20, 109, 111, 162).

For another consequence of Sextus Pompeius's defeat at Naulochos; cf. Thomas Schäfer ("Das Tropaeum Augusti von Lugdunum Convenarum: Skylla, Sex. Pompeius und Oktavian", 2017).

Schäfer (2017, 337) writes in his Abstract:

"According to a new reconstruction proposal of the Augustan tropaeum from Lugdunum Convenarum, a Scylla on top of the lean bow formed its middle part. In fact, it is well known from literal and other iconographic sources that this kind of figure type served as the figurehead on the flagship of Octavian, fighting Marc Antony in the naval battle of Actium. Earlier, the female companion of Neptune had been used as a symbol by Sextus Pompey, the *Neptuni filius*, and it became a sign associated with Octavian only after the battle of Naulochos. Having this background in mind, it is of specific semantic significance that a Scylla was used on a victory monument for Augustus - in a city founded by Pompey Magnus".

Note that with "*Neptuni filius*", Schäfer (2017, 337; cf. pp. 345-346) refers to Sextus Pompeius, because the latter's father Pompeius Magnus was regarded as the 'new Neptune'; Sextus Pompeius had even himself called "*Neptuni filius*". See the well-known article by Eugenio La Rocca (1987/88), to which also Schäfer refers; cf. La Rocca ("Pompeo Magno, 'novus Neptunus', 1987/88).

Let's now return to our main subject, the discussion of *La Marmorata*.

**Section IV. The Statio Marmorum and the 'sculpture industry' at La Marmorata, its Tiber ships for the transportation of fresh marble blocks and of finished products, Domitian's Tiber ship delivering a block of marble (Figs. 105; 106), Domitian's 'pharaonic' building projects at Rome, and the question, whether the Navalía at La Marmorata had anything to do with all this. With some remarks on the heaviest object, ever transported on the Tiber in antiquity: the Lateran Obelisk (Fig. 101)**

The area of the former *La Marmorata* has been excavated in recent years, in order to build new, likewise vast market halls there, called *Il Nuovo Mercato del Testaccio*. For those excavations; cf. also Mirella Serlorenzi and Renato Sebastiani (2011). An initiative of the *Soprintendenza Speciale Archeologica Belle Arti e Paesaggio di Roma* (the Superintendency of Rome of the State), called *Museo Diffuso del Rione Testaccio*, has developed a didactic concept, by which all the excavated archaeological sites that belong to this area, comprising the ancient *Horrea* as well as the *Monte Testaccio*, are communicated to the public. Cf. *supra*, in Chapter *Introductory remarks and acknowledgements*.

I have elsewhere discussed the colossal statue of Minerva at the Museo Nazionale Romano, Palazzo Massimo. Considering its findspot: at the foot of the Aventine, at the 'Piazza dell'Emporio, Via Marmorata', I ask myself now whether this sculpture could have occurred at a workshop that belonged to the 'sculpture industry', located at *La Marmorata*, which will be discussed in this Section IV.

Cf. Häuber (2014a, 793): "... Erika Simon [with n. 6] suggested that the double life-size statue of Minerva in the Museo Nazionale Romano at Palazzo Massimo, carved from differently coloured stones, could be the cult image of the temple of Minerva on the Aventine".

In my **note 6**, I wrote: "E. Simon, *s.v.* Kolossale Kultstatue der Minerva, in Helbig<sup>4</sup>, III, 1969, pp. 153-154 no. 2244 (inv. no. 124 495; 2,50 m high)". - Simon (*op. cit.*) writes: "1923 an der Piazza dell'Emporio bei der Via Marmorata gefunden". Cf. Brunella Germini ("Statua di Minerva seduta", in: A. LA REGINA 1998, 20): "Dalle fondamenta di un palazzo presso via Marmorata, piazza dell'Emporio (1923) ... L'opera si data in età augustea". - By using white Luna marble for face, hands and feet, basalt for the coiffure, and yellow alabaster for Minerva's garments, this statue imitates Greek statues in chryselephantine technique.

Let's now turn to the findings of Patrizio Pensabene and Javier Á. Domingo concerning the provision of the Forum of Trajan with marbles by using the facilities at *La Marmorata*, for example the *Navalia* (which they themselves, in my opinion, erroneously identify with the '*Porticus Aemilia*' though), as well as all the other wharves and harbours on the Tiber discussed here.

Patrizio Pensabene and Javier Á. Domingo (2016-2017, 572-573, "Foro Traiano: organizzazione del cantiere e approvvigionamento dei marmi alla luce dei recenti dati di Palazzo Valentini"; I Il cantiere, l'approvvigionamento dei marmi, il trasporto e i costi dei grandi monoliti in granito del foro e in sienite; Section: "Il trasporto dei fusti lungo il Tevere") write about the area of the (alleged) *Emporium/ La Marmorata*, which, in their opinion, in antiquity was connected with the *Statio Marmorum*:

"Sappiamo che lungo le sponde del Tevere esistevano numerosi punti di sbarco di materiali costruttive. I blocchi di piccole o medie dimensioni potevano essere sbarcati a Porto, depositati in qualche magazzino e progressivamente portati a Roma in navi più piccole man mano ce n'era richiesta. Si tratta di un tipo di trasporto che doveva essere abbastanza frequente, ben illustrato dalla base della statua del Tevere, ora nel Museo del Louvre, nella quale è rappresentata una nave che sta trasportando un blocco di pietra (fig. 15 [= here Fig. 105]) [with n. 155], quasi a segnalare che questa era una delle attività più frequenti su questo fiume. Inoltre va ricordato la nota iscrizione del *corpus traiectus marmorarium* (CIL X, 542 = XIV, 425), probabilmente un collegio di marmorari specificamente destinato a compiere le delicate operazioni di trasporto di questi materiali. [with n. 156] Infine, un qualche lume su come avveniva il trasporto fluviale, ci viene da una rappresentazione di attività affini sul Tevere in un laterizio con rematori da una tomba dell'Isola Sacra, nella quale si rappresenta una barca con rematori e una cima tesa a poppo che sta molto probabilmente rimorchiando un'altra imbarcazione. [with n. 157]

Lo sbarco di questi materiali doveva avvenire, dunque, nei numerosi approdi fluviali individuati archeologicamente lungo le due sponde del fiume. Non possiamo in questa sede enumerarli tutti; [with n. 158] inoltre molti di essi sono formati da piccole strutture che non avrebbero permesso lo sbarco dei fusti giganteschi. In ogni caso numerose sono le segnalazioni di rinvenimenti di blocchi e marmi di [page 573] cava poco prima di arrivare a Porta Portese ad esempio quelli presso il Gasometro tra la via Ostiense e il Tevere), [with n. 159], e anche di tracce dell'attività di officine scultoree. [with n. 160]

Il porto di sbarco principale dei marmi era però quello di Marmorata, ai piedi dell'Aventino (fig. 16), collegato direttamente con la *Statio Marmorum*, da cui provengono blocchi con date consolari già dal periodo di Nerone, soprattutto di Domiziano e in minore misura di II secolo, con un picco in età adrianea. [with n. 161]

Questo porto si estendeva tra l'Aventino e il Testaccio, e vi sono stati rinvenuti durante gli scavi del Visconti del 1868-1870 ben 1.400 pezzi di marmo di maggiori dimensioni e migliaia di frammenti di lastre di minori dimensioni e tonnellate di schegge.

Rinvenimenti avvennero anche nella zona del Lungotevere Testaccio, con strutture risalenti all'età repubblicana, ma con diversi rifacimenti successivi che si prolungano fino alla seconda metà del II sec. d.C. con un notevole ampliamento proprio in età traiana. [with n. 162] Anche scavi degli anni '80 del secolo scorso hanno confermato l'esistenza di depositi di marmi nel settore lungo il fiume a sud-ovest della *porticus Aemilia* [here interpreted as *Navalia*]; [with n. 163] si tratta di un'area vicina a quella da cui provengono stele funerarie di funzionari e commercianti coinvolti nel commercio del marmo [my emphasis].

The caption of Pensabene's and Domingo's Fig. 15 [= here Fig. 105] reads: "Parigi, Museo del Louvre. Particolare della base della statua del Tevere con la rappresentazione del trasporto di un blocco di marmo". The caption of their Fig. 16 reads: "Roma, porto tiberino all'Emporio (da KEAY 2012)". - Note that on Keay's plan (2012) the bank of the Tiber in front of the '*Porticus Aemilia*' / *Navalia* is labelled: Emporio.

In their note 155, Pensabene and Domingo write: "Paris, Louvre MA 593; MAISCHBERGER 1997, p. 29, nota 129".

In their note 156, they write: "MAISCHBERGER 1997, p. 52".

In their **note 157**, they write: "*Digest.* 19.2.25.7; MEIGGS 1997, p. 298, tav, XXVIIIa; GIANFROTTA 2005, pp. 15-17, fig. 9".

In their **note 158**, they write: "**Citiamo solo l'approdo fluviale di fronte alla chiesa di S. Passera sul lato sinistro [corr.: destro] del Tevere e non lontano dalla basilica di S. Paolo f.l.m. [fuori le mura]. Questo è stato identificato per la presenza di una banchina portuale che potrebbe risalire alla metà del I sec. d.C.,** MOCCEGANI 1975-1976, pp. 250-262 [my emphasis]".

In their **note 159**, they write: "PENSABENE 1994, pp. 209-249.

In their **note 160**, they write: "Questi piccoli depositi, nei quali i marchi di cava non sono più antichi del tardo I secolo d. C., come nota Bruzza in base alle date consolari su blocchi riutilizzati a San Paolo, si estendevano quasi ininterrottamente lungo la sponda sinistra del Tevere, fin oltre S. Paolo, per la cui ricostruzione molti furono utilizzati: Bruzza in un manoscritto inedito reso noto da Gatti (GATTI 1936, pp. 55-82)".

In their **note 161**, they write: "MAISCHBERGER 1997, pp. 77-81, nota 333".

In their **note 162**, they write: "BIANCHI 2007, pp. 89-124".

In their **note 163**, they write: "MAISCHBERGER 1997, pp. 61-93, 175-177; KEAY 2012, p. 38". - See now Simon Keay, Martin Millett, Kristian Strutt and Paola Germoni (2020). I thank Hans Rupprecht Goette for the reference.

Pensabene and Domingo (2016-2017, 572 with n. 158) understandably state in the above-quoted passage that, in the context of this article, they cannot possibly mention all the wharves and harbour facilities, that have been documented by excavations on both banks of the Tiber within the area discussed here.

Pensabene and Domingo (2016-2017, 572) mention for example in their note 158 the "approdo fluviale di fronte alla chiesa di S. Passera" (the wharf in front of the Church of Santa Passera), which has become the motivation for Laura Gigli (2022) to write the fictional account of the Egyptian merchant *Ciro*, that is quoted *verbatim* above, in Section II.

Nevertheless I wish to remind the reader of one of these facilities, already mentioned elsewhere in this *Study*, because there it was even possible to handle the Lateran Obelisk (cf. here **Fig. 101**) (!).

*In the following, I allow myself a digression on the weight of the Lateran Obelisk (here Fig. 101).*

*When brought to Rome in AD 357, it was, according to several authors, 148 palmi high, whereas today it is 144 palmi high. According to Franz Xaver Schütz, the Lateran Obelisk was thus originally circa 33,08 m high and weighed circa 529 tons; whereas today it is still 32,18 m high and weighs circa 509 tons.*

This remarkable monolithic rose granite artefact which, at the moment when it arrived at Rome in AD 357, was, according to Franz Xaver Schütz, circa 33,08 m high, weighing circa 529 tons - the Lateran Obelisk (cf. here **Fig. 101**) - although now 'only' 32,18 m high and currently weighing circa 509 tons, is still the largest extant Egyptian obelisk. The Lateran Obelisk was carved from Aswan rose granite. For all those just-mentioned properties of this obelisk; cf. below, at *The second Contribution by Franz Xaver Schütz: Wie schwer war der ägyptische Obelisk, der heute auf der Piazza di S. Giovanni in Laterano in Rom steht?*

For the meaning of this stone, when used for obelisks; cf. John Pollini (2017a, 53):

"In Egyptian religion, rose-coloured granite obelisks are sacred to the sun-god Ra, and their pyramidion-shaped capstones, probably gilded, are symbolic of the triangle that the sun's rays form, especially when seen on a cloudy day as they break through clouds. In fact, as Pliny (*HN* 36,64) tells us, the Egyptian word *tekhen* is the same for 'sunbeam' and 'obelisk'. Rose-colored granite used for obelisks was emblematic of the fiery sun itself and was understood as such even in Roman times, as suggested by the Greek word *pyrrhopoekilos* ('red-spotted') for this type of bespeckled rose-colored stone [Pliny *HN* 36.64]".

This passage I have already quoted in Häuber (2017, 426).

See also Patrizio Pensabene (1994, 313):

"... un altro caso più clamoroso è costituito dal granito di Assuan, in quanto il suo impiego nei grandi obelisci [!] introdotti a Roma in età augustea di cui è noto il significato simbolico d'immortalità connesso al culto dei faraoni (e di conseguenza degli imperatori romani che li utilizzarono ([with n.] 79) finisce per riverberarsi sulla pietra stessa".

In his **note 79**, Pensabene writes: "FANT, A distribution model for the Roman imperial marble[s; 1993], cit., pp. 148-149".

**Fig. 101. The obelisk standing in Piazza di S. Giovanni in Laterano at Rome, the 'Lateran Obelisk', commissioned by Pharaoh Tuthmosis III for the Temple complex of Amun in Karnak at Thebes (today Luxor). Rose granite from Aswan. Augustus had originally planned to bring this tallest of extant obelisks from Karnak to Rome, but it was only brought there in AD 357 under Constantius II, who erected it on the *spina* of the *Circus Maximus*; cf. Häuber (2017, 427-428: "Appendix 5. L. Habachi (2000) on the Lateran Obelisk (Fig. 5.1 [= here Fig. 101])"). From: Häuber (2017, 115, Fig. 5.1). (photo: F.X. Schütz 27-IX-2015).**

**Fig. 101.a. Cf. G.B. Cipriani (1823, with Tav. 1; 2), his discussion and etchings of the 12 (Egyptian) obelisks in Rome. The caption of his Tav. 1 reads: "Dodici Obelischii Egizj, che si osservano rialzati ad ornamento della Città di Roma, posti secondo ordine della loro rievazione". The caption of his Tav. 2 reads: "Fusti dei dodici Obelischii dei Egizj, che si osservano rialzati ad ornamento della Città di Roma, posti secondo il grado della loro altezza". Cipriani's etchings of those 12 obelisks are measured: the tallest one is the Lateran Obelisk. Cipriani has also discussed and drawn Domitian's obelisk, which he refers to in his text and on his plates as: "Agonale di Piazza Navona", see his Tav. 1; Tav. 2 (in both Domitian's obelisk is the fifth from left).**

For the Lateran Obelisk; cf. *supra*, in Chapter IV.1.1.c); and *infra*, in volume 3-2, in *Appendix I.d.1.a*); and in *Appendix VI.*; at Section VII.

In the following, I anticipate a passage, written for *infra*, volume 3-2, at *Appendix I.d.1.a*):

Paolo Liverani (2020, 25) provides additional information concerning the Lateran Obelisk (cf. here **Fig. 101**), namely that it had been brought to the river port, called *Vicus Alexandri*:

"... sotto l'Aventino invece arrivavano grano, olio, marmi e in genere le merci e derrate che venivano importate via mare e risalivano il fiume dal porto posto alla sua foce. Naturalmente questa è una schematizzazione: a valle del circuito delle Mura Aureliane si disponevano strutture portuali ancora per un lungo tratto del fiume e abbiamo notizia di carichi eccezionali come quello dell'obelisco di Costanzo II [*i.e.*, the Lateran Obelisk, here **Fig. 101**] che, secondo Ammiano Marcellino [with n. 43] fu sbarcato [in AD 357] al *Vicus Alexandri*, il porto fluviale a sud della basilica di S. Paolo noto nel Medioevo come Porto della Pozzolana [with n. 44]. Di qui avrebbe proseguito per la via Ostiense fino a raggiungere il Circo Massimo".

In his **note 43**, Liverani writes: "Ammiano 17.4.14".

In his **note 44**, he writes: "Barbini 2001".

As Liverani (2020, 25) writes, the ships in question "risalivano il fiume dal porto posto alla sua foce".

In the course of time the navigation on the Tiber had greatly been improved thanks to the fact that the Port of Claudius and the *Portus Traianus* were built; the latter was connected with the Tiber by means of the *fossa Traiana* and by the *Canale Romano* (cf. here **Figs. 95-97**).

Cf. Pensabene and Domingo (2016-2017, 579, 581-582, quoted *verbatim infra*). For the Port of Claudius, the *Portus Traianus* and the channels, mentioned by Paolo Liverani (2020, 25), the *fossa Traiana* and the *Canale Romano*; cf. also Simon Keay and Martin Millett 2005 (269-296, Figs. 8.1.; 8.2; 8.4; 8.6 [= here **Fig. 95, above and below; Figs. 96; 97**]; Lorenzo Quilici ("Sul faro di Portus e una nota in margine al Porto di Traiano", 2017); and Simon Malmberg ("Understanding Rome as a port city", 2021).

**Fig. 95, above. From: S. Keay, M. Millett, L. Paroli and K. Strutt (2005, 273, Fig. 8.1. The caption reads: "The geographical context of the Claudian and Trajanic phases of Portus").**

**Fig. 95, below. From: S. Keay, M. Millett, L. Paroli and K. Strutt (2005, 274, Fig. 8.2. The caption reads: "Pre-Trajanic Harbour. Summary plan showing the evidence for the Claudian and first-century AD layout of Portus").**

**Fig. 96. From: S. Keay, M. Millett, L. Paroli and K. Strutt (2005, 280, Fig. 8.4. The caption reads: "Trajanic Harbour. Summary plan showing the evidence for the Trajanic and mid-Imperial layout of Portus").**

**Fig. 97. From: S. Keay, M. Millett, L. Paroli and K. Strutt (2005, 292, Fig. 8.6. The caption reads: "Late Antique Harbour. Summary plan showing the evidence for the late antique layout of Portus. The approximate extent of cemetery evidence from the field survey is shown by hatching").**

*According to the (erroneous) statement by Patrizio Pensabene and Javier Á. Domingo (2016-2017, 580), the Lateran Obelisk was originally 32 m high and weighed 350 tons*

Pensabene and Domingo (2016-2017, 580) report also on the transportation of the Lateran Obelisk on the Tiber in AD 357, but believe that it was already at that stage 'only' 32 m high, and weighed 'only' 350 tons:

"La situazione pare diversa dopo la costruzione del porto di Claudio, anche se dobbiamo risalire a Costanzo II per una nuova informazione sul trasporto degli obelischi, che ora potevano avvicinarci alla città: egli fece trasportare da Alessandria **nel 357 d.C. un obelisco alto 32 m e di 350 tonnellate**, [with n. 195] destinato al Circo Massimo (**ora a San Giovanni in Laterano** [cf. here **Fig. 101**]), per il quale si utilizzò una nave apposita che rimontò il Tevere fino a 3 miglia a sud della città, dove l'obelisco fu sbarcato e portato a Roma attraverso la via Ostiense fino al circo (Am. Marcellino 17,4, 14-15) [my emphasis]".

In their **note 195**, Pensabene and Domingo write: "MAISCHBERGER 1997, pp. 28-29; LIVERANI 2012, pp. 471-487".

**But we shall see below that Pensabene and Domingo (2016-2017, 580) have misunderstood Maischberger (1997, 28-29). Also Liverani (*op.cit.*) does not mention the weight of the Lateran Obelisk in his account.**

Needless to say that the Lateran Obelisk is *by far* larger than any of those Egyptian granite column shafts, that were used to build the Forum of Trajan, and which are the focus of Pensabene's and Domingo's essay (2016-2017).

Cf. for the measurements of the column shafts of this forum the chart published by Pensabene and Domingo (2016-2017, 530-531). Cf. p. 531: the largest monolithic granite column shafts, measuring 50 Roman feet (= 14,78 m) have been attributed to the Temple of *Divus Traianus*. As is well known, a fragmentary one of these granite column shafts lies immediately to the north of the Column of Trajan; cf. p. 529, Fig. 1: "Fusto in granito del *Mons Claudianus*, alto 50 piedi, attribuito al Tempio di Traiano". Cf. p. 533, Fig. 4: the monolithic granite column shafts of the Basilica Ulpia measured "m. 8,82-8,84".

But we learn that even larger goods than the Lateran Obelisk (here **Fig. 101**) were transported in antiquity (but on seagoing ships!; cf. below) as Pensabene and Domingo (2016-2017, 578-579) state:

**"È vero che lo studio dei relitti ci mostra come molte navi adibite al trasporto di blocchi di pietra avevano una capacità di carico fra le 200-350 tonnellate [with n. 185], con dimensioni intorno ai 30-40 [page 579] m di lunghezza per circa 14 m di larghezza [with n. 186; my emphasis]"**.

In their **note 185**, Pensabene and Domingo write: "MAISCHBERGER 1997, pp. 28-29; RATHBONE 2003, pp. 199-201. Un elenco di questi resti con ulteriore bibliografia, in: PENSABENE, DOMINGO 2016, p. 4".

In their **note 186**, they write: "PENSABENE 2013, p. 259".

**Note that Maischberger (1997, 28-29), whom Pensabene and Domingo quote in their note 185, refers in the relevant passage of his text to seagoing ships (that is to say, not to ships that had been travelling on the Tiber).**

Note also that there is also a problem with the information, provided by Pensabene and Domingo (2016-2017, 580) for the weight of the Lateran Obelisk (*i.e.*, allegedly 350 tons), when that arrived at Rome in AD 357. - In case, the Egyptologist Labib Habachi (2000, 67) was right, who was of a different opinion.

This seems to be the case, since I had the chance to discuss the matter with the Egyptologist Emanuele M. Ciampini, who was kind enough to check the relevant literature for me. Labib Habachi (2000, 49, 67), contrary to Pensabene and Domingo (2016-2017, 580, with note 195), knew perfectly well that the Lateran Obelisk (cf. here **Fig. 101**) had still its original height, when arriving at Rome in AD 357.

Habachi's (2000, 67) stated, in addition to this, that the Lateran Obelisk *currently* (still) weighs 455 tons:

"Bei einem Gewicht von 455 t beträgt seine heutige Höhe [*i.e.*, of the Lateran Obelisk] noch immer 32,18 m, obwohl im 16. Jh., bei seiner Wiederaufstellung, ein Stück abgeschlagen worden war".

Pensabene and Domingo (2016-2017, 580 with note 195) clearly state instead that this obelisk weighed 'only' 350 tons when arriving at Rome. In a telephone conversation on 28th May 2021, Ciampini disclosed also the following problem to me: because the shape of the Lateran Obelisk is not perfectly regular, the calculation of its weight is kind of difficult, but a weight 'around 450 tons', as suggested by Habachi (2000, 67), is also according to Ciampini correct. This opinion Ciampini has now also confirmed by writing me an E-mail.

**If true, in antiquity even goods 'weighing around 450 tons' could be transported on the Tiber - that is at least recorded for AD 357 in the case of the Lateran Obelisk.**

Unfortunately, I am unable to offer a solution to this controversy concerning the actual weight of the Lateran Obelisk in this context.

A long time after I had written this down, Franz Xaver Schütz decided to study this problem. First of all he ordered in the Bayerische Staatsbibliothek the book by the engineer Armin Wirsching, which Peter Herz has mentioned in his sixth Contribution to this volume ("Rom. Strukturen der Versorgung"). Wirsching's book has the title (*Obelisk transportieren und aufrichten in Ägypten und in Rom*, 2013).

Wirsching (2013, 116-117) writes about the Lateran Obelisk:

**"Der Lateran Obelisk hatte ursprünglich eine Höhe von 33 Metern, und das Gewicht wird auf mehr als 500 Tonnen geschätzt. Bei der Dritt-Aufstellung [in the Piazza di S. Giovanni in Laterano] mussten vom beschädigten Schaft 4 palmi abgeschlagen werden, um eine Standfläche zu erhalten [with n. 146]. Heute**

ist der Obelisk noch 32,15 Meter hoch. Der [page 117] Sockel hatte eine Höhe von rund 8,5 Metern, doch waren die Steine so stark beschädigt, dass man sie vor Ort liegen ließ [my emphasis]".

In his note 146, Wirsching writes: "Mercati (Anm. 122 [*i.e.*, here G. MERCATI 1589; *id.* 1981]) 138. D'Onofrio (Anm. 83 [*i.e.*, here C. D'ONOFRIO 1967]) 166. Iversen (Anm. 83 [*i.e.*, here E. IVERSEN 1968]) 55".

Then Franz Xaver Schütz ordered the book by Martin Maischberger in the Bayerische Staatsbibliothek (*Marmor in Rom: Anlieferung, Lager- und Werkplätze in der Kaiserzeit*, 1997). Franz checked the quotation of Maischberger, provided by Pensabene and Domingo (2016-2017, 580, n. 195) for the weight "350 tons", for the Lateran Obelisk, writing in his second *Contribution* :

"PENSABENE, DOMINGO 2017

Offensichtlich in Mißverständnis von MAISCHBERGER 1997 schreiben PENSABENE und DOMINGO: "un obelisco alto 32 m e di 350 tonnellate, [with n. 195] destinato al Circo Massimo (ora a San Giovanni in Laterano)" (PENSABENE, DOMINGO 2017, 580). In ihrer Anmerkung 195 verweisen die Autoren auf "MAISCHBERGER 1997, pp. 28-29" und "LIVERANI 2012, pp. 471-487". MAISCHBERGER nennt zwar die Zahl von 32 m für die Höhe, jedoch kein Gewicht (MAISCHBERGER 1997, S. 29)".

For his detailed discussion of this subject; cf. below, at *The second Contribution by Franz Xaver Schütz : Wie schwer war der ägyptische Obelisk, der heute auf der Piazza di S. Giovanni in Laterano in Rom steht?*

Let's now return to our main subject.

Pensabene and Domingo (2016-2017, 579; cf. p. 573, Fig. 15) inform us also about the small ships on the Tiber, one of which, transporting a huge block of marble, is visible on the relief, illustrated on their Fig. 15 (= here Fig. 105):

"La prassi più comune per i carichi di fusti di piccola e media grandezza e di blocchi di marmo (esistono naufragi, come quello di Punta Scifo A, con carichi misti di fusti, blocchi e manufatti semifiniti come i bacini), era di trasferirli - soprattutto a partire della costruzione del bacino portuale di Claudio a Porto -, su battelli più piccoli che potevano rimontare il Tevere più facilmente (v.[edi] il rilievo del Louvre sopracitato [= here Fig. 105]). [with n. 187] A questo proposito vanno citati i *nautae*, cioè i marinai fluviali (*scapharii*, *lenuncularii*, *lyntrarii* e *caudicarii*) [with n. 188] che si occupano della discesa e della risalita delle merci lungo i fiumi. Le imbarcazioni usate erano i *lenunculi*, a remi, con una lunghezza di circa 10-12 m, per i quali vi era a Ostia un *ordo corporatorum lenunculariorum*, [with n. 189] o le *caudicariae* governate dai *navicularii codicarii*, cioè il *collegium* che riuniva gli addetti alla navigazione del Tevere su questo tipo di battelli fluviali a scafo rotondo, [with n. 190] di circa 16 m di lunghezza e 4,80 m di larghezza, con una capacità di carico di circa 30-35 tonnellate. [with n. 191] Alla navigazione fluviale, come è noto, si accompagnava la pratica dell'alaggio con animali e/o uomini che tiravano le funi legate all'albero del battello. [with n. 192].

Una conferma che a Porto avvenisse per i marmi un cambio del mezzo di trasporto è dato dal rinvenimento di centinaia di blocchi e fusti sulle sponde della *fossa Traiana*, in particolare sulla sinistra, dove si sarebbe localizzata la *statio marmorum* di Porto e comunque il deposito principale all'aperto ... [with n. 193; my emphasis]".

In their note 187, Pensabene and Domingo write: "Paris, Louvre MA 593; MAISCHBERGER 1997, p. 29, nota 129".

In their note 188, they write: "DIOSONO 2009, p. 472".

In their note 189, they write: "CIL XIV, 250, 251, 252; BONINO 2015, pp. 74-75".

In their note 190, they write: "CIL IV, 131, 170, 4144, 4234".

In their note 191, they write: "BONINO 2015, pp. 70-73".

In their **note 192**, they write: "V. [vedi] più ampiamente: AGUILERA MARTIN 2012 [*i.e.*, here A.J. AGUILERA MARTIN 2012], pp. 107-116".

In their **note 193**, they write: "BACCINI LEOTARI 1989, p. 43, n. 61".

Apropos "la pratica dell'alaggio", mentioned by Pensabene and Domingo (2016-2017, 579), quoted above. Such scenes are, of course, also known from other rivers in the Roman Empire, for example from the river Durance in France, where barrels with wine have been transported this way; cf. Maria Paola Del Moro ("101. Bassorilievo con scena di alaggio", in: *Cat. Aurea Roma 2000*, pp. 481-482). - My thanks are due to Laura Gigli for the reference.

**Prerequisite for the transportation on the Tiber of goods of the calibre of the Lateran Obelisk (cf. here Fig. 101) was, apart from the *fossa Traiana* also another facility, built under Trajan, the *Canale Romano* (cf. here Figs. 96; 97).**

Pensabene and Domingo (2016-2017, 581-582) write about the *Canale Romano* (here Figs. 96; 97):

"Dai dati fin qui presentati risulta dunque un'evoluzione del trasporto fra l'età di Augusto-Caligola - le grandi navi incaricate del trasporto degli obelischi si fermano a Ostia, da dove questi proseguono su imbarcazioni più piccole - e quella di Costanzo II [transporting the Lateran Obelisk; cf. here Fig. 101], quando la nave raggiunge quasi la città di Roma, fermandosi a 3 miglia a sud. [with n. 199] Questa differenza è evidentemente dovuta alla costruzione del porto di Claudio, inaugurato nel 64 d.C., poi integrato dal bacino esagonale e dalla *Fossa Traiana* (Canale di Fiumicino), che resero più facile la navigazione sul Tevere. Fino a questo nuovo sistema portuale Roma dipendeva dal porto di Pozzuoli, che ancora in età neroniana rivestiva un'importanza primaria per la città, visto che il vecchio porto di Ostia non era sempre agibile con navi di portata superiore alle 3.000 anfore; cioè circa 130-150 tonnellate. [with n. 200] Inoltre, molto probabilmente nell'età di Traiano si costruì il *Canale Romano*, di 35 m di larghezza e circa 5-7 m di profondità, [page 582] fra il Tevere e la *Fossa Traiana*, che avrebbe permesso la navigazione di navi cariche fino a 350-390 tonnellate. [with n. 201; my emphasis]".

In their **note 199**, Pensabene and Domingo write: "PENSABENE, DOMINGO 2016, pp. 4-5".

In their **note 200**, they write: "BONINO 2015, p. 12: Dionigi di Alicarnasso, *Antichità romane*, III, 44".

In their **note 201**, they write: "SALMON [*corr.*: F. SALOMON], GOIRAN, BRAVARD, ARNAUD, DJERBI, KAY, KEAY 2014, pp. 31-49, figg. 1 e 6".

**Apropos "navi cariche fino a 350-390 tonnellate", mentioned by Pensabene and Domingo (2016-2017, 582), which, in their opinion, could travel on the Tiber as soon as the *Canale Romano* had been built in the Trajanic period.**

**But because Franz Xaver Schütz was able to demonstrate that the Lateran Obelisk (here Fig. 101) is still weighing circa 509 tons, but originally weighed circa 529 tons, when it was transported on the Tiber in AD 357, this statement by Pensabene and Domingo has to be corrected accordingly.**

Cf. below, at *The second Contribution by Franz Xaver Schütz : Wie schwer war der ägyptische Obelisk, der heute auf der Piazza di S. Giovanni in Laterano in Rom steht?*

**To conclude this point.**

Patrizio Pensabene's and Javier Á. Domingo's (2016-2017, 572-573) above-quoted comments on the archaeological finds from this area, as well as from elsewhere on both banks of the Tiber between Porto and Rome, have shown that ancient Rome's *new* commercial river port at *La Marmorata* was used to stock huge quantities of building material, especially of all kinds of marble. Pensabene and Domingo have, in addition to this, demonstrated, that in this area was also located a grandiose marble working 'industry'.

As we have seen above, Pensabene and Domingo (2016-2017, 573) report also on the fact that many fresh marble blocks, carrying consular dates of the 2<sup>nd</sup> century were found in the area of the river port at *La Marmorata*. In addition, it has been observed that the port facilities at the "Lungotevere Testaccio" (immediately in front of and to the west of the *Navalia*; cf. their Fig. 16 and here **Figs. 102; 102.3**) have undergone "un notevole ampliamento proprio in età traianea". - In my opinion, both facts, taken together, allow the conclusion that also parts of the architectural sculptures of the Forum of Trajan were made there.

**If true, that assumption would prove to be especially interesting in the context of this Study, because we know now for sure that the Forum of Trajan had been begun by Domitian.**

Cf. *infra*, in volume 3-2, at *Appendix I.d*); *Appendix IV.d.2.f*); *Appendix IV.d.4.*), *Appendix IV.d.4.b*), and *Appendix IV.d.4.c*).

In order to create the huge plane area for his Mega-Forum - the Forum of Trajan - Domitian ordered the destruction of the former *sella* between the Quirinal and the *Arx*, the northern summit of the Capitoline. This excavated material was used to fill in a valley on the *Mons Oppius*, at the bottom of which, in my opinion, ran the 'old *Vicus Iovis Fagutalis*' (part of this excavated ancient road is labelled "E" on our maps): this was the site of the future Baths of Trajan. I, therefore, suggest here that Domitian had obviously already planned or even started building large public baths at this site on the Oppian (a suggestion now also made by many other scholars).

Cf. *infra*, in volume 3-2, at *Appendix IV.d.4.c*) *Domitian's building projects at Rome. Conclusions arrived at in Appendix IV.d. With The first Contribution by Eugenio La Rocca.*

*As a result of this Chapter it seems to be clear that Domitian, who destroyed the sella between the Quirinal and the Arx, in order to erect his huge forum there (the later 'Forum of Trajan'), had used this excavated material to fill in a valley on the Mons Oppius. This finding invited the further assumption that already Domitian had planned to erect at this site great public baths, the now so-called 'Baths of Trajan'. The confirmation that Domitian had actually started building those baths, reached me only afterwards.*

Cf. **Fig. 73**, labels: COLLIS QUIRINALIS; "Mercati di Traiano"; FORUM TRAIANI; ARX; CAPITOLIUM; **Fig. 71**, labels: COLLIS QUIRINALIS; MONS OPPIUS; Building with "Citta Dipinta"; [road] E; old VICUS IOVIS FAGUTALIS; Baths of Trajan.

Pensabene and Domingo (2016-2017) have documented and analysed in detail the admirable organization and management of the enormous building site, which is the focus of their article - the Forum of Trajan.

**Considering what was said above, all this had, in my opinion, at least in part already been envisaged and started by Domitian and his collaborators.**

Cf. Pensabene and Domingo (2016-2017, 527-534, Section: "La gestione del progetto architettonico [of the Forum of Trajan] e l'approvvigionamento dei materiali"). Cf. p. 527, where the authors discuss Domitian's well documented activities at the surrounding fora that are all related to the realization of (his) Mega-Forum, the future Forum of Trajan - a fact which Pensabene and Domingo themselves do not address though.

As Pensabene and Domingo (2016-2017, 527) observe, the organization of this building site required not only a very close and 'international' cooperation of many of the imperial *procuratores* and clients, but also a close cooperation with the leading politicians of the areas, where the desired rare building materials came from. The authors state also that the organization of the building site 'Forum of Trajan' was clearly based on relevant experiences already made by the Flavian emperors.

In the following, here not quoted, sections of their article, Pensabene and Domingo (2016-2017, 575-591) reconstruct meticulously, how the finished architectural marbles were brought to their final destinations

(for example to the Forum of Trajan). Those architectural marbles and sculptures had been created in the workshops on the banks on the Tiber and elsewhere in Rome, which the authors discuss in their article (plus the large column shafts imported from Egypt). These artifacts were either transported from the harbour facilities, where for example those column shafts had been unloaded from their seagoing ships (see for those here **Figs. 98; 99**), or else from the workshops at Rome, where they had been made, to their relevant building sites. Because of the large sizes of some of these marbles, these enterprises often proved to be very difficult.

**Pensabene's and Domingo's (2016-2017, 579) above-quoted account and their Fig. 15, as well as the drawing in the Paper Museum of Cassiano dal Pozzo (for both; cf. here Figs. 105; 106), which show three ships on the Tiber, one of them transporting a huge block of marble, prove, in my opinion, that the location of sizeable *Navalia* at *La Marmorata*, as suggested here, was therefore more than necessary. And that for the following reasons:**

**a) because workmen from the sculpture workshops at *La Marmorata* eventually fetched marble blocks in the suitable sizes from the even larger magazines at Porto (where marble was stocked in great quantities), to be then manufactured at the workshops of *La Marmorata*; and -**

**b), once those sculptures were finished, they had to be delivered to their relevant building sites at Rome.**

This unique relief (here **Figs. 105; 106**), which illustrates among other things the transportation of a block of marble in a small ship on the Tiber, is to be found on a relief that adorns the plinth of Domitian's colossal statue of the River God Tiber (here **Fig. 104**). This fact is, of course, significant. See again Alexander Heinemann's (2018) choice of the title: "Blessings of Empire ..." for his article, in which he discusses the colossal marble statues of the River Gods Tiber and Nile (here **Fig. 104**), that Domitian had commissioned for his newly erected Iseum Campense.

**Many of the fresh marble blocks, found at *La Marmorata*, carry consular dates. As we have seen above, Patrizio Pensabene and Javier Á. Domingo (2016-2017, 573), studying also their chronology, have come to the conclusion that *most of them* are dated to the Domitianic period - as not otherwise expectable in this *Study on Domitian*, I should like to add. For that subject; cf. *infra*, in volume 3-2, at *Appendix IV.d.4.c) Domitian's building projects at Rome: Conclusions*.**

In this *Chapter*, I could unfortunately not address all the findings that relate to the topographical features, ancient buildings and churches presented in the publications, that were available to me. But after writing it, one thing seems to be clear: the discussion of this very interesting quarter of Rome, called Testaccio and *La Marmorata*, and its immediate surroundings, will certainly go on for a very long time.

**As also not otherwise expectable, exactly as many other scholars, whose works have been summarized in this book on Domitian, I myself have likewise not covered the entire scholarly debate revolving around those subjects.**

Only when this volume was about to be sent to the press, have I for example found the article by Christer Bruun ("Approvvigionamento, infrastruttura, trasporti", 2022).

I quote here the English summary of his essay *verbatim* for the following reason. Bruun has already in 2022 pointed out some of the problems concerning the transportation on the Tiber of all the goods needed for the City of Rome, which, independently of him, have been addressed by Peter Herz in his sixth *Contribution* to this volume : *Rom. Strukturen der Versorgung*, and also by myself in this *Chapter*:

Cf. Christer Bruun (2022, Résumé): "This contribution is concerned with the provisioning of Rome during the Principate. Recent archaeological discoveries in the immediate area around the city of Rome provides new information on hydraulic resources and the technology (in particular, water-lifting devices) that were

available to the population. Most imports to Rome were transported on the Tiber, and there is new information on brick production upstream from Rome, while other new evidence pertains to the import of firewood from the Sabine country. Above all Rome was provisioned by imports which arrived at Ostia-Portus and were brought up to Rome on the Tiber in smaller craft (*naues caudicareae*). The journey up to Rome took three days and organizing the Tiber traffic was a major challenge for the imperial government, the complex nature of which is often not realized. The task was evidently handled successfully, since Rome and its population survived. The article concludes that when estimating the total population of Rome it is important to understand the constraints that the towpath along the Tiber represented for the volume of goods that could be hauled up to Rome.

Keywords :

water supply, imports, Tiber, *naues caudicariae*, Tiber towpaths".

*A Study on Hadrian's portrait-statue from Hierapydna (cf. here Fig. 29)*

This *Study* belongs to the following text; cf. *infra*, in volume 3-2:

*Appendix IV.c.2.) The Ogulnian monument (a statue group representing the she-wolf suckling Romulus and Remus, standing underneath the sacred fig tree ficus Ruminalis), and she-wolf suckling Romulus and Remus on a headless cuirassed statue of a Flavian emperor (Domitian?) in the Vatican Museums (cf. here Fig. 6, right) and on Hadrian's cuirassed statue from Hierapydna at Istanbul (cf. here Fig. 29). Exactly like the statue of the ficus Ruminalis on the Anaglypha Hadriani (cf. here Figs. 21; 22), the lupa and the twins on those cuirasses symbolize Rome's claim to eternal power and divine mission, and that it was the task of the Roman emperor to fulfill this obligation (cf. C. Parisi Presicce 2000, 28, 29). With a discussion of the meaning of the lupa and the twins on the "Rilievo Terme Vaticano" (cf. here Fig. 31), and with The second Contribution by Claudia Valeri*

*Introduction*

I have first come across this portrait of Hadrian from Hierapydna in Crete at Istanbul (cf. here **Fig. 29**) in Claudio Parisi Presicce's exhibition catalogue on the *lupa Capitolina* (2000, 39, cat. no. 14), in which several portraits of Roman emperors are discussed, the cuirasses of which show the *lupa*, suckling the infants Romulus and Remus; cf. for example Parisi Presicce (2000, 25-30, 39, cat. nos. 13 = cf. here **Fig. 6, right - a possible portrait of Domitian**), discussed below and *infra*, in volume 3-2, at *Appendix IV.c.2.)*.

The iconography, chosen for those cuirasses, is reminiscent of the Ogulnian monument, discussed *infra*, in volume 3-2, at *Appendix IV.c)*. Later I became interested in Michaela Fuchs's (2014) observations concerning this statue (here **Fig. 29**). I hoped to find out, whether or not my interpretation of the statue of the *ficus Ruminalis*, that appears on both Anaglypha Hadriani (cf. here **Figs. 21; 22**), discussed in this *Appendix IV.*, could be corroborated. As is stated in the above-quoted title of *Appendix IV.c.2.)*, this is indeed the case.

Next I looked at Hadrian's portrait statue from Hierapydna (here **Fig. 29**) in the context of my studies on the *virtus* 'invincibility', that was on principle expected of all Roman emperors. This interest had been intensified by the research on the colossal portrait of Hadrian (now Constantine the Great; here **Fig. 11**).

I have at first asked myself, whether this statue of Hadrian/ Constantine (here **Figs. 11; 11.1**) could have belonged to the inscription here **Fig. 29.1**, dedicated to Hadrian by the Senate and the Roman People to commemorate his victory in the Bar Kokba Revolt. According to Geza Alföldy (at: *CIL VI 40524 = 974 = here Fig. 29.1*) and Michaela Fuchs (2014, 130), this honorary statue was erected within the Temple of *Divus Vespasianus*. As I only found out later, already Cécile Evers (1991, 797, n. 72) had asked the same question. But after having finished writing this *Appendix IV.c.2.)*, I have changed my mind and suggest now that this honorary inscription (here **Fig. 29.1**) belonged instead to the prototype of Hadrian's portrait-statue from Hierapydna at Istanbul (here **Fig. 29**) and of the almost 30 replicas of this portrait of Hadrian.

Cf. *supra*, at *A Study on the colossal portrait of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori at Rome (cf. here Fig. 11) ...*; at Part I. *The statue of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori (cf. here Fig. 11), the inscription (CIL VI 974 = 40524; cf. here Fig. 29.1), and the cult-statue of Divus Vespasianus in the Temple of Divus Vespasianus. With The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great).*

The research on Hadrian's portrait from Hierapydna (here **Fig. 29**), in its turn, had the effect that I have added further parts to *Appendix IV.*: on Hadrian's military campaigns; on all of Domitian's building projects in Rome; and on Domitian's military campaigns. The latter research resulted in my hypothesis that Frieze A of the Cancellaria Reliefs (cf. here **Fig. 1; Figs. 1 and 2 drawing; figure 6**) shows Domitian's *profectio* to his Second Dacian War in the spring of AD 89 that ended with his victory, which the emperor celebrated with his (last) triumph in Rome in November/ December of 89.

At the end of all this research I, have therefore, decided to cut out of *Appendix IV.c.2.)* the following passages on Hadrian's portrait-statue from Hierapydna (here **Fig. 29**), and to publish them as this separate *Study* in volume 3-1 of my book on Domitian.

Let's now turn to my idea, mentioned below (cf. *infra*, in volume 3-2, at *Appendix IV.c.1.*)), that Hadrian could have regarded himself - like all other Romans - 'as the son of Mars'. We will try to verify this hypothesis by discussing the cuirassed statue of Hadrian from Hierapydna in Crete (also spelled Hierapytna, Hierapetra, and Ierapetra) at Istanbul (cf. here **Fig. 29**). But there is more. In the following I repeat, therefore, a passage, written for *supra*, Chapter *Preamble*; at Section II.: 'Also Hadrian did not feel 'only' like the 'son of Mars' ... the iconography of his cuirassed portrait-statue from Hierapydna in Crete (here **Fig. 29**) even assimilates Hadrian to the god. According to Michaela Fuchs (2014, 129-130 with ns. 40-44, Fig. 7 [cf. here **Fig. 129**])) this is proven by coins, issued by the emperor, which show Hadrian in the pose of Mars Ultor, and this pose is exactly the same as that of this portrait-statue (here **Fig. 29**)'.

**In the following, I anticipate my own conclusions concerning Hadrian's portrait-statue from Hierapydna:**

I follow A. Caló Levi (1948), C. Vermeule (1981), P. Karanastasi (2012/2013), and M. Fuchs (2014) that Hadrian's coins (here **Fig. 129**) represent the prototype of Hadrian's portrait-statue from Hierapydna (here **Fig. 29**); I follow Vermeule (1981), B. Bergmann (2010b), Fuchs (2014), and L. Cigaina (2020), in assuming that the statue-type of Hadrian, to which his portrait from Hierapydna belongs (here **Fig. 29**), was an honorary statue, dedicated to the emperor to commemorate his suppression of the Bar Kokhba Revolt; and Cigaina (2020, 222) that the replicas of this portrait-type of Hadrian (here **Fig. 29**) are datable to AD 132-138; I follow G. Alföldy (1996 = here **Fig. 29.1**), W. Eck (2003), Fuchs (2014), and C. Barron (2018) in assuming that the fragmentary inscription (*CIL* VI 974 = 40524 = here **Fig. 29.1**), found 'within?', 'beneath?', or 'in front of?' the Temple of *Divus Vespasianus*, belonged to an honorary statue, dedicated by the Senate and the Roman People to Hadrian in AD 134/5, 135 or 135/6 to commemorate his victory in the Bar Kokhba Revolt; I follow Vermeule (1981) in assuming that the *pose and iconographies* of Hadrian's coins (here **Fig. 129**) and of his portrait-statue (here **Fig. 29**) copy that of the Emperor Vespasian on his IVDAEA CAPTA coins (here **Fig. 130**); I myself have realized that the same iconographic scheme had also been chosen by the Emperor Titus for his own IVDAEA CAPTA coins (here **Fig. 131**); I follow E. La Rocca (1994) and C. Parisi Presicce (2000) in assuming that the iconography of Hadrian's portrait from Hierapydna (here **Fig. 29**) is influenced by those of archaic 'oriental' kings; I follow S. Heijnen's (2020) concerning the cuirasses on Hadrian's statues, to which his portrait from Hierapydna (here **Fig. 29**) belongs, which follow his "trophy type": also the portraits of the Emperors Vespasian, Titus and Domitian, that commemorate their victories in Judaea and Germania, are decorated with cuirasses of Heijnen's "trophy type"; I follow P.L. Strack (1933) that Hadrian's coins (here **Fig. 129**) are datable 'not before AD 134', and that the crocodile on these coins 'could be understood as a symbol of Palestine'; and Cigaina (2020, 267) that the iconography, chosen by other emperors and for Hadrian's coins (here **Fig. 129**), usually documented the 'suppression of disorder'; and Caló Levi, who, in her article "Hadrian as King of Egypt" (1948) analyses his coins here **Fig. 129**. The foremost obligation of the Egyptian king was the establishment of the highly sophisticated doctrine or *Staatslehre* dominating Egyptian society: a state of affairs which the Egyptians called Ma'at, (social) harmony; and, in order to achieve this perfect government, 'to fight the evil/ the chaos'. The Emperor Hadrian actually was the Pharaoh of Egypt. The Egyptians took their king for an incarnation of their god Horus, whose obligation to 'fight the evil' was expressed with the iconography 'Horus kills the crocodile'. For a representation of the iconography 'The Pharaoh/ Horus kills the crocodile'; cf. here **Fig. 129.1**. Hadrian, shown on his coins (here **Fig. 129**) stepping with his left foot on a crocodile, 'because he fights the chaos/ suppresses disorder', to borrow Cigaina's (2020) phrasing, is indeed represented 'as King of Egypt'. Concerning the rôle of the Pharaoh, defined by Egyptian theology, I follow *inter alia* the Egyptologists D.P. Davies (2003) and E.M. Ciampini (2016).

**I myself suggest the following hypothesis:** the statue, belonging to the honorary inscription (*CIL* VI 974 = 40524 = here **Fig. 29.1**), dedicated to the Emperor Hadrian by the Senate and the Roman People in AD 134/5, 135, or 135/6 (so ALFÖLDY 1996, BARRON 2018, and ECK 2003) to commemorate his victory in the Bar Kokhba Revolt, may be identified with the prototype of Hadrian's portrait-statues, to which the copy from Hierapydna (here **Fig. 29**) belongs; and that the prototype of this portrait-statue is represented on Hadrian's coins (here **Fig. 129**). This hypothesis seems to be corroborated by Cigaina's observations (2020, 267, 222) that those almost 30 replicas of Hadrian's portrait-statue from Hierapydna were created between AD 132-138, and that Hadrian's portrait-statue, visible on the coins here **Fig. 129**, is datable to AD 134 or shortly later.

Fig. 6, left. Torso of a cuirassed statue, Domitianic (representing Titus or Vespasian, the restored head does not belong), his cuirass is decorated with a Victoria, sacrificing a bull. Found in the Baths of Caracalla at Rome. Musei Vaticani, Museo Chiaramonti (inv. no. 1250). Cf. C. Parisi Presicce (2000, 28, 39, at cat. no. 13).

Fig. 6, right. Torso of a cuirassed statue, Domitianic (representing Domitian?), 1,02 m high (the restored head does not belong), his cuirass is decorated with the *lupa*, suckling the infants Romulus and Remus. Found in the Baths of Caracalla at Rome. Musei Vaticani, Museo Chiaramonti (inv. no. 1254). Cf. C. Parisi Presicce (2000, 28, 39, cat. no. 13). Parisi Presicce's tentative identification of this headless torso with Domitian may be supported by the fact that Domitian identified himself with Romulus; cf. *supra*, in Chapter *Preamble*; Section III., at point 4.).

Autopsy of both statues: 16th May 2022.

Fig. 29. Over lifesize cuirassed statue of the Emperor Hadrian, 2,68 m high (comprising the plinth), 2,54 m high (without the plinth), his cuirass is decorated with an Athena/ Palladion, crowned by two winged Victories, who is standing on the *lupa*, suckling the infants Romulus and Remus. Hadrian sets his left foot on a small human figure (representing the Roman Province of Judaea?). Found at Hierapydna in Crete. Istanbul, Archaeological Museum (inv. no. 50). In my opinion, the prototype of this portrait of Hadrian belonged with the inscription *CIL VI 974 = 40524* = here Fig. 29.1 to the victory monument, dedicated in honour of Hadrian by the Senate and the Roman People in AD 134/5 (so G. ALFÖLDY 1996 = here Fig. 29.1), in AD 135 (so C. BARRON 2018), or in AD 135/6 (so W. ECK 2003, 162, n. 35) to commemorate his victory in the Bar Kokhba Revolt. Photos: Courtesy H.R. Goette (April 2023).

I know this statue from autopsy (July 1974).

Fig. 29.1. Fragmentary inscription (*CIL VI 974 = 40524*), marble, once belonging to an honorary statue of the Emperor Hadrian, dedicated to him by the Senate and the Roman People to commemorate his victory in the Bar Kokhba Revolt; so G. Alföldy (at: *CIL VI* [1996] 40524, who restored the inscription as shown here, dating it to AD 134/5); W. ECK 2003, 162-165; M. FUCHS 2014; C. BARRON 2018). According to G. Alföldy (*op.cit.*) and M. Fuchs (2014, 130), this honorary statue was erected within the *cella* of the Temple of *Divus Vespasianus* in the *Forum Romanum*. From: M. Fuchs (2014, 131, Fig. 8: "*CIL, VI, Pars VIII, Fasc. II* [1996], 40524". According to C. Barron (2018, who follows in this respect W. Eck 1999-2003), the honorary statue, to which this inscription belonged, stood "beneath (in front of?)" the Temple of *Divus Vespasianus*, its inscription is kept in the Capitoline Museums, Rome (inv. no. NCE 2529), and is datable: "135 CE Sep 15th to 135 CE Dec 9th"; according to W. Eck (2003, 162, n. 35) it is datable to AD 135/6. C. Evers (1991, 797, n. 72), according to whom this inscription was found in the *Forum Romanum*, asks, whether it belonged to the colossal statue of Hadrian (now Constantine the Great), here Fig. 11. In my opinion, this dedication belonged to the honorary statue, after which Hadrian's portrait-statue from Hierapydna at Istanbul (here Fig. 29) and almost 30 replicas of this portrait were copied.

Fig. 129. Above: *sestertius* ('not earlier than AD 134'; P.L. STRACK 1933). The reverse shown here appears on several coin-types that were issued at Rome by Hadrian. They show the cuirassed emperor in 'victor pose', with lance and *parazonium*, stepping with his left foot on a crocodile. Photo taken after a plaster cast of a *sestertius* of the Museo Archeologico Nazionale, Napoli. From: A. Caló Levi (1948, 30-31 with n. 1, Fig. 1). Below: from: L. Cigaina (2020, 267, Fig. 113). The caption reads: "Sesterzio (*RIC II Hadrian 782*; 134-136 d.C. ca. [circa]): busto laureato e drappeggiato di Adriano / Adriano stante in abito militare calpesta un coccodrillo (© Bertolami Fine Art, asta 77, n. 1107, 1 dicembre 2019)".

Fig. 129.1. Drawing after a relief from the Temple of Horus at Dendera in Egypt, which represents a Pharaoh in the iconography of 'Horus killing the crocodile'. From: A.E. Mariette, *Dendérah*, vol. II (1870-1874), Pl. 75a; cf. A.C. Levi (1948, 35, Fig. 5).

**Fig. 131. Sestertius, issued by Titus (AD 80-81): IVDAEA CAPTA. Courtesy of the Jewish Virtual Library. Online at: <<https://www.jewishvirtuallibrary.org/coins-from-judaea-capta>>.**

*The meaning of the lupa and of Romulus and Remus  
on the cuirass of Hadrian's portrait from Hierapydna (cf. here Fig. 29).*

As mentioned above, I added this *Study* to my book on Domitian, in order to answer the question whether or not the Emperor Hadrian could have regarded himself - like all other Romans - 'as the son of Mars', trying to do that by discussing the statue of Hadrian from Hierapydna at Istanbul (cf. here **Fig. 29**).

This question was developed *infra*, in volume 3-2, at Appendix IV.c.1.), a summary of the current discussion on the Anaglypha Hadriani (for those; cf. *infra*, in volume 3-2, at Appendix IV.b), and here **Figs. 21; 22**). This statue of Hadrian was chosen, because its cuirass is decorated with the *lupa*, Romulus and Remus (cf. here **Fig. 29**). The *ficus Ruminalis* is missing on the relief of this cuirass (here **Fig. 29**), whereas the Ogulnian monument of the Republican period (cf. *infra*, in volume 3-2, at Appendix IV.b); and Appendix IV.c.), which was, at least in my opinion, the model of this image, consisted of a statue group of the *lupa* and the twins that had been on display under the *ficus Ruminalis* in the Comitium. On the Anaglypha Hadriani (cf. here **Figs. 21; 22**), on the other hand, which show both a statue portraying the *ficus Ruminalis*, the *lupa* and the twins are missing. But we know that not only the entire Ogulnian monument (*i.e.*, the *lupa*, Romulus and Remus, on display under the *ficus Ruminalis*), but even the *ficus Ruminalis* on its own - that is to say, without the *lupa* and the twins - could stand for 'continuitas imperii' (cf. M. TORELLI 1982, 99, 108, quoted *verbatim infra*, in volume 3-2., at Appendix IV.c)).

In Appendix IV.c.1.), I asked, whether the appearance of the statue of the *ficus Ruminalis* on both Anaglypha Hadriani, carrying the message of the 'continuitas imperii', could be read as Hadrian's political program in foreign affairs. In the sense that he, as the Roman emperor, and at the same time like 'all other sons of Mars' (*i.e.*, the Roman citizens and soldiers), was willing to serve his country (in peace and war), thus guaranteeing the desired 'continuitas imperii'. And because the statue at Istanbul (cf. here **Fig. 29**) shows the same Emperor Hadrian as a general in 'triumphant pose', and in a cuirass decorated with the *lupa* and the twins, I was hoping to find in this *Study*, dedicated to this statue, an answer to this question.

When formulating this inquiry, I was unaware of the fact that already, long ago, Claudio Parisi Presicce (2000, 25-30, 39) had found the answer to it. His results were, therefore, first summarized in the headline of Appendix IV.c.2.) as follows: 'The Ogulnian monument (a statue group representing the she-wolf suckling Romulus and Remus, standing underneath the sacred fig tree *ficus Ruminalis*) appears first (without the *ficus Ruminalis*) on a cuirassed statue of Domitian in the Vatican Museums (cf. here **Fig. 6, right**) and then on Hadrian's cuirassed statue from Hierapydna at Istanbul. Exactly like the statue of the *ficus Ruminalis* on the Anaglypha Hadriani (cf. here **Figs. 21; 22**), the *lupa* and the twins on those cuirasses symbolize Rome's claim to eternal power and divine mission, and that it was the task of the Roman emperor to fulfill this obligation (cf. C. Parisi Presicce 2000, 28, 29)'.

After my E-mail correspondence with Paolo Liverani on 24th April 2020, in which he had criticized this title, and that is discussed *infra*, in volume 3-2, at Appendix IV.c.2.), I have changed the title of Appendix IV.c.2.) as follows: 'The Ogulnian monument (a statue group representing the she-wolf suckling Romulus and Remus, standing underneath the sacred fig tree *ficus Ruminalis*), and she-wolf suckling Romulus and Remus on a headless cuirassed statue of a Flavian emperor (Domitian?) in the Vatican Museums (cf. here **Fig. 6, right**) and on Hadrian's cuirassed statue from Hierapydna at Istanbul (cf. here **Fig. 29**). Exactly like the statue of the *ficus Ruminalis* on the Anaglypha Hadriani (cf. here **Figs. 21; 22**), the *lupa* and the twins on those cuirasses

symbolize Rome's claim to eternal power and divine mission, and that it was the task of the Roman Emperor to fulfill this obligation (cf. C. Parisi Presicce 2000, 28, 29). With a discussion of the meaning of the *lupa* and the twins on the "Rilievo Terme Vaticano" (cf. here Fig. 31), and with *The second Contribution by Claudia Valeri*.

**To this we may now add that the emperors discussed here: Domitian (if it was him, who was represented in the statue here Fig. 6, right) and Hadrian (cf. here Fig. 29), by choosing to decorate their cuirasses with the images of the *lupa*, Romulus and Remus, had obviously accepted for themselves the gigantic obligation, which went together with the propagated doctrine of 'continuitas imperii'.**

But the surprising result of this inquiry, at least for me, obtained in this *Study*, is that Hadrian did not feel 'only' like the 'son of Mars' - as any one of his Roman soldiers - the iconography of this statue (cf. here Fig. 29) shows instead that he is *assimilated* to the god, as proven by the coins, discussed by Michaela Fuchs (2014, 129, Fig. 7 [= here Fig. 129]).

Or should we assume that Hadrian, in this statue at Istanbul (cf. here Fig. 29), is even meant to *be* Mars? Even that seems possible, when we consider Eugenio La Rocca's (2000) and Claudio Parisi Presicce's (2005; *id.* 2006b) analyses of the colossal portrait of Hadrian (now Constantine; cf. *supra*, at *A Study on the colossal portrait of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori at Rome* (cf. here Fig. 11). With The Contribution by Hans Rupprecht Goette on the reworking of the portrait of Hadrian (now Constantine the Great)

Also Michaela Fuchs (2014, 130) speaks of an "Angleichung" (assimilation) of the emperor to Mars: in her discussion of Hadrian's cuirassed statues, dedicated, in her opinion, to Hadrian after his victory in the Bar Kokhba Revolt (cf. here Fig. 29), which she compares with the already mentioned coins (cf. here Fig. 129), representing Hadrian 'in the pose of Mars'. - To those coins I will come back below.

As was already quoted above (cf. *supra*, at *A Study on the colossal portrait of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori at Rome* (cf. here Fig. 11), La Rocca has observed that the portrait of Constantine (here Fig. 11), was based on a statue-type of Jupiter: he suggests that this portrait not only assimilated Constantine to the god, but that it rather showed the emperor as *deus praesens*. - This was followed by Parisi Presicce (2005, 147; cf. *id.* 2006b, 154).

Cf. La Rocca (2000, 25): "**Se la statua [of Constantine the Great; cf. here Fig. 11] è stata dedicata dal Senato riconoscente dopo la battaglia di Saxa Rubra [i.e., against Maxentius], non ci si poteva attendere altro: un'immagine che equipara l'imperatore a un dio, tale da indurre rispetto e timore ... Il fatto è che l'acrolito doveva raffigurare non il comandante vincitore, ma il *deus praesens* ... [my emphasis]**".

Now, if true, and provided this colossal statue of Constantine (here Fig. 11) had indeed originally been a portrait of Hadrian, as I believe, following Cécile Evers (1991), already this statue of Hadrian could have been not only an image of "il comandante vincitore", as La Rocca writes (again in the Bar Kokhba Revolt? For this earlier hypothesis, which I have given up in the meantime; cf. *supra*, at *A Study on the colossal portrait of Hadrian (now Constantine the Great) in the courtyard of the Palazzo dei Conservatori at Rome* (cf. here Fig. 11), but rather the *deus praesens* - in this case Jupiter.

**Michaela Fuchs (2014, 127-131) writes about Hadrian's cuirassed statue from Hierapydna at Istanbul (cf. here Fig. 29): "Das so entstandene Pasticcio [i.e. the bronze statue of Hadrian, found at Tel Shalem, her Figs. 1-3] unterscheidet sich jedoch in vielerlei Hinsicht von den Wiederholungen der Gruppe 'Piräus-Hierapydna'. Diese folgen einem Archetypus, der für Hadrian anlässlich der Gründung des Panhellenions 131/132 in Athen konzipiert wurde [with n. 24] und dessen Dekor die integrative Reichspolitik des Kaisers ins Bild gefasst [hat?]: Über der Lupa Romana steht [p. 128] ein archaisches Bild der Athena, das durch Eule und Schlange als das attische Palladion gekennzeichnet ist [with n. 25].**

In der Verbindung der beiden Symbole, die auf die Gründungsmythen Athens und Roms und damit auf ihre lange Tradition verweisen, sind "die beiden Weltreiche der politisch-realen Macht (Rom) und der geistigen Kultur (Athen) ... zur Synthese gebracht" [with n. 26]; die das Palladion bekrönenden Victorien stehen für den ewigen Erfolg dieser Symbiose.

Gegenüber der Programmatik dieser Statuenschöpfung findet bei den Vertretern der Gruppe 'Piräus-Hierapytna' eine Akzentverschiebung statt [with n. 27]: Deren Wiederholungen weisen unter dem Fuß oder neben dem Bein des Kaisers eine Barbarenfigur auf [with n. 28], und bei einigen Exemplaren wurden auf dem Panzerschmuck die Ranken unter den Füßen der Victorien durch liegende Barbaren ersetzt [with n. 29] oder auf den zentralen Pteryges kauernde Barbaren statt Helmen dargestellt [with n. 30]. Die Vermutung, dass der kriegerische Aspekt erst nachträglich der Panhellenion-Statue hinzugefügt und damit auf die Niederschlagung des jüdischen Aufstandes unter Bar Kochba Bezug genommen wurde [with n. 31], scheint naheliegend. Die friedliche Botschaft des Archetypus, die das Bild des auf Stärkung des inneren Zusammenhalts des [page 129] Reiches bedachten Kaisers propagiert, wird damit um eine zusätzliche Aussage erweitert: Hadrian ist dank seiner *virtus* befähigt, erfolgreich Kriege zu führen [with n. 32], er ist durch seine Sieghaftigkeit zum *imperator invictus* geworden [with n. 33] ...

[In the following, Fuchs describes a statue-type representing Mars Ultor, its copies, and its distribution] Die wohl auf dieselbe Vorlage zurückgehenden, handwerklich z. T. [zum Teil] sehr bescheidenen Werke aus Ägypten [with n. 37] spiegeln, ebenso wie die Gruppe 'Piräus-Hierapytna', die Reaktion der östlichen Provinzen auf den jüdischen Aufstand [*i.e.*, the Bar Kokhba Revolt] ...

Auf [page 130] einem Münztypus, der 134 n. Chr. oder etwas später von Hadrian und Senat mit übereinstimmendem Rückseitenbild herausgegeben wurde, erscheint in eben dieser Pose des Mars Ultor der Kaiser [with n. 41] (Abb. 7 [cf. here Fig. 129]), wobei er durch die von Legionsoffizieren verwendete Waffe in seiner Linken [cf. p. 129: *i.e.*, the "Parazonium"] zusätzlich als siegreicher Imperator gekennzeichnet ist ...

Das locker über die Schultern umgelegte Paludamentum findet bei der Bronze von Tel Shalem jedenfalls am ehesten eine Erklärung, wenn es im Zusammenhang mit diesen Prägungen [*i.e.*, the coin-type of her Fig. 7; cf. here Fig. 129] als Anspielung auf die Ikonographie des Kriegsgottes [*i.e.*, Mars] gesehen wird [with n. 44]. Die aus Anlass des römischen Sieges wohl am Ort des entscheidenden Gefechts aufgestellte Hadrianstatue verwies somit auf diese Angleichung und vermutlich auch über die Thematik des Panzerdekors [cf. her Figs. 1-3] noch offenkundiger als die Vertreter der Gruppe 'Piräus-Hierapytna' auf die militärischen Auseinandersetzungen [*i.e.*, the Bar Kokhba Revolt], die Hadrians letzte Regierungsjahre überschatteten ...

In der senatorischen Münzprägung fand die erfolgreiche Beendigung der jüdischen Revolte kaum einen nennenswerten Widerhall [with n. 48]; darauf nimmt am deutlichsten der erwähnte Münztypus mit Hadrian in der Pose des Mars Ultor [with n. 49] (Abb. 7 [cf. here Fig. 129]) Bezug [my emphasis].

Fuchs (2014, 130-131, Fig. 8) discusses several initiatives in Rome, which commemorated Hadrian's victory in the Bar Kokhba Revolt. Apart from coins, issued, in her opinion, on that occasion, the Senate and the Roman People dedicated a, in her opinion, colossal statue of Hadrian at Rome, the fragmentary inscription of which survives (*CIL* VI 40525 = *CIL* VI 974 = here Fig. 29.1). For a discussion of this inscription; cf. *infra*, in volume 3-2, at Appendix IV.c.1.), as well as below). To those coin issues and to this victory monument, she refers in the following paragraph.

As we shall see below, Werner Eck (2019b, 204, with n. 41) rejects Michaela Fuchs's (2014) relevant assertion: "Auch die Reichsmünzen nehmen keinen Bezug auf den Abschluss des Krieges [*i.e.*, Hadrian's suppression of the Bar Kokhba Revolt], trotz der gegenteiligen Ausführungen von Fuchs [with n. 41, quoting: M. FUCHS 2014, 130]".

Cf. Fuchs (2014, 131): "Die Niederschlagung des Aufstandes in Iudaea [*i.e.*, the Bar Kokhba Revolt] ist demnach durchaus auch in Rom dokumentiert worden, hatte sich doch dadurch das den Römern nicht gerade eingängige Bild des auf friedlichen Erhalt der Reichseinheit bedachten Kaisers [with n. 56] -

**zumindest teilweise - an das römische Ideal des Welteroberers angenähert, wie ihn sein Vorgänger Trajan verkörpert hatte** [my emphasis]".

**The caption of Fuchs (2014, 129, Fig. 7 [cf. here Fig. 129]) reads: "Dp/As, Hadrian in der Pose des Mars Ultor** (*The New York Sale*, XI, Baldwin's Auctions Ltd., Dimitry Markov Coins & Medals, M & M Numismatics Ltd., Nr. 301) [my emphasis]". - To those coins of Hadrian I will come back below.

In her **note 24**, Fuchs writes: "Bergmann 2010 ... [*i.e.*, here B. BERGMANN 2010b], 248-253. Gergel, der den von ihm so benannten "Eastern Hadrianic Breastplate Type" in vier zeitlich aufeinanderfolgende Gruppen unterteilt, spricht sich dagegen für eine Entstehung in den frühen Regierungsjahren Hadrians aus und nimmt eine stufenweise Entwicklung des Dekors bis hin zu den posthumen Wiederholungen an, Gergel 2004, vgl. bes. [vergleiche besonders] 403-407. Nach Cavalieri, Jusseret 2009, 357-402 entstand der Typus zu Beginn der hadrianischen Regierung "comme une invention crétoise, ... qui paraît résumer les principales facettes du règne du *Graeculus*" (scilicet Hadrian), hierzu 386. **Für eine frühe Entstehung des Panzerschmucks spricht sich jetzt auch Karanastasi 2012-2013, 338 aus und beruft sich auf Prägungen, die seit 121 bzw. 119 n. Chr. das Bild der Lupa Romana bzw. der Athena Promachos, wie sie das Palladion deutet (S. 332-333), zeigen. Beide Motive begegnen jedoch auch schon viel früher und können als Einzelbilder natürlich nicht für die Datierung der Komposition am Panzerschmuck herangezogen werden** [my emphasis]".

In her **note 25**, she writes: "s.[iehe] dazu Bergmann 2010 ... [*i.e.*, here B. BERGMANN 2010b], 237-240; dagegen Karanastasi 2012-2013, 332-333".

In her **note 26**, she writes: "[H.] Meyer 1991, 218; vgl. Bergmann 2010 ... [*i.e.*, here B. BERGMANN 2010b], 235-240, 251; anders Karanastasi 2012-2013, 323; 332-333; 336-338".

In her **note 27**, she writes: "Bergmann 2010 ... [*i.e.*, here B. BERGMANN 2010b], 235, 253-258".

In her **note 28**, she writes: "Bergmann 2010 ... [*i.e.*, here B. BERGMANN 2010b], 261-264 Kat. Nr. 3-5; 266-269 Kat. Nr. 8-9; 273-274, Kat. Nr. 14. Hinzugekommen sind Karanastasi 2012-2013, 358-360, Nr. 2, 3, 5; 361-362, Nr. 10; 364, Nr. 17; 365-366, Nr. 23-24. Zur Motivgeschichte s. [iehe] zuletzt Bergmann 2010 [*i.e.*, here B. BERGMANN 2010b], 243-247 und Karanastasi 2012-2013 passim".

In her **note 29**, she writes: "Bergmann 2010 ... [*i.e.*, here B. BERGMANN 2010b], 268-270 Kat. Nr. 9-10, vgl. ebenda 233 und 253-254, wo allerdings eine sehr allgemeine Interpretation dieser Variatio angeboten wird; s. [iehe] dazu jetzt auch Karanastasi 2012-2013, 333".

In her **note 30**, she writes: "Bergmann 2010 ... [*i.e.*, here B. BERGMANN 2010b], 214, Abb. 4 a-b (Kat. Nr. 4); 226-228, Abb. 10 a-b (Kat. Nr. 3); vgl. *ibid.* 235, 242 und jetzt Karanastasi 2012-2013, 333".

In her **note 31**, she writes: "Bergmann 2010 ... [*i.e.*, here B. BERGMANN 2010b], 254-258, s.[iehe] Abb. 20. Hier wird allerdings der Bezug zum Judenaufstand als "nur ein Versuch" bezeichnet und die Aussage der "außergewöhnlichen Häufung" von Barbaren als "allgemein und unspezifisch" bewertet, auf 255 dagegen die Botschaft des durch Barbarenfiguren erweiterten Kaiserbildes als "Zusage an das Panhellenion, Rom und die zivilisierte Welt und als Absage an separatistische Tendenzen" gesehen, die ihren Ursprung "unmittelbar nach dem Konflikt unter dem Eindruck der unsicheren Verhältnisse" gehabt hätten. Wegen ihrer Frühdatierung des Bildprogramms des Panzers (s. o. [siehe oben] Anm. 24) vertritt Karanastasi 2012-2013, 342 und passim die These, dass die triumphale Symbolik der "Variante Hierapytna" "im Nachklang des noch unter Trajan 116-117 n. Chr. ausgebrochenen Aufstands der Juden in der Diaspora entstanden ist".

In her **note 32**, she writes: "Vgl. hierzu Anm. 103 und auch die bei Fuchs 2009, 374 angegebene Literatur".

In her **note 33**, she writes: "Zu den Epitheta "victor" und "invictus" als Eigenschaften des Kaisers vgl.[vergleiche] Hölscher 1967, 152; so schon Sauter 1934, 154-155; s.[iehe] auch Fuchs 2009, 374".

In her **note 37**, she writes: "Hofmann 1984, 585-591, Taf. 31; Karanastasi 2012-2013, 351-354 mit Anm. 173, 181 und Abb. 6. Das freiplastische Vorbild für diese Werke konkret in der Statue von Hierapytna zu vermuten (so Karanastasi 2012-2013, 352-353), erscheint fragwürdig".

In her **note 41**, she writes: "Strack 1933, 138, Nr. 291, Taf. 4 (Denar), Nr. 701, Taf. 11 (Dp-As); vgl.[vergleiche] *BMCRE*, III, 1936, 475, Nr. 1552-1553, Taf. 89, 2 (As); 485, Nr. 1617, Taf. 91, 3 (As); Robertson 1971, 156, Nr. 567-570, Taf. 40; Gorny & Mosch, Auktion 186 a, 8.-9. März 2010, Nr. 2046". - Michaela Fuchs's assumption,

according to which the coins (here **Fig. 129**) were issued by Hadrian *and* by the Roman Senate, is certainly not true, they were only issued by Hadrian himself. To this I will come back below.

In her **note 44**, she writes: "Zu Marsangleichung des Hadrian Fittschen, Zanker 1985, 48-49, Nr. 48, Taf. 53; s.[iehe] auch *LIMC*, II, 1984, 513, Nr. 21b und passim, *s.v.* Ares/Mars (E. Simon, G. Bauchhenss); vgl.[vergleiche] dazu allg.[emein] Zanker 1980, 199-200".

In her **note 48**, she writes: "48 Vgl. [Vergleiche] Strack 1933, 126-127, 134-137; vgl. [vergleiche] Birley 2001, 280 (mit weiteren Angaben in Anm. 5)".

In her **note 49**, she writes: "s. o. [siehe oben] mit Anm. 41".

In her **note 56**, she writes: "Zum Unverständnis und zur kritischen Haltung der Römer gegenüber der defensiven Außenpolitik Hadrians s. z. B. Strack 1933, 81-82; Kienast 1980, 396-398 (mit weiterer Literatur in Anm. 38). Vgl. dazu auch *TAC. ann.* 4, 32".

### **To conclude (*i.e.*, my first attempt at a conclusion).**

Provided it is true that the 'Piräus-Hierapydna' statue-type was actually developed from an "Archetypus, der für Hadrian anlässlich der Gründung des Panhellenions 131/132 konzipiert wurde" ('a prototype that was created for Hadrian on the occasion of the foundation of the Panhellenion AD 131/132'), as Fuchs (2014, 127, n. 24) assumes, who follows with this suggestion Birgit Bergmann (2010b, 248-253), this would provide a *terminus post quem* for the series of statues, discussed here (cf. here **Fig. 29**). Considering at the same time the coin-type 'showing Hadrian in the pose of Mars', illustrated on Fuchs's Fig. 7 (cf. here **Fig. 129**), which was issued 'in AD 134 or a little later', her conclusion seems inevitable.

**But we shall see below that thanks to those coins we shall also be able to define, who had commissioned the original of the series of portrait-statues of Hadrian discussed here, also the where, why and when.**

I, therefore, agree with Fuchs (2014) that the series of portrait-statues of Hadrian discussed here was created to commemorate Hadrian's victory in the Bar Kokhba Revolt. - Or rather, since I have so far not studied either those statues, or their contexts in detail myself, that this is at least true for the portrait of Hadrian from Hierapydna (cf. here **Fig. 29**). This assumption would also explain the strange haste, in which many of the 15, so far known statues of this series had been executed, as observed by Parisi Presicce (2000, 29, quoted *verbatim infra*, in volume 3-2, at *Appendix IV.c.2.*). Karanastasi (2012/2013, 325-332; cf. pp. 358-367 for her cat. nos. 1-29) discusses her 29 catalogue numbers (which in her opinion belong to a statue-type). Her cat. nos. 1-22 are, in her opinion, certain replicas of this statue-type; cf. pp. 362-363: the statue from Hierapydna (here **Fig. 29**), is her cat. no. 12. - These statues were then obviously meant as 'Loyalitätsadressen' in regard to the Emperor Hadrian, on the part of those towns in the East of the Roman Empire, and of some towns in Africa.

But one strange fact remains, and I honestly confess that I do not know, whether or not this fact contradicts the interpretation adopted here of this series of portrait-statues of Hadrian (cf. here **Fig. 29**). The problem in the case of our statue is that if indeed Hadrian in his portrait at Istanbul (cf. here **Fig. 29**) is meant as victor in the Bar Kokhba Revolt, then the 'enemy', on whose neck he sets his left foot, is one of his own *subjects* - because Judaea was a Roman province. This fact (that this uprising had occurred within a Roman province) was, of course, the reason, why Hadrian had done everything to suppress the Bar Kokhba Revolt in the first place. - But as we shall see, the contrary is true, because the 'oriental' schemes, on which the iconography of these statues of Hadrian was modeled, comprise exactly victory scenes of reigning monarchs, who had suppressed uprisings of their own subjects. This means that the existence of such 'oriental' creations confirms the interpretation suggested here for those portraits of Hadrian (cf. here **Fig. 29**).

**The original 'oriental' iconographies, which come to mind when we look at the series of portrait-statues of Hadrian discussed here (cf. C. PARISI PRESICCE 2000, 29 with n. 26), represent reigning monarchs together with their vanquished enemies, and show on principle two men belonging to different countries.**

This is, at least, what I had taken for granted so far, having studied *Vorderasiatische Altertumskunde* ('Near Eastern Archaeology') at the Universität zu Köln with Wolfram Nagel (1973-1980). Since I assume that Hadrian's portrait-statue discussed here (cf. here **Fig. 29**) commemorated the emperor having victoriously suppressed the Bar Kokhba Revolt, we shall see that Eugenio La Rocca (1994), who discusses the 'oriental' iconographic forebears of Hadrian's portrait-statue, presents also examples of precisely the same situation as that of Hadrian in this war. La Rocca (1994) himself does not suggest which motivation could have led to the creation of the specific iconography of Hadrian's portrait, and before quoting the relevant passages from his article, I will summarize the results of my own relevant inquiries before I came across La Rocca's essay.

**As already said above: the problem in the case of our statue is that, if indeed Hadrian in his portrait at Istanbul (cf. here Fig. 29) is meant as victor in the Bar Kokhba Revolt, then the 'enemy', on whose neck he sets his left foot, is one of his own subjects - because Judaea was a Roman province.**

Thinking of Arminius, chief of the Germanic Cherusci, who was mentioned above (cf. *supra*, at *What this Study is all about*; and below, in volume 3-2. at *Appendix IV.c.1.*)), he was even a Roman citizen (!). - Cf. Rose Mary Sheldon (2020, 1012, quoting for that fact in her note 17: "Velleius, *The Roman History*, 2.118.2", quoted in more detail and discussed *infra*, in volume 3-2, at *Appendix IV.d.2.d.*)).

Cf. Tessa Rajak: "**Judaea** first appears in the Hellenistic period ... as the name for the primarily Jewish territory ... around Jerusalem ... Growing again under Herod (1), Judaea became a Roman procuratorial province after the banishment in AD 6 of Herod's successor there ... After 70 Judaea was put by Vespasian under an imperial legate ... with a permanent legionary garrison. The Jewish population dwindled after the Bar Kokhba Revolt of 135 ..." , in: *OCD*<sup>3</sup> (1996) 799.

See also Sheldon (2007, 129, quoted *verbatim infra*, in volume 3-2, at *Appendix IV.c.2.*)). - For a very different opinion concerning Judaea's legal status; cf. now Werner Eck ("Chapter 6. Judäa als Teil der Provinz Syrien im Spannungsfeld zwischen den Legaten von Syrien und den ritterlichen Funktionsträgern in Judäa von 6-66 n. Chr.", 2021a. See also W. Eck: "14. The Extraordinary Roman Military Presence in Judaea from AD 70 until the 3<sup>rd</sup> Century", 2021b). - My thanks are due to Hans Rupprecht Goette for sending me both articles.

For Flavius Josephus, whose works Eck (2021a) discusses in this context in great detail; cf. also *supra*, n. 201, at Chapter *I.1.1.*).

**If, in fact, the iconography of this portrait of Hadrian (cf. here Fig. 29) may be interpreted in the way that is suggested here, in order to judge the situation of the Jews in the Roman province Judaea we need, of course, to know their precise legal status.**

My thanks are due to Rose Mary Sheldon, who, having corrected the English of this *Chapter*, was also kind enough to mention this point to me in an E-mail on 23rd August 2020. She alerted me to E. Mary Smallwood (1976, 358-361) and to one of her own publications, in which this complex subject is discussed in detail; cf. Thijs Voskuilen and Rose Mary Sheldon (2008, 48). In addition to this, Sheldon mentioned to me that, although the Jews may have been 'subjects' of Rome (writing this term with inverted commas) - as I tentatively suggest in my interpretation of Hadrian's portrait (cf. here **Fig. 29**) - they were not always Roman citizens.

Cf. Thijs Voskuilen and Rose Mary Sheldon (2008, 48, Chapter: "Jewish Citizenship"):

"Ethnic Jews had been given [under Roman rule] the right to govern themselves by their own laws and to enjoy some autonomy as long as they remained loyal to Rome. They were not granted citizenship in the cities, but they were given the right to create their own administrative and judicial organizations, which were called *politeumata* (sing.[ular] *politeuma*). To be a citizen (*polites* in Greek) did not necessarily imply that one was a Roman citizen but rather it indicated that one was a member of a *politeuma*. [with n. 48]

Such colonies (*politeumata*) were the focus of civic, religious and ethnic identity. **Jews with membership in a *politeuma* held something of an intermediate status between citizen and resident aliens (metics). They enjoyed exemption from some taxes - for example, the poll tax (*laographia*) - and they received some privileges of limited self-government.** ... Scholars who have studied Seleucia-on-Tigris, for example, observe there were separate *politeuma* of Greeks, Syrians and Jews who enjoyed equal rights. [with n. 49; my emphasis]".

In their **note 48**, Voskuilen and Sheldon write: "E.M. Swallowwood ... [*i.e.*, here E.M. SMALLWOOD 1976], pp. 358-61".

In their **note 49**, they write: "S. Applebaum ... [*i.e.*, here S. APPLEBAUM 1974], Vol. I, p. 453; see also A.D. Nock ... [*i.e.*, here A.D. NOCK 1972], Vol. 2, pp. 960-962".

Apropos the poll tax (*laographia*), mentioned by Voskuilen and Sheldon (2008, 48) in the above-quoted passage. Contrary to the Jews in Judaea, who were exempt of it, the subjects living in the Roman province of Egypt had to pay *laographia*, which was actually a rather high tax; cf. Angelo Geißen (2017) 732-733.

**Pavlina Karanastasi (2012/2013, 338) discusses the series of portraits of Hadrian (cf. here Fig. 29), of which several copies were found in Crete, and comments on the iconography of those statues as follows:**

"Dass die 'Feinde' in diesem historischen Moment für die Insel [*i.e.*, Crete] keine anderen als die aufständischen Juden in der Diaspora sein konnten", and writes the word 'enemy' with inverted commas ("'Feinde'"). Karanastasi thus expresses her observation that the iconography of our series of portrait-statues of Hadrian could be called: 'Roman emperor triumphs over an enemy', and that this does not exactly fit the historical situation to which, in Karanastasi's opinion, this (in her opinion 'statue-type'), actually refers. Because the historic reality, which in Karanastasi's opinion this statue-type commemorated, namely the Jewish revolt in the diaspora, should be called: 'Roman emperor suppresses an uprising in a Roman province'. - Karanastasi's choice to write "'Feinde'" in this context thus implies, that she too has realized that the so-called 'enemy' in this series of portrait-statues of Hadrian (cf. here **Fig. 29**) was, in reality, a subject of the represented emperor: Hadrian.

After I had written this *Study* already, I realized that Karanastasi (2012/2013, 338) compares a statue showing Vespasian and a vanquished enemy in a similar iconography as that of the statue **Fig. 29** discussed here. According to the author, the defeated figure represents *Judaea*. In this context, Karanastasi does not address the problem, provided her interpretation is true, that here again Vespasian (as the Roman emperor) is shown with a representation of one of his own subjects, who is portrayed in the iconography of a defeated 'barbarian': "Dennoch springt die Ähnlichkeit mit der knienden Barbarenfigur neben der Statue Vespasians aus dem Metroon von Olympia (Abb. 4 a. b), in der wohl am ehesten Judaea zu erkennen ist, sofort ins Auge [with n. 150], wie vor allem die Gegenüberstellung mit dem Stützenfragment aus Gortyn (10 Taf. 5, 1 - 3) und insbesondere derjenigen aus Kissamos (13 Taf. 7, 1. 2 [thus referring to two replicas of the portrait of Hadrian here **Fig. 29**]) zeigt [with n. 151]". In her notes, Karanastasi provides references.

**After writing the following Chapter (cf. *infra*, in volume 3-2, at Appendix IV.d)), I realized that R.R.R. Smith's (2013, 121) observations concerning the 50 representations of *ethne* ('nations') in the *Sebasteion* at Aphrodisias are also applicable to the portrait-statue of Hadrian discussed here (cf. **Fig. 29**), and that in two respects:**

- 1.) concerning the rôle of the Roman emperor as envisaged in the 'Greek East', as Smith refers to that part of the Empire where also most of the examples of the series of Hadrian's portrait-statues discussed here were found; and -
- 2.) concerning the way how in the series of 'nations' in the *Sebasteion* at Aphrodisias such subjects of a Roman emperor (in this case Augustus) were characterized, who, defeated and pacified by the Romans, lived now in the Roman provinces.

R.R.R. Smith (2013, 121, Section: "**Conclusion: Sebasteion *ethnē* and world dominion**") writes:

"What then did the *ethnē* mean within the Sebasteion? **Subtleties and ambiguities of imperial ideology at Rome tended to be replaced in the Greek East with a more straightforward view of things. There, as for the poets, the emperor was a great conqueror and supreme victor, and the limits of his conquests and empire were the limits of the world.** [with n. 151] In the *Res Gestae*, 26–33, Augustus gives a carefully graded account of his achievements on the frontiers – conquest, pacification, diplomacy. However, in the preamble of the provincial copies, clearly not written by Augustus, these are telescoped to the bald statement: 'the deeds by which he (Divus Augustus) subjected the world to the empire of the Roman people'. [with n. 152; my emphasis]". - This will be discussed in more detail *infra*, in volume 3-2, at *Appendix IV.d.2.b*).

Smith's (2013, 121) observation: "'the deeds by which he (Divus Augustus) subjected the world to the empire of the Roman people'", although referring to a different context, can help us to better understand the meaning of the series of portrait-statues of Hadrian, discussed here (cf. **Fig. 29**).

**By using 'oriental' iconographies, the foremost duty of such sovereigns has thus been adopted to show the duties of the Roman Emperor Hadrian - or, when we borrow Smith's phrasing:**

**'[this iconography shows that Hadrian's duty is] to subject the world to the empire of the Roman people'.**

This already becomes clear when we read what Eugenio La Rocca (1994) writes in his comparison of Hadrian's portrait from Hierapydna (cf. **Fig. 29**) with such images of sovereigns of Egypt and the Near East, who are shown in the act of vanquishing their enemies. La Rocca's examples add information that can also help us to understand, why in this series of portrait-statues of Hadrian (cf. **Fig. 29**) one of the emperor's own subjects is represented like a defeated enemy, who belongs to a different people (provided it is true, that this figure represents Judaea at all).

Emanuele M. Ciampini (2016), who concentrates on the Egyptian examples of this iconography, reminds us of the foremost duty that the Pharaoh of Egypt had to fulfill: the establishment of Ma'at, the ideal state of government or justice. The Egyptians believed that, without the ability of their king to create this desired state of affairs in their country, the opposite of Ma'at would persist: *chaos*, and that not only in the realm of the humans, but also in that of the gods.

Seen from that perspective, there was no difference whatsoever between an 'enemy' of a foreign country and someone belonging to the own subjects of such a king, who caused disorder. The kings of these archaic societies dealt with both in the same fashion.

For the obligation of the Egyptian Pharaoh to create the desired state of affairs in Egypt and in the realm of the gods, called by the Egyptians Ma'at; cf. Jan Assmann (2006), and *infra*, in volume 3-2, at *Appendix II.c*).

**As a matter of fact, since the representations from Egypt and the Near East, discussed by La Rocca (1994), are always accompanied by texts, we can observe that this iconography was applied *both* in the wars of these kings against foreign enemies, *and* in the suppression of revolts within their own Empires.**

Which means, of course, at the same time that the legal correctness of all the decisions of their own governments were not at all questioned by these sovereigns, to the effect that revolts of their own subjects were automatically regarded as illegal, which, consequently, had to be suppressed.

**A telling example of this relentless attitude against revolts of their own subjects has already been discussed (cf. *infra*, in volume 3-2, at *Appendix I.d.1.a*): the extraordinary story of *The Taking of Joppa*, in which we are told the details of a clever stratagem.**

The ancient town of Joppa in Palestine (today Tel Aviv-Jaffa), had originally belonged to the Egyptian Empire, and was 'taken back' by Djehuty, a general of Pharaoh Tuthmosis III (around 1450 BC). Throughout this story, known from an Egyptian papyrus (which is quoted *verbatim infra*, in volume 3-2, at *Appendix I.d.1.a*), the governor of the town of Joppa is called 'the rebel', because he had obviously dared to revolt against Tuthmosis III. As soon as general Djehuty took the city of Joppa by means of this and other stratagems (without any bloodshed), the entire population of Joppa is taken as prisoners and brought to Egypt.

*The Taking of Joppa* is written like a military report and is obviously based on a historical event. Interestingly, Djehuty, the general of Pharaoh Tuthmosis III, ends the report of his stunning victory by attributing it, as a matter of course, to his king, who was not present during this whole enterprise, and by asking Tuthmosis III to send him more troops, since otherwise it would be impossible to lead the entire population of Joppa as war-prisoners to the Temple of Amun at Karnak, in Thebes (today Luxor) in Egypt, to a temple complex, which is circa 1000 kilometres away from Joppa. *The Taking of Joppa* was written down circa 200 years after the (possible) event, that is to say, under the Egyptian Pharaoh Rameses II. Therefore, in the course of analysing this story, it was realized (cf. *infra*, in volume 3-2, at *Appendix I.d.1.a*) that the historical background of this story turns out to be (in part) the Egyptian Imperialism in the Levant under Rameses II.

***The Taking of Joppa* has been discussed in this book on Domitian in some detail for two reasons:**

1.) because it is based on the same stratagem, as applied by some of the men of Domitian's uncle, the *praefectus urbi* Flavius Sabinus, who thus managed, on 19th December AD 69, to escape the siege of the Vitellians of the *Capitolium*; cf. *infra*, in volume 3-2, at *Appendix I.d*); and -

2.) because this story can help us to better understand an outstanding artwork, the Lateran Obelisk (cf. here **Fig. 101**).

The Lateran Obelisk has already been discussed above in a several different contexts. For example *supra*, at Chapter *IV.1.1c*): the fact that it is mentioned in the Constantinian Regionary Catalogues provides a *terminus post quem* for these important documents, since we know that this obelisk was brought to Rome in AD 357.

We know, for example, that many thousand men were involved in the creation of an obelisk, and also, that many of these men would perish in the course of such an operation. *The Taking of Joppa*, which is set at the time of Pharaoh Tuthmosis III - who also commissioned the Lateran Obelisk - can provide us with an explanation of how this Pharaoh could have possibly gotten hold of these many thousand men in order to create his seven (!) obelisks in the Temple complex of Amun at Karnak: namely by suppressing a revolt of the inhabitants of a town within the Egyptian Empire, such as the city of Joppa in Palestine.

As mentioned above, the Egyptian general Djehuty takes the entire population of Joppa as prisoners and brings them to Egypt to be the slaves of the god Amun at Karnak, the main god of Tuthmosis III's dynasty. Or, as David Peter Davies (2003, 103) suggests, these war prisoners could alternatively have been sold in order to finance Tuthmosis III's ambitious building projects in the Temple complex of Amun at Karnak. Tuthmosis III erected seven obelisks at Karnak, the largest one being the Lateran Obelisk (cf. here **Fig. 101**). This means that the former inhabitants of Joppa - provided *The Taking of Joppa* is in this respect based on fact - may somehow have been related to the Lateran Obelisk.

The following is discussed in more detail *infra*, in volume 3-2, at *Appendix I.d.1.a*). Labib Habachi (2000, 18, Chapter: "Die Herstellung von Obelisken") describes the extraction of an obelisk at a quarry. For an operation of this kind, several thousand men were needed (on p. 20 Habachi explains that for this operation were needed 6000 men). Cf. p. 25, where Habachi discusses a papyrus which reports on a comparable expedition to the Eastern desert under Rameses IV, which had the objective to extract large stone blocks in a quarry. As the papyrus documents, 8362 men were involved in this expedition, among them 2000 slaves and 5000 soldiers. Of these, 900 men had died during this enterprise (!).

As we shall see in detail below, many of the Egyptian and Near Eastern monuments, accompanied by inscriptions, which La Rocca's (1994) has published, could be regarded as possible illustrations of the story *The Taking of Joppa*. For example, the relief discussed by La Rocca (1994, 8, Fig. 5; cf. p. 11), also because it belongs likewise to the period of the Ramesside Empire. The caption of La Rocca's Figure 5 reads: "Bet el Wali. Atrio, parete settentrionale. Ramses II saccheggia una città siriana". - Pharaoh Rameses II is shown in the Egyptian iconography of 'the king, smiting his enemy'. - This iconography and its meaning will be discussed below by Emanuele M. Ciampini (2016).

But before turning to Ciampini (2016), I will first of all quote the relevant passages from La Rocca (1994).

**La Rocca (1994, 5) illustrates as his Fig. 3 a coin, issued by Trajan. The caption reads: "Sesterzio raffigurante Traiano con il piede poggiante sul capo di un guerriero partico, Roma, Museo delle Terme".**

**After discussing the representation of Trajan's Dacian wars on the Column of Trajan, La Rocca (1994, 4) turns to the coin, illustrated on his Fig. 3, which he later compares with the iconography of Hadrian's portrait-statue from Hierapydna (cf. Fig. 29) discussed here :**

"Ma su conii coevi [*i.e.*, issued by Trajan] proprio l'umanissimo Traiano, l'imperatore che partecipava ai medesimi disagi della sua truppa [with n. 12], è raffigurato mentre sovrasta le personificazioni simbolo delle sue conquiste: avvolto entro la sua corazza lucente, con un atteggiamento di orgogliosa sicurezza, schiaccia con il piede il busto di un Dace emergente da terra (fig. 3) [with n. 13], oppure calpesta con un suo cavallo un Dace colpito dalla sua lancia (fig 4) [with n. 14], o ancora preme il piede sull'Armenia, alla presenza passiva del Tigri e dall'Eufrate, tutti redotti in stato di soggezione [with n. 15]".

The caption of La Rocca's Fig. 4 reads: "Sesterzio raffigurante Traiano a cavallo in atto di trafiggere un guerriero Dace. Roma, Museo delle Terme".

In his **note 12**, La Rocca writes: "Plin. paneg. 13,1. La posizione politica di Traiano è assai più vicina a quella di Domiziano di quanto non appare dalle fonti. La variante di maggior rilievo è offerta dal buon rapporto con il senato che, in collegamento con le sue eccezionali imprese belliche, fece di Traiano, come di Augusto, un simbolo di principe perfetto: K. H. Waters, *AJPh* 90, 1969, 385 ss.; *id.* in: *Polis and Imperium. Studies in Honour of E.T. Salmon* (1974) 233 ss.; *id.* in: *ANRW II 2* (1975) 381 ss. Anche le forme artistiche nell'epoca di Domiziano e Traiano mostrano, per taluni aspetti, analogie di non scarso rilievo: W. Gauer, *Jdl* 88, 1973, 318 ss.; N. Hannestad in: M. Trolle Larsen (ed.), *Power and Propaganda* (1979) 372 s."

In his **note 13**, he writes: "Banti *op. cit.* [cf. *supra*, his n. 10; *i.e.*, here A. BANTI 1983] 145 s. nn. 219. 220". - For this coin of Trajan and those of other emperors in this pose (for example Domitian); cf. P. Karanastasi 2012/2013, 355-356 with ns. 188, 189.

In his **note 14**, La Rocca writes: "J. P. C. Kent - B. Overbeck - A. v. Stylow, *Die römische Münze* (1973) tav. VIII 266; J. E. Blamberg, *The Public Image Projected by the Roman Emperors (A. D. 69-117) as Reflected in Contemporary Imperial Coinage* (1976) 122 s.; Banti *op. cit.* [cf. *supra*, his n. 10; *i.e.*, here A. BANTI 1983] 135 ss. nn. 199-218".

In his **note 15**, he writes: "Hannestad, *art. cit.* [cf. *supra*, his n. 12] 372 fig. 2; R. A. G. Carson, *Principal Coins of the Romans II. The Principate* (1980) 51 n. 563; Banti *op. cit.* [cf. *supra*, his n. 10; *i.e.*, here A. BANTI 1983] 48 ss. nn. 28-31".

For the historic reality, referred to by Trajan's coins, that are discussed by La Rocca (1994, 4) in the above-quoted passage; cf. also below, at *The third Contribution by Peter Herz: Der Übergang von Trajan auf Hadrian und das erste Regierungsjahr Hadrians*.

**Then, La Rocca (1994, 5, with n. 19) turns to the "celebrazione della vittoria". The material, La Rocca is interested in, was first collected by Gerhard Rodenwald (1922), who compared the very different iconographies to celebrate the victory of a sovereign, that were developed in Egypt, the states in the Near East, in Greece and by the Romans, and who referred to those different iconographic schemes as to "Richtungen".**

In his **note 19**, La Rocca writes: G. Rodenwaldt, *JdI* 37 (1922) 22 ss."

**It is in the context of Rodenwaldt's ``Richtungen`` of `celebrations of victory`, in which La Rocca then discusses Hadrian's portrait-statue from Hierapydna (cf. here Fig. 29).**

Cf. La Rocca (1994, 5-7): "Nella ``Richtung`` definita ``espressionistica`` il vincitore predomina secondo rigidi, ripetitivi, schemi simbolici. Questa tendenza prevale in ambiente orientale. Di misura soprannaturale rispetto ai vinti, il faraone calpesta i nemici, e le scene di battaglia sono descritte secondo repertori che si ripetono con costanza, rendendo prevalente l'elemento [page 6] rituale ed astratto rispetto alla narrazione puntuale degli eventi bellici. Malgrado un più consistente supporto di dettagli narrativi, e malgrado il diverso accento posto sull'immagine del sovrano raffigurato non più come un dio, **anche la cultura figurativa mesopotamica, principalmente quella neo-assira, si muove nella stessa ``Richtung``.**

**Differente il caso greco, la cui cultura figurativa segue una ``Richtung`` da Rodenwaldt definita ``umanista``, nella quale il nemico è pari al vincitore, descritto con rispetto e partecipazione, secondo una visione tragica in cui la cultura letteraria offre numerosi esempi.** La lotta tra dei e giganti, così come essa è rappresentata in ambiente greco sarebbe parsa sacrilega secondo la morale orientale, e **riflette una differente visione culturale, secondo cui la gloria per la vittoria è tanto maggiore se il nemico è pari per forza ed audacia.**

**C'è poi il caso romano**, assai complesso. Qui, come mostra il fenomeno delle processioni trionfali, la vittoria è sentita come una necessità, come un affermarsi imperioso ed ineluttabile dei migliori, cui competono tutte le principali *virtutes* con il loro bagaglio e valori etici. **Secondo Rodenwaldt nella cultura figurativa romana si afferma nel tempo la ``Richtung`` espressionistica**, già presente *in nuce* nella Gemma Augustea, imperiosamente evidenziata nel Grande Fregio di Traino e poi predominante nel mondo tardo-antico. **Opere della media età imperiale nelle quali il principe schiaccia con il piede il nemico come nella monetazione di Traiano, o sulla statua di Adriano da Hierapytna [with n. 20], mostrano il prevalere degli schemi simbolici, forse mediati dalla cultura figurativa orientale.**

È merito di Rodenwaldt aver trasferito l'analisi dai contenuti agli schemi figurativi, letti senza la partecipazione, emotiva quasi, di quegli studiosi drammaticamente coinvolti dalle vicende belliche che hanno funestato la prima metà di questo secolo.

Ma fino a che punto schemi figurativi e morale coincidono? o meglio: uno schema figurativo va letto secondo una valutazione morale?

**Ritorniamo per un momento allo schema del principe che schiaccia con il piede il nemico (fig. 3).** Esso è stato analizzato da B. Schweitzer in funzione della raffigurazione di Nemesi che schiaccia una personificazione, forse la Hybris [with n. 21], secondo un modello di probabile ascendenza alessandrina di cui non si sono esempi nell'arte greca [with n. 22], ma che rimanda alla più antica tradizione orientale, quella stessa tendenza ``espressionistica`` che si incontra sulle emissioni di Traiano e sulla statua di Hierapytna. **Apparentemente lo schema è estraneo alla morale greca [with n. 23] che romana [with n. 24]; anzi pare avere una [page 7] connotazione negativa rispetto all'ideologia romana che ha nel *parcere subiectis* uno dei suoi vertici morali [with n. 25; my emphasis]**".

In his **note 20**, La Rocca writes: "A. Hekler, *ÖJh* 19/20, 1919, 230 ss. fig. 158; B. Schweitzer, *JdI* 46, 1931, 216; M. Wegner, *Hadrian* (1956) 98 tavv. 13a; 16c; 41; P. Zanker, Provinzielle Kaiserporträts, *Abh München* N. F. 90 (1983) 17 tavv. 6,4; 7,1".

In his **note 21**, he writes: "Schweitzer, art. cit. [cf. *supra*, his n. 20] 214 ss.". - For Nemesis; cf. P. Karanastasi (2012/2013, 356 with n. 190). See also P. Karanastasi ("Nemesis", in: *LIMC* VI [1992] 733-762".

In his **note 22**, La Rocca writes: "Così già Rodenwaldt loc. cit. [cf. *supra*, his n. 19] ...".

In his **note 23**, he writes: "E. Fränckel (ed.), Aeschylus. Agamemnon (1950) II 412, comm.[entario] a v[erso] 907".

In his **note 24**, he writes: "L. Barchiesi, La traccia del modello. Effetti omerici nella narrazione virgiliana (1984) 35 ss. e nota 46".

Elsewhere, La Rocca (1994, 11-16) discusses reliefs, among them Egyptian ones, that show the deportation of foreign peoples. For example subjects of the Egyptian Pharaoh Sethos I, who lived in Palestine, which at the time belonged to the Egyptian Empire; the Pharaoh documented this on reliefs in the Temple complex at Karnak.

These examples, presented by La Rocca, are interesting for two subjects, discussed here:

a) they prove the above-mentioned hypothesis that Hadrian in his statue from Hierapydna (cf. here Fig. 29) could in fact be shown in this 'oriental' iconography, even provided the vanquished figure, on whose neck the emperor sets his left foot, could be identified with (a representation of?) his own subject(s) - provided it may indeed be identified as the representation of Judaea;

b) on the other hand, these examples corroborate the information contained in the Egyptian tale *The Taking of Joppa*, a town in Palestine, taken (according to this story) around 1450 BC by Djehuty, a general of Pharaoh Tuthmosis III (cf. *infra*, in volume 3-2, at *Appendix I.d.1.a*). These reliefs, published by La Rocca (1994) could even be regarded as illustrations of this story, because Djehuty enslaved the entire population of Joppa. These people were then brought from Joppa (today Tel Aviv-Jaffa in Israel) to the Temple complex of Amun at Karnak at Thebes (today Luxor) in Egypt circa 1000 kilometres away.

La Rocca (1994, 11-12) discusses *inter alia* a deportation-scene in a tomb of Pharaoh Horemheb and Pharaoh Sethos I's suppression of an uprising in Palestine, which the Pharaoh then documented in the Temple complex at Karnak at Thebes (today Luxor) :

"... verso la fine della XVIII dinastia, il generale, poi faraone, Horemheb faceva decorare una delle sue tombe, quella di Menfi, con una serie di splendidi rilievi, purtroppo dispersi tra vari musei, tra i quali emergono alcune lastre raffiguranti una processione di genti deportate, etnicamente ben caratterizzate in base alla fisionomia ed all' abbigliamento, guidate da soldati egiziani che mantengono ordine nella schiera improvvisata. Le donne hanno i bambini sulle spalle; altre reggono sporte contenenti le masserie. Un uomo anziano e calvo, con le mani legate, solleva il volto verso il cielo, in un atteggiamento di tragica desolazione (fig. 9) [with n. 50].

Non v'è dubbio che in ambedue i casi la prima impressione è che gli artisti ideatori abbiano trasfuso nella loro opera, malgrado si trattasse di monumenti 'ufficiali', una nota almeno di umana partecipazione, con la quale, tuttavia, contrastano le parole stesse dei faraoni, quando descrivono in toni enfatici le loro imprese. Durante una ribellione in Galilea, l'intervento di Sethos I fu duro: "Sua Maestà fu informata che gli Apiru del monte Yarmutu, insieme con gli Tayarù, erano insorti e attaccavano gli Asiatici di Ruhma [page 12]. Disse Sua Maestà: "Cosa credono di essere, questi spregevoli Asiatici?". Il faraone interviene, riporta pace nel distretto insieme con un ricco bottino e con prigionieri [with n. 51]. Coloro che si ribellavano sono 'spregevoli', e la reazione è sempre la stessa: "... il forte braccio del faraone giunse di fronte ad essi come una fiamma, calpestando le montagne", come si dice a proposito degli spregevoli Irem, oltre la terza cateratta del Nilo [with n. 52]. E, a proposito di beduini palestinesi: "Sua Maestà venne così informata: "I nemici beduini Shosu stanno tramando ribellioni. I loro capi tribù si sono uniti e asserragliati sulle colline di Khurru (in Palestina). Hanno provocato confusione e tumulto, uccidendosi a vicenda: essi ignorano le leggi del Palazzo". Sua Maestà si rallegrò alla notizia. Infatti questo dio perfetto esulta agli inizi della battaglia, gode a gettarsi in essa; il suo cuore si diletta alla vista del sangue. Egli tronca le teste dei ribelli. Egli preferisce ai momenti di divertimento quelli in cui annienta (il nemico). Sua Maestà con un colpo li massacra senza lasciare discendenti, e chi sfugge alla morte è portato prigioniero in Egitto" [with n. 53]. Così è scritto sui muri della sala ipostila del grande tempio di Karnak, dove il faraone giganteggia sovrastando con la sua smisurata mole la massa amorfa dei nemici. Alcuni motivi della descrizione dei beduini hanno significative consonanze con l'atteggiamento romano nei confronti delle popolazioni 'barbariche' [with n. 54]. Ignorare le leggi del Palazzo significa non far parte della società civile; combattendosi tra loro i Shosu si mostrano simili agli animali, e come tali il faraone, come in seguito l'imperatore romano nei confronti dei Germani, dei Traci o dei Daci, si sbaraglia e li massacra.

Nessun sentimento di umanità, anche se alcune raffigurazioni sembrano parlare un linguaggio differente: ma è un'illusione [my emphasis]".

The caption of La Rocca's Fig. 9 reads: "Rilievo della tomba di Horemheb presso Saqqara: prigionieri asiatici condotti dinanzi Horemheb".

In his **note 50**, La Rocca writes: "K. Lange - M. Hirmer, *L'Egitto* (1957) tav. 20 in alto".

In his **note 51**, he writes: "K. A. Kitchen, *Il faraone trionfante. Ramses II e il suo tempo* (Roma-Bari: Laterza 1987, 37 s.)".

In his **note 52**, he writes: "Kitchen, *op.cit.* 49".

In his **note 53**, he writes: "Kitchen, *op.cit.* 35 s.".

In his **note 54**, he writes: "Vd. [Vedi] *infra*".

**La Rocca (1994, 13-16) then explains, why the Egyptian Pharaohs suppressed rebellions and enslaved and deported those involved in such uprisings, and provides finally a deportation-scene from Mesopotamia :**

"In quanto alle scene di deportazione, l'amaro e disperato tema degli uomini che aggregano gli armenti, mentre le donne si dispongono in fila reggendo entro sporte i loro figlioletti, si incontra in affreschi dalla XII dinastia a Beni Hasan, dove Libici sono ordinati [page 14] in schiera da un sovrintendente (fig. 11.12) [with n. 59] ... Questi sono i risultati della guerra, e non v'è nulla per impedirlo, sembrano affermare queste cronache figurate, all'unisono con i resoconti agiografici trascritti con magnifici caratteri geroglifici sugli stesso monumenti. Ma, se ognuno conosce e paventa i disastri della guerra, allora è bene assogestarsi volontariamente al linguaggio del più forte. E se la forza viene dagli dei, se il faraone stesso è un dio, la legge del più forte è la legge del giusto, l'unica possibile: chi non lo riconosce è 'spregevole' e merita la violenza che la guerra trascina con sé.

**Disprezzo per i vinti e per i sottomessi, ancor più quando tendono a ribellarsi.** Questo leitmotiv continua imperterrita nel tempo, calando sulle rive del Tigri. Nudi, con le braccia e le teste crudelmente legate in ceppi, iconograficamente caratterizzati sono i prigionieri [page 15: Figs. 11; 12; page 16] sul frammento di una stele del regno accadico II/ II (fig. 13) [with n. 62; my emphasis]".

The caption of La Rocca's Figs. 11; 12 reads: "Beni Hasan, Tomba 14, parete orientale nella fascia centrale, scena di deportazione di popolazioni libiche".

The caption of La Rocca's Fig. 13 reads: "Frammento di stele dai pressi di Nasirijja: prigionieri in ceppi".

In his **note 59**, La Rocca writes: "P. E. Newberry, *Beni Hasan I* (1893) 84 s. tavv. XLV.XLVII (tomba 14)".

In his **note 62**, he writes: "Databile intorno al 2415-2290 a. C.: F. Basmachi, *Sumer* 10, 1954, 116 ss. tavv. I.II; *Sumer* 13, 1957, 222 tav. I, II; E. Strommenger - M. Hirmer, *Fünf Jahrtausende Mesopotamien* (1963) tav. 118".

See also La Rocca (1994, 26):

**"Gli Egiziani credevano ciecamente al loro faraone, dio in terra. I deportati significavano terra conquistata e forza lavoro per i grandi possedimenti templari e statali, per le fabbriche di mattoni e per gli altri opifici del Delta [my emphasis]".**

**Fighting victoriously against his 'enemies' - that is to say, the documented victories, analysed by Eugenio La Rocca (1994) in the above-quoted passages, was among the actions that defined the foremost duty of an Egyptian Pharaoh, which, as the Egyptians believed, only the king himself was capable of achieving: the realisation of an ideal state of affairs, called by the Egyptians Ma'at. 'Ma'at' meant order, justice,**

harmony, and that in the Pharaoh's realm on earth in Egypt, and in the realm of the gods alike (!). Because all this has been discussed in great detail above (cf. *supra*, at Chapter IV.; and *infra*, in volume 3-2, at Appendix II.), I quote in the following only one additional detail of this very complex ethic construction of the king in Egyptian theology, observed by the Egyptologist Emanuele M. Ciampini. He explains, from which kind of earlier representations the iconographic scheme: 'the king smiting his enemy', which La Rocca (1994) has described in some of his above quoted passages, had actually been derived.

Emanuele M. Ciampini writes in his article ("The King's Food A Note on the Royal Meal and Legitimation", 2016, 115) :

"Egyptian kingship is the result of the convergence of several traditions, first emerging in archaic chiefdoms. [with n. 1] The development of the ruler's iconography plays a fundamental role in the ideological 'construction' of these initial phases of kingship: representations of the king in the shape of falcon, lion, or bull are the clearest evidence of his super-human attributes. In such images, the culture of ancient Egypt offers a dynamic representation of its central authority, whose powerful act is believed to truly create reality. [with n. 2] The motives found in archaic royal iconography are reflected in the names of the first rulers as well: J. Assmann has stressed the aggressive nuance of such names, perfectly fitting the visual representations of archaic documents. [with n. 3]

These royal icons often appear in conflict scenes: the well-known model of the 'king smiting the enemy' [with n. 4] becomes a productive element of ideological representations, conveying the idea of an active role of the ruler in the eternal conflict between order and chaos. Since its origins, the Egyptian state celebrated the meaningful victory of the king against his enemies. The winning ruler is often depicted [page 116] in the act of destroying his opponent, whose destiny is complete annihilation. Thus, the enemy plays a passive role within the scene: his physical presence is his unique significance. This consideration may explain why he may also become part of a royal meal. One of the best examples of this practice is found in the main scene of the 'Battlefield Palette' (Late Pre-Dynastic Period, probably from Abydos: British Museum 20791+Ashmolean Museum 1892-1171), where the lion (= king) is devouring the body of his enemy. This theriomorphic representation is noteworthy for a twofold reason: 1) the king is smiting the chaotic element (= enemy) by means of an 'anthropophagical' act; 2) at the same time, the meal celebrates the powerful king, as provider of order [my emphasis]."

In his **note 1**, Ciampini writes: "Kemp 1991, 31-35".

In his **note 2**, he writes: "According to Wenke (2009, 183), the two crowns represent the status of the archaic king; these formal elements are the result of historical developments (South vs. [versus] North), stressing also the double nature of royal power: narrative vs. [versus] ritualistic".

In his **note 3**, he writes: "Assmann 1996, 51-52. For the use of the theriomorphic icons in the definition of the dynamic nature of the kingship: Ciampini 2011-2012, 107-110".

In his **note 4**, he writes: "This royal icon is analysed by Swan Hall 1986".

**To conclude (i.e., my second attempt at a conclusion).**

Applying what was said above to this series of portrait-statues of Hadrian discussed here (cf. **Fig. 29**), Hadrian's advisors or he himself consciously adopted such archaic 'oriental' iconographies of kings for himself in those portraits also in so far as a vanquished man (or a representation of a whole people, as perhaps shown in **Fig. 29**, provided, this figure actually represented *Judaea*) is shown as defeated, no matter, whether he belongs to a different people, and could thus be called, in our own parlance, an 'enemy', or whether he was one of the emperor's own subjects.

Decisive was obviously something completely different than that which I had assumed when starting to study this series of portrait-statues of Hadrian (cf. **Fig. 29**). Exactly like those sovereigns of archaic states in Egypt and in the Near East, from whose 'oriental' iconographies that of this portrait of Hadrian has

been derived, Hadrian regarded his own (or in the case of the Revolt of the Jews in the diaspora, Trajan's) government as just, and, consequently, a revolt against Roman government as illegal.

Seen under that perspective, and assuming at the same time, *a*) that the figure vanquished by Hadrian (cf. here **Fig. 29**) was actually a representation of *Judaea*, and *b*) that this portrait commemorated Hadrian's victory in the Bar Kokhba Revolt, it must have seemed consequent and appropriate, in Hadrian's eyes, to represent the defeated 'enemy', although in reality representing his own subjects, in precisely that merciless iconography. - And that, although we have learned above from La Rocca (1994, 6-7) that this attitude towards one's subjects was originally *not* typical of the Romans, but, as he likewise writes, Roman *emperors* later adopted precisely that archaic 'oriental' iconography, mentioning *inter alia* the example of the portrait of Hadrian from Hierapydna (here **Fig. 29**), discussed here.

Interestingly there actually exists the possibility that this very frequently copied portrait of Hadrian (cf. here **Fig. 29**) conveyed a *very* positive message, similarly as Marco Cavalieri and Simon Jusseret (2009, 357) and Pavlina Karanastasi (2012/2013, 381) write in their respective abstracts, both quoted *verbatim infra*, in volume 3-2, at *Appendix IV.c.2*.) But note that these authors base their conclusions on different arguments than I myself in the following. Let me, therefore, end the discussion of this enigmatic portrait of Hadrian (cf. here **Fig. 29**) by repeating a passage, that was written for the *Introductory remarks and acknowledgements*:

'It is well known that the iconography of this series of portraits of Hadrian (cf. here **Fig. 29**) was derived from archaic 'oriental' models, as demonstrated by Eugenio La Rocca ("Ferocia barbarica. La rappresentazione dei vinti tra medio Oriente e Roma", 1994). These 'oriental' iconographies show Near Eastern and Egyptian kings in the act of smiting their enemies; but note that the same iconographies were likewise used when those kings had suppressed the revolts of subjects in their own Empires.

**But only when we consider, in addition to this, the findings by the Egyptologist David Peter Davies (*The Taking of Joppa*, 2003), in combination with the observations by the Egyptologist Emanuele M. Ciampini's ("The King's Food A Note on the Royal Meal and Legitimation", 2016), can we arrive at a better understanding of Hadrian's peculiar portrait (cf. here **Fig. 29**).**

David Peter Davies (2003, 48, quoted in detail *infra*, in volume 3-2, at *Appendix I.d.1.a*)) writes that Tuthmosis III's general Djehuty, whose name derives from that of the god Thot, by taking the city of Joppa, 'restores harmony', precisely as the god Thot himself 'restores harmony' (for that conviction; cf. *infra*, in volume 3-2, at *Appendix I.d.1.a*); and at *Appendix II.c*)).

Let me explain, why the Egyptians believed in this important capacity of their god Thot: the Egyptian Pharaoh was crowned at the festival of New Year, presided by the gods Thot and Ma'at, and celebrated in the month called after the god Thot. As a result of his coronation, the Egyptian king would then be able to restore the desired state of affairs in the Egyptian state, as well as in the realm of the gods, called by the Egyptians Ma'at - harmony. Cf. *infra*, in volume 3-2, at *Appendix II.a*); and *Appendix II.b*)).

**Ciampini (2016, 115, quoted ... [above]) explains that the Egyptian iconography, showing the king "smiting the chaotic element (= the enemy)", illustrates the foremost duty of the Egyptian Pharaoh, namely to restore order and justice, a state of affairs called by the Egyptians Ma'at - harmony, thus proving, as Ciampini writes, the ruler's 'active role in the eternal conflict between order and chaos [my emphasis]'.**

See also what Jean Claude Goyon (1988, 33, quoted in more detail *supra*, in Chapter *IV.1.1.e*) wrote about this prime obligation of the Egyptian Pharaoh: "We have seen above that the pharaoh-Horus, embodying the principle of the maintenance of Ma'at, was recognized and universally accepted, whatever his name, not because of who he was but for the sake of the fundamental principle of social harmony [my emphasis]".

Seen under that perspective, the large series of these portraits of Hadrian (cf. here **Fig. 29**), which commemorate one of his victories (in my opinion in the Bar Kokhba Revolt) ... could, in theory, have celebrated Hadrian as 'the restorer of harmony'. If true, *that* harmony was, of course, clearly a matter of perspective. Besides, when one stands in front of this overlifesize portrait-statue of Hadrian (cf. here **Fig. 29**),

which I myself found very impressive and even scary, this interpretation of its iconography does not come to mind easily.

My second attempt at a conclusion thus interprets the iconography of this portrait-type of Hadrian (cf. here **Fig. 29**) as a concept that could be read as directly deriving from the construction of the Egyptian Pharaoh, or in other words, as showing 'Hadrian as King of Egypt'.

**I realized this after having finished writing this *Study*, when reading the article of 1981 of my good late friend Cornelius Clarkson Vermeule III (August 10, 1925 - November 27, 2008) on Hadrian's portrait (here **Fig. 29**). My thanks are due to Hans Rupprecht Goette, who was kind enough to provide me with a copy of it. Vermeule's and my own hypothesis are based on Annalina Caló Levi's (1948) interpretation of Hadrian's coins (cf. here **Fig. 129**) which show the emperor in (almost) the same iconography as his portrait-statue from Hierapydna (**Fig. 29**). Since Caló Levi's interpretation of these coins has been widely discussed by other scholars, but not by Eugenio La Rocca (1994), I will come back to this below.**

But before quoting the relevant observations by Vermeule (1981), let me repeat some passages from this *Study*, that have become the basis of my own conclusions: these are either quotes from other scholars, or refer to them.

1.) Cf. La Rocca (1994, 6-7): "Ritorniamo per un momento allo schema del principe che schiaccia con il piede il nemico (fig. 3 [showing Trajan]). Esso è stato analizzato da B. Schweitzer in funzione della raffigurazione di Nemesi che schiaccia una personificazione, forse la Hybris [with n. 21], secondo un modello di probabile ascendenza alessandrina di cui non si sono esempi nell'arte greca [with n. 22], ma che rimanda alla più antica tradizione orientale, quella stessa tendenza "espressionistica" che si incontra sulle emissioni di Traiano [*i.e.*, his Figs. 3 and 4] e sulla statua di Hierapydna [here **Fig. 29**]. Apparentemente lo schema è estraneo alla morale greca [with n. 23] che romana [with n. 24]; anzi pare avere una [page 7] connotazione negativa rispetto all'ideologia romana che ha nel *parcere subiectis* uno dei suoi vertici morali [with n. 25]".

2.) [= a quote from the title of Appendix IV.c.2.)] "... Exactly like the statue of the *ficus Ruminalis* on the Anaglypha Hadriani (cf. here **Figs. 21; 22**), the *lupa* and the twins on those cuirasses [of the headless statues here **Figs. 6, right** possibly representing a portrait of Domitian; and here **Fig. 29**, Hadrian's portrait from Hierapydna] symbolize Rome's claim to eternal power and divine mission, and that it was the task of the Roman Emperor to fulfill this obligation (cf. C. Parisi Presicce 2000, 28, 29)".

3.) Following with this assumption a hypothesis of Birgit Bergmann (2010b), [Michaela] Fuchs [2014] suggests that a statue-type of Hadrian, created for the emperor on the occasion of his foundation of the *Panhellenion* at Athens in AD 131/132, became the basis for the statue discussed here (cf. here **Fig. 29**), which, according to Fuchs, belongs to the "Piräus-Hierapydna"-type. Whereas the original invention of this statue-type conveyed a "friedliche Botschaft" ('peaceful message'), the "Piräus-Hierapydna"-type adds a "kriegerischen Aspekt" ('warlike aspect') to it. Fuchs concludes that this change of the statue-type's iconography was motivated in order to commemorate Hadrian's victory in the Bar Kokhba Revolt; cf. Fuchs (2014, 127-128 ...). In addition, Fuchs observes (as many other scholars before her) that the iconography of his statue appears on coins, issued by Hadrian in AD 134 or shortly later, 'which represent, in Fuchs's opinion, the emperor in the pose of Mars Ultor'; cf. Fuchs (2014, 129, caption of her Fig. 7 [= here **Fig. 129**]). - To those coins I will come back below.

4.) R.R.R. Smith's (2013, 121) observation: "'the deeds by which he (Divus Augustus) subjected the world to the empire of the Roman people'", although referring to a different context, can help us to better understand the meaning of the series of portrait-statues of Hadrian, discussed here (cf. here **Fig. 29**).

**By using 'oriental' iconographies, the foremost duty of such sovereigns has thus been adopted to show the duties of the Roman Emperor Hadrian - or, when we borrow Smith's phrasing: '[this iconography shows that Hadrian's duty is] to subject the world to the empire of the Roman people'.**

Let's now turn to Cornelius Vermeule's judgement of the portrait of Hadrian from Hierapydna (cf. Fig. 29).

As a matter of fact, already Annalina Caló Levi ("Hadrian as King of Egypt", 1948) has interpreted one of Hadrian's rare *sestertii* (cf. here Fig. 129) in precisely this way, as Vermeule (1981, quoted *verbatim* below) reported. This *sestertius* shows Hadrian in (almost) the same iconography as our statue (cf. here Fig. 29). Vermeule's relevant findings have not been considered by the above-mentioned scholars in their relevant discussions of Hadrian's series of portraits discussed here. Besides, Vermeule (1981) was first to conclude that this statue of Hadrian (here Fig. 29) commemorated the emperor's victory in the Bar Kokhba Revolt.

Cornelius Vermeule (1981, 24-25, Chapter: "Hadrian's cuirassed statues and Jewish affairs") wrote:

"There were, however, other monuments, including coins, which proclaimed a sterner side of Hadrian's pan imperial administration and [page 25] military nature. One of these was the rare *sestertius* showing Hadrian as "King of Egypt," perhaps a forceful allusion to the troubles with the Jews of Alexandria which occurred off and on during his reign. The emperor wears ceremonial armor and stands in "Virtus pose," with one foot placed on the back of a crocodile. [with n. 32] The concept as a representation of military domination was an old one, going back to Alexander the Great as a god like Poseidon lord of the sea. More immediately, the propagandists of Hadrian's court could look to the famous JVDAEA CAPTA *sestertii* of Vespasian, where the latter had assumed armor and an identical pose to celebrate the capture of Jerusalem and the destruction of the holiest Temple. [with n. 33] This iconography was not confined to Hadrian's coins. The celebrated statue in the Istanbul Museum, from Hierapytna on Crete (a legionary port of embarcation to the East), shows Hadrian in ceremonial armor, his raised foot planted on the back of a Jewish boy. [with n. 34] (Fig. 23 [cf. here Fig. 29]) Charles Seltman of Cambridge (England) proposed the identification to me in the early 1950's. The statue is one of a series, produced most likely in Attica in the 120's and certainly the 130's, with *Victoriae* crowning *Athena* or *Roma-Virtus* on the breastplate and captives of various eastern nationalities as supports beside the imperial, panther-skin-booted leg. The fact that the Jewish boy is the only defeated figure placed underfoot in this group of marble statues [*i.e.*, here Fig. 29] may reflect the "Virtus-pose" iconography of JVDAEA CAPTA and Alexandria in Egypt (with its large Jewish community) or (and in addition) it may signify the seriousness of the Jewish uprisings in 116 to 117 or 132 to 134, depending on the date of the Hadrian [*i.e.*, his statue] set up at the Cretan port [*i.e.*, here Fig. 29] which looked out towards the Holy Land, Egypt, and Libya. The latter date would accord better with the mature portrait of Hadrian, the fact that official silence about the earlier uprising was in keeping (accorded) with his lack of numismatic or monumental commemorative evidence for the disturbances around the time of Trajan's death [my emphasis]."

In his note 32, Vermeule wrote: "H. Mattingly, *Coins of the Roman Empire in the British Museum*, III [Nerva to Hadrian, 1936], p. 475, nos. 1552-1553, pl. 89,2. Annalina Caló Levi recognized the importance of the type and the accessory under Hadrian's foot: "Hadrian as King of Egypt," *The Numismatic Chronicle*, Sixth Series, Vol. VIII, 1948, pp. 30-38, fig. 1 [my emphasis]."

In his note 33, he wrote: "H. Mattingly, *Coins of the Roman Empire in the British Museum*, II. [Vespasian to Domitian, 1930], p. 117, pl. 20,10; also pl. 25,1 and pl. 33,4, etc".

In his note 34, he wrote: "See [C. VERMEULE,] *Berytus XIII* [1959/1960], p. 55, no. 182 and bibliography, pl. XV, fig. 47. (The other statues in this series are listed here or in the later *Berytus* articles on cuirassed statues and reliefs [cf. for example C. VERMEULE 1966a and 1978]). Also, C. Vermeule, *Roman Imperial Art in Greece and Asia Minor* [1968] pp. 247, 254, fig. 138".

Let's now turn to the findings concerning the subjects discussed here by Annalina Caló Levi (1948) and Cornelius Vermeule (1981), and refer those to the honorary statue of Hadrian, reported by the inscription (*CIL VI 974 = 40524* ; cf. here Fig. 29.1).

**A. Caló Levi's (1948) discussion of Hadrian's sestertius (Fig. 129), representing him in the iconography of his portrait-statue from Hierapydna (Fig. 29), C. Vermeule's (1981) findings related to both subjects, and the statue of Hadrian, dedicated by the Senate and the Roman People to commemorate the emperor's victory in the Bar Kokhba Revolt (Fig. 29.1), erected within, beneath, or in front of the Temple of Divus Vespasianus**

*This statue [referring to the original of Hadrian's portrait-statue from Hierapydna; cf. here Fig. 29] was executed in artistic Graeco-Roman forms but according to Egyptian ideas, a composite frequently found on monuments in Egypt"*

Annalina Caló Levi (1948, 38).

Only after this *Study* was written, did I realize that Pavlina Karanastasi had also discussed Hadrian's above-mentioned coins (here **Fig. 129**); cf. Karanastasi (2012/2013, 352-353, 356, Section: "DIE ÄGYPTISCHE PERSPEKTIVE", quoted *verbatim infra*). On these coins appears the cuirassed Hadrian in exactly the same pose and in (almost) exactly the same iconography as in his statue from Hierapydna (here **Fig. 29**), with the important difference that the emperor sets his left foot on a crocodile, instead of on a vanquished human figure.

Annalina Caló Levi (1948, 30-33, 35, 37-38, quoted *verbatim infra*, with her Fig. 5 = here **Fig. 129.1**) was first to explain Hadrian's pose on those coins (cf. here **Fig. 129**) with the assumption that it derived from an existing statue of the emperor, suggesting, because of (almost) precisely the same iconography of both that this should have been the original, after which Hadrian's portrait-statue from Hierapydna (here **Fig. 29**) was copied. Caló Levi was also first to realize that the iconography, represented on those coins, derives from an Egyptian iconographic scheme which shows the reigning Pharaoh about to kill a crocodile (cf. here **Fig. 129.1**). - To all this I will come back below.

**Fig. 29. Over lifesize cuirassed statue of the Emperor Hadrian, 2,68 m high (comprising the plinth, 2,54 m high (without the plinth), his cuirass is decorated with an Athena/ Palladion, crowned by two winged Victories, who is standing on the *lupa*, suckling the infants Romulus and Remus. Hadrian sets his left foot on a small human figure (representing the Roman Province of Judaea?). Found at Hierapydna in Crete. Istanbul, Archaeological Museum (inv. no. 50). In my opinion, the prototype of this portrait of Hadrian belonged with the inscription *CIL VI 974 = 40524 = here Fig. 29.1* to the victory monument, dedicated in honour of Hadrian by the Senate and the Roman People in AD 134/5 (so G. ALFÖLDY 1996 = here **Fig. 29.1**), in AD 135 (so C. BARRON 2018), or in AD 135/6 (so W. ECK 2003, 162, n. 35) to commemorate his victory in the Bar Kokhba Revolt. Photos: Courtesy H.R. Goette (April 2023).**

**Fig. 29.1. Fragmentary inscription (*CIL VI 974 = 40524*), marble, once belonging to an honorary statue of the Emperor Hadrian, dedicated to him by the Senate and the Roman People to commemorate his victory in the Bar Kokhba Revolt; so G. Alföldy (at: *CIL VI* [1996] 40524, who restored the inscription as shown here, dating it to AD 134/5); W. ECK 2003, 162-165; M. FUCHS 2014; C. BARRON 2018). According to G. Alföldy (*op.cit.*) and M. Fuchs (2014, 130), this honorary statue was erected within the *cella* of the Temple of *Divus Vespasianus* in the *Forum Romanum*. From: M. Fuchs (2014, 131, Fig. 8: "*CIL, VI, Pars VIII, Fasc. II* [1996], 40524". According to C. Barron (2018, who follows in this respect W. Eck 1999-2003), the honorary statue, to which this inscription belonged, stood "beneath (in front of?)" the Temple of *Divus Vespasianus*, its inscription is kept in the Capitoline Museums, Rome (inv. no. NCE 2529), and is datable: "135 CE Sep 15th to 135 CE Dec 9th"; according to W. Eck (2003, 162, n. 35) it is datable to AD 135/6. C. Evers (1991, 797, n. 72), according to whom this inscription was found in the *Forum Romanum*, asks, whether it belonged to the colossal statue of Hadrian (now Constantine the Great), here **Fig. 11**. In my opinion, this dedication belonged to the honorary statue, after which Hadrian's portrait-statue from Hierapydna at Istanbul (here **Fig. 29**) and almost 30 replicas of this portrait were copied.**

**Fig. 129.** Above: *sestertius* ('not earlier than AD 134'; P.L. STRACK 1933). The reverse shown here appears on several coin-types that were issued at Rome by Hadrian. They show the cuirassed emperor in 'victor pose', with lance and *parazonium*, stepping with his left foot on a crocodile. Photo taken after a plaster cast of a *sestertius* of the Museo Archeologico Nazionale, Napoli. From: A. Caló Levi (1948, 30-31 with n. 1, Fig. 1).

Below: from: L. Cigaina (2002, 267, Fig. 113). The caption reads: "Sesterzio (RIC II Hadrian 782; 134-136 d.C. ca. [circa]): busto laureato e drappeggiato di Adriano / Adriano stante in abito militare calpesta un coccodrillo (© Bertolami Fine Art, asta 77, n. 1107, 1 dicembre 2019)".

**Fig. 129.1.** Drawing after a relief from the Temple of Horus at Dendera in Egypt, which represents a Pharaoh in the iconography of 'Horus killing the crocodile'. From: A.E. Mariette, Dendérah, vol. II (1870-1874), Pl. 75a; cf. A.C. Levi (1948, 35, Fig. 5).

**Fig. 130.** *Sestertius*, issued at Rome by Vespasian (AD 71): IVDAEA CAPTA. Courtesy of the British Museum, London. Online at: <[https://www.britishmuseum.org/collection/object/C\\_R-10518](https://www.britishmuseum.org/collection/object/C_R-10518)>.

**Fig. 131.** *Sestertius*, issued by Titus (AD 80-81): IVDAEA CAPTA. Courtesy of the Jewish Virtual Library. Online at: <<https://www.jewishvirtuallibrary.org/coins-from-judaea-capta>>.

Based on the date of those coins, issued by Hadrian (cf. here **Fig. 129**: 'not before AD 134' according to A. Caló LEVI 1948, 31; cf. p. 30 n. 1, Fig. 1, quoted *verbatim infra*, who followed with this statement P.L. STRACK 1933), together with the consideration of some other data, Cornelius Vermeule (1981, 24-25, quoted *verbatim supra*) was first to suggest that Hadrian's portrait from Hierapydna (cf. here **Fig. 29**) commemorated the emperor's victory in the Bar Kokhba Revolt.

Also Pavlina Karanastasi (2012/2013, 352-353, 356) quotes the findings of Annalina Caló Levi (1948), who already knew that Hadrian had issued these coins (cf. here **Fig. 129**) 'not before 134 AD', and follows Caló Levi also in assuming that those coins refer to the prototype of the statue from Hierapydna (cf. here **Fig. 29**). This was also Vermeule's (1981) opinion, whom I have followed above, but Karanastasi (2012/2013, 381, quoted *verbatim infra*, in volume 3-2, at *Appendix IV.c.2.*)), who ignores Vermeule's account, nevertheless comes to the (in my opinion erroneous) conclusion that Hadrian's series of portrait-statues discussed here (cf. here **Fig. 29**) commemorated Hadrian's (alleged) victory in the Revolt of the Jews in the diaspora (this revolt had lasted from 115-117 AD). To the information, provided by Caló Levi (1948, 30 n. 1) concerning those coins of Hadrian (cf. here **Fig. 129**), Karanastasi (2012/2013) adds the important information that they were issued at Rome.

As we have already seen above, also Michaela Fuchs (2014) has discussed those coins of Hadrian (cf. here **Fig. 129**). Fuchs adds the following observations: that these coins show Hadrian in the pose of Mars Ultor (the emperor is thus assimilated to the god Mars); that the coins with the reverse, which feature Hadrian in the iconography discussed here (cf. here **Fig. 129**) were issued by Hadrian *and* by the Roman Senate (which, as we shall see below, is not true), and that the *parazonium*, held by Hadrian in his left hand, indicates that the victories, celebrated with these coin, were won by the Roman legions: cf. Fuchs (2014, 130).

Contrary to Vermeule (1981, 25), whose account she has overlooked, Fuchs (2014, 130 with n. 42, quoting A.C. LEVI 1948, 30-38) does not follow Caló Levi in assuming that those coins show 'Hadrian as King of Egypt'. Also concerning Paul Leberecht Strack's interpretation of the presence of the crocodile on those coins, namely that it symbolizes "'das Gefährliche und Feindliche schlechthin" ... oder [dass es] auch als Symbol für Palästina verstanden werden kann" ("in a word, the dangerous and hostile", or [that it] may also be understood as a symbol of Palestine'); cf. Fuchs (2014, 130, with n. 43, quoting P.L. STRACK 1933, 138), Fuchs comes to the conclusion that both questions must be left open.

As already stated at the beginning of this *Study*, I myself follow instead both above-quoted statements by Paul Leberecht Strack (1933, 138) and by Annalina Caló Levi (1948, 30-38).

Discussing the matter with the numismatist-Angelo Geißen, he has told me that Michaela Fuchs's (2014, 130) above-quoted assumption, according to which the coins (here Fig. 129; carrying the inscription "S C"), were issued by Hadrian *and* by the Senate, has in the meantime been abandoned by numismatists: those coins have only been issued by Hadrian himself.

Annalina Caló Levi (1948, 31, with n. 5), translated Strack's passage as follows: "The motive, in his opinion [quoting for that P.L. STRACK 1933, 138], is a victory motive; but he queries whether the crocodile might not be a symbol of Palestine or of the enemy in general [my emphasis]".

Since I agree with Eugenio La Rocca (1994) and Claudio Parisi Presicce (2000) - both overlooked by Fuchs (2014) - in assuming that the iconography of Hadrian's portrait-statue from Hierapydna follows 'oriental' models (a fact, which is also assumed by P. KARANASTASI 2012/2013, 323 with ns. 1, 188, p. 353, whom also M. FUCHS 2014 discusses), I also follow Caló Levi's suggestion (1948, 35, quoted *verbatim infra*, with her Fig. 5 = here Fig. 129.1) that this crucial iconographic detail of Hadrian's coins - the crocodile - (cf. here Fig. 129) can likewise be explained by studying relevant Egyptian iconographic schemes.

Let me anticipate here the results of my relevant research: Strack (1933, 138) was, in my opinion right, when he interpreted the crocodile on Hadrian's coins (cf. here Fig. 129) as meaning 'the enemy in general' (to use Caló Levi's translation), and because he dated this coin-type 'not earlier than AD 134'; cf. Caló Levi (1948, 31 with n. 4, who quoted likewise P.L. STRACK 1933, 138 for that), Strack's further suggestion that 'the crocodile might also be a symbol of Palestine' (*i.e.*, Hadrian's victory in the Bar Kokhba Revolt) seems, in my opinion, to be the logical consequence of this.

In her discussion of these coins of Hadrian (cf. here Fig. 129), Karanastasi (2012/2013, 353) has overlooked that the crocodile, on the back of which Hadrian sets his left foot, does not necessarily exclusively refer to Egypt. Caló Levi (1948, 31 with n. 1, quoted *verbatim infra*) had already quoted Strack (1933 II, 138, no. 291, Pl. IV, whom also P. KARANASTASI and M. FUCHS quote) for that.

Paul Leberecht Strack (1933 II, 138, no. 291, Pl. IV) was first to identify on Hadrian's coin (here Fig. 129) the crocodile as such, and, as already mentioned above, had suggested that this crocodile could mean *a*) 'the enemy in general', and *b*) just as well refer to (a victory in) Palestine.

Vermeule (1981, 25, quoted *verbatim supra*) added to Caló Levi's observations concerning the appearance of a crocodile on Hadrian's coins (cf. here Fig. 129), and to her suggestion of its possible meaning, to be discussed below (cf. here Fig. 129.1), the information that: "More immediately, the propagandists of Hadrian's court could look to the famous JVDAEA CAPTA sestertii of Vespasian [cf. here Fig. 130], where the latter had assumed armor and an identical pose to celebrate the capture of Jerusalem and the destruction of the holiest Temple. [with n. 33]".

Considering what we have heard above (in this *Study*, and below, in volume 3-2, at *Appendix IV.c.1.*)), Vermeule's latter observation may be regarded as decisive here. With this remark I am referring to the statue of Hadrian, dedicated by the Senate and the Roman People in recognition of the emperor's victory in the Bar Kokhba Revolt. Of this portrait-statue of Hadrian only the fragmentary dedicatory inscription has survived (cf. *CIL VI 974 = 40524 = here Fig. 29.1*).

The following relates to this portrait-statue of Hadrian, dedicated to him by the Senate and the Roman People in recognition of the emperor's victory in the Bar Kokhba Revolt, and is a quote from *Appendix IV.c.1.*) : "Geza Alföldy (at: *CIL VI 40524 [= here Fig. 29.1]*) believed that this portrait of Hadrian was erected in the *cella* of the Temple of *Divus Vespasianus*. Fuchs (2014, 130, with n. 47) follows him, not only because of the findspot of the inscription, but also because of its content: in this inscription Hadrian's military success is explicitly compared with those of the *imperatores maximi* Vespasian and Titus, 'whom, with his victory, Hadrian has even surpassed'.

And Michaela Fuchs (2014, 130) writes:

"Auch wenn Hadrian keinen Triumph feierte [*i.e.*, for his victory in the Bar Kokhba Revolt], so hat der Senat den östlichen Erfolg des Kaisers doch auch in Rom - wenn auch sehr zurückhaltend - gewürdigt. Eine fragmentarische Inschrift (Abb. 8 [= here **Fig. 29.1**]) belegt, dass dem Kaiser ein großes Siegesdenkmal errichtet wurde [with n. 45], ohne dass sich über dessen Charakter Näheres aussagen ließe. Der 90 cm hohe Rest der Inschrifttafel könnte am ehesten zu einer Basis für eine kolossale Statue Hadrians gehört haben, die allem Anschein nach auf dem Forum Romanum im Tempel des Divus Vespasianus [with n. 46] aufgestellt war [with n. 47]. Das Fragment kam in oder nahe den Überresten dieses Gebäudes zutage, doch wird der Zusammenhang nicht nur durch den Fundort nahegelegt, sondern er wird auch aus dem **Wortlaut der Inschrift ersichtlich. Der Senat und das Volk von Rom widmeten dieses Denkmal dem Kaiser, weil der dank des vorbildlichen Eifers des von ihm entsandten Heeres im Gefecht Syrien und Palästina befreit und dabei sogar die *imperatores maximi* (d. h. [das heißt] Vespasian und dessen Sohn Titus) übertroffen habe. Damit wird direkter Bezug auf den jüdischen Aufstand genommen, den gut 60 Jahre zuvor die Flavier niedergeschlagen hatten** [my emphasis]"

Because of the existence of this portrait-statue of Hadrian - (possibly) on display in the *cella* of the Temple of *Divus Vespasianus* - I believe that Vermeule (1981, 25) was right in suggesting that Hadrian's contemporaries, when looking at Hadrian's coins (cf. here **Fig. 129**), could not have had any problems in understanding that also Hadrian's coins referred to Hadrian's victory in Palestine. This is because of the great similarity of Hadrian's coins (cf. here **Fig. 129**) with Vespasian's IVDAEA CAPTA coins (cf. here **Fig. 130**, dated AD 71) - and I should like to add, because of their likewise great similarity with Titus's IVDAEA CAPTA coins (cf. here **Fig. 131**, dated AD 80-81), which show Titus in (almost) precisely the same iconography as Vespasian and Hadrian. - The only difference is that, whereas Vespasian and Titus set their raised left feet on a helmet, Hadrian sets his left foot on a crocodile.

For Vespasian's and Titus's IVDAEA CAPTA coins; cf. Anne Wolfsfeld (2014, 203), who writes about Domitian: "Der Katalysator für die einschlägig militärische Repräsentation der Flavier war sicherlich der herrschaftslegitimierende Sieg über Judäa [with n. 113]"

In her **note 113**;, Wolfsfeld writes: "Zur Rolle Judäas in der Repräsentation der Flavier s.[iehe] Coarelli (2009) 68-97; Eck (2006) 570-578; Millar (2005) 102-128; Beard (2003) 543-558; Pfanner (1983) 99-102; **zu den Iudaea Capta-Prägungen s.[iehe] exemplarisch: RIC II.1 163-169. 233-236 (Vespasian)** [my emphasis]"

Or in other words, given the date of Hadrian's coins (here **Fig. 129**) ('not earlier than AD 134'), they obviously celebrated his victory in the Bar Kokhba Revolt. In my opinion, also the presence of the crocodile on Hadrian's coins could not be misunderstood as a hint at Egypt, since the emperor's contemporaries certainly knew perfectly well that Hadrian had *not* suppressed any revolts in Egypt during his reign. Already Harold Mattingly (1936, p. CLXXXII, quoted after A.C. LEVI 1948, 31, ns. 3, 5), who insisted that those coins (cf. here **Fig. 129**) referred to a victory, had pointed out this important fact.

Annalina Caló Levi (1948, 35, 36, Fig. 5 = here **Fig. 129.1**, quoted *verbatim infra*), has convincingly compared the iconography of Hadrian's coins discussed here (cf. here **Fig. 129**) with this image of a Pharaoh from the Temple of Horus at Dendera in Egypt, who is shown in the act of killing a crocodile. Contrary to the meaning of Hadrian's coins (cf. here **Fig. 129**), which we can only deduce, the meaning of this iconography of an Egyptian Pharaoh is well known. Like Vermeule (1981, 25) and some later scholars, I follow Caló Levi's suggestion that, because of the striking iconographic similarities, Hadrian, on those coins (cf. here **Fig. 129**), is portrayed 'as the King of Egypt'. - This implies that Hadrian, by definition, like an Egyptian Pharaoh, has the obligation to fight the 'evil' (*i.e.*, the Pharaoh the enemies of the Egyptian state/ and Hadrian the enemies of the Imperium Romanum), which is symbolized by the crocodile. - Or rather: it means that Hadrian had *accepted* this enormous obligation for himself.

Personally I find it very interesting to compare *a*), this static image of a Pharaoh from the Temple of Horus at Dendera (cf. here Fig. 129.1) with *b*), the dramatic scenes of the Egyptian Pharaohs in the iconographic scheme 'the king, smiting his enemies', discussed by Eugenio La Rocca (1994) and by Emanuele M. Ciampini (2016), that we have looked at above, and *c*), to compare both these iconographic schemes with the portrait of Hadrian from Hierapydna (cf. here Fig. 29).

At first glance, the messages of these two Egyptian iconographic schemes, here called *a*) and *b*), are exactly the same: the Pharaoh fulfills his foremost duty by fighting and destroying the 'evil', or, when looking at the obtained results: by fighting successfully the 'evil' (or, in Egyptian parlance: 'the chaos'), the king has been able to achieve the opposite, namely perfect government, or the establishment of the highly sophisticated doctrine or *Staatslehre* that dominated Egyptian society: a state of affairs which the Egyptians called Ma'at, that is to say, (social) harmony.

At second glance, the iconographic scheme *a*) looks like an 'Andachtsbild' ('devotional image'). In a Christian context we could be reminded of representations of a saint with his or her often likewise very small attributes by which they are recognizable, and in this specific case we could think of 'St. George killing the dragon'.

Representations of the Pharaoh in the iconographic scheme *a*) thus proclaimed 'in a nutshell', and generally speaking, the foremost duty of the reigning king, that is to say, without referring to a historical event. The latter is true in the case of the iconographic scheme *b*), which functions as a typical 'illustration' of the actual annals or *gestae* of the king in question throughout his reign. In this respect, such reliefs of the Egyptian iconographic scheme *b*) are, in my opinion, comparable to Roman state reliefs, such as the Cancellaria Reliefs (cf. *supra*, at Chapters I.-VI., and here Figs. 1; 2; Figs. 1 and 2 drawing).

Interestingly, Hadrian's statue from Hierapydna (cf. here Fig. 29), and the other statues of this large group of portraits of Hadrian discussed here, combine characteristics of *both* these Egyptian iconographic schemes, here called *a*) and *b*).

These portraits of Hadrian do not only follow scheme *a*), which is why they are no mere 'Andachtsbilder' ('devotional images'). The reason being that the 'evil', which Hadrian has overcome victoriously, is not visualized by means of a symbol - the crocodile. Or, in other words: what Hadrian's portraits discussed here distinguish from this Egyptian scheme *a*) is the figure, on which, in the statue from Hierapydna, Hadrian sets his left foot (cf. here Fig. 29), and which may possibly be identified as a representation of *Judaea*. As we have seen above, in the other statues of this 'Hadrian series', similar, but amongst each other very different small human figures appear at Hadrian's feet. All these tiny vanquished human figures are, so to say, very modest abbreviations of those opulent and multifigured scenes that are typical of the Egyptian iconographic scheme *b*).

For the portrait of a Roman emperor that I have elsewhere interpreted as an 'Andachtsbild' ('devotional image'), and for the important spiritual functions of such portraits; cf. Häuber (2014a, 698; cf. pp. 695-721: "B 25.) The iconography of the bust of Commodus as Hercules Romanus").

Because of all this, I do not agree with Annalina Calò Levi (1948, 33, quoted *verbatim infra*), who believed that the iconography of Hadrian's portrait from Hierapydna could "refer to the victorious power of the emperor in general", or, in other words, to the doctrine of the emperor's 'invincibility', the discussion of which has loomed large in this *Study*. The reason being that this statue does *not* only follow the Egyptian iconographical scheme *a*). I believe - because of the addition of the tiny vanquished human figure, which belongs to the Egyptian iconographic scheme *b*) - that it was rather the intention to commemorate with this statue (cf. here Fig. 29) a precise historic event. And because of the date of Hadrian's coins discussed here (Fig. 129: 'not earlier than AD 134'), I maintain my above-mentioned hypothesis that this historical event was Hadrian's victory in the Bar Kokhba Revolt.

**To conclude (i.e., my final attempt at a conclusion) :**

1.) The date of those coins discussed here (cf. here **Fig. 129**: 'not earlier than AD 134'), combined with the (almost) identical iconography of the representation of Hadrian on these coins with the iconography of the portrait of Hadrian from Hierapydna (cf. here **Fig. 29**), gives us a secure hint at the date of this portrait of Hadrian. This agreement was first observed by Annalina Caló Levi (1948). In 1981, her arguments were followed by Cornelius Vermeule, who was actually first to suggest that the portrait of Hadrian from Hierapydna (because of the date of those coins, and because Hadrian's age, as represented in this portrait, here **Fig. 29**) was meant to commemorate the emperor's victory in the Bar Kokba Revolt. Finally, in 2014, Michaela Fuchs arrived at the same conclusion, although in part based on different evidence. In her opinion, all the presumed copies of her 'Piräus-Hierapydna' statue-type were dedicated because of the same event. In addition to this, I follow -

2.) Annalina Caló Levi (1948, 37-38, quoted *verbatim infra*) in assuming that those coins (cf. here **Fig. 129**) were modelled after an existing portrait-statue of Hadrian, of which, in her opinion, the statue from Hierapydna should be regarded as a copy (cf. here **Fig. 29**) - and, in my opinion, also the other statues of this 'Hadrian series' discussed here. Since we know -

3.) from Karanastasi (2012/2013, 356), quoted *verbatim infra* that those coins (cf. here **Fig. 129**) were issued at Rome, and -

4.) from Fuchs (2014, 130), quoted *verbatim infra* that the coin reverses showing Hadrian in this iconography (cf. here **Fig. 129**) were issued by Hadrian 'in AD 134 or a little later', as Fuchs suggests, this leads us more or less 'automatically' to another dedication by the Senate on behalf of Hadrian at precisely the same time.

With point 4.) I am referring to the above-mentioned dedication by the Senate and the Roman People of a portrait of Hadrian to commemorate the emperor's victory in the Bar Kokhba Revolt. Because of the findspot of its fragmentary dedicatory inscription, Geza Alföldy (at: *CIL VI 40524 = CIL VI 974 = here Fig. 29.1*) had assumed that this portrait of Hadrian was in the *cella* of the Temple of *Divus Vespasianus*. This was followed by Fuchs (2014, 130, with n. 47), not only because of the findspot of this inscription, but also because of its content: in this inscription, Hadrian's military success in the Bar Kokhba Revolt is explicitly compared with those of the *imperatores maximi* Vespasian and Titus, 'whom, with his victories, Hadrian has even surpassed'.

**That the coins of Hadrian (cf. here Fig. 129) should be seen in connection with Vespasian and Titus, is also, in my opinion, clear from the fact, that the entire iconography of Hadrian's portrait on those coins (including the *parazonium*, held by Hadrian in his left hand), repeats in (almost) identical fashion the iconographies chosen for Vespasian (cf. here Fig. 130, dated AD 71) and Titus (cf. here Fig. 131, dated AD 80-81) on their respective IVDAEA CAPTA coins.**

Besides, the iconography of all three portraits of Emperor Vespasian, Emperor Titus and Emperor Hadrian on these coin-types (cf. here **Figs. 130; 131; 129**) may, in my opinion, in a certain sense even be regarded as the faithful 'visualization' of Hadrian's praise, as formulated in the dedicatory inscription of this portrait-statue dedicated by the Senate and the Roman People (see *CIL VI 40524 = CIL VI 974 = here Fig. 29.1*).

See the translation of this inscription by Michaela Fuchs (2014, 130): "Der Senat und das Volk von Rom widmeten dieses Denkmal dem Kaiser, weil der dank des vorbildlichen Eifers des von ihm entsandten Heeres im Gefecht Syrien und Palästina befreit und dabei sogar die *imperatores maximi* (d. h. [das heißt] Vespasian und dessen Sohn Titus) übertroffen habe" ('the Senate and the Roman People dedicated this monument to Hadrian, because he, thanks to the exemplary zeal of the army sent by him, by campaigns liberated Syria and Palestine, and by doing so has even surpassed the *imperatores maximi* [i.e., Vespasian and his son Titus]').

I am suggesting here that the iconography of this portrait-statue of Hadrian (possibly) in the *cella* of the Temple of *Divus Vespasianus* in a certain sense even 'visualized' Hadrian's praise in the pertaining dedicatory inscription (CIL VI 40524 = CIL VI 974 = here Fig. 29.1), because Fuchs (2014, 130) comments on Hadrian's coins (cf. here Fig. 129) as follows: "Das Parazonium in der Linken des Kaisers scheint ... auf von Legionen errungene Siege hinzuweisen" ('the *parazonium* in Hadrian's left hand seems to indicate that the victories [celebrated with these coins] was achieved with the legions').

Cf. Siemer Oppermann: "Parazonium ... ein kurzer Ehrendegen, in der Größe zwischen pugio und gladius, den Militärtribunen (Martial. 14,32) und höhere Offiziere am cingulum, wohl an der l.[inken] Seite trugen ...", in: *KlPauly* 4 (1979) Sp. 509.

**If indeed, as here suggested, the portrait-statue of Hadrian from Hierapydna (cf. here Fig. 29) and other statues of the 'Hadrian series' discussed here, may be regarded as copies of that statue of Hadrian, dedicated by the Senate and the Roman People to commemorate Hadrian's victory in the Bar Kokhba Revolt, and (possibly) erected in the *cella* of Domitian's Temple of *Divus Vespasianus*, this could :**

a) be regarded at the same time as a great homage to Titus's and Vespasian's victories as well. And that simply because the iconography chosen for this portrait of Hadrian intentionally repeated the (almost identical) iconographies of the portraits of Vespasian and Titus on their IVDAEA CAPTA coins (cf. here Figs. 130; 131).

Note that Vespasian and Titus issued those coins (cf. here Figs. 130; 131) when they were both *themselves* emperors. Precisely as in the case of those archaic 'oriental' iconographic schemes, discussed by Eugenio La Rocca (1994) and Emanuele M. Ciampini (2016), that we have looked at above: also in those cases it was exclusively the reigning monarchs who were represented as the victors of military campaigns, regardless who had actually achieved them.

In reality, Vespasian had started to suppress the Great Jewish Revolt (or War) in AD 67, at the order of Nero, which means, had Nero lived as long as AD 71, *he* could have issued such a IVDAEA CAPTA coin with a portrait of himself in this 'victor-iconography' as Vespasian on his relevant coins (cf. here Fig. 130).

And as for Titus: Vespasian, after a long journey, was already back in Rome by October of AD 70, whereas, only shortly before, in August/September of AD 70, Titus had fought the decisive battles in this war - as rightly observed by Vermeule (1981, 25): "... the famous JVDAEA CAPTA sestertii of Vespasian [cf. here Fig. 130], where the latter [*i.e.*, Vespasian] had assumed armor and an identical pose [as Hadrian on his coins and in his statue; cf. here Figs. 129; 29] to celebrate the capture of Jerusalem and the destruction of the holiest Temple. [with n. 33]".

For all those historic events; cf. *supra*, at Chapter V.1.i.3.); below, at Chapter *The visualization of the results of this book on Domitian on our maps*; and Dietmar Kienast, Werner Eck and Matthäus Heil (2017, 105, referring to Titus): "Aug.[ust]/Sept.[ember] 70 Einnahme von Jerusalem".

But, of course, the reigning Emperor Vespasian was given on this coin the credit for this victory in AD 70 at Jerusalem (cf. here Fig. 130). Contrary to other victorious generals, Titus was lucky enough to succeed his father Vespasian as emperor: he could, therefore, issue in 80/81 his coins (cf. here Fig. 131), which celebrate now *him* as the victor in this decisive battle of AD 70 (!).

A comparison of Vespasian's and Titus's victorious military campaigns on the one hand, and of Hadrian's victories on the other hand - all in the same area of the Roman Empire - was actually explicitly drawn in the dedicatory inscription of this portrait of Hadrian, which the Senate and the Roman People (possibly) dedicated in the Temple of *Divus Vespasianus* (cf. CIL VI 40524 = CIL VI 974 = here Fig. 29.1);

b) In addition to this, this assumption (if at all true) could explain, given the fact that his portrait-statue of Hadrian (possibly) stood in the *cella* of the Temple of *Divus Vespasianus*, that it was considered as not 'necessary' by Hadrian, who issued those coins (cf. here Fig. 129), to add any explanatory text on those coins that would have defined *expressis verbis* the event that they were supposed to celebrate;

c) Provided this assumption is true, we can now also explain, why the copies of this original portrait-statue of Hadrian, which (possibly) stood in the *cella* of the Temple of *Divus Vespasianus* at Rome, namely the statue from Hierapydna (cf. here **Fig. 29**), and the other statues of this 'Hadrian series', were only commissioned by communities or institutions, for example at Hierapydna in Crete, as described by Vermeule (1981, 25, quoted *verbatim supra*) which could actually 'look' towards Palestine, or because they wished to thank Hadrian for his victory, since they lived fairly close to the theatre of this war. - But see now Sam Heijnen (2020, 204, quoted *verbatim infra*) for a much better explanation;

d) Apart from intentionally copying the iconographies of the portraits of Vespasian and Titus on their IVDAEA CAPTA coins (cf. here **Figs. 130; 131**), this original portrait-statue of Hadrian, dedicated by the Senate and the Roman People (possibly) in the Temple of *Divus Vespasianus*, offered a great wealth of additional iconographic detail, especially the reliefs on Hadrian's cuirass, which we know from the copies of this original, Hadrian's portrait from Hierapydna (cf. here **Fig. 29**) and the other statues of the 'Hadrian series' discussed here. The meaning of all this has been analysed with great care by the above-discussed scholars, whose important results I have not repeated here again. - But also to this I will come back below.

### *Post Scriptum to my conclusion*

Even after having finished writing this conclusion reached me more information concerning the statue of Hadrian (cf. here **Fig. 29**) discussed here, which I have summarized in the following.

Rose Mary Sheldon, whom I had sent an earlier draft of this *Study*, comprising the above-mentioned illustrations of Vespasian's and Titus's IVDAEA CAPTA coins (cf. here **Figs. 130; 131**), was kind enough to correct the English of my text. And because these coins show both Flavian emperors with a mourning representation of Judaea, Rose Mary alerted me in an E-mail on 11th February 2021 to Jane M. Cody's (2003) discussion of the coinage of the Flavian emperors.

Rose Mary wrote me that, according to Cody, "this coinage reveals that the theme of 'conqueror and conquered' was the one most favoured by the Flavians. The numismatic representation of conquered peoples throughout this period showed a marked preference for imagery in which a province was represented as conquered and mourning or bound, often beneath a victory trophy".

**And to this, Rose Mary remarked to me in her E-mail of 11th February 2021: "Seems like it could be argued in other sculptural representations, too" (!). - To this I will come back below.**

See now the exhibition-catalogue *Domiziano Imperatore. Odio e amore* (2023, 22, cat. 22), an *aureus*, issued by Domitian in AD 85, with a mourning representation of *Germania* on the reverse:

"12. Aureo di Domiziano con la personificazione della Germania  
D/ IMP CAES DOMIT AVG GERM PM TR P IIII.  
Testa laureata di Domiziano verso destra  
R/ IMP VIII COS XI CENS POT PP.  
La Germania afflitta seduta verso destra su scudo.  
Sotto, una lancia spezzata  
Oro  
Diam. mm 20,5; peso g 7,51  
Zecca di Roma, 85 d.C. (*RIC* II<sup>2</sup>, p. 288, n. 340)  
Da Roma. Collezione Campana. Acquisito dai Musei Capitolini: 1873  
Roma, Musei Capitolini, Medagliere, inv. MED 3432".

To Jane M. Cody's (2003) findings and Rose Mary Sheldon's related remark, we may now add some observations by Sam Heijnen (2020, 200-204), who, to my knowledge, is one of the two most recent scholars, who has studied Hadrian's series of portraits discussed here (cf. **Fig. 29**). My thanks are due to Hans Rupprecht Goette for providing me with a copy of Heijnen's article. The other scholar to have most recently discussed those portraits of Hadrian is Lorenzo Cigaina in his book on Crete (2020), to which I will come back below. My thanks are due to Peter Herz for alerting me to this publication.

*The observations concerning Hadrian's portrait-statue from Hierapydna by Sam Heijnen (2020)*

Sam Heijnen ("Living up to expectations. Hadrian's military representation in freestanding sculpture", 2020, 202, Fig. 11) refers to these portrait-statues of Hadrian, of which the one from Hierapydna is the most famous replica (here **Fig. 29**), as to Hadrian's "Eastern breastplate type". Heijnen provides a very useful map, in which the findspots of the 22 replicas of his Hadrian's "Eastern breastplate type" (cf. her **Fig. 29**), that are known to him, are marked. Note that on his inserted map of Crete 'Hierapydna' is called: "Ierapetra".

Heijnen summarizes the debate concerning the date of those portraits. But because he does not consider the research by Annalina Caló Levi (1948), Cornelius Vermeule (1981), and Michaela Fuchs (2014) - although he quotes Pavlina Karanastasi (2012/2013), who has likewise discussed them - he does not consider Hadrian's above-mentioned coins (cf. here **Fig. 129**), which are dated 'not earlier than AD 134', and represent the iconography of Hadrian's portrait series (cf. here **Fig. 29**) in almost identical fashion. Nor addresses Heijnen the findings of La Rocca (1994) or any of the other above-mentioned scholars, who have studied the fact that the iconography of Hadrian's portrait (cf. here **Fig. 29**) is clearly influenced by 'oriental' iconographies.

**Heijnen (2020, 200-202) mentions the two different dates suggested for the creation of those portraits of Hadrian (cf. here Fig. 29) by Richard A. Gergel (2004) and Pavlina Karanastasi (2012/2013) on the one hand, and Bettina Bergmann (2010b) on the other hand, saying that, according to the former, those portraits commemorated Hadrian's victories in the Revolt of the Jews in the diaspora. Bergmann, on the other hand suggests that these statues were dedicated to celebrate Hadrian's victories in the Bar Kokhba Revolt.**

Heijnen (2020, 202) does not himself decide which of the two hypotheses could possibly be true. Trying to solve this chronological problem, Heijnen (2020, 202) has studied the epigraphic evidence, collected by Jakob Munk Højte (2005), coming to the conclusion that there are many more dedications to Hadrian that belong to the later of those two periods.

**As I hope to have demonstrated *infra*, in volume 3-2, at Appendix IV.c.2.), the statues of Hadrian discussed here (cf. here Fig. 29), for historical and iconographical reasons, cannot possibly commemorate Hadrian's (alleged) suppressions of the Revolts of the Jews in the diaspora (AD 115-117).**

The reasons being that:

*a)* the Emperor Trajan, in AD 117, had ordered Hadrian, one of his generals, only a couple of days before his own death (on 7th ? August AD 117; cf. *supra*, n. 323, in Chapter II.1.e) to suppress one of these Jewish revolts in the diaspora; and -

*b)* that exclusively the *reigning Pharaohs* and *Roman emperors* were represented in this archaic 'victor pose', as for example the Emperor Hadrian (here **Fig. 29**), and as represented on here **Fig. 129.1** (an Egyptian Pharaoh as Horus); and on here **Figs. 130; 131** (the Emperors Vespasian and Titus), regardless of the fact that, in reality, possibly one of their generals had conducted the victorious military campaigns in question.

This we have already learned above, when looking at Vespasian's IVDAEA CAPTA coins (dated AD 71; here **Fig. 130**): it is the Emperor Vespasian, who appears on those coins in exactly the same 'victor pose' as the Emperor Hadrian in the statue from Hierapydna (here **Fig. 29**), and that, although it had been his son, the general Titus, who in AD 70, had achieved the relevant final victory in this war. In addition to this we have seen above that Titus, in his turn, could only issue his *own* IVDAEA CAPTA coins (here **Fig. 131**; dated AD 80-81), thus celebrating (his) same final victory of AD 70, when he was himself emperor (!).

This means, of course, that, provided the Revolts of the Jews in the diaspora (AD 115-117) had indeed been suppressed by Trajan's general Hadrian, and commemorated with an honorary statue, the *Emperor Trajan, not Hadrian*, would have been represented in this iconography.

Heijnen (2020, 203) analyses the iconography of Hadrian's cuirass, especially the central figure of an "Athena/Palladion/Virtus", as he refers to it, which is standing on the *lupa romana* (cf. here **Fig. 29**). Heijnen himself is unaware of the potential of his findings. In my opinion, they support my hypothesis that those portraits of Hadrian (here **Fig. 29**) may be attributed to the victory monument commemorating the emperor's victory in the Bar Kokhba Revolt, to which the inscription (here **Fig. 29.1**) once belonged.

Heijnen (2020, 203) writes: "However, I believe an important precedent of the Hadrianic motif has been overlooked, which may be the key to understanding its meaning. Within the medium of imperial statuary, the motif of two Victories, crowning or decorating a central figure or object often appears in cuirasses with a military trophy (*tropaion*) at their center (e.g. *fig. 13*) [with n. 75]. **Particularly during the Flavian period, trophies were used in statuary representations of the emperors to refer to their conquests of Judaea and Germania** [with n. 76]. The conquered people were then often represented by two captives at the bottom of the trophy and/ or by a captive at the foot of the statue [with n. 77]. The arrangement of the main figures in the Hadrianic breastplate type seems to be strongly influenced by that of the 'trophy type' [my emphasis]".

In his **notes 75-77**, Heijnen provides references.

The caption of Heijnen's *Fig. 13* reads: "Marble headless statue of a Roman emperor with two Victories crowning a military trophy. Thessaloniki, Archaeological Museum (photo author)".

**Personally, I find Heijnen's just-quoted observation very convincing: according to the author, the design of the central motif of Hadrian's cuirass (c. here *Fig. 29*) was influenced by such 'trophy type' decorations of cuirasses (his *Fig. 13*), which in their turn appear also in exactly the same fashion on many victory monuments of the Flavian period.**

Heijnen (2020, 203), in the above-quoted passage, mentions the important fact that "during the Flavian period, trophies were used in statuary representations of the emperors to refer to their conquests of Judaea and Germania". More such examples of trophies of the Flavian period, even one, decorated with a winged Victoria, as in the examples mentioned by Heijnen, have already been discussed above: the sculptural decoration of the '*Aula Regia*' within Domitian's Palace on the Palatine (cf. here **Fig. 9**).

I repeat in the following a passage, written for *supra*, Chapter VI.3. *Summary of my own hypotheses concerning the Cancellaria Reliefs presented in this Study; Addition: My own tentative suggestion, to which monument or building the Cancellaria Reliefs may have belonged, and a discussion of their possible date:*

``As discussed in detail above (cf. *supra*, in Chapter V.1.i.3.b); at Section III.), Bianchini (1738, 50, 52, 54 with Tab. II.-IV. = here **Figs. 8; 9**) describes the architecture, size and decoration of the '*Aula Regia*', and provides a measured ground-plan of Domitian's entire Palace (his Tab. VIII. = here **Fig. 8**). His excellent etchings comprise also a measured ground-plan of the '*Aula Regia*' (his Tab. II. = here **Fig. 9**); an etching, illustrating an uniquely rich decorated marble column base (cf. his Tab. III. = here **Fig. 9**), belonging to a pair of giallo antico columns (cf. p. 50: "mai state osservate") that flanked the main entrance to the '*Aula Regia*' in the north

(cf. here **Figs. 8; 8.1**), the plinth of which is decorated with trophies, as well as other finds from that hall (cf. p. 54): **a detail of a marble entablature, decorated with a winged Victoria, who is crowning a trophy (illustrated on his Tab. IV. = here Fig. 9). Bianchini's illustrations (1738, Tab. III. and IV. = here Fig. 9) therefore show that at least one of the iconographic themes of the enormous 'Aula Regia' was certainly the celebration of Domitian's military victories. According to Eugenio Polito (2009, 506, quoted *verbatim supra*, in Chapter V.1.i.3.b); at Section III.), this was the major subject of the 'Aula Regia' [my emphasis]''.**

At the end of his discussion of his "Eastern breastplate type" of Hadrian (cf. here **Fig. 29**), Heijnen (2020, 204) comes to the following (in my opinion very convincing) conclusion:

**"The choice to use the 'trophy-type' [on the cuirasses of this series of portraits of Hadrian; cf. here Fig. 29] as an anchor might have been influenced by the fact that this type has been used before to commemorate the conquest of Judaea under the Flavians. However, even regions that did not suffer from rebellions directly employed the military cuirass with the eastern breastplate type [of Hadrian] (albeit without the barbarian motif) to express that their age of prosperity was thanks to the eternity of Rome and the emperor's efforts to ensure peace [my emphasis]".**

*The observations concerning Hadrian's portrait-statue from Hierapydna by Lorenzo Cigaina (2020)*

Lorenzo Cigaina (*Creta nel Mediterraneo greco-romano: identità regionale e istituzioni federali*, 2020, 122-124) discusses the well-known, but at the same time remarkable fact that in Crete were found five (or six?) copies of 'Hadrian's portrait series', to which the statue from Hierapydna (here **Fig. 29**) belongs.

Cigaina is first to connect this fact with Hadrian's improvement of a major road that connected the western part of Crete with its eastern part. We know three Hadrianic milestones of this road, which, as Cigaina (2020, 219) is able to demonstrate, are datable between AD 133-136. He, therefore, convincingly suggests that Hadrian used this road to guarantee the transportation of soldiers and supplies that he needed for his suppression of the Bar Kokhba Revolt in *Judaea*. Cigaina (2020, 219) suggests that Hadrian actually shortly went himself to *Judaea* to lead in person a campaign in order to suppress the Bar Kokhba Revolt. According to Cigaina (2020, 222), all the statues of Hadrian of the "tipo Hierapydna" were created between AD 132-138. He, therefore, convincingly suggests that those five (or six?) honorary statues of Hadrian in Crete (cf. here **Fig. 29**) were dedicated to Hadrian to commemorate the emperor's suppression of the Bar Kokhba Revolt.

**When discussing his relevant research with Lorenzo Cigaina in an E-mail correspondence of February 2021, I had at that stage not as yet realized that Cigaina (2020) addresses in his book also Hadrian's coins (cf. here Fig. 129), which show on the reverses the cuirassed emperor in 'victor pose', with lance and *parazonium*, stepping with his left foot on a crocodile.**

Cigaina (2020, 267, ns. 799, 801) quotes for those coins (here **Fig. 129**) also Caló Levi's article (1948). But he has overlooked that Caló Levi was *a*) first to suggest that those coins represent the prototype of Hadrian's portrait-statue from Hierapydna (here **Fig. 29**); and *b*) that Caló Levi (1948, 38, quoted *verbatim infra*) had obviously taken for granted that this statue of Hadrian had been erected in Rome, since she suggested that it had decorated the cenotaph of Antinous at Rome. Caló Levi (1948) herself did not explain, why she assumed this; but the fact that Hadrian had issued those coins (here **Fig. 129**) in Rome may have been the reason.

Lorenzo Cigaina (2020, 267-268, § IV.8) offers the *status quaestionis* concerning the meaning of this 'Egyptian' iconography that was not only chosen for the coins, issued by Hadrian (cf. here **Fig. 129**), but, as Cigaina points out, also by several other Roman emperors. I quote in the following first his passage, in which he discusses those coins (here **Fig. 129**), because Cigaina (2020, 267, n. 801) comes to the following interesting conclusion: this iconography was chosen by those Roman emperors, who thus wanted to refer

**to the fact that they had 'suppressed disorder'. In addition, Cigaina suggests that the reverses of Hadrian's coins (here Fig. 129) may represent a portrait of Hadrian, created in AD 134 or shortly later.**

Cigaina (2020, 267-268) is well aware of the fact that this 'victor iconography', adapted by some Roman emperors to their own portraits, as for example by Hadrian in his coins (here Fig. 29), had been derived from the Egyptian iconographic scheme 'the Pharaoh/ Horus kills the crocodile' (cf. here Fig. 129.1).

**Cigaina (2020, 267-268, § IV.8) writes about this iconography, that was also chosen for Hadrian's portraits on the reverses of his coins (here Fig. 129):**

"In alternativa, contro le forze del caos e del male incarnate dal cocodrillo combatte il dio Horus o la sua incarnazione terrena, il faraone, che sono rappresentati nell'atto di sottometterlo calpestandolo [with n. 799]. In seguito, questa iconografia di vittoria viene trasferita occasionalmente all'imperatore romano, concepito in Egitto fin da Augusto come nuovo Horus [with n. 800], per esempio in un'emissione di denarii, sesterzî e dupondi sotto Adriano (fig. 113 [= here Fig. 129]) e in un'altra di aurei e sesterzî sotto Caracalla (215 d.C.), entrambe della zecca di Roma [with n. 801]. **Sebbene presso il pubblico dell'Impero l'associazione con Horus restasse perlopiù implicita, il concetto di dominio sull'Egitto e sulle forze avverse doveva comunque essere perspicuo** [my emphasis]".

In his **note 799**, Cigaina writes: "A.C. Levi, 'Hadrian as king of Egypt', *NumChron* 1948, (30-38) 34-37; J.-C. Grenier, *La décoration statuaire du 'Serapeum' du 'Canope' de la Villa Adriana*, Roma 1990, 20-22, 28-30 e tavv. 22-25; Hoffmann, *Krokodildarstellungen* (nt. 796), 432, fig. 4, cat. 350, 357; cfr. *LIMC* V (1990), 541 e n. 26 s.v. 'Horus' (M.-O. Jentel): rilievo in calcare del V sec. d.C. [my emphasis]". - See Cigaina's **note 796**: "... F. Hoffmann, 'Krokodildarstellungen in Ägypten und Rom (Kat. 350-357)', in H. Beck (a cura di), *Ägypten, Griechenland, Rom: Abwehr und Berührung* (Catalogo della Mostra, Frankfurt a. M., 26 nov. 2005 – 26 feb. 2006), Frankfurt a. M. 2005 [*i.e.*, here *Ägypten Griechenland Rom 2005*], 427 [corr.: 428]-433 ...".

In his **note 800**, he writes: "F. Herklotz, *Prinzeps und Pharaos: der Kult des Augustus in Ägypten*, Frankfurt a. M. 2007, 117-122, 128-136 (Horus), 209-228 (Sol-Apollo a Roma)".

In his **note 801**, he writes: "RIC II *Hadrian* 782, 830; A. Banti, *I grandi bronzi imperiali*, II 2, Firenze 1984, 370-373 nn. 728-734 (sesterzi di Adriano); RIC IV 1 *Caracalla* 257 a-b; vd. [vedi] Levi, *Hadrian as king* (nt. 799), 30 ss. e figg. 1 [= here Fig. 129]-3; S.M.E. Fick, 'Der Kaiser und das Krokodil. Überlegungen zu einem Motiv römischer Münzprägung: Kontext - Vorbilder - Botschaft', in K. Schnegg - B. Truschnegg - M. Pohl (a cura di), *Antike Welten. Althistorische Forschungen in Österreich* (Akten der Tagung, Innsbruck, 17.-19. Nov. 2016), Innsbruck 2018, 115-132; cfr. E. La Rocca [*i.e.*, here E. La Rocca 1995a], '«Clemenza imperiale». L'immagine del principe vittorioso', in *Storia letteratura e arte a Roma nel secondo secolo dopo Cristo* (Atti del Convegno, Mantova, 8-10 ott. 1992), Firenze 1995, 213-248, in part. 222, 231; Kiss, *Le dieu-crocodile* (nt. 796), 276, figg. 4-5. **L'imperatore è sempre in abito militare e armato. Il tipo viene interpretato perlopiù in riferimento alla repressione di disordini o, secondo Fick (loc. cit.), al controllo dell'annona. L'immagine di Adriano [cf. here Fig. 129] potrebbe ritrarre una statua realizzata nel 134 d.C. o poco dopo** [my emphasis]". - See Cigaina **note 796**: "... Z. Kiss, 'Le dieu-crocodile égyptien dans l'Italie romaine', in N. Bonacasa (a cura di), *L'Egitto in Italia dall'antichità al medioevo* (Atti del III Congresso, Roma - Pompei, 13-19 novembre 1995), Roma 1998, 275-288 ...".

**Cigaina (2020, 123-124, § IV.1) writes about Hadrian's 'portrait series' in Crete, to which the statue from Hierapydna (here Fig. 29) belongs:**

"... e sull'isola [*i.e.*, Crete] si constata un'insolita concentrazione di [page 124] statue di Adriano del 'tipo Hierapydna' - cinque o sei esemplari - la cui corazza è decorata con motivi simbolici riferibili al Panhellenion (fig. 21 [cf. here Fig. 29]; vd. [vedi] *infra*, § IV.6) [with n. 70]".

In his **note 70**, Cigaina writes: "Così Bergmann [*i.e.*, here B. BERGMANN 2010b] 2010".

Cigaina (2020, 219-220, § IV.6) discusses the three milestones (datable to AD 133-136), that belong to the road in Crete, which Hadrian improved to guarantee the transportation of his army and supplies for his suppression of the Bar Kokhba Revolt in Judaea. Cigaina suggests that Hadrian "per organizzare di persona le prime contromisure in Giudea" went to Judaea to lead himself a campaign to suppress the Bar Kokhba Revolt. Because that question is currently debated, I quote in the following Cigaina's relevant passage. Concerning the inscriptions of those milestones, set by Hadrian in Crete, Cigaina writes:

"Mancano purtroppo indicazioni puntuali per accertare la sua contemporaneità [of the third milestone], ma le coincidenze della titolatura [of Hadrian] (terzo consolato, *pater patriae* e soprattutto *proconsul* / ἀνθύπατος, portato da Adriano di solito quando era fuori Roma in viaggio nelle province) parlano a favore di un rapporto stretto coi milari latini [with n. 584] ... Il titolo *pater patriae*, conservatosi in tutti e tre i testi, è usato ufficialmente dalla prima metà del 128 d.C. e costituisce qui un *terminus post quem* restringendo la cronologia al 128-138 d.C. [with n. 585] ...

**Il titolo *proconsul* collega inoltre i milari alla presenza di Adriano nelle province: partito per il suo secondo viaggio nell'estate del 128 d.C., egli fece ritorno a Roma tra il 9 dicembre 132 e l'8 aprile 133 [with note 586]. Raggiunto nei Balcani dalla notizia della rivolta di Bar Kochba scoppiata nell'estate del 132, egli era probabilmente ritornato sui suoi passi per organizzare di persona le prime contromisure in Giudea [note 587] ... [page 2020] ... Dopo il non previsto sopralluogo in Giudea, Adriano affrettò verosimilmente il suo ritorno a Roma per la via più breve, ovvero attraverso il Mediterraneo, non appena la fine dell'inverno, all'inizio del 133, lo permise [my emphasis]."**

In his **note 584**, Cigaina writes: "Cfr. TZIFOPOULOS 2004, 96-98: il titolo *proconsul* / ἀνθύπατος, che demarca il potere dei governatori provinciali (già assunto da Augusto con l'*imperium proconsulare maius* nel 23 a.C.), inizia a essere usato da Traiano poco prima della morte (116 d.C.); in seguito, è portato soprattutto dagli imperatori Antonini e perde il suo carattere eccezionale (cfr. D.C. LIII 17, 2: fuori dall'Italia tutti gli imperatori hanno poteri proconsolari). Su Adriano, vd. [vedi] W. ECK - P. HOLDER - A. PANGERL, 'A diploma for the army of Britain in 132 and Hadrian's return to Rome from the East', ZPE 174, 2010, (189-200) 193 s., 197 s.; KIENAST - ECK - HEIL 2017<sup>6</sup>, 122 [corr.: 123]".

In his **note 585**, he writes: "KIENAST - ECK - HEIL 2017<sup>6</sup>, 123".

In his **note 586**, he writes: "KIENAST - ECK - HEIL 2017<sup>6</sup>, 123; sul ritorno, vd. [edi] ECK - HOLDER - PANGERL, *A diploma* (nt. 584), 198. CHANIOTIS 2013b [*i.e.*, here A. CHIANIOTS 2013], 60 s., lascia aperta la possibilità di un soggiorno di Adriano a Creta nell'autunno 128 d.C., durante l'andata, e data il miliare di Faneromeni al 129-132 d.C. circa. - Un altro soggiorno cretese è stato ipotizzato nel 123 d.C. da vari studiosi tra cui BESCHI, che riferisce ad esso il miliare di Rhodopou (BESCHI 1974, 219 s., 226; vd. [vedi] KARANASTASI 2012/13, 348 nt. 149)".

In his **note 587**, he writes: "La partecipazione dell'imperatore è indiziata dalla definizione "*expeditio Iudaica*" e dalla sua accettazione di un'acclamazione imperatoria a conflitto concluso (ECK - HOLDER - PANGERL [2010], *A diploma* [nt. 584], 198; Kienast - Eck - Heil 2017<sup>6</sup>, 123 s.: *imp. II*) [my emphasis]".

To the just-quoted passage from Cigaina (2020, 219), I should like to add a comment:

The question, whether or not Hadrian had personally led a campaign in Judaea to suppress the Bar Kokhba Revolt, is still debated. For the name "*expeditio Iudaica*" of Hadrian's war, and for some other reasons, I have followed those scholars, who are convinced that Hadrian was in person there, and have thus arrived at the same conclusion as Cigaina (2020, 219).

Contrary to his earlier publications (cf. W. ECK, P. HOLDER, and A. PANGERL 2010, quoted by L. CIGAINA 2020, 219, n. 587), Eck (2012, quoted by W. ECK 2022, Sp. 485, note [7]), and Eck (2019b, 203, discussed in detail *infra*, in volume 3-2, cf. below), Eck (2022, Sp. 485, 486) now expresses serious doubts that Hadrian could have returned in person to Judaea in order to suppress the Bar Kokhba Revolt.

Eck (2022, Sp. 485, Chapter: "B. Bar-Kochba-Aufstand") writes:

**"Dass Hadrian selbst im Herbst 132 wegen der Schwere der militärischen Revolte in die Provinz zurückkehrte [7], ist eher unwahrscheinlich. Die Annahme beruht auf der Bezeichnung *expeditio*, die sich in manchen inschriftlichen Quellen findet; doch wird dem Wort vielleicht zu viel an Bedeutung zugewiesen [my emphasis]"; cf. Sp. 486: "Die Kämpfe zogen sich bis ins Frühjahr 136 hin, da Hadrian erst damals die zweite Imperatorenakklamation annahm (CIL XIV 2088; vor 31. Mai 136: [n. 17. Nr. 88] und P. Heid. VII 396; vgl. [10]; [6]). Gleichzeitig ließ der Kaiser durch den Senat den Statthaltern von Iudaea, Syria und Arabia die *ornamenta triumphalia* verleihen (CIL III 2830; AE 1904, 9; IGR III 176; CIL XI 5212). **Auf den Reichsmünzen wird weder der Krieg noch der Sieg thematisiert.** Nur in Iudaea ließ der Senat oder eine der Legionen bei Tel Shalem südlich von Scythopolis einen Bogen zum Gedenken an den Sieg errichten ([9] gegen [2], s. die Argumente bei [5]) [my emphasis]"**.

In his **note [2]**, Eck writes: "G. W. Bowersock, The Tel Shalem Arch and P. Naḥal Hever/Seiyal 8, in: P. Schäfer (Hrsg.), *The Bar Kokhba War Reconsidered*, 2003, 171–180".

In his **note [5]**, he writes: "W. Eck, Hadrian, the Bar Kokhba Revolt, and the Epigraphic Transmission, in: P. Schäfer (Hrsg.), *The Bar Kokhba War Reconsidered*, 2003, 153–170".

In his **note [6]**, he writes: "W. Eck, Rom herausfordern. Bar Kochba im Kampf gegen das Imperium Romanum, 2007".

In his **note [7]**, he writes: "W. Eck, Der Bar Kochba-Aufstand der Jahre 132–136 und seine Folgen für die Provinz Iudaea/Syria Palaestina, in: G. Urso (Hrsg.), *Iudaea socia – Iudaea capta*, 2012, 249–265".

In his **note [8]**, he writes: "W. Eck, Bar Kokhba, in: *The Oxford Classical Dictionary*, digital edition, 2015 (doi: [https://doi.org/10.1093/acrefore/9780199381135\\_013.1056](https://doi.org/10.1093/acrefore/9780199381135_013.1056))".

In his **note [9]**, he writes: "W. Eck / G. Foerster, Ein Triumphbogen für Hadrian im Tal von Beth Shean bei Tel Shalem, in: *JRA* 12, 1999, 294–313".

In his **note [10]**, he writes: "W. Eck / N. Mugnai, A New Military Diploma for the Troops of Moesia *inferior* (19 January 136), in: *ZPE* 198, 2016, 218–222".

In his **note [11]**, he writes: "W. Eck / A. Pangerl, Die Konstitution für die classis Misensis aus dem Jahr 160 und der Krieg gegen Bar Kochba unter Hadrian, in: *ZPE* 155, 2006, 239–252".

In his **note [17]**, he writes: "J. H. Oliver, Greek Constitutions of Early Roman Emperors from Inscriptions and Papyri, 1989".

**Because of the current controversy concerning this point, I have summarized the relevant discussion.**

Cf. *infra*, in volume 3-2, at *A Study on the consequences of Domitian's assassination ...*

Or: *The wider topographical context of the Arch of Hadrian alongside the Via Flaminia which led to the (later) Hadrianeum and to Hadrian's Temples of Diva Matidia (and of Diva Sabina?)...; at Chapter III. Was Hadrian himself present at the suppression of the Bar Kokhba Revolt?; and at Appendix IV.c.2).*

**I anticipate below some passages, written for *infra*, volume 3-2, in *A Study on the consequences of Domitian's assassination; at Chapter III. Was Hadrian himself present at the suppression of the Bar Kokhba Revolt? For the following reason: also in his above-quoted most recent publication, Eck (2022, Sp. 485, 486) does not address the fact that Rabbinic and Christian sources actually state explicitly that Hadrian, in AD 132-133, had in person commanded the suppression of the Bar Kokhba Revolt:***

``II.) Eck's statement (2019b, 203) in the above-quoted passage that he does not exclude the assumption that Hadrian could have been in person in Iudaea in the few months between the beginning of the war [*i.e.*, the Bar Kokhba Revolt or War] in the Spring of AD 132 and his return to Rome at the beginning of AD 133' ...

Ad II. Do we have any evidence that could prove that Hadrian commanded in person the *expeditio Iudaica* = the suppression of the Bar Kokhba Revolt? ...

c) Rabbinic and Christian sources state *expressis verbis* that Hadrian, from AD 132-133, commanded in person the suppression of the Bar Kokhba Revolt.

Mordechai Gichon (1979, 93 n. 30, pp. 84-89) quotes and discusses "Rabbinic sources". Cf. Gichon 1979, 87 n. 14, where he quotes for those Rabbinic sources: "S. Yeivin, The Bar Kochba War (Jerusalem 1946), pp. 68 ff. (Hebrew [non vidi])". This evidence proves, in Gichon's opinion, that Hadrian "recaptured" in person Galilee. Gichon (1979, 93) came to the conclusion that Hadrian commanded in person the suppression of the Bar Kokhba Revolt from 132 until 133, and that he left Judaea immediately after that.

Precisely this time-span (132-133) has been mentioned by Werner Eck (2019b, 203) as a theoretical possibility in the above-quoted passage, but note that Eck does not mention the fact that this has actually been suggested as a fact by earlier scholars like Gichon (1979), who is even capable of proving his assertion by adducing ancient (Rabbinic and Christian) literary sources, ignored by Eck.

Rudolf Hanslik (1979, Sp. 910) wrote about Hadrian's itinerary since AD 131 and his presence at the suppression of the Bar Kokhba Revolt, which was recorded by the Christian author Eusebius in his 'Ecclesiastical History' (HE 4,6,1) :

"Erst im Herbst 131 verließ er [*i.e.*, Hadrian] Äg.[ypten], zog nach Syrien, überwinterte aber wieder in Athen, Dio 69,12,2. 16,1f. Während H.[adrian] im J.[ahr] 132 von Athen auf den Balkan ging (Gründung von Hadrianopolis), brach in Syrien ein schrecklicher Judenaufstand unter Barkochba wegen der Errichtung eines Jupitertempels an Stelle des Jahweheiligtums in Jerusalem aus. Dio 69,12,2f. s.[iehe] L. SCHÜREER I,562-589. P.M. FRASER H.[adrian] and Cyrene, JRS 40, 1950, 84ff. Während des dreijährigen Krieges begab sich H.[adrian] im Jahre 133 selbst nach Judaea, Eus.[ebius] h.e. 4,6,1. Dio 69,14,3. Im J.[ahr] 134 befand sich H.[adrian] in Rom und ließ das Athenaeum (J. TOYNBEE The Hadrianic School, 1934), das Mausoleum und seine Villa bei Tibur bauen, Aurel. Vict. Caes, 14,2f.; vit. 19,11. Dio 69,23,1. Der jüd.[ische] Krieg wurde 135 beendet, Eus.[ebius] h. e. 4,6,3, Judaea als prov.[incia] Syria Palaestina eingerichtet [my emphasis]"

Let's now return to the discussion of Cigaina's findings.

Cigaina (2020, 221-222, § IV.6) discusses Hadrian's road in Crete, known through those milestones, its possible connection with the Bar Kokhba Revolt and with Hadrian's statues of his "tipo Hierapytna" (cf. here Fig. 29); the fact that in his opinion the replicas of this statue-type are datable to AD 132-138; and that the replicas, found in Crete, therefore, commemorated Hadrian's suppression of the Bar Kokhba Revolt:

"La datazione di almeno due dei tre miliari tra la fine del 133 e il 136 d.C. coincide approssimativamente con l'epoca della rivolta giudaica di Bar Kochba (132 - inizio 136 d.C.) [with n. 593] ... Il teatro della rivolta di Bar Kochba rimase contenuto nell'area siro-palestinese, ma è possibile che Creta, per la sua posizione centrale nel Mediterraneo, abbia giocato allora un ruolo chiave per gli aspetti logistici (spostamento di contingenti e approvvigionamenti) e per le comunicazioni, in particolare quelle con l'Italia e con Roma. In questo quadro di emergenza militare le vie ordinarie della rotta marittima lungo la costa meridionale di Creta potevano risultare insufficienti o troppo lente, soprattutto a causa del condizionamento dei venti stagionali. Un'alternativa ottimale era l'uso di una via terrestre efficiente che attraversasse l'isola in senso est-ovest e dalla costa meridionale, su cui affacciavano i porti di Gortina (Matalon, Lasaia e Lebena) raggiungibili anche dalla [page 222] Cirenaica, alla costa settentrionale. Queste considerazioni potrebbero aver indotto Adriano a potenziare l'asse viario strategico che da Gortina portava all'estremità nord-occidentale di Creta.

Il sostegno attivo, benché indiretto, alla soppressione della rivolta e i benefici economici che dovettero derivare dallo spostamento di uomini e merci sul suolo cretese sembrano confermati dall'erezione di statue onorarie di Adriano con corazza del c.d. [cosiddetto] "tipo Hierapytna" (fig. 21 [cf. here Fig. 29]). Secondo una convincente ricostruzione di Birgit Bergmann, la complessa decorazione della

corazza visualizza gli ideali del Panhellenion, che fu inaugurato nel 131/2 d.C. [with n. 595]. L'ideazione del prototipo statuario, pertanto, si data con verosimiglianza dopo questa data [with n. 596]. Tenuto conto che quasi tutti gli esemplari noti furono eretti mentre Adriano era ancora in vita, **le statue loriccate di questo tipo si collocano perlopiù in un arco cronologico assai ristretto, tra il 132 e il 138 d.C.** [with n. 597]. **Creta si distingue per una concentrazione relativamente alta di esemplari - ben cinque o sei** [with n. 598] - e per l'insistenza sul tema del barbaro sottomesso, se non addirittura calpestato dall'imperatore [with n. 599]. Questa enfasi sulla supremazia bellica contrasta con l'attitudine pacifica di Adriano, la cui politica tese sempre al consolidamento dei confini dell'Impero già ingrandito da Traiano. **L'unica guerra impegnativa durante il suo regno è rappresentata dalla repressione della rivolta di Bar Kochba ed è verosimile che proprio a questo evento militare facciano riferimento le statue cretesi con corazza del "tipo Hierapytna"** [my emphasis].

In his **note 593**, Cigaina writes: "Sulla rivolta: Y. YADIN, *Bar-Kokhba: the rediscovery of the legendary hero of the second Jewish revolt against Rome*, London 1971; S. APPLEBAUM, *Prolegomena to the study of the second Jewish revolt (A.D. 132-135)*, Oxford 1976; P. SCHÄFER, *Der Bar-Kokhba-Aufstand. Studien zum zweiten jüdischen Krieg gegen Rom*, Tübingen 1981; W. ECK, 'The Bar Kokhba revolt: the Roman point of view', *JRS* 89, 1999 [i.e., here W. ECK 1999d], 76-89; P. SCHÄFER (a cura di), *The Bar Kokhba war reconsidered: new perspectives on the Second Jewish Revolt against Rome*, Tübingen 2003. Sulle date, cfr. KIENAST - ECK - HEIL 2017<sup>6</sup>, 123".

In his **note 595**, he writes: "BERGMANN 2010 [i.e., here B. BERGMANN 2020a], 230-254".

In his **note 596**, he writes: "BESCHI 1974, 222-226; CAVALIERI - JUSSERET 2009, 374 ss., scagliano la datazione durante tutto il regno di Adriano, ma con argomenti meno stringenti; GALLI 2002, 73-76, considera queste statue come postume; KARANASTASI 2012/13, 323-391, in part.[icolare] 342-348 (con riassunto delle diverse tesi): il tipo statuario, creato all'inizio del regno, risentirebbe dell'eco della rivolta giudaica del 115-117 d.C., per il superamento della quale i Greci giocarono un ruolo chiave; similmente, M. CADARIO, 'L'immagine militare di Adriano', in E. CALANDRI - B. ADEMBRI (a cura di), *Adriano e la Grecia. Villa Adriana tra classicità ed ellenismo*, Milano 2014, 106-113, in part. 107 s."

In his **note 597**, he writes: "Il nesso istituito da alcuni studiosi tra la statua di Lyttos e una delle tre basi di statua di Adriano dal medesimo sito, databili rispettivamente al 122, 124, 125 d.C. per la tribunicia potestas (IC I XVIII 40-42) non è vincolante (BESCHI 1974, 220 s., 225; CAVALIERI - JUSSERET 2009, 385). Da Lyttos, infatti, provengono numerose basi di statue imperiali che, sotto Traiano, arrivano ad avere anche cadenza annuale (IC I XVIII 15-43, 45-50; CHANIOTIS - RETHEMIOTAKIS 1992, 28-31 nn. 1-5 = SEG 42, 810-814; cfr. CIGAINA 2016, 322 s.)".

In his **note 598**, he writes: "BERGMANN 2010, cat. 4 (Hierapytna; vd. [vedi] anche *ibid.*, 206-220, 227-230; BESCHI 1974, 225 s.), 5 (Kisamos), 10 (Gortina; PORTALE 1998, cat. 33; LAGOIANNI-GEORGAKARAKOU 2002, cat. 70; CAVALIERI - JUSSERET 2009, 387-396), 13 (Cnosso; CAVALIERI - JUSSERET 2009, *ibid.*), 14 (Lyttos; BESCHI 1974, 222, 224 s.); KARANASTASI 2012/13, 362-363 cat. 11-15; verosimilmente dello stesso tipo è un frammento proveniente pure da Gortina (Haghii Deka), comprendente la gamba sinistra di un imperatore, con *mulleus*, e una piccola figura acefala di barbaro inginocchiato e legato eccezionalmente alla sua sinistra, invece che a destra come di norma (*ibid.*, 325 s., 339-342, 348, 361 s. cat. 10, tav. 5,1-3; marmo bianco, forse pentelico; alt. 0,77 col plinto, maggiore del vero)".

In his **note 599**, he writes: "Sulla figura secondaria del barbaro sottomesso (inginocchiato o steso a terra) che accompagna tutte le statue cretesi eccetto quella di Cnosso, vd. [vedi] Bergmann 2010 [i.e., here B. BERGMANN 2010a], 242-248: su un totale di 17 esemplari, solo 7 hanno il barbaro, di cui 4 (o 5 col nuovo frammento) sono cretesi. La statua di Hierapytna (*fig. 21* [cf. here **Fig. 29**]) è una delle uniche tre che lo calpesta a terra (*ibid.*, 254); l'esemplare di Gortina, inoltre, è uno dei due che ha sulla corazza il raro motivo delle Vittorie che calpestano barbari (*ibid.*, 253 nt. 120). Il barbaro di Hierapytna è stato identificato come Parto per via della faretra e dell'arco raffigurati sul puntello, che tuttavia potrebbero pure riferirsi ad arcieri cretesi (vd. [vedi] KARANASTASI 2012/13, 348; CIGAINA 2016, 324); gli altri barbari sono caratterizzati genericamente come orientali. Il barbaro nudo descritto da O. Belli nel '500 accanto alla statua di Lyttos è stato interpretato come un Mauro e messo in relazione con i "motus Maurorum" repressi da Adriano nel 122 d.C. (Hist. Avg. *Hadr.* 12, 7; cfr. BESCHI 1974, 222, 225; CAVALIERI - JUSSERET 2009, 385 s.), ma l'ipotesi non è verificabile essendo la statua dispersa. **Sulla probabile allusione dei barbari orientali alla rivolta di**

**Bar Kochba, vd. [vedi] BERGMANN 2010 [i.e., here B. BERGMANN 2010a], 254-258: l'evento fu percepito come una seria minaccia per la sicurezza dell'Impero anche a causa di una possibile offensiva partica nell'Oriente divenuto instabile [my emphasis]"**.

**Summarizing these additional observations by Jane M. Cody's (2003), Sam Heijnen (2020), and Lorenzo Cigaina (2020), and adding them to what was already said above, we can now conclude the following :**

Hadrian's artists, who created the prototype of Hadrian's portrait-statues (cf. here **Fig. 29**) did not only deliberately 'cite' the 'victor poses' of the portraits of Vespasian and Titus, as represented on the reverses of their IVDAEA CAPTA coins (here **Figs. 130; 131**). Also the elaborate decoration of Hadrian's cuirass (here **Fig. 29**) is clearly modeled on coin images and sculptures that had been ordered by the Flavian emperors.

**Precisely as suggested by Rose Mary Sheldon in her above-quoted E-mail to me of 11th February 2021, those coin images (i.e., the coins, issued by the Flavian emperors, such as here **Figs. 130; 131**) repeated the same iconographies as existing sculptures in the round.**

These Flavian victory monuments were *inter alia* erected to commemorate "the conquest of Judaea", as Heijnen (2020, 204) refers to the victories of Vespasian and Titus in the Great Jewish Revolt (or War), and by Domitian to commemorate his victories in Germany.

In my opinion, the above-quoted additional observations by Cody (2003), Heijnen (2020), and Cigaina (2020), taken together, thus corroborate the hypothesis suggested here: that the prototype of the almost 30 portraits of Hadrian, of which the statue from Hierapydna in Crete at Istanbul (cf. here **Fig. 29**) is the most famous replica, may be identified with the (lost) honorary statue (cf. here **Fig. 29.1**), dedicated by the Senate and the Roman People close to the Temple of *Divus Vespasianus*, or (possibly) within the *cella* of this temple.

And that for the following reasons:

The pertaining inscription (cf. *CIL* VI 40524 = *CIL* VI 974 = here **Fig. 29.1**) declares that this statue was dedicated to Hadrian,

*a)* for having 'liberated Syria and Palestine' - that is to say, for his suppression of the Bar Kokhba Revolt; and

*b)* that Hadrian, 'with his victories in Syria and Palestine had even surpassed the victories [there] of the *imperatores maximi* [i.e., Vespasian and Titus]'; *c)* to this Lorenzo Cigaina (2020) has now added some observations concerning the date of the almost 30 copies of the prototype of Hadrian's portrait, to which the statue from Hierapydna (here **Fig. 29**) belongs. These portrait-statues of Hadrian, according to Cigaina (2020, 222 with n. 597), are datable between AD 132-138. Concerning the five (or six?) copies of this portrait-type of Hadrian, found in Crete, Cigaina suggests that they should be seen in connection with Hadrian's improving in AD 133-136 of a major road in Crete, which served the transportation and the supply of his army that suppressed the Bar Kokhba Revolt in Judaea. According to Cigaina's (2020, 222) convincing suggestion, these five (or six?) honorary statues of Hadrian in Crete (cf. here **Fig. 29**) were, therefore, dedicated to commemorate Hadrian's suppression of the Bar Kokhba Revolt.

**But with the latter remark, with which I had originally hoped to end this 'Post Scriptum to my conclusion', I had by no means accomplished this goal. Even after having summarized those just-mentioned additional publications, Hans Rupprecht Goette and Franz Xaver Schütz alerted me to the article by Caroline Barron (2018), in which she refers to some of the subjects discussed in this Chapter.**

One of Caroline Barron's (2018) observations is the reason, why I have already stated above that the statue, to which the inscription (*CIL* VI 40524 = *CIL* VI 974; here **Fig. 29.1**) once belonged, 'was (possibly) on display

within the *cella* of the Temple of *Divus Vespasianus*. Apart from the information, provided by Caroline Barron, which has led me to suggest this now, the author adds some more insights previously unknown to me. I, therefore, quote in the following the relevant passages from her article *verbatim*.

**Caroline Barron** ("*Dedication for a statue of Hadrian near the Temple of Vespasian and Titus (CIL VI, 974 = CIL VI, 40524 [cf. here Fig. 29.1]*", 2018) writes:

"Typology (Honorific / Funerary / etc.): Honorific

**Original Location/Place:** Beneath (in front of?) the Temple of Vespasian, Roman Forum, Rome.

**Actual Location (Collection/Museum):** Capitoline Museums, Rome. Inventory number: NCE 2529

**Date:** 135 CE Sep 15th to 135 CE Dec 9th [my emphasis]

Physical Characteristics:

Fragment of a marble slab, originally c.[irca] 2 m in length. **Werner Eck has noted that [the] shape of the slab is indicative that it was originally attached to a small arch or statue base (Eck [i.e., here W. ECK 2003], "Hadrian, the Bar Kokhba Revolt and the Epigraphic Transmission", p. 162 [my emphasis]).**

Commentary:

**Excavated from beneath the remains of the podium and three columns of the Temple of Vespasian and Titus [corr: this temple was only dedicated to *Divus Vespasianus*] in the Roman Forum, this fragment was originally part of a dedicatory inscription that accompanied an honorific monument for the Emperor Hadrian. Although the text is heavily restored and we cannot be certain that the proposed reconstruction reflects the missing fragment of the dedication, the wording of the inscription and its location beneath the Temple of Vespasian nonetheless suggests that in the capital of the Empire, Hadrian's victory against Bar Kokhba was presented as a continuation of the Flavian conquest of the Jews. The inscription records that a monument of some kind was dedicated to Hadrian by the Senate and the People of Rome ... Werner Eck has noted that the shape and size of the surviving panel indicates that it most likely adorned an honorific arch or a large base, either of which likely supported a monumental statue of the emperor, much like the arch and statue dedicated to him at Tel Shalem ...**

(Eck, "Hadrian, the Bar Kokhba Revolt and the Epigraphic Transmission," [i.e., here W. ECK 2003] p. 162). **Following the identification of the dedicators, Hadrian's official titles are given, from which a date of 15 September - 9 December 135 CE can be securely established, based on the second acclamation as emperor and the number of times that he had held the tribunician power ... (see the data given in Eck and Foertster [corr.: Foerster], Triumphbogen [i.e., here W. ECK and G. FOERSTER 1999], p. 312). The final three lines of the inscription contain the most interesting details of the text; if Geza Alföldy's reconstruction is correct, they praise the Roman war effort against the Jews and record that Hadrian is being honoured by the city of Rome because he "liberated Syria Palestina from the enemy" .... 'Syria Palestina' was the new name that had been given to the province of Judea following the suppression of the Bar Kokhba revolt ... If restored correctly, the inscription also recorded that the army sent to Syria-Palestina by Hadrian was "fighting with great enthusiasm" ...**

**As well as the text of the inscription, the location selected for this honorific monument is certainly worthy of note. It appears to have been set up beneath the Temple of Vespasian ... Werner Eck has suggested that this choice of location for a monument that potentially celebrated Hadrian's victory and suppression of the Bar Kokhba revolt was a deliberate attempt to align the emperor with the memory of the Flavian dynasty, whose conquest of the Jews had been memorialised in a series of monuments across the centre of Rome ... [mentioning those monuments in the following] By permitting the Senate to erect a monument in celebration of his victory against the Jews, Hadrian reformulated what had begun as a provincial rebellion as a continuation of Vespasian and Titus's war against an external foreign enemy. The placement of this monument within sight of the Flavian temple made a clear statement of how**

**Hadrian's achievement should be considered, and the extent of its political importance (Eck [*i.e.*, here W. ECK 2003], "Hadrian, Bar Kokhba and the Epigraphic Transmission", p. 162-163) ...**

The Bar Kokhba revolt, although devastating within the province of Judea and costly for Rome's army, provided Hadrian with the opportunity to prove that he was as strong a military general as he was a patron of the arts; **by physically joining his legions there, albeit briefly, he demonstrated the same martial virtus exemplified by other 'good' emperors, such as Vespasian and Titus (Speller [*i.e.*, here E. SPELLER 2003], *Following Hadrian*, p. 205).** By advertising a definitive conclusion to Rome's interactions with the Jews, Hadrian was able to promote his popularity in the city of Rome, where his military success could be elevated to the same status and context as those of Rome's earlier heroes [thus referring to the Vespasian and Titus; my emphasis]" (!).

**In the following, I quote from the article of Werner Eck those passages referred to by Caroline Barron (2018) in her above-quoted account, and, in addition to this, Eck's final conclusion, not mentioned by Barron (cf. *id.*, "Hadrian, the Bar Kokhba Revolt, and the Epigraphic Transmission", 2003, 162-163, 165):**

*"III. Epigraphic Texts in Rome*

Celebrations of the costly victory in Judaea [*i.e.*, Hadrian's suppression of the Bar Kokhba Revolt] were not confined to the battlefield. Monuments commemorating the event were set up also in Rome. **Two epigraphic texts, both fragmentary, must be interpreted as parts of victory monuments.** The first is a fragment of a slab which originally measured ca. [circa] 2 m or more in length [cf. here **Fig. 29.1**]. This time the *Senatus Populusque Romanus* is explicitly stated to have erected a monument for Hadrian after he had freed someone or something. **Géza Alföldy is probably right in restoring Syria Palaestina in the missing part of the text.** [with n. 35] **The presumed shape of the panel makes it likely to have been attached either to a small arch or to a large statue base. In either case the monument bore a statue of Hadrian like the Tel Shalem arch. Even more important than the shape of the monument is the find site, The fragment was found on the slope of the Capitoline hill, directly beneath the *templum divi Vespasiani*. The monument itself could also have stood there. Here too, the place was not arbitrarily chosen. Vespasian [page 163] had crushed the first revolt in Judaea and turned that achievement into the foundation of his rule.** [with n. 36] The theme of *Judaea capta*, the *triumphus de Iudaeis*, dominates his coinage, and is present everywhere in the new aspect of the centre of Rome: the *templum Pacis*, the *Amphitheatrum Flavium* and at least one triumphal arch for Titus. [with n. 37] **If Hadrian allowed the senate to regard his achievement in Judaea as continuing Vespasian's victory, or even exceeding it,** [with n. 38] **what would be a more fitting place for the victory monument than the temple of the *divus Vespasianus*?** [with n. 39; my emphasis].

**In the same topographical context, another fragmentary inscription has been discovered which contains an *elogium*, either to an emperor or to a high military commander,** [with n. 40] **referring to a *bellum Iudae[icum]* or *Iudae[orum]*.** It has recently been dated by Géza Alföldy to the imperial period, and more precisely to the second century. [with n. 41] **In the epigraphic sources of the time only one war against the Jews is termed *bellum*, the war against Bar Kokhba - not the revolt of the Jews in the diaspora in the years 115-117.** [with n. 42]"

In the following, Eck discusses this inscription (*CIL* VI 1565 = 37054 = VI, VIII 3, p. 4713) which, in his opinion, refers likewise to the suppression of the Bar Kokhba Revolt.

In his final sentence, Eck (2003, 165) concludes: **"The temple of *divus Vespasianus* in Rome and its immediate surroundings were used probably to present Hadrian as Vespasian's successor in Rome's war against its Jewish rebels. His victory, which was the victory of Rome, was thus demonstrated in the public domain in Rome.** [with n. 50; my emphasis].

In his **note 35**, Eck writes: "*CIL* VI 974 = 40524: [*S(enatus) p (opulus) q(ue) R(omanus) [Imp(eratori) Caes(ari) divi Traiani] Parthici f(ilio) [divi Nervae nep(oti) Traiano Ha]driano Aug(usto), [pont(ifici) max(imo), trib(unicia*

*potest(ate XX (?), imp(eratori) II, co(n)s(uli) III p(atri) p(atriciae), [quod summo pugnandi a]rdore misso [exercitu suo superatis imperat]oribus max[imis Syriam Palaestinam ab ho]ste liberavit. The tribunicia potestas is restored before the second acclamation as in all of Hadrian's official inscriptions after the assumption of imp II. See n. 32 above [my emphasis]". - To this I will come back below.*

In his **notes 36-37**, Eck provides references.

In his **note 38**, Eck writes: "CIL VI 40524 is reconstructed by Géza Alföldy in this spirit [= here **Fig. 29.1**]. Cf. no. [corr.: n.] 35 above".

In his **note 39**, he writes: "Cf. **A.R. Birley, Hadrian. The restless Emperor, 1997, 287** [my emphasis]".

In his **note 40**, he writes: "CIL VI 1565 = 37054 = VI, VIII 3, p. 4713. The text, as restored by Géza Alföldy reads: [---t]riumph[----] / [----] senatus laeti[tia] / [---co]npage imal[----]a? bello Iudae[orum/ico ---]va liburni[----c]lassis ornatu/[----]s orae mari/[tim?---]arum .../[---]".

In his **note 41**, he writes: "G. Alföldy on CIL VI, VIII 3, p. 4713. Photograph in *Supplementa Italica. Imagines. Roma (CIL VI) 1*, ed. G.L. Gregori - M. Mattei 1999, p. 384f., no. 1223".

In his **note 42**, he writes: "Despite Schäfer, *Bar Kokhba Aufstand* [1981], 130.

In his **note 50**, he writes: "**The survival of only two monuments** [i.e., to which the two inscriptions discussed by him; cf. CIL VI 974 = 40524 = here **Fig. 29.1**, and CIL VI 1565 = 37054 = VI, VIII 3, p. 4713, had belonged] **should not be taken as evidence that only two monuments in Rome celebrated the victory over the Jews. The contrary is true: when two fragments of the almost entirely lost memorial epigraphy are preserved, we should assume that the victory was widely celebrated in the capital of the world-empire** [my emphasis]".

**To Eck's (2003, 162) above-quoted note 35, I should like to add a comment that concerns the different dates, suggested for the inscription CIL VI 974 = 40524 = here Fig. 29.1:**

Note that Géza Alföldy (1996 = here **Fig. 29.1**) had restored this inscription differently than Eck (2003, 162, n. 35), by writing: "trib(unicia) pot(estate) XVI]III".

See Lorenzo Cigaina (2020, 219, § IV.6), who, in his discussion of the inscriptions of the three milestones of the road, built by Hadrian in Crete, provides the relevant calendar dates: "Il titolo *pater patriae* [i.e., of the Emperor Hadrian], conservatosi in tutti e tre i testi, è usato ufficialmente dalla prima metà del 128 d.C. e costituisce qui un *terminus post quem* restringendo la cronologia al 128-138 d.C. [with n. 585]. Dopo il 128 d.C. sono disponibili le seguenti integrazioni: trib. pot. XIIX = 133/4 d.C.; XIX = 134/5 d.C.; XX = 135/6 d.C.". He, therefore, dates those three milestones, erected under Hadrian, to AD 133-136.

In his **note 585**, Cigaina writes: "Kienast - Eck - Heil 2017<sup>6</sup>, 123".

**Applying this information, provided by Cigaina (2020, 219) to the two different reconstructions of the inscription CIL VI 974 = 40524 = here Fig. 29.1, this means that Alföldy (1996 = here Fig. 29.1), by restoring '19th tribunicia potestas', dated the inscription to AD 134/5, whereas Eck (2003, 162, n. 35), by restoring '20th tribunicia potestas' suggests the date: AD 135/6.**

**To the above-quoted suggestion by Werner Eck (2003), concerning the possible location of the monument, to which the inscription (CIL VI, 974 = CIL VI, 40524; cf. here Fig. 29.1) once belonged, which has been followed by Caroline Barron (2018), I should also like to add a comment:**

Eck (2003), followed by Caroline Barron (2018), suggests that this inscription (here **Fig. 29.1**) belonged to a small Arch of Hadrian, or else to a statue of Hadrian, which stood right in front of the Temple of *Divus Vespasianus*. In my opinion, such a reconstruction is impossible because of the topography of the area. Eck (2003) and Barron (2018) do not provide a map of the space 'in front of' the Temple of *Divus Vespasianus*.

When we look at our *measured* maps, in order to investigate this question;

cf. here **Figs. 58; 71; 73**, labels: CAPITOLIUM; TEMPLUM : DIVUS VESPASIANUS; CLIVUS CAPITOLINUS; AEDES : SATURNUS; MUNDUS; FORUM ROMANUM;
